A DICTIONARY
OF
GREEK AND ROMAN GEOGRAPHY.

IABADIUS.

IABADIUS ('Iabádios vínos, Ptol. vii. 2. § 29, viii. 27. § 10), an island off the lower half of the Golden Chersonese. It is said by Ptolemy to mean the "Island of Barley," to have been very fertile in grain and gold, and to have had a metropolis called Argynis. There can be little doubt that it is the same as the present Java; which also signifies "barley." Humboldt, on the other hand, considers it to be Suvatara (Kritishe Unterla. P. 64); and Mannert, the small island of Baron, on the SE. side of Suvatara. [V.]

JABBOK (Ἰαββόκ, Joseph; Ἰαβυκ, LXX.), a stream on the east of Jordan, mentioned first in the history of Jacob (Gen. xxxii. 22). It formed, according to Josephus, the northern border of the Amorites, whose country he describes as isolated by the Jordan on the west, the Arnon on the south, and the Jabbok on the north. (Ant. iv. 5. § 2.) He further describes it as the division between the dominions of Sihon, king of the Amorites, and Og, whom he calls king of Galadene and Gualotinus (§ 3)—the Bashan of Scripture. In the division of the land among the tribes, the river Jabbok was assigned as the northern limit of Gad and Reuben. (Dent. iii. 16.) To the north of the river, in the country of Bashan, the half tribe of Manasseh had their possession (13,13.) (Ammonites; Amorites.) It is correctly placed by Eusebius (Onomast. s. e.) between Ammon, or Philadelphia, and Gerasa (Gerasa); to which S. Jerome adds, with equal truth, that it is 4 miles from the latter. It flows into the Jordan. It is now called El-Zerka, and "divides the district of Moesra from the country called El-Bela." (Bocarbanit's Smyria, p. 347.) It was crossed in its upper part by Iby and Mangles, an hour and twenty minutes (exactly 4 miles) SW. of Gerasa, on their way to El-Sealt. (Travels, p. 319, comp. p. 75.) [G. W.]

JAREESI (Ἰαρέσι, LXX.; Ἰαρισά, Jareard, Ιαρεσος, Joseph.), a city of Gilead, the inhabitants of which were exterminated, during the early times of the Judges (xx. 28), for not having joined in the national league against the men of Gibeah (xxi. 9, &c.). Three centuries later, it was besieged by the Ammonite king, Nahash, when the hard terms offered to the inhabitants by the invaders roused the indignation of Saul, and resulted in the relief of the town and the rout of the Ammonites. (1 Sam. xi.) It was probably in requisit for this deliverance that the inhabitants of Jabez-Gilead, having heard of the indignity offered to the bodies of Saul and his sons after the battle of Gilbea, "arose, and went all night, and took the body of Saul, and the bodies of his sons, from the wall of Beth-shan, and came to Jabez and buried them there; and they took their bones and buried them under a tree at Jabez, and fasted seven days." (1 Sam. xxxi. 11 — 13; 2 Sam. ii. 4 — 7.) It was situated, according to Eusebius, in the hills, 6 miles from Pella, on the road to Gerasa; and its site was marked in his time by a large village (see 'Apardos and Ιαρεσος). The writer was unsuccessful in his endeavours to recover its site in 1842; but a tradition of the city is still retained in the name of one of the valleys that runs into the plain of the Jordan, one hour and a quarter south of Wady Mus, in which Pella is situated. This valley is still called Wady Tubas, and the ruins of the city doubtless exist, and will probably be recovered in the mountains in the vicinity of this valley. [G. W.]

JABNEH. [IAMNIA.]

JACCA. [JACETANI; VASCONES.]

JACETANI (Ἰακετάνων, the most important of the small tribes at the S. foot of the Pyrenees, in Hispania Tarraconensis, E. of the Vascones, and N. of the Ibergetes. Their country, Jacetania (Lactertia), lay in the N. of Aragon, below the central portion of the Pyrenean chain, whence it extended towards the Iberus as far as the neighbourhood of Henda and Osca; and it formed a part of the theatre of war in the contests between Sertorius and Pompey, and between Julius Caesar and Pompey's legates, Afranius and Petreius. (Strab. iii. p. 161; Caes. B. C. i. 60, concerning the reading, see LACETANI; Ptol. ii. 6. § 72.) None of their cities were of any consequence. The capital, Jacca (Jaca, in Biscaya), from which they derived their name, belonged, in the time of Ptolemy, to the Vascones, among whom indeed Pliny appears to include the Jacetani altogether (iii. 3. s. 4). Their other cities, as enumerated by Ptolemy, and identified, though with no great certainty, by Uckert (vol. ii. p. 1. p. 425), are the following: — IPSUS (Ἰπσός, Ignacio); Cereses (Keretos, S. Columba de Ceralto); ANADIS (Ἀνάδις, Teneda); BACCASIS (Baconis, Munavea, the district round which is still called Bages); TELECOS (Τεληκός, Martorell); ASCEREIS (Ἀσκέρεις, Sayarra); UBEQRA (Uberra, Cardona); LERCA (Leca, near Munavea); NETELIS (Netelis § 2Adenis, Solcon); CINNA (Kima, near Glimo), perhaps the same place as the Scinsem of Livy (xxi. 60, where the MSS. have Scissis, Stissum, Sisa), and the Gessa of

VOL. II.
PHAEO. (iii. 76: coins, ap. Sestini, pp. 132, 163; Num. Goth.).

LADERA. (Iâdâpâ, Pol. iii. 16: § 10: Iâdâpâ, Nicet. p. 348; Iader, Plin. iii. 26; Iader, Porph. Mela, ii. § 3: Pent. Tab.: Geog. Rav.; on the orthography of the name see Tzschucke, ad Melan, l. c. vol. ii. pt. 2, p. 275: Euth. Iaderimnus, Hirt. B. A. 42: Zenar), the capital of Liburnia in Illyricum. Under Augustus it was made a Roman colony. ("Parnes coloniae," Iassar, ap. Parfutt, TIppar. Sacr., vol. v. p. 3: comp. Pol. l. c.). Afterwards it bore the name of Diobora, and paid a tribute of 110 pieces of gold to the Eastern emperors (Const. Porph. de Adna. Imp. 30), until it was handed over, in the reign of Basil the Macedonian, to the Slavonic princes. Zara, the modern capital of Dalmatia, and well known for its famous siege against the combined French and Venetians, at the beginning of the Fourth Crusade (Gibbon, c. ix., Wilken, die Kreutz, vol. v. p. 167), stands upon the site of Iadera. Little remains of the ancient city; the sea-gate called Porta di San Chirigos is Roman, but it seems likely that it has been brought from Aenona. The gate is a single arch with a Cornithian pilaster at each side supporting an entablature.

Eckhel (vol. i. p. 152) doubts the evidence of any coins of Iadera, though some have been attributed to it by other writers on numismatics. Sir G. Wilkinson, Dalmatia and Montenegro, vol. i. p. 78; J. F. Negezian, Die Sudlaken, pp. 181—191.)

IADO'NI, a people in the extreme NW. of Hispamia Tarraconensis, mentioned only by Pliny, who places them next to the Arroctaeae. (Plin. iv. 20. s. 34.)

IATA or IETAE (Iera, Stephan. B.: Euth. Ieraios, Id.; but Dioborus has Iâdâpâ, and this is confirmed by coins, the legend of which is uniformly Iâzdâsuvw, Eckhel, vol. i. p. 216: in Latin, Cicero has Ietini, but Pliny Ietenes), a town of the interior of Sicily, in the NW. of the island, not very far from Panormus. It was mentioned by Philistus (ap. Stephan. B. s. v. as a fortress, and it is called by Thucydides also (if the reading Iâzdâs is admitted, in vol. 2) a fortress of the Sicilians (tâkios ov oS Zâxaiâ), which was taken by Gyllippus on his march from Himera through the interior of the island towards Syracuse. It first appears as an independent city in the time of Perthus, and was attacked by that monarch on account of its strong position and the advantages it offered for operations against Panormus; but the inhabitants readily capitulated. (Diod. xxii. 10, p. 498.) In the First Punic War it was occupied by a Carthaginian garrison, but after the fall of Panormus drove out these troops and opened its gates to the Romans. (Id. xxii. 18, p. 505.) Under the Roman government it appears as a municipal town, but not one of much importance. The Ietini are only noticed in passing by Cicero among the towns whose lands had been utterly ruined by the exactions of Verres; and the Ietenes are enumerated by Pliny among the "populi stipendiarii" of the interior of Sicily. (Cic. Verr. iii. 43; Plin. iii. 8. s. 14.) Many MSS. of Cicero read Lzetini, and it is probable that the Iâzdâs of Polydeni (iii. 4. § 15) is really a corruption of the same name.

The position of Ieta is very obscurely intimated, but it appears from Dioborus that it was not very remote from Panormus, and that its site was one of great natural strength. Silius Italicus also alludes to its elevated situation ("ceius Ietas," xiv. 271.)

Fazello assures us that there was a medieval fortress called Iato on the summit of a lofty mountain, about 15 miles from Palermo, and 12 N. of Entella, which was destroyed by Frederic II. at the same time with the latter city; and this he supposes, probably enough, to be the site of Ieta. He says the mountain was still called Monte di Iato, though more commonly known as Monte di S. Cosimo, from a church on its summit. (Fazell. x. p. 471: Amic. Arc. Top. Sic., vol. ii. p. 291.) The spot is not marked on any modern map, and does not appear to have been visited by any recent travellers. The position thus assigned to Ieta agrees well with the statements of Dioborus, but is wholly irreconcilable with the admission of Iâzdâs into the text of Thucydides (vii. 2); this reading, however, is a mere conjecture (see Arnold's note), and must probably be discarded as untenable. (E. H. B.)

COIN OF IETA.

JAEZER (IáZâr, LXX.; Iâzâr and Arâz, Euscb.), a city of Gilead, assigned to the tribe of Gad by Moses. In Numbers (xxiii. 11), "the land of Jazer" is mentioned as contiguous to "the land of Gilead, and suited to cattle." In Jeremiah (xliv. 32), "the sea of Jazer" occurs in some versions, as in the English; but Ireland (s. v. p. 823) justly remarks, that this is not certain, as the passage may be paraphrased after the word "sea," and "Jazer," as a vocative, commence the following clause. But as "the land of Jazer" is used for the country south of Gilead, so the Dead Sea may be designated "the sea of Jazer." Eusebius (Onomast. s. v. Arâz) places it 8 miles west of Philadelphia or Ammon; and elsewhere (s. v. Iâzâr), 10 miles west of Philadelphia, and 15 from Esbon (Ilesbion). He adds, that a large river takes its rise there, which runs into the Jordan. In a situation nearly corresponding with this, between Scult and Edous, Burekhardt passed some ruins named Szeyr, where a valley named Wady Szeyr takes its rise and runs into the Jordan. This is doubtless the modern representative of the ancient Jazer. "In two hours and a half (from Szulul) we passed, on our right, the Wady Szeyr, which has its source near the road, and falls into the Jordan. Above this source, on the declivity of the valley, are the ruins called Szeyr." (Sçzyr, p. 364.) It is probably identical with the Iâzâs of Polydeni which he reckons among the cities of Palestine on the east of the Jordan (v. 16).

IALYSUS. (Iâlýsos, Iâlzâsos, or T nâzâsos; Eth. Iâlzâtos), one of the three ancient Doric cities in the island of Rhodes, and one of the six towns constituting the Doric hexapolis. It was situated only six stadia to the south-west of the city of Rhodes, and it would seem that the rise of the latter city was the cause of the decay of Ialyus; for in the time of Strabo (xiv. p. 655) it existed only as a village. Pliny (v. 36) did not consider it as an independent place at all, but imagined that Ialyus was the ancient name of Rhodes. Orychoma, the citadel, was situated above Ialyus, and still existed in the time of Strabo. It is supposed by some that

IALYSUS.
IAMBICUS.

Orchomena was the same as the fort Achaia, which is said to have been the first settlement of the Hel- liadæ in the island (Diod. Sic. v. 57; Athen. viii. p. 360); at any rate, Achaia was situated in the territory of Ialysus, which bore the name Ialysia. (Comp. Hom. Il. ii. 656; Pind. Ol. vii. 106; Herod. ii. 182; Thucyd. vii. 44; Pol. v. 2. § 94; Steph. B. s. c.; Syllax, Peripol. p. 81; Dionys. Perieg. 504; Or. Met. vii. 365; Paus. Mela. ii. 7.) The site of ancient Ialysus is still occupied by a village bearing the name Ialio, about which a few ancient remains are found. (Ross, Reisen auf den Griech. Inseln, vol. iii. p. 98.)

[LS. S]

IAMISSA. [THAMESIS.]

IAMNA, IAMNO. [BALEAE], p. 374, b.]

IAMNIA (λαμνία, LXX. ; ιάμνα, Ιαμνία έπωμα), a city of the Phœnicians, assigned to the tribe of Judah in the LXX. of Joshua xv. 45 (Piwa); but omitted in the Hebrew, which only mentions it in 2 Chron. xxvi. 6 (Jairneh in the English version), as one of the cities of the Philistines taken and destroyed by king Uzziah. It is celebrated by Philo Judæus as the place where the first occasion was given to the Jewish revolt under Caligula, and to his impious attempts to profane the temple at Jerusalem. His account is as follows:

In the city of Iamnia, one of the most populous of Judæa, a small Gentile population had established itself among the more numerous Jews, to whom they occasioned no little annoyance by the wanton violation of their cherished customs. An unprincipled government officer, named Capito, who had been sent to Palestine to collect the tribute, anxious to pre-occupy the emperor with accusations against the Jews before their well-grounded complaints of his boundless extortion could reach the capital, ordered an altar of mud to be raised in the town for the defilement of the emperor. The Jews, as he had anticipated, indignant at the profanation of the Holy Land, assembled in a body, and demolished the altar. On hearing this, the emperor, incensed already at what had lately occurred in Egypt, resolved to resent this insult by the erection of an equestrian statue of himself in the Holy of Holies. (Philo, de Legat. ad Caesar. iv. 56.) With him they were to celebrate a triumph at Rome (Appian, B. C. i. 19, Illyr. 10; Liv. Épit. lxxxv.; Fasti Corsic.) They had a "foedus" with Rome (Cic. pro Balb. 14), but were in n. c. 34 finally subdued by Octavianus, after an obstinate defence, in which Mettmum, their principal town was taken (Strab. vii. p. 315).

In n. c. 129, the consuls C. Sempronius Tuditanus carried on war against this people, at first unsuccessfully, but afterwards gained a victory over them, chiefly by the military skill of his legate, D. Junius Brutus, a man with whom he was allied to celebrate a triumph at Rome (Appian, B. C. i. 19, Illyr. 10; Liv. Épit. lxxxv.; Fasti Corsic.) They had a "foedus" with Rome (Cic. pro Balb. 14), but were in n. c. 34 finally subdued by Octavianus, after an obstinate defence, in which Mettmum, their principal town was taken (Strab. l. c.; Appian, Illyr. l. c.).

METTMUM (Μετμόλιον), their capital, was situated on the river Colapis (Kalpe) to the N., on the frontier of Pannonia (Appian, l. c.), and has been identified with Metting or Metlico on the Kalpe. The Antonine Itinerary has the following places on the road from Sosia (Zeuvy) to Siscia (Siseck) —

AVENDONE (comp. Pent. Tab.; Albedo, Geog. Rav.; Adriëderà, Appian, Illyr. l. c.; Ovidus, Strab. iv. p. 207, vii. p. 314); AKUPHUM (Acyrum), Pent. Tab.; Parapignum, Geog. Rav.; 'Agouropolis, App. Illyr. 16., perhaps the same as the Aponoia of Ptolemy, ii. 16, § 9), now Ottochatae. At Bribium, which should be read Brivium (Wesseling, o. l.), the road divided, taking a direction towards Pannonia, which the Itinerary follows, and also towards Dalmatia, which is given in the Pentergant Table.

Neigebrunn (Die Sudalpen, pp. 224—235) has identified from a local antiquity the following sites of the Table:

EPOTIOTUM (Eselle); ACCUS (Chaulon); A-

n 2
IAPYGIA.

Sanxalio (Vinsch, near Ulbien); Clumdetae (Groehate).

[EBJ.]

IAPY gia (Iapugia), was the name given by the Greeks to the SE. portion of Italy,bordering on the Adriatic Sea, but the term was used with considerable vagueness, being sometimes restricted to the extreme SE. point or peninsula, called also Mes- saquia, and by the Romans Calabria; at other times extended so as to include the whole of what the Romans termed Apulia. Thus Strabo describes the whole coast from Lucania to the promontory of Drion (Mt. Garganii) as comprised in Iapugia, and even includes under that appellation the cities of Metapontum and Heraclea on the gulf of Tarentum, which are usually assigned to Lucania. Hence he states that their coast-line extended for a space of six days and nights' voyage. (Syl. § 14. p. 5.) Polybius at a later period used the name in an equally extended sense, so as to include the whole of Apulia (ii. 88.), as well as the Messapian peninsula; but he elsewhere appears to use the name of Iapugians as equivalent to the Roman term Apulians, and distinguishes them from the Messapians (ii. 24). This is, however, certainly contrary to the usage of earlier Greek writers. Herodotus distinctly applies the term of Iapugia to the peninsula, and calls the Messapians an Iapugian tribe; though he evidently did not limit it to this portion of Italy, and must have extended it, at all events, to the land of the Pentaecians, if not of the Daunians also. (Herod. iv. 99, vii. 170.) Aristotle also clearly identifies the Iapugians with the Messapians (Pol. vi. 3), though the limits within which he applies the name of Iapugia (Ib. vii. 10) cannot be defined. Indeed, the name of the Iapugian promontory (§ 242. Garg. Heroon), was universally given to the headlands which formed the extreme point of the peninsula, sufficiently proves that this was considered to belong to Iapugia. Strabo confines the term of Iapugia to the peninsula, and says that it was called by some Iapugia, by others Messapia or Calabria. (Strab. vi. pp. 281, 282.) Appian and Dionysius Periegetes, on the contrary, follow Polybius in applying the name to the Roman Apulia, and the latter expressly says that the Iapugian tribes extended farther as Hyrcania on the whole of Mt. Garganii. (Appian, Ann. 43; Dionys. Per. 379.) Poltemy, as usual, follows the Roman writers, and adopts the names then in use for the divisions of this part of Italy; hence he ignores altogether the name of Iapugia, which is not found in any Roman writer as a geographical appellation; though the Latin poets, as usual, adopted it from the Greeks. (Verg. Aen. xi. 247; Ovid, Met. xv. 703.) We have no clue to the origin or meaning of the name of Iapugians, which was undoubtedly given to the people (lapyges, iapuges) before it was applied to the country which they inhabited. Niebuhr (vol. i. p. 146) considers it as etymologically connected with the Latin Apulia, but this is very doubtful. The name appears to have been a general one, including several tribes or nations, among which were the Messapians, Salentinii, and Pente- cianians. (Appian, Garg.) The name of Iapugia (Iapuges Messaurnae, vii. 170); and the two names are frequently interchanged. The Greek mythographers, as usual, derived the name from a hero, lapyx, whom they represented as a son of Lycaon, a descent probably intended to indicate the Pelasgic origin of the Iapugians. (Anton. Liberal. 51; Plin. iii. 11. s. 16.) For a further account of the national affinities of the different tribes in this part of Italy, as well as for a description of its physical geography, see the articles Apulia and Cala- bria.

[EBJ.

IAPYgium PROMONTORIUM (Arch larem: Capo Sta. Maria di Lecua), a headland which forms the extreme SE. point of Italy, as well as the extremity of the long peninsula or promontory that divides the gulf of Taranto from the Adriatic sea. It is this long projecting strip of land, commonly termed the heel of Italy, and designated by the Romans as Calabria, that was usually termed by the Greeks Iapugia, whence the name of the promontory in question. The latter is well described by Strabo as a rocky point extending far out to sea towards the SE., but inclining a little towards the Lucanian promontory, which rises opposite to it, and together with it encloses the gulf of Tarentum. He states the interval between these two headlands, and consequently the width of the Tarentine gulf, at its entrance, at about 700 stadia (70 G. miles), which slightly exceeds the truth. Thiny calls the same distance 100 M. P. or 800 stadia; but the real distance does not exceed 66 G. miles or 660 stadia. (Strab. vi. pp. 258, 281; Plin. iii. 11. s. 16; Pol. iii. 1. § 13; Polyb. x. 1.) The same point was also not unfrequently termed the Sicilian promontory (Promontorium Salen- tinum, Mel. ii. 4. § 8; Pol. l.c.), from the people of that name who inhabited the country immediately adjoining. Sallust applies the same name to the whole of the Calabrian or Messapian peninsula. (Sull. ap. Sac. ad Aen. iii. 400.) Its modern name is derived from the ancient church of Sta. Maria di Lecua, situated close to the headland, and which has preserved the name of the ancient town and port of Leucas; the latter was situated immediately on the W. of the promontory, and afforded tolerable shelter for vessels. (Leuca.) Hence we find the Athenian fleet, in B.C. 415, on its way to Sicily, touching at the Iapugian promontory after crossing from Corcyra (Thuc. vi. 30, 44); and there can be no doubt that this was the customary course in proceeding from Greece to Sicily. [EBJ.

IATDANUS (Iapadanos), a river on the N. coast of Crete, near the banks of which the Cydraiones dwelt. (Hom. od. iii. 292.) It is identified with the rapid stream of the Plataniat, which rises in the White Mountains, and, after flowing between the Rhitone villages of Theraïos and Lokik or Lekos, runs through a valley formed by low hills, and filled with lofty plateaus; from which it obtains its name. The river of Plataniat falls into the sea, nearly opposite the islet of Itapneos Theokloros, where there is good anchorage. (Pashley. Trav. i. p. 22; Hirtz, Kreta, vol. i. pp. 23, 384.)

[EBJ.

IARDAJNUS, a river of Elis. (Pheia.)

JAZETHIA. (Librya.)

IASI. (Jassil.)

JASONIUM (Iarasov) Pol. vi. 10, § 3.), a town in Margiana, at the junction of the Margus (Murgh- ob) and some small streams which flow into it. (Cf. also Ammian. xxii. 6.)

JASONIUM (Arch larem, Pol. vi. § 4;) Strab. p. 529), a mountain in Media, which extended in a NW. direction from the M. Parnocharas (M. Elvent), forming the connecting link between the Taurus and the outlying spurs of the Antitaurus. It is placed by Ptolemy between the Orontes and the Corusus.

[V.

JASO'NIUM (Iararos), a promontory on the
cost of Pontus, 130 stadia to the north-east of Ptolemaeum; it is the most projecting cape on that coast, and forms the terminating point of the chain of Mount Paryadres. It was believed to have received its name from the fact that Jason had landed there. (Strab. xii. p. 548; Arrian, Perip. p. 17; Anonymous. Perip. p. 11; Pol. v. 6, § 4; Xenoph. Anab. vii. 2, § 1, who calls it Jasonis act.) It still bears the name Jason, though it is more commonly called Cape Bona or Vena, from a town of the same name. (Hamilton, Researches, vol. i. p. 269.) The Asineia, called a Greek acropolis by Scylax (p. 33), is probably no other than the Jasonium.

IASFIS. [Contestanfnia.]

IASSI (Ἰασσίον), mentioned by Ptolemy as a populous station of Upper Ptolemaia (iv. 14. § 2), Pliny's form of the name (iii. 25) is Itas. He places them on the Drace. [R. G. L.]

IASUS, or IASUS (Ἰασσός, or λασσός; Κατ. 'Ιασσοῦ), a town of Caria, situated on a small island close to the north coast of the Sasanian bay, which derives its name from Iassus. The town is said to have been founded at an unknown period by Argive colonists; but as they had sustained severe losses in a war with the native Carians, they invited the sons of Nebres, who had previously founded Milos, to come to their assistance. The town appears on that occasion to have received additional settlers. (Polyb. xvi. 12.) The town, which appears to have occupied the whole of the little island, had only ten stadia in circumference; but it nevertheless acquired great wealth (Thucyd. viii. 28.), from its fisheries and trade in fish (Strab. xiv. p. 658). After the Sicilian expedition of the Athenians, during the Peloponnesian war, Iassus was attacked by the Lacedaemonians and their allies; it was governed at the time by Amorges, a Persian chief, who had revolted from Darius. It was taken by the Lacedaemonians, who captured Amorges, and delivered him up to Tissaphernes. The town itself was destroyed on that occasion; but must have been rebuilt, for we afterwards find it besieged by the last Philip of Macedon, who, however, was compelled by the Romans to restore it to Ptolemy of Egypt. (Polyb. xvi. 2; Liv. xxxiii. 33; comp. Pol. v. 2. § 9; Plin. v. 29; Stad. Mar. Magn. §§ 274, 275; Hieroc. p. 689.)

The mountains in the neighbourhood of Iassus furnished a beautiful kind of marble, of a blood-red and livid white colour, which was used by the ancients for ornamental purposes. (Paul. Silent. Epher. S. Soph. ii. 213.) Near the town was a sanctuary of Hestia, with a statue of the goddess, which, though standing in the open air, was believed never to be touched by the rain. (Polyb. xvi. 12.) The same story is related, by Strabo, of a temple of Artemis in the same neighbourhood. Iassus, as a celebrated fishing place, is alluded to by Athenaeus (iii. p. 105, xiii. p. 606). The place is still existing, under the name of Askem or Askou Kalass. Chauder (Travels in As. Min. p. 226) relates that the island on which the town was built is now united to the mainland by a small isthmus. Part of the city walls still exist, and are of a regular, solid, and handsome structure. In the side of the rock a theatre with many rows of seats still remains, and several inscriptions and coins have been found there. (Comp. Spon and Wheeler, Voyages, vol. i. p. 361.)

A second town of the name of Iassus existed in Capadocia or Armenia Minor (Pol. v. 7, § 6), on the north-east of Zorapassus.

IASTAE (Ἱάσται, Pol. vi. 12.), a Scythian tribe, whose position must be sought for in the neighbourhood of the river Iastus. [E. B. J.]

IASTUS (Ἰαστός), a river, which, according to Ptolemy (vi. 12), was, like the Polytemus (Kokil), an affluent of the Caspian basin, and should in fact be considered as such in the sense given to a denomination which at that time embraced a vast and complicated hydraulic system. [Jaxartes.] Von Humboldt (Aste Centrale, vol. ii. p. 263) has identified it with the Kizil-Darja, the dry bed of which may be traced on the barren wastes of Kizil Kom in W. Turkistan. It is no unusual circumstance in the sandy steppes of N. Asia for rivers to change their course, or even entirely to disappear. Thus the Kizil-Derja, which was known to geographers till the commencement of this century, no longer exists. (Comp. Levechne, Hordes et Steppes des Kirghiz Kazakas, p. 436.) [E. B. J.]

IASTUS, a river mentioned by Ptolemy (vi. 14. § 2) as falling into the Caspian between the Jaik and the Oxus. It is only safe to call it one of the numerous rivers of Independent Tartary. [R. G. L.]

IASUS. [Oecum.]

IATTH (Ἰάτθ, Pol. vi. 12. § 4), a people in the northern part of Sogdiana. They are also mentioned by Pliny (ii. 16. 18); but nothing certain is known of their real position. [V.]

IATINUM (Ἰατίνων), according to Ptolemy (ii. 8. § 15) the city of the Medii, a people of Gallia Lugdunensis. It is supposed to be the same place as the Fixanum of the Table [FIXITINUM], and to be represented by the town of Meanz on the Marne. Walcheren, who trusts more to the accuracy of the distances in the Table than we safely can do, sought in the place Fixanum no exactly in the Table the usual mark which designates a capital town, and that the measures do not carry the position of Fixanum as far as Meanz, but only as far as Montboeuf. He conjectures that the word Fixanum may be a corruption of Fines Iatiniarum, and accordingly must be a place on the boundary of the little community of the Medii. This conjecture might be good, if the name of the people was Latin, and not Medii. [G. L.]

JATRIIPPA. [Lathrippa.]

IATRA or IATRUM (Ἱατρόν), a town in Moesia, situated at the point where the river Iatrus or Iatrix empties itself into the Danube, a few miles to the east of Ad Novas, (Procop. de Aed., iv. 7; Theophylact. vii. 2; Notit. Imp. 29, where it is erroneously called Latra; Geogr. Rav. iv. 7, where, as in the Post. Tab., it bears the name Laton.) [L. S.]

IATRUS (in the Post. Tab. Iatras), a river traversing the central part of Moesia. It has its sources in Mount Haemus, and, having in its course to the north received the waters of several tributaries, falls into the Danube close by the town of Iatra. (Plin. iii. 29, where the common reading is Ietrus; Jornand. Get. 18; Geogr. Rav. iv. 7.) It is probably the same as the Athrys (Ἄθρυς) mentioned by Herodotus (iv. 40). Its modern name is Iatros. [L. S.]
JAXARTES.

JAXARTES, JAXARTES (δ Ἰάξαρτης), the river of Central Asia which now bears the name of Syr-Daria, or Yellow River (Daria is the generic Tartar name for all rivers, and Syr=“yellow”), and which, watering the barren steppes of the Kirghiz-Cossacks, was known to the civilised world in the most remote ages.

The exploits of Cyrus and Alexander the Great have inscribed its name in history many centuries before our era. If we are to believe the traditional statements about Cyrus, the left bank of this river formed the N. limit of the vast dominion of that conqueror, who built a town, deriving its name from the founder [Cyrèschatā], upon its banks; and it was upon the right bank that he lost his life in battle with Tomyris, Queen of the Massagetae.

Herodotus (i. 201—216), who is the authority for this statement, was aware of the existence of the Syr-Daria; and although the name Jaxartes, which was a denomination adopted by the Greeks and followed by the Romans, does not appear in his history, yet the Araxes of Herodotus can be no other than the actual Syr, because there is no other great river in the country of the Massagetae. Much has been written upon the mysterious river called Araxes by Herodotus; M. de Guignes, Fosse, and Gatterer, suppose that it is the same as the Oxus or Amou-Daria; M. de la弩axe sees in it the Araxes of Armenia, while Bayer, St. Croix, and Larcher, misconceive that under this name the Volga is to be understood. The true solution of the enigma seems to be that which has been suggested by D'Anville, that the Araxes is an appellative common to the Amou, the Armenian Araxes, the Volga, and the Syr. (Comp. Araxes, p. 185; Mem. de l'Acad. des Inscr. vol. xxxvi. pp. 69—85; Heeren, Asiat. Notione, vol. ii. p. 19, trans.) From this it may be concluded, that Herodotus had some vague acquaintance with the Syr, though he did not know it by name, but confounded it with the Araxes; nor was Aristotele more successful, as the Syr, the Volga, and the Don, have been recognised in the description of the Araxes given in his Meteorologica (i. 13. § 15), which, it must be recollected, was written before Alexander's expedition to India. (Comp. Ideker, Meteorologica Vet. Graecor. et Rom. ad L. c., Berol. 1838; St. Croix, Examen Critique des Hist. d'Alex. P. 703.)

A century after Herodotus, the physical geography of this river-basin became well known to the Greeks, from the expedition of Alexander to Bactria and Sogdiana. In n. c. 329, Alexander reached the Jaxartes, and, after destroying the seven towns or fortresses upon that river the foundation of which was ascribed to Cyrus, founded a city, bearing his own name, upon its banks, ALEXANDRIA URUM (Ἀλεξάνδρεια Υρούμ). (Q. Curt. vii. 6; Arrian, Anab. iv. 1. § 3.)

After the Macedonian conquest, the Syr is found in all the ancient geographers under the form Jaxartes: while the country to the N. of it bore the general name of Sceytia, the tracts between the Syr and Amou were called Transoxiana. The Jaxartes is not properly a Greek word, it was borrowed by the Greeks from the Barbarians, by whom, as Arrian (Anab. iii. 27) asserts, it was called Oraxes (Ὀξάρτης). Various etymologies of this name have been given (St. Croix, Examen Critique des Hist. d'Alex. § 6), but they are too uncertain to be relied on; but whatever be the derivation of the word, certain it is that the Syr appears in all ancient writers under the name Jaxartes. Some, indeed, confounded the Jaxartes and the Tanais, and that purposely, as will be seen hereafter. A few have confounded it with the Oxus; while all, without exception, were of opinion that both the Jaxartes and the Oxus discharged their waters into the Caspian, and not into the Sea of Aral. It seems, at first sight, curious, to those who know, the true position of these rivers, that the Greeks, in describing their course, and determining the distance of their respective “embouchures,” should have taken the Sea of Aral for the Caspian, and that their mistake should have been repeated up to very recent times. Von Humboldt (Asie Centrale, vol. ii. pp. 162— 297) — to whose extensive inquiry we owe an invaluable digest of the views entertained respecting the geography of the Caspian and Oxus by classical, Arabian, and European writers and travellers, along with the latest investigations of Russian scientific and military men — arrives at these conclusions respecting the ancient junction of the Aral, Oxus, and Caspian:

1st. That, at a period before the historical era, but nearly approaching to those revolutions which preceded it, the great depression of Central Asia — the concavity of Turan — may have been one large interior sea, connected on the one hand with the Euxine, on the other hand, by channels more or less broad, with the Icy sea, and the Balkhash and its adjoining lakes.

2nd. That, probably in the time of Herodotus, and even so late as the Macedonian invasion, the Aral was merely a bay or gulf of the Caspian, connected with it by a lateral prolongation, into which the Oxus flowed.

3rd. That, by the preponderance of evaporation over the supply of water by the rivers, or by diurnal deposits, or by Plutonic convulsions, the Aral and Caspian were separated, and a bifurcation of the Oxus developed, — one portion of its waters continuing its course to the Caspian, the other terminating in the Aral.

4th. That the continued preponderance of evaporation has caused the channel communicating with the Caspian to dry up.

At present it must be allowed that, in the absence of more data, the existence of this great Aral-Caspian basin within the "historic period," must be a moot point; though the geological appearances prove by the equable distribution of the same peculiar organic remains, that the tract between the Aral and the Caspian was once the bed of an united and continuous sea, and that the Caspian of the present day is the small residue of the once mighty Aralo-Caspian Sea.

Strabo (xi. pp. 507—517) was acquainted with the track or position of this river, and has exposed the errors committed by the historians of Alexander (p. 508), who confounded the mountains of the Paropamisus — or Paropamisis, as all the good MSS. of Ptolomy read (Asie Centrale, vol. i. pp. 114—118) — with the Caucasus, and the Jaxartes with the Tanais. All this was imagined with a view of exalting the glory of Alexander, so that the great conqueror might be supposed, after subjugating Asia, to have arrived on the shores of the Caspian, the scene of the legend where Hercules unbound the chains of the fire-bringing Titan.

The Jaxartes, according to Strabo (p. 510), took its rise in the mountains of India, and he determines it as the frontier between Sogdiana and the nomad Sce-
JAXARTES.

Though the principal tribes of which the Sacae, Daeae, and Massagetae, and adds (p. 518) that its "embouchure" was, according to Patroclus, 80 parasang from the mouth of the Oxus. Pliny (vi. 18) says that the Scythians called it "Silis," probably a form of the name Syr, which it now bears, and that Alexander and his soldiers thought that it was the Tanais. It has been conjectured that the Alani, in whose language the word tan (Tan-aes, Dan, Dan) signified a river, may have brought this appellative first to the E., and then to the W. of the Aralo-Caspian basin, in their migrations, and thus have contributed to confirm an error so flattering to the vanity of the Macedonian conquerors. (Aisie Centrales, vol. ii. pp. 254, 291; comp. Schafarik, Stor. Alt. vol. i. p. 500.) Pomponius Mela (iii. 5, § 6) merely states that it watered the vast countries of Scythia and Sogdiana, and discharged itself into that E. portion of the Caspian which was called Scythicus Sinus.

Arrian, in recounting the capture of Cyropolis (Aesb. iv. 3, § 4), has mentioned the curious fact, that the Macedonian army entered the town by the dried-up bed of the river; these descissions are not rare in the sandy steppes of Central Asia,—as for instance, in the sudden drying up of one of the arms of the Jaxartes, known under the name of Tangan-Daira, the account of which was first brought to Europe in 1820. (Comp. Journ. Geog. Soc, vol. xiv. pp. 353—355.)

Pomponius (vi. 12, § 1) has fixed mathematically the sources, as well as the "embouchure," of the Jaxartes. According to him the river rises in lat. 43° and long. 125°, in the mountain district of the Comedi (σχετρι Κομηθών, § 3; Μου-Τάγχ), and throws itself into the Caspian in lat. 48° and long. 97°, carrying with it the waters of many affluents, the principal of which are called, the one Bascatres (Bacartia, § 3), and the other Demus (Δαμος, § 9). He describes it as watering three countries, that of the "Sacae," "Segdiana," and "Scythia intra Imaeo." In the first of these, upon its right bank, were found the Comai (Κόμοιοι) and Carataec (Καρατάρα, vi. 13, § 3); in the second, on the left bank, the Antaei (Ἀνταίει) and Drespiani (Ἀνταίει, § 5), who extended to the Oxus, the Tachomi (Τάχομοι), and Ihati (Ηθνα, vi. 12, § 4); in the third, in the Syr, the Jaxartes (Σαρτάρα), a numerous people (vi. 14, § 10), and near the "embouchure," the Ariacae (Ἀριάκαι, vi. 14, § 13). Ammianus Marcellinus (xxii. 6. § 59), describing Central Asia, in the upper course of the Jaxartes which falls into the Caspian, speaks of two rivers, the Arazates and Dymas (probably the Demus of Pomponius), "qui per juxta vallesque praeceptae in campstrem planitiam decurrentes Oximin nomine paludem effusa longa latine diffimina." This is the first intimation, though very vague, as to the formation of the Sea of Aral, and requires a more detailed examination.

[OXIA PALIS.]

The obscure Geographer of Ravenna, who lived, as it is believed, in the 7th century A. D., mentions the Jaxartes river in describing Hyrcania.

Those who wish to study the accounts given by mediæval and modern travellers, will find much valuable information in the "Descriptio rerum in Asiae Minoris," the "River Jaxartes" annexed to Lefevre, Horae et Steppes des Kirghiz-Kazakhs, Paris, 1840. This same writer (pp. 53-70) has described the course of the Syr-Daria, which has its source in the mountains of

Kochkar-Djalan, a branch of the range called by the Chinese the "Mountains of Heaven," and taking an N.W. course through the sandy steppes of Kizilk-Konm and Kara-Konam, unites with those of the Sea of Aral, on its E. shores, at the gulf of Kamechlen-Bachi.

[E. B. J.]

JAXAMATAE (Ἰάξαμαται, Ιάξαματα, Ἰαξκαται, Ιαςκαται, Ιασκαται, Ionmata, Amm. Marc. xxii. 8. § 51; Exonmata, Val. Flacc. Argonaut. vi. 144, 569) a people who first appear in history during the reign of Satyrus III., king of Bospurus, who waged war with Tigratoo, their queen. (Polyen. viii. 55.) Thucydides attribute them to the Sarmatian stock. (Symm. Fr. p. 140; Anon. Peripl. Eux. p. 2.) Pomponius Mela (i. 19, § 17) states that they were distinguished by the peculiarity of the women being as tried warriors as the men. Ptolemy (v. 9) has placed them between the Don and Volga, which agrees well with the position assigned to them by the authors mentioned above. In the second century of our era they disappear from history. Schafarik (Stor. Alt. vol. i. p. 340), who considers the Sarmatians to belong to the Median stock, connects them with the Median word "mot" as "people," in the termination Sarmatae; but it is more probable that the Sarmatians were Slavonians.

[E. B. J.]

JAZYGES, ΙΑΖΥΓΕΣ (Ἰαζύγες, Steph. B. Iazyx), a people belonging to the Sarmatian stock, whose original settlements were on the Palus Marcicis. (Pol. iii. 5, § 19; Strab. vii. p. 306; Arrian, Aesb. 1, 3; Amm. Marc. xxii. 8, § 31.) They were among the barbarian tribes armed by Mithridates (Appian, Mithr. 69); during the banishment of Ovid they were found on the Danube, and in Bessarabia and Wallachia (Ep. ex Pont. i. 2, 79, iv. 7, 9, Trist. ii. 19. 1.) In A. D. 50, either induced by the rich pastures of Hungary, or forced onwards from other causes, they no longer appear in their ancient seats, but in the plains between the Lower Theiss and the mountains of Transylvania, from which they had driven out the Dacians. (Tac. Ann. xii. 29; Plin. iv. 12.) This migration, probably, did not extend to the whole of the tribe, as is implied in the surname "Metastatae," henceforward history speaks of the Jazygæs Meta-

nastæ (Ἰαζύγες εἰς Μετατάτας), who were the Sarmatians with whom the Romans so frequently contended. (Comp. Gibbon, c. xviii.) In the second century of our era, Pomponius (iii. 7) assigns the Danube, the Theiss, and the Carpathians as the limits of this warlike tribe, and enumerates the following towns as belonging to them:—USECUM (Οὔσεκον); BORUMANUM OR GORNAMUS (Βορομάνος, al. Βόρομας); AIDA or ABINTA (Αἰάδης, al. Αἴδητα); TRISSUM (Τρίσσων); CANDANEUM (Κανδανέων); FARCA (Φαρκα); PESSUM (Πέσσου); and PARTISUCUM (Παρτίσουκον). These towns were, it would seem, constructed not by the Jazygæs themselves, who lived in tents and wagons, but by the former Slave inhabitants of Hungary; and this supposition is confirmed by the fact that the names are partly Keltic and partly Slavish. Mannert and Reichard (Forbiger, vol. iii. p. 1111) have guessed at the modern representatives of these places, but Schafarik (Stor. Alt. vol. i. p. 514) is of opinion that no conclusion can be safely drawn except as to the identity of Death with Poinsum, and of Partisucum with Partisucum.

The Iazyges lived on good terms with their neighbours on the W., the German Quadi (Tac. Hist. iii. 5), with whom they united for the purpose of subjugation.
JAZYGES.

The northern tribes vanished by Hermanric in A.D. 332—350, and that they were the same people as those described by Ptolemy (De Reb. Get. § 5) under the corrupt form IANUINX.

There is a monograph on this subject by Hennig (Comment de Rebus Iazygum S. Iacovergerus, Regiomont., 1812); a full and clear account of the fortunes of these peoples will be found in the German translation of the very able work of Schafarik, the historian of the Slavish races.

In 1799 a golden dish was found with an inscription in Greek characters, now in the Imperial cabinet of antiquities at Vienna, which has been referred to the Iazyges. (Von Hammer, Osman. Gesch. vol. iii. p. 726.)

IBERA.

The name survives in the modern Ián, St. Martin, the historian of Armenia (Mém. sur l'Arménie, vol. i. p. 117), says, that according to native traditions, Ián is a very ancient city, the foundation of which was attributed to Semiramis. Ruined in course of time, it was rebuilt by a king called Van, who lived a short time before the expedition of Alexander the Great, and who gave it his name; but, having again fallen into decay, it was restored by Vagh-Ar-bang (Vahvasses), brother to Arsaces, and first king of Armenia of the race of the Arsacidae.

In the middle of the 4th century after Christ it was captured by Sapor B. (Bitter, Eroldame, vol. ix. pp. 877, 981; London Geog. Journal, vol. viii. p. 66.)

[ARTENITA BUANA.]

[IBER. [IBERUS.]]

IBERA, a city of Hispania Citerior, mentioned only by Livy, who gives no explicit account of its site, further than that it was near the Ibera (Ébro), whence it took its name; but, from the connection of the narrative, we may safely infer that it was not far from the sea. At the time referred to, namely, in the Second Punic War, it was the wealthiest city in these parts. (Livy, xxxii. 28.) The manner in which Livy mentions it seems also to warrant the conclusion that it was still well known under Augustus. Two coins are extant, one with the epigraph MUN.

HIBERJA JULIA on the one side, and IBERCAYVONI on the other; and the other with the head of Tiberius on the reverse, and on the reverse the epigraph M. U. J. IBERCAVONI; whence it appears to have been made a municipium by Julius, or by Augustus in his honour, and to have been situated in the territory of the IBERCAEONI. The addition DEKT. on the latter of these coins led Harduin to identify the place with Dertosa, the site of which, however, on the left bank of the river, does not agree with the probable position of Ibera. Flórez supposes the allusion to be to a treaty between Ibera and Dertosa. The ships with spread sails, on both coins, indicate its maritime site, which modern geographers seek on the S. side of the delta of the Ébro, at S. Carlos de la Rápita, near Amposta. Its decay is easily accounted for by its lying out of the great high road, amidst the malaria of the river-delta and in a position where its port would be choked by the alluvial deposits of the Ébro. It seems probable that the port is now represented by the Southern lagoon called Puerto de los Altijares, which signifies Port of the Jaws, i.e. of the river. (Plin. iii. 3. s. 4; Harduin, ad loc.; Narca, Hist. ii. 8; Flórez, Méd. de Esp. vol. ii. p. 435; Sestini,

[Is. 8 S.]

IBERIA (ἡ Ιβηρία), the extensive tract of country which lies between the Euxine and Caspian seas, to the north of the Caucasus, and which, bounded on the W. by Colchis, on the E. by Albania, and the S. by Armenia, is watered by the river Cyrus (Kür). (Strab. xi. p. 499, comp. i. pp. 45, 69; Pomp. Mai. iii. 5. § 6; Plini. vi. 11; Pol. v. 11.) From these limits, it will be seen that the Iberia of the ancients corresponds very nearly with modern Georgia, or Grazia, as it is called by the Russians. Strabo (p. 500) describes it as being hemmed in by mountains, over which there were only four passes known. One of these crossed the Moschičj Montes, which separated Iberia from Colchis, by the Colchian fortress Sarapana (Scharapon), and is the modern road from Mingrelia into Georgia over Suram. Another, on the N., rises from the country of the Nomades in a steep ascent of three days' journey (along the valley of the Terek or Teryfl); after which the road passes through the Aragaci country, a journey of four days, where the pass is closed at the lower end by an impregnable wall. This, no doubt, is the pass of the celebrated Caucasian Gates (Caucasae Portae), described by Pliny (vi. 12) as a prodigious work of nature, formed by abrupt precipices, and having the interval closed by gates with iron bars. Beneath ran a river which emitted a strong smell ("Salter medias fores, sume diri odoris fluens," Plin. L. c.). It is identified with the great central road leading from the W. of Georgia by the pass of Darigel, so named from a fortress situated on a rock washed by the river Terek, and called by the Georgians Shevis Kori, or the Gate of Shevi. The third pass was from Albania, which at its commencement was cut through the rock, but afterwards went through a marsh formed by the river which descended from the Caucasus, and is the same as the defile now called Derbend or "narrow pass," from the chief of Tlie de Strab. (p. 499) speaks of the numerous cities of Iberia, with their houses having tiled roofs, as well as some architectural pretensions. Besides this, they had market-places and other public buildings.

The people of the Iberes or Iberos (Ἰβηρης, Steph. B. s. v.) were somewhat more civilised than their neighbours in Colchis. According to Strabo (p. 500), they were divided into four castes: —

(1.) The royal hore, from which the chiefs, both in peace and war, were taken. (2.) The priests, who acted also as arbitrators in their quarrels with the neighbouring tribes. (3.) Soldiers and husbandmen. (4.) The mass of the population, who were slave-like beings. The term of government was patriarchal. The people of the plain were peaceful, and cultivated the soil; while their dress was the same as that of the Armenians and Medes. The mountaineers were more warlike, and resembled the Scythians and Sarmatians. As, during the time of Herodotus (ii. 9), Colchis was the N. limit of the Persian empire, the Iberians were probably, in name, subjects of that monarchy. Along with the other tribes between the Caspian and the Euxine, they acknowledged the supremacy of Mithridates. The Romans became acquainted with them in the campaigns of Lucullus and Pompeius. In n. c. 65, the latter general commenced his march northwards in pursuit of Mithridates, and had to fight against the Iberians, whom he compelled to sue for peace. (Plint. Pomp. 34.) A.D. 35, when Tibers set up Tithdates as a claimant to the Parthian throne, he induced the Iberian princes, Mithridates and his brother Pharasmanes, to invade Armenia; which they did, and subdued the country. (Tac. Ann. vi. 33 —36; comp. Dict. of Biog. Pharasmanes.) In A.D. 113, when Armenia became a Roman province under Trajan, the king of the Iberians made a form of submitting himself to the emperor. (Eutrop. viii. 15; Dion Cass. lix. 15; Spartan. Hist. 17.)

Under the reign of Constantine the Iberians were converted by a captive woman to Christianity, which has been preserved there, though mixed with superstition, down to the present times. One of the original sources for this story, which will be found in Nennier (Allegeme, Gesch. der Christl. Relig. vol. iii. pp. 235 —266; comp. Nilman, Hist. of Christianity, vol. ii. p. 450), is Rufinus (s. 10), from whom the Greek church historians (Socrates. i. 20; Sozom. ii. 7; Theod. i. 24; Mos. Choren. ii. 53) have borrowed it. In A.D. 365 —378, by the ignominious treaty of Jovian, the Romans renounced the sovereignty and alliance of Armenia and Iberia. Sapor, after subjugating Armenia, marched against Sauronaces, who was king of Iberia by the permission of the emperors, and, after expelling him, reduced Iberia to the state of a Persian province. (Anon. Mar. xvi. 12; Gibbon, c. xxv; Le Blanc, Bas Empire, vol. iii. p. 357.)

During the wars between the Roman emperors and the Sasanian princes, the Iberian Gates had come into the possession of a prince of the Huns, who offered this important pass to Anastasius; but when the emperor built Durus, with the object of keeping the Persians in check. Cobades, or Kbal, seized upon the defiles of the Caucasus, and fortified them, though less as a precaution against the Romans than against the Huns and other northern barbarians. (Procop. B. P. i. 10; Gibbon, c. xli; Le Blanc, vol. vi. pp. 269, 442, vol. vii. p. 398.) For a curious history of this pass, and its identification with the fabled wall of Geg and Javgg, see Humboldt, Asie Centrale, vol. ii. pp. 93 —104; Eichwald, Peripl. del Cosp. Marres, vol. i. pp. 128 —132. On the decline of the Persian power, the Iberian frontier was the scene of the operations of the emperors Maurice and Heraclius. Iberia is now a province of Russia.

The Georgians, who do not belong to the Indo-European family of nations, are the same race as the ancient Iberians. By the Armenian writers they are still called Virk, a name of perhaps the same original as Iberes. They call themselves Kartli, and derive their origin, according to their national traditions, from an eponymous ancestor, Karidos. Like the Armenians, with whom, however, there is
no affinity either in language or descent, they have an old version of the Bible into their language. The structure of this language has been studied by Adelung (Mithridat. vol. i. pp. 430, foll.) and other modern philologists, among whom may be mentioned Bresset, the author of several learned memoirs on the Georgian grammar and language: Klapproth, also, has given a long vocabulary of it, in his Asia Polychotota.

Armenian writers have supplied historical memoirs to Georgia, though it has not been entirely wanting in domestic chronicles. These curious records, which have much the style and appearance of the half-legendary mishkhis histories of other countries, are supposed to be founded on substantial truth. One of the most important works on Georgian history is the memoirs of the celebrated Ossetian family, which have been published by St. Martin, with a translation. Some account of these, along with a short sketch of the History of the Georgians and their literature, will be found in Prichard (Physical Hist. of Mankind, vol. iv. pp. 261—276). Dubois de Montprévost (Voyage autour du Caucase, vol. ii. pp. 8—169) has given an outline of the history of Georgia, from native sources; and the maps in the magnificent Atlas that accompanies his work will be found of great service.

[EB. J.]

IBERIA INDAES (1689, Peripl. M. E. p. 24, ed. Hudson), a district placed by the author of the Periplos between Iarica and the Siculoians. It was doubtless peopled by some of the Siculoian tribes, who gradually made their descent to the S. and E. part of Scinde, and founded the Indo-Siculoie empire, on the overflow of the Greek kings of Iarica, about B.C. 136. The name would seem to imply that the population who occupied this district had come from the Caucasus.

[EB.]

IBERICUM MAEAE. [HISPANUM MAREAE.]

IBERES, IBERI, IBERIA. [HISPANIA.]

IBERIGAE (1692, Peripl. v. 2, § 18), a people placed by Ptolemy between the Beiyyurus Mois (Varoia Mois.) and the Montes Damiasi, in India extra Gangem, near the Brahmaputra. [EB.]

IBIS (1670, gen. —sis, and —tis; in MSS. often Iberis, Ebro), one of the chief rivers of Spain, the basin of which includes the NE. portion of the peninsula, between the great mountain chains of the Pyrenees and Ibedua. [HISPANIA.] It rises in the mountains of the Cantabri, not far from the middle of the chain, near the city of Julidriga (the source lies 12 miles W. of Reginnois), and, flowing with a nearly uniform direction to the E., after a course of 450 M. P. (540 miles), into the Mediterranean, in 40° 42' N. lat., and 0° 50' E. long., forming a considerable delta at its mouth. It was navigable for 260 M. P. from the town of Varia (Varoca, in Burgos). Its chief tributaries were:—on the left, the Scorritis (Scyre) and the Galligus (Galigo), and on the right the Salo (Xalon). It was long the boundary of the two Spain (HISPANIA), whence perhaps arose the error of Appian (Hist 6), which makes it divide the peninsula into two equal parts. There are some other errors not worthy of notice. The origin of the name is disputed. Dismissing derivations from the Phoenician, the question seems to depend very much on whether the Iberians derived their name from the river, as was the belief of the ancient writers, or whether the river took its name from the people, as W. von Humboldt contends. If the former was the case, and if Niebuhr's view is correct, that the popula-

ICARUS, ICARIA.

ICARUS, ICARIA (Icaros, 'Icaria: Nikaria), an island of the Aegean, to the west of Samos, according to Strabo (x. p. 480, xiv. 639), 80 stadia from Cape Ampelos, while Pliny (v. 23) makes it 35 miles. The island is in reality a confirmation of the range of hills traversing Samos from east to west, whereas it is long and narrow, and extend from NE. to SW. Its length, according to Pliny, is 17 miles, and its circumference, according to Strabo, 300 stadia. The island, which gave its name to the whole of the surrounding sea (Icarium Mare or Pelagus), derived its own name, according to tradition, from Icarus, the son of Daedalus, who was believed to have fallen into the sea near this island. (Or. Met. viii. 195, foll.) The cape forming the easternmost point of the island was called Drepamum or Dromacum (Strab. xiv. pp. 637, 639; Hom. Hyg. xxvii. 1; Dion. Sic. iii. 66; Plin. iv. 23; Steph. B. s. v. Oeboeov); and near it was a small town of the name of Icarus. Further west, on the north coast, was the small town of Isti (Istoa), with a tolerably good roadstead; to the south of this was another little place, called Oenoet (Oenoe, Strab. I. 5; Athen. I. p. 50). According to some traditional, Doryphus was born on Cape Dromacum (Theocrit. Idyl. xxxi. 33), and Artemis had a temple near Isti, called Tauropelion. The island had received its first colonists from Miletus (Strab. xiv. p. 635); but in the time of Strabo it belonged to the Samians, and was mainly used by the Samians as pasture land for their flocks. (Strab. x. p. 488, xiv. p. 639; Sykoc., pp. 22; Ateneo. Pers. 857; Thucyd. ii. 92, viii.)
ICARUSA.

99; Prot. v. 2 § 30; P. Mela, ii. 7.) Modern writers derive the name of Icaria from the Ionic word ψηφα, a pasture (Hesych. s. v. Ψῆφος), according to which it would mean "the pasture land." In earlier times it is said to have been called Dolche (Plin. l. c.; Callim. Hymn. in Dion. 187), Macris (Plin. l. c.; Eustath. ad Dionys. Per. 530; Liv. xxvi. 13), and Ilethyoessa (Plin. l. c.). Respecting the present condition of the island, see Toumefort, Voyage du Lévant, ii. lett. 9. p. 94; and Ross, Reisen auf den Griech. Inseln, vol. ii. p. 164, fol.  

[ L. S.]

COIN OF OKEOE OR OENAE, IN ICARUS.

ICARUSA, a river the embouchare of which is on the E. coast of the Exuine, mentioned only by Pliny (vi. 5). Icarsus answers to the Ukraš river; and the town and river of Hieros is doubtless the Hieros Portus (ἵππος λιθώς) of Arrian (Peripit. p. 19), which has been identified with Sunik-kala. (Renouel, Compar. Geog. vol. ii. p. 328.) [E. B. J.]

ICAUNUS or ICAUNA (Imone), in Gallia, a river which is a branch of the Sequana (Séine). Autelodorum or Autodulorum (Auxerre) is on the Ionne. The name Icaunus is only known from inscriptions. D'Anville (Notice, &c., s. e. Leonna, states, on the authority of the Abbé le Beuf, that there was found on a stone on the modern wall of Auxerre the inscription DEAE ICAUN. He supposes that Icauni ought to be Icaunae, but without any good reason. He also adds that the name Leonna appears in a writing of the 5th century. According to Ubert (Gallien, p. 145), who also cites Le Beuf, the inscription is "Debus Icauni." It is said that in the ninth century Auxerre was named Icauna, Hisona, Nyma. (Milin, Voyage, i. p. 167, cited by Ubert, Gallien, p. 474.) Icauna is as likely to be the Roman form of the original Celtic name as Icaunus.  

[ G. L.]

ICENI, in Britain. Tacitus is the only author who gives us the exact form Iconi. He mentions them twice. First, they are defeated by the proprietor P. Otorius, who, after fortifying the valleys of the Austena (Autfena) and Sabrina, reduces the Iceni, and then marches against the Cangi, a population sufficiently distant from Norfolk or Suffolk (the area of the Iceni) to be near the Irish Sea. (Ann. xi. 31, 52.) The difficulties that attend the geography of the campaign of Otorius have been indicated in the article CAMULODUNUM. It is not from this passage that we fix the Iceni.  

The second notice gives us the account of the great rebellion under Boadicea, wife of Prasatogatus. From this we infer that Camulodunum was not far from the Iceni area, and that the Trinobantes were a neighboring population. Perhaps we are justified in carrying the Iceni as far south as the frontiers of Essex and Herts. (Ann. xv. 31—57.) The real reason, however, for fixing the Iceni lies in the assumption that they are the same as the Sinemi of Ptolemy, whose town was Venta (Norwich or Calais); an assumption that is quite reasonable, since the Venta of Ptolemy's Sinemi is mentioned in the Itinerary as the Venta Icenorum, and in contradistinction to the Venta Belgarum (Winchester).  

[R. G. L.]

IGR (Ix), a river of Central Asia, which only occurs in Menander of Byzantium (Hist. Lact. § 3. Barbarorum ad Romanos, p. 300), ed. Niebuhr, Bonn, 1829), surnamed the "Protector," and contemporary with the emperor Maurice, in the 6th century after Christ, to whom comparative geography is indebted for much curious information about the basin of the Caspian and the rivers which discharge themselves into it on the E. Niebuhr has recognized, in the passage from Menander to which reference has been made, the first intimation of the knowledge of the existence of the Lake of Aral, after the very vague intimations of some among the authors of the classical period. Von Humboldt (Asie Centrale, vol. ii. p. 186) has identified the Ick with the Emba or Dzem, which rises in the mountain range Airurak, not far from the sources of the Bot or Djem, but according to Sillig, an island of the river, and, after traversing the sandy steppes of Songiz and Bukhara, falls into the Caspian at its NE. corner. (Comp. Leveau, Histoire et Steppes des Caspien, Kazaats, p. 65.) [E. B. J.]

ICIANA (Icyana, Eth. Icyano), a city of Sicily, which, according to Stephanus of Byzantium, held out for a long time against the arms of the Syracusans, whence it derives its name (from the verb ικυάω, a form equivalent to λιηναίω), but gives us no indication of the period to which this statement refers. The Icianenes, however, are mentioned by Pliny (iii. 8, s. 14) among the stilt-pendary towns of the interior of Sicily, though, according to Sillig (ad loc.), the true reading is Iapaneses. (Hist. Ician.) In either case we have no clue to the position of the city, and it is a mere random conjecture of Claveros to give the name of Ielianus to the ruins of a city which still remain at a place called Vindicari, a few miles N. of Cape Pachyum, and which were identified (with still less probability) by Fazello as those of Ischamara. (Imachara.) [E. H. B.]

ICINAE (Icyana), a city of Bottiae, in Macedonia, which Herodotus (vii. 123) couples with Pella. (Leske, Travels in Northern Greece, vol. iv. p. 382.) [E. B. J.]

ICINAE (Icyana, Isid. Char. p. 5; Stephan. B. a. v.), a small fortified town, or castle, in Mesoopotamia, situated on the river Bilecha, which itself flowed into the Euphrates. It is said by Labors to have owed its origin to the Macedonians. There can be little doubt that it is the same place as is called in Dion Cassius Icyana (xii. 12), and in Plutarch Icyana (Cox. c. 25). According to the former writer, it was the place where Crassus overcame Talymenas; according to the latter, that to which the younger Crassus was persuaded to fly when wounded. Its exact position cannot be determined; but it is clear that it was not far distant from the important town of Carrhae. (V.)

ICCIUS PORTUS. [Icynea.]

ICHTHYOPHAGHI. [Icybnogéou, Disd. iii. 15, seq.; Herod. iii. 19; Pansan. i. 33. § 4; Pliny vii. 30. s. 32], were one of the numerous tribes dwelling on each shore of the Red Sea which derived their appellation from the principal article of their diet. Fish-eaters, however, were not confined to this region; in the present state of things, wherever the fish are plenty, and as the sea is salt, there are, and are found on the coasts of New Holland. The Arthiopian Icthyophagi, who appear to have been the most numerous of these
tribes, dwelt to the southward of the Regio Troglo-
dytica. Of these, and other more inland races, con-
cerning whose strange forms and modes of life
curious tales are related by the Greek and Roman
writers, a further account is given under TROGLO-
dYTICAE. [W. B. D.]

**ICTHYOPHAGORUM SINUS (Βυθόφαγος των Σμύρνων, [18]), a deeply embayed por-
tion of the Persian gulf, in lat. 25° N., situated
between the headlands of the Sun and Asabé on the
eastern coast of Arabia. The inhabitants of its bor-
ders were of the same mixed race — Aethiopo-Ara-
bic — with the Ichthyophagi of Athiopia. The
bay was studded with islands, of which the prin-
cipal were Aradus, Tylos, and Tharros. [W. B. D.]

**ICTHYUS. [Elis, p. 817, b.]

**ICIANI. In Britain, mentioned in the Itinerary as
a station on the road from London to Carlisle (Lun-
galium). As more than one of the stations on each side
(Villa Fanstini, Cambircum, &c.) are uncertain, the
locality of the Iciani is uncertain also. Chesh-
ford, Iscurbe, and Thelford are suggested in the
Monumenta Britannica. [R. G. L.]

**ICIDMAGUS, a town of Gallia Lugdunensis, is
placed by the Table on a road between Rheesus
(supposed to be St. Thivos) and Avnne Segeta. [18]
Icidimus is probably Icen-
gorii or Issinhaus, which is SSW. of St. Etienne,
on the west side of the mountains, and in the basin
of the Upper Loire. The resemblance of name is
the chief reason for fixing on this site. [G. L.]

**ICIONI (Ικιονιια), an Alpine people of Gallia.
Strabo (p. 135) says: "Above the Cavares are the
Voconii, and Trictici, and Icioni, and Peduli;" and
again (p. 203): Next to the Voconii are the Si-
cionii, and Trictici, and after them the Meduli (Me-
dulli), who inhabit the highest summits. These
Icioni and Siconii are evidently the same people,
and the sigma in the name Siconii seems to be merely a
repetition of the final sigma of the word ικιονιο-νοια.
The Peduli of the first passage, as some editions have it,
is also manifestly the name Medulli. The
ascertained position of the Cavares on the east side of
the Rhone, between the Durunco and Isor, and
that of the Voconii, part of the Cavares, as given by
Strabo's remark about the position of the Me-
dulli, show that the Trictici and the Icioni are be-
 tween the Voconii and the Medulli, who were on
the High Alps: and this is all that we know. [G. L.]

**ICONIUM (Ικωνιονιον, Eth. Ικωνιονες; Κογις,
Κυνιος, or Κυνιεχ), was regarded in the time of
 Xenophon (Athen. i, 2, 19) as the easternmost
town of Phrygia, while all later authorities describe
it as the principal city of Lycaonia. [Cic. ad Fam.
iii. 6, 8, sv, 3] Strabo (xii. p. 568) calls it a ιο-
Ακιον, whence we must infer that it was then
still a small place; but he adds that it was well
peopled, and was situated in a fertile district of
Lycaonia. Pliny (v. 27), however, and the Acts of
the Apostles, describe it as a very populous city,
 inhabited by Greeks and Jews. Hence it would
 appear that, within a short period, the place had
 greatly risen in importance. In Pliny's time the territory
of Iconium formed a tetrarchy comprising 14 towns,
of which Iconium was the capital. On coins belonging
to the reign of the emperor Galienus, the town is
called a Roman colony, which was, probably, only
an assumed title, as no author speaks of it as a colony.
Under the Byzantine emperors it was the metropolis
of Lycaonia, and is frequently mentioned (Hieroc.
p. 675); but it was wrested from them first by the

**ICTIS. Saracens, and afterwards by the Turks, who made it
the capital of an empire, the sovereigns of which
took the title of Sultans of Iconium. Under
the Turkish dominion, and during the period of the
Crusades, Iconium acquired its greatest celebrity. It is
still a large and populous town, and the residence of a
pasha. The place contains some architectural
remains and inscriptions, but they appear almost all
to belong to the Byzantine period. [Comp. Ann.
Marc. xiv. 2; Steph. B. a.; Pol. v. 6, 16; Laske, Asia Minor, p. 48; Hamilton, Researches,
vol. ii. p. 205, fol.; Echel, vol. iii. p. 31; Sestini, Geo. Num. p. 48.] The name Iconium led the an-
cients to derive it from ἱκτῶν, which gave rise to the
false that the city derived its name from an image
of Medusa, brought thither by Perseus (Bustath. ad
Ptole. Per. 868); hence Stephanus B. maintains that
the name ought to be spelt ἵκτων, a form
actually adopted by Eustathius and the Byzantine
writers, and also found on some coins. [L. S.]

**ICORIUM. [Egorigium.]

**ICOS. [Ictus.]

**ICOSITANA. [Ilis].

**ICOSLUM (Ἰκόσλοιμον: Algier), a city on the coast
of Mauretania Caesariensis, E. of Caesarea, a colony
and one of the Roman empire, and presented by Vespasian
with the four Larum. [Ilin. Anton. 3, 57; Ilin. vi.
6, 1; Ilin. v. 2, s. 1; Pol. iv. 2, 6.] Its site,
already well indicated by the numbers of Ptolemy,
who places it 30° W. of the mouth of the Savus,
has been identified with certainty by inscriptions dis-
covered by the French. (Pellissier, in the Explo-
Many modern geographers, following Manet, who
was misled by a confusion in the numbers of the
Itinerary, put this and all the neighbouring places
too far west. [Comp. Ict.] [P. S.]

**ICTIMULI or VICTIMULI (Ικτιμωνονια, Strab.), a people of Cisalpine Gaul, situated at the
foot of the Alps, in the territory of Vercellae. They
are mentioned by Strabo (v. 215), who speaks of
a village of the Ictimuli, where there were gold mines,
which he seems to place in the neighbourhood of
Vercellae; but the passage is so confounded that it
would be unjust to lay much stress on it. Pliny,
indeed, combined with Strabo's remark about the
position of the Medulli, show that the Trictici and the Icioni are be-
tween the Voconii and the Medulli, who were on
the High Alps: and this is all that we know. [G. L.]

**ICTINUM (Ικτινιον; Eth. Ικτινες; Cogni,
Κυνιος, or Κυνιεχ), was regarded in the time of
Xenophon (Athen. i, 2, 19) as the easternmost
town of Phrygia, while all later authorities describe
it as the principal city of Lycaonia. [Cic. ad Fam.
iii. 6, 8, xv. 3] Strabo (xii. p. 568) calls it a ιο-
Ακιον, whence we must infer that it was then
still a small place; but he adds that it was well
peopled, and was situated in a fertile district of
Lycaonia. Pliny (v. 27), however, and the Acts of
the Apostles, describe it as a very populous city,
 inhabited by Greeks and Jews. Hence it would
 appear that, within a short period, the place had
 greatly risen in importance. In Pliny's time the territory
of Iconium formed a tetrarchy comprising 14 towns,
of which Iconium was the capital. On coins belonging
to the reign of the emperor Galienus, the town is
called a Roman colony, which was, probably, only
an assumed title, as no author speaks of it as a colony.
Under the Byzantine emperors it was the metropolis
of Lycaonia, and is frequently mentioned (Hieroc.
p. 675); but it was wrested from them first by the

**ICTIS. in Britain, mentioned by Diodorus Siculus
(v. 22) as an island lying off the coast of the tin
districts, and, at low tides, becoming a peninsula,
whither the tin was conveyed in waggons. St. Mi-
chael's Mount is the suggested locality for Ictis
Probably, however, there is a confusion between the Isle of Wight, the Isle of Portland, the Scilly Isles, and the Isle just mentioned; since the name is suspiciously like Veta, the physical conditions being different. This view is confirmed by the text of Pline (vi. 30), who writes, "Timaeus, historian of a Britannia introitus sex dierum navigatione abesse duct insulam Miction in qua eandem ubum phunum praebuit; ad eam Britannios vitivitis navigio cirruscatum navigavi." 

**ICTODURUM.** in Gallia. The Antinome Lin. placis Caturiges (Chorges) on the road between Ebrosudum (Eubrion) and Vapincon (Gap); and the Table adds Ictodurum between Caturigermans, which is also Chorges, and Vapincon. We may infer from the name that Ictodurum is some stream between Chorges and Gap; and the Table places it half-way. The road distance is more than the direct line. By following the road from either of these places towards the other till we come to the stream, we shall ascertain its position. D'Anville names the small stream the Vence; and Walckenaer, the name of the island. Ictodurum in Bonste De Ville. 

**ICULISMA.** A place in Gallia, mentioned by Ansonius (Ep. xv. 22) as a retired and lonely spot where his friend Tetradus, to whom he addresses this poetical epistle, was at one time engaged:—

"Quondam docendi maestre adstrictum gravi
Icullismum cum te abscederent.

It is assumed to be the place called Civitas Eciliemensum in the Notitia Prov. Gall., which is Augusteum, in the French department of Charente, on the river Charente. 

**ICUS (Icox; Eth. /Icoxos),** one of the group of islands off the coast of Magnesia in Thessaly, lay near Peraephurus, and was colonised at the same time by the Cossians of Crete. (Seymour, Chius, 582; Strab. ix. p. 436; Appian, B. C. v. 7.) The fleet of Attalus and the Rhodians sailed past Seycus to Icus. (Liv. xxxi. 45.) Phanodemus wrote an account of this insignificant island. (Steph. B. s. v.) It is now called Sarakinia. (Leake, Northern Greece, vol. iii. p. 312.)

**IDA. IDAEOUS MONS (♀ Idu, 16a: Ida), a range of mountains of Phrygia, belonging to the system of Mount Taurus. It traverses western Asia Minor in many branches, whence it was compared by the ancients to the scorpion or millipede (Strab. xiii. p. 583), its main branch extending from the south-east to the north-west; it is of considerable height, the highest point, called Gargaron or Gargaron, rising about 4650 feet above the level of the sea. The greater part is covered with wood, and contains the sources of innumerable streams and many rivers, whence Homer (II. viii. 45) calls the mountain Aproantak. In the Homeric poems it is described as rich in wild beasts. (Comp. Strab. xiii. pp. 602, 604; Hom. H. ii. 824, vi. 238, viii. 170, xi. 153, 196; Athen. xv. 8; Hor. Od. iii. 20, 15; Ptole. v. 2, § 13; Plin. v. 32.) The highlands about Zeleia formed the northern extremity of Mount Ida, while Lectum formed its extreme point in the south-west. Two other subordinate ranges, paring from the principal summit, one at Cape Rhoeo, the other at Sigurni, may be said to enclose the territory of Troy in a crescent; while another central ridge between the two, separating the valley of the Scamander from that of the Sinoes, gave to the whole the form of the Greek letter epsilon. (Demetr. ap. Strab. xiii. p. 597.) The principal rivers of which the sources are in Mount Ida, are the Sinoes, Scamander, Granicus, Aeseus, Rhodius, Carens, Idaea, and others. (Horn. H. ii. 20, &c.) The highest peak, Gargaron, affords an extensive view over the Hellespont, Propontis, and the whole surrounding country. Besides Gargaron, three other high peaks of Ida are mentioned: viz. Cotylus, about 3500 feet high, and about 150 stadia above Scopasis; Pytna; and Diete. (Strab. xiii. p. 472.) Timotheus (ap. Steph. B. s. v. Αἰγαλέως) and Strabo (xiii. p. 606) mention a mountain belonging to the range of Ida, near Aratus, which bears the name of Andania, where Paris (Alexander) was believed to have pronounced this judgment as to the beauty of the three goddesses. (Comp. Clarke's Travels, ii. p. 134; Hunt's Journal in Wyalce's Turkey, i. p. 120; Cramer's Asin Minor, i. 120.) [L. S.]

**IDA (Iteq, Prot. iii. 17; § 9; Pomp. Nela. vii. 7; § 12; Plin. iv. 12, xvi. 33; Virg. Aen. iii. 105; Sechin. ii.; Avien. 176; France. iii. 338), the central and hottest point of the mountain range, which crosses the island of Andania, where Paris (Alexander) was believed to have pronounced this judgment as to the beauty of the three goddesses. (Comp. Clarke's Travels, ii. p. 134; Hunt's Journal in Wyalce's Turkey, i. p. 120; Cramer's Asin Minor, i. 120.) [L. S.]

**IDALIA, IDALIUM.** The Cretan Ida, like its Trojan namesake, was connected with the working of iron, and the Idacan Dactyls, the legendary discoverers of metallurgy, are assigned sometimes to the one and sometimes to the other. Wood was essential to the operations of smelting and forging; and the word Ida, an appellative for any wood-covered mountain, was used perhaps, like the German berg, at once for a mountain and a mining work. (Kenrick, Aegypt of Herodotus, p. 278; Hick, Krete, vol. i. p. 4.) [E. B. J.]

**IDACUS (I'kocas), a town of the Thracian Chersonese, mentioned by Thucydides (viii. 104) in his account of the manoeuvres before the battle of Cyprusacum, and not far from Arkehana. Although nothing whatever is known of these places, yet, as the Athenians were sailing in the direction of the Propontis from the Aegean, it would appear that Idacus was nearest the Aegean, and Arkehana further up the Hellespont, towards Sestus and the Propontis. (Arnold, ad loc.) [E. B. J.]

**IDALIA, IDALIUM (I'dakov: Eth. /'dakelov, Steph. B.; Plin. vi. 31), a town in Cyprus, adjoining to which was a forest sacred to Aphrodite; the poets who connect this place with her worship, give no indications of the precise locality. (Theocr. x. 100; Virg. Aen. i. 681, 692, x. 51; Catull. Pel. v. Thet. 96; Propert. ii. 13; Lucan, viii. 17.) Engel (Kypes, vol. i. p. 153) identifies it with Dilos, de-
IDIMIUM, a town in Lower Pannonia, on the east of Sirmium, according to the Peut. Tab.; in the Ravenna Geographer (iv. 19) it is called Idiminiun. Its site must be looked for in the neighbourhood of Mauritania. IDIMUS, a town of uncertain site in Upper Moesia, probably on the Morava in Serbia. (It. Ant. 134; Tab. Peut.) [L. S.]

IDISTAVISUS CAMPUS, the famous battlefield where Germanicus, in A.D. 16, defeated Arminius. The name is mentioned only by Tacitus (Ann. ii. 16), who describes it as a "campus medius inter Visurgim et colles," and further says of it, that "ut ripae fiamini cedent aut prominentia montium residat, inanequilator situm. Tunc tergum insurgelat silva, editis in altum ramis et pars humo inter arborum trancos." This plain between the river Weser and the hills has been the subject of much discussion among the modern historians of Germany, and various places have been at different times pointed out as answering the description of Tacitus' Idistavitus. It was formerly believed that it was the plain near Iugesack, below Bremen; more recently pretty unanimously in believing that Germanicus went up the river Weser to a point beyond the modern town of Minden, and crossed it in the neighbourhood of Hausberge, whence the battle probably took place between Hausberge and Rinteln, not far from the Porta Westphalica. (Ledebar, Land u. Volk der Brucerter, p. 288.) As to the name of the place, it used to be believed that it had arisen out of a Roman asking a German what the place was, and the German answering, "It is a wise," (it is a meadow); but Grimm (Deutsche Mythol. p. 372. 2nd edit.) has shown that the plain was probably called Idistavitus, that is, "the maiden's meadow" (from idia, a maiden). [L. S.]

IDOMENE (Ἰδωμηνε, Potl. iii. 13. § 39; Idomenia, Pent. Tab.), a town of Macedonia which the Tabular Itinerary places at 12 M. P. from Stena, the pass now called Demetropos, or Ibron Gate, on the river Pardirari. Situated on his route from Thrace to Macedonia, crossed Mr. Cercine, leaving the Passes on his right, and the Sinti and Maudi on his left, and descended upon the Axios at Idomene. (Tium. ii. 98.) It probably stood upon the right bank of the Axios, as it is included by Ptolemy (L.c.) in Emathia, and was near Dobrus, next to which it is named by Hierocles among the towns of Cusmiria Macedonia, under the Byzantine empire. (Leake, North. Greece, vol. iii. p. 444.) [E. B. J.]

IDOMENE. [Argos Amphilochicorum]

IDRACES (Ἰδραξ, Potl. iii. 5. § 23), a people of Sarmatia Europaea, whose position cannot be made out from the indications given by Ptolemy. (Schafarik, Statt. Alt. vol. i. p. 213.) [E. B. J.]

IDRIAS (Ἰδρίας), according to Stephanus B. (s. v.), a town in Caria which had formerly borne the name of Chrysa-ws. Herodotus (v. 118) describes the river Marjas as flowing from a district called Idrius; and it is conjectured that Strabone, founded by Antiochus Soter, was built on the site of the ancient town of Idrias. (Comp. Leake, Asia Minor, p. 235; see Laodicea.) [L. S.]

IDUBEDA (Ἰδούβεδα, misspelt by Agathemeres Ιδοδουβεδα, ii. 9; Sierra de Oyo and Sierra de Lorenzo), a great mountain chain of Hispania, running in a SE. direction from the mountains of the Cantabri to the Mediterranean, almost parallel to the Ebro, the basin of which it borders on the W. Strabo makes it also parallel to the Pyrenees, in conformity with his view of the direction of that chain from N. to S. (Strab. iii. p. 161; Ptol. ii. 6. § 21.) Its chief offsets were: — MACNUS, near Bibilis (Martial, i. 49, iv. 55), the NALUS MANIANUS (Lucan, l. 39, probably the Sierra Molino), and, above all, M. Ortespeona, which strikes off from it to the S. long before it reaches the sea, and which ought perhaps rather to be regarded as its principal prolongation than as a mere branch. [P. S.]

IDUMAEA. (Ἰδουμαία), the name of the country inhabited by the descendants of Edom (or Ezen), being, in fact, only the classical form of that ancient Semitic name. (Joseph. Ant. ii. 1 § 1.) It is otherwise called Mount Seir. (Gen. xxviii. 1; xxxvi. 8; Deut. ii. 5; Joshua, xxiv. 4.) It lay between Mount Herob and the southern border of Canaan (Deut. i. 2), extending apparently as far south as the Gulf of Aqaba (Deut. ii. 2—8), as indeed its ports, Ezion-geber, and Eloth, are expressly assigned to the "land of Edom." (2 Chron. viii. 17.) This country was inhabited in still more ancient times by the Horims (Deut. i. 12, 22), and derived its more ancient name from their patriarch Seir (Gen. xxxvi. 16); comp. xiv. 6, as is properly maintained by Reland, against the fanciful conjecture of Josephus and others. (Palestina, pp. 66, 69.) The Jewish historian extends the name Idumaea so far to the north as to comprehend under it great part of the south of Judaea; as he says that the tribe of Simeon received as their inheritance that part of Idumaea which borders on Egypt and Arabia. (Ant. v. 1. § 22.) He elsewhere calls Hebron the first city of Idumaea, i.e., reckoning from the north. (B. J. iv. 9. § 7.) From his time the name Idumaea disappears from geographical descriptions, except as an historical appellation of the country that was then called Gebelone, or the southern desert (ἡ κατὰ μεσοποταμίαν ἐπιφανήμονα Σιναί), Euseb. Onom. s. v. Ailada, or Arabia. The historical records of the Idumaeans, properly so called, are very scanty. Saul made war upon them; David subdued the whole country; and Solomon made Ezion-geber a naval station. (1 Sam. xiv. 47, 2 Sam. v. 11; 1 Kings, xi. 13. 5, xxxvii. 14.) The Edomites, however, recovered their national independence under Jehoram, king of Judah (2 Kings, xiv. 7), and avenged themselves on the Jews in the cruelties which they practised at the capture of Jerusalem by Nebuchadnezzar. (Psalms, cxvii. 7.) It was probably during the Babylonian captivity that they extended themselves as far north as Hebron, where they were attacked and subdued by Judas Maccabaeus (1 Macc. v. 63—68; Joseph. Ant. xii. 8. § 6.) It was on this account that the whole of the south of Palestine, about Hebron, Gaza, and Eleutherapolis (Beit Jebrin), came to be designated Idumaea. (Joseph. B. J. iv. 9. § 7, c. Apion. ii. 9; S. Jerom. Comment. in Obad. ver. 1.) Meanwhile, the ancient seats of the children of Edom had been invaded and occupied by another tribe, the Idumaeans, the descendants of the ancient Edomites (Strabo, vii. 6. 13.), under which name the country and its capital (Petra) became famous among Greek and Roman geographers and historians, on which account their description of the district is more appropriately given under that head. St. Jerome's brief but accurate notice of its general features may here suffice:—"Omnia adtravis regio Idumaeorum de Eleutherop-
palli usque ad Petram et Ailam (haec est possessio Æsau) in specusbus habitaturnelas habet; et propter minus calores solis, quia meridiana provincia est, ultimam est tugurii urbis." (Comment. in Odad, vv. 5, 6.) And again, writing of the same country, he says that south of Tectoa "ultra nullus est viculus, ne agrestes qui casam esse et fururum similis, quas Afric appellant majalija. Tanta erunt vastitas, quae usque ad Mare Rubrum Persarumque et Athiopiam atque Idumaeorum terminus dilatatur. Et quia hunc arido atque arcano nihil omnino frugum frumentum, cuncta sunt plena pestisnotiones, ut sterilissimam terras componat poporum multitudine." (Preged ad Amosum.)

[G. W.]

IDUNUM, a town in the extreme south of Panonia (Ptol. ii. 14. § 3), which, from inscriptions found on the spot, is identified with the modern Judenburg.

[L. S.]

JEBUS, JEBUSITES. [JERUSALEM.]

JEHOSHAPHAT, VALLEY OF. [JERUSALEM.]

IENA, in Britain, mentioned by Ptolemy (iii. 3. § 2) as an estuary between the outlets of the rivers Aburanava and Deva to the south of the promontory of the Novantae (= Wigtown Bay). [R. G. L.]

IERABRIGA. [ARABIA.]

JERICHO (Jeru., Jericho, Strab.), a strongly fortified city of the Canaanites, miraculously taken by Joshua, who utterly destroyed it, and prohibited its being rebuilt under pain of an anathema. (Josh. vi. 3.) This was probably to prevent the city from being used as a place of refuge by the Canaanites after their defeat. It lay in the border of Benjamin, to which tribe it was assigned (Josh. xviii. 12, 21), but was not far from the southern borders of Ephraim (xvi. 1). It is mentioned in the New Testament in connection with the wealthy revenue-farmer Zacchaeus, who resided there, and probably farmed the government dues of its rich and well cultivated plain. Josephus describes it as well situated, and fruitful in palms and balsam. (Ant. iv. 8. § 1, B. J. i. 6, § 6.) He places the city 60 stadia from the Jordan, 150 from Jerusalem (B. J. iv. 8. § 3), the intervening country being a rocky desert. He accounts for the narrow limits of the tribe of Benjamin by the fact that Jericho was included in that tribe, the fertility of which far surpassed the richest soil in other parts of Palestine (§§ 21, 22). Its plain was 70 stadia long by 20 wide, irrigated by the waters of the fountain of Elisah, which possessed almost miraculous properties. (Ant. iv. 8. §§ 2, 3.) It was one of the eleven toparchies of Judaea. (B. J. iii. 2.) Its palm grove was granted by Antony to Cleopatra (i. 18. § 5), and the subsequent possession of this envious district by Herod the Great, who first farmed the revenues for Cleopatra, and then redeemed them (Ant. xiv. 4. §§ 1, 2), probably gave occasion to the proverbial use of his name in Horace (Ep. ii. 2. 184): —

"cessare et ludere et ungi,
Præferat Herodis palmetis pingubus."

It is mentioned by Strabo (xvi. p. 763) and Pliny (v. 14) in connection with its palm-trees and fountains. This former also alludes to the palace and its gardens of balsam, the cultivation and collecting of which is more fully described by Pliny (xxii. 25).

The palace was built by Herod the Great, as his own residence, and there it was that he died; having first confined in the hippodrome the most illustrious men of the country, with the intention that they should be massacred after his death, that there might be a general mourning throughout the country on that occurrence. (B. J. i. 33. § 6.)

Josephus further mentions that Jericho was visited by Vespasian shortly before he quit the country, where he left the tenth legion (B. J. iv. 8. §§ 1, 9, 11); but he does not mention its destruction by Titus on account of the perfidy of its inhabitants; a fact which is supplied by Eusebius and St. Jerome. They add that a third city had been built in its stead; but that the ruins of both the former were still to be seen. (Onomast. s. v.) The existing ruins can only be referred to this latest city, which is frequently mentioned in the mediaeval pilgrimages. They stand on the skirts of the mountain country that shut in the valley of the Jordan on the west, about three hours distant from the river. They are very extensive, but present nothing of interest. The waters of the fountain of Elisha, now 'Ain-es-SuUcam, well answer to the glowing description of Josephus, and still fertilise the soil in its immediate neighbourhood. But the palms, balsam, sugar-canes, and roses, for which this Paradise was formerly celebrated, have all disappeared, and the modern Ribah consists only of the tents of a Bedouin encampment. [G. W.]

IERNE, is a better form for the ancient name of Ireland than Hibernia, Ibernia, Ivernia, etc., both as being nearer the present Gaelic name Eir, and as being the oldest form which occurs. It is the form found in Aristotle. It is also the term found in the poem attributed to Orphus on the Argonautic expedition, which, spurious as it is, may nevertheless be as old as the time of Onomacritus (i.e. the reign of the first Darius): —

"virgoae Téirnoin d'nos in Icoimi." (Orpheus, 1164, ed. Leipzig, 1764.)

Aristotle (de Mundo, c. 3) writes, that in the ocean beyond the Pillars of Hercules "are two islands, called Britannia, very large, Albian and Ierine, beyond the Celtica." In Diodorus Siculus (v. 32) the form is Iris; the island Iris being occupied by Britons, who were cannibals. Strabo (ii. p. 107) makes Ierine the farthest voyage northwards from Celtica. It was too cold to be other than barely habitable, the parts beyond it being absolutely uninhabited. The reported distance from Celtica is 500 stadia. The same writer attributes cannibalism to the Irish; adding, however, that his authority, which was probably the same as that of Diodorus, was insufficient. The form in Pomponius Mela is Iverna. In Iverna the luxuriance of the herbage is so great as to cause the cattle who feed on it to burst, unless occasionally take off. Pliny's form is Hybernia (iv. 30). So- lius, whose form is Hibernia, repeats the statement of Mela as to the pasture, and adds that no snakes are found there. Warlike beyond the rest of her sex, the Hibernian mother, on the birth of a male child, places the first morsel of food in his mouth with the point of a sword (c. 22). Avienus, probably from the similarity of the name to Ika, writes: —

"As in duobus in Sacrum, sic inmulud
Divere prisci, solibus curcas rata est.
Haec inter undas multa cepit jact:
Eamque late gessit Hibernorum colit."

(Orca Mart. 109—113.)

Avienus's authorities were Cathaginian. More im-
portant than these scanty notices, and, indeed, more important than all the notices of Ireland put together, is the text of Ptolemy. In this anther the details for Ireland (Ἰερες) are fuller, rather than scantier, than those for Great Britain. Yet, as Ireland was never again, or barely, explored by a lost, his authorities must have been other than Latin. Along with this fact must be taken another, viz., that of the earliest notice of Ireland (Ἰερες) being full as early as the earliest of Britain; earlier, if we attribute the Aragonautic poem to Omonarctus; earlier, too, if we suppose that Hanno was the authority of Avienus.

If not Roman, the authorities for Ierne must have been Greek, or Phoenician.—Greek from Marseilles, Phoenician from either the mother-country or Carthage. The probabilities are in favour of the latter. On the other hand, early as we may make the first voyage from Carthage (via Spain) to Ireland, we find no traces of any permanent occupancy, or of any intermixture of blood. The name Ierne was native; though it need not necessarily have been taken from the Iermans themselves. It may have been Iberian (Spanish) as well. Some of the names in Ptolemy—a large proportion—are still current, e.g. Livia, Servus, Oboe, Birus, Eblana, Nagnate, &c., = Lifly, Shannon, Avoca, Barrow, Dublin, Connaught, &c. Ptolemy gives us chiefly the names of the Irish rivers and promontories, which, although along a sea-board so deeply indented as that of Ireland not always susceptible of accurate identification, are still remarkably true in the general outline. What is of more importance, inasmuch as it shows that his authorities had gone inland, is the fact of several being mentioned: "The inland towns are these, Rhigia, Rhahea, Laverne, Macolicum, Danum, another Rhigia, Turris."

The populations are the Venneciani and Rhobogdii, in Uster; the Nagnate, in Connaught; the Erudi and Erspeditan, between the Nagnate and Venneciani; the Utreni and Viodiae, in Munster; and the Anteri, Gangumi, the Veilbora (or Eliebora), between the Utreni and Nagnate. This leaves Leicster for the Uerganti, Conriadi, Merapii, Cauic, Blanii, Volutni, and Darnii, the latter of whom may have been in Uster. Besides the inland towns, there was a Menapias (or Rion) and an Edlana (or Slane) on the coast.

Tacitus merely states that Agricola meditated the conquest of Ireland, and that the Irish were not very different from the Britons:—"Ingenia, cultrumque hominum hand multum a Britannia different." (Agric. 24.)

It is remarkable that on the eastern coast one British and two German names occur,—Brigantes, Cauic, and Menapii. It is more remarkable that two of these names are more or less associated on the continent. The Chauci lie north of the Menapii in Germany, though not directly. The inference from this is by no means easy. Accident is the last resource to the ethnographical philologist; so that more than one writer has assumed a colonisation. Such a fact is by no means improbable. It is not much more difficult for Germans to have been in Wexford in the second century than it was for Northmen to have been so in the eighth, ninth, and tenth. On the other hand, the root m-n-r-p seems to have been Celic, and to have been a common, rather than a proper, name; since Pwy gives us the island Monapiar Aegyptiaca. No opinion is given as to the nature of these coincidences.

Of none of the Irish tribes mentioned by Ptolemy do we meet any separate substantive notice, a notice of their playing any part in history, or a notice of their having come in contact with any other nation. They appear only as details in the list of the populations of Ierne. Neither do the Ierni appear collectively in history; the day beyond the pale of the classical (Roman or Greek) nations in which we did the tribes of Northern Germany and Scandinavia; and we know them only in their geography, not in their history.

But they may have been tribes unmentioned by Ptolemy, which do appear in history; or the names of Ptolemy may have been changed. Ptolemy says nothing about any Scoti; but Claudian does. He also connects them with Ireland:

"unde rerunt Saxone fuso
Orcaedes; incinuat Pictorum sanguine Thule
Scotorum canes bellii glacialis Ierne."

(De Terr. Consul. Hiberni, 72—74.)

Again:

"Itum quum Scotos Iernam Moviit."

(De Terr. Consul. Sidilich. ii. 252.)

The extent to which the correct opinions as to the early history of the Gaels of Scotland confirm the ideas suggested by the text of Claudian is considered under Scoti. At present it may be said that Scoti may easily have been either a generic name for some of the tribes mentioned in detail by Ptolemy, or else a British instead of a Gaelic name. At any rate, the Scoti may easily have been, in the time of Ptolemy, an Irish population.

Two other names suggest a similar question,—Belgae, and Attaccoti. The claim of the latter to have been Irish is better than that of the former. The Attaccoti occur in more than one Latin writer; the Belga (Fir-tolga) in the Irish annals only. [See ATTACOTI, and BELGAE OF BRITANNIA.]

The etymology of the ancient Ierne is ascertained by that of modern Ireland. The present population belongs to the Gaelic branch of the Celtic stock; a population which cannot be shown to have been introduced within the historical period, whilst the stock of the time of Ptolemy cannot be shown to have been ejected. Hence, the inference that the population of Ierne consisted of the ancestors of the present Irish is eminently reasonable,—so reasonable that no objections lie against it. That English and Scandinavian elements have been introduced since, is well known. That Spanish (Iberic) and Phoenician elements may have been introduced in the ante-historical period, is likely; the extent to which it took place being doubtful. The most cautious investigators of Irish archaeology have hesitated to pronounce any existing remains either Phoenician or Iberian. Neither are there any remains referable to pagan Rano. [R. G. L.]

IERNUS, in Ireland, mentioned by Ptolemy (ii. 2, § 4) as the most southern of two rivers (the Duns being the other) lying between the Erenus (Shannon) and the Southern Promontory (Mn Ass Head)—either the Kenmare or the Barry Bay River. [R. G. L.]

JERUSALEM, the ancient capital of Palestine, and the seat of the Hebrew kingdom. I. NAMES.

The name by which this ancient capital is most commonly known was not its original appellation, but apparently compounded of two earlier names,
attached, perhaps, to two neighbouring sites afterwards incorporated into one. The sacred narrative, by implication, and Josephus, explicitly, recognise from the first a distinction between the Upper and the Lower city, the former of which is supposed to be retained in the dual form of the Hebrew name ירושלים. The learned are divided in opinion as to whether the Salem of Melchizedek is identical with Jerusalem. St. Jerome, who cites Josephus and a host of Christian authorities in favour of their identity, himself maintaining the opposite conclusion, says that extensive ruins of the palace of Melchizedek were shown in his day in the neighbourhood of Scythopolis, and makes the Salem of that patriarch identical with "Sahem, a city of Shechem." (Gen. xxiii. 18); the same, no doubt, with the Salem near to Acon (St. John, iii. 29), where a village of the same name still exists in the mountains east of Noblaz. Certain, however, it is that Jerusalem is intended by this name in Psalm lxxvi. 2, and the almost universal agreement of Jews and Christians in its identity with the city of Melchizedek is still further confirmed by the religious character which seems to have attached to its guardian at the time of the coming in of the children of Israel, when we find it under the name of Adonizedek, a term equivalent to Melchizedek ("righteous Lord"). Regarding, then, the latter half of the name as representing the ancient Salem, we have to inquire into the origin of the former half, concerning which there is considerable diversity of opinion. Josephus has been understood to derive it from the Greek word Ἱεροσολοῦμεν, prefixed to Salem. In the obscure passage (Ant. vii. 3 § 2) he is so understood by St. Jerome; but Isaac Vossius defends him from this imputation, which certainly would have raised his character as an etymologist. Lightfoot, after the Rabbis, and followed by Whitson, regards the former half of the name as an abbreviation of the latter part of the title Jehovah-jireh, which this place seems to have received on occasion of Abraham offering up his son on one of the mountains of "the land of Moriah." (Gen. xxii. 8, 14.) Reland, followed by Raumer, adopts the root ירוש, and supposes the name to be compounded of יִרְשָׁשׁ and יִשְׁלְשָׁשׁ, which would give a very good sense, "hereditary," or "possession hereditaria paesis." Lastly, Dr. Wells, followed by Dr. Lee, regards the former part of the compound name as a modification of the name Jehus, יְיוֹשָׁע, one of the earlier names of the city, from which its Canaanite inhabitants were designated Jebusites. Dr. Wells imagines that the יְיוֹשׁ was changed into יִשְׁלְשָׁשׁ, for the sake of euphony; Dr. Lee, for euphony, as Jerusalem would mean "the trampling down of peace"—a name of ill omen. Of these various interpretations, it may be said that Lightfoot seems to have the highest authority; but that Reland is otherwise the most satisfactory. Its other Scripture name, Shion, is merely an extension of the name of one particular quarter of the city to the whole. There is a further question among critics as to whether by the city Cadytis, mentioned in Herodotus, Jerusalem is intended. It is twice alluded to by the historian: once as a city of the Syrians of Palestine, not much smaller than Sardis (v. 5); again, as having been taken by the Parthians under the King of Egypt, after his victory in Magdolum (ii. 159). The main objections urged against the identity of Cadytis and Jerusalem in these passages, are, that in the former passage Herodotus is apparently confining his survey to the sea-border of Palestine, and that the fact narrated in the second is not alluded to in the sacred narrative. But, on the other hand, there is no mention in sacred or profane history of any other city, maritime or inland, that could at all answer to the description of Cadytis in respect to its size: and the capture of Jerusalem by Necho after the battle of Megiddo,—which is evidently corrupted by Herodotus into Magdolum, the name of a city on the frontier of Egypt towards Palestine, with which he was more familiar,—though not expressly mentioned, is implied in Holy Scripture; for the deposition and deportation of Jehoshaphat, and the substitution and subjugation of Jehoakim, could not have been effected, unless Necho had held possession of the capital. (2 Kings, xxv. 29—35; comp. 2 Chron., xxxvi. 3.) It may therefore be safely concluded that Cadytis is Jerusalem; and it is remarkable that this earliest form of its classical name is nearly equivalent to the modern name by which alone it is now known to its native inhabitants. El-Khams signifies "the Holy (city)," and this title appears to have been attached to it as early as the period of Isaiah (xiv. 2, ii. 1), and is of frequent recurrence after the Captivity. (Nehem. xi. 1, 18; St. Matt. iv. 5, xxvii. 53.) Its pagan name Colonia Asia Capitoline, like those imposed on many other ancient cities in Palestine, never took any hold on the native population of the country, nor, indeed, on the classical historians or ecclesiastical writers. It probably existed only in state papers, and coins, many of which are preserved to this day. (See the end of the article.)

II. GENERAL SITE.

Jerusalem was situated in the heart of the mountain district which commences at the south of the great plain of Esdraelon and is continued throughout the whole of Samaria and Judaea quite to the southern extremity of the Promised Land. It is almost equidistant from the Mediterranean and from the river Jordan, being about thirty miles from each, and situated at an elevation of 2000 feet above the level of the Mediterranean. Its site is well defined by its circumjacent valleys.

Valleys. (1) In the north-west quarter of the city is a shallow depression, occupied by an ancient pool. This is the head of the Valley of Hinnom, which from this point takes a southern course, containing the city on the westward side, until it makes a sharp angle to the east, and forms the southern boundary of the city to its south-east quarter, where it is met by another considerable valley from the north, which must next be described.

(2) At the distance of somewhat less than 1500 yards from the "upper pool" at the head of the Valley of Hinnom, are the "Tombs of the Kings," situated at the head of the Valley of Jehoshaphat, which runs at first in an eastern course at some distance north of the modern city, until, turning sharply to the south, it skirts the eastern side of the town, and meets the Valley of Hinnom at the south-east angle, as already described, from whence they run off together in a southerly direction to the Dead Sea. Through this valley the brook Kedron is supposed once to have run; and, although no water has been known to flow through the valley within the course of history, it is unquestionably entitled to the name of the Valley of the Kedron. The space between the basin at the head of the Valley of Hinnom and the head of the Valley of
JERUSALEM.

Jehoshaphat is occupied by a high rocky swell of land, which attains its highest elevation a little without the north-west angle of the present town. The city, then, occupied the termination of this broad swell of land being isolated, except on the north, by the two great valleys already described, towards which the ground declined rapidly from all parts of the city. This rocky promontory is, however, broken by one or two subordinate valleys, and the declivity is not uniform.

(3) There is, for example, another valley, very inferior in magnitude to those which encircle the city, but of great importance in a topographical view, as being the main geographical feature mentioned by Josephus in his description of the city. This valley of the Tyropoeon (cheese-makers) meets the Valley of Hinnom at the Pool of Siloam, very near its junction with the Valley of Jehoshaphat, and can be distinctly traced through the city, along the west side of the Temple enclosure, to the Damascene gate, where it opens into a small plain. The level of this valley, running as it does through the midst of a city, through which each constant vicissitudes and such repeated destruction, of course of been greatly raised by the desolations of so many generations, but is so marked a feature in modern as in former times, that it is singular it was not at once recognised in the attempt to re-distribute the ancient Jerusalem from the descriptions of Josephus. It would be out of place to enter into the arguments for this and other identifications in the topography of ancient Jerusalem; the conclusions only can be stated, and the various hypotheses must be sought in the works referred to at the end of the article.

Hills. — Ancient Jerusalem, according to Josephus, occupied "two eminences, which fronted each other, and were divided by an intervening ravine, at the brink of which the closely-built houses terminated." This ravine is the Tyropoeon, already referred to, and this division of the city, which the historian observes from the earliest period, is of the utmost importance in the topography of Jerusalem. The two hills and the intermediate valley are more minutely described as follows:—

(1) The Upper City.— Of these eminences, that which had upon it the Upper City was by much the loftier, and in its length the straiter. This eminence, then, for its strength, need to be called the stronghold by king David, but by as it was called the Upper Acra.

(2) The Lower City.— The other eminence, which was called Acra, and which supported the Lower City, was in shape gibbous (αμπυροε). 

(3) The Temple Mount.— Opposite to this latter was a third eminence, which was naturally lower than Acra, and was once separated from it by another broad ravine: but afterwards, in the times when the Asmonaeans reigned, they filled up the ravine, wishing to join the city to the Temple; and having levelled the summit of Acra, they made it lower, so that in this quarter also the Temple might be seen rising above other objects.

"But the ravine called the Tyropoeon (cheese-makers), which we mentioned as dividing the eminences of the Upper City and the Lower, reaches to Siloam; for so we call the spring, both sweet and abundant. But on their outer sides the two eminences of the city were hemmed in within deep ravines, and, by reason of the precipices on either side, there was no approach to them from any quarter." (B. Juil. v. 4, 5.)

JERUSALEM.

This, then, was the disposition of the ancient city, on which a few remarks must be made before we proceed to the new city. The two-fold division, which, as has been said, is recognised by Josephus from the ancient shape of the city when it was little more than in the acount of its capture by the Israelites, and subsequently by David, but in all such passages as mention the city of David or Mount Zion as distinct from Salem and Jerusalem. (Comp. Josh. xv. 63; Judges, i. 8, 21; 2 Sam. v. 6—9; Psalms, lxxvi. 2, &c.) The account given by Josephus of the taking of the city is this: that "the Israelites, having besieged it, after a time took the Lower City, but the Upper City was hard to be taken by reason of the strength of its walls, and the nature of its position" (Ant. v. 2 § 2); and, subsequently, that "David laid siege to Jerusalem, and took the Lower City by assault, while the citadel still held out" (vii. 3 § 1). Having at length got possession of the Upper City also, "he encircled the two with one wall, so as to form one body" (§ 2). This could only be effected by taking in the intervening valley, which is apparently the part called Mills.

(4) But when in process of time the city overflowed its old boundaries, the hill Bezeatha, or New City, was added to the ancient hills, as is thus described by Josephus:— "The city, being over-abundant in population, began gradually to creep beyond its old walls, and the people joining to the city the region which lay to the north of the temple and close to the hill of Agrippa, advanced considerably, so that even a fourth eminence was surrounded with habitations, viz. that which is called Bezeatha, situated opposite to the Antonia, and divided from it by a deep ditch; for the ground had been cut through on purpose, that the foundations of the Antonia might not, by joining the eminence, be easy of approach, and of inferior height." The Antonia, it is necessary here to add, in anticipation of a more detailed description, was a castle situated at the north-western angle of the outer enclosure of the Temple, occupying a precipitous rock 50 cbaths high.

It is an interesting fact, and a convenient one to facilitate a description of the city, that the several parts of the ancient city are precisely coincident with the distinct quarters of modern Jerusalem: for that, 1st, the Armenian and Jewish quarters, with the remainder of Mount Zion, now excluded from the walls, composed the Upper City; 2dly, the Armenian or Moabite quarter corresponds exactly with the Lower City; 3dly, that the Haram-es-Sherif, or Noble Sanctuary, of the Moslems, occupies the Temple Mount; and 4thly, that the Haret (quarter) Bab-el-Ilatta is the declivity of the hill Bezeatha, which attains its greatest elevation to the north of the modern city wall, but was entirely included within the wall of Agrippa, together with a considerable space to the north and west of the Lower City, including all the Christian quarter.

The several parts of the ancient city were enclosed by distinct walls, of which Josephus gives a minute description, which must be noticed in detail, as furnishing the fullest account we have of the city as it existed during the Roman period; a description which, as far as it relates to the Old city, will serve for the elucidation of the ante-Babylonish capital,—as it is clear, from the account of the rebuilding of the walls by Sennacheri (n. vi.), that the new fortifications followed the course of the ancient enceinte.
III. WALLS.
1. Upper City and Old Wall. — "Of the three walls, the old one was difficult to be taken, both on account of the ravines, and of the eminence above them on which it was situated. But, in addition to the advantage of the position, it was also strongly built, as David and Solomon, and the kings after them, were very zealous about the work. Beginning towards the north, from the tower called Hippicus, and passing through the place called Xystus, then joining the council chamber, it was united to the western cloister of the Temple. In the other direction, towards the west, commencing from the same place, and extending through a place called Bethos to the gate of the Essenes, and then turning towards the south above the fountain Siloam, thence again bending toward the east to the Pool of Solomon, and running through a place which they called Ophla, it was joined to the eastern cloister of the Temple." To understand this description, it is only necessary to remark, that the walls are described, not by the direction in which they run, but by the quarter which they face; i.e. the wall "turning towards the south" is the south wall, and so with the others; so that the Hippicus Tower evidently lay at the NW. angle of the Upper City; and, as the position of this tower is of the first importance in the description of the city walls, it is a fortunate circumstance that we are able to fix its exact site.

(1) The Hippicus Tower is mentioned in connection with two neighbouring towers on the same north wall, all built by Herod the Great, and connected with his splendid palace that occupied the north-west angle of the Upper City. "These towers," says the historian, "surpassed all in the world in extent, beauty, and strength, and were dedicated to the memory of his brother, his friend, and his best loved wife.

"The Hippicus, named from his friend, was a square of 25 cubits, and thirty high, entirely solid. Above the part which was solid, and constructed with massive stones, was a reservoir for the rain-water, 20 cubits in depth; and above this a house of two stories, 23 cubits high, divided into different apartments; above which were battlements of 2 cubits, on a parapet of 3 cubits, making the whole height 30 cubits.

(2) "The Tower Phasaelus, which was named from his brother, was 40 cubits square, and solid to the height of 40 cubits; but above it was erected a cloister 10 cubits high, fortified with breastworks and ramparts; in the middle of the cloister was carried up another tower, divided into costly chambers and a bath-room, so that the tower was in no sense inferior to palaces. Its summit was adorned with parapets and battlements, more than the preceding. It was in all 90 cubits high, and resembled the tower of Pharos near Alexandria, but was of much larger circumference.

(3) "The Tower Mariamne was solid to the height of 30 cubits, and 20 cubits square, having above a richer and more exquisitely ornamented dwelling. Its entire height was 55 cubits.

"Such in size were the three towers; but they looked much larger through the site which they occupied; for both the old wall itself, in the range of which they stood, was built upon a lofty eminence, and likewise a kind of crest of this eminence reared itself to the height of 30 cubits, on which the towers being situated received much additional elevation. The towers were constructed of white marble, in blocks of 20 cubits long, 10 wide, and 5 deep, so exactly joined together that each tower appeared to be one mass of rock.

Now, the modern citadel of Jerusalem occupies the NW. angle of Mount Zion, and its northern wall rises from a deep fossæ, having towers at either angle, the bases of which are protected on the outside by massive masonry sloping upward from the fossæ. The NW. tower, divided only by the trench from the Jaffa gate, is a square of 43 feet. The NE., commonly called the Tower of David, is 70 feet 3 inches long, by 56 feet 4 inches broad. The sloping balustrade is 40 feet high from the bottom of the trench; but this is much choked up with rubbish. To the tower part there is no known or visible entrance, either from above or below, and no one knows of any room or space in it. The lower part of this platform is, indeed, the solid rock merely cut into shape, and faced with massive masonry, which rock rises to the height of 42 feet. This rock is doubtless the crest of the hill described by Josephus as 30 cubits or 45 feet high. Now, if the dimensions of Hippicus and Phasaelus, as already given, are compared with those of the modern towers on the north side of the citadel, we find that the dimensions of that at the NW. angle—three of whose sides are determined by the scarped rock on which it stands—so nearly agree with those of Hippicus, and the width of the NE. tower—also determined by the cut rock—so nearly with the square of Phasaelus, that there can be no difficulty in deciding upon their identity of position. Mariamme has entirely disappeared.

"To these towers, situated on the north, was joined within

(4) "The Royal Palace, surpassing all powers of description. It was entirely surrounded by a wall 30 cubits high, with decorated towers at equal intervals, and contained enormous banquetting halls, besides numerous chambers richly adorned. There were also many porticoes encircling one another, with different columns to each, surrounding green courts, planted with a variety of trees, having long avenues through them; and deep channels and reservoirs everywhere around, filled with bronze statuary, through which the water flowed. In many towers of fame pious abounds for the fountains.

This magnificent palace, unless the description is exaggerated beyond all licence, must have occupied a larger space than the present fortress, and must probably its gardens extended along the western edge of Mount Zion as far as the present garden of the Armenian Convent; and the decorated towers of this part of the wall, which was spared by the Romans when they levied the remainder of the city, seem to have transmitted their name to modern times, as the west front of the city wall at this part is called Abruth Ghanzah, i.e. The Towers of Gaza.

(5) As the Xystus is mentioned next to the Hippicus by Josephus, in his description of the north wall of the Upper City, it may be well to proceed at once to that; deferring the consideration of the Gate Gennath, which obviously occurred before that one, until we come to the Second Wall. The Xystus is properly a covered portico attached to the Greek Gymnasium, which commonly had uncovered walks connected with it. (Dict. Ant. p. 580.) As the Jerusalem Xystus was a place where public meetings were occasionally convened (Bell. Jud. ii. 6. § 3), it must be understood to be a wide public
Jerusalem, though not necessarily connected with a gymnasium, but perhaps rather with another palace which occupied "this extremity of the Upper City," for the name was given also to a terraced walk with colonnades attached to Roman villas. (Vitrav. v.11.)

(6) The House of the Astronomers was above the Xystus, and was apparently occupied as a palace by the Younger Agrippa; for, when he addressed the multitude assembled in the Xystus, he placed his sister Berenice in the house of the Astronomers, that she might be visible to them. (R.J. L.C.)

(7) The Causeway. At the Xystus we are told a causeway (γέφυρα) joined the Temple to the Upper City, and one of the Temple gates opened on to this causeway. That the γέφυρα was a causeway and not a bridge, is evident from the expression of Josephus in another passage, where he says that the valley was interrupted or filled up, for the passage (τῆς φαραγγίας οὖς διότι ἀπάλλασσέρη, Λου. xv. 11, § 5). As the Tyropoeon divided the Upper City from the Lower City, and the Temple Mount was attached to the Lower, it is obvious that the Tyropoeon is the valley here mentioned. This earth-wall or embankment, was the work of Solomon, and is the only monument of that great kingly in Jerusalem that can be certainly said to have escaped the ravages of time; for it exists to the present day. serving the same purpose to the Mahometans as formerly to the Jews; the approach to the Mosk enclosure from the Babars passes over this causeway, which is therefore the most frequented thoroughfare in the city. (Williams, Holy City, vol. ii. pp. 392 - 397, and note, pp. 601 - 607.)

It is highly probable that the Xystus was nothing else than the wide promenade over this mound, adorned with a covered cloister between the trees, with which the Habbínical traditions assure us that Solomon's causeway was shaded. It is clear that the north wall of the Upper City must have crossed the valley by this causeway to the Gate Shallecheth, which is explained to mean the Gate of the Embankment. (1 Chron. xxvi. 16.)

(8) The Council-Chamber (βουλή, Βουλευτήριον) is the next place mentioned on the northern line of wall, as the point where it joined the western portico of the Temple. And it is remarkable that the considerable difference in the mound of the Temple occupies the same site; the Mekehemeh, or Council-Chamber of the Judicial Divan, being now found immediately outside the Gate of the Chain, at the end of the causeway, corresponding in position to the Shallecheth of the Scriptures.

We have now to trace the wall of the Upper City in the opposite direction from the same point, viz. the Hippic Tower at the NW. angle. The points named correspond to the city's eastern, northward (i.e. with a western aspect), through a place called Bethos, to the Gate of the Essenes; then, turning E., it ran (with a southern aspect) above the fountain of Siloam; thence it bent northward, and ran (with an eastern aspect) to the Pool of Solomon, and extending as far as a place called Ophel, was joined to the eastern cloister of the Temple.

If. On the West Front neither of the names which occur are found again in the notices of the city: but Bethos may safely be assigned to the site of the garden of the Armenian Convent, and the Gate of the Essenes may be fixed to a spot not very far from the SW. corner of the modern city, a little to the W. of the Tomb of David, near which a remarkable ridge seems still to indicate the foundation of the ancient city wall.

iii. Along the south face of the Upper City the old wall may still be traced, partly by scarped rock and partly by foundations of the ancient wall, which have served as a quarry for the repairs of the neighbouring buildings for many ages. Its course from this point to the Temple is very difficult to determine, as the steep declivity to the Tyropoeon would make it extremely inconvenient to carry the wall in a straight line, while, on the contrary, the absence of all notice of any deviation from a direct line in a description in which the angles are uniformly noted, would seem to imply that there was no such deflection in its course. As it is clear, however, that the Upper City was entirely encompassed with a wall of its own, nowhere noticed by Josephus, except so far as it was coincident with the outer wall, it may be safely conjectured that this east wall of the Upper City followed the brow of the ridge from the south-east angle of the Hill Sion, along a line nearly coincident with the aqueduct; while the main wall continued its easterly course down the steep slope of Sion, across the valley of the Tyropoeon, not far from its mouth,—a little above the Pool of Siloam,—and then up the ridge Ophel, until it reached the brow of the eastern valley. It may serve to countenance this theory to observe, that in the account of this wall in Nekhrin there is mention of "the stairs that go down from the city of David," by which stairs also the procession went up when encompassing the city wall. (iii. 15, xii. 37.)

iv. The further course of the old wall to the eastern cloister of the Temple is equally obscure, as the several points specified in the description are not capable of identification by any other notices. These are the Pool of Solomon and a place called Ophel, in the description already cited, to which may be added, from an incidental notice, the Basilica of Grapte or Monebazu. (B. J. v. 8. § 1.)

The Pool of Solomon has been sometimes identified with the Fountain of the Virgin, from which the Pool of Siloam is supplied, and sometimes with that very pool. Both solutions are unsatisfactory, for Siloam would scarcely be mentioned a second time in the same passage under another name. The question cannot, with any propriety, be called a pool.

The place called Ophel — in Scripture Ophel — is commonly supposed to be the southern spur of the Temple Mount, a narrow rocky ridge extending down to Siloam. But it is more certain that it is used in a restricted sense in this passage, than that it is ever extended to the whole ridge. (See Holy City, vol. ii. p. 365, note 7.) It was apparently a large and well-built building, to the north of the Temple, connected with an outlying tower (Αβίβιμ, iii. 27, 28), and probably situated near the southern extremity of the present area of the Mosk of Omar. And the massive angle of ancient masonry at the SE. corner of the enclosure, "lying over the Valley of Jehoshaphat, which here actually bends south-west round the corner, having a depth of about 130 feet," may possibly have belonged to the outlying tower. (H.C. vol. ii. pp. 311, 317.) It is clear, in any case, that the wall under consideration must have joined the eastern cloister of the Temple somewhere to the north of this angle, as the bend in the valley indicated by Dr. Robinson would have precluded the possibility of a junction at this angle.
JERUSALEM.

2. The Second Wall, and the Lower City.—The account of the second wall in Josephus, is very meagre. He merely says that it began at the Gate Gennath, a place in the old wall; and, after compassing the Lower City, had its termination at the Fortress Antonia.”

There is here no clue to the position of the Gate Gennath. It is, however, quite certain that it was between the Hippie Tower and the Xystus; and the north-west angle of the Upper City was occupied by the extensive palace of Herod the Great, and its imposing towers stood on the north front of this old wall, where a rocky crest rose to the height of 30 cubits, which would of course preclude the possibility of an exit from the city for some distance to the east of the tower. Other incidental notices make it clear that there was a considerable space between the third and the second wall at their southern quarter, comparatively free from buildings, and, consequently, a considerable part of the north wall of the Upper City unprotected by the second wall—e. g. Cestius, having taken the outer wall, encamped within the New City, in front of the Royal Palace (B. J. ii. 19. § 5); Titus attacked the outer wall in its southern part, both because it was lower than elsewhere, inasmuch as this part of the New City was thinly inhabited, and afforded an easy passage to the third (or innermost) wall, through which Titus had hoped to take the Upper City” (v. 6. § 2). Accordingly, when the legions had carried the outer and the second wall, a bank was raised against the northern wall of Sion at a pool called Amygdalon, and another about thirty cubits from it, at the high-priest’s monument. The Almond Pool is no doubt identical with the tank that still exists at no great distance from the modern fortress; and the monument must, therefore, have been some 50 feet to the east of this, also in the angle formed by the north wall of the Upper City and the southern part of the second wall.

There is the head of an old archway still existing above a heap of ruins, at a point about half way between the Hippie Tower and the north-west angle of the Xystus, which makes it probable that this hill brings it nearly to a level with the declivity to the north. This would afford a good starting-point for the second wall, traces of which may still be discovered in a line north of this, quite to the Damoscena point where are two chambers of ancient and very massive masonry, which appear to have flanked an old gate of the second wall at its weakest part, where it crossed the valley of the Tyropoemon. From this gate, the second wall probably followed the line of the present city wall to a point near the Gate of Hiero, now blocked up; whence it was carried along the brow of the hill to the north-east angle of the fortress Antonia, which occupied a considerable space on the north-west of the Temple area, in connection with which it will be described below.

3. The Third Wall, and the New City.—The third wall, which enclosed a very considerable space to the north of the old city, was the work of Herod Agrippa the Elder, and was only commenced about thirty years before the destruction of Jerusalem, and never completed according to the original design, in consequence of the jealousy of the Roman government. The following is Josephus’s account:—“This third wall Agrippa drew round the super-added city, which was all exposed. It commenced at the Tower Hippicus, from whence it extended to the northern quarter, as far as the Tower Psephinus; then, passing opposite to the Monuments of Helena, and being produced through the Royal Caves, it bent, at the angular tower, by the monument called the Fuller’s, and, joining the old wall, terminated at the valley of the Kidron.” It was commenced with stones 20 cubits long and 10 wide, and was raised by the Jews to the height of 25 cubits, with the battlements.

(1) As the site of the Hippie Tower has been already fixed, the first point to be noticed in this third wall is the Psephinus Tower, which, Josephus informs us, was the most wonderful part of this great work, situated at its north-west corner, over against Hippicus, octagonal in form, 70 cubits in height, commanding a view of Arabia towards the east, of the Mediterranean towards the west, and of the utmost limits of the Hebrew possessions. The site of this tower is still marked, by its massive foundations, at the spot indicated in the plan; and considerable remains of the wall that connected it with the Hippie Tower are to be traced along the brow of the ridge that slants in the upper part of the valley of Hinnom, and almost in a line with the modern wall. At the highest point of that ridge the octagonal ground-plan of the tower may be seen, and a large cistern in the midst of the ruins further confirms their identity, as we are informed that the towers were furnished with reservoirs for the rain water.

(2) The next point mentioned is the Monuments of Helena, which, we are elsewhere told, were three pyramids, situated at a distance of 3 stadia from the city. (Ant. xx. 3. § 3.) About a century later (A. D. 174) Pausanias speaks of the tomb of Helena, in the city of Solyms, as having a door so constructed as to open by mechanical contrivance, at a certain hour, one day in the year. Being thus opened, it closes again of itself after a short interval; and, should you attempt to open it at another time, you would break the door before you could succeed. (Pans. viii. 16.) The pyramids are next mentioned by Eusebius (Hist. Eccle. ii. 12), as remarkable monumental pillars still shown in the suburbs of Jerusalem. St. Jerome, a century later, testified that they still stood. (Epist. ad Emaschim, Op. tom. iv. pars ii. p. 573.) The latest notice is that of an Armenian writer in the 5th century, who describes the tomb as a remarkable monument before the gates of Jerusalem. (Hist. Armen. lib. ii. cap. 32.) Notwithstanding these repeated notices of the sepulchral monuments of the queen of Adiabene, it is not now possible to fix their position with any degree of certainty, some archæologists assigning them to the Tombs of the Kings (B. Robinson, Bib. Sac. vol. i. pp. 465, 533—538), others to the Tombs of the Martyrs, about 1/2 of a mile to the west of the former. (Schnitz, Jerusalem, pp. 63—67; De Saulcy, tom. ii. pp. 326, 327.) A point halfway between these two monuments would seem to answer better to the incidental notices of the monuments, and they may with great probability be fixed to a rocky court on the right of the road to Med Samaud, where there are several excavated tombs. Opposite the Monuments of Helena was the Gate of the Women in the third wall, which is mentioned more than once, and must have been between the Nablus road and the Psephinus Tower.

(3) The Royal Caves is the next point mentioned on the third wall. They are, doubtless, identical with the remarkable and extensive excavations still called the Tombs of the Kings, most probably
the same which are elsewhere called the Monuments of Herod, and, from the character of their decorations, may very well be ascribed to the Herodian period. M. de Sauley has lately added to our previous information concerning them, and, by a kind of exhumating process, he endeavours to prove that they could have been no other than the tombs of David and the early kings of Judah, which have always hitherto been placed on Mount Zion, where the traditional site is still guarded by the Moslems. (Vuillaume, "Corpus," vol. 3, pp. 228—281.)

(4) The Fuller's monument is the last-mentioned point on the new wall, and, as an angular tower occupied this site, the monument must have been at the north-east angle of the New City; probably one of the many rock graves cut in the perpendicular face of the Valley of Jehoshaphat, near one of which Dr. Schultze has described the foundations of a tower. (Jerusalem, pp. 38, 64.) The Monument of the Fuller probably gave its name to the Fuller's field, which is mentioned by the prophet Isaiah as the spot near which the Assyrian army under Rabshakeh encamped (xxxvi. 2; vii. 3); and the traditional site of the camp of the Assyrians, which we shall find mentioned by Josephus, in his account of the siege, was certainly situated in this quarter. From this north-east angle the third wall followed the brow of the Valley of Jehoshaphat until it reached the wall of the Outer Temple at its north-east angle.

Having thus completed the circuit of the walls, as described by Josephus, and endeavoured to fix the various points mentioned in his description (which furnishes the most numerous topographical notices now extant of ancient Jerusalem), we shall be in a condition to understand the most important historical facts of its interesting and chequered history, when we have further taken a brief survey of the Temple. But, first, a singular and perplexing discrepancy must be noticed between the general and the detailed statements of the historian, as to the extent of the ancient city; for, while he states the circuit of the entire city to be no more than 33 stadia, or 4 Roman miles plus 1 stadium, the specification of the measure of the wall of Aciptra alone gives, on the lowest computation, an excess of 12 stadia, or 1 Roman mile, over that of the entire city—for it had 90 towers, 20 cubits wide, at intervals of 200 cubits. No satisfactory solution of this difficulty has yet been discovered.

IV. THE TEMPLE MOUNT.

The Temple Mount, called in Scripture the Mountain of the Lord's House, and Moriah (2 Chron. iii. 1), is situated at the south-east of the city, and is easily identified with the site of the Dome of the Mosk in modern Jerusalem. It was originally a third hill of the Old City, over against Acre, but separated from it by a broad ravine, which, however, was filled up by the Asmonaean princes, so that these two hills became one, and are generally so reckoned by the historians. (B. J. v. 4.)

1. THE OUTER COURT.—The Temple, in the widest signification of the word (סֹאַטָב), consisted of two courts, that of the Outer Court, the only one which is sometimes subdivided and distributed into four other courts. The area of the Outer Court was in great part artificial, for the natural level space on the summit of the mount being found too confined for the Temple, with its surrounding chambers, courts, and cloisters, was gradually increased by mechanical expedients. This extension was commenced by Solomon, who raised from the depth of the eastern valley a wall of enormous stones, bound together with lead, within which he raised a bank of earth to a level with the native rock. On this was erected a cloister, which, with its successors, always retained the name of "Solomon's Porch." (2 Chron. iii. 14; Acts, iii. 11; v. 12.) This process of enlarging the court by artificial embankments was continued by successive kings; but particularly by Herod the Great, who, when he reconstructed the Temple Proper (ra'ot), enlarged the Outer Court to double its former size, and adorned it with stately cloisters. (Ant. xv. 11, § 5.) Of these, the Royal Porch, on the south, was the most remarkable of all his magnificent works. It consisted of four rows of Corinthian columns, distributed into a central nave and lateral aisles; the aisles being 30 feet in width and 50 in height, and the nave half as wide again as the aisles, and double their height, rising into a clerestory of unusually large proportions. The other cloisters were double, and their total width only 30 cubits. To this Outer Court there were four gates on the west, towards the city, and one on each of the other sides; of which that on the east is still remaining, commonly called the Golden Gate.

2. THE INNER COURT.—The Inner Temple (lēpōr) was separated from the Outer by a stone wall (קְרֵיָה), see Ephes. ii. 14) 3 cubits in height, on which stood pillars at equal distances, with inscriptions, in Greek and Latin, prohibiting aliens from access. To this court there was an ascent of fourteen steps, then a level space of 10 cubits, and then a further ascent of five steps to the gates, of which there were four on the north and south sides, and two on the east, but none on the west, where stood the Sanctuary (ra'ot).

The place of the Altar, in front of the ra'ot, is determined with the utmost precision by the existence in the Sacred Rock of the Moslems, under their venerated dome, of the very cospool and drain of the Jewish altar, which furnishes a key to the restoration of the whole Temple, the dimensions of which, in all its parts, are given in minute detail in the treatise called Middoth (i.e. measures), one of the very few ancient books now contained in the Masora. The drain communicating with this cospool, through which the blood ran off into the Kidron, was at the south-west angle of the Altar; and there was a trap connected with this cave, 1 cubit square (commonly closed with a marble slab), through which a man occasionally descended to cleanse it and to clear obstructions. Both the drain and the trap are to be seen in the rock at this day.

The Altar was 52 cubits square at its base, but gradually contracted, so that its heighth was only 24 cubits square. It was 15 cubits high, and had an ascent by an inclined plane on the south side, 32 cubits long and 16 wide.

Between the Altar and the porch of the Temple was a space of 22 cubits, rising in a gentle ascent by steps to the vestiule, the door of which was 40 cubits high and 20 wide. The total length of the Holy House itself was only 100 cubits, and this was subdivided into three parts: the Pronaos 11, the sanctuary 40, the Holy of Holies 20, allowing 29 cubits for the partition walls and a small chamber behind (i.e. west) of the Most Holy Place. The total width of the building was 70 cubits; of which the Sanctuary only occupied 20, the remainder being distributed into side chambers, in three stories, as-
signed to various uses. The Romans was, however, 30 cubits wider, 15 on the north, and 15 on the south, and a length of 100 cubits, which, with a width of only 11 cubits, must have presented the proportions of a Narthex in a Byzantine church. Its interior height was 90 cubits, and, while the chambers on the sides of the Temple rose only to the height of 60 cubits, there was an additional story of 40 cubits above the Sanctuary, also occupied by chambers, rising into a clerestory of the same elevation as the restible. The front of the Temple was decorated with gold, and reflected back the beams of the rising sun with dazzling effect; and, where it was not enunciated with gold, it was exceedingly white. Some of the stones of which it was constructed were 45 cubits long, 5 deep, and 6 wide.

East of the Altar was the Court of the Priests, 135 cubits long and 11 wide; and, east of that again, was the Court of Israel, of the same dimensions. East of this was the Women, 135 cubits square, considerably below the level of the former, to which there was an ascent of 15 semicircular steps to the magnificent gates of Corinthian brass, 50 cubits in height, with doors of 40 cubits, so ponderous that they could with difficulty be shut by 20 men, the spontaneous opening of which was one of the portents of the approaching destruction of the Temple, mentioned by Josephus (Bell. Jud. vi. 5 § 5), and repeated by Tacitus (Hist. v. 15).

Thus much must suffice for this most venerable seat of the Hebrew worship from the age of Solomon until the final destruction of the Jewish polity. But, in order to complete the survey, it will be necessary to notice the Acropolis, which occupied the north-west angle of the Temple enclosure, and which was, says the historian, the fortress of the Temple, as the Temple was of the city. Its original name was Baris, until Herod the Great, having greatly enlarged and beautified it, changed its name to Antonia, in honour of his friend Mark Antony. It combined the strength of a castle with the magnificence of a palace, and was like a city in extent,—comprehending within its walls not only spacious apartments, but courts and camping ground for soldiery. It was situated on an elevated rock, which was faced with slabs of stone, upon which was superimposed a broadwork of 3 cubits high, within which was the building, rising to a height of 40 cubits. It had turrets at its four corners, three of them 50 cubits high, but that at the south-east angle was 70 cubits, and commanded a view of the whole Temple. It communicated with the northern and western clusters of the Temple at the angle of the area, by flights of steps for the convenience of the garrison which usually occupied this commanding position; and it is a remarkable and interesting coincidence, that the site of the official residence of the Roman procurator and his guard is now occupied by the Seraiyah, or official residence of the Turkish Pasha and his guard: for there can be no question of the identity of the site, since the native rock here, as at Hippicus, still remains to attest the fidelity of the Jewish historian. The rock is here "cut perpendicularly to an extent of 20 feet in some parts; while within the men also, in the direction of the Mosk, a considerable portion of the rock has been cut away" to the general level of the enclosure (Bartlett, Walks about Jerusalem, pp. 156, 174, 175); so that the Seraiyah, or government house, actually rests upon a precipice of rock which formerly swept down abruptly, and has obviously been cut away to form the level below, which also bears marks of having been scarped.

The fortress was protected towards the south by an artificial fosse, so as to prevent its foundations from being assailed from that quarter. This fosse has only lately been filled in.

It is certain, from several passages, that the fortress Antonia did not cover the whole of the northern front of the Temple area; and, as the second wall, that encircled the Lower City, ended at the fortress, it is clear that this wall could not have coincided with the modern wall at the north-east quarter of the modern city. It is demonstrable, from several allusions and historical notices, that there must have been a considerable space between the second and third wall on the northern front of the Temple area. (Williams, Holy City, vol. ii. pp. 348—353.)

V. History.

The ancient history of Jerusalem may be conveniently divided into four periods. 1. The Canaaniti, or Amorite. 2. The Hebrew, or Ante-Babylonian. 3. The Jewish, or Post-Babylonian. 4. The Roman, or classical.

1. Of these, the first may claim the fullest notice here, as the sources of information concerning it are much less generally known or read than those of the later periods, and anything that relates to the remote history of that venerable city cannot but be full of interest to the antiquarian, no less than to the Christian student.

It has been said that the learnèd are divided in opinion as to the identity of the Salem of Mekhibizek with the Jerusalem of Sacred History. The writer of a very learned and interesting Review of the Second Edition of the Holy City, which appeared in the Christian Remembrancer (vol. xviii. October, 1849), may be said to have demonstrated that identity by a close critical analysis of all the passages in which the circumstances are alluded to; and has further shown it to be highly probable that this patriarch was identical, not with Simeon, as has been sometimes supposed, but with Heber, the son of Peleg, from whom the land of Canaan had obtained the name of the "land of the Hebrews" or Heberites, as early as the days of Joseph's departure to Egypt. (Gen. xii. 6.)

But the elucidation which the early history of Jerusalem receives from the monuments of Egypt is extremely important and valuable, as relating to a period which is passed over in silence by the sacred historian; and these notices are well collected and arranged in the review referred to, being borrowed from Mr. Osborne's very interesting work entitled Egypt, her Testimony to the Truth. After citing some remarkable memoirs of Sethos, and Sessoris his son, relating to the Jebusites, the writer proceeds:—"What glimpses, then, do we obtain, if any, of the existence of such a city as Jerusalem during the recorded period? Under that name, of course, we must not expect to find it; since even in the days of Joshua and the Judges it is so called by anticipation. (Holy City, vol. i. p. 3, note.) But there is a city which stands forth with a very marked and peculiar preeminence in these wars of the kings of Egypt with the Jebusites, Amorites, and neighbouring nations. We meet with it first as a fortress of the Amorites. Sethos II. is engaged in besieging it. It is situated on a hill, and strengthened with two tiers of ramparts. The inscription sets forth that it is in the
land of Amor, or the Amorite; and that the con-
queror had made his right arm to overcome
the chiefs of many walled cities. This implies
that the fort in question, the name of which is inscribed
upon it, was the chief stronghold of the nation.
That name, when translated from the hieroglyphics
into Coptic, and thence into Hebrew, is Chladash.
The next notice of Chladash belongs to the reign of
Sesostris, and connects it with the Jebusite nation.
The Ammonites had laid siege to the city, and a
joint embassy of the Jebusites and Hitites, who
were then tributary to Sesostris, entreat him to come
to their aid. The Egyptians having accordingly
sailed over the Dead Sea, met with another embassy,
from the Zazims, which gave further particulars of
the siege. The enemy had seized on the fortified
camps erected by the Egyptians to secure their hold
over the country, and spread terror to the very walls
of Chladash. A great battle is fought on a moun-
tain to the south of the city of Chladash. The in-
scription further describes Chladash as being in
the land of Heth. What, then, do we gather from these
combined notices? Plainly this, that Chladash was
a city of the first importance, both in a military
and civil point of view; the centre of interest to three or
four of the most powerful of the Canaanish na-
tions; in a word, their metropolis. We find it
moreover placed, by one inscription, in the territory
of the Amorites, by another in that of the Hittites,
while it is obviously inhabited, at the same time, by
the Jebusites. Now, omitting for the present the
consideration of the Hittites, this is the exact char-
acter and condition in which Jerusalem appears in
Scripture at the time of Joshua's invasion. Its met-
ropolitan character is evinced by the lead which
Aboni-zedek, its king, takes in the confederacy of
the Five Kings; its strength as a fortress, by the fact
that it was not then even attempted by Joshua, nor
ever taken for 400 years after. And while, as
the royal city of Aboni-zedek, it is reckoned among
the Amorite possessions, it is no less distinctly called
Jehus (Josh. xv. 8, xviii. 28; Judg. i. 21, xix. 10)
down to the days of David; the truth being, ap-
parently, that the Amorite power having been extin-
guished in the person of Aboni-zedek, the Jebusite
thereforth obtained the ascendency in the city which
the two nations inhabited in common. Nor is there
any reason to believe that the name, for the sake of
the share assigned by the monuments to the Hittites
in the possession of the city; for, as Mr. Osburn has
observed, the tribes of the Amorites and Hitites
appear, from Scripture, to have bordered upon each
other. The city was probably, therefore, situated
at a point where the possessions of the three tribes
met. Can we, then, hesitate to identify the Chladash
of the hieroglyphics with the Kadser of Herodotus,
the Ka-tar of the Arabs, the Kadash of the
Syrians, the 'Holy City'? The only shadow of an
objection that appears to lie against it is, that, strictly
speaking, the name should be not Chladash, but
Kadash. But when it is considered that the name
is a translation out of Canaanish into hieroglyphics,
thence into Coptic, and thence again into Hebrew,
and that the difference between Π and Π is, after all,
but small, it is not too much to suppose that
Kadash is what is really intended to be represented.
That Jerusalem should be known to the Canaanites
by such a name as this, denoting it 'the Holy,' will
not seem unreasonable, if we bear in mind what
has been noticed above with reference to the title Aboni-
zedek; and the fact forms an interesting link, con-
necting the Arabian and Syrian name for the city
with its earlier nomenclature, and confirming the
identity of Herodotus's Cadysis with Jerusalem.
Mr. Osburn has only very doubtfully propounded
(p. 66, note) the view we have undertaken to defend.
He inclines to identify Chladash with the Hadassah,
or Addasa, enumerated among the southernmost
cities towards the border of Edom, given to Judah
(Josh. xv. 21) from among the Amorites' posses-
sions. But it seems incredible that we should never
hear again, in the history of Joshua's conquest, of so
important a city as Chladash evidently was; besides,
Hadassah seems to lie too far south. We presume
Mr. Osburn will not be otherwise than pleased to
find the more interesting view supported by any
arguments which had not occurred to him. And
we have reserved one which we think Aristotle him-
self would allow to be of the nature of a τερεμοιον
or 'eluding argument.' It is a geographical one.
The paintings represent Chladash as surrounded by
a river or brook on three sides; and this river or
brook runs into the Dead Sea, toward the northern
part of it. Surely, nothing could more accurately
describe the very remarkable conformation of Jeru-
usalem; its environment on the east, south, and west,
by the waters of the valleys of Jehoshaphat and
Hinnom, and their united course, after their junc-
tion, through the Wady el-Nar into the north-west
part of the Dead Sea. And there are some diffi-
culties or peculiarities in the Scripture narrative
respecting Jerusalem, which the monuments, thus
interpreted, will be found to explain or illustrate.
We have already alluded to its being in one place
spoken of as an Amorite city, in another as the chief
seat of the Jebusites.
The LXX. were so pressed with this difficulty, that they adopted the rendering
'Jebusite' for 'Amorite' in the passage which
makes Aboni-zedek an Amorite king. (Josh. x. 5.)
The hieroglyphics clear up the difficulty, and render
the change of reading unnecessary. Again, there is
a well-known ambiguity as to whether Jerusalem
was situated in the tribe of Judah or Benjamin; and
the view commonly acquired in is. that, being in
the borders of the two tribes, it was considered
common to both. Perhaps the right of possession,
or the apportionment, was never fully settled; though
the Rabbis derive from the exact lines through the
very borders of the Ten Tribes. But how it is to
be asked, came such an element of confusion to be
introduced into the original distribution of the Holy
Land among the tribes? The answer seems to be,
that territory was, for convenience sake, assigned,
in some measure, according to existing divisions;
thus, the Amorite and Hitite possessions, as a whole,
fell to Judah; the Jebusite to Benjamin; and then
all the uncertainty resulting from that general
compartmentalization is very much simplified by the
name, which is testified to by the monuments, was necessarily
introduced into the rival claims of the two tribes."
counts for the firm hold with which they maintained their possession of their stronghold, the capital of their tribe, for upwards of five centuries after the coming in of the children of Israel under Joshua (cir. n. c. 1585); during which period, according to Josephus, they held uninterrupted and exclusive possession of the Upper City, while the Jebusites (whether of the tribe of Judah or of Benjamin is uncertain) seem only to have occupied the Lower City for a time, and then to have been expelled by the garrison of the Upper City. (Joseph. Ant. v. 2. §§ 5, 7; comp. Judges, i. 8, 21, xix. 10—12.)

2. It was not until after David, having reigned seven years in Hebron, came into undisputed possession of the kingdom of Israel, that Jerusalem was finally subjugated (cir. n. c. 1049) and the Jebusite garrison expelled. It was then promoted to the dignity of the capital of his kingdom, and the Upper and Lower City were united and encircled by one wall. (1 Chron. xi. 8; comp. Joseph. Ant. vii. 3. § 2.)

Under his son Solomon it became also the ecclesiastical head of the nation, and the Ark of the Covenant, and the Tabernacle of the Congregation, and the Temple of the Holy of Holies, were erected on the Sling-floor of Araunah the Jebusite, on Mount Moriah. (1 Chron. xxi. 15; 2 Chron. iii. 1.) Besides erecting the Temple, king Solomon further adorned the city with palaces and public buildings. (1 Kings, vi. viii. 1—8.) The notices of the city from this period are very scanty. Threatened by Shishak, king of Egypt (n. c. 972), and again by the Arabians under Zerah (cir. 950), it was sacked by the combined Philistines and Arabs during the discontinuous reign of Jehoram (884), and subsequently by the Israelites, after their victory over Amaziah at Bethlehem (cir. n. c. 805). In the invasion of the confederate armies of Pekah of Israel and Rezin of Syria, during the reign of Ahaz, the capital barely escaped (cir. 730; comp. Isaiah, vii. 1—9, and 2 Kings, xvi. 5, with 2 Chron. xxviii. 5); as it did in a still more remarkable manner in the following reign, when Israel was invaded twice, as it would seem, by the generals of Sennacherib, king of Assyria (n. c. 713). The deportation of Manasseh to Babylon would seem to intimate that the city was captured by the Chaldeans as early as 650; but the fact is not recorded expressly in the sacred narrative. (2 Chron. xxxiii.) From this period its disasters thickened space. After the battle of Megiddo it was taken by Pharaoh Necho, king of Egypt (n. c. 609), who held it only about two years, when it passed, together with the whole country under the sway of the Chaldeans, and Jehoiakim and some of the princes of the blood royal were carried to Babylon, with part of the sacred vessels of the Temple. A futile attempt on the part of Jehoiakim to regain his independence after his restoration, resulted in his death; and his son had only been seated on his tottering throne three months when Nebuchadnezzar again besieged and took the city (598), and the king, with the royal family and principal officers of state, were carried to Babylon, Zedekiah having been appointed by the conqueror to the nominal dignity of king. Having held it nearly ten years, he revolted, when the city was a third time besieged by Nebuchadnezzar (n. c. 587). The Temple and all the buildings of Jerusalem were destroyed by fire, and its walls completely demolished. (2 Kings, xxv. 1—20; 2 Chron. xxxvi. 1—23; Jer. xxxii. 41, 42.)

3. As the entire desolation of the city does not appear to have continued more than fifty years, the "seventy years" must date from the first deportation; and its restoration was a gradual work, as the desolation had been. The first commission issued in favour of the Jews in the first year of Cyrus (n. c. 538) contemplated only the restoration of the Temple and the son of Obed-Edom, protected, in consequence of numerous vexations interruptions, for 20 years, — i. e. until the eighth year of Darius Nethus (n. c. 418). According to the most probable chronology it was his successor, Artaxerxes Moseon, who issued the second commission to Ezra, in the seventh year of his reign, and a third to Nebuchadnezzar, in his twelfth year (n. c. 355). It was only in virtue of the edict with which he was intrusted, backed by the authority with which he was armed as the civil governor of Palæstine, that the restoration of the city was completed; and it has been before remarked that the account of the rebuilding of the walls clearly intimates that the limits of the restored city were identical with that of the preceding period: but the topographical notices are not sufficiently clear to enable us to determine with any degree of accuracy or certainty the exact line of the wall. The attempts of ancient writers (Strabo, xv. 3. § 3; and Williams, Memoirs, 111—121.) Only fifty years after its restoration Jerusalem passed into the power of a new master (n. c. 332), when, according to Josephus, the conqueror visited Jerusalem, after the subjugation of Gaza, and accorded to its inhabitants several important privileges (Josephus, Ant. xi. 8). On the death of Alexander, and the division of his conquests among his generals, it was the ill-fortune of Judaea to become the frontier province of the rival kingdoms of Egypt and Syria; and it was consequently seldom free from the miseries of war. Potemey Soter was the first to seize it,—by treachery, according to Josephus (n. c. 305), who adds that he ruled over it with violence. (Ant. xii. 1.) But the distinctions which he conferred upon such of its inhabitants as he carried into Egypt, and the privileges which he granted to their high priest,Simon the son of Onias, were not sufficient to ensure his representation (Eccles. l. 1, 2.) But his successor, Potemey Philadelphus, far outdid him in liberality; and the embassy of his favourite minister Aristes, in conjunction with Andreas, the chief of his bodyguard, to the chief priest Eleazar, furnish us with an apparently authentic, and certainly genuine, account of the city in the middle of the third century before the Christian era, of which an outline may be here given. "It was situated in the midst of mountains, on a lofty hill, whose crest was crowned with the magnificent Temple, girt with three walls, seventy cubits high, of proportionate thickness and length corresponding to the extent of the building .... The Temple had an eastern aspect: its spacious courts, paved throughout with marble, covered immense reservoirs containing large supplies of water, which rushed out by mechanical contrivance to wash away the blood of the numerous sacrifices offered there on the festivals. .... The foreigners viewed the Temple from a strong fortress on its north side, and described the appearance which the city presented. .... It was of moderate extent, being about forty furlongs in circuit. .... The disposition of its towers resembled the arrangement of a theatre: some of the streets ran along the brow of the hill; others, lower down, but parallel to these, followed the course of the valley, and they were connected by cross streets. The city was built
on the sloping side of a hill, and the streets were furnished with raised pavements, along which some of the passengers walked on high, while others kept the lower path,—a precaution adopted to secure those who were purifled from the pollution which contact with anything unclean could have occasioned. . . . . The place, too, was well adapted for mercantile pursuits, and adorned in artificers of various crafts. Its market was supplied with spicery, gold, and precious stones, by the Arabs, in whose neighboring mountains there had formerly been mines of copper and iron, but the works had been abandoned during the Persian domination, in consequence of a representation to the government that they must prove ruinously expensive to the country. It was also richly furnished with all such articles as are imported by sea, since it had commodious harbours—as A-calon, Joppa, Gaza, and Ptolemais, from none of which it was far distant." (Aristees, op. Gallandii Biblth. Vet. Iot. tom. ii, p. 805, &c.) The truthfulness of this description is not affected by the authorship; there is abundance of evidence, internal and external, to prove that it was written by one who had actually visited the Jewish capital during the times of the Ptolemies (cir. B.C. 210).

The Seleucidae of Asia were not behind the Ptolemies in their favour to the Jews; and the peace and prosperity of the city suffered no material diminution, while it was handed about as a marriage dowry, or by the chances of war, between the rivals, until internal factions subjected it to the dominion of Antiochus Epiphanes, whose tyranny crushed for a time the civil and ecclesiastical polity of the nation (cir. B.C. 175). The Temple was stripped of its costly sacred vessels, the palaces burned, the city walls demolished, and an idol-altar raised on the very altar of the Temple, on which daily sacrifices of swine were offered. This tyranny resulted in a vigorous national revolution, which secured to the Jews a greater amount of independence than they had enjoyed subsequently to the captivity. This continued, under the Asmonean princes, until the conquest of the country by the Romans: from which time, though nominally subject to a native prince, it was actually free in its dependencies, as a province, to the Roman empire. Once again before this the city was recaptured by Antiochus Sidetes, during the reign of John Hyrcanus (cir. 135), when the city walls, which had been restored by Judas, were again levelled with the ground.

4. The capture of the city by Pompey is recorded by Strabo, and was the first considerable event that fixed the attention of the classical writers on the city (cir. 63). He narrates the intervention of Pompey in the disputes of the brothers Hyrcanus and Aristobulus, the sons of Alexander Janneus, who first assumed regal power. He states that the conqueror levelled the fortifications when he had taken the city, which he did by filing up an enormous fosse which defended the Temple on the north side. The particular of the siege are more fully given by Josephus, who states that Pompey entered the city only after giving the Senate the sacred treasures of the Temple, which were plundered by Crassus on his way to Parthia (cir. 54). The stragglers for power between Antigonus, the son of Aristobulus, and Herod, the son of Antipater, led to the sacking of the city by the Parthians, whose aid had been sought by the former (cir. 46). Herod, having been appointed king by the Senate, only

JERUSALEM
This memorable siege has been thought worthy of special mention by Tacitus, and his lively abridgment, as it would appear, of Josephus's detailed narrative, must have served to raise his countrymen's ideas, both of the military prowess and of the powers of endurance of the Jews.

The city was wholly demolished except the three towers Hippicus, Phasaelus, and Mariamne, and so much of the western walls that would serve to protect the legion left there to garrison the place, and prevent any fresh insurrectionary movements among the Jews, who soon returned and occupied the ruins. The palace of Herod on Mount Zion was probably converted into a barrack for their accommodation, as it had been before used for the same purpose. (Bell. Jud. vii. 1 § 1, ii. 15 § 5, 17 §§ 8, 9.)

Six years after its destruction, Jerusalem was visited by the emperor Hadrian, who then conceived the idea of rebuilding the city, and left his friend and kinsman Agrippa there to superintend the work, A.D. 130. (Epiphanius, de Pond. et Mens. §§ 14, 15.) He had intended to colonise it with Roman veterans, but his project was defeated or suspended by the outbreak of the revolt headed by Barcochebas, his son Rufus, and his grandson Romaeus. The insurrection for a time checked the capital, and at times tried to rebuild the Temple: they were speedily dislodged, and then held out in Bethar for nearly three years. [Bethar.] On the suppression of the revolt, the building of the city was proceeded with, and luxurious palaces, a theatre, and temples, with other public buildings, fitted it for a Roman population.

The Chronicon Alexandrinum mentions τα δύο σημαίνα τα τω ιερω και το οντος και το τρικέ- μενον και τον επανήλαθα του πυρινομοιολογικον ονεμιδασι την κūραι (appended, I have added.) A temple of Jupiter Capitolinus, from whom the city derived its new name, occupied the site of the city, and a tetartyle face of Venus was raised over the site of the Holy Sepulchre. The ruined Temple and city furnished materials for these buildings. The city was divided into seven quarters (ἀρμονία), each of which had its own warden (ἀρμονικός). Part of the mountain of Zion was excluded from the city as at present, and was "ploughed as a field." (Michal, iii. 12; St. Jerome, Comment. in loc.; Hierosolyma Hierod. p. 592, ed. Weissing.) The history of Aelia Capitolina has been made the subject of distinct treatises by C. E. Deyling, "Aelia Capitolinae Origines et Historia" (appended to his father's Observationes Sacrae, vol. v. p. 453, &c.), and by Dr. Münzer, late Bishop of Copenhagen (translated by W. Wadding Turner, and published in Dr. Robinson's Bibliotheca Sacra, p. 593, &c.), who have collected all the scattered notices of it as a pagan city. Its coins also belong to this period, and extend from the reign of Hadrian to Severus. One of the former emperor (impr. Caes. Traian. Hadrianus. Avg., which exhibits Jupiter in a tetartyle state, with the legend col. Ael. cap.) confirms the account of Dion Cassius (l. c. 12), that a temple to Jupiter was erected on the site of God's temple (Eckel, Doct. Num. Vet. pass. i. tom. iii. p. 449); while one of Antoninus (Antoninius. Avg. Tiv. F. P. Th. P. Cos. Ill, representing Venus in a similar temple, with the legend the c. a. c. or col. Ael. cap.) no less distinctly confirms the Christian tradition that a shrine of Venus was erected over the Sepulchre of our Lord. (Valiant, Numismata Areet Impertit. in Coll. pt. 1. p. 279; Eckel, l.c. p. 442.) Under the emperor Constantine, Jerusalem, which had already become a favourite place of pilgrimage to the Christians, was furnished with new attractions by that emperor and his mother, and the erection of the Martyr of the Resurrection inaugurated a new era of the Holy City, which now recovered its ancient name, after it had apparently fallen into complete oblivion among the government officers in Palestine itself. (Euseb. de Mort. Palæst. cap. ii.) The erection of his church was commenced the year after the Council of Nicaea, and occupied ten years. It was dedicated on the tricennalia of the emperor, A.D. 336. (Euseb. Vita Constantini, iii. 30—49, iv. 40—47.) Under the emperor Julian, the city again became an object of interest to the pagans, and the account of the defeat of Julian's attempt to rebuild the Temple is preserved by Ammianus Marcellinus, an exceptional witness (exil. 1: all the historical notices are collected by Bishop Warburton, in his work on the subject, entitled Julian.) In 451, the see of Jerusalem was erected into a patriarchate; and its subsequent history is chiefly occupied with the conflicting opinions of its incumbents on the subject of the heresies which troubled the church at that period. In the following century (cir. 592) the emperor Justinian emulated the zeal of his predecessor Constantine by the erection of churches and hospitals at Jerusalem, a complete account of which has been left by Procopius. (De Aedificiis Justin. anii, v. 6.) In A.D. 614, the city with all its sacred places was desolated by the Persians under Chosroes II., when, according to the contemporary records, 90,000 Christians, of both sexes and of all ages, fell victims to the relentless fury of the Jews, who, to the number of 26,000, had followed the Persians from Gaiile to Jerusalem to gratify their heretical malice by the massacre of the Christians. The churches were immediately restored by Mestostus; and the city was visited by Heraclius (A.D. 629) after his defeat of the Persians. Five years later (A.D. 634) it was invested by the Saracens, and, after a defence of four months, capitulated to the Khalif Omar in person; since which time it has followed the vicissitudes of the various dynasties that have swayed the destinies of Western Asia.

It remains to add a few words concerning the modern city and its environs.

V. THE MODERN CITY.

El-Kuds, the modern representative of its most ancient name Kedeshah, or Cadytis, is surrounded by a high and strong cut-stone wall, built on the solid rock, loop-holed throughout, varying from 25 to 60 feet in height, having no ditch. It was built by the sultan Salimah (A.D. 1542), as is declared by many inscriptions on the wall and gates. It is in circuit about 23 miles, and has four gates facing the four cardinal points. 1. The Jaffa Gate, on the west, called by the natives Bab-el-Halil, i.e. the Hebron Gate. 2. The Damascus Gate, on the north, Bab-el-Amid, the Gate of the Column. 3. The St. Stephen's Gate, on the east, Bab-Sittij-Miriam, St. Mary's Gate. 4. The Sion Gate, on the south, Bab-al-Naua Daul, the Gate of the Prophet David. A fifth gate, on the south, near the mouth of the Tyropoeon, is sometimes opened to facilitate the introduction of the water from a neighbouring well. A line drawn from the Jaffa Gate to the Mosque, along the course of the old wall, and another, cutting it at right angles, drawn from the Sion to the Damascus Gate, could divide the
city into the four quarters by which it is usually distinguished.

These four quarters are:—(1) The Armenian Quarter at the SW.; (2) the Jew's Quarter at the SE.—both these being on Mount Zion; (3) the Christian Quarter at the NW.; (4) the Mahometan Quarter, occupying the remainder of the city on the west and north of the great Haram-es-Sherif, the noble Sanctuary, which represents the ancient Temple area. The Mosque, which occupies the grandest and once most venerated spot in the world, is, in its architectural design and proportions, as it was formerly in its details, worthy of its site. It was built for Abd-el-Melik Ibn-Marwan, of the house of Omniah, the tenth kalif. It was commenced in A.D. 688, and completed in three years, and when the view-studies it has undergone within a space of nearly 1200 years are considered, it is perhaps rather a matter of astonishment that the fabric should have been preserved so entire that the adornment should exhibit in part marks of ruinous decay.

The Church of Justinian,—now the Mosk El-Aksa,—to the south of the same area, is also a conspicuous object in the modern city; and the Church of the Holy Sepulchre, with its appendages, occupies a considerable space to the west. The greater part of the remaining space is occupied with the Colleges or Hospitals of the Moslems, in the vicinity of the Mosks, and with the Monasteries of the several Christian communities, of which the Patriarchal Convent of St. Constantine, belonging to the Greeks, near the Church of the Holy Sepulchre, and that of the Armenians, dedicated to St. James, on the highest part of Mount Sion, are the most considerable.

The population of the modern city has been variously estimated, some accounts stating it as low as 10,000, others as high as 30,000. It may be safely assumed as about 12,000, of which number nearly half are Moslems, the other half being composed of Jews and Christians in about equal proportions. It is governed by a Turkish pasha, and is held by small garrisons. Most of the European nations are there represented by a consul.

VI. ENVIRONS.

A few sites of historical interest remain to be noticed in the environs of Jerusalem; as the valleys which environ the city have been sufficiently described at the commencement of the article, the mountains may here demand a few words.

The Seyyur, which derived its name, as Josephus informs us, from the extensive view which it commanded of the surrounding country, is the high ground to the north of the city, beyond the Tons of the Kings, 7 stadia from the city (B. J. ii. 19. § 4, v. 2, § 3), where both Cestius and Titus first encamped on their approach to the city (ll. cc.): this range is now occupied by a village named Shophah,—the Semitic equivalent to the Greek Ἁμαραί. On the east of the city is the Mount of Olives, extending along the whole length of its eastern wall, conspicuous with its three summits, of which the centre is the highest, and is crowned with a pile of buildings occupying the spot where Helon, the mother of Constantine, built a Basilica in commemoration of the Ascension of our Lord. (Eusebius, Vita Constantini, iii. 12. Lactant. § 9.)

A little below the southern summit is a remarkable gallery of sepulchral chambers arranged in a semi-circle concentric with a circular tunnel-shaped hall 24 feet in diameter, with which it is connected by three passages. They are popularly called "the Tombs of the Prophets," but no satisfactory account has been given of these extensive excavations. (Plans are given by Schlottz, Kraft, and Tobler, in the works referred to below.) Dr. Schlottz was inclined to identify this with the rock sepulchre mentioned by Josephus in his account of the Wall of Circumvallation (B. J. v. 12), which he supposes to be a translation of the Latin Colonnarium. (See Dict. Ant. art. Funus, p. 561, l. h.)

In the bed of the Valley of Jehoshaphat, immediately beneath the centre summit of Mount Olivet, where the dry bed of the brook Kidron is spanned by a bridge, is the Garden of Gethsemane, with its eight venerable olive-trees protected by a stone wall; and close by is a subterranean church, in which is shown the reputed tomb of the Virgin, which, however, according to an ancient tradition, was buried in that city. (Lamb. Concilia, tom. iii. col. 574.)

A little to the south of this, still in the bed of the valley, are two remarkable monolithic sepulchral monuments, ascribed to Absalom and Zachariah, exhibiting in their sculptured ornaments a mixture of Doric, Ionie, and perhaps Egyptian architecture, which may possibly indicate a change in the original design in conformity with later taste. Connected with these are two series of sepulchral chambers, one immediately behind the Pillar of Absalom, called by the name of Jehoshaphat; the other between the monoliths, named the Cave of St. James, which last is a pure specimen of the Doric order. (See A General View in Holy City, vol. ii. p. 449, and detailed plans, &c. in pp. 157, 158, with Professor Willis's description.)

To the south of Mount Olivet is another rocky eminence, to which tradition has assigned the name of the Mount of Offence, as "the hill before Jerusalem" where king Solomon erected altars for idolatrous worship (1 Kings, xi. 7). In the rocky base of this mountain, near the summit of the Kidron, is the rock-hewn village of Sileam, chiefly composed of sepulchral excavations, much resembling a Columbarium, and most probably the rock Peristernium of Josephus. Immediately below this village, on the opposite side of the valley, is the intermitting Fountain of the Virgin, at a considerable depth below the bed of the valley, with a descent of many steps hewn in the rock. Its supply of water is very scanty, and what is not drawn off here runs through the rocky ridge of Ophel, by an irregular passage, to the Pool of Siloam in the mouth of the Tyrephon. This pool, which is mentioned in the New Testament (St. John, ix. 7, &c.), is now filled with earth and cultivated as a garden, a small tank with columns built into its side serves the purpose of a pool, and represents the "quadriportium" of the Bordeaux Pilgrim (A. D. 333), who also mentions "Alia piscina grandis foras." This was probably identical with Hezekiah's Pool "between the two walls" (Isa. xxvii. 7), as it certainly is with the "Pool of Siloah by the king's garden" in Nehemiah (iii. 15. ii. 14; comp. 2 Kings, xxv. 4). The arguments are fully stated in the Holy City, vol. ii. pp. 474—480. M. de Sankey accepts the identification. The king's gardens are still represented in a variant spot, where the concurrence of the three valleys, Hinnom, Jehoshaphat, and Tyrephon
forms a small plain, which is cultivated by the villagers of Siloam.

In the month of the southern valley which forms the continuation of these three valleys towards the Dead Sea, is a deep well, variously called the Well of Nehemiah, of Job, or Joab; supposed to be identical with Enrogel, "the well of the spies," mentioned in the borders of Judah and Benjamin, and elsewhere (Jos. xvii. 7; xviii. 16; 2 Sam. xvii. 17; 1 Kings, i. 9).

On the opposite side of the valley, over against the Mount of Olives, is another high rocky hill, facing Mount Zion, called the Hill of Evil Counsel, from a tradition that the house of Annas the high-priest, father-in-law to Caiaphas (St. John, xvii. 13, 24), once occupied this site. There is a curious coincidence with this in a notice of Josephus, who, in his account of the wall of circumvallation, mentions the monument of Ananus in this part (v. 12 § 2); which monument has lately been identified with an ancient rock-grave of a higher class,—the Acedaïma of ecclesiastical tradition,—a little below the ruins on this hill; which is again attested to be "the Potter's Field," by a stratum of white clay, which is still worked. (Schultz, Jerusalem, p. 39.)

There is a series of sepulchres excavated in the lower part of this hill; among which are several bearing Greek inscriptions, of which all that is clearly intelligible are the words THC. AFIAC, CIÖN, indicating that they belonged to inhabitants or communities in Jerusalem. (See the Inscriptions in Krafft, and the comments on his decipherments in the Holy City, Memoir, pp. 56—60).

Higher up the Valley of Hinnom is a large and very ancient pool, now called the Sultan's (Birket-es-Sultan), from the fact that it was repaired, and adorned with a handsome fountain, by Sultan Suliman Ibn Selim, 1520—1566, the builder of the present city-wall. It is, however, not only mentioned in the mediæval notices of the city, but is connected by Nehemiah with another antiquity in the vicinity, called En-ôebi Dûdah. On Mount Zion, immediately above, and to the east of this pool, is a large and irregular mass of building, supposed by Christians, Jews, and Moslems, to contain the Tomb of David, and of his successors the kings of Judah. It has been said that M. de Sanlcy has attempted an elaborate proof of the identity of the Tombs of the Kings, at the head of the Valley of Jehoshaphat, with the Tomb of David. His theory is inadmissible; for it is clear, from the notices of Nehemiah, that the Sepulchres of David were not far distant from the Pool of "Siloam," close to "the pool that was made," and, consequently, on that part of Mount Zion where they are now shown. (Nehem. iii. 16—19.) The memory of David's tomb was still preserved until the destruction of Jerusalem (Josephus, Ant. xiii. 8 § 4, xvi. 7 § 1; Acts, ii. 29), and is noticed occasionally in the middle ages. (See Holy City, vol. ii. pp. 505—513.) In the same pile of buildings, now occupied by the Moslems, is shown the Concaenulum where our Lord is said to have instituted the Last Supper. Ephraïmis mentions that this church was standing when Hadrian visited Jerusalem (Pond. et Mens. cap. xiv.), and there St. Cyril delivered some of his catechetical lectures (Catech. xvi. 4). It was in this part of the Upper City that Titus spared the houses and city wall to form barricades for the soldiers of the garrison. (Vide supra.)

Above the Pool of the Sultan, the Aqueduct of Pontius Pilate, already mentioned, crosses the Valley of Hinnom on nine low arches; and, being carried along the side of Mount Sion, crosses the Tyropoeon by the causeway into the Haram. The water is conveyed from Etham, or the Pools of Solomon, about two miles south of Bethlehem. (Josephus, B. J. ii. 9 § 4.)

The mention of this aqueduct recalls a notice of Strabo, which has been perpetually illustrated in the history of the city; viz., that it was εἰς τὸν μὲν εὐθὺς ἐκτὸς δὲ παντελῶς διόρθων... αὐτὸ μὲν εὐθὺς, τὸν δὲ κύκλῳ χῶραν ἄχων λατρεών καὶ ἀνθρωπον. (xvi. p. 723.) Whence this abundant supply was derived it is extremely difficult to imagine, as, of course, the aqueduct just mentioned would be immediately cut off in case of siege; and, without this, the inhabitants of the modern city are almost entirely dependent on rain-water. But the accounts of the various sieges, and the other historical notices, as well as existing remains, all testify to the fact that there was a copious source of living water introduced into the city from without, by extensive subterranean aqueducts. The subject requires, and would repay, a more accurate and careful investigation. (See Holy City, vol. ii. p. 453—505.)

Besides the other authorities cited or referred to in the course of this article, the principal modern sources for the topography of Jerusalem are the following:—Dr. Robinson's Biblical Researches, vols. i. and ii; Williams's Holy City; Dr. Wilson's Lands of the Bible; Dr. E. G. Schultz, Jerusalem; W. Krafft, Die Topographie Jerusalem; Carl Ritter, Die Erkundung von Arsin, ãëã, Palästina, Berlin, 1852, pp. 297—508; Dr. Titus Tobler, Golgotha, 1851; Die Siloamquelle und die Ostberg, 1852; Denkblatter aus Jerusalem, 1853; P. de Sanlcy, Voyage autour de la Mer Morte, tom. 2. [G. W.]

COINS OF AEGLA CAPITOLINA (JERUSALEM).

IESPUS. [JACETANII.

JEREEEL. [EDREELA.]

IGIILII (OIOYAI: Potl. tjieli), a sea-port of Murenetia Caeсariense, on the Sinus Numidicus, made a Roman colony by Augustus. It stands on a headland, on the E. side of which a natural roadstead is formed by a reef of rocks running parallel to the shore; and it was probably in ancient times the emporium of the surrounding country. (Itin. Ant. p. 18; Plin. v. 2. s. 1; Potl. iv. 2. § 11; Ammian. Mar. xxix. 5; Tab. Pent.; Shaw, Traité, p. 45; Barth, Wanderungen, esp. p. 66.) [F. S.]

IGIILUM (Giglio), an island off the coast of
Etruria, directly opposite to the Mars Apennine, and the port of Cosa. It is, next to Ivia, the most considerable of the islands near the coast of Etruria, being 6 miles long by about 3 in breadth, and consists of a group of mountains of considerable situation forming the small peninsula of the Utrona coast-mina." (Tit. iii. 325.) From that author we learn that, when Rome was taken by Hannibal (A. D. 410), a number of fugitives from the city took refuge in Iguilium, the inquirer position of which afforded them complete security. Caesar also mentions it, during the Civil War, in conjunction with the neighbouring port of Cosa, as furnishing a few vessels to Domitian, with which that general sailed for Massilia. (Caes. B. C. i. 54; Plin. iii. 6. s. 12; Strabo, iii. 7. § 19.) It is evident, therefore, that it was inhabited in ancient as well as modern times. [E. B. B.]

IGLETES, IGLETEN. [Hist. styl.]

IGULLIIONES, in European Sarmatian, mentioned by Ptolemy as lying between the Stavani and Costoboci, and to the east of the Veneti (iiii. 5. § 21). Now the Stavani lay south of the Galindae and Sudini, populations of which the locality is known to be that of the Galitiae and Sudovae of the middle ages, i.e. the parts about the Sydringi-see in East Prussia. This would place the Igulliones in the southern part of Litiunian, or in parts of Grodno, Podoli, and Pologne, in the country of the Jazwingi of the thirteenth century, — there or thereabouts. Zeus has allowed himself to consider some such form as Trygvari as the true reading; and, so doing, identifies the names, as well as the localities, of the two populations (Trygvar, Jazwingi), — the varieties of form being very numerous. In the Igulliones were Litiunians—Lithuanians as opposed to Slavonians; and in this lies their ethnological importance, inasmuch as the southward extension of that branch of the Sarmatian stock is undetermined. (See Zeus, s. v. Jazwingi.) [R. G. L.]

IGUVIUM. [Tayck: Ekk. Italiuni: Gubbio], an ancient and important town of Umbria, situated on the W. slope of the Apennines, but not far from their central ridge, and on the line of the Via Flaminia. Its existence as an ancient Umbrian city is sufficiently attested by its coins, as well as by a remarkable monument presently to be noticed; but we find no mention of it in history previous to the period of its subjection to Rome, and we learn incidentally from Cicero that it enjoyed the privileged condition of a "decemvirates civitas," and that the terms of its treaty were of a highly favourable character. (Cic. pro Bab. 20, where the reading of the older editors, "Fulginium," is certainly erroneous; see Orelli, ad loc.) The first mention of its name occurs in Livy (xvi. 43, where there is no doubt we should read Iguvium for "Litturrimum") as the place selected by the Roman senate for the confinement of the Illyrian king Gentius and his sons, when the people of Spoleto refused to receive them. Its natural strength of position, which was evidently the cause of its selection on this occasion, i.e. also its bearing in conspicuous part in the beginning of the civil war between Caesar and Pompey, when it was occupied by the praetor Minucius Thermus with five cohorts; but on the approach of Curio with three cohorts, Thermus, who was apprehensive of a revolt of the citizens, abandoned the town without resistance. (Caes. B. G. 14. 12; Cic. ad Att. viii. 13, 6.) Under the Roman dominion Iguvium seems to have lapsed into the condition of an ordinary municipal town: we find it noticed in an inscription as one of the "civitates Umbriae" (Igg. Insocr. 98), as well as by Pliny and Ptolemy (Plin. iii. 14. s. 19; Ptol. iii. i. § 53); and it is probable that in Strabo also we should read Trygvar for the corrupt name Trupa of the MSS. and earlier editions. (Strab. v. p. 227; Chuer. Ital. p. 626.) But its secluded position as mountains, and at some distance from the line of the Via Flaminia, was probably unfavourable to its prosperity, and it does not seem to have been a place of much importance. Silvanus Italianus speaks of it as very subject to fogs (viii. 459). It early became the seat of a bishop, and retained its episcopal rank throughout the middle ages, when it rose to be a place of considerably more importance than it had enjoyed under the Roman empire.

The modern city of Gubbio contains no ruins of ancient date; but about 8 miles to the E. of it, at a place now called La Scheggia, on the line of the ancient Flaminian Way, and just at the highest point of the pass by which it crosses the main ridge of the Apennines, some vestiges of an ancient temple are still visible, which are supposed with good reason to be those of the temple of Jupiter Apenninus. This was a principal part of the Tabula Peutingeriana, existing at the highest point of the pass, and is noticed also by Claudian in describing the progress of Honorius along the Flaminian Way. (Claudian, de VI. Cons. Hon. 504; Tab. Peut.) The oracle consulted by the emperor Claudius "in Apennino" (Tab. Poll. Claud. 10) may perhaps have reference to the same spot. Many bronze idols and other small objects of antiquity have been found near the ruins in question; but a far more important discovery, made on the same site in 1444, was that of the celebrated tables of bronze, commonly known as the Tabulae Eugubinae, which are still preserved in the city of Gubbio. These tables, which are seven in number, contain long inscriptions, four of which are in Etruscan characters, two in Latin, and one partially in Etruscan and partially in Latin characters; but the language is in all cases apparently the same, though some of them are written from the genuine Etruscan monuments on the one hand, as well as from Latin on the other, though exhibiting strong traces of affinity with the older Latin forms, as well as with the existing remains of the Oscan dialects. There can be no doubt that the language which we here find is that of the Umbrians themselves, who are represented by all ancient writers as nationally distinct both from the Etruscans and the Sabellian races. The etiological and linguistic inferences from these important monuments will be more fully considered under the article Umbria. It is only of late years that they have been investigated with care; early antiquaries having formed the most extravagant theories as to their meaning: Lanzhi had the merit of first pointing out that they evidently related only to certain sacrificial and other religious rites to be celebrated at the temple of Jupiter by the Iguvians themselves and some neighbouring communities. The interpretation has since been carried out, as far as our imperfect knowledge will permit, by Lepsius, Grofendorf, and still more recently in the elaborate work of Aufrecht and Kirchhoff. (Lanzi, Stagio di Lingua Etrusca, vol. ii. pp. 657—768; Lepsius, de Tabulis Eugubinis, 1833; Inscriptiones Umbricae et Oscanae, Lips. 1841; Grofendorf, Kndl. Lang. Umbri. Harv. 1835—1839; Aufrecht u. Kirchhoff, Die Umbriischen Sprache. Lpz. 1843.) In the still in-
perfect state of our knowledge of the inscriptions in question, it is somewhat hazardous to draw from them positive conclusions as to proper names; but it seems that we may fairly infer the mention of several such communities in the immediate neighbour- hood of Illugum. These were, however, in all probability not independent communities, but pagoi, or villages dependent upon Illugum itself. Of this description were: Akeranua or Acerornua (probably answering to the Latin Aquilonia), Claverina (in Lat. Clavena), Curia or Curia, Caslum, Juinuscum, Museia, Pierium (?), Tarsina, and Trebia or Trepia.

The last of these evidently corresponds to the Latin name Trebia or Trepia, and may refer to the Umbrian town of that name; the Caricati of the inscription are evidently the same with the Curiates of Pliny, mentioned by him among the extinct communities of Umbria (Plin. iii. 14. s. 19); while the names of Museia and Caslum are said to be still retained by two villages called Museia and Caslido in the immediate neighbourhood of Gubbio. Chiserca, another neighbouring village, is perhaps the Claverina of the inscriptions.

The coins of Illugum, which are of bronze, and of large size (so that they must be anterior to the reduction of the Italian A.), have the legend ikvivi, which is probably the original form of the name, and is found in the Tables, though we here meet also with the softened and probably later form "Iovina," or "Iovina.

[H. R. P.]

[H. A. in Scotland, mentioned by Polonen (ii. 3. § 5) as the first river south of the Borbium Prono- muntum = Firth of Fornoch. [B. G. L.]

ILARUGATAE. [HISPANIA; IERGETES.]

ILARCURIS. [Carpethani.]

ILARGUS, a river of Rhacia Secunda, flowing from west to east, and emptying itself into the Danube. (Pedo Albin. Eleg. ad Lit. 386, where the common reading is larárus; others read Iargarus, and regard it as the same as the river I—the ("As/Wus" mentioned by Strabo, iv. p. 207, with Grondzur's note, vol. i. p. 356.) It would, however, appear that Ilaragus and Iargarus were two different rivers, since in later writers we find, with a slight change, a river Ilarus (Vita S. Magni, 18), answering to the modern Iler, and also, Iserye (Act. S. Cassiani, ap. Recht, Annal. Sabion. iv. 7), the modern Iserach, which flows in a southern direction, and empties itself into the Athesis. [L. S.]

ILATTIA (Ilaria; Polyb. Steph. B. 6. s. n.), a town of Crete, which is probably the same as the Elatus of Pliny (iv. 12). Some editions read Cattus, incorrectly classed by him among the inland towns. (Hick. Kerko, vol. i. p. 432.) [E. B. J.]

ILDUM. [EDETANI.]

ILIS. [HERBONE.

ILEOSCA. [Osa.]

ILEGAGENTES (Tapasodres, Poltol. ii. 6. §§ 16, 64; Ieracanenses, Liv. xxii. 21; Ilercargonenses, Cas. B. C. i. 60; in this, as in so many other Spanish names, the e and a are interchangeable), a people of Hispania Tarraconensis, occupying that portion of the sea-coast of Edetania which lay between the rivers Urduba and Iererus. Their exact boundaries appear to have been a little to the N. of each of these rivers. They possessed the town of Dertosa (Tortosa), on the left bank of the Iererus, and it was their chief city. [DEETOSA.] Their other towns, according to Polyben, were:— AGER ("Aspeata"?), IRELIA (Tapasodres: Ierulina, ap. Plin. iii. 3. s. 4; Tapasodres), BISCARIGUS (Bokaragus; Bisaragitani civ. Rom., Plin. : Burus), SIGALIA (Sigalava: Segara, Marca, Hisp. ii. 8), CARTHAGO VETUS (Carthaginian town: Carta Viria, Marca, ibid.), and THEAVULA (Taracina). Ulibri also assigns them, on the N. of the Iererus, TRAJAE CAPITA, OLEASTRYM, TARDO, and other places, which seem clearly to have belonged to the COSETANI. The name of their city, ILERACOYUN, occurs on the coins of their city IERERA.

[O.S.]

ILERDA (Iaposa, and rarely Elereda; Hlereda, Auson. Epist. xxv. 59; Yet. Tiberiana, Herdenses: Levista), the chief city of the IERGETATI, in Hispania Tarraconensis, was a place of considerable importance, historically as well as geographically. It stood upon an eminence, on the right (W.) bank of the river Sicorius (Sogre), the principal tributary of the Ebro, and some distance above its confluence with the Cinga (Cisca); thus commanding the country between these rivers, as well as the great road from Tarraco to the NW. of Spain, which here crossed the Sicorius. (Hirt. Ant. pp. 391, 432.) Its situation (propertius locis opportunitatem, Cas. B. C. i. 38) induced the legends of Pompey in Spain to make it the key of their defence against Caesar, in the first year of the Civil War (n. c. 49). Afranius and Petreius threw themselves into the place with five legions; and their siege by Caesar himself, as narrated in his own words, forms one of the most interesting passages of military history. The resources exhibited by the great general, in a contest where the formation of the district and the various elements of nature seemed in league with his enemies, have been compared to those displayed by the great Duke before Badajoz; but no epigram can do justice to the campaign. It ended by the capitulation of Afranius and Petreius, who were conquered as much by Caesar's generosity as by his strategy. (Cas. B. C. i. 58, et seq.; Flor. iv. 12; Appian, B. C. ii. 42; Vell. Pat. ii. 42; Suet. Cons. 34; Liv. 40.) The empire, Ilerda was a very flourishing city, and a munici- pium. It had a fine stone bridge over the Sicorius, on the foundations of which the existing bridge is built. In the time of Ausonius the city had fallen into decay; but it rose again into importance in the middle ages, (Strab. iii. p. 161; Horat. Epist. i. 20. 13; coins, ap. Florio, Med. iii. pp. 451, 646, iii. p. 73; Moisant, vol. i. p. 44. Suppl. vol. i. p. 89; Castani, pp. 161, 166; Eckhel, vol. i. p. 51.)

[C.O.]

COIN OF ILERDA.

ILERGETES (Taperunis, Poltol. ii. 6. § 68; Liv. xxii. 63, 61, 22; Plin. iii. 3. s. 4; Tapasodres, Polyb. iii. 35;) or ILEGAGENTES (Tapasodres, Strab. iii. p. 161; doubtless the Tapasodrates of Hecateus, ap. Steph. B. 6. s. n.), a people of Hispania Tarraconensis, extending on the N. of the Iererus (Ebro) from the river Gallaecus (Geres) to both banks of the Sicorius (Sogre), and as far as the Rhenus-

CATTUS (Lobregat); and having for neighbours the
EUFITANI and CILITEIERI on the S., the VASCONES on the W., the NE. and the NE. small peoples at the foot of the Pyrenees, as the JACETANI, CASTELLANI, ACSETANI, and CHERETANI, and on the NE. the COSETANI. Besides IBERIA, their chief cities were:—the colony of CELS (Villita, near Xelos), OSCA (Huesca), famous in the story of SERTORIUS; and ATHANAGIA, which Livy (xxi. 61) makes their capital, but which no other writer names. On the great road from Italy into the N. of Spain, reckoning from Tarraco, stood IBERIA, 62 M. P.; TOLOSA, 32 M. P., in the conventus of CAESARUGA, and with the civitas ROMANA (Flin.); PENYXA, 18 M. P. (PERTSAAN, on the Ale¡adure); OSCA, 19 M. P., whence it was 46 M. P. to CAESARUGA (Itin. Ant. p. 391).

On a loop of the same road, starting from CAESARUGA, were:—GALCUM, 15 M. P., on the river Gallica (Zaure, on the Gallega); BORITANAE, 18 M. P. (Boripina, Postl.); TARRACO; OSCA, 12 M. P.; CAST, 29 M. P.; MENDEMCNIA, 19 M. P. (probably Monzon); IBERIA, 22 M. P. (Itin. Ant. pp. 431, 492). On the road from TOLOSA, up the valley, were the Gallica, to BERNAULTUS (Orther) in Gallia, near TORMUS GALLORUM, 30 M. P. (Garaua), and EURELUM, 22 M. P. (Helio), whence it was 24 M. P. to the summit of the pass over the Pyrenees (Itin. Ant. p. 452).

Besides these places, POILEMNY mentions BERGUSIA BERGUSIA (Baloguer), on the Secris; BERGUDIC (Bergrado); ERGA (Erga); SUCOSA (Soucasa); GALICA FLAVIA (TALALAT Phousia: Fluga?); and ORCIA (Orcia, Proh. Guarea), a name also found on coins (Sestini, Med. Jsp. p. 93), while the same coins bear the name of AESONES, and inscriptions found near the Secris have AERSONESIS and JESSONESIS (Muratori, Nov. Thes. p. 1021, Nos. 2, 3; Spon, Misc. Erod. Ant. p. 188), with which the GESSONISI of Pliny may perhaps have some connection. BERGUSIA is mentioned on coins (Sestini, p. 107), and OCTOGENA (Proh. La Greina, at the confluence of the Segre and the Floro) by Caesar (B. C. L. 61); UERT, vol. ii. pt. 1. pp. 450-453. [P. S.]

II. LICI.C. [IERSIUM.]

II. LICI or II. LICI (Itin. Ant. p. 401); TACIASI? DAESIS, Postl. ii. 6, § 62: Elche), an inland city of the Contestani, but near the coast, on which it had a port (XATCIASIS AEGION, Postl. L. c. § 14), lying just in the middle of the bay formed by the Pt. Saturni and Damiapan, which was called Illicitanus Sinus. The city itself stood at the distance of 52 M. P. from Carthagio Nova, on the great road to Tarraco (Itin. Ant. p. 401), and was a Colonii immuralis, with the jus Italicum (Flin. iii. 3. s. 4: Paulus, Dig. viii. de Cens.). Its coins are extant of the period of the empire (Flores, Mot. de Esp. vol. ii. p. 438; Sestini, p. 166; Monnet, vol. i. p. 43, Suppl. vol. i. p. 90; Eckhel, vol. i. p. 51). Pliny adds to his mention of the place its coin contributur Iciciatanii. (Uert, vol. ii. pt. 1. pp. 402, 403.)

II. LIENSES (Iaene: Paum), a people of the interior of Sardinia, who appear to have been one of the most considerable of the mountain tribes in that island. Mel calls them "antisquismi in ea populi, or Pliny also mentions them among the "colchotoi m populi" of Sardinia. (Mel. ii. 7. § 19; Plin. iii. 7. s. 15.) Pausanias, who term them TACIASI, distinctly ascribes to them a Trojan origin, and derives them from a portion of the com-

II. IPA.

THESitimes of AEneas, who settled in the island, and remained there in quiet until they were compelled by the Africans, who subsequently occupied the coasts of Sardinia, to take refuge in the more rugged and inaccessible mountain districts of the interior. (Paus. x. 17. § 7.) This tale has evidently originated in the resemblance of the name of LIENSES, in the form which the Romans gave it, to that of the Trojans; and the latter part of the story was invented to account for the apparent anomaly of a people that had come by sea dwelling in the interior of the island. What the native name of the LIENSES was, we know not, and we are wholly in the dark as to their real origin or ethнич affinities; but their existence as one of the most considerable tribes of the interior at the period of the Roman conquest, is well ascertained; and they are repeatedly mentioned by Livy as contending against the supremacy of Rome. Their first insurrection, in B.C. 181, was repressed, rather than put down, by the praetor M. PIRIARIUS; and in B.C. 178, the LIENSES and BALARI, in conjunction, laid waste all the more fertile and settled parts of the island; and were even able to meet the consul T. SEMPRONIUS GRACCHUS in a pitched battle, in which, however, they were defeated with heavy loss. In the course of the following year they appear to have been reduced to complete submission, and their name is not again mentioned in history. (Liv. xl. 19, 34. xii. 6, 12, 17.)

The situation and limits of the territory occupied by the LIENSES, cannot be determined; but we find them associated with the BALARI and CORSI, as inhabiting the central and mountainous districts of the island. Their name is not found in POILEMNY, though he gives a long list of the tribes of the interior.

Many writers have identified the LIENSES with the BALARI or ILOLAI, who are also placed in the interior of Sardinia; and it is not improbable that they were the same people, but ancient authors certainly make a distinction between the two. [E. H. B.]

II. ILICA. [HELICE.]

II. IPA. I. (TACIA, Strab. iii. pp. 141, seq.; DAEIAE €r AECIA m e) • (TACIA, Strab. iii. pp. 141, 143; Hisa cognominis Ilia, Flin. iii. 1. 3, according to the corrupt reading which Sillic's last edition retains for want of a better; some give the epiteth in the form Hipa: Harduin reads Einus, on the authority of an inscription, which is almost certainly spurious, ep. Gruter, pp. 351, 305, and Muratori, p. 1002), a city of the Turdetani, in Hispania Baetica, belonging to the constituency of Hispalis. It stood upon the right bank of the Baeticus (Guadalquivir), 700 stadia from its mouth, at the point up to which the river was navigable for vessels of small burthen, and where the tides were no longer discernible. [BAETIS.] On this and other grounds it has been identified with the Roman ruins near Peñafort. There were great silver mines in its neighbourhood. (Strab. L. c., and pp. 174, 173; Flin. L. c.; Itin. Ant. p. 411; Liv. xxxv. 1; Flores, Exp. S. vol. vii.)

COIN OF ILIPA.

IIPLA. (Cohn; IIPLA, Itin. Ant. p. 432; probably the Ταλαίπωρα of Ptol. ii. 4. § 12: Niebla), a city of the Turdetani, in the W. of Hispania Baetica, on the high road from Hispalis to the mouth of the Amsas. (Caro, Antiq. Hist. iii. 81; Coins ap. Floros, Med. de Esp. vol. ii. p. 471; Mionnet, vol. i. p. 16, Suppl. vol. i. p. 29; Sestini, p. 53; Eckhel, vol. i. p. 25.)

IIPLA. 1. Surnamed Latis by Pline (iii. i. s. 3), and Magna by Ptolomy (Ταλαίπωρα μεγάλη, ii. 4. § 12), a city of the Turduli, in Baetica, between the Baets and the coast, perhaps Lozra. (Ukert, vol. ii. pt. 1. p. 563.)

IIPLA. 2. Minor (prob. Oliva or Lepe de Roda, near Carmona), a tributary town of the Turduli, in Hispania Baetica, belonging to the conventus of Hispalis. (Pint. iii. i. s. 3; Sestini, vol. ii. p. 15.)

IIPLA. MONS (Ταλαίπωρα), a range of mountains in Baetica, S. of the Baets, mentioned only by Ptolomy (ii. 4. § 15), and supposed by some to be the Sierra Nevada, by others the Sierra de Alhama or the Alpajarras. [P. S.]

ILLUSUS. [Attica, p. 329, s.]

ILLISTIA (Ταλιστία; Hilarho), a town in Lycaonia, on the road from Laranda to Isaura, which is still in existence. (Hieroc. p. 675; Concill. Ephes. p. 584; Concill. Chalced. p. 674; Hamilton, Researches, vol. iii. p. 324; Leake, Asia Minor, p. 102.) [L. S.]

ILITHIA (Εἰλιθίες πόλις, Strab. xviii. p. 817; Εἰλιθσκα, Ptol. iv. 5. § 75), a town of the Egyptian Heptanomis, 30 miles N. of Apollonidas Magna. It was situated on the eastern bank of the Nile, in lat. 25° 3' N. According to Phurarch (Aias et Osir. c. 75), Ilithia contained a temple dedicated to Baubis, to whom, as to the Taurian Artemis, human victims were, even at a comparatively recent period, sacrificed. A less-relief (Minotii, p. 394, seq.) discovered in the temple of Baubis at El-Kab, representing such a sacrifice, seems to confirm Phurarch's statement. The practice of human sacrifice among the Aegyptians is, indeed, called in question by Herodotes (ii. 45); yet that it once prevailed among them is rendered probable by Manetho's statement of a king named Amosis having abolished the custom, and substituted a waxen image for the human victim. (Poplavy, de Abstinent. ii. p. 223; Euseb. Prep. Evang. iv. 16; comp. Ovid, Fast. v. 621.)

The singularity in Phurarch's story is the recent date of the imputed sacrifices. [W. B. D.]

IIITURIS. [ILLITURIS.]

IIILIM, IIION (Τιόν, ἩΠαίος: Ekh. 'Iävov, f. Τιόν), sometimes also called Troia (Τρώια), whence the inhabitants are commonly called Troes, and in the Latin writers Trojani. The existence of this city, to which we commonly give the name of Troy, cannot be doubted any more than the simple fact of the Trojan War, which was believed to have ended with the capture and destruction of the city, after a war of ten years, c. 1184. Troy was the principal city of the country called Troyes. As the city has been the subject of current inquiry in ancient and modern times, it will be necessary, in the first instance, to collect and analyse the statements of the ancient writers; and to follow up this discus-

IIILIM. [Hellen. i. 1. § 4] and Scylax (p. 35) seem to speak of Ilion as a town actually existing in their days.

P. V.
It is uncertain in the time of Alexander New Ilium did exist, and was inhabited by Aconians. (Diod. c. Aristocr., p. 671; Arrian, Arm. i. 11. 2, 576.) This new town, which is distinguished by Strabo from the famous ancient city, was not more than 12 stadia, or less than two English miles, distant from the sea, and was built upon the spur of a projecting edge of land, separating the basins of the Scamander and Simois. It was at first a place of no much importance (Strab. xiii. pp. 593, 601), but increased in the course of time, and was successively extended and embellished by Alexander, Lysimachus, and Julius Caesar. During the Mithridatic War New Ilium was taken by Fimbria. in n. c. 85. on which occasion it suffered greatly. (Strab. xiii. p. 594: Appian, Mithrid. 53; Liv. Epit. ixxxiii.) It is said to have been once destroyed before that time, by one Charidemus (Plut. Sertor. 1: Polyæn. iii. 14:); but we neither know when this happened, nor who this Charidemus was. Sulla, however, found the town extremely, in consequence of which it rose, under the Roman dominion, to considerable prosperity, and enjoyed exemption from all taxes. (Plin. v. 33.) These were the advantages which the place owed to the tradition that it occupied the identical site of the ancient and holy city of Troy: for, it may be here observed, that no ancient author of Greece or Rome ever doubted the identity of the site of Old and New Ilium until the time of Demetrius of Scœpsis, and Strabo, who adopted his views; and that, even afterwards, the popular belief among the people of Ilium itself, as well as throughout the whole world generally, remained as firmly established as if the criticism of Demetrius and Strabo had never been heard of. These critics were led to look for Old Ilium farther inland, because they considered the space between New Ilium and the coast far too small to have been the scene of all the great exploits described in the Iliad; and, although they are obliged to own that not a vestige of Old Ilium was to be seen anywhere, yet they assumed that it must have been situated about 42 stadia from the sea-coast. They accordingly fixed upon a spot which at the time bore the name of Taisow κοινα. This view, with its assumption of Old and New Ilium as two distinct places, does not in any way remove the difficulties which it is intended to remove; for the space remains still too small to have been the scene of so many exploits described in the Iliad; and, it is not reasonable to suppose that the place was inhabited by such a number of people. This view, however, did not meet with any opposition, and the name of Taisow was given to the spot as a matter of course. It is, however, probable that the town was situated in a different locality, and that it was not inhabited by such a large number of people. The site of Old Ilium, according to modern writers, is supposed to be the spot covered with ruins now called Kismirik, between the villages of Kum-bish, Kalli-fathi, and Tebbele, a little to the west of the last-mentioned place, and not far from the point where the Simois once joined the Scamander. Those who maintain that Old Ilium was situated in different locality cannot, of course, be expected to agree in their opinions as to its actual site, and in some cases, it is impossible to fix any one spot as the site of the ancient city, in every particular with the poet's description. Respecting the nationality of the inhabitants of Ilium, we shall have to speak in the article TROY. (Comp. Sp. de. Agro Trojano, Lips., 1814, 8vo.; Remond, Observations on the Topography of the Plain of Troy, London, 1814, 4to.; Choiseul-Gouffier, l'ouvrage Pittorique de la Græce, Paris, 1820, vol. ii. p. 177, foll.; Leake, Asia Minor, p. 275, foll.; Grote Hist. of Greece, vol. i. p. 436, foll.; Eckenbrecher, über die Lage des Homerischen Ilium, Rhein. Mus. Neue Folge, vol. ii. pp. 1—49, where a very good plan of the district of Ilium is given. See also, Wedder, Kleine Schriften, vol. ii. p. 1, foll.; C. Macclaren, Dissertation on the Topography of the Trojan War, Edinburgh, 1822; Maunutt, Découvertes dans la Troade, q.e., Paris & Londres, 1840.) [L. S.]

COIN OF ILIUM.

ILLIBERIS (Tailedinis, Prot. ii. 4, § 11), or ILLIBERI LIBERINI (Prot. iii. 1. s. 3), one of the chief cities of the Turduli, in Hispameta Bactea, between the Baetis and the coast, is identified by inscriptions with Granada. It is probably the Elibirige (אֱלִיבִּירָג) of Stephanus Byzantinus, (Inscr. ap. Gruter, p. 277, No. 3; Florer. Esp. 8, vol. v. p. 4, vol. xii. p. 81; Montelle, Geogr. Comp. Esp. Mol. p. 163; Coins ap. Florer, Med. vol. iii. p. 75; Monnet, vol. i. p. 15, Suppl. vol. i. p. 23; Eckel, vol. i. p. 22.) [P. S.]

COIN OF ILLIBERIS (IN SPAIN).

ILLIBERIS or ILLIBERRIS (Tailedinis), a town in the country of the Sardones, or Sardones, or Sedii, in Gallia Aquitania. The first place that Hannibal came to after passing through the Eastern Pyrenees was Illiberis. (Liv. xxi. 24.) He must have passed through the Ibergeorge. Illiberis was near a small river Illiberis, which is south of another small stream, the Ruscino, which had also on it a town named Baserino. (Strab. p. 182.) Mela (ii. 5) and Pliny (iii. 4) speak of Illiberis as having once been a great place, but in their time being decayed. The road in the Antonine Itin. from Aralate (Arda) through the Pyrenees to Juncaria passes from Ruscino (Castellum Ruscioni) to Ad Centuriam, and omits Illiberis; but the Table places Illiberis between Ruscino and Ad Centuriam, which is the same place as the Ad Centurionem of the Itin. (Cestubiones, Ad.) Illiberis is Eficia on the river Tech. Illiberis or Illiberis is an Iberian name. There is another place, Climberis, on the Gallic side of the Pyrenees, which has the same termination. (Auct.) It is said that berri, in the Basque, means "a town." The site of Illiberis is fixed at Eficia by the Hist.; and we find an explanation of
the name Else in the fact that either the name of Iliberis was changed to Helena or Elena, or Helena was a camp or station near it. Constans was murdered by Magnusius "not far from the Hispanic, in a castrum named Helena." (Eutrop. x. 9.) Victor's Epitome (c. 41) describes Helena as a town very near the place where Priscus and Zensius has the same name (ii. 42; and Orosius, vii. 29). It is said by some writers that Helena was so named after the place was restored by Constantine's mother Helena, or by Constantine, or by some of his children; but the evidence of this is not given. The river of Iliberis is the Tichus of Mela, and TICUM of Pliny, now the Tich. In the text of Ptolemy (ii. 10) the name of the river is written Iliberis.

Some geographers have supposed Iliberis to be Cottinum, near Port Vendre, which is a plain mistake.

[Nov.]

ILLICI. [ILLIC.] ILLITULA. [ILLIOLA.]

ILLITURGIC, LIITURGIS, or LITURGIS (probably the Λιλυτρίχια of Ptol. ii. 4. § 9 as well as the Λαλύτριχια of Polybius, ep. Steph. B. s. c., and the Λαλύτριχια of Appian, Hisp. vii. 92: Eth. Illyrican), a considerable city of Hispia Baetica, situated on a steep rock on the N. side of the Baetis, on the road from Corduba to Castulo, 20 M. F. from the latter, and five days' march from Cartago Nova. In the Second Punic War it went over to the Romans, like its neighbours, Castulo and Mentella, and endured two sieges by the Carthaginians, both of which were raised; but, upon the overthrow of the two Scipios, the people of Iliberis and Castulo revolted to the Carthaginians, the former adding to their treason the crime of betraying and putting to death the Romans who had fled to them for refuge. At least such is the Roman version of their offence, for which a truly Roman vengeance was taken by Publius Scipio, n.c. 206. After a defence, such as might be expected when despair of mercy was added to national fortitude, the city was stormed and burnt over the slaughtered corpses of all its inhabitants, children and women as well as men. (Liv. xxiii. 49, xxiv. 17, 47, 41, xcviii. 19, 20.) Ten years later it had recovered sufficiently to be again besieged by the Romans, and taken with the slaughter of all its adult male population. (Liv. xxiv. 10.) Under the Roman empire it was a considerable city, with the surname of Forum Iulium. Its site is believed to have been in the neighbourhood of Ambujar, where the church of S. Potenciana now stands. (Itin. Ant. p. 403; Pint. iii. i. 3. 3; Priscian, vi. p. 682, ed. Putsch; Morales, Antig. p. 56, b.; Mentelle, Esp. Mod. p. 183; Laborde, Itin. vol. ii. p. 113; Flores, Esp. & vol. xii. p. 369; Coins, op. Flores, Med. vol. iii. p. 81; Monnet, vol. i. p. 16; Sestini, p. 56; Eckfeld, vol. i. p. 23; Uberti, vol. ii. pt. 1. p. 350.)

ILLURCO or ILLURCO, a town in the W. part of Hispania Baetica, near Pintos, on the river Cu- bitas. (Insc. ap. Gruter, pp. 235, 406; Marator, p. 1051, Nos. 2, 3; Flores, Esp. & vol. xii. p. 98; Coins, op. Flores, Med. de Esp. vol. ii. p. 472; Monnet, vol. i. p. 17; Sestini, Med. Esp. p. 57; Eckfeld, vol. i. p. 23.)

[Per.]

ILLURGAVONSES. [ILERGAONES.]

ILLYRIA. [ILLYRIUM.]

ILLYRICUM (θε "Ιλλυρίαν: Eth. and Adj. Ιλλυρός, Ιλλυρίας, Illyrians, Illyrians), the eastern coast of the Adriatic sea.

1. The Name. — The Greek name is ILLYRIOS (Ἰλλυρίος, Hecat. Fr. 65; Polyb. iii. 16; Strab. ii. pp. 108, 123, 129, vii. p. 317; Dionys. Per. 96; Herodian, vi. 7; Apollod. ii. § 1; Ptol. viii. 7, § 1), but the more ancient writers usually employ the name of the people, Ιλλυρίαν (ἡ τῶν Ιλλυρίων, Herod. i. 196, iv. 49; Scyl. pp. 7, 10). The Herodian name ILLYRIUM (Ἰλλυρίου) rarely occurs. (Steph. B. s. c.; Prop. i. 2. 2.) By the Latin writers it generally went under the name of "Illyricum" (Caes. B. G. ii. 33, iii. 7; Varr. R. R. ii. 10. § 7; Cic. ad Att. x. 6; Liv. xiv. 18, 26; Ovid, Trist. i. 3. 121; Mela, ii. 3. § 13; Tac. Ann. i. 5. 46, ii. 41, 53; Hist. i. 2, 9, 76; Flor. i. 18, iv. 2; Just. vii. 2. 2; Suet. Tib. 16; Vell. Pat. ii. 109), and the general assent of geographers has given currency to this form.

2. Extent and Limits. — The Roman Illyricum was of very different extent from the Illyria or of Ιλλυρία of the Greeks, and was itself not the same at all times, but must be considered simply as an artificial and geographical expression for the borders who occupied the E. coast of the Adriatic, from the junction of that gulf with the ionian sea, to the estuaries of the river Po. The earliest writers (who has left any account of this coast is Sulpicius; according to whom (c. 19—27) the Illyrians, properly so called (for the Liburnians and Istrians beyond them are excluded), occupy the sea-coast from Liburnia to the Chamaions of Epiros. The Buthi were the northermost of these tribes, and the Amanitini the southernmost. Herodotus (i. 196) includes under the name, the Henri or Veneti, who lived at the head of the gulf; in another passage (iv. 49) he places the Illyrians on the tributary streams of the Morava in Sciria. It is evident that the Gallic invasions, of which there are several traditions, threw the whole of these districts and their tribes into such confusion, that it is impossible to harmonise the statements of the Peripius of Sulpicius, or the far later Scimus of Chios, with the descriptions in Strabo and the Roman historians.

In consequence of this immigration of the Gauls, Appian has confounded together Gauls, Thracians, Paonians, and Illyrians. A legend which he records (Ital. 1) makes Celtus, Illyrians, and Gala, to have been three brothers, the sons of the Cyclops Polyphemus, and is grounded probably on the intermixture of Celtic tribes (the Boii, the Scordisci, and the Taurisci) among the Illyrians; the Iapodi, a tribe on the borders of Istrià, are described by Strabo (iv. p. 143) as half Celts, half Illyrians. On a rough estimate, it may be said that, in the earliest times, Illyricum was the coast between the Naro (Neretva) and the Drin (Drin), bounded on the E. by the Triball. At a later period it comprised all the various tribes from the Celtic Taurisci to the Epirots and Macedonians, and eastward as far as Moesia, including the Veneti, Pannonians, Daroodtians, Dardani, Autaritae, and many others. This is Illyricum in its most extended meaning in the ancient writers till the 2nd century of the Christian era: as, for instance, in Strabo (vii. pp. 313—319), during the reign of Augustus, and in Tacitus (Histor. i. 2, 9, 76, ii. 86; comp. Joseph. B. J. ii. 16), in his account of the civil wars which preceded the fall of Jerusalem. When the boundary of Rome reached to the Danube, the "Illyricum Limes" (as it is designated in the "Scriptores Historiae Augustae"), or "Illyrian frontier," comprised the following provinces: Noricum, Pannonia Superior, Pannonia e 2.
ILLYRICUM.

Inferior, Moesia Superior, Moesia Inferior, Dacia, and Thrace. This division continued till the time of Constantine, who severed it from Lower Moesia and Thrace, but added it to Macedonia, Thessaly, Achaea, Old and New Epiros, Praevalitana, and Crete. At this period it was one of the four great divisions of the Roman empire under a "Præfectura Prætoriana," and it is in this signification that it is used by the later writers, such as Sexus Rufus, the "Auctor Notitiae Deiignitatum Imperii," Zosimus, Josuandes, and others. At the final division of the Roman empire, the so-called "Illyricum Orientale," containing the provinces of Macedonia, Thessaly, Epiros, Hellas, New Epiros, Crete, and Praevalitana, was incorporated with the Lower Empire; while "Illyricum Orientalis" was united with Rome, and embraced Noricum, Pannonia, Dalmatia, Savia, and Valeria Epirosis.

A. ILLYRIUS BARBARA DE ROMANA, was separated from Istria by the small river Arsia (Arsia), and bounded S. and E. by the Drilo, and on the N. by the Savus; consequently it is represented now by part of Croatia, all Dalmatia, the Herzegovina, Monte-Negro, nearly all Bosnia, and part of Albania. On the N. it was divided into three districts, the northern of which is Iapodia, extending S. as far as the Tedanii (Zerrmania); the strip of land extending from the Arisa to the Titiius (La Kerka) was called Liburnia, or the whole of the north of what was once Venetian Dalmatia; the territory of the Dalmatae was at first comprehended between the Xaro and the Tiburis or Nestus; it then extended to the Titiius. A list of the towns will be found under the several heads of Iapodia, Liburnia, and Dalmatia.

B. ILLYRIUS GRÆCA, which was called in later times Epirus Nova, extended from the river Drilo to the S., up to the Ceraunic mountains, which separated it from Epirus Proper. On the N. it was bounded by the Roman Illyricum and Mount Scordus, on the W. by the Ionian sea, on the S. by Epiros, and on the E. by Macedonia; comprehending, therefore, nearly the whole of modern Albania. Next to the frontier of Cerasia is the small town of Amantia, and the people of the Amantians and Bulionides. They are followed by the Taullantii, who occupied the country N. of the Aoüs—the great river of S. Macedonia, which rises in Mount Lacoûn, and discharges itself into the Adriatic—as far as Epiramnus. The chief towns of this country were Apollonia, and Epidamnus or Dyrrhachium. In the interior, near the Macedonian frontier, there is a considerable lake, Lacus Lychnitis, from which the Drilo issues. Ever since the middle ages there has existed in this part the town of Acheria, which has been supposed to be the ancient Lychnites, and was the capital of the Bulgarian empire, when it extended from the Enarum as far as the interior of Aetolia, and comprised S. Illyricum, Epiros, Acrania, Acron, and a part of Thessaly. During the Roman period the Dassaretæ dwelt there; the neighbouring country was occupied by the Autaritae, who are said to have been driven from their country in the time of Cassander, when they removed as fugitives with their women and children into Macedonia. The Arduarii and Parnathini dwelt N. of the Autaritae, though not at the same time, but only during the Roman period. Scodrus (Scutari), in later times the capital of Praevalitana, was unknown during the flourishing period of Greek history, and more properly belongs to Roman Illyricum; as Lissus, which was situated at the mouth of the Drilo, was fixed upon by the Romans as the border town of the Illyrians in the S., beyond which they were not allowed to sail with their privateers. Internal communication in this Illyricum was kept up by the Via Candavaria or Epirus, the great line which connected Italy and the East—Rome, Constantinople, and Jerusalem. A road of such importance, as Colonel Leake remarks (North. Greece, vol. iii. p. 311), and on which the distance had been marked with milestones soon after the Roman conquest of Macedonia, we may believe have been kept in the best order as long as Rome was the centre of a vigorous authority; but it probably shared the fate of many other great establishments in the decline of the empire, and especially when it became as much the concern of the Byzantine as of the Roman government. This fact accounts for the disproportionate number of inscriptions in the Itineraries; for though Lychnites, Heracleia, and Edessa, still continued, as on the Candavian Way described by Polybius (ap. Strab. vii. pp. 322, 323), to be the three principal points between Dyrrhachium and Thessallonia (matters, in fact, having strongly drawn that line in the valley of the Genusus), there appears to have been a choice of routes over the ridges which contained the boundaries of Illyricum and Macedonia. By comparing the Antonine Itinerary, the Peutingerian Table, and the Jerusalem Itinerary, the following account of stations in Illyricum is obtained:—

3. Physical Geography. — The Illyrian range of mountains, which traverses Dalmatia under the name of Mount Prolog, and partly under other names (Mons Albis, Belicus), branches off in Carniola from the Julian Alps, and then, at a considerable distance from the sea, stretches towards Venetia, approaches the sea beyond Aquileia near Trieste, and forms Istria. After passing through Istria as a lofty mountain, though not reaching the snow line, and traversing Dalmatia, which it separates from Bosnia, it extends into Albania. It is a limestone range, and, like most mountains belonging to that formation,/modules broken up; hence the bold and picturesque coast runs out into many promontories, and is flanked by numerous islands.

These islands appear to have originated on the breaking up of the lower grounds by some violent action, leaving their limestone summits above water. From the salient position of the promontory terminating in Punta della Piana, they are divided into two distinct groups, which the Greek geographers called Anaytides and Libuënidës. They trend NW. and SE., greatly longer than broad, and form various fine channels, called "canali," and named from the nearest adjacent island; these being bold,
with scarcely a hidden danger, give ships a secure passage between them. Cherson, Orchon, Lusia, Sasso-geo (Asyrtides), abound with fossil bones. The bone-breccia of these islands appears to be the same conglomerate with those of Gibraltar, Cerigo, and other places in the Mediterranean. The Liburnian group (Liburni ridea, Strab. ii. 1. 124, v. 1. 216, pp. 318, 317; " Liburniae Insulae," Plin. iii. 30), Issa (Grosos), Brattia (Brazzo), Issa (Lisse), Melita (Melos), Corcyra (Corfu), Phaer (Lenis) and Oxynx (Solto), have good ports, but are badly supplied with drinkable water, and are not fertile. The mountainsowr, though industriously cultivated towards the shore, is for the most part, as in the days of Strabo (l. c), wild, rugged, and barren. The want of water and the arid soil make Dalmatia unfit for agriculture; and therefore of old, this circumstance, coupled with the excellency and number of the harbours, made the natives more known for piracy than for commercial enterprise. A principal feature of the whole range is that called Monte-Negro (Cerne Morgan), consisting chiefly of the cretaceous or Mediterranean limestone, so extensively developed from the Alps to the Archipi- pelago, and remarkable for its craggy character. The general height is about 3000 feet, with a few higher summits, and the slopes are gentle in the direction of the inclination of the " strata," with precipices at the outcroppings, which give a fine variety to the scenery.

There is no sign of volcanic action in Dalmatia; and the Nymphaeum near Apollonia, celebrated for the flames that rose continually from it, is, probably, no reference to anything of a volcanic nature, but is connected with the beds of asphaltum, or mineral pitch, which occur in great abundance in the nummu- licite limestone of Albania.

The coast of what is now called Middle Albania, or the Illyrian territory, N. of Epirus, is, especially in its N. portion, of moderate height, and in some places even low and uninhabitable, as far as Acalon (Talmon or Areona), where it suddenly becomes rugged and mountainous, with precipitous cliffs descending rapidly towards the sea. This is the Kihnara range, upwards of 4000 feet high, dreaded by ancient mariners as the Acro-Ceraunian promontory. The interior of this territory was much superior to N. Illyricum in productivity; though mountainous, it has more valleys and open plains for cultivation. The sea-ports of Epidamnus and Apollonia introduced the luxuries of wine and oil to the barbarous; whose chiefs learnt also to value the woven fabrics, the polished and carved metallic work, the templed weapons, and the pottery which was furnished them by Greek artisans. Salt fish, and, what was of more importance to the inland resi- dents on lakes like that of Lycianus, salt itself, was imported. In return they supplied the Greeks with those precious commodities and the Slaves. Silver mines were also worked at Damastium. Wax and honey were probably articles of export; and it is a proof that the natural products of Illy- ria were carefully sought out. when we find a species of iris peculiar to the country collected and sent to Corinth, where its root was employed to give the special flavour to a celebrated kind of aromatic unguent. Greek commerce and intercourse not only tended to civilise the S. Illyrians beyond their northern brethren, who shared with the Thracian tribes the custom of tattooing their bodies and of offering human sacrifices; but through the intro- duction of Grecian exiles, made them acquainted with Hellenic ideas and legends, as may be seen by the tale of Cadmus and Harmonia, from whom the chiefs of the Illyrian Eneclees professed to trace their descent. (Comp. Grose, Hist. of Greece, vol. iv. pp. 1—10, and the authorities quoted there; to which may be added, Wilkinson, Dalmatia, Montenegro, vol. ii. pp. 38—42; J. F. Negelein, Die Sudslaven, Leipzig, 1851; Niebuhr, Lect. onEthnog. and Geog. vol. iv. pp. 297—314; Smyth, The Mediterranean, pp. 40—45; Huhn, Albanische Studien, Wien, 1854.)

4. Race and National Character.—Sufficient is not known either of the language or customs of the Illyrians, by which their race may be ascertained. The most accurate among the ancient writers have always distinguished them as a separation, or group of nations, from both the Thracians and Epirots.

The ancient Illyrians are unquestionably the ances- tors of the people generally known in Europe by the name Albanians, but who are called by the Turks " Arnanuts," and by themselves " Skiptares," which means in their language " mountaineers," or " dwellers on rocks," and inhabit the greater part of ancient Illyricum and Epirus. They have a peculiar language, and constitute a particular race, which is very distinct from the Slavonian inhabitants who border on them towards the N. The ancients, as has been observed, distinguished the Illyrians from the Epirots, and have given no intimations that they were in any way connected. But the Albanians, who inhabit both Illyricum and Epirus, are one people, whose language is only varied by slight modifications of dialect. The Illyrians appear to have been pressed southwards by Slavonian hordes, who settled in Dalmatia. Driven out from their old territories, they extended themselves towards the S., where they now inhabit many districts which never belonged to them in former times, and have swallowed up the Epirots, and extinguished their language. According to Schafarik (Ske. A/ vol. i. p. 31) the modern Albanian population is 1,200,000.

Ptolemy is the earliest writer in whose works the name of the Albanians has been distinctly recognised. He mentions (iii. 13. § 23) a tribe called Albani (AIA/ani) and a town Albanopolis (Albâ- nopolis), in the region lying to the E. of the Ionian sea; and from the names of places with which Albanopolis is connected, it appears clearly to have been in the S. part of the Illyrian territory, and in modern Alonia. There are no means of forming a conjecture bow the name of this obscure tribe came to be extended to so considerable a nation. The latest work upon the Albanian language is that of F. Eiter von Xylender (Die Sprache der Albanesen oder Skhipetaren, 1835), who has elucidated this subject, and established the principal facts upon a firm basis. Among the positions at which Xylender arrived will be found in Pichard (The Physical History of Mankind, vol. iii. pp. 477—482).

As the Dalmatian Slaves have adopted the name Illyrians, the Slavonian language spoken in Dalmatia, especially at Rogana, is also called Illyrian; and this designation has acquired general currency; but it must always be remembered that the ancient Illyrians were in no way connected with the Slave races. In the practice of tattooing their bodies, and offering human sacrifices, the Illyrians resembled the Thracians (Strab. vii. p. 315; Herod. v. 6): the 

p 3
custom of one of their tribes, the Dalmatians, to have a new division of their lands every eighth year (Strab. l.c.), resembled the well-known practice of the Germans, only advanced somewhat further towards barbarity and cruelty. The author of the Periplus ascribed to Strabon (l.c.) speaks of the great influence enjoyed by their women, whose lives, in consequence, he describes as highly licentious. The Illyrian, like the modern Albanian Skiptar, was always ready to fight for hire; and rushed to battle, obeying only the instigation of his own love of fighting, or vengeance, or love of blood, or craving for booty. But as soon as the feeling was satisfied, or over- come by fear, his rapid and impetuous rush was succeeded by an equally rapid retreat or flight. (Comp. Grote. Hist. of Greece, vol. vi. p. 609.) They did not fight in the phalanx, nor were they merely ψαλιοί; they rather formed an intermediate class between them and the phalanx. Their arms were short spears and light javelins and shields (“pet- tustae”); the chief weapon, however, was the ἰππικὸς or cimentum. When killed, the Illyrski has re- mained (Hist. of Rome, p. i. 495)—"The eastern coast of the Adriatic is one of these ill-fated portions of the earth which, though placed in immediate contact with civilisation, have remained perpetually barbarian." But Scymnus of Chios (comp. Arnold, vol. iii. p. 477), writing of the Illyrians about a century before the Christian era, calls them "a religious people, just and kind to strangers, loving to be liberal, and desiring to live orderly and soberly." After the Roman conquest, and during its dominion, they were as civilised as most other peoples reclaimed from barbarism. The emperor Diocletian and St. Jerome were both Illyrians. And the palace at Spalato is the earliest existing specimen of the legitimate combination of the round arch and the column; and the modern history of the eastern shores of the Adriatic begins with the relations established by Herennius with the Scerdi or W. Slaves, who moved down from the Carpathians to the provinces between the Adriatic and the Danube. The states which they constituted were of considerable weight in the history of Europe, and the kingdoms, or baronies, of Croatia, Servia, Bosnia, Basca, and Dalmatia, occupied for some centuries a political position very like that now held by the secondary medizined states of the present day. The people of Narenta, who had a republican form of government, once disputed the sway of the Adriatic with the Venetians; Ragusa, which sent her Argosies (Ragiosies) to every coast, never once succumbed to the winged Lion of St. Mark; and for some time it seemed probable that the Serian colonies established by Herennius were likely to take a prominent part in advancing the progress of Euro- pean civilisation. (Comp. Fokly, Greece under the Romans, p. 409.)

5. History.—The Illyrians do not appear in history before the Peloponnesian War, when Brasidas and Perdiccas retreated before them, and the Illyrians, for the first time, possibly, had to encounter the Spartan troops. (Thuc. iv. 124—128.) Nothing is heard of these barbarians afterwards, till the time of Philip of Macedon, by whose vigour and energy their in- cursions were first resisted, and their country partially conquered. Their coalition with the Macedo- nians appears to have risen under the following circumstances. During the 4th century before Christ a large invasion of Gallic tribes from the west- ward was taking place, invading the territory of the more northerly Illyrians, and driving them further to the south. Under Barylith the Illyrians, who had formed themselves into a kingdom, the origin of which cannot be traced, had extended themselves over the towns, villages, and plains of W. Macedonia (Diod. xvi. 4; Thuc. 35, ed. Diot.; Cic. de Off. ii. 11; Phot. Bibl. p. 530, ed. Bekker; Liban. Orat. xviii. p. 632). As soon as the young Philip of Macedon came to the throne, he attacked these hereditary enemies b.c. 360, and pushed his successes so vigorously, as to reduce to submission all the tribes to the E. of Lyciandus. (Comp. Grote, Hist. of Greece, vol. iii. p. 302—304.) A state was formed the capital of which was probably near Ragusa, but the real Illyrian pirates with whom the Romans came in collision, must have occupied the N. of Dalmatia. Rhodes was still a maritime power; but by b.c. 233 the Illyrians had become formidable in the Adriatic, ravaging the coasts, and disturbing the navigation of the allies of the Romans. Envoyes were sent to Tents, the queen of the Illyrians, demanding the surrender of Rome, and either murder or the habit of her people, and finally had the envoyes murdered. (Polyb. i. 8; Appian, Illyr. 7; Zonar. viii. 19; comp. Plin. xxxiv. 11.) A Roman army for the first time crossed the Illyrian gulf, and concluded a peace with the Illyrians upon honourable terms, while the Greek states of Corcyra, Apollonia, and Epidamnus, received their liberty as a gift from Rome.

On the death of Tenta, the traitor Demetrius of Phares made himself guardian of Pineus, son of Agron, and usurped the chief authority in Illyri- cum, thinking that the Romans were too much engaged in the Gallic wars, he ventured on several piratical acts. This led to the Second Illyrian War, b.c. 219, which resulted in the submission of the whole of Illyricum. Demetrius fled to Macedonia, and Pineus was restored to his kingdom. (Polyb. iii. 16, 18; Liv. xxxiii. 33; App. Illyr. 7, 8; Flor. ii. 5; Dion Cass. xxxiv. 46, 151; Zonar. viii. 20.) Pineus was succeeded by his uncle Scredilaidas, and Scredilaidas by his son Pleuratus, who, for his fidelity to the Roman cause during the Macedonian War, was rewarded at the peace of 196 by the addition to his territories of Lychiandus and the Parthini, which had before belonged to Macedonia (Polyb. iii. 36, 40; Liv. xxxiii. 34.) In the reign of Gentius, the last king of Illyricum, the Dalmatines revolted, b. c. 180, and the praetor L. Anicius, entering Illyricum, finished the war within thirty days, by taking the capital Scodra (Scutari), into which Gentius had thrown himself, b. c. 168. (Polyb. xxx. 13; Liv. xliv. 30 —32, xlv. 43; Appian, Illyr. 9; Eutrop. iv. 6.) Illyricum, which was divided into three parts, be- came annexed to Rome. (Liv. xlv. 40.) Illyricum in the his- tory of the Roman wars with Dalmatia, Iapydia, and Liburnia, is given under these heads.

In b. c. 27 Illyricum was under the rule of a provincial appointed by the senate (Dion Cass. liii. 12): but the frequent attempts of the people to re- cover their liberty showed the necessity of maintain- ing a strong force in the country; and in b. c. 11 (Dion Cass. liv. 34) it was made an imperial province, with P. Cornelius Dolabella for "legatus" (see leg. pro. pr. "Orsell. Inscr. no. 3653, comp. no. 328; Tac. Hist. ii. 86; Marquardt, in Becker's Rom. Alt. vol. iii. pt. i. pp. 110—115.) A large region, extending far inland towards the valley of the Sire and the Drave, contained bodies of soldiery,
ILLYRICUM.

who were stationed in the strong links of the chain of military posts which was scattered along the frontier of the Daube. Inscriptions are extant on which the records of its occupation by the 7th and 11th legions can still be read. (Orelli, nos. 5332, 3353, 4993, 4996; comp. Joseph. B. J. ii. 16: Tac. ii. 11. 8.) There was at that time no seat of government or capital; but the province was divided into regions called "conventus": each region, of which there were three, named at the frontiers of Istria to the territory of Dyrrhachium, with colonies of the Serbs and W. Slaves. From the settlement of the Servian Slavonians within the bounds of the empire we may therefore date, as has been said above, the earliest encroachments of the Illyrian or Albanian race on the Hellenic population of the South. The singular events which occurred in the reign of Heraclitus are not among the least of the elements which have gone to make up the condition of the modern Greek nation. [E. B. J.]

ILEIOC. [ELIOCHOCA.]

ILLUCIA. [OGETAN]

ILLURATUM (Iacopovar. Ptol. iii. 6. § 6), a town in the interior of the Tanuric Chersonese, probably somewhat to the N. of Kaflia. [E. B. J.]

ILLUCIONES. [ILERCAONES.]

ILLUCIS. [GACCURIS.

ILLIGELIA. ILURGIS. [ILITYROIS.]

ILLIGETAL. [ILERGETES.]

ILLIUBO. In Gallia Aquitania, is placed by the Antonine Itin. on the road from Caesaraugusta, in Spain, to Beneharnum. [BENEHARUM. Iluro is between Aspallca [ASPALCA] and Beneharranm. The modern site of Iluro is Olcron, which is the same name. Olcron is in the department of Basses Pyrenees, at the junction of the Gare d'Aspe, the river of Aspalcca, and the Gare d'Olon, which by their union form the Gare d'Olcron. Gare is the name in these parts for the river-valleys of the Pyrenees. In the Notitia of Gallia, Iluro is the Civitas Illeronensis. The place was a bishop's see from the commencement of the sixth century. [G. L.]

2. [LAETAN.

ILUZA (ra 'Ivoua), a town in Phrygia Pacatiana, which is mentioned only in very late writers, and is probably the same as Anulda in the Table of Pentinger; in which case it was situated between Sebaste and Acmena, 25 Roman miles to the east of the latter town. It was the see of a Christian bishop. (Hieroc. p. 667; Concil. Constant. iii. p. 534.) [L. S.]

ILVA (Ivoua, Ptol.; Elfor) called by the Greeks APCRACIA (Apocracia, Diod.; Abacira, P. Arist., Philist. ap. Steph. B.), an island in the Tyrrhenian Sea, lying off the coast of Etruria, opposite to the headland and city of Populenum. It is much the most important of the islands in this sea, situated between Corsica and the mainland, being about 18 miles in length, and 12 in its greatest breadth. Its outline is extremely irregular, the mountains which compose it, and which rise in some parts to a height of above 3000 feet, being indented by deep gulls and inlets, so that its breadth in some places does not exceed 3 miles. Its circuit is greatly overstated by Pliny at 100 Roman miles; the same author gives its distance from Populenum at 10 miles, which is just about correct; but the width of the strait which separates it from the nearest point of the mainland (near Piombino) does not exceed 6 miles, though estimated by Dionysius as 100 stadia (122 miles), and by Strabo through an enormous error, at not less than 300 stadia. (Strab. v. p. 223; Diod. v. 13; Plin. iii. 6. s. 12; Met. ii. 7. § 19; Scal. p. 2. § 6; Appoll. Rhod. D 4.)
ILYATES.

IV. 634.) Ila was celebrated in ancient times, as it still is at the present day, for its iron mines; these were probably worked from a very early period by the Tyrrhenians on the opposite coast, and were already noticed by Herodotus, who called the island Althca: indeed, its Greek name was generally regarded as derived from the smoke (αίθας) of the numerous furnaces employed in smelting the ore. (Diod. v. 13; Steph. B. s. c.) In the time of Strabo, however, the iron ore was no longer smelted in the island itself, but the want of fuel compelled the inhabitants (as it does at the present day) to transport the ore to the opposite mainland, where it was smelted and wrought so as to be fitted for commercial purposes. The unfalling abundance of the ore (alluded to by Virgil in the line

"Insula inexanthis Chalybium gestans metaillis")

led to the notion that it grew again as fast as it was extracted from the mine. It had the advantage of being extracted with great facility, as it is not sunk deep beneath the earth, but forms a hill or mountain mass of solid ore. (Strab. I. c.; Diod. l. c.; Virg. Aen. x. 174; Plin. iii. 6. s. 12, xxxiv. 14. s. 41; Paus. Arist. de Mirab. 95; Entil. Itin. i. 351—356; Sic. Ital. viii. 616.) The mines, which are still extensively worked, are situated at a place called Ri, near the E. coast of the island; they exhibit in many cases unequivocal evidence of the ancient workings.

The only mention of Ila that occurs in history is in n. c. 453, when we learn from Diodorus that it was ravaged by a Syracusan fleet under Phylilus, in revenge for the piratical expeditions of the Tyrrhenians. Phylilus having effected but little, a second fleet was sent under Apelles, who is said to have made himself master of the island; but it certainly did not remain subject to Syracuse. (Diod. xi. 88.) The name is again incidentally mentioned by Livy (xxx. 39) during the expedition of the consul Tib. Claudius to Corsica and Sardinia.

Ila has the advantage of several excellent ports, of which the most important and active is called Porto Feraria, was known in ancient times as the PORTUS AUGUSTI (Agemo Aspis), from the circumstance that the Augustan Emperors were believed to have landed there on their return from their visit to the island, while sailing in quest of Circe. (Strab. v. p. 224; Diod. iv. 56; Apollon. ibid. iv. 638.) Considerable ruins of buildings of Roman date are visible at a place called Le Gratte, near Porto Feraria, and others are found near Capo Castello, at the NE. extremity of the island. The quarries of granite near S. Pietro, in the SW. part of Ebora, appears also to have been extensively worked by the Romans, though no notice of them is found in any ancient writer; but numerous columns, basins for fountains, and other architectural ornaments, still remain, either wholly or in part hewn out of the adjacent quarry. (Iloare, Class. Tour, vol. i. pp. 23—29.)

[Ε. Η. Β.]

ILYATES, a Ligurian tribe, whose name is found only in Livy. He mentions them first as taking up arms in n. c. 209, in concert with the Gaulish tribes of the Insubres and Cenomani, to depose the Roman colonies of Placentia and Cenomani. They are again noticed three years later as being still in arms, after the submission of their Transalpine allies; but in the course of that year's campaign (n. c. 197) they were reduced by the consul Q. Minucius, and their name does not again appear in history. (Liv. xxx. 10, xxxi. 29, 30.) From the circumstances here related, it is clear that they dwelt on the N. slopes of the Apennines, towards the plains of the Padus, and apparently not very far from Clastidium (Costeggiolo); but we cannot determine with certainty either the position or extent of their territory. Their name, like those of most of the Ligurian tribes mentioned by Livy, had disappeared in the Augustan age, and is not found in any of the geographers. [LIGUERIA.] Walckenaer, however, supposes the Ilyates over whom the consul M. Fulvius Nobilior celebrated a triumph in n. c. 129 (Fast. Capit. ap. Gron., p. 297), and who are in all probability the same people with the Veletates of Pliny [Velevia], to be identical also with the Ilyates of Livy; but this cannot be assumed without further proof. (Walckenaer, Geogr. des Gaules, vol. i. p. 164.)

[Ε. Η. Β.]

IMAUSAC (Ιμαχάρα) or Ήμαχάρα, Ptol.; Eth. Imachares, Cic.; Imacaremis, Plin.), a city of Sicily, the name of which does not appear in history, but which is repeatedly mentioned by Cicero among the municipal towns of the island. There is great discrepancy in regard to the form of the name, which is written in many MSS. "Macarenis" or "Macharenis"; and the same uncertainty is found in those of Pliny, who also notices the town among those of the interior of Sicily. (Cic. Terr. iii. 18, 42. v. 7; Zumpt, ad loc.; Plin. iii. 8. s. 14; Sillev, ad loc.) From the manner in which it is spoken by Cicero, it would seem to have been a town of some consideration, with a territory fertile in corn. That writer associates it with Herbita, Assorus, Agryum, and other towns of the interior, in a manner that would lead us to suppose it situated in the same region of Sicily; and this inference is confirmed by Polyeany, who places Hemichara or Himichara (evidently the same place) in the NE. of Sicily, between Capitium and Centuripia. (Ptol. iii. 4. § 12.) Hence Cluverius conjectures that it may have occupied the site of Troina, but this is wholly uncertain. Fazello and other Sicilian writers have supposed the ruins of an ancient city, which are still visible on the coast about 9 miles N. of Cape Funchunum, near the Porto Vindicari, to be those of Imachara; but though the name of Maecanes, still borne by an adjoining headland, is supposed to be derived from the town mentioned, it is opposed to the data furnished us by ancient authors, who all agree in placing Imachara in the interior of the island. The ruins in question, which indicate the site of a considerable town, are regarded by Cluverius (but equally without authority) as those of Ichana. (Cluver. Sicil. p. 356; Fazell. de Reb. Sic. iv. 2. p. 217; Amico, Not. ad Fazell. pp. 417, 447; Howard's Classical Tour, vol. ii. p. 301.) [Ε. Η. Β.]

IMAUS, the great mountain chain, which, according to the ancients, divided Northern Asia into "Sycthia intra Imaum" and "Sycthia extra Imaum." This word (τά Ιαβων υψός, Strab. xv. p. 689; Ptol. vi. 13. § 1; τά Ιαβων υψός, Steph. ii. p. 129; Ιαβων, Athen. ii. 9; although all the MSS. of Strabo (xi. p. 516) have Imaunus (Clavis) in the passage describing the expedition of the Graeco-Carian king Menander, yet there can be no doubt that the name Imaus is correct, and the word Imaunus should be substituted), connected with the Sanscrit hinautat, " snowy" (comp. Plin. vi. 17; Bohlen, das Alter Indien, vol. i. p. 11; Lassen, Ind. Alt. vol. i. p. 17), is one of those many significative expressions which have been used for mountain masses upon every zone of the earth's surface (for instance, Mont Blanc, in Savoy, Sierra
of Imaus the Byzant. (Beitr., vi. 13, § 3), in the country of Little Thibet, which still bears the indigeneous name of Baltistan. At the sources of the Indus are the Dāla-bārā (vii. 1. § 42), the Dardara or Derders mentioned in the poem of the Mukulabdrata and in the fragments of Megasthenes, through which the Greeks received the image of that region of miraculous sand, and who occupied the S. slopes of the Indian Caucasus, a little to the W. of Kaisalmār.

It is to be remarked that Ptolemy does not attach Imaus to the Comedorum Montes (Kowtotoz), but places the Imaus too far to the E., 8° further than the meridian of the Ganges (Gangotīri). The cause of this mistake, in placing Imaus so far further towards the E. than the Bolor range, no doubt arose from the data upon which Ptolemy came to his conclusion being selected from two different sources. The Greeks first became acquainted with the Comedorum Montes when they passed the Indian Caucasus between Cabal and Balak, and advanced over the "plateau" of Bārītan along the W. slopes of Bolor, where Alexander found, in the tribe of the Sihan, the descendants of Heracles (Strabo, xvi. p. 688), just as Marco Polo and Burnes (Tavole in Balkara, vol. ii. p. 214) met with people who boasted that they had sprung from the Macedonian conquerors. The N. of Bolor was known from the route of the traffic of the Seres, as described by Marins of Tyre and Ptolemy (i. 12). The combination of notions obtained from such different sources was imperfectly made, and hence the error in longitude.

These obscure orographical relations have been illustrated by Humboldt upon the most logical principles, and the result of many apparently contradictory accounts is so presented as to form one connected whole. (Asie Centrale, vol. i. pp. 100—164, vol. ii. pp. 365—440.)

The Bolor range is one link of a long series of elevated ranges running as it were, from S. N., which, with axes parallel to each other, but alternating in their localities, extend from Cape Comorin to the Icy Sea, between the 64th and 70th degrees of longitude, keeping a mean direction of S.E. and N.N.W. Lassen (Indische Alterthumskunde) coincides with observations obtained by Humboldt. [F. R. B.]
worship of the Cabiria and Hermes, whom the Carnians called Imbrasons (Steph. B. s. v. *Iabros*).

Both the island and the city of Imbras are mentioned by Homer, who gives to the former the epithet of *pαναλοίς (U. xiii. 33, xiv. 281, xxiv. 78, Hymn. in Apoll. 36.).

The island was annexed to the Persian empire by Otanes, a general of Darius, at which time it was still inhabited by Pelasgians.

(Herod. v. 26.) It was afterwards colonised by the Athenians, and was no doubt taken by Miltiades along with Lemnos. It was always regarded in later times as an ancient Athenian possession: thus the peace of Antalcidas, which declared the independence of all the Greek states, nevertheless allowed the Athenians to retain possession of Lemnos, Imbras, and Scyros (Nep. Hell. iv. 8 § 15, v. 1 § 31); and at the end of the war with Philip the Romans restored to the same people the islands of Lemnos, Imbras, Helos, and Scyros. (Liv. xxxiii. 30.)

The coins of Imbras have the common Athenian emblem, the head of Palus. Imbras seems to have afforded good anchorage. The fleet of Antiochus first sailed to Imbras, and from thence crossed over to Scutium. (Liv. xxxiv. 43.) The ship which carried Ovid into exile also anchored in the harbour of Imbras, which the poet calls "Imbrasia de Maeur; but the numbers will not agree. The real distance is much less than xii. M. P., which is the distance in the Itin.; and D'Aville, applying his usual remedy, alters it to vii. But Walckenaer well objects to fixing on a little island or rock as the position of Imnadrus, and then charging the Itineraire with being wrong. He finds the distance from a little bay west of Cap Morgiou to Marseille to agree with the Itin. measure of 12 M. P. [G. L.]

**IMMUNDUS SINUS (Άκραβόρα εὔκολος, Strab. xviii. p. 770; Itin. iii. 29, Prov. iv. 5, § 7; Pini. vi. 29, s. 33.), the modern Fond Bay, in lat. 32° 11', derived its appellation from the badness of its anchorage, and the difficulty of navigating vessels among its numerous reefs and breakers. In its western recess lay the city of Berenice, founded, or rather enlarged, by Ptolemy Philadelphus, and so named by him in honour of his mother, the widow of Ptolemy Soter; and opposite its mouth was the island Ophites, famous alike for the reptiles which infested it, and its quarries of topaz. The latter was much employed by Egyptian artisans for ornamenting rings, scarabaei, &c., &c. [Berliner.] [W. B. D.]

IMUS PYRENAEUS, a station in Aquitania, at the northern base of the Pyrenees, on the road from Aquae Tarbellicae (Dax) to Pompelen (Pampeluna) in Spain. Imus Pyreneus is between Carasa (Gers) and the Summus Pyreneus. The Summus Pyrenaeus is the Somnet de Ceret-Foix, and the Imus Pyreneus is St. Jean-Pied-de-Port, “at the foot of the pass.” The distance in the Itin. between Summus Pyreneus and Imus Pyreneus is v., which D’Aville would alter to x., to fit the real distance. Walckenaer takes the measure to be Gallic leagues, and therefore the v. will be equivalent to 7½ M. P. [G. L.]

INA (Ἰνα, Ptol. i. 13. Inenis), a town of Sicily, the position of which is wholly unknown, except that Ptolemy reckons it among the inland towns in the south of the island. (Ptol. iii. 4, § 15.) That author is the only one of the geographers that mentions it, and the name has been thought corrupt; but it is supported by the best MSS. of Ptolemy, and the reading “Inenis” is equally well supported in Cicero (De Fin. iv. 43), where the old editions had “Enennes.” (Alpia, nod loc.) The term appears to rank them among the minor communities of the island which had been utterly ruined by the exactions of Verres. [E. H. B.]

INACCHOIDEUM (Ἰνακχόης, Ptol. iii. 17. § 2), a city of Crete, which, from the similarity of sound, Mr. Pashley (Trav. vol. ii. p. 78) is inclined to believe was situated in the modern district of Enneikhereio, on the W. coast of Crete. (Hick. Kretn, vol. i. p. 379.) [E. B. A.]

2. A river in the territory of Argos Amphibolichum. [Argos Amphibolich., p. 208, b.]

INABIME. [Αναβίμα.]  

**INATUS. (Ἰνάτος, Ptol. iii. 17. § 2), a city of Crete, the same, no doubt, as Enatis (Ἑνάτος, Steph. B. s. v.; Ptol. v. 8. 39; Pliny. Mag. s. v.), situated on a mountain and river of the same name. The Ptolemaic Table puts a place called Inata on a river 24 M. P., E. of Lissa, and 32 M. P. W. of Hierapytum. These distances agree well with the three or four hamlets known by the name Kasteliama, derived from the Venetian fortress. Castle Bevideere, situated on a hill a little to the N. of the villages. The**
In the account of India, the ancients, as we have seen, were not very particular. The ancient writers described the characteristics of the country, but the boundaries of the country itself were not clearly defined. The ancient writers, such as Herodotus, Strabo, Ptolemy, and Pliny, provided some information about India, but their descriptions were often confused and contradictory.

Herodotus described India as a land of great wealth and prosperity, and he mentioned the famous city of Palmyra. Strabo, on the other hand, was more critical of the ancients' descriptions of India, and he believed that the accounts of India were often exaggerated.

Ptolemy, in his Geographia, described India as a great and populous country, and he mentioned the important cities of India, such as Varanasi and Mathura. Pliny, in his Natural History, also described India, and he mentioned the important cities of India, such as Mathura and Varanasi.

The boundaries of India were not clearly defined, and there were different opinions about the extent of the country. Some ancient writers, such as Herodotus, described India as a land of great wealth and prosperity, while others, such as Strabo, were more critical of the accounts of India.

In conclusion, the ancient writers provided some information about India, but their descriptions were often confused and contradictory. The boundaries of India were not clearly defined, and there were different opinions about the extent of the country. Further research is needed to provide a clearer understanding of the ancient accounts of India.
INDIA.

1831), the Indus and the Indus (Fragm. 174 and 178), the Argaeon (Fragm. 176), the people of Oria on the banks of the Indus (Fragm. 175), the Calatiae, (Fragm. 177, Herod. iii. 38; or Calatiae, Herod. iii. 97), Gandara and the Gandarii (Fragm. 178) and their city Caspatyrus (Fragm. 179; Caspatyrus, Herod. iii. 102, iv. 44), are mentioned, in company with other Eastern places. Further, it appears, from the testimony of Herodotus, that Scylax of Caryanda, who was sent by Darius, navigated the Indus to Caspatyrus in Puthiye, and thence along the Erythraean sea by the Arabian gulf to the coast of Egypt (iv. 41); in the course of which voyage he must have seen something of India, of which he is said to have recorded several marvels (cf. Aristot. Pol. v. 7. 14; Phil. str. vit. Apoll. Togn. iii. 11; Tacta. Chit. vii. 144), though Klausen has shown satisfactorily, in his edition of the fragments which remain, that the Periplus usually ascribed to this Scylax is at least as late as the time of Philip of Macedon.

The notices preserved in Herodotus and the remains of Ctesias are somewhat fuller, both having had opportunities, the one as a great traveller, the other as a resident for many years at the court of the Achaemenids, which no previous writers had had. The knowledge of Herodotus (n. c. 484—408) is, however, limited to the account of the satrapies of Darius; the twentieth of which, he states, comprehended that part of India which was tributary to the Persians (iii. 94), the country of the most Eastern people with whom he was acquainted (iii. 95—102). To the S. of them, along the Indian Ocean, were, according to his view, the Asiatic Anthropitans (iii. 94); beyond them desert. He adds that the Indians were the greatest and wealthiest people known; he speaks of the Indus (on whose banks, as well as on those of the Nile, crocodiles were to be seen) as flowing through their land (iv. 44), and mentions by name Caspatyrus (a town of Puthiye), the nomadic Padii (iii. 99), and the Calatiae (iii. 38) or Calatiae (iii. 97). He places also in the seventh satrapy the Gandarii (iii. 91) [Gandarares], a race who, under the name of Gandharas, are known as a genuine Sanscrit-speaking tribe, and who may therefore be considered as connected with India, though their principal seat seems to have been on the W. side of the Indus, probably in the neighbourhood of the present Candahar.

Cesias (about n. c. 490) wrote twenty-three books of Persica, and one of Bactria, with other works on Asiatic subjects. These are all lost, except some fragments preserved by Photius. In his Persica he mentions some places in Bactria (Fragm. 5, ed. Bähr) and Ceyzara, on the Erythraean sea (Fragm. 40); and in his Indica he gives an account of the Indus, of the manners and customs of the natives of India, and of its productions, some of which bear the stamp of a too credulous mind, but are not altogether uninteresting or valuable.

On the advance of Alexander through Bactria to the banks of the Indus, a new light was thrown on the geography of India; and the Greeks, for the first time, acquired with tolerable accuracy some knowledge of the chief features of this remarkable country. A number of writers—some of them officers of Alexander's army—devoted themselves to a description of different parts of his route, or to an account of the events which took place during his progress from Babylon to the Hyphasis; and to the separate narratives of Bion and Dionysus, Neararchus, Onesicritus, Aristobulus, and Callitheness, condensed and extracted by Strabo, Pliny, and Arrian, we owe most of our knowledge of India as it appeared to the ancients. None of the original works of these writers have been preserved, but the voyage of Neararchus (the most important of them), though the places in India he names are few and uncertain, was held apparently by Arrian (in his Indica) with considerable minuteness. Ne-archus seems to have kept a day-book, in which he entered the distances between each place. He notices Pattala, on the Indus (from which he started), and Coreasia (perhaps the present Kurniap), Pliny, who calls this voyage that of Neararchus and Onesicritus, adds some few places, not noticed by Arrian (vi. 23, s. 26). Onesicritus himself considered the land of the Indians to be one-third of the whole inhabited world (Strab. xv. p. 691), and was the first writer who noticed Taprobane (Cydonia). (Ital. p. 691.) Both writers appear, from Strabo, to have left interesting memorials of the manners and customs of the natives (Strab. xi. p. 517, xv. p. 726) and of the natural history of the country. (Strab. xv. pp. 693, 703, 716, 717; Aelian. Hist. An. xvi. 174, xvii. 179, 599, 716, vi. 174, 269, 726; Pers. 176, 177, v. 179.)

Aristobulus is so frequently quoted by Arrian and Strabo, that it is not improbable that he may have written a distinct work on India: he is mentioned as noticing the swelling and floods of the rivers of the Pansab, owing to the melting of the snow and the rain (Strab. xv. p. 691), the mouths of the Indus (p. 701), the Brahamanes at Taxila (p. 714), the trees of Hyrcania and India (xi. p. 569), the rice and the mode of its tillage (xv. p. 692), and the fish of the Nile and India, respectively (xv. p. 707, xvii. p. 804).

Subsequently to these writers,—probably all in the earlier part of the third century B. c.—were some others, as Megasthenes, Dainachus, Patrocles, and Timosthenes, who contributed considerably to the increasing stock of knowledge relative to India. Of these, the most valuable additions were those acquired by Megasthenes and Dainachus, the name of whom is mentioned in the same breath, as ambassadors from Seleucus to the Courts of Sandromous (Chandragupta) and his successor Allirouros (Strab. ii. p. 70, xv. p. 702; Plin. vi. 17, s. 21), or, as it probably ought to be written, Alirouros. Megasthenes wrote a work often quoted by subsequent writers, which he called τα ινδικά (Athen. iv. p. 153; Clem. Alex. Strom. i. p. 152; Joseph. c. Apion. i. 20, Antiq. x. 11, § 1), in which he probably embodied the results of his observations. From the fragments which remain, and which have been carefully collected by Schwanbeck (Megasthenes Indicus, Bonn, 1846.), it appears that he was the first to give a tolerably accurate account of the breadth of India,—making it about 16,000 stadia (Arran, iii. 7, 8; Strab. i. p. 68, xv. p. 692)—to mention the Ganges by name, and to state that it was larger than the Indus (Arran, vi. 6, 10, Indic. 4, 13), and to give, besides this, some notice of no less than fifteen tributaries of the Indus, and nineteen of the Ganges. He remarked that India contained 118 nations, and so many cities that they could not be numbered (Arrian, Ind. 7, 10); and observed (the first among the Greeks) the existence of custer among the people (Strab. xv. p. 703; Arrian, Ind. 11, 12; Diod. ii. 40, 41; Solin. c. 52), with some peculiarities of the Indian religions, system, and of the Brahmanes (cf. Eur-
With the establishment of the mathematical schools at Alexandria, commenced a new era in Grecian geography; the first systematic arrangement of the divisions of the earth's surface being made by Eratosthenes (n.c. 276—161), who drew a series of parallels of latitude— at unequal distances, however—through a number of places remotely distant from one another. According to his plan, his most southern parallel was extended through Taprobane and the Cinnamon coast (the SE. end of the Arubian Gulf: and, passing through Palibothra and about 3400 stadia) passed through the S. coast of India, the mouths of the Indus and Merōs; his third (at an interval of 5000 stadia) passed through Palibothra and Syene; his fourth (at a similar interval) connected the Upper Ganges, Indus, and Alexandria; his fifth (at an interval of 3750 stadia) passed through Thina (the capital of the Seros), the whole chain of the Eudosms, Imus, Paropamisus, and the island of India (Strab. i. p. 115—132.). At the same time he drew seven parallels of longitude (or meridians), the first of which passed through the E. coast of China, the second through the mouths of the Ganges, and the third through those of the Indus. His great geographical error was that the intersection of his meridians and latitudes formed right angles. (Strab. ii. pp. 79, 80, 92, 93.) The shape of the inhabited portion of the globe he compared to a Macedonian "Chilean" extended. (Strab. ii. p. 118, xii. p. 519; Macrobi. Somn. Scip. ii. 9.) The breadth of India between Taprobane and Indus he made to be 16,000 stadia. Taprobane, like his predecessors, he held to be 5000 stadia long.

Hipparchus (about B.C. 150), the father of Greek astronomy, followed Patroclus, Daimachus, and Megasthenes, in his view of the shape of India; making it, however, not so wide at the S. as Eratosthenes had made it (Strab. ii. pp. 77, 81), but much wider towards the N., even to the extent of from 20,000 to 20,000 stadia (Strab. ii. p. 68). Taprobane he held not to be an island, but the commencement of another continent, which extended onward to the S. and W. —following, probably, the idea which had prevailed since the time of Aristotle, that Africa and SE. India were connected on the other side of the Indian Ocean. (Mela. iii. 7. 7; Plin. vi. 22, s. 24.) Artemidorus (about n.c. 100) states that the Ganges rises in the Montes Euenuli, flows S. till it arrives at Gange, and then E. by Palibothra to its mouths (Strab. xvi. p. 719): Taprobane he considered to be about 7000 stadia long and 500 broad (Steph. B.). The whole breadth of India, from the Ganges to the Indus, he made to be 16,000 stadia. (Plin. vi. 19, s. 22.) The greater part of all that was known up to his time was finally reduced into a consistent shape by Strabo (p. c. 66—A.D. 36). His view of India was not materially different from that which had been the received opinion since Eratosthenes. He held that it was the greatest and most Eastern land in the world, and the Ganges its greatest stream (ii. p. 130, xv. pp. 650, 719); that it stretched S. as far as the parallel of Merōs, but not so far N. as Hipparchus thought (Strab. p. 71, 72, 75); that it was in shape like a lozenge, the S. and E. being the longest sides. Its greatest breadth was 16,000 stadia on the E., its least 13,000 on the W.; its greatest length on the S., 19,000 stadia. Below the S. coast he placed Taprobane, which was, in his opinion, not less than Great Britain (G. i. p. 130, xv. p. 690). Pliny the Elder and Pomponius Mela, who were contemporaries, added somewhat to the geographical knowledge previously acquired, by incorporating into their works the results of different expeditions sent out during the earlier emperors. Thus, Pliny follows Agrippa in making India 3300 M. P. long, and 2300 M. P. broad, though he himself suggests a different and shorter distance (vi. 17. s. 21); while, after Seneca, he reckoned that it contained 118 peoples and 60 rivers. The Eomus, Indus, and Indus, the three, or one continued chain from E. to W., stating that S. of these great mountains, the land was, like Egypt, one vast plain (vi. 18. s. 22), comprising many wastes and much fruitful land (vi. 20. s. 23). For a fuller notice of Taprobane than had been given by previous writers, he was indebted to the ambassadors of the emperor Claudius, from whom he learnt that it had towards India a length of 10,000 stadia, and 500 towers,—one, the capital, Palæumandus, of vast size. The sea between it and the continent is, he says, very shallow, and the distance from the nearest point a journey of four days (vii. 22, s. 24). The measurements of the distances round the coast of India he gives with some minuteness, and in some instances with less exaggeration than his predecessors.

With Megasthenes of Tyre and Claudius Ptolemaeus, in the middle of the second century, the classical knowledge of geography may be said to terminate. The latter, especially, has, in this branch of knowledge, exercised an influence similar to that of Aristotle in the domain of the moral and physical sciences. Both writers took a more comprehensive view of India than had been taken before, owing in some degree to the journey of a Macedonian trader named Timtides, whose travels extended along the Taurus to the capital of China (Ptol. i. 11, § 7), and to the voyage of a sailor named Alexander, who found his way across the Indian Ocean to Cattigara (Ptol. i. 14, § 1), which Ptolemy places in lat. 80° 30' S., and between 170° and 180° E. long. Hence, his idea that the Indian Ocean was a vast central sea, with land to the S. Taprobane he held to be four times as big as it really is (vi. 4), and the largest island in the world was Madeira; a group of islands in the NE. and S. (in all probability, those now known as the Madeiros and Locadicus). In the most eastern part of India, beyond the Ganges and Bengal, which he terms the Golden Chersonesus, he speaks of Ialadus and Maniole; the first of which is probably that now known as Java, while the name of the second has been most likely preserved in Molucca. The main divisions of India into India interna Gangesum and India extra Gangesum, have been adopted by the
majority of subsequent geographers, from Ptolemy. Subsequent to this date, there are few works which fall within the range of classical geography, as which have added any information of real value on the subject of India; while most of them have borrowed from Ptolemy, whose comprehensive work was the basis of all subsequent works. The British scholar, Alexander Cunningham, has published a valuable work on the subject of Indian Geography, which is well known to all readers of the subject.

such may serve as a concise outline of the progress of knowledge in ancient times relative to India. Before, however, we proceed to describe the country itself, we must consider the natural history, rivers, provinces, and cities, it will be well to say a few words on the origin of the name India, with some notice of the subdivisions which were in use among the earlier geographers, but which we have not thought it convenient in this place to perpetuate.

The names INDUS, INDIA, are no doubt derived from the Sanscrit appellation of the river, Sinduḥ, which, in the plural form, means also the people who dwelt along its banks. The adjoining countries have adopted this name, with slight modifications: thus, Ἱδρυ is the form in the Zend or old Persian, Ḫoddu in the Greek, from which the name Indians has been derived. The Rājput word, Ḫodn, is the name of a tribe, and is the root of the Sanscrit word Ḫodra, from which the name of the city of Hodha was derived.

The great divisions of India which have been usually adopted are those of Ptolemy (vii. 1. § 1), into,—(1) India intrar Ganges, a vast district, which was bounded, according to that geographer, on the W. by the Paropamisadas, Arachosia, and Gedrosia; on the N. by the Imaus, in the direction of the Sogdian and Sacae; on the E. by the Ganges; and on the S. by a part of the Indian Ocean; and (2) India extrar Ganges (Ptol. vii. 2. § 1), which was bounded on the W. by the Ganges; on the S. by the Sichina and Serica; on the E. by the Sinaes, and by a line extended from their country to the Mēδhākos Kōvma (Gulf of Siam); and on the N. by the Indian Ocean, and a line drawn from the island of Menithia (Ptol. vii. 2. § 1), whence it appears that Ptolemy considered that the Ganges flowed nearly due N. and S. We have considered that this division is too arbitrary to be adopted here; we merely state it as the one proposed by Ptolemy and long current among geographers.

The later ecclesiastical writers made use of other terms, as Εδρων, in which they included even Arabia (Socrat. H. E. i. 19; Theol. i. 23; Theop. i. 33); and Ἱδρών (Saxoum. ii. 23).

The principal mountains of India (considered as a whole) were:—the eastern part of the Paropamisades (or Hindu-Kush), the Himalayas (Hindu-Ganges), and the Ganges (known by the generic name of the Himalayas). To the extreme E. were the Montes Semalvendi, the boundary of the land of the Sinæi, the Monte Damassia, and the Byprysus M. (probably the present Nārēka M.). An extension of the M. Damassia is the Macandras M. (now Mīta-Muru). In India intrar Ganges Ptolemy mentions many mountains, the names of which can with difficulty be supposed to have been derived from the names of the mountains of the Ganges, such as the Orulid M., in the S. extremity of the land between the Tyndis and the Chaebars; the Uxentus M., to the N. of them; the Aisiatius M.; the Bittigo M. (probably the range now known as the Ghîats), and the M. Vindius (unquestionably the present Fândya), which extend NE. and SW., along the N. bank of the Verbudda; M. Sarakonix (probably the present Sonpur), and M. Apeossia (perhaps the present Arracell).

The principal promontories in India are:—in the extreme E., Promontorium Magnun, the western point of the Sinus Magnus; Malaecli, on the S. coast of the golden peninsula; Promontorium Aureae Chersonesoi, the southern terminus of the Sinus Sabarum, on the western side of the Chersonesoi; Cory or Callirhoea, between the S. Argaricius and the 27th Colchica, near the SW. point of the peninsula of Himatia; Camarîa (now C. Cypriotis), the most southern point of Hindostan; Calo Carias (or Calli- caris), between the towns Amamagora and Muziris; Simylia or Semblia, the southern end of the Ganges. In the S. direction from E. to W. are the following gulfs and bays:—the Sinus Magnus (now Gulf of Siam); S. Perimilium, and Sabarums, on the E. and W. sides of the Chersonesoi Aurea; S. Gangericius (Bay of Bengal), S. Argaricius, opposite the N. end of Taprobane (probably Palk's Bay); S. Colchicus (Bay of Manamur); S. Barygazesius (Gulf of Cambay), and S. Cunthi (most likely the Gulf of Catch). The rivers of India are very numerous, and many of them of great size. The most important (from E. to W.) are the Doria (Suba?) and Doanias (the Irrawaddy), the Chrysan, the Payodas, the Tocisana (probably the present Arrakon), and the Catabola (now Carambol); the Ganges, with many tributaries, themselves large rivers. [Ganges.] Along the W. side of the Bay of Bengal are the Adamas (Brokmin), Dosaron (Mahanand), Maesolus (Godaveri), Tyndis (Kistna), and the Chaebars or Chaeburs (the Cavierry). Along the shores of the Indian Ocean are the Kasaiga (T monet), the Narimandus (Narmadu or Vermadu), and lastly the India, with its several tributaries. [INDUS.]

The towns in India known to the ancients were very numerous; yet it is remarkable that but few details have been given concerning them in the different authors of whose works fragments still remain. Generally, these writers seem to have been content with a simple list of the names, adding, in some instances, that such a place was the important port for commerce. The probability is, that, even so late as Ptolemy, few cities had reached sufficient importance to command the productions of an extensive surrounding country; and that, in fact, with one or two exceptions, the towns which he and others enumerate were little more than the head places of small districts, and in no sense capitals of great empires, such as Bactria, Delhi, and Calcutta, have become in later periods of Indian history. Beginning from the extreme E., the principal states and towns mentioned in the ancient writers are:—Perinamila
on the E. coast of the Golden Chersonesus (in the neighbourhood of Malacca); Tadcra (perhaps Tavrai or Tavary); Triglyphon, in the district of the Cyrrhidiae, at the mouth of the Brahmaputra (now Tipperah or Tribripur); and Cattigara, the exact position of which has been much disputed among geographers, but which appears conjunctly as Boraeas or Borosa. Northward of Triglyphon are a number of small districts, about which nothing certain is known, as Chaktis, Basananae, Caroane, and Aminacae, the Indrakrapathea, and Iberiacae; and to the W., along the swamp-land at the foot of the Himilaya chain, are the Thienes between the Puspan and the Tachae. All the above may be considered as belonging to India extra Ganges.

Again, from the line of coast from E. to W., the first people along the western months of the Ganges are called the Gangaridae, with their chief town Gange (in the neighbourhood of the modern Calcutta); the Caininga, with their chief towns Parthisa and Dandaga (the latter probably Calina-pattana, about halfway between Mahakandi and Godikorri); the Mesoil and Mesoilis, occupying nearly the same range of coast as that now called the Circora, with the capital Pityna, and Contai-saggia (Masulpattana?) and Asyagna on the sea-coast; W. of the Mesoilus (Godikorri), the Arvanni, with the chief town Malanga (probably Mandaragia, the present Madras). Then follow the Soorins and Batl, till we come to the land of Pandion (Pandivos xigea), which extends to the southern extremity of the peninsula of Hindustan, and was a district of great wealth and importance at the time of the Periplus. (Peripl. pp. 31, 33.) There can be no doubt that the land of Pandion is the same as the Indian Pindja, and its capital Modura the present Makkura. Within the same district were Argara (whence the S. Argaricae derives its name), the Carci, and the Colch. At the SW. end of the peninsula were Cottara (Cochin), and Connata, where the present Concoria derives its name. Following the western coast, we arrive at Linyriea (Peripl. pp. 30, 36), undoubtedly in the neighbourhood of Mangalore, with its chief towns Carura (most likely Colunbatore, where a great quantity of Roman coins have been dug up during the last fifteen years) and Tyndis (in the neighbourhood of Goa); and then Musopala, Nitras, and Mandagarra; all places on the sea-coast, or at no great distance from it. Somewhat further inland, within the district known generally at the time of the Periplus by the name of Deochinabades (Doddhinabade, or Deocan), was the district of Ariaca (Ariaca Zabawar, Ptol. vii. 1. §§ 6, 52; cf. Peripl. p. 30), with its chief town Hippocora (Nomdora or Hydralab, if not, as it has been imagined, the sea-port Mangalore); Basta, Sinylia (on the coast near Bassina), Omenagarra (undoubtedly the celebrated fortress Armel-nagar), and Tagara (Peripl. p. 19), the present Deoghir. Further N., the rich commercial state of Laree appears to have extended from the Namalus (Narvdor or Ner-budda) to Barygaza (Berauch) and the Gulf of Cambay. Its chief town was, in Tolomey's time, Ozene (Ozein or Uzhayini), a place well known to the antiquaries of India for the vast numbers of the earliest Indian coins constantly found among its ruins; Minnagarra, the position of which is doubtful, and Barygaza, the chief empire of the commerce of Western India. North of Laree was Syastrone (Sarsvatren), to the west of the Gulf of Cambay; and still further to the westward, at the mouth of the Indus, Pattala (Lower Sind, and the neighbourhood of Kursi), with its capital Pattala (Patala.).

It is much more difficult to determine the exact site of the various tribes and nations mentioned in ancient authors as existing in the interior of the country, though it is to ascertain the corresponding modern localities of those which occupied the sea-coast. Some, however, of them can be made out with sufficient certainty, by comparison of their classical names with the Sanscrit records, and in some instances with the modern native appellations. Following, then, the course of the Indus northwards, we find, at least in the times of Tolomey and of the Periplus, a wide-spread race of Scythian origin, occupying both banks of the river, in a district called, from them, Indo-Scythia. The exact limits of their country cannot now be traced; but it is probable that they extended from Pattala on the S. as far as the lower ranges of the Hindu-Kush,—in fact, that their empire swayed over the whole of modern Scinde and the Punjab; a view which is borne out by the extensive remains of their Tophes and cairns, which are found throughout these districts, and especially to the northward, near the head waters of the three western of the Five Rivers. A great change had no doubt taken place by the successful invasion of a great horde of Scythishards to the close of the second century B.C., as they are known to have overthrown the Greek kingdom of Bactriana, at the same time effacing many of the names of the tribes whom Alexander had met with two centuries before, such as the Aspasii, Assa- centi, Massiani, Hippasii; with the towns of Ac- derna, Daedelae, Massaga, and Emboluma, which are preserved in Arrian, and others of Alexander's historians.

Further N., along the bases of the Paropamisus, Imaus, and Emodus, in the direction from W. to E., we find mention of the Sambatae, the district Sambatae (now Second), and Goryae, with the towns Gorya and Dianopola, or Nagar (now Nagar); and further E., between the Susiana and the Indus, the Gandarae (one, doubtless, of the original seats of the Gondhurza). Following the mountain range to the E., we come to Caspira (now Casimir, in earlier times known, as we have seen, to Herodotus, under the name of Caspatyrus). Southward of Casimir was the territory of Varas, with its chief towns Taza, a place of importance so early as the time of Alexander (Arrian, v. 8), and probably indicated now by the extensive remains of Manikupa (Burnes, Travels, vol. i. p. 65), if, indeed, these are not too much to the eastward. A little further S. was the land of Pandora (Pandovos xigea), doubtless the representative of one of the Pandava dynasties of early Hindii history), during the time of Alexander the territory of the king Porus. Further eastward were the state of Yndipphe, with the sources of the Sutthibya, Jumna, and Ganges; and the Gangakh, whose territory extended into the highest range of the Himalaya.

Many small states and towns are mentioned in the historians of Alexander's campaigns along the upper Punjab, which we cannot here do more than glance at, as Panchauta (Panchakauta), Necasa, Beuchalia, the Glacunaitae, and the Saba or Sba. Following next the source of the Ganges, we meet with the Dasithei, the Nunchae, Prasica; and the Mandala, with its celebrated capital Pali Bothra (beyond all doubt the present Patliputra, or Patna), situated at the junction of
of the Eranorbas (Hiruapiboah) and the Ganges; with some smaller states, as the Sarasvatae, and the towns Methora and Clisoba, which were subject to the Prasii. Southward from Pulibothra, in the interior of the plain country, dwelt the Coconagas, on the banks of the Adumars, the Sahibae, the Salaceni, the Dellenophylitae, the Adelshpri, with their capital Sagidh (probably the present Shahpur), situated on the northern spurs of the Vindhyas, at no great distance from the sources of the Vira. Between the Sonus and the Ganges were the Bolingi. In a NW. direction, beyond the Sonus and the Vindhyas, we find a territory called Sandrabatii, and the Gymnosophistae, who appear to have occupied the country now called Sirhund, as far as the river Satlejha. The Caspureci (at least in the time of Ptolemy; see Ptol. vii. 1, § 47) seem to have extended over a considerable breadth of country, as their sacred town Medara (Melupaya त्राव in Siav) was situated, apparently, at no great distance from the Nerbodas, though its exact position has not been identified. The difficulty of identification is much, indeed, increased by the error of reckoning which prevails throughout Ptolemy, who held that the coast of India towards the Indian Ocean was in a straight line E. and W. from Taprobane and the Indus, thereby placing Nanganua and the Namadus in the same parallel of latitude. On the southern spurs of the Vindhyas, between the Namadus and Nanganua, on the edge of the Deocean, were the Phyllitae and Gondii; and to the E. of them, between the Bitigo M. and the river Chaberas (Civeris), the nomad Sorae (Sorae vaunder), with a chief town Sora, at the eastern end of M. Tittigo. To the southward of these, on the Chaberas and Sœlen, were several small tribes, the Brahmamani Mogi, the Ambashe, Bettigii or Bitii, and the Tabasii.

All the above-mentioned districts and towns of any importance are more fully described under their respective names.

The ancient appear to have known but little of the islands which are now considered to form part of the East Indies, with the exception of Taprobane or Ceylon, of which Ptolemy and Ptolemy have left some considerable notice in their works. The reason of this is, that it was not till a much later period of the world's history that the Indian Archipelago was fully opened out by its commercial resources to scientific inquiry. Besides Ceylon, however, Ptolemy mentions, in its neighbourhood, a remarkable cluster of small islands, doubtless (as we have remarked before) those now known as the Leeccrites and Maldives; the island of Tabadas (Jawa), before the Chersonese Aurora; and the Natronnus Indiae, on the same parallel with the E. end of this Chersonesus, which may perhaps answer to the Austras or Natava islands.

Of the government of India, considered as a whole, comparatively little was known to the Greek writers; indeed, with the exception of occasional names of kings, it may be asserted that they knew nothing E. of Pulibothra. Nor is this strange; direct connection with the interior of the country ceased with the fall of the Greco-Bactrian empire; from that period almost all the information about India which found its way to the nations of the West was derived from the merchants and others, who made voyages to the different out-ports of the country. It may be worth while to state briefly here some of the principal rulers mentioned by the Greek and Roman writers; premising that, previous to the advance of Alexander, history is on these subjects silent. Previous, indeed, to Alexander, we have nothing on which we can rely. There is no evidence that Darius himself invaded any part of India, though a portion of the NW. provinces of Bactria may have paid him tribute, as stated by Herodotus. The expeditions of Dionysaus and Hercules, and the wars of Sesostris and Semiramis in India, can be considered as nothing more than fables too credulously recorded by Ctesias. At the time of the invasion of Alex- ander the Great, there can be no doubt that there was a settled monarchy in the western part of India, and his dealings with it are very clearly to be made out. In the north of the Punjab was the town or district Taxila (probably Manikya, or very near it), which was ruled by a king named Taxiles; it being a frequent Indian custom to name the king from the place he ruled over. His name in Diodorus is Mophs (viii. 86), and in Curtius, Omphis (viii. 12), which was probably the real one, and is itself of Indian origin. It appears that Alexander left his country as he found it. (Strab. xv. pp. 698, 699, 716.) The name of Taxiles is not mentioned in any Indian author. The next ruler Alexander met with was Porus (probably Panauros Sancus., a change which Strabo indicates in that of Dampavii into Dampavus), with whom Taxiles had been at war. (Arr. vi. 13.) Alexander appears to have succeded in reconciling them, and to have increased the empire of Poras, so as to make his rule comprehend the whole country between the Hydaspes and Acesines. (Arr. v. 20, 21, 29.) His country is not named in any Indian writer. Shortly afterwards, Alexander received an embassy and presents from Abisarises (no doubt Ambises), whose territory, as has been shown by Prof. Wilson from the Annals of Cashmir, must have been in the mountains in the southern part of that province. (Asiat. Res. vol. xvi. p. 116.) There had been previously a war between this ruler and the Malli, Oxydraca, and the people of the Lower Punjab, which had ended in nothing. Alexander confirmed Abisaries in the possession of his own territory, made Philip satrap of the Malli and Oxydraca, and Pytho of the land between the confines of the Indus and Acesines and the sea (Arr. vi. 13), placing at the head of the Alex. Oxydraces over the Pargamiscades. (Arr. vi. 15.) It may be observed that, in the time of Ptolemy, the Cashmirians appear to have held the whole of the Punjab, so far as the Vindhyas mountains, a portion of the southern country being, however, in the hands of the Malli and Cashaiu.

The same state of things prevailed for some time after the death of Alexander, as appears by a decree of Pergamus, mentioned in Diodorus (xxvi. 3), and with little material change under Anti- pater. (Diod. xviii. 39.) Indeed, the provinces remained true to the Macedonians till the commencement of the rule of the Prasii, when Sundraccottus took up arms against the Macedonian governors. (Justin. xiv. 4.) The origin of this rebellion is clearly traceable. Porus was slain by En- damus about b.c. 317 (Diod. xix. 14); hence Sundraccottus must have been on the throne about the time that Seleucus took Babylon, b.c. 312. The attempt of the Indians to recover their freedom was probably aided by the fact that Poras had been slain by a Greek. Sundraccottus, as king of the Prasii (Sasne. Paschys) and of the nations on the Ganges, made war with Seleucus Nicator, who penetrated far into India. Phalutes says he ruled over all India, but this is not likely. (Plut. Alex. 62.) It appears
that he crossed the Indus, and obtained by marriage Arachosia, Gedrosia, and the Bactrian Sicas, from Seleucus (Strab. xiv. p. 724: Appian, Syr. p. 55.) It was to his court that Megasthenes (as we have before stated) was sent. Sandrockottus was succeeded by Amritochates (Sane. Amiratchoitas), which is almost certainly the true form of the name, though Strabo calls him Allitrochades. He was the contemporary of Antiochus Soter. (Athen. xiv. 67.) It is clear, from Athenaeus (l. c.), that the same friendship was maintained between the two monarchs as between the two fathers. Dariusmus was sent as ambassador to Paliobothra. (Strab. ii. p. 70.) Then came the wars between the Parthians and Bactrians, and the more complete establishment of the Graeco-Bactrian kingdom, under Menander, Apollodotus, Eucratides, and their successors, to which we cannot here do more than allude. The effect, however, of these wars was to interrupt communication between the East and the West; hence the meagre nature of the historical records of the period. The expedition of Antiochus the Great to India brought to light the name of another king, Sogasagassus (Polyb. xi. 32), who was, in all probability, king of the Prasis. The Scythians finally put an end to the Bactrian empire about B.C. 136. (De Guignes, Mém. de l'Acad. d. Insér. xxv. p. 17.) This event is noticed in the Peripolia (p. 22), where, however, Puthi must be taken to mean Scythi. (See also Peripolia, p. 24: Droysen, Persepol. ii. 1087—1088.) Estathius adds, in his commentary on Dionysius: —Oe I Κ Ι ν δς δ χ π ω ρ α ς α θ ι ν τ ι ν ι ρ ι τ ι υς λ ι γ ι ρ ι ζ ν ω η. Minagara was their chief town, a name, as appears from Lisl. Char. (p. 9), which was partly Scythian and partly Sanscrit. (Cf. also De Guignes, l. c.)

The Scythians were in their turn driven out of India by Vercingetorix (about B.C. 56 (Colebrooke, Ind. Algebra, Lond. 1817, p. 43), who established his seat of empire at Oyemin (Ujgejiai). At the time when the Peripolia was compiled, the capital had been again changed, as we there read, Ουζιρην, ἐν ἦ καὶ τα Βασκλεο πάρερον ὅρ. It is remarkable that no allusion has been found in any of the early literature of the Hindus to Alexander the Great; but the effect of the later expeditions of the Bactrians is clearly indicated under the name of the Yowziana. In the astronomical works, the Yowziana are barbarians who understood astronomy, whence it has been conjectured by Colebrooke that the Alexandrians are referred to. (Ind. Algebra, p. 80.) Generally, there can be no doubt that the Yowziana mean nations to the W. of India. Thus, in the Mahabharata, they make war on the Hindus, in conjunction with the Pandi (i.e. Parthis), and the Scythians or Sicas. (Lassen, Pentsa, p. 96.) In the Drama of the Meda-Baxa, which refers to the war between Chandragupta and another Indian King, it is stated that Cusumapura (i.e. Paliobothra) was surrounded by the Cirtarae, Tavani, Cambogi, Perae, Bactrians, and the other forces of Chandragupta, and the king of the Mountain Regions. Lassen thinks, with much reason, that this refers to Scelencus, who, in his war with Chandragupta, reached, as we know, Paliobothra. (Pinn. vi. 17.)

With regard to the commerce of ancient India, which we have reason to suppose was very extensive, it is impossible in this place to do more than to indicate a few of the principal facts. Indeed, the commerce of India, including the northern and the southern districts, may be considered as the epitome of the commerce of the world, there being few products of the other country which may not be found somewhere within its vast area.

The principal directions in which the commerce of ancient India flowed were, between Western India and Africa, between the interior of the Deccan and the outports of the southern and western coast of the Indian Ocean, between Ceylon and the ports of the Coromandel coast, between the Coromandel coast and the Auroa Chersonesus, and, in the N., along the Ganges and into Tityar and the territory of the Nikes. There appears also to have been a remarkable trade with the opposite coast of Africa, along the district now called Zanguebar, in sassaum, rice, cotton goods, cane-honey (sugar), which was regularly sent from the interior of Aria (Concoa) to Barygaza (Beroeoch), and thence westward. (Perip. p. 8.) Arab sailors are mentioned who lived at Muzar (Alocha), and who traded with Barygaza. (Perip. p. 13.) Bananas of India had established themselves on the N. side of Sostrata, called the island of Disceordes (Perip. p. 17): while, even so early as Agatharchides, there was evidently an active commerce between Western India and Yemen. (Agath. p. 66, ed. Hudson.) Again, the rapidity with which Alexander got his fleet together seems to show that there must have been a considerable commerce by boats upon the Indus. At the time of the Peripolia there was a chain of ports along the western coast. — Barygaza (Beroeoch), Muziris in Lymyrlica (Mangalore), Nelkyma (Nelvisarn), Patallá (once supposed to be Tutta, but much more probably Hyderabad), and Calicenu, named Gollon (Perip. p. 30): while there were three principal emporia for merchandise, — Oxene (Oyjein), the chief mart of foreign commerce, (vide an interesting account of its ruins, Asiat. Res. vol. vii. p. 36), and for the transmission of the goods to Barygaza; Thacara, in the interior of the Deccan (almost certainly Deoghar or Deenagori near Ellora), whence the goods were conveyed over difficult roads to Barygaza and Phutana, or Phitana, a place the exact position of which cannot now be determined, but, from the character of the products of the place, must have been somewhere in the Ghatis.

Along the Regio Parasila to the S., and on the Coromandel coast, were several ports of consequence; and extensive pearl fisheries in the kingdom of Pandion, near Colohi, and near the island of Epiderus, where the χαρακτικ (a silky thread spun from the Pinnia-fish) was procured. (Perip. p. 35.) Further to the N. were, — Massala (Massapitai), famous for its cotton goods (Perip. p. 35); and Gange, a great mart for muslin, beldal, pearls, &c., somewhere near the mouth of the Ganges, its exact locality, however, not being now determinable. (Perip. p. 36.) The commerce of Ceylon (Selandib, i.e. Sinhala-velpo) was in pearls of the best class, and precious stones of all kinds, especially the ruby and the emerald. The notices in Polteny and Phiny show that its shores were well furnished with commercial towns (Ptol. vii. 4, §§ 3, 4, 5), while we know from the writings of Cosmas Iconocles that the merchant ships crossed over to Charyse (in all probability Malaccat), in the Aarea Chersones, the name of it, however, is not specified.

It is probable, however, that the greatest line of commerce was from the N. and W. along the
Ganges, commencing with Taxila near the Indus, or Lahore on that river, and passing thence to Pataliputra. This was called the Royal Road. It is remarkable that the Ramayana describes a road from Ayodhya (Oudh), over the Ganges and the Jumna, to Hastinapura and Lahore, which must be nearly identical with that mentioned in the Greek geographers. The commerce, which appears to have existed between the interior of Asia, India, and the land of the Suse and Sircna, is very remarkable. It is stated that from Thina (the capital of the Sinae) fine cottons and silk were sent on foot to Indians, and thence down the Ganges to Linythra.

(Perip. p. 36.) The Peripius speaks of a sort of annual fair which was held within the territory of the Thinae, to which malabarathon (hotel) was imported from India. It is not easy to make out whereabouts Thina itself was situated, and none of the modern attempts at identification appear to us at all satisfactory: it is clearly, however, a northern town, in the direction of Ludhik to Thibet, and not, as was seemed to the modern geographers of the country, or, as Vincent (Voyage of Nearchus, vol. ii. p. 785) conjectured, at Arracan. It is curious that silk should be so constantly mentioned as an article of import from other countries, especially Sircna, as there is every reason to suppose that it was indigenous in India; the name for silk throughout the whole of the Indian Archipelago being the Sanscrit word sutra. (Colebrooke, Asiatic. Res. vol. v. p. 61.)

It is impossible to give in this work any details as to the knowledge of ancient India exhibited in the remains of native poems or histories. The whole of this subject has been examined with great ability by Lassen in his Indische Alterthums- kunde and to his pages, to which we are indebted for most of the Sanscrit names which we have from time to time inserted, we must refer our readers. From the careful comparison which has been made by Lassen and other orientalists (among whom Pott deserves special mention) of the Indian names preserved by the Greek writers, a great amount of evidence has been adduced in favour of the general faithfulness of those who recorded what they saw or heard. In many instances, as may be seen by the names we have already quoted, the Greek writers have been content with a simple adaptation of the sounds which they heard to the nearest suits for their own pronunciation. When we consider the barbarous words which have come to Europe in modern times as the European representations of the names of places and peoples existing at the present time, we have reason to be surprised at the accuracy with which Greek ears appreciated, and the Greek language preserved, names which must have appeared to Greeks far more barbarous than they would have seemed to the modern correspondents of the same.

The attention of modern scholars has detested many words of genuine Indian origin in a Greek dress; and an able essay by Prof. Tychsen on such words in the fragments of Ctesias will repay the perusal of those who are interested in such subjects. (See Heeren, Asiatic Nations, vol. ii. Appendix. 4, ed. Lond. 1846.)

The general name of the inhabitants of the whole country to the E. of Persia and S. of the Himalaya mountains (with the exception of the Sere) was, in ancient times, India (I. 653), or Indians. It is true that the appellation referred to a much wider or much less extensive range of country, at different periods of history. There can, however, be no doubt, that when the ancient writers speak of the Indi, they mean the inhabitants of a vast territory in the SE. part of Asia. The extension of the meaning of the name depended on the extension of the knowledge of India, and may be traced, though less completely, in the same manner as we have traced the gradual progress of knowledge relative to the land itself. The Indi are mentioned in more than one of the fragments of Hecataeus (Hecat. Frug. 175, 178), and are stated by Aeschylus to have been a people in the neighborhood of the Aethiopians, who made use of camels. (Suppl. 289—287.) Herodotus is the first ancient author who is said to give any real description of them; and he is led to refer to them, only because a portion of this country, which joined the territory of Dareius, was included in one of the satrapies of his vast empire, and, therefore, paid him tribute. Some part of his narrative (iii. 94—106, iv. 44. vii. 65) may be doubted, as clearly from hearsay evidence; some is certainly fabulous. The sum of it is, that the Indians were the most populous and richest nation which he knew of (iii. 94), and that they consisted of many different tribes, speaking different languages. Some of them, he states, dwelt in the immediate neighbourhood of the Aethiopians, and were, like them, black in colour (iii. 98, 101); some, in the marshes and desert land still farther E. The manners of these tribes, whom he calls Padiæ, and Callatiae or Callatæ, were in the lowest grade of civilization—a wandering race, living on raw flesh and raw fish, and of cannibal habits (cf. Strab. xv. p. 710, from which Mamert, v. 1, p. 3, infers that the Padiæ were not after all genuine Indians, but Ætiopæans). Others (and these were the most warlike) occupied the northern districts in the neighbourhood of Caspatyurus (Caspatyrus) in the Regio Pactycis. Herodotus places that part of India which was subject to Dareius in the 20th satrapy, and states that the annual tribute from it amounted to 360 talents (iii. 94). Xenophon speaks of the Indians as a great nation, and one worthy of alliance with Cynaxares and the Mades (i. 5, § 3, iii. 2, § 25, vii. 2), though he does not specify to what part of India he refers. That, however, it was nearly the same as that which Herodotus describes, no one can doubt.

From the writers subsequent to Alexander, the following names were given to the people and their manners may be gathered. The ancients considered that they were divided into seven castes:—1. Priæts, the royal counsellors, and nearly connected with, if not the same as, the Brachminæ or Brahmins. (Strab. xv. pp. 712—716; Arrian, Ind. i.) With these Strabo (L. c.) makes another class, whom he calls Capulææ, These, as Grosskund (iii. p. 153) has suggested, would seem, from the description of their habits, to have been barbarous, or, perhaps, the same as the Gymnosophistæ so often mentioned by Strabo and Arrian. This casta was exempted from taxes and service in war. 2. Husbandmen, who were free from war-service. They were the most numerous of the seven castes. (Strab. xv. p. 704.) The kind itself was held to belong to the king, who farmed it out, leaving to the cultivator one-fourth of the produce as his share. 3. Hunters and shepherd, The same kind of wandering, life, going to rear cattle and beasts of burden: the horse and the elephant were held to be for the kings only. (Strab. l. c.) 4. Artizans and handicraftsmen, of all kinds. (Strab. xv. p. 707.) 5. Warriors. (Strab. l. c.) 6. Political officers (Εὐποροι, Strab.
INDIA.

Who looked, and repeated secretly to the king. 7. The Royal Counsellors, who presided over the administration of justice (Strab. l.c.), and kept the archives of the realm.

It was not permitted for intermarriages to take place between any of these classes, nor for any one to perform the offices allotted to another, except in the case of the first caste (called also that of the Brahmanes), to which a man might be raised from any of the other classes. (Strab. l.c.; Arrian, Ind. c. 12; Diod. ii. 41; Plin. vi. 19. s. 22.) We may remark that the modern writers on India recognise only four castes, called respectively Brahmanes, Kshatriyas, Vaisyas, and Sudras—a division which Heeren has suggested (we think without sufficient evidence) to indicate the remains of distinct races. (Asiat. Nat. vol. ii. p. 230.)

The lowest of the people (now called Parsaees), as belonging to none of the above castes, are nowhere distinctly mentioned by ancient writers (but cf. Strab. xv. p. 709; Diod. ii. 29; Arrian, Ind. c. 10).

The general description of the Indians, drawn from Megasthenes and others who had lived with them, is very pleasing. Theft is said to have been unknown, so that houses could be left unfastened. (Strab. xv. p. 709.) No Indian was known to speak falsehood. (Strab. xv. l.c.)—Their manners were extremely temperate, abstaining wholly from wine (Strab. l.c.);—their hatred of drunkenness being so great that any girl of the harem, who should see the king drunk, was at liberty to kill him. (Strab. xv. p. 710.) No class eat meat (Herod. iii. 100), their chief sustenance being rice, which afforded them also a strong drink, i.e. arrak. (Strab. xv. p. 694.) Hence an especial freedom from disease, and longevity; though maturity was early developed, especially in the female sex, girls of seven years old being deemed marriageable. (Strab. xv. pp. 701—706; Arrian, Ind. 9.) The women are said to have been remarkable for their chastity, it being impossible to tempt them with any smaller gifts than that of an elephant (Arrian, Ind. c. 17), which was not considered discreditable by their countrymen; and the usual custom of marriage was for the father to take his daughters and to give them in marriage to the youths who had distinguished themselves most in gymnastic exercises. (Arrian, l.c.; Strab. xv. p. 717.) To strangers they ever showed the utmost hospitality. (Diod. ii. 42.) As warriors they were notorious (Arrian, Ind. c. 9; Expel. Alex. v. 4; Plut. Alex. c. 59, 63); the weapons of the foot-soldiers being bows and arrows, and a great two-handed sword; and of the cavalry, a javelin and a round shield (Arrian, Ind. c. 16; Strab. xv. p. 717; Curt. viii. 9.) In the Fanjah, it is said that the Macedonians encountered poisoned arrows. (Diod. xviii. 103.) Manly exercises of all kinds were in vogue among them. The chase was the peculiar privilege of royalty (Strab. xv. pp. 709—712; Cic. Ind. 14; Curt. viii. 9, seq.)—gymnastics, music, and dancing, of the rest of the people (Plut. Alex. c. 709; Arrian, Expel. Alex. vi. 3); and juggling and slight of hand were then, as now, among their chief amusements. (Aelian, vii. 7; Juven. vi. 582.) Their usual dress bespotted their hot climate, and was of white linen (Philostr. VIl. Apoll. ii. 9) or of cotton-stuff (Strab. xv. p. 719; Arrian, Ind. c. 16); their heads and shoulders partially covered (Arrian, l.c.; Curt. viii. 9, 13) or shaded from the sun by umbrellas (Arrian, l.c.); with shoes of white leather, with very thick and many-colored soles. (Arrian, l.c.) Gold and ivory rings and ear-rings were in common use; and they were wont to dye their beards, not only black and white, but also red and green. (Arrian, l.c.) In general form of body, they were thin and elegantly made, with great litherness (Arrian, Ind. c. 17; Strab. ii. p. 103, xv. p. 685), but were larger than other Asiatics. (Arrian, Expel. Alex. v. 4; Plin. vii. 2.)

Some peculiar customs they had, which have lasted to the present day, such as self-immolation by water or fire, and throwing themselves from precipices (Strab. xv. pp. 716, 718; Curt. viii. 9; Arrian, Expel. Alex. vii. 5; Lucan. iii. 42; Plin. vi. 19. s. 20), and the burning of the widow (auttes); not, indeed, agreeably to any fixed law, but rather according to custom. (Strab. xv. pp. 699—714; Diod. xvii. 91, xix. 33; Ciec. Tus. Disp. v. 27.) For writing materials they used the bark of trees (Strab. xv. p. 717; Curt. ii. 15), probably much as the modern Cinghalenses use the leaf of the palm. Their houses were generally built of wood or of the bamboo-cane; but in the cold mountain districts, of clay. (Arrian, Ind. c. 10.)

It is a remarkable proof of the extent to which civilisation had been carried in ancient India, that there were, throughout the greater part of the country, high roads, with stones set up (announcing to ear Millennium) on which were inscribed the name of the place and the distance to the next station. (Strab. xv. pp. 689—708; Arrian, Ind. c. 3.) [VY.

INDICUS OCEANUS (ὁ Ἰνδικὸς Όικανός, Agath. ii. 14; Ἡ δύσων πέλαγος, Ptol. vii. i. § 5.) The Indian Ocean of the ancients may be considered generally as that great sea which washed the whole of the southern portion of India, extending from the parallel of longitude of the mouths of the Indus to the shores of the Chersonesian Aurea. It seems, indeed, to have been held by them as part, however, of a yet greater extent of water, the limits of which were undefined, at least to the southwards, and to which they gave the generic name of the Southern Sea. Thus Herodotus speaks of ἡ τοίχι ἐρμαίνον (in this sense (iv. 37), as does also Strabo (ii. p. 121); Diodorus calls it ἡ κατα μεγάλην ὡκανον (iii. 38), while the Erythraean sea, taken in its most extended meaning, doubtless conveyed the same sense. (Herod. ii. 102, iv. 37; compared with Strab. i. p. 33.) Ptolemy gives the distances across this sea as stated by seafaring men; at the same time he guards against their over-statements, by recording his opinion in favour of no more than one-third of their measurements: this space he calls 8870 stadia (i. 13. § 7). The distance along its shores, following the indentations of the coast-line, he estimates, on the same authority, at 19,000 stadia. It is evident, however, that Ptolemy himself had no clear idea of the real form of the Indian Ocean, and that he inclined to the opinion of Hipparchus, Polybius, and Marinus of Tyre, that it was a vast inland sea, the southern portion of it being bounded by the shores of an unknown land which he supposed to connect Cat-tigara in the Chersonesian Aurea with the island of Prassum (now Cape Delgado) in Africa (comp. iv. 9. §§ 1, 3, vi. 3. §§ 1, 3, 6). The origin of this error it is not easy now to ascertain, but it seems to have been connected with one which is found in the historians of Alexander's expedition, according to which there was a connection between the Indus and the Nile, so that the sources of the Acesines (Chemb) were confounded with those of the Nile. (Arrian, v. 1.) Strabo, indeed, appears to have had some leaning to a similar view, in that he connected the Erythraean with the Atlantic sea (ii. p. 130); which was also

E 2
the opinion of Eratosthenes (Strab. i. p. 64). The 
Indian Ocean contains at its eastern end three principal 
gulf, which are noticed in ancient authors,— 
the SUCUS PELPULUS (Ptol. vii. 2 § 5), in the 
Chersonesus Aera (probably now the Straits of 
Molucca); the SUCUS SARACUS (Ptol. vii. 2 § 4), 
now the Gulf of Martaban; and the SUCUS GAN- 
GETICUS, or Bay of Bengal. [V.] 
INDIGETAE, or INDIGETAE, (Ἰνδιγέται, Strab. i. p. 164) a people of Homata 
Territoria, in the extreme NE. corner of the 
peninsula, around the gulf of Rhoda and Emporiae 
(Gulf of Amyrthia), as far as the Trophies of 
Pomey (τα Πομπεια τριπατα, ἀκαδήμαι του 
Πομπείου), on the summit of the pass over the 
Pyrenees, which formed the boundary of Gaul 
and Spain (Strab. iii. p. 160, iv. p. 178). [Pom-
peii Trophies.] They were divided into four 
tribes. Their chief cities, besides Emporiae and 
Rhoda, were: 

- Jungaria (Ἰονγαρία, Ptol. ii. 6 § 73; Jungaera, or, as some suppose, Figureia), 
16 M. I. south of the summit of the Pyrenees (Sum-
mum Pyreneum. Itin.), on the high road to Tarra-
co (Itin. Ant. pp. 390, 397); 
CINNANIA (瞵αία), 15 M. P. farther S. (It. Thub. Pent.) 
and Declania, near Jungaria (Ptol. ii. 6 § 73). On 
the promontory formed by the E. extremity of the 
Pyrenees (C. Crena), was a temple of Venus, with 
a sacred spring on the Lys-
ride (Ἄφροδιτα, Steph. B.; το Ἀφροδίτιο τερρα, 
Ptol. ii. 6 § 20; Pyreneus Venus, Ptol. iii. 3. s. 4; 
Portus Veneris, Mea, ii. 6 § 5; Portus Pyrenei, 
Liv. xxxiv. 8; Porte Vendres), which some made 
the boundary of Gaul and Spain, instead of the 
Trophies of Pomey. 

Polamen names two small 

- rivers as falling into the gulf of Emporiae, the 
CINNANIA (ที่ไม่αία), and the SAM-
MERIANAS (Σαμεριάνα), 
then being, the Smaller river flowing past Roes. 
The district round the gulf of Emporiae was called 
Jungariae Campus (το Ιονγαρίου πεδίου), from 
the abundance of rushes which grew upon its 
marshe 
Strab. iii. pp. 156, 163; Steph. B. 5. 3. 1. 
Indi-
ka; Eustath. ad II. p. 191; Arien, Or. Mar. 

- Euphrateos, a district of wide extent along the Indus, 
which probably comprehended the whole 
tract watered by the Lower Indus, Cutch, Guzerat, 
and So obsession. It derived its name from the Sichyan 
tribes, who gradually pressed onwards to the south 
and the sea-coast after they had overthrown the 
Graeco-Bactrian empire, about A. D. 136. It is 
first-mentioned in the Periphus M. E. (p. 22) as occu-
pating the banks of the Indus, while Polemen is a 
 fuller description, with the names of some of its 
principal subdivisions, as Pattalco, Abiria, and 
Syrastrene (Suspyskoom), with an extensive list of 
towns which belonged to it (vii. 1. §§ 55–61). 
Some of them, as Hinnagura (properly Minnagura), 
have been recognised as partially Cythic in form. 
(Lassen, Pent. p. 56; cf. T. d. 5. 9.) In 
Binnagura (Bannagura), it is supposed that the people are 
described as νεκροι Σετείλικοι. As late as the middle of 
the sixth century A.D. Cosmas Indiopis states the 
speaking of White Guns, or Mongolians, as the inhabitants of the 
Punjab (p. 338). These may be considered 
as the remains of the same Cythic empire, the pre-
cessors of the hordes who subsequently poured 
down from the north under Jinghia Khan. (Bitter, 
Eriskunde, vol. i. p. 558.) [V.] 

INDUS (4 1568) one of the principal rivers of 
Asia, and the boundary westward of India. It is 
mentioned first in ancient authors by Heracleas of 
Miletus (Ergon. 14. 4, ed. Klauser), and sub-
sequently by Herodotus (iv. 44), who, however, only 
notices it in connection with various tribes who, he 
states, lived upon its banks. As in the case of 
India itself, so in that of the Indus, the first real 
description which the ancients obtained of this river 
was from the historians of Alexander the Great's 
movements, among whom Arrian states that his sources were in the 
lower spurs of the Paropamisus, or Indian Caucasus (Hindu-Kush); wherein he agrees with Mela (iii. 7. 
§ 6), Strabo (xv. p. 690), Curtius (viii. 9. § 3), and 
other writers. It was, in Arrian's opinion, a vast 
stream, even from its first sources, the largest river 
in the world except the Ganges, and the recipient of 
many tributaries, themselves larger than any other 
known stream. It has been conjured, from the 
descriptions of the Indus which Arrian has preserved, 
that the writers from whom he has condensed his 
narrative must have seen it at the time when 
its waters were at their highest, in August and Sep-
tember. Quoting from Ctesias (v. 4. 11), and with 
the authority of the other writers (v. 20), Arrian 
gives 40 stadia for the mean breadth of the river, and 15 
stadia where it was most contracted (v. 20). The 
stream increased, however, in breadth past 
100 stadia, those, on the other hand, who 
have measured it, asserted that 50 stadia was its 
greatest, and 7 stadia its least breadth (v. 10. 6). 
Its depth, according to Plyn, (L. c.), was nowhere 
less than 15 fathoms. According to Diodorus, it was 
the greatest river in the world after the Nile (ii. 35). 
Curtius states that its waters were cold, and of the 
colour of the sea (vii. 9. § 4). Its current is held 
by some to have been slow (as by Mela, iii. 7. § 6); by 
others, rapid (as by Eustath. in Dionys. Perieg. v. 
1088.). Its course towards the sea, after leaving the 
mountains, was nearly south (v. 10. 5. Ed.); and 
the mouth of the stream, by which it was received, according to Strabo (p. 700) and 
Arrian (v. 6), 15, according to Plyn, 19 
other tributary rivers (L. c.). About 2000 stadia 
from the Indian Ocean, it was divided into two 
principal arms (Strab. xv. p. 701), forming thereby a 
Delta, like that of the Nile, though not so large, 
called Pattalame, from its chief town Pattala (which 
Arrian asserts meant, in the Indian tongue, Delta 
(v. 4); though this statement may be questioned), 
(Cf. also Arrian, Ind. 2; Dionys. Perieg. v. 
1088.). The flat land at the mouths of rivers which flow 
from high mountain-ranges with a rapid stream, is 
ever changing: hence, probably, the different 
accounts which we receive of the mouths of the Indus 
from those who recorded the history of Alexander, 
and from the works of later geographers. The 
former accounts are given by those who were 
the Indus only two principal outlets into the Indian 
Ocean,—at a distance, the one from the other, 
according to Aristobulus (ap. Strab. xv. p. 690), of 
1090 stadia, but, according to Nearchus (L. c.), of 
1800 stadia. The latter mention more than two 
mouths: Mela (iii. 7. § 6) speaking of "πυθυ 
εσθα", and Polemen giving the names of seven (vii. 
1. § 28), in which he is confirmed by the author of 
the Periphanes M. Brythraci (p. 22). The names
of these months, in a direction from W. to E., are: —
1. Σάγανα στέμνα (the Fitti or Lohari), not improbably in the arm of the stream by which Alexander’s fleet gained the Indian Ocean; 2. Σίνιον στέμνα (the Bikanal); 3. Χρυσάνοι στέμνα (the Pomonari or Kubawani), whereby merchandise and goods ascended to Tatta; 4. Χαφφόν στέμνα (the Mala ?); 5. Ζά-
para; 6. Λάδάλα or Λάσάλα (the Pinnari or Sir); 7. Λανέδά (probably Loniviri, the Pavana, Darja or Kori). For the conjectural identifications of these mouths, most of which are now closed, ex-
cept in high floods, see Lassen’s Map of Ancient India. The principal streams which flowed into the Indus are: — on the right or western bank of the river, the Chauspas, called by Arrian the Guraeans, and by Ptolemy the Susustus (the Attock); and the Copheus (Cabal river), with its own smaller tributary the Choos (the Kow); and, on the left or eastern bank, the greater rivers, — which give its name to the Pan-
jab (or the country of the Five Rivers) — the Acesines (Canjhu), rising in the Himalaya, the Brahmaputra or the Confluence; and the Hyphasis or Hypysias (the Sutlej). [See these rivers under their re-
spective names.] As in the case of the Ganges, so in that of the Indus, it has been left to modern researches to determine accurately the real sources of the river: it is now well known that the Indus rises at a considerable distance on the N.E. side of the Himalaya, in what was considered by the Hindus their most sacred land, and which was also the dis-
- trict in which, on opposite sides of the mountains, the Brahmaputra, the Ganges, and the Jumna, have their several sources. From its source, the Indus flows NW. to Lobardus, and thence W. and SW., till it hurries through the mountain barriers, and descends into the plain of the Punjab, passing along the western edge of Kashmir. (Ritter, Erdkunde, vol. v. p. 216; Moerder, Traces in Ladak and Kashmir, 1841.) The native name Sindhu has been pre-
served with remarkable accuracy, both in the Greek writers and in modern times. Thus, in the Peri-
pli, we find Σινθης (p. 23); in Ptolemy, Σινθος (vii. 1. § 2), from which, by the softening of the Ionic pronunciation, the Greeks obtained their form Ισθος. (Cf. Plin. vi. 20; Cosmas, Indic. p. 357.) The present name is Sind or Sindhu. (Ritter, vol. v. p. 29. 4)

INDUS, a river of the south-east of Caria, near the town of Cibyra. On its banks was situated, ac-

cording to Livy (xxxviii. 14), the fort of Thabunion, Pliny (v. 29) states that sixty other rivers, and up-
wards of a hundred mountain torrents, emptied them-
selves into it. This river, which is said to have received its name from some Indian who had been thrown into it from an elephant, is probably no other than the river Caldas (Xedex, Xabre, xiv. p. 561; Prot. v. 2. § 11; Emp. Mela, i. 16), at present called Quingui, or Tewar, which has its sources on Mount Cadmus, above Cibyra, and passing through Caria empties itself into the sea near Camaus, oppo-
site to the island of Rhodes. [L. S.]

INDUSTRIA, a town of Liguria, situated on the right bank of the Padus, about 20 miles below Turin. It is mentioned only by Pliny, who tells us that its ancient name was Bodinconagus, which he connects with Bodicus, the native name of the Padus [PadoS], and adds that it was at this point that river first attained a considerable depth. (Plin. iii. 16. s. 20.) Its site (which was erroneously fixed by earlier writers at Casale) has been established beyond question at a place called Montel di Po, a few miles below Chiasso, but on the right bank of the river, where excavations have brought to light numerous coins and objects of ancient art, some of them of great beauty, as well as several inscriptions, which leave no doubt that the remains thus dis-
covered are those of Industria. They also prove that it enjoyed municipal rank under the Roman empire. (Ricoli e Rivuatile, Il sito dell’antica città d’Industria, f.c., Torino, 1743, 4to.; Millin, Voy. en Piémont, vol. i. pp. 308—311.) [E. H. B.]

INESA. [Actna.]

INGAUNA [Tyrrhenum Mares].

INGAEVONES. [Germania and Helvely-
nes.]

INGAUNI (Τυρραννος), a Ligurian tribe, who inhabited the sea-coast and adjoining mountains, at the foot of the Maritime Alps, on the W. side of the Gulf of Genoa. Their position is clearly iden-
tified by that of their capital or chief town, Albium Inganum, still called Albenga. They appear to have been in early times one of the most powerful and warlike of the Ligurian tribes, and bear a promi-
inent part in the long-continued wars of the Ro-

mans with that people. Their name is first men-
tioned in b. c. 205, on occasion of the landing of Maçò, the brother of Hannibal, in Liguria. They were at that time engaged in hostilities with the Epanterrri, a neighbouring tribe who appear to have dwelt further inland; the Carthaginian general con-
cluded an alliance with them, and supported them against the mountaineers of the interior; he subse-

duently returned to their capital after his defeat by the Romans in Caisipine Gaul, and it was from thence that he took his final departure for Africa, b. c. 203. (Liv. xxviii. 46. xxx. 19.) After the close of the Second Punic War, b. c. 201, a treaty was concluded with the Inganni by the Roman consul, C. Cælius (Id. xxxi. 2); but sixteen years later (in b. c. 185) we find them at war with the Romans, when their territory was invaded by the consul Appius Claudius, who defeated them in se-
veral battles, and took six of their towns. (Id. xxxix. 32.) But four years afterwards, b. c. 181, they were still in arms, and were attacked for the second time by the proconsul Aemilius Paulus. This general was at first involved in great peril, the Inganni being surprised by night and rushing into his camp; but he ultimately obtained a great and decisive victory, in which 15,000 of the enemy were killed and 2500 taken prisoners. This victory pro-
cured to Aemilius the honour of a triumph, and was followed by the submission of the whole people of the Inganni ("Ligurum Ingannorum omne nomen"), while all the other Ligurians sent to Rome to sue for peace. (Liv. xl. 25—28. 34.) From this time we hear nothing more of the Inganni in history, prob-
ably on account of the loss of the later books of Livy; for that they did not long remain at peace with Rome, and that hostilities were repeatedly re-
newed before they were finally reduced to submis-
sion and settled down into the condition of Roman subjects, is clearly proved by the fact stated by Pliny, that their territory was assigned to them, and its boundaries fixed or altered, no less than thirty times. ("Liguribus Inganibus agro tricesi data") Plin. iii. 5. s. 6.) They appear to have been much addicted, in common with other maritime Ligurian tribes, to habits of piracy, a tendency which they retained down to a late period. (Liv. xl. 28, 41; Vopisc. Procud. 12.) We find them still existing and recognized as a separate tribe in the days of e 3
INGENEA.

Strabo and Pliny; but we have no means of knowing the extent or limits of their territory, which was in fact a considerable portion of the coast on each side their capital city, and probably extended on the W. till it met that of the Intermelii. It must have included several minor towns, but their capital, of which the name is variously written Albium Iugicanum and Albicanium, is the only town expressly assigned to them by ancient writers.

[Aulus Iugaeurn.] (Strab. iv. p. 202, i.iii. ii. 3. s. 6.)

INGENEA. [ADNIGENT.]

INTERMELii, a town in Lower Pannonia, in the neighbourhood of which there was a praetorium, or place of rest for the emperors when they travelled in those parts. (Itin. Ant. pp. 260, 265.) Some identify it with the modern Possega. [L. S.]

INOUPS. [DELOS.]

INSANSI MONTES (vgt. Mauriulasa. Ep. Vol. iii. 5. § 7), a range of mountains in Sardinia, mentioned by Livy (xxix. 39) in a manner which seems to indicate they were in the NE. part of the island; and this is confirmed by Claudian, who speaks of them as rendering the northern part of Sardinia rugged and savage, and the adjoining seas stormy and dangerous to navigators. (Claudian, B. Gild. 513.) Hence, it is evident that the name was applied to the lofty and rugged range of mountains in the N. and NE. part of the island: and was, doubtless, given to them by Roman navigators, on account of the sudden and frequent storms to which they gave rise. (Lit. L.c.)

Polybius also places the Maurovia (now a name which is obviously translated from the Latin one — in the interior of the island, and though he would seem to consider them as nearer the W. than the E. coast, the position which he assigns them may still be referred to the same range or mass of mountains, which extends from the neighbourhood of Olbia (Terra Nera) on the E. coast, to that of Cornus on the W. (SARDINIA.) [E. H. B.]

INTSUBRES, a people both in Gallia Transalpina and Gallia Cisalpina. D'Anville, on the authority of Livy (v. 34), places the Insubres of Gallia Transalpina in that part of the territory of the Aedui where there was a town Mediomatitan, between Forum Velorum (Forum Neatullorum) and Lugdunum (Lyon). He gives the situation of the Insular Insula, and that there is no reason to suppose that there ever lived a people or a people in Gallia Transalpina named Insubres. Of the Insulae in Gallia Cisalpina, an account is given elsewhere. [Vol. i. p. 936.]

[G. L.]

INSCULAE, or INSULAE ALLOBROGCUM, in Gallia Narbonensis. Livy (xxi. 34, 32) describes Hannibal's passage of the Rhone, says that he directed his march on the east side towards the inland parts of Gallia. At his fourth encampment he came to the Insula, "where the river Arar and the Rhone, flowing down from the Alps by two different directions, comprise between them some tract of country, and then unite: it is the level country between them which is called the Insula. The Allobroges dwell near." One might easily see that there must be some error in the word Arar, for Hannibal could not have reached the latitude of Lugdunum (Lyon) in four days from the place where he crossed the Rhone; and this is certain, though we do not know the exact place where he did cross the Rhone. Nor, if he had got to the junction of the Arar and Rhodanus, could Livy say that he reached a place near which the Allobroges dwell; for, if he had

INTERLEXE. [ETRUMEN.] IN ExTEILENE. (Itrumono), one of the five provinces of the Tigris, celebrated in A.D. 297, by Narses to Galerius and the Romans. (Petr. Patr. Fr. 14, Fragm. Hist. Græc. ed. Müller; Gibbon, c. xiii.) St. Martin, in his note to Le Beau (Bas Empire, vol. i. p. 380), would read for Inteleini,
Interamna. 53

Interamna. (Vintimiglia), the name of a small province of Armenia near the sources of the Tigris mentioned by Ephraimus (Hoceres. L. X. vol. 1, p. 503, ed Valesius; comp. St. Martin, Mém. sur l'Arménie, vol. i, pp. 23, 27; [E. B.]).

Interamna (Vintimiglia), a maritime people of Liguria, situated to the W. of the Inguani, at the foot of the Maritime Alps. They are but little known in history, being only once mentioned by Livy, in conjunction with their neighbours, the Inguani, as addicted to pratical habits, to repress which their coast was visited by a Roman squadron in B.C. 180. (Liv. vi. 41.) Strabo speaks of them as still existing in the Roman Empire. (Str. xii. 2, 1.) They received a colony under the Second Triumvirate, but does not appear to have enjoyed colonial rank, several inscriptions of imperial times giving it only the title of a municipium. (Lib. Col. p. 234; Orell. Inscr. 2357, 3828.) Its position at some distance from the line of the Via Latina was probably unfavourable to its prosperity in later times; from the same cause its name is not found in the Itineraries, and we have no means of tracing its existence after the fall of the Roman Empire. The period at which it was mined or deserted is unknown; but mention is found in documents of the middle ages of a "Castrum Taram," and the site of the ancient city, though now entirely uninhabited, is still called Taramo. It presents extensive remains of ancient buildings, with vestiges of the walls, streets, and aqueducts; and numerous inscriptions and other objects of antiquity have been discovered there, which are collected in inscriptions "Interamnae," and sometimes "Viramates" alone: hence it is probable that we should read "Larimatum" for "Larimatum" in Silvius Italicus (vii. 402), where he is enumerating Volscian cities, and hence the mention of Larimatum would be wholly out of place.

2. (Termes), a city of Umbria, situated on the river Nar, a little below its confluence with the Velinus, and about 8 miles E. from Narnia. It was surrounded by a branch of the river, so as to be in fact situated on an island, whence it derived its name. The inhabitants are termed by Pliny "Interamnatus oegronum Narrae," to distinguish them from those of the other towns of the name; and we find them designated in inscriptions as Interamnates Nartae and Narae; but we do not see this epithet applied to the city itself. No mention is found of Interamnus in history previous to its parasitism under our yoke; but there is no doubt that it was an ancient Umbrian city, and an inscription of the time of Tiberius has preserved to us the local tradition that it was founded in B.C. 672, or rather more than 80 years after Rome. (Orell. Inscr. 689.) When we first hear of Interamna in history it appears as a flourishing municipal town, deriving great wealth from the fertility of its territory, which was irrigated by the river Nar. Hence it is said to have been, as early as the civil wars of Marius and Sulla, one of the "florentissima Italiae municipia" (Florus, iii. 21); and though it suffered a severe blow upon that occasion, its lands being confiscated by Sulla and portioned out among his soldiers, we still find it mentioned by Cicero in a manner that proves it to have been a place of importance (Cic. ad Att. iv. 15). Its inhabitants were frequently engaged in litigation and disputes with their neighbours of Beato, on account of the regulation of the waters of the Velinus, which joins the Nar a few miles above Interamna; and under the reign of Tiberius they were obliged to enter an energetic protest against a project that had been started for turning aside the
INTERAMNA.

Mommsen, in his "Itinera", it is said that the Roman district of Itoman included various name through the Portus, and the name is now given in the Antonine and Jerusalem Itineraries to the exclusion of the true Via Flaminia. (Itin. Ant. p. 125; Itin. Hier. p. 613; Tab. Pent.)

The great richness of the meadows belonging to Interamna on the banks of the Nar is celebrated by Pliny, who tells us that they were cut for the table in less than four times in a year (Plin. xiii. 25. s. 67); and Tacitus also represents the same district as among the most fertile in Italy (Tac. Ann. i. 79). That great historian himself is generally considered as a native of Interamna, but without any distinct authority; it appears, however, to have been subsequently the patrimonial residence, and probably the birthplace, of his descendants, the two emperors Tacitus and Florianus.

(Vopisc. Flor. 2.) In a.d. 193, it was at Interamna that a deputation from the senate met the emperor Septimus Severus, when on his march to the capital (Spartian. Serer. 6); and at a later period (A.D. 233) it was there that the two emperors, Trebonianus Gallus and his son Volusianus, who were on their march to oppose Aemilianus in Moesia, were put to death by their own soldiers. (Epitrop. i. 5; Vict. Oros. 31, Epit. 31.)

Interamna became the seat of a bishop in very early times, and has subsisted without interruption through the middle ages on its present site; the name being gradually corrupted into its modern form of Terni. It is still a flourishing city, and retains various relics of its ancient importance, including the remains of an amphitheatre, of two temples supposed to have been dedicated to the sun and to Hercules, and some portions of the ancient Thermæ. None of these ruins are, however, of much importance or interest. Many inscriptions have also been discovered on the site, and are preserved in the Palazzo Publico.

About 3 miles above Terni is the celebrated cascade of the Velinus, which owes its origin to the Roman M. Curius; it is more fully noticed under the article Velinus.

3. (Terni.) a city of Picenum, in the territory of the Praetutti, and probably the chief place in the district of that people. The name is omitted by Pliny, but is found in Prokyn, which distinctively assigns it to the Praetutti; and it is mentioned also in the Liber Carolinum among the "Civitates Picene." It bears the epithet of "Palaestina," or, as the name is elsewhere written, "Palaetina," the origin and meaning of which are wholly unknown. (Itin. in 1. § 58; Lib. Carol. pp. 229, 259.) In the genuine fragments of Byzantium, on the other hand, the cities are correctly designated as "Interamnates Praetutti." (Frontin. 1. p. 18, ed. Laclum.) Being situated in the interior of the country, at a distance from the highroads, the name is not found in the Itineraries, but we know that it was an episcopal see and a place of some importance under the Roman empire. The name is already corrupted in our MSS. of the Liber Carolinorum into Ternum, whence its modern form of Terni. But in the mediaeval ages it appears to have been known also by the name of Aprutium, supposed to be a corruption of Prastutium, or rather of the name of the people Praetutti, applied (as was so often the case in Gaul) to their chief city. Thus we find the name of Abrutium among the cities of Picenum enumerated by the Geographer of Ravenna (iv. 31); and under the Lombards we find mention of a "comes Aprutii." The name is thus retained in that of Abruzzo; now given to the two northernmost provinces of the kingdom of Naples, of one of which, called Abruzzo Ulteriore, the city of Ternano is still the capital. Vestiges of the ancient theatre, of baths and other buildings of Roman date, as well as statues, altars, and other ancient remains, have been discovered on the site; numerous inscriptions have been also found, in one of which the citizens are designated as "Interamnates Praetuttin." (Romani, vol ii. pp. 297—301; Mommsen, L. R. N. pp. 329—351.)

There is no foundation for the existence of a fourth city of the name of Interamna among the Frontiani, as assumed by Iomannelli, and, from him, by Cramer, on the authority of a very apocryphal inscription. [Frontiani.] [E. H. B.]

INTERMNE'SIA (Phelegon. de Longev. 1; Eth. Interamnenses, Phia. iv. 21. s. 53), a stipendiary town of Lucania, named in the inscription of Alcantara, and supposed by Uberti to have been situated between the Con and Tournes, near Castel Rodrigo and Alconiz. (Uberti, vol ii. p. 493.) [P. S.]

INTERAMNIIUM. [Ant ihers.]

INTERECATIA. [Vaccare.]

INTERISCA or AD INTERISCA, is the name given in the Itineraries to a station on the Via Flaminia, which evidently derives this name from its being situated at the remarkable tunnel or gallery hereon through the rock, now known as the Passo del Purolo. (Itin. Hier. p. 614; Tab. Pent.) This passage, which is still traversed by the modern highway from Rome to Fano, is a work of the emperor Vespasian, as an inscription cut in the rock informs us, and was constructed in the seventh year of the reign of A. Vespasian, in the time of Tiberius. (Inser. 5. 12. 598. 61. s. 75.) (Inser. vii. 3. 75.) It is also noticed among the public works of that emperor by Aurelius Victor, who calls it Petra Pertusa; and the same name (Πέτρα ρηπτόσα) is given to it by Procopius, who has left us a detailed and accurate description of the locality. (Vit. Caes. 9, Epit. 9; Procop. B. G. ii. 11.)

The valley of the Cantiano, a tributary of the Metaurus, which is here followed by the Flaminian Way, is at this point so narrow that it is only by cutting the road out of the solid rock that it can be carried along the face of the precipice, and, in addition to this, the rock itself is in one place pierced by an arched gallery or tunnel, which gave rise to the name of Petra Pertusa. The actual tunnel is only 126 feet long, but the whole length of the pass is about half a mile. Claudian alludes to this remarkable work in terms which prove the admiration that it excited. (Claud. de Vi. Cons. Hom. 502.) At a later period the pass was guarded by a fort, which, from its completely commanding the Flaminian Way, became a military post of importance, and is repeatedly mentioned during the wars of the Goths
with the generals of Justinian. (Procop. B. G. ii. 11, iii. 6. iv. 28, 34.) The Jerusalem Itinerary places the station of Intercesa 9 M. E. from Calles (Cycli), and the same distance from Forum Sempronii (Passombrone), both of which distances are just about correct. (D'Anville, Analyse de l'Italie, p. 153.)

INTERNI MARE, the great inland or Mediterra-
nean Sea, which washes the coasts of Southern Europe, Northern Africa, and Asia Minor.

1. Name.—In the Hebrew Scriptures, this sea, on the W. of Palestine, and therefore behind the face of the E., is called the "Hinder Sea" (Deut. xi. 24: Joel, ii. 20), and also the "Sea of the Philis-
tines" (Ezod. xxvi. 31), because that people occupied the largest portion of its shores. Pre-eminently it was "the Great Sea" (Gen. xxxiv. 6, 7; Josh. i. 4, 1x. 47; Ezek. xlviii. 10, 15, 20), or simply "the Sea" (1 Kings, v. 9; comp. 1 Macc. xiv. 34, xv. 11). In the same way, the Homeric poets, Hesiod, the Cyclical poets, Aeschylus, and Pindar, call it emphatically "the Sea." The topographer Hecataeus speaks of it as "the Great Sea" (Fri. 349, ed. Kraner). Nor did the historians and systematic geographers mark it off by any peculiar denomination. The Roman writers call it mare internum (Pomp. Mela, i. 1. § 4; Plin. iii. 9) or internum (Sall. Juv. iv. 2; Hesiod, Theog. iii. 39; Hesych. Scl., Strab. ii. p. 121, iii. p. 139; Hesych. 'Hrpslalov sptekalv Scl., Arist. Met. ii. 1), or more frequently, mare nostrum (Sall. Jug. 17, 18; Caes. B. G. v. 1; Liv. xxvi. 42; Pomp. Mela, i. 5. § 1; Hesych. kawviv Scl., Strab. ii. p. 121). The epithet "Mediterranean" is not used in the classical writers, and was first employed for this sea by Strabo (c. 24; comp. Isid. Orig. xiii. 16). The Greeks of the present day call it the "White Sea" (Arkopa Sidanpova), to distinguish it from the Black Sea. Throughout Europe it is known as the Mediterranean.

2. Extent, Shape, and Admeasurements.—The Mediterranean Sea extends from 6° W. to 36° E. of Greenwich, while the extreme limits of its latitude are from 30° to 46° N.; and, in round numbers, its length, from Gibraltar to its furthest extremity in Syria, is about 2000 miles, with a breadth varying from 800 to 3000 miles. Thus, in an ellipse, it is carried, with a line of shore of 4500 leagues. The ancients, who considered this sea to be a very large portion of the globe, though in reality it is only equal to one-seventeenth part of the Pacific, assigned to it a much greater length. As they possessed no means for critically measuring horizontal angles, and were unable by the compass and chronometer, correctness in great distances was unattainable. On this account, while the E. shores of the Mediterranean approached a tolerable degree of correctness, the relative positions and forms of the W. shores are erroneous. Strabo, a philosophical rather than a scientific geographer, set himself to rectify the errors of Eratosthenes (ii. pp. 105, 106), but made more mistakes: though he drew a much better "contour" of the Mediterranean, yet he distorted the W. parts, by placing Massilia 13° to the S. of Byzantium, instead of 24° to the N.; putting Carthage and S. Africa, instead of Carthage and S. Tunisia, such as the flattening-in of the N. coast of Africa, to the amount of 41° to the S., in the latitude of Carthage, while Byzantium was placed 2° to the N. of its true position; thus increasing the breadth in the very part where the greatest accuracy might be expected. Nor was this all; for the extreme length of the Internal Sea was carried to upwards of 20° beyond its true limits. The maps of Aazathoaman which accompany the Geography of Ptolemy, though indifferently drawn, preserve a much better outline of this sea than is expressed in the Theodosian or Peutingerian Table, where the Mediterranean is so reduced in breadth as to resemble a canal, and the site, form, and dimensions of its islands are displaced and disfigured.

The latitudes were estimated by the ancient ob-
servers in stadia reckoned from the equator, and are not so discordant as might be expected from such a method. The length between the equinoctial line and Syrace, or rather the place which they called the "Strait of Sicily," is given as follows:

Their latitudes run rather wild, and are reckoned from the "Sacrum Pronomontium" (Cape St. Vin-
cent), and the numbers given are as the arc from thence to Syrace:

In Admiral Smyth's work (The Mediterraneum, p. 375) will be found a tabular view of the above-
mentioned admeasurements of the elder geographers, along with the determination resulting from his own observations; assuming, for a reduction of the numbers, 700 stadia to a degree of latitude, for a plane projection in the 36° parallel, and 555 for the corresponding degree of longitude. (Comp. Gesellin, Geographie des Griechen, 1 vol. Paris, 1780; Geogra-

3. Physical Geography.—A more richly-varied and broken outline gives to the N. shores of the Mediterranean an advantage over the S. or Libyan coast, which was remarked by Eratosthenes. (Strab. ii. p. 109.) The three great peninsulas,—the Iberian, the Italic, and the Hellenic,—with their sinuous and deeply indented shores, form, in combination with the neighbouring islands and opposite coasts, many straits and isthmuses. Exclusive of the Euxine (which, however, must be considered as part of it), this sheet of water is naturally divided into two vast basins; the barrier at the entrance of the straits marks the commencement of the W. basin, which descends to an abysmal depth, and extends as far as the central part of the sea, where it flows over another barrier (the subaqueous Ad-
venture Bank, discovered by Admiral Smyth), and again falls into the yet unathomed Levant basin.

Strabo (ii. pp. 122—127) marked off this expanse by three smaller closed basins. The westernmost, or Tyrrhenian basin, comprehended the space between the Pillars of Hercules and Sicily, including the Ilyrian basin and its affords, the Hathor basin, and the waters to the W. of Italy were also called, in re-
ference to the Adriatic, the "Lower Sea," as that gulf bore the name of the "Upper Sea." The second was the Syric basin, E. of Sicily, including the Ausonian or Sicilian, the Ionian, and the Libyan seas; on the N. this basin runs up into the Adriatic, on the S. the gulf of Libya penetrates deeply into
the African continent. The E. part of the basin is interrupted by Cyprus alone, and was drained by the Carpathian, Pamphylian, Cilician, and Syrian seas.

The third or Aegean portion is bounded to the S. by a curved line, which, commencing at the coast of Caria in Asia Minor, is formed by the islands of Rhodes, Crete, and Cythera, joining the Peloponnesus not far from Cape Malea, with its subdivisions, the Thracian, Myrtosian, Carian, and Cretan seas. From the Aegean, the "White Sea" of the Turks, the channel of the Hellespont leads into the Propontis, connected by the Thracian Bosphorus with the Euxine: to the NE. of that sheet of water lies the Puthus Maestis, with the strait of the Cimmerian Bosphorus. The configuration of the continents and of the islands (the latter either served from the main or volcanically elevated in lines, as if over long fissures) led in very early times to cosmological views respecting eruptions, terrestrial revolutions, and upwarpings of the swollen higher seas into those which were lower. The Euxine, the Hellespont, the straits of Gades, and the Internal Sea, with its many islands, were well fitted to originate such theories. Not to speak of the floods of Ogyges and Deucalion, or the legendary cleaving of the pillars of Hercules by that hero, the Samothracian traditions recounted that the Euxine, once an inland lake, swollen by the rivers that flowed into it, had broken first through the Bosphorus and afterwards the Hellespont. (Diod. v. 47.) A reflex of these Samothracian traditions appears in the "Stade Theory" of Straton of Lamprocense (Strab. i. pp. 49, 50), according to which, the swellings of the waters of the Euxine first opened the passage of the Hellespont, and afterwards caused the eurret through the Pillars of Hercules. This theory of Straton led Eratosthenes of Cyrene to examine the problem of the equality of level of all external seas, or seas surrounding the continents. (Strab. l. c.; comp. ii. p. 104.) Strabo (i. pp. 51, 54) rejected the theory of Straton, as insufficient to account for all the phenomena, and proposed one of his own, the profoundness of which modern geologists are only now beginning to appreciate. "It is not," he says (l. c.), "because the lands covered by seas were originally at different altitudes, that the waters have risen, or raised from some point and inundated others. But the reason is, that the same land is sometimes raised up and sometimes depressed, so that it either overflows or returns into its own place again. We must therefore ascribe the cause to the ground, either to that ground which is under the sea, or to that which becomes flooded by it; but rather to that which lies beneath the sea, for this is more moveable, and, on account of its wetness, breathes with greater celerity." (Lyell, Geology, p. 17; Humboldt, Cosmos, vol. ii. p. 118, trans., Aspects of Nature, vol. ii. pp. 75—83.)

The fluvial system of the Internal Sea, including the rivers that fall into the Euxine, consists, besides many secondary streams, of the Nile, Danube, BoPgoythenes, Tanais, Po, Rhone, Elbe, and Tigris. The general physics of this sea, and their connection with analogous speculations, do not fall within the scope of this article; it will be sufficient to say that the theory of the tides was first studied on the coast of this, which can only in poetical language be called a "tideless sea." The mariner of old had his charts and sailing directories, was acquainted with the bewildering currents and counter-currents of this sea,—the "Typhon" (τυφών), and the "Prester" (πρέστηρ), the destroyer of those at sea, of which Lucræus (vi. 422—445) has given so terrific a description,—and bailed in the hour of danger, as the "Discuri" who played about the mast-head of his vessel (Phin. ii. 457; Sen. Nat. Quaest. ii.), the fire of St. Elmo, "sacred to the seamen." Much valuable information upon the winds, climate, and other atmospheric phenomena, as recorded by the ancients, and compared with modern investigations, is to be found in Smyth (Medd. of the Medit. p. 210—302). Forbiger's section upon Physical Geography (vol. i. pp. 576—655) is useful for the references to the Latin and Greek authors. Some papers, which appeared in Fraser's Magazine for the years 1852 and 1853, upon the fish known to the ancients, throw considerable light upon the ichthyology of this sea.

Recent inquiry has confirmed the truth of many instructive and interesting facts relating to the fish of the Mediterranean which have been handed down by Aristotle, Pliny, Archestratus, Aelian, Ovid, Oppian, Athenaeus, and Ausonius.

4. Historical Geography.—To trace the progress of discovery on the waters and shores of this sea would be to give the history of civilisation,—"nulhum esse nonum saxum." Its geographical position has eminently tended towards the intercourse of nations, and the extension of the knowledge of the world. The three peninsulas—the Iberian, Italian, and Hellenic—run out to meet that of Asia Minor projecting from the E. coast, while the islands of the Aegean have served as stepping stones for the passage of the peoples from one continent to the other; and the great Indian Ocean advances by the isle between Arabia, Abyssinia, and Abyssinia, under the name of the Red Sea, so as only to be divided by a narrow isthmus from the Delta of the Nile valley and the SE. coast of the Mediterranean.

"We," says Plato in the Phædo (p. 109, b.), "who dwell from the Phasis to the Pillars of Hercules, inhabit only a small portion of the earth in which we have settled round the (Interior) sea, like ants or frogs round a marsh." And yet the margin of this contracted basin has been the site where civilisation was first developed, and the theatre of the greatest events in the early history of the world. Religion, intellectual culture, law, arts, and manners—nearly everything that lifts us above the savage, have come from these coasts.

The earliest civilisation on these shores was to the S., but the national character of the Egyptians was opposed to intercourse with other nations, and their navigation, such as it was, was mainly confined to the Nile and Arabian gulf. The Phoenicians pressed southwards, and were the first to establish commercial relations with Europe (Lyell, Geology, p. 176), and to learn the commodities of other lands. For months, as if by a preconcerted plan, they spread their influence along the Mediterranean shore. They learned the language of the country through which they passed, and their flag waved in every part of the waters of the Mediterranean Sea. Carthage and Ethiopia, though of less importance than Phœnicia in connecting nations and extending the geographical horizon, exercised great influence on commercial intercourse with the W. coast of Africa and the N. of Europe. The progressive movement propagated itself more and more elaborately through the Greek and Roman empires. The latter had broken the Phœnico-Carthaginian power.

In the Hellenic peninsula the broken configuration of the coast-line invited early navigation and commercial intercourse, and the expeditions of the Samians (Herod. iv. 162) and Phœceans (Herod.
INTEROCEA.

I, 163) laid open the W. coast of this sea. During the period of the Roman Universal Empire, the Mediterranean was the lake of the imperial city. Soon after the conclusion of the First Miliaristic War, piracy, which has always existed from the earliest periods of history to the present day in the Grecian waters, was carried on systematically by large armies and fleets, the strongholds of which were Cilicia and Crete. From these stations the pirates directed their expeditions over the greater part of the Mediterranean. (Appian, Bell. Mithr. 92; Plat. Pont. 24.) Piracy, crushed by Romanus, was never afterwards carried on so extensively as to merit a place in history, but was not entirely extirpated even by the fleet which the Roman emperors maintained in the East, and that case still occurred is proved by inscriptions. (Böckh, Corp. Inscrip. Graec. iii. 2335, 2347.) The Romans despised all trade, and the Greeks, from the time of Hadrian, their great patron, till the extinction of the Roman power in the East, possessed the largest share of the commerce of the Mediterranean. Even after the Muslim conquests, the Arabs, in spite of the various expeditions which they fitted out to attack Constantinople, never succeeded in forming a maritime power; and their naval strength declined with the numbers and wealth of their Christian subjects, until it dwindled into a few piratical squadrons. The emperors of Constantinople really remained masters of the sea. On all points connected with this sea, see Admiral Smyth, The Mediterranean, London, 1854. [E. B. J.]

INTEROCREA (Iterocrea, Strab.), a small town or village of the Sabinæ, between Amaterrum and Reste. It was placed on the Via Salaria, at the junction of its two branches, one of which led eastwards to Amaterrum, the other, and principal one, up the valley of the Velinus, to Asculum. It is now called Autrodeo, and is a position of great military importance, from its commanding the entrance to the two passes just mentioned, which must in all ages have formed two of the principal lines of communication across the Apennines. It seems, however, to have been in ancient times but a small place; Strabo calls it a village; and its name is otherwise found only in the Itineraries, which place it at 14 M. P. from Reste, a distance that coincides with the position of Autrudeo. (Strab. v. 332; Vit. Pent. 307.) Its ancient name is evidently derived from its position in a deep valley between rugged mountains; for we learn from Festus (p. 181, ed. Müh.) that Oris was an ancient word for a mountain; and it is interesting to find this form still preserved in the name of the Montagne d' Ocre, a lofty and rugged group of the Apennines, near Aquila. (Zannoni, Carta del Regno di Napoli, s. 3.) [E. B. B.]

INTEROPRIMUS, a village of the Marrucini, forming a station on the Via Claudia Valeria between Corfinium and Teate. It is repeatedly mentioned in the Itineraries, but the distances are variously given. (Itin. Ant. pp. 102, 310; Vit. Pent.) The line of the ancient highroad is, however, well ascertained, and the position of Interoprimus is fixed by ancient remains, as well as medieaval records, at a place on the right bank of the Aruns, just northwards through which that river flows below Popoli. The site is now marked only by a tavern called the Osteria di S. Valentino, from the little town of that name on the hill above; it is distant 12 Roman miles from Corfinium (S. Pellino), and 13 from Teate (Chieti), or 21 from Pescara, at the mouth of the Aternus. (Holstein, Not. ad Clar. p. 143; D'Aubry, Analyse de l'Italie, p. 175; Romanelli, vol. iii. p. 117.) An inscription also mentions Interoprimus under the name of Pausus Interoprimus (Orell. Inscrip. 144; Romanelli, l. c.); it is called "Interoprimum vias" in the Itinerary of Antoninus (p. 102), and was evidently a mere village, probably a dependency of Teate. [E. H. E.]

ITUTIBILIA. [ESTIVANI.] 2. A town of Hispania Baetica, near Illiturgis, the scene of a battle gained by the Romans over the Carthaginians in the Second Punic War. (Liv. xxii. 49; Front. Stratoj. iii. 3.) [F. S.]

INU CASTRUM. [CASTRUM INUL.

INYCCUM or INYCUS (Ivncus, Steph. B., but ιυνκος, Herod. v. Liv. ιυνκος), a town of Sicily, situated in the SW. of the island, on the river Hypsos. It is principally known from its connection with the mythical legends concerning Minos and Daedalus; the capital of the Sicanian prince Cocalus, who afforded a shelter to the fugitive Daedalus against the Cretan monarch, being placed by some writers at Iyneum, and by others at Camini. (Paus. vii. 4; 6; Charux, ap. Steph. B. v. Καυμακός.) It is mentioned in historical times by Herodotus as the place of confinement to which Scythæs, the ruler of Zanci, was sent by Hippocrates, who had taken him prisoner. (Herod. vi. 23, 24.) Aelius, who copies the narrative of Herodotus, represents Scythæs as a native of Iyneum; but this is probably a mistake. (Ael. v. H. vii. 17.) Plato speaks of Iyneum as still in existence in his time, but quite a small place (χώρος πάνω σμικρόν); notwithstanding which he makes the soothsayer Hippasus boast that he had derived it from a sum of 20 minae. (Plat. Hipp. M. p. 282, b.) It is evident that it always continued to be an insignificant place, and was probably a mere dependency of Selinus. Hence we never again meet with its name, though Stephæns tells us that this was still preserved on account of the excellence of its wine. (Steph. B. s. v. Ινύκου; Hesych. s. v.) Vibius Sevester is the only author that affords any clue to its position, by telling us that the river Hypsos (the modern Belici) flowed by it (Vib. Sevest. p. 12, according to Cluver's emendation); but farther than this its site cannot be determined. [E. B. E.]

IOBACCHI. [MAMARICA.] IOL., afterwards CAESAREA (Καίσαρεα, Ptol. ii. 4, § 5; Καισαρεία, Strab., &c.), originally an obscure Phocian settlement on the N. coast of Africa, became afterwards famous as the capital of Bocchus and of Juba II. [MACRATANIA.] The latter king enlarged and adorned the city, and gave it the name of Caesarea, in honour of his patron Augustus. Under the Romans it gave its name to the province of Macratenia Caesariensis, of which it was the capital. It was made a colony by the emperor Claudius. Under Valens it was burnt by the emperor Mauricius; but it was again restored, and in the 6th century it was a populous and flourishing city. It occupied a favourable position midway between Carthage and the Straits, and was conveniently situated with reference to Spain, the Baleareic islands, and Sardinia. It still had a natural harbour protected by a small island. To the E. of the city stood the royal mausoleum. (Strab. xvii. p. 831; Dion Cass. l. 9; Meli, i. 6, § 1; Plin. v. 2, s. 1; Ituprot. vii. 5; Itin. Ant. pp. 5, 15, 23, 31; Oros. vii. 33; Ammian. xix. 5;Procop. B. Vand. ii. 5.)
Caesarea is now identified, beyond all doubt, with the magnificent ruins at Zerubbell on the coast of Aegiae, in a little more than 2° E. long. The Aramaic name, Elah, an abbreviation of Caesarea Solo, is a fact clear to the intuitive sagacity of Shaw, and which, in connection with the statements of the ancients, led that incomparable traveller to the truth. Unfortunately, however, nearly all subsequent writers preferred to follow the thick-headed Mannert, who was misled by an error in the Antonine Itinerary, whereby all the places along this coast, for a considerable distance, are thrown too far to the W.; until the researches which followed the French conquest of the country revealed inscriptions which set the question at rest for ever. There exist few stronger examples of that golden rule of criticism:—"Ponderanda sunt testimonia, non nume-

IOLAI or IOLAIENES (Cives, Pans.; Th. Asen. Diol., Iolais, Strab. v. p. 225), a people of Sardina, who appear to have been one of the inligenous or native tribes of the island. According to Strabo, they were the same people who were called in his day Diacebians or Diacebi (Δια-
γεβίοι or Διαγεβίοι), a name otherwise unknown; and he adds that they were a Tyrrhenian people, a statement in itself not improbable. The commonly received tradition, however, represented them as a Greek race, composed of emigrants from Attica and Thessalia, who had settled in the island under the command of Iolas, the nephew of Hercules. (Paus. x. 17. § 5; Diod. iv. 30, v. 15.) It is evident that this legend was derived from the resemblance of the name (in which it assumed according to the Greek pronunciation) to that of Iolos: what the native form of the name was, we know not; and it is not mentioned by any Latin author, though both Pausanias and Diodorus affirm that it was still retained by the part of the island which had been inhabited by the Iolai. Hence, modern writers have assumed that the name is in reality the same with that of the Illeens, which would seem probable enough; but Pausanias, the only writer who mentions them both, expressly dis-
tinguishes the two. That author speaks of Olbia, in the N.E. part of the island, as one of their chief towns. Diod was represents them, on the contrary, as occupying the plains and most fertile portions of the island, while the district adjoining Olbas is one of the most rugged and mountainous in Sardina. [E. H. B.]

IOLCUS (Ιόλκος, Ep. Ιαλοκός, Dem. Ιαλόκος; Eth. Ιάλκος, fem. Ιαλώκη, Ιαλωκία), an ancient city of Magnesia in Thessaly, situated at the head of the Pagonar gulf, and at the foot of Mt. Pelion (Pind. Nem. iv. 88), and celebrated in the his-
torics as the residence of Jason, and the place where the Argonauts assembled. [See Dict. of Biogra. artt. JASON and ARGONAUTAE.] It is mentioned by Homer, who gives it the epithets of ἐκμυθήμην and ἐφψύχοντο (I. ii. 712, Od xi. 256). It is said to have been founded by Cretans (Apollod. i. 5. § 11), and to have been colonised by Minyans from Orchomenus. (Strab. ix. p. 414.) Iolos is rarely mentioned in historical times; but it was given by Stadiasmus to the Thessalians at Hippis, upon his expulsion from Athens. (Herod. v. 94.) The town afterwards suf-
fered from the incursions of its inhabitants, but it was finally ruined by the foundation of Demetrias in

II. 290, when the inhabitants of Iolos and of other
adjoining towns were removed to this place. (Strab. x. p. 436.) It seems, however, to have been no longer in ex-
istence in the time of Strabo, since he speaks of the place where Iolos stood (ὁ λός Ιαλωκοῦ τόκος, ix. p. 438).

The position of Iolos is indicated by Strabo, who says that it was on the road from Boebe to Demet-
rias, and at the distance of 7 stadia from the latter (ix. p. 438). In another passage he says that Iolos was situated above the sea at the distance of 7 stadia from Demetrias (ix. p. 156). Pindar also
speaks, as we have already seen, places lokes at the foot of Mt. Pelion, consequently a little inland. From these
descriptions there is little doubt that Leake is right in placing Iolos on the steep height between the southernmost houses of Volos and Volchos-makihali, upon which stands a church called Episkopi. There are at present no ancient remains at this place; but some large squared blocks of stone are said to have formerly existed at the foot of the height, and to have been carried away for the construction of build-
ings elsewhere. Moreover, it is the only spot in the neighbourhoools which has any appearance of being an ancient site. It might indeed appear, from Leivy (xlii. 12, 13), that Iolos was situated upon the coast; but in this passage, as well as in Strabo (ix. p. 436), the name of Iolos seems to have been given to this part of the coast as well as to the city itself. (Leake, Northern Greece, vol. iv. p. 379; Mezières, Mémoire sur le Pelion et l’Ossa, p. 11.)

JOMANES (Πιον. vii. 17. s. 21), the most im-
portant of the affluents of the Ganges, into which it flows near the city of Allahabad (Pratishthana). There can be no doubt that Arrian means the same river when he speaks of Iobares (Ind. c. 8); and Pudeny expresses nearly the same sound, when he names the Jumna (vii. § 29). It is now called the Jumna or Jumua. The Jumna rises in the highest part of the Hindalun, at no great dis-
tance from the source of the Sutledge and Ganges, respectively, in the neighbourhood of Jumnanatari (Jumnaetari), which is probably the most sacred spot of Hindu worship. It enters the Indian plain country at Fygbad, and on its way to join the Ganges it passes the important cities of Dehli (In-
drapaschna) and Agra (Crishamapura), and receives several large tributaries. These affluents, in order from W. to E., are the Salumana (Arrian, Ind. c. 4), (probably the Carmunati or Cambat), the Betwa (or Veetavati), and the Caisna (Arrian, l.c.; Plin. vi. 19. s. 21; now Cypagana or Ceu.) The last has been already mentioned as one of the tributaries of the Ganges. [V.]

IONIMION. [Macrextania.]

ION (Ιόν.), a river of Tymphe in Thessaly, rising in the Cambunian mountains, and flowing into the Peucetian now river of Krytovara. (Strab. vi. p. 327, Leake, Northern Greece, vol. iv. p. 546.)

ION MONS. [Libyia.]

IONES. [Ionia.]

IONIA. [Iasis], also called Iasis, the country of Asia Minor inhabited by Ianian Greeks, and com-
prising the western coast from Phocaea in the north to Miletus in the south. (Herod. i. 142; Strab. xiv.
init.; Plin. vi. 21.) Its length from north to south, in a straight line, amounted to 1620 stadia, and the length of its much indented coast amounted to 3430; and the distance from Ephesus to Smyrna, in a straight line, was only 520 stadia, while along the coast it reached the large number of 2200. (Strab,

IONIA.
Towards the inland, or the east, Ionia extended only a few miles, the towns of Magnesia, Larissa, Troilus, Abdera, and others, not belonging to it. Polyb. (v. 2) assigns much narrower limits to Ionia than his predecessors, for, according to him, it extended only from the Hermus in Lydia to the Maeander in Caria; so that Phocaea and Miletus would not belong to Ionia. According to a generally received tradition, the Ionian colonies on the west coast of Asia were founded after the death of Croesus, the last king of Attica, about B.C. 1044, or, according to others, as early as B.C. 1060, about 60 years after the death of Pelops, mentioned by the Dorians. The sons of Croesus, Naxus and Androcles, it is said, being dissatisfied with the abolition of royalty and the appointment of their eldest brother Melon to the archonship, emigrated, with large numbers of Attic Ionians and bands from other parts of Greece, into Asia Minor. (Strab. xiv. p. 633, fol.; Paus. vii. 2.) Here, in one of the most beautiful and fertile parts of the earth, they founded a number of towns, partly expelling and partly subduing the ancient inhabitants, who consisted mainly of Maenians, Carians, and Pelasgians. (Herod. i. 142; Paus. vii. 2; Pheræcyl. Frug. 26; Dionys. Per. 522, &c.) As a great many of the original inhabitants remained in the country as subjects of the conquerors, and as the latter had gone to Asia as warriors, without women, the new colonies were not pure Greek, but still the subdued nations were not so completely subdued as to render amalgamation into one nation impossible, or even very difficult. This amalgamation with different tribes also accounts for the fact that four different dialects were spoken by the Ionians. (Herod. l. c.)

The towns founded by the Ionians—which, though independent of one another, yet formed a kind of confederacy for common purposes—amounted to twelve (Δώδεκα), a number which must not be regarded as accidental. These towns, of which accounts are given in separate articles, were: Phocaea, Erythrae, Clazomenae, Teos, Iasus, Colophon, Ephesus, Priene, Mylas, Miletus, and Samos and Chios in the neighbouring islands. (Strab. xiv. p. 633; Aelian, V. H. viii. 5.) Subsequently, about B.C. 700, Smyrna, which until then had belonged to Arcadia, became by treachery a member of the confederacy, which at length consisted of thirteen cities. (Herod. l. c.; Paus. vii. 5; Strab. l. c.) These Ionian colonies soon rose to a high degree of prosperity, and in many respects outstripped the mother-country; for poets, philosophers, historians, and artists flourished in the Ionian cities long before the mother-country attained to any eminence in these intellectual pursuits. All the cities of Ionia formed independent republics, with democratic constitutions, but their common affairs were discussed at regular meetings held at Parnionium (Παρνιόνιον), the common centre of all the Ionian cities, on the northern slope of Mount Mycale, near Priene, and about three stadia from the coast. (Herod. l. c. 141, 148; Strab. xiv. p. 639; Mela, i. 17; Poll. v. 29.) These meetings at Parnionium appear to have given rise to a permanent town, with a Prytanœum, in which the meetings were held. (Steph. B. s. c.) The political bond which held the Ionian cities together appears to have been rather loose, and the principal objects of the meetings, at least in later times, were religious worship and the celebration of games. The cities continued to enjoy their increasing prosperity and their independence until the establishment of the Lydian monarchy. The attacks upon the Ionian colonies began even in the reign of Gyges, so that one city after another was conquered, until, in the reign of Croesus, all of them became subject to the Lydians. When Lydia became the prey of the Persian conqueror Cyrus, in B.C. 557, Ionia also was obliged to acknowledge the supremacy of Persia; but the new rulers scarcely interfered with the internal affairs of the cities and their confederacy; all they had to do was to pay tribute, to send their contingents to the Persian armies, and to submit to satraps and tyrants, the latter of whom were usually Peloponnesians who set themselves up in their native cities, and were backed by the Persian monarchs. But the Ionians, accustomed to liberty, were unable to bear even this gentle yoke for any length of time, and in B.C. 500 a general insurrection broke out against Persia, in which the Athenians and Eretrians also took part. The revolt had been planned and organised by Histiaeus, tyrant of Miletus, and Aristagoras, his son-in-law. The Ionians burned and destroyed Narses, the residence of the Persian satraps, but were then routed and defeated in a bloody battle near Ephesus. In B.C. 496 all the Ionians were again reduced, and compelled to assist the Persians with men and ships in the war against Greece. In the battle of Mycale, B.C. 479, the Ionians deserted from the ranks of the Persians and joined their kinsmen, and thus took the first step to recover their independence, which ten years later was fully secured by the battle on the Eurymedon. They then entered into a relation with the Athenians, who were to protect them against any further aggression from the Persians; but in consequence of this they became more or less dependent upon their protectors. In the unfortunate peace of Antalchia, the Ionians, with the other Asiatic Greeks, were again made over to Persia, B.C. 387; and when the Persian monarchy was destroyed by Alexander, they became a part of the Macedonian empire, and finally fell into the hands of the Romans. The highest prosperity of Ionia belongs to the period of the Lydian supremacy; under the rule of Macedonia it somewhat recovered from its previous sufferings. Under the Romans the Ionian cities still retained their importance as commercial places, and as seats of art and literature; but they lost their provincial life, and their numbers were reduced to that of mere provincial towns. The last traces of their prosperity were destroyed under the barbarous rule of the Turks in the middle ages. During the period of their greatest prosperity and independence, the Ionian cities sent out numerous colonies to the shores of the Black sea and to the western coasts and islands of the Mediterranean. (Comp. Thirlwall, Hist. of Greece, vol. ii. chap. 12, pp. 94, 115, 120, &c.; Grote, Hist. of Greece, vol. ii. pp. 229—253.)

IONIAMARE. (Ἰόνιον ἀριστοτείχος, Πόλις), was the name given by geographers to the sea which bathed the western shores of Greece, and separated them from those of Sicily and Southern Italy. The appellation would seem to date from a very early period, when the Ionians still inhabited the shores of the Corinthian gulf, and the part of the Peloponnesus subsequently known as Achaia; but we have no evidence of its employment in early times. The legends invented by later writers, which derived it from a hero of the name of Ionius or Ioan, or from the wanderings of Io (Aesch. Prom. 810; Taez. ad Lygophr. Alex. 630; Steph. B. s. v.; Eustath. ad Dionys. 840.)
true Ionian Mare is meant by the poet, says—:

"Siceniun, sonium sine esse immensus, ab Ioniasque ad Sicilian, et hisus partas esse Adriaticum, Adriaticum et Epipoticum." (Serv. ad Aen. iii. 211.)

On the other hand, the name of the Ionian gulf (δ Λόγος) was still given in late times (at least by geographers), in joint geographical mention with the Adriatic immediately within the strait at its entrance. (Eustath. ad Dionys. Per. 92, 389.)

Polybius even applies the name of the Ionian sea (τῶν Πέλαγος, i. § 14, 15) in the same restricted manner.

From the name of the Ionian sea has been derived that of the Ionian islands, now given to the group of seven principal islands (besides smaller ones) which constitute an independent republic under the protectorate of Great Britain; but there is no ancient authority for this application. [E. H. B.]

**JOPPA (Iσπά, L.X.X.; Strab. xvi. p. 759; Pol. v. 16. § 2.) The form Iσπά, Steph. B.; Dionys. v. 910; Joseph. Antiq. ix. 10, § 2; Solin. 34, better suits the Phoenician original, which signifies "an eminence." comp. Mover's Plutarch., pt. ii. p. 177; Hidag, Die Ptolomäer, pp. 131—134: Ebd. Tolnian, Iσπά,Ἰσπά,Ἰσπά,Ἰσπά; D.V., Iσπά, Iσπά. The Hebrew name Japho is still preserved in the Arabic Yifa or Jaffo. A seaport town and haven on the coast of Palestine, situated on an eminence. The ancients asserted that it existed before the Deluge (Pomp. Mela, i. 11. § 3; Plin. v. 14), and according to legend it was on this shore that Archelaus was rescued by Persens (Strab. l.c.; Plin. l.c.; comp. Hieron. in. Jan. 1.) from the monster, whose skeleton was exhibited at Rome by M. Aurelius Severus during his famous curule expedition (Plin. iv. 9.). When the Egyptians invaded Canaan it is mentioned as lying on the border of the tribe of Dan (Josh. xix. 40), and was the only port possessed by the Jewish people, till Herod made the harbour at Caesarea. The timber from Lebanon intended for both the first and second temples was landed here (1 Kings, v. 9: 2 Chron. ii. 16; Ezra, iii. 7); and Jeshua went to Joppa to find a ship capable of carrying them (2 Chron. iii. 7), as well as Polybius and Sennus Chius, fixes the Aecorean promontory as the limit between the Ionian and the Adriatic seas. (Strab. iii. p. 123, vii. pp. 316, 317.) Pliny uses the name of Ionium Mare very widely, or rather very vaguely; including under that appellation the Mare Siculum and Cottium of the Greeks, as well as apparently the lower part of the Adriatic (Plin. iii. 8. § 14, 26, s. 29, 30, iv. 11. s. 18), and this appears to have been the usage common in his day, and which is followed by the Latin poets. (Virg. Aen. iii. 211, 671; Ovid, Fast. iv. 565, &c.) Melas distinguishes the Ionian sea from the Sicilian, and applies the former name, in the sense now generally adopted by geographers, as that portion of the broad sea between the shores of Greece and those of Sicily, which lay nearest to the former. (Mol. ii. 4. § 1.) But all these names, given merely to portions of the Mediterranean which had no natural limits, were evidently used very vaguely and indefinitely; and the great extension given at a later period to the name of the Adriatic swallowed up altogether those of the Ionian and Sicilian seas [Adriaticum Mare], or led to the employment of the former name in a vague and general sense, wholly different from that in which it was originally applied. Thus Servius, commenting on the expression of Vir. iv. 46, Ioannes Pico in rerum variarum

**JOPTA.**
of the Crusades, Joppa, which had already taken the name of Jaffa (Tàsà, Anna Comm. Alex. zi. p. 928), was known to the navigator Hircan and to the geographers Ptol. and Mommsen. After its capture by Saladin (Wilken, Die Kreuzz., vol. iv. pp. 537, 539) it fell into the hands of our own Richard (p. 545), was then sacked by Malek-al-Adel (vol. v. p. 25), was rebuilt by Frederick II. (vol. vi. p. 471) and Louis IX. (vol. vii. p. 316), when it was taken by Sultan Bihars (vol. vii. p. 517). As the landing-place for pilgrims to Jerusalem, from the first Crusade to our own day, it occurs in all the Itineraries and books of travels, which describe the locality and natural unfitness of Jaffa for a haven, in terms very similar to those employed by the ancient. For coins of Joppa see Eckhel, vol. iii. p. 433. (Roldan, Paust. p. 864; Von Ranmer, Palestina, p. 201; Winer, Realwörterbuch, s. v.; Robinson, Researches, vol. iii. p. 41; Ritter, Erdkunde, vol. xvi. pt. 1, pp. 574—580, Berlin, 1852.)

JORDANES. [Palaestina.]

IOS (Iös: Eth. Էթբ, էթբ), an island in the Aegean sea, one of the Sporades, and falsely called by Stephanus one of the Cyclades, lay north of Thera and south of Paros and Naxos. According to Pliny, it was 25 miles in length, and was distant 18 miles from Naxos and 25 from Thera. (Plin. iv. 12, s. 23.) Both Pliny and Stephanus state that it was originally called Phaeuciae. It possessed a town of the same name (Ptol. iii. 15, § 29), situated upon a height on the western side of the island. It has an excellent harbour, of a circular form, like the Persian: its mouth faces the south-west, and is opposite the island of Sicia. The island is now called Nio (νίο); and when Ross visited it, in 1836, it contained 505 families or 2500 souls. The modern town is built upon the site of the ancient one, of which there are still remains.

Ios was celebrated in antiquity as the burial-place of Homer, who is said to have died here on his voyage from Smyrna to Athens. Long afterwards, when the name of the poet had filled the world, the inhabitants of Iös are reported to have erected the following inscription upon his tomb:

'Ενθάδε τὴν ἱερὴν κεφαλῆν κατὰ γαῖαν καλότετε Ανδρέαν ὡς κομιστήρα, Σεινάν Ομηρον.

(Pseudo-Herod. Th. Homer. 34, 36; comp. Sclayx, p. 22; Strab. x. p. 484; Paus. x. 4, § 2; Plin., Steph. B. c. c.) It was also stated that Clymene, the mother of Homer, was a native of Ios, and that she was buried in the island (Paus., Steph. B. c. c.); and, according to Gallus (iii. 11), Aristophanes related that Homer himself was born in Ios. In 1771 a Dutch nomenclat, Graf Pasch van Kriens, asserted that he had discovered the tomb of Homer in the northern part of the island; and in 1773 he published an account of his discovery, with some inscriptions relating to Homer which he said he had found upon the tomb. Of this discovery a detailed account is given by Ross, who is disposed to believe the account of Pasch van Kriens; but the original inscriptions have never been produced, and most modern scholars regard them as forgeries. (Ross, Reisen auf den Griech. Inseln, vol. i. pp. 54, 154, seq.; Weicker, in Zeitschrift für die Alterthums-

JOTAPE (Ιωταπέ), an island in the Erythrean Sea, not less than 1000 stadia from the city of Aëdana, inhabited by Jews who, formerly independent, accepted the yoke of the Empire during the reign of Justinian (Procop. B. P. 1. 19). It is now called Tiryn, or Djetet Tyrus of Burckhardt (Trav. p. 531), the island at the entrance of the Gulf of Akaba, (Comp. Journ. of Geog. Soc. vol. vi. pp. 54, 55.) The modern name recalls the "Gens Tyra" of Pliny (vi. 33), placed by him in the interior of the Arabian gulf. (Ritter, Erd-

JOTAPATA (Ιωταπάτα: Eth. Ιωταπατός), a city of Galilee, standing on the summit of a lofty hill, rising abruptly on three sides, from the deep and impassable ravines which surround it. Josephus, who manfully defended it against the Passian, has told the story of its siege and capture; 1200 prisoners were taken, and 40,000 men fell by the sword during its protracted siege: Vesuvian gave orders that the city should be razed to the ground, and all the defenses burnt. Thus perished Jotapata on the first day of Pancenus (July) (B. J. iii. pp. 6—8; comp. Roldan, Paust. p. 867; Milman, Hist. of Jews, vol. ii. pp. 287—309). Mr. Bankes (Irby and Mangles, Trav. p. 299) has fixed the site at the singular remains of Keft Un Ma'at, in the Wady-el-Hamam (comp. Burckhardt, Trav. p. 351; Ritter, Erdkunde, vol. xv. pt. 1, p. 297), but Robinson (Researches, vol. iii. pp. 279—282) identifies these ruins with the Ar-

JOTASEN (Ιοτασέν), a small town of Cilicia, in the district called Selentinus, not far from Seleus. It is perhaps the same place as Laerte, the native city of Diogenes Laertius. It is identified with the modern fort Lambaro. (Plut. v. § 8; Plin. v. 23; Conc. Chald. p. 659; Hierocl. p. 709, where it is called 'Ιωτάρης; comp. LAETE.)

The coins of Iotape belong to the emperors Philip and Valerian. [L. S.]

JOVATIA, a town of Lower Pannonia, on the southern bank of the river Dravaus. (H. Hieros. p. 562.) In the Pent. Tab. it is called Iovaullium, while Plutenny (ii. 16. § 6,) calls it Iawolawon or Iawolawon, and the Geog. Rev. (iv. 19), Iolhinos. It occupied, in all probability, the site of the modern village of Vulpa. [L. S.]

JOVEM, AD, in Gallia Aquitania, a Mutatio on the road from Burdigala (Bordeaux) to Tolosa (Toulouse); and between Bucomos and Tolosa. This Mutatio was seven leagues from Tolosa. D'Anville conjectures it to be at a place which he names Guerin or Guerin. Walckenaer fixes the Mutatio of Buconus near the Bois du Bonconne. [G. L.]

JOVIA, a town in Lower Pannonia, south of the river Dravaus, on the road from Postorum to Murza. (H. Hieros. p. 561; Hist. Ant. p. 130; Tab. Post.) The site is generally identified with some ruined fort at Tupola. Another place of the same name is mentioned in Upper Pannonia, on the same road (Hist. Ant. p. 264), and is identified with some ruins found at Tovincze. [L. S.]
JOYACUM, a town in Noricum, where a "profectus secundum Italicae militum Liburnarium" had its head-quarters; a circumstance suggesting that the town, though situated some distance from the Danube, was yet connected with its navigation. ([Itin. Ant. p. 249]; [Not. Imp.; Tob. Pent.]. [L. S.])

JOYCE MONS (θῆβα Δἰόν οἰκ., Πολ. iv. 3. § 18; Zonca), a mountain of Africa Propea, between the rivers Bagrath and Trajon, apparently containing the sources of the river Caetaola. [P. S.]

JOYCE PAGUS, a town in the interior of Messenia, on the eastern bank of the Margus. ([Itin. Hieros., p. 563; Tob. Pent.; Gezeg. Rev. iv. 7, where it is called simply Pazes.) Some identify it with the modern Glypionas. [L. S.]

JOYCE PROMONTORIUM (Δἰον οἰκ., Πολ. vii. 4. § 4), a promontory mentioned by Ptolemy, at the S. end of the island of Taphoskone (Cyprus). Its exact position cannot be identified, but it must have been in the neighbourhood of the present Duolofylle, if it be not the same. [V.]

IPASTHURI (Iasthura). [L. S.]

IPHISTIADAE. [Attica, p. 326, b.]

IPEI (Ipsea), on the coast of Magnesia, in Thessaly, at the foot of Mount Pelion, where part of the fleet of Xerxes was wrecked, seems to have been the name of some rocks. ([Herod. vii. 188; Strab. ib. p. 443.)

IPENOS (Ipnea), a town of the Lorri Oascon, of uncertain site. ([Thuc. iii. 101; Steph. B. E.]).

IPENOS (Ipeiros or Ipoeos), a small town of Phrygia, a few miles below Smyrna. The place itself never was of any particular note, but it is celebrated in history for the great battle fought in its plains, B. C. 301, by the aged Antigonus and his son Demetrius against the combined forces of Cassander, Lysimachus, Ptolemy, and Seleucus, in which Antigonus lost his conquests and his life. ([Plut. Pyrrh. 4; Apian, Script. 55.) From Herod. (p. 677) and the Acts of Cambel (Conn. Nickres, ii. p. 161), we learn that in the seventh and eighth centuries it was the see of a Christian bishop. Some moderns identify Ipsus with Ippis Iassus. [L. S.]

IRA (Ipea). 1. A town of Messenia, mentioned by Hesec (H. i. 150, 292), usually identified with the later Abia on the Messenian gulf. [Aula.] 2. Or Eira (Eia), a mountain in Messenia, which the Messenians handed in the Second Messenian War, and which Aristobulus obtained for ten years against the Spartans. It was in the north of Messenia, near the river Neda. Leake places it at 3000 feet; the distance from the sea, under the side of the mountain, on which now stands Siello colubris and Amurine; but there are no ancient remains in this spot. More to the east, on the left bank of the Neda, near Volokos, are the remnants of an ancient fortress, which was, in all probability, Eira; and the left mountain above, now called Tela or, was probably the highest summit of Mount Etra. (Paus. iv. 17, 10, 20, §§ 1. 5; Strab. viii. p. 360; Steph. B. s. r. Ida; Leake, Morax, vol. i. p. 486; Gehr, River of the Morax, p. 81; Ross, {Eren in Peloponnesia, p. 57.)

IRENOPOLIS (Eirropolos), a town of the district Lacedaemon, in the north-east of Cilicia. It was situated not far from the river Calycadnus, and is said to have once borne the name of Neronis (Nerone). ([Theodoret. Hist. Eccle. i. 7, ii. 8; Sacrat. ii. 26; Tob. v. n. 8 § 6.)

IRENOPOLIS. [Beroea.]

IREÁNA (Areus.)

IREÁFLAVIA (Geiraiachyia.)

IREA (Eipa, Pol.; Lth. Iria, Irenia; Voghera), a considerable town of the interior of Liguria, mentioned both by Pliny and Ptolemy, as well as in the itineraries, which place it 10 miles from Dertona, on the road to Placentia. ([Plin. iii. 5. 7; Tob. iii. i. 35; Itin. Ant. p. 278; Tob. Pent.]) This distance agrees with the site of the modern town of Voghera, which appears to have been called in the middle ages, Laire, a name gradually corrupted into its modern appellation. It is situated on the little river Staffora, which would seem to have borne in ancient times the same name with the city; it is called Hricia or Iria by P. Dacoum, who tells us that the emperor Majorianus was put to death on its banks. ([Hist. Marc. x. 54.) Ptolemy includes Iria, as well as Dertona, in the territory of the Taursio; but this would seem to be certainly a mistake; that people could never have extended so far to the eastwards. An inscription (of which the reading is, however, a matter of controversy) has "Coloniae Forum Juli Iriensium," from which it would seem that Iria, as well as the neighbouring Dertona, became a colony after the death of Caesar, and obtained the name of Forum Julii; but this is very doubtful. No other trace is found either of the name or the colony. ([Maffia, Mem. de la F. 371, 4; Murat. Iasor. p. 1198, 4; Orell. Iasor. 73.) [E. H. R.]

IRENE, an island in the Argolick gulf, supposed by Leake to be Ypilee. ([Plin. iv. 12, s. 19; Leake, Peloponneseologia, p. 294.)

IREUS SINUS. [Canthus Sinus.]

IRIPPÓ, a town of Hispania Baetica (Plin. iii. i. s. 3), which Ucrét supposes to have been situated in the Sierras de Hondo, near Zara or Pinal. (Flo. Rep. 3. 8, vol. xii. p. 303; Coins, ap. Flor., Med. vol. ii. p. 474; Mionnet, vol. i. p. 85; Sestini, vol. i, p. 56, Suppl. vol. i. p. 113; Sestini, Med. I. 61; Ucrét, vol. ii. pt. 1. p. 358.) [P. S.]

IRE (6 iera. Koutalak), a considerable river of Pontus, which has its sources in the heights of Anti- turmis in the south of Pontus. It flows at first in a north-western direction, until reaching Conama it takes a western turn; it thus passes by the towns of Messia and Gazirta. A little above Abusa it receives the Seyzar, and then turns eastward; near Emporia the Lycus empties itself into it. After this it flows due north, and, traversing the plains of Theracaea, it empties itself into the Euxine by four mouths, the westernmost of which is the most important. ([Strab. xii. p. 556.) The Iria is smaller than the Ialys (Apollon, Rhod. ii. 368), but still a considerable river, flowing through a vast extent of country, and, according to Xenophon (Anab. v. 6. § 3), was three leagues in breadth. (Comp. Strab. i. p. 52, xii. 54, 55; Tob. v. 6, § 4; Xenophon, v. 6. § 0, vi. ii. § 1; Apollon. Rhod. ii. 965; Diodor. Per. 783; Plin. vi. 3, 4.) The part near its mouth is
ISURIA. 65

word as the English Ouse. D'Anville says that the name Isara in the middle ages became Esaia or Aesia. Vibius Sequester mentions a river Isia which flows into the Sequana; but D'Anville suspects the passage to be an interpolation, though it is impossible to judge whether this interpolation in such a strange book as Vibius Sequester. Oberlin, the editor of Vibius Sequester, maintains the passage to be genuine (p. 110).

3. [Luba.]

ISAECI, a Rhodian tribe dwelling about the mouth of the river Isara (Plin. iii. 24), from which it appears to have derived its name. [L. S.]

ISAERUS (Isara; the Isor), a river of the Rhodian Alps, flowing from an Alpine lake, and in a southern direction until it joins the Atheisis near Pons Drusi. (Strab. iv. p. 207, where the Isapos (or a) is said to receive the Arges (Athesis); either a mistake of Strabo himself, or by a transcriber transposing the names. Comp. IsAERUS.) [L. S.]

ISAERA (Isara: Eth. Isaroepis), the capital of Isara, situated in the south-west of the island of Crete. It was a wealthy, populous and well-fortified city at the foot of Mount Taurus. Of its earlier history nothing is known; but we learn from Dio- dorus (xvii. 22) that when it was besieged by Per- diceas, and the inhabitants were no longer able to hold out, they set fire to the city, and destroyed themselves with all they possessed. Large quantities of molten gold were found afterwards by the Macedonians among the ashes and ruins. The town was rebuilt, but was destroyed a second time by the Roman Servilius Iaurinius, and thenceforth it remained a heap of ruins. Strabo (xii. p. 568) states that the place was ceded by the Romans to Amyntas of Gabasia, who built out of the ruins of the ancient city a new one in the neighbourhood, which he surrounded with a wall; but he did not live to complete the work. In the third century of our era Isara was the residence of the rival king Trebennus (Trebell, Poll. XXX. Tyron. 25); but in the time of Annianus Marcellinus (xiv. 8) nearly all traces of its former magnificence had vanished. At a later period it is still mentioned, under the name Ia- norpolis, as a town in the province of Lycaonia. (Hieroc. p. 675; Concil. Chalced. 673; comp. Strab. xiv. p. 663; Ptd. v. 4. § 12; Steph. B. s. v.; Plin. v. 27.) Of Old Isara no ruins appear to be found, though D'Anville and others have identified it with the modern Beil Sheker; they also believe that Seilati Sheker occupies the site of New Isara, while some travellers regard Serki Server as the representative of New Isara; but Hamilton (Researches, vol. ii. pp. 330, foll.) has given good reasons for thinking that certain ruins, among which are the remains of a triumphal arch of the emperor Hadrian and a gate- way, on a hill near the village of Olnu Bonnor mark the site of New Isara. The walls of the city can still be traced all around the place. The Isaurians were a people of robbers, and the site of their city was particularly favourable to such a mode of life. [Isauria.]

ISAURIA. [L. S.]

ISAUTIA (Iauapia), a district in Asia Minor, bordering in the east on Lycaonia, in the north on Phrygia, in the west on Pisidia, and in the south on Cilicia and Pamphylia. Its inhabitants, living in a wild and rugged mountainous country, were little known to the civilised nations of antiquity. The country contained but few towns, which existed especially in the northern part, which was less

IRIS. now called Yecchi or Yekli Irnak. (Hamilton, Researches, vol. i. p. 340.) [L. S.]

IRIS. [Terene.]

IIUS or IRA (?Ious or Iap), a town of Malis, of uncertain site. (Steph. B. s. v.; Lycophr. 903.) In (Is, Heroea 179), a town of Mesopotamia, some eight days' journey N. of Babylon, situated, according to Herodotus, on a stream of the same name, which brought down the bitumen which was used in the construction of the walls of Babylon. There is no reason to doubt that it is represented by the modern Hit. There does not appear to be any river at present at Hit, but a small stream may have been easily blocked up by the sand of ages. There are still bitumen springs in the neighbourhood of this place. It has been conjectured that the Ica[t]an[0]art of Isidorus (p. 5) refers to the same town. (Ritter, Erdkunde, vol. ii. p. 148; Remnall, Geogr. of Herod. p. 552.) [Y.]

ISAACA, in Britain, a river mentioned by Ptolemy (iii. 3. § 4) as lying west of the outlet of the Tamus (Tamar). In the Monumenta Britannica, Isaca castra are identified with Weymouth, and also with Pembroke; most probably the latter, name, for isaca, as name, as well as place for place. In the Geographer of Ravenna the form Isca, which is preferable. [Isaca.]

ISADICI (Eidaços), a people whom Strabo (xi. p. 360) couples with the Troglodytes and other tribes of the Caucasus. The name may imply some Hellenic fancy about savage justice and virtue. (Comp. Groskurd, ed loc.) [E. B. J.]

ISAMNÜL, in Ireland, mentioned by Ptolemy (ii. § 8) as a promontory north of the Bobinada (river Boyne = St. John's Foreland, Clogher Head, Downy Point, Ballashan Point (?). [R. G. L.]

ISANXAVATAPA, in Britain, mentioned in the 6th Itinerary as lying between Luctodurum and Trionptium. It is a name of some difficulty, since neither of the places on each side of it has been identified. (See Luctoder.) In the Geographer of Rava-enna we find a Bannovallum, and in the 8th Itin- erary a Bannovantum. Probably these two names are identical. At any rate, Bannovantum = Isana- vatin, since each is 28 miles from Magoviumin. Thus, in the 6th Itinerary, we have:—

Maugiovinio  M. P.
Luctodoro  xvi.
Isanavatina  xii=xviii.
And in the 8th Itinerary:—

Bannavanto  M. P.
Magovicion  xxviii.

It is only safe to say that Isanavatia was a town in the southern part of Northamptonshire, probably Daventry. The Itinerary in which it occurs has only two names beyond doubt, viz. Verulamium and Luton (St. Albans and Lincoln). Daventry, how- ever, is Horsley's identification. In more than one map of Roman Britain, Bannovantum is placed in Lincolnshire. This is because it is, in the first place, separated from Bannovantum, and then fixed on the river Bain, a Lincolnshire river. This is the meaning of Horncastle being given as its equivalent. The change, however, and the assumption, are equally gratuitous. [R. G. L.]

1. ISARA, the river. 1. [Insula.]

2. The Isara, which was a branch of the Sequana, has its true or main course in the Celtic map of a place which was on it, named Briva Isarae. (Briva Isarar.) The Celtic element Is has become Osa, the modern name of the river, which is the same VOL. II.
mountains, though the capital, Isaura, was in the south. Strabo, in a somewhat obscure passage (xii. p. 568), seems to distinguish between Isauria, the northern part, and Isauricus, the southern and less known part, which he regards as belonging to Lycaonia. Later writers, too, designate by the name Isaura only the northern part of the country, and take no notice of the south, which was to them almost a terra incognita. The inhabitants of that secluded mountainous region of Asia, the Isauri or Isaurians, appear to have been a kindred race of the Pisdians. Their principal means of living were derived from plunder and rapine; from their mountain fastnesses they used to descend into the plains, and to ravage and plunder wherever they could overcome the inhabitants of the valleys in Cilicia, Phrygia, and Pisidia. These marauding habits rendered the Isaurians, who also took part in the piracy of the Cilicians, so dangerous to the neighbouring countries that, in n. c. 78, the Romans sent against them an army under P. Servilius, why, after several severe and bloody campaigns, succeeded in conquering most of their strongholds and reducing them to submission, in consequence of which he received the surname of Isauricus. (Strab. l. c.; Diod. Sic. xvii. 22; Zosim. v. 25; Mela, i. 2; Plin. v. 23; Estrap. vi. 3; Liv. Epit. 93; Dion Cass. xiv. 16; Fl. Flor. iii. 6; Ptol. iv. 4, §12; Oros. v. 29; Ann. Marc. xiv. 2, xiv. 9.) The Isaurians after this were quite distinct from the Lycaonians, for Cicono (ad Att. v. 21; comp. ad Fam. xv. 2) distinguishes between the Forum Lycaonius and the Isauri. But notwithstanding the severe measures of Servilius, who had destroyed their strongholds, and even their capital of Isaura, they subsequently continued to inflict their neighbours, which induced the tetrarch Amnytas to attempt their extirpation; but he did not succeed, and lost his life in the attempt. Although the glorious victory of Pompey over the pirates had put an end to such practices at sea, the Isaurians, who in the midst of the possessions of Rome maintained their independence, continued their predatory excursions, and defied the power of Rome; and the Romans, unable to protect their subjects against the bold mountaineers in any other way, endeavoured to check them by surrounding their country with a ring of fortifications. (Proh. Polli. XXX. 56.) In this, however, they failed, and their garrisons were assaulted and plundered by them, and they remained the terror of the surrounding nations. In the third century, Trebellenus, a chief of the Cilician Isauri, even assumed the title and dignity of Isaurian emperor. The Romans, indeed, conquered and put him to death; but were unable to reduce the Isauri, and the emperor Probus, for a time, was unable to render them to submission; but they succeeded in the end by the help of the Persians. (Voigt. Proc. 16; Zosim. v. 69, 70.) In the Greek accounts, they are represented as pillagers and tyrants, for whole armies are said to have been cut to pieces and destroyed by them. (Proc. 16; Phot. 19; Hygin. Fab. 196.)

**Hist. Eccles. iii. 8.)** Once the Isaurians even had the honour of giving an emperor to the East in the person of Zeno, surrounded the Isaurian; but they were subsequently much reduced by the emperor Anastasius, so that in the time of Justinian they had ceased to be formidable. (Comp. Gibbon, *Hist. of the Decline*, j.c., chap. xi.) The Isaurians are described as an ugly race, of low stature, and badly armed; in the open field they were bad soldiers, but as hardened mountaineers they were irresistible in what is called guerilla warfare. Their country, though for the most part consisting of rugged mountains, was not altogether barren, and the vine was cultivated to a considerable extent. (Ann. Marc. xiv. 8.) Traditions originating in the favourite pursuits of the ancient Isaurians are still current among the present inhabitants of the country, and an interesting specimen is related in Halmelun's *Researches*, vol. ii. p. 301. [L. S.]

**ICSA,** the name of two towns in Britain. The criticism of certain difficulties connected with their identification is given under MURIDENIUM. Here it is assumed that one is Exeter, the other Carleon-on-Ush.

1. **ICSA = Exeter.** Mentioned by Ptolemy (ii. 3. §30). In the 12th and 15th Itineraries this appears as Isca Dumnoniorum, 15 miles from Muridenum. The name Dumnoniorum shows that Devonshire is the county in which it is to be sought. Name for name, Exeter suggests itself. Nevertheless, Horsey gives Uxella as the Roman name for Exeter, and placed Isca D. at Chiseldon. After remarking on Isca, that "it is universally supposed to be the river Exe in Devonshire," and that "Isca estua must, therefore, be Ermouth," he adds, " Isca Dumnoniorum has been universally taken for Exeter; I have placed it near Chiseldon and South Petherton, near the borders of Somersetshire" (p. 371). His observations (p. 462) lie in the difficulty of fixing Muridenum (q. v.), but, beyond this, he considers himself free to claim Uxella (q. v.) as Exeter. For considering Isca Dumnoniorum to be Exeter, he sees no better reason than "general opinion and some seeming affinity of names." Yet the "affinity of names" has been laid great stress on in the case of Isca estua. The Isca of Ptolemy must be about 20 or 30 miles north-east of the mouth of the Exe, "on which river Exeter stands. This reaches to the Axe." Hence he suggests Horsey's Isca Dum., but, as he admits that this town has a claim to be considered Ischalis (q. v.), he also admits that some of the localities about Hamptona Hill (where there are the remains of a Roman camp), South Petherton (where Roman coins have been found), and Chiseldon (not far from the Axe) have better claims. Hence, in his map, Uxella = Exeter, and Isca D. = Chiseldon. Assuming that same, if not all, these difficulties are explained under Uxella and Muridenum, the positive evidence in favour of Exeter is something more than mere opinion and similarity of name.

(1) The form Isca is nearer to Es than to Axe, and that Isca = Exeter is admitted. The Ux. in Uxella may better be Axe.

(2) There is no doubt as to the other Isca = Carleon-on-Ush. Now, Roger Hoveden, who wrote whilst the Cornish was a spoken language, states that the name of Exeter was the same as that of Curneion in British. It is written thus:

(3) The statement of Horsey, that he could never hear of any military way leading to or from Exeter, misleading. In P. Vesci. (p. 182) we have a
most distinct notice of the road from Scuton, and, nine miles from Exeter, the locality called Street-way Head; the name street = road (when not through a town or village) being strong evidence of the way being Roman. Tesselated pavements and the foundations of Roman walls have been found at Exeter, as well as other remains, showing that it was not only a Roman town, but a Roman town of importance, as it continued to be in the Saxon times, and as it had probably been in the British times. 2. ISCA LEGIONUM = Caerleon-as-Uch, is mentioned in the 12th itinerary, i.e. in the one where Isca Dumnoniorum occurs. The only town given by Ptolemy to the Silures, the population of the parts to which Isca (sometimes called by later writers Isca Silurum) belongs, is Builtem. This is Buil- tem of the Itinerary, 8 Roman miles from Isca (= Uch, about 6 English miles from Caerleon.) Hence, Isca may have been a military station of comparatively recent date. But there is a further complication. It is the Devonshire Isca to which Ptolemy gives the Second Legion (Aryxan οἱενήρα Καιβατή). "This," remarks Horsley (and, perhaps, with truth), on the part of Ptolemy, is, "in my opinion, the only manifest and material error committed by him in this part of England" (p. 482).

Again: several inscriptions from the Wall (per lium Volf) show, when that was built, the Second Legion was on the Scottish border, taking part in the work; the previous history of the legion being, that it came into Britain under the reign of Claudius, commanded by Vespasian. (Tac. Hist. iii. 44.) On the other hand, an inscription mentioned by Horsley, but now lost (p. 78), indicates their presence at Caerleon in the time of Severus. As the Itinerary places them there also, we must suppose that this was their quarters until the times approaching the evacuation of Britain. When the Notitia was made, they were at Rutupia (Rich- broa): praefectus legionis ii. August. Eutus.

The Roman remains found at Caerleon are considerable. A late excavation for the parts about the Castle Mound gave the remains of a Roman villa, along with those of a medieval castle, built, to a great extent, out of the materials of the former. In some cases the traces preserved its colour. There was abundance of pottery,—Saxon ware, ornamented with figures of combatant gladiators, keys, bowls, bronze ornaments, and implements. At Pit Bach, near Caerleon, tesselated pavements have been found, along with the following inscription:—<br>

| THE MA-<br>

| NIVS TADIA YELLAVIS. | VIXIT ANNOX SEXAN-<br>

| GINA QUIVQUE. | ET TADIVS EXPETVRR PILVIS<br>

| VIXIT ANNOX REGINTA XEPTEM. | DEFIVNTVS (sic)<br>

| EXPEDITONEM GERMANNICA. | TADIA BLAVOS<br>

| PILUL MULI EX PATRI PSIDII SECVS TAD-<br>

| MLAEM PATRI POSVIT. | Others, of less length, to the number of twenty, have also been found in the neighbourhood. (See Archaeologia Cambrensis; Journal of British Archæological Association (passim); and Delineations of Roman Antiquities found at Caerleon, J. E. Lec.)

[ R. G. L. ]

ISCA, river. [ISACA.]

ISCATHA (Erkeatia), a town in the W. of Baets, between the Rhine and the Anea, not far from Trier. (Atpian, Hisp. 68.) [P. S.]

ISCHALIS, in Britain, mentioned by Ptolemy (iii. 3. § 28) as one of the towns of the Belf. Bath and Winchester ("Caerana Oppid, or Aquae Sulis, and Venta) being the other two; identified, in the Monumenta Britannica, with Heister. [Isca Dum- noniorum.] [R. G. L.]

ISCHÔPOLIS (Ισχώπολις), a small town on the coast of Pontus near Pharnacia, was in ruins even in the time of Strabo (xii. p. 548), but is still noticed by Ptolemy (v. 6. § 5). [L. S.]

ISICORR MUS PORTUS (Ἰσίκορρ Λυμέριον, Arrian, Peripl. p. 21, Anon. Peripl. p. 9), a harbour on the Exeine sea (350 stadia from the island at the mouth of the Borytheres, and 1200 stadium from the Πατησιανος (Patrois) mouth of the Danube. (Arrian, l.c.) It has been identified by Rennell (Comp. Geog. vol. ii. p. 360) with Odessa. There is some difficulty in adjusting the discrepancies in detail; but the aggregate distance appears to be clearly enough made out. Thus, from the island to Odessa Arrian allows a distance of 80 stadia, and from Odessa to the port of the Istrians (},${\text{I}}$sepsei Τρωϊκον) 250 stadia, and thence to that of the Isaac 50 stadia. The Odessus (Οδεσσας) of Arrian (for he places Odessus at Varna) is probably a false reading, and is the same as the Odesseus (Οδισσας) of Ptolemy (iii. 5. § 29) and Pliny (iv. 12),situated upon the river Axios, or the modern Tegylus, a large estuary which receives a river of the same name. As the interval in Arrian between Odessus (Odesseus) and the island is too short, so the next is too large; but the errors balance one another, and the harbour of the Isaac agrees with that of Odessa within three quarters of a mile; the port of the Istrians may have lain to the N. of the bay of Odessa. [E. B. J.]

ISIDIS OPPIDUM (Plin. v. 10. s. 11). Near the city of Busiris, in the Egyptian Delta, was situated a splendid temple of Isis, around which, besides the ordinary dwellings of the priests within the sacred precincts, gradually clustered a large and flourishing village, inhabited by the artisans and husbandmen who supplied the wants or tilled the lands of the inmates of the temple. These buildings formed probably the hamlet or town of Isis mentioned by Pliny. The modern village of Bubastis, N. of the ancient city of Busiris, is supposed to cover the ruins of the Temple of Isis. (Pudocce, Tracta in the... 10. p. 34; Minuto, p. 304.) [Bu- siris.] [W. B. D.]

ISINISCA, a place in Phoecis Scevou, on the ancient road between Aegina and Salamis. (Hist. Ant. pp. 236, 251, 257; Tab. Ptol., where it is called Isinnica.) It is identified by some with Icen, and by others with a place near Hellenispor [L. S.]

ISIONDA (İzıkorda), a town in the south-west of Pisidia, a few miles to the north-west of Terrasus. (Poliv. Exc. de Leg. 31; Lit. xxxvii. 13.) Strabo (xii. p. 570), in enumerating the Pisian towns, mentions one which he calls Sinda, a name which sometimes it is believed to be a corruption of Sisond; but, as there existed a town of the name of Sinda near Cyhra in Pisidian Phrygia, it would be hazards to decide anything. (See Kramer's note on Strab. l. c.) Sir C. Fellowes (Asin Minor, p. 194) found extensive remains of an ancient town on the top and side of one of the many isolated hills of the district, which he supposes to be the ruins of Isinda, but he does not mention any coins or inscriptions of its conjectured site. [L. S.]

ISIS (İzi), a navigable river on the east coast of the Exuné between the Acinasis and Magoras, from each of which its distance amounted to 90 stadia, while its mouth was 180 stadia south of that of the Phasis. (Arrian, Peripl. p. 7; Plin. vi. 4; 17)}
 Seyfay, p. 32, where the common reading "Iov has been corrected by Gohi." This river is believed to be the River Terek. [L. S.]

 ISIMUM (Isi, Itin. Anton. p. 167; Isii, Not. Imp.), a fort situated on the borders of the Thebaid and Hephtamitis in Egypt, in lat. 27° 5' N., and on the eastern bank of the Nile. Isium was about 20 miles SE. from the castle of Hieracon, and nearly 24 miles NE. from that of Mathis. Under the Roman empire a troop of Spanish infantry (ala Britannia) was stationed there. [W. B. B. D.]

 ISIU'S MANSO (-Tianew down, Post. iv. 7, § 5), a mountain, or rather a ridge of highlands rising gradually on its western side, but steep and escarped towards the east, on the coast of Aethiopia, and in the Leucio Troglydctica. It was seated in lat. 20° 1' N., a little to the southward of the headland Mne- num (Mnænum Aeror, Post. iv. 5, § 7), and SW. of Berenice and the Sinus Immundus (Foul Boy). Mons I. Isius answers to the modern Kas-el-Dewar. Strabo, indeed (vii. 7, p. 773), places this eminence further to the south, and says that it was so called from a temple of Isis near its summit. [W. B. D.]

 ISMARIS ('Teoaiis Aiam), a small lake on the south coast of Thrace, a little to the east of Maronea. (Heron. viii. 169; Steph. B. s. v. "Ismardus."

 ISMARUS ('Ismardus), a mountain rising on the east of Lake Ismarus, on the south coast of Thrace (Virg. Aen. vi. 30, Georg. ii. 37; Propert. ii. 13, 5, iii. 12, 25; Lucert. v. 31, where it is called Ismarus, as in Virg. Aen. x. 331.) Homer (Od. iv. 40, 198) speaks of Ismarus as a town of the Cicones, on or at the foot of the mountain. (Comp. Hecat. 28.) The name of the town also appears in the form Ismanon (Plliv. iv. 18). The district about Ismarus produced wine which was highly esteemed. (Ath. i. p. 30; Or. Med. iv. 641; Steph. B. s. v.)

 ISMUNDUS. [Therae.]

 ISOXAIAS ('Isiakias, Post. v. 9, § 23), a people whose position must be sought for in the valley of the river Iskos Xain, in Lesbos, to the W. of the Cyprian.

 ISPISNIM. [Carpetanei.]

 ISSEIL. [Faleratina.]

 ISSEI (Isis, Post. ii. 16, § 14; Acathem, i. 5; Post. ii. 133; Plut. iii. 26; Steph. B. 'I. S. I.:

 It is mentioned by Seyfay (p. 8) as a Greek colony, which, according to Scymnus of Chios (i. 412), was sent from Syracuse. Dioscorus (xiv. 13) relates that in a. 357 B.C. they, in a war against the tribes of the island, sent 400 men to Syracuse. [E. B. J.]

 ISSEI'AIC. [Lesbonos.]

 ISSACHAR. [Palaeatina.]

 ISSEDONES ('Ismardon, Steph. B. s. v.; in the Roman writers the usual form is "Eseedones"), a people living to the E. of the Arcopae, and the most remote of the tribes of Central Asia with whom the Hellenic colonies on the Euxine had any communication. The name is found as early as the Spartan Alceon, n. c. 671 — 631, who calls them "Aseedones" (Fr. 94, ed. Welcker), and Hecataeus (Fr. 168, ed. Klaun.); a great movement among the nomad tribes of the N. had taken place in very remote times, following a direction from SE. to SW.; the Aramnus had driven out the Issedones from the steppes over which they wandered, and they in turn drove out the Seythians, and the Issedones the Cimmerians. Traces of these migrations were indicated in the poem of Aristea of Proconnesus, a semi-mythical personage, whose pilgrimage to the land of the Issedones was strangely disfigured after his death by the fables of the Milean colonists. (Heron. iv. 13.) The Issedones, according to Herodotus (v. 26), have a custom, when any one loses his father, for the kinsfolk to kill a certain number of sheep, whose flesh they hash up together with that of the dead man, and make merry over it. This done, they peel and clean out his skull, which after it has been gilded becomes a kind of idol to which yearly sacrifices are offered. In all other respects they are a righteous people, submitting to the rule of men equally with that of men; in other words, a civilised people.

 Ireven (Asiat. Not. vol. ii. p. 15, trans.), upon Dr. Levien's authority (Asiat. Res. vol. ii. p. 202), illustrates this way of carrying out the duties of
 filial piety by the practice of the Battes of Sumatra. It may be remarked that a similar story is told of the Indian Padasi. (Herod. iii. 99.) Pomponius Mela (ii. 1. § 13) simply copies the statement of Herodotus, though he alters it so far as to assert that the Issedones used the skull as a drinking cup. The name occurs more than once in Pliney (iv. 28, vi. 7, 19); and Ptolemy, who has a town Issedon in Syria (Ioseph. vi. 16. § 7, viii. 24. § 5), mentions in another place (viii. 24. § 3) the Scythian Issedon. (Comp. Steph. B. s. v.; Amm. Marc. xiii. 6 § 66.)

Von Humboldt (Asia Centrale, vol. i. pp. 390—412) has shown that, if the relief of the countries between the Don and the Irtysh be compared with the itinerary traced by Herodotus from the Thys-sagetas to the Issedones, it will be seen that the Father of History was acquainted with the existence of vast plains separating the Cral and Altai, chains which modern geographers have been in the habit of uniting by an imaginary passage running through the steppes of the Kirghiz. This route (Herod. iv. 23, 24) recognizes the passage of the Cral from W. to E., and indicates another chain more to the E. and more elevated — that of the Altai. These chains, it is true, are not designated by any special names, but the presence of mountain ranges in Europe with the names of the Alp and Bihacian mountains; and a comparison of the order in which the peoples are arranged, as well as the relief and description of the country, shows that much definite information had been already attained. Advancing from the Palus Mesochis, which was supposed to be of far larger dimensions than it really is, in a central direction towards the NE., the first people found occupying the plains are the "Black-clothed" My-lanchiaeni, then the Budini, Thyssagetas, the Iurcae (who have been falsely identified with the Turks), and finally, towards the E., a colony of Scythians, who had separated themselves from the "royal Scythians" (perhaps to barter gold and skins). Here the plains end, and the ground becomes broken (λάβανθα και τριχεία), rising into mountains, at the foot of which are the Arkippaei, who have been described from their clothing and flat noses with the Kafmucks or Mongolians by Niebuhr, Böckh, and others, to whom reference is made by Mr. Grote. (Hist. of Greece, vol. iii. p. 520.) This identification has been disputed by Humboldt. (Comp. Cosmox, vol. i. p. 333 note, 440, vol. ii. p. 141 note, 202, trans.), who refers these tribes to the Finnish stock, assuming as a certain fact, on evidence which it is difficult to make out, that the Mongolians who lived around Lake Baikal did not move into Central Asia till the thirteenth century. Where the data are so few, for the language (the principle upon which the families of the human race are marked off) may be said to be unknown, ethnographic analogies become very hazardous, and the more so in the case of nomad tribes, the same under such wide differences of time and climate. But if there be considerable difficulty in making out the antiquity of race, the local bearings of these tribes may be laid down with tolerable certainty. The country up to the Arkippaei was well known to the traders; a barrier of impassable mountains blocked up the way beyond. (Hypereborae.) The position of the Issedones, according to the indications of the route, must be assigned to the E. of Ichim in the steppe of the central horde of the Kirghiz; and that of the Arinaasi on the N. declivity of the Altai. The communication between the two peoples for the purpose of conveying on the gold trade was probably made through the plains at the N.W. extremity of the Altai, where the range juts out in the form of a large promontory. (E. B. J.)

ISSICUS SINCUS. (Issicus.) Issicus (Ierous and Isoso, Xen. Anab. i. 2. § 24, and i. 4. § 11) a town of Cilicia, on the gulf of Issicus (Ἰσσικός κόλπος). Herodotus calls the gulf of Issicus the gulf of Myriandros (iv. 38), from the town of Myriandros, which was on it.

The gulf of Issicus is now named the gulf of Iskenderun or Scanderoon, from the town of Skenderun, formerly Alexandria ad Issum, on the east side. It is the only large gulf on the southern side of Asia Minor and on the Syrian coast, and it is an important place in the systems of the Greek geographers. This gulf runs in a NE. direction into the land to the distance of 47 miles, measured nearly at right angles to a line drawn from the promontory Megarans (Cape Karadash), on the Cilician coast, to the Rhikas Scopulus (Rius-el-Khinizir, or Hymazar, as it has sometimes been written), on the Syrian coast; for these two caps are respectively the limits of the gulf on the west and east, and 25 miles from one another. The width immediately north of the caps is sometimes less than 25 miles, but it does not diminish much till we approach the northern extremity of the gulf. It seems certain that the ancient outlet of the Pyramus was west of and close to Cape Karadash, where Beaufort supposes it to have been; and this is consistent with the old prophecy [Vol. i. p. 620], that the alluvium of the Pyramus would some time reach to the shore of Cyprus; for if the river had entered the gulf where it does now, 23 miles further east, the prophecy would have been that it would fill up the gulf of Issicus. For the earth that the river formerly discharged into the sea is now sent into the gulf, where it "has produced a plain of sand along side of the gulf, somewhat similar in shape, and equal in size, to that formed by the Ghiub Soogo [Calycadnus, Vol. i. p. 483]; but the elbow where the current that sets round the gulf quits it, is obtuse and there the "Black-clothed" Scythians of Ptolemy, once in the coast, may be accounted for by the progressive advance of the shore into the gulf, which has left the ruins of that town some miles inland" (Beaufort, Caramania, p. 296). Ptolemy's Sarneopolis (Σαρνηοπόλις), which he calls a small place (κάπη), is between Mallus, which is a little east of Cape Megamasus, and Aegea or Aegae. [Aegae.] The next city to Aegae on the coast is Issicus, and this is the remotest city in this part of Cilicia which Ptolemy mentions. Xenophon also speaks of it as the last city of Cilicia on the road to Sicily.

The mountains which bound the gulf of Issicus are described in the article AMANUS. The bold Rhikas Scopulus (5400 feet high), where the Syrian Amanus terminates on the coast, may be distinctly seen by the sailor when he is a short distance to the south of Seleucia (Seleuksh), at the mouth of the Calycadnus, a distance of 85 geographical miles (Beaufort). A small stream flows into the head of the gulf of Issicus, and a few from the Amanus enter the coast side, one of which, the Pinarus, is the Deli Tchah; and the other, the Cursus of Xenophon, is the Merkez. The Amanus which descends to the Rhikas Scopulus, and the other branch of the Amanus which shoots in the gulf of Issicus on the
NW., and forms Strabo's Amanides Pylae, unfit in the interior, as Strabo says (p. 535); and ver modern maps represent it so. There is a plain at the head of the gulf. Strabo gives a greater extent to the Issiac gulf than we do to the gulf of Scamander, for he says it extended to the east, but here it extends beyond the Amanid, and joins Cilicia Trachea, and certainly to Sol (pp. 534, 664). In another passage (p. 125) he shows what extent he gives to the gulf of Issus, by placing Cyprus in the Pamphylian sea and in the gulf of Issus—the west part of the island being in the Pamphylian, and the east in the Issiac gulf. The gulf of Issus was surveyed by Lt. Murphy in the Buckingham expedition under the command of Colonel Gomery.

The ancient geographers did not agree about the position of the isthmus of the country which we call Asia Minor; by which isthmus they meant the shortest distance across the eastern part of the peninsula from the Euxine to the Mediterranean. Strabo (p. 673) makes this shortest distance lie along a line joining Amiaces and Tarsus. If he had said Amiaces and the head of the gulf of Issus, he would have been quite right. He was newly correct as to the longitude of the head of the gulf of Issus, which he places in the meridian of Amiaces and Thessalosira (p. 126); and in another passage he says that the head of the gulf of Issus is a little more east than Amiaces, or not at all more east (p. 519). Amiaces, in fact, a little further east than the most eastern part of the gulf of Issus. The longest direction of the inhabited world, according to Strabo's system (p. 118), from west to east, is measured on a line drawn through the Seleos (Strait of Gibraltar), and the Sicilian strait (Strait of Messina), to Rhodos and the gulf of Issus, whence it follows the Taurus, which divides Asia into two parts, and terminates on the eastern sea. Those ancient geographers who made the isthmus of the Asiatic peninsula extend from Issus to the Euxine, considered the shortest line across the isthmus to be a meridian one, and the dispute was whether it ran to Sinope or Myriandrus (Strab. p. 678). The choice of Issus as the point on the Mediterranean to reckon from, shows that Issus was the limit, or most eastern point, on the south coast of the peninsula, and that it was not on that part of the bay of Issus where the coast runs south. Consequently Issus was on or near the head of the gulf. Herodotus (iv. 38) makes the southern end of this peninsula, or Arce, as he calls it, extend the Myriandrus gulf (gulf of Issus) to Issus the promontory, which is quite correct. On the north side he makes it extend from the mouth of the Phasis to the promontory Sigurna, which is as to the promontory; but he carries the too far east, when he makes it begin at the Phasis.

This mistake, however, shows that he something of the position of the mouth of the Phasis, for he intends to make the Arce begin at that point: where the coast of the Euxine begins to be west and east; and though the mouth of the Euxine was not exactly at this point, it was the best known river of any near it. In another passage (i. 72), which like many others in his history, is condensedly expressed, he describes the neck (sciur) of the Arce as nearly cut through by the river Haylos, and he makes its width from the sea opposite to Corycus to the Euxine to be five days' journey for an active man—an estimate very much short of the truth, even if we allow Greek activity to walk 30 miles a day through a rough country. Strabo re-
so situated that he came to Issus first, where he shamefully treated the sick of the Macedonians who had been left there. The next day he moved from Issus to pursue Alexander (Arrian; Curtius, iii. 8); that is, he moved towards the Pylea, and he came to the banks of the river Pinarus, where he halted. Issus was, therefore, north of the Pinarus, and some little distance from it. Kiepert's map of Asia Minor marks a pass in the range of the Syrian Amanus, which is north of the pass that leads over the same mountains from the east to Baille (Boyage), and nearly due east of the head of the gulf of Issus. He calls it Pylea Amanides, by which he means the Pylea Amanacae of Arrian, not the Amanides of Strabo; and he takes it to be the pass by which Darius crossed the Syrian Amanus and came down upon the gulf. This may have been his route, and it would bring him to Issus at the head of the gulf, which he came to before turning south to the Pinarus (Deh Tashat). It is certain that Darius crossed, by some pass which brought him to Issus before he reached the Pinarus. Yet Kiepert has placed Issus south of the Pinarus, or rather between the two branches of this river, which he represents as uniting near the coast. Kiepert also marks a road which passes over the junction of the two branches of the Amanus (Amancus, Vol. I. p. 114) and runs to Morseau, which he remarks was the eastern boundary of the Parthians. This is the dotted road marked as running north from the head of the gulf of Issus in the plan (Vol. I. p. 115); but even if there be such a road, it was not the road of Darius, which must have been the pass above mentioned, in the latitude of the head of the gulf of Issus; which is not marked in the above plan, but ought to be. This pass is probably the Amanacae Pylea of Poleney, which he places 5' further south than Issus, and 100 east of Issus.

Alexander, hearing that the Persians were in his rear, turned back to the Pylea, which he reached at midnight, and halted till daybreak, when he moved on. (Arrian, Anab. ii. 8.) So long as the road was narrow, he led his army in column, but as the pass widened, he extended his column into line, part towards the mountain and part on the left towards the sea. When he came to the wide part (επονογιαπα), he arranged his army in order of battle, which Alexander called his battle. He then placed his rear, of which Darius was on the right, on the north side of the Pinarus. It is plain, from this description, that Alexander did not march very far from the Pylea before he reached the wider part of the valley, and the river. As the sea was on his left, and the mountains on his right, the river was a stream which ran down from the Syrian Amanus; and it can be no other than the Delli Tashat, which is about 15 miles north of the Caraus (Merveld), direct distance. Polybus (vii. 17), who criticizes Callisthenes's description of the battle, states, on his authority, that Darius descended into Cilicia through the Pylea Amanides, and encamped on the Pinarus, at a place where the distance between the mountains and the sea was not more than 14 stadia; and that the river ran across this place into the sea, and that in its course through the level part "it had abrupt and difficult eminences (κατανομα)." This is certain, though Arrian says of the banks of the river being steep in many parts on the north side. (Arab. ii. 10.) Callisthenes further said, that when Alexander, after having passed the defile (τα σταθμα), heard of Darius being in Cilicia, he was 100 stadia from him, and, accordingly, he marched back through the defile. It is not clear, from the extract in Polybius, whether the 100 stadia are to be reckoned to Issus or to the Pinarus. According to Arrian, when Alexander heard of Darius being behind him, he sent some men in a galley back to Issus, to see if it was so; and it is most consistent with the narrative to suppose that the men saw the Persians at Issus before they had advanced to the river; but this is not quite certain. The Persian army was visible, being near the coast, as it would be, if it were seen at Issus.

Strabo (p. 676), following the historians of Alexander, adds nothing to what Arrian has got from them. Alexander, he says, led his infantry from Sidi along the coast and through the Maloitos to Issus and the forces of Darius; an expression which might misled, if we had no other narrative. He also says, after Mallius in Aegea, a small town with a harbour, then the Amanides Pylea (Amanides Pylae), where there is a harbour; and after Aegea is Issus, a small town with a harbour, and the river Pinarus, where the fight was between Alexander and Darius. Accordingly he places Issus north of the Pinarus. Cicero, during his proconsulship of Cilicia, led his forces against the mountaineers of the Amanus, and he was saluted as imperator at Issus, "where," he says, "as I have often heard from you, Caltarchus told you that Darius was defeated and措us, this is nothing to be got from this. (Ad Fam. i. 10.) In another passage, he says that he occupied for a few days the same camp that Alexander had occupied at Issus against Darius. (Ad Att. v. 20.) And again (Ad Fam. xiv. 20), he says that, "he encamped for four days at the roots of the Amanus, at the Arne Alexandri." If this is the same fact that he mentions in his letter to Atticus, the Arne were at Issus, and Issus was near the foot of the Amanus.

The battle between Septrimus Severus and Niger was fought (A. D. 194) somewhere about Issus; but nothing can be collected from the description of Herodian (iii. 12), except that the battle was not fought on the same ground as Alexander's, though it was fought on the gulf of Issus. Stephanus (s. r. Vero) describes it as "a city between Syria and Cilicia, where Alexander defeated Darius, which was called, for this reason, Nicopolis by him; and there is the bay called Nicopolis, and there is a river named Pinarus." Strabo, after speaking of Issus, mentions, on the Issic gulf, Rhousus, and Myrlandus, and Alexandriu, and Nicopolis, and Mopsucretia, in which description he proceeds from the Syrian side of the gulf, and terminates with Mopsucretia on the Pyranus. According to this enumeration, Nicopolis would be between Alexandriu (Scanderoon) and Mopsucretia; and it may be near Issus, or it may not. Polybius (v. 8. § 13. § 21) places Nicopolis exactly one degree north of Alexandriu and 50 north of Issus. He places Issus and Rhousus in the same longitude, and Nicopolis, Alexandriu, and Myrlandus 10° further east than Issus. The absolute truth of his numbers is immaterial. A map constructed according to Ptolemy would place Issus at the head of the gulf, and Nicopolis inland. Nicopolis is one of the cities which he enumerates among the inland cities of Cilicia Proper. In my map of Issus, then, being at the head of the gulf, and Thaurus being a fixed point in the march of Cyrus, we may now see how the matter stands with Xeno-phon's distances. Cyrus embraced 10 parages from Thaurus to the river Pears (Surus). Silius, and crossed at a place where it was 300 feet wide.
ISSUS.

From the Sarus the army marched 5 parasangs to the Pyramus, which was crossed where it was 600 Greek feet wide; and the march from the Pyramus to Issus was 15 parasangs. Accordingly, the whole distance from Tarsus to Issus was 30 parasangs. The direct distance from Tarsus to the head of the gulf is about 56 geographical miles; and these two points are very nearly in the same latitude. The modern road from Tarsus, through Adana on the Sarus, and Mopsuestia on the Pyramus, to the head of the gulf, has a general direction from W. to E. The length of Cyrus's march, from Tarsus to the Sarus, exceeds the direct distance on the map very much; if we reckon the parasangs at 3 geographical miles; for 10 parasangs are 30 geographical miles, and the direct distance to Adana is not more than 16 miles. Mr. Ainsworth infers us that the Sarus is not fordable at Adana; and Cyrus probably crossed at some other place. The march from the Sarus to the Pyramus was 5 parasangs, or 15 geographical miles; and this appears to be very nearly the direct distance from Adana to Mopsuestia (Myriandrus). But Cyrus may have crossed some distance below Mopsuestia, without lengthening his march from the Sarus to the Pyramus; and he may have done this even if he had to go lower down the Sarus than Adana to find a ford. If he did not go higher up the Pyramus to seek a ford, for the reasons which Mr. Ainsworth mentions, he must have crossed lower down than Mopsuestia. The distance from the point where the supposed old bed begins to turn to the south, to the NE. end of the gulf of Issus, is 40 geographical miles; and thus the distance of 15 parasangs from the passage of the Pyramus to Issus, is more easily reconciled with the real distance than the measurement from Tarsus to the Sarus.

The places not absolutely determined on or near the gulf of Issus, are: Myriandrus, Nicopolis, Epiphaneia, Areia, Alexandri, and Issus, though we know that Issus must have been at the head of the gulf and on it. The following extract from Colonel Chesney contains the latest information on these sites:—"About 7 miles south-eastward from the borders of Syria are the remains of a considerable city, probably those of Issus or Nicopolis, with the ruins of a temple, a part of the Acropolis, an extensive aqueduct, generally with a double row of arches, running E.S.E. and W.N.W. These, in addition to the walls of the city itself, are entirely built of lava, and still exist in considerable perfection. Nearly 14 miles southward from thence, the Dori Gulf quits the foot of the Anamuss in two branches, which, after traversing the Issic plain, unite at the foot of the mountain just previously to entering the sea. The principal of these branches makes a deep curve towards the NE., so that a body of troops occupying one side might see behind and outflank those posted on the opposite side, in which, as well as in other respects, the stream appears to answer to the Piarsus of Alexander's historians. A little southward of this river are the castle, kháin, báif, and other ruins of Bayás, once Baiae, with the three villages of Kuretar in the neighborhood, situated in the midst of groves of orange and palm trees. Again, 5 miles southward, is the pass, above noticed, of Sifkil-Turán, and at nearly the same distance onward, the fine bay and anchorage of Iskende- tràn, a convenient landing-place on a bold beach; but, in consequence of the accumulation of the sand by which the mouths of the streams descending from this part of the Anamuss are choked, a pestilential swamp extends from the very edge of the sea almost to the foot of the mountain. In the middle of the bay there are some trifling ruins, which may possibly be the site of ancient Myriandrus; and within a mile of the shore are the remains of a castle and bridge constructed by Godfrey of Bouillon." (Expedition for the Survey of the Rivers Euphrates and Tigris, vol. i. p. 488.)

There is no direct proof here that these remains are those of Issus. The aqueduct probably belongs to the Roman period. It seems most likely that the remains are those of Nicopolis, and that Issus on the coast has disappeared. Colonel Chesney's description of the bend of one of the branches of the Deli Tochatsi corresponds to Arrian's (ii. 2. § 10), who says, "Darius placed at the foot of the mountain, which was on the Persian left and opposite to Alexander's right, about 20,000 men; and some of them were on the rear of Alexander's army. For the mountain where they were posted in one place opened to some depth, and so a part became of the form of a bay on the sea. Darius then, by advancing further to the bend, brought the men who were posted at the foot of the mountain, in the rear of the right wing of Alexander.'

There still seems some doubt about the site of Myriandrus, which Mr. Ainsworth (Travel in the Track of the Ten Thousand, &c. p. 60) places about half way between Scanderouz and Elassus (Arsus); and he has the authority of Strabo, in his enumeration of the places on this coast, and that of Ptolomy, who places Myriandrus 15' south of Alexandria ad Issum. As to Arsus, he observes,—"there are many ruins, and especially a long aqueduct leading from the foot of the mountains." [G. L.]

ISTER. [DANUBIUS.]

ISTHMIUM, a small district in Thrasylos. [ZELA.-

ISTHMUS. [CORINTHUS, p. 682, seq.]

ISTONE. [CORINTIA.]

ISTONIUM. [SEYTHERBEA.]

ISTRIA (lorpia) or HISTRIA, was the name given by the Greeks and Romans to the country which still bears the same appellation, and forms a peninsula of somewhat triangular form near the head of the Adriatic sea, running out from the coast of Liburnia, between Tergeste (Trieste) and the Sinus Flaminianus, or Gulf of Quarnero. It is about 50 G. miles in length, and 35 in breadth, while the isthmus or strip of land between the two gulfs of Trieste and Quarnero, by which it is united to the mainland, is about 27 G. miles across. The name is derived both by Greek and Latin authors from the fabulous notion entertained at a very early period that one branch or arm of the Danube (the Ister of the Greeks) flowed into the Adriatic sea near its head. (Strab. l. p. 57; Plin. lit. 18. s. 22.) The deep inlets, and narrow channels, with which the coasts of the Adriatic are intersected for a considerable distance below the peninsula of Istria may have contributed to favor this notion so long as those coasts were imperfectly known; and hence we cannot wonder at Scylax speaking of a river named Istrus (which he identifies with the Danube) as flowing through the land of the Istrians (Scyl. p. 6. § 20); but it seems incredible that an author like Mela, writing in the days of Augustus, should not only speak of a river Ister as flowing into this part of the
Istria.

Istria, but should assert that its waters entered that sea with a turbulence and force similar to those of the Padus. (Mcl. ii. 3, § 13, 4, § 4.) In point of fact, there is no river of any magnitude flowing into the upper part of the Adriatic on its eastern shore which could afford even the slightest connuence to such a notion; the rivers in the peninsula of Istria itself are very trifling streams, and the dry, calcareous ridges which hem in the E. shore of the Adriatic, all the way from Trieste to the southern extremity of Dalmatia, do not admit either of the formation or the outlet of any considerable body of water. It is scarcely possible to account for the origin of such a fable; but if the inhabitants of Istria were really called Istrii (Ἰστρίοι), as their native name, which is at least highly probable, this circumstance may have first led the Greeks to assume their connection with the great river later, and the existence of a considerable amount of traffic up the valley of the Savus, and from thence by land across the Julian Alps, or Mount Ocra, to the head of the Adriatic (Strab. vii. p. 314), would tend to perpetuate such a notion.

The Istrians are generally considered as a tribe of Illyrian race (Appian, Illyr. 8; Strab. vii. p. 314; Zerus, Die Deutschen, p. 253), and the fact that they were immediately surrounded by other Illyrian tribes is the strongest reason for assuming this fact. (Seynus Chias alone calls them a Thracian tribe, but on what authority we know not. (Seynus, Ch. 393.) They first appear in history as taking part with the other Illyrians in their piratical expeditions, and Livy ascribes to them this character as early as B.C. 301 (Liv. x. 2); but the first occasion on which they are distinctly mentioned as joining in these enterprises is just before the Second Punic War. They were, however, severely punished; the Roman consuls M. Minucius Rufus and P. Cornelius were sent against them, and they were reduced to complete submission. (Enrop. iii. 7; Oras. iv. 13; Zonar. viii. 20; Appian, Illyr. 8.) The next mention of them occurs in B.C. 183, when the consul M. Claudius Marcellus, after a successful campaign against the Gauls, asked and obtained permission to lead his legions into Istria. (Liv. xxxix. 53.) It does not appear from what this line son produced any considerable result; but their piratical expeditions, together with the opposition offered by them to the foundation of the Roman colony of Aquileia, soon became the pretext of a fresh attack. (Ib. x1. 18, 26, xii. 1.) In n. c. 178 the consul A. Manlius invaded Istria with two legions; and though he at first sustained a disaster, and narrowly escaped the capture of his camp, he recovered his position before the arrival of his colleague, M. Junius, who had been sent to his support. The two consuls now attacked and defeated the Istrians; and their successor, C. Claudius, following up this advantage, took in succession the towns of Nessactum, Mutila, and Faveria, and reduced the whole people to submission. For this success he was rewarded with a triumph, n. c. 177. (Liv. xli. 1—5, 8—13; Flor. ii. 10.) The subjection of the Istrians on this occasion seems to have lasted a long time; but a few years after we find them joining the Carni and Ilypes in complaining of the exactions of C. Cassius (Liv. xiii. 5), we hear of no subsequent revolts, and the district appears to have continued tranquil under the Roman yoke, until it was incorporated by Augustus, together with Venetia and the land of the Carni, as a portion of Italy. (Strab. v. p. 215; Plin. iii. 19. s. 23.) It continued thenceforth to be always included under that name, though geographically connected much more closely with Dalmatia and Illyricum. Hence we find, in the Notitia Dignitatum, the " Consularis Venetiae et Histrinae" placed under the jurisdiction of the Vicarii Italicae. (Not. Dign. ii. pp. 5, 63.)

The natural limits of Istria are clearly marked by those of the peninsula of which it consists, or by a line drawn across from the Gulf of Trieste to that of Quarnero, near Fiume; but the political boundary was fixed by Augustus, when he included Istria in Italy, at the river Arisa or Arenza, which falls into the Gulf of Quarnero about 15 miles from the southern extremity of the peninsula. This river has its sources in the group of mountains of which the Monte Maggiore forms the highest point, and which constitutes the heart or nucleus of the peninsula, from which there radiate ranges of great calcareous hills, gradually declining as they approach the western coast, so that the shore of Istria along the Adriatic, though hilly and rocky, is not of any considerable elevation, or picturesque in feature. But the calcareous rocks of which it is composed are indented by deep inlets, forming excellent harbours; of these, the beautiful land-locked basin of Pola is particularly remarkable, and was noted in ancient as well as modern times. The mouth of the Istria was fixed by Augustus at the river Fornio, a small stream falling into the Gulf of Trieste between that city and Capo d’Istria. Pliny expressly excludes Tergeste from Istria; but Poleny extends the limits of that province so as to include both the river Fornio and Tergeste (Ptol. iii. 1. § 27); and Strabo also appears to consider the Tinavus as constituting the boundary of Istria (Strab. v. p. 215), though he elsewhere calls Tergeste “a village of the Carni” (vii. p. 314). Pliny, however, repeatedly alludes to the Fornio as having constituted the boundary of Italy before that name was officially extended so as to include Istria also, and there can be no doubt of the correctness of his statement. Istria is not a country of any great natural fertility; but its calcareous rocky soil was well adapted for the growth of olives, and its oil was reckoned by Pliny inferior only to that of Carthage (Olb. ii. 19, s. 3.) In the later ages of the Roman empire, when the seat of government was fixed at Ravenna, Istria became of increased importance, from its facility of communication by sea with that capital, and furnished considerable quantities of corn, as well as wine and oil. (Cassiod. torr. xii. 23, 24.) This was probably the most flourishing period of its history. It was subsequently ravaged in succession by the Lombards, Avars, and Slavs (P. Dair. iv. 23, 42.), but appears to have continued permanently subject to the Lombard kingdom of Italy, until its destruction in A.D. 774.

The towns in Istria mentioned by ancient writers are not numerous. Much the most important was Pola, near the extreme southern promontory of the peninsula, which became a Roman colony under Augustus. Proceeding along the coast from Tergeste to Pola were Arena, Carpis d’Istria (Pola) (P. Dair. iv. 23, 42.)...
ISTRIANORUM PICTORUM.

Tenny also mentions three towns, which he places in the interior of the country, and names Puccina, Piumantium (Pievico), and Alvol (or Alven). Of these, Piumantium may be probably identified with Piumante, a considerable place in the heart of the mountain district of the interior; and Alven with Alba (called Alba in the Tabula), which is, however, E. of the Arco, and therefore not strictly within the Roman province of Istria. In like manner the Puccina of Ptolemy is evidently the same place with the "castellum, neboles vivis, Piumantium" of Pliny (vi. 19. s. 224), which is the latter place in the territory of the Carni, between the Triunus and Teresite, and was perhaps the same with the modern Daino. Ninguna, a place mentioned in the Antonine Itinerary (p. 271) between Teresite and Parentium, cannot be determined with any certainty. The Tabula also gives two names in the NW. part of the peninsula, Quersi and Silvo (Silventum), both of which are wholly unknown. The same authority marks at three small islands off the coast of Istria, to which it gives the names of Zepo- tona (3), Otraria, and Pularia: the last is mentioned also by Pliny (iii. 26. s. 30), and is probably the rocky island, or rather group of islets, off the harbour of Pola, now known as Li Brioni. The other two cannot be identified, any more than the Oessa of Pliny (i. c.): the Asbyrtides of the same author are the larger islands in the Golfo di Quarnaro, which belong rather to Liburnia than to Istria.

ISTRIANORUM PICTORUM. [Isiacorum Portus.]

ISTRIANUS (Istroano, Ptol. iii. 6. § 3), a river of the Tauric Chersonese, which has been identified with the Kykn Tep. (Foulquier, vol. iii. pp. 1117, 1121.)

ISTRIOPOLIS, ISTROPOULIS, ISTROPOULI, ISTROPOULON, ISTROPOLIS (Istroporos, Istrapalos, or simply Istrpo: Istrae), a town of Lower Macea, at the southern extremity of lake Balaiyris, on the coast of the Euxine. It was a colony of Miletus, and, at least in Strabo's time, a small town. (Stab. iv. p. 319; Ptol. iv. 18. 24; Mela i. 2; Strab. iv. vi. 8; Herod. ii. 33; Arrian, Perip. Eur. p. 24; Graec. Civ. iv. 6; Ly, op. 74; Ptol. iii. 10. § 8; Sclioin, Franc. 22; Steph. B. s. c. Amm. Marc. xx. 8; Herod. p. 637.) It has been supposed by some of the scholars that it must have been a commercial town of some importance; of its history, however, nothing is known. Some modern writers have identified it with Kin- stante or Kostrandje, the ancient Constantia, which, however, was in all probability situated to the E. of Istropolis. [L. S.]

ISTRIUS (Istraper, a Cretan town which Artemidorus also called Istrina. (Steph. B. s. c.) the latter form of the name is found in an inscription (op. Chishall, Antig. Asiat. p. 110). The site is placed near Monos: "Among the ruined edifices and columns of this ancient city are two immense marble blocks, half buried in the earth, and measuring 54 by 15 feet." (Cornelius, Creata Sacra, vol. i. p. 11; op. Mus. Class. Antig., vol. ii. p. 273; comp. Heck, Kreta, vol. i. pp. 17, 421.) [K. B. J.]

ITALIA. COIN OF ISTRIE.

ISTURGI (Arbuzje la Vija), a city of His- ponia Baetica, in the neighbourhood of Illiterris. (Inscr. op. Florac. Esp. S. vol. vii. p. 137.) The Iparsturgi Triumphale of Pliny (iii. 1. 3) is probably the same place. (Ubert., vol. ii. p. 1. pp. 380, 381.)

ISBURIGANTUM. [Isiburium.]

Isurium, in Britain, first mentioned by Ptolemy (ii. 3. § 16) as a town of the Brigantes. It then occurs in two of the Itineraries, the 1st and 2nd. In each, it lies between Cataractonium and Eboracum (Catterick Bridge and York). Isburignium, in the 5th Itinerary, does the same.

In the time of the Saxons Isturium had already taken the name of Eild-bury (Old Town), out of which has come the present name Aldborough, near Boroughbridge, with which it is undoubtedly identified.

Roman remains, both within and without the walls, are abundant and considerable at Aldborough; the Stodhart (or Stadhirth), the Red Hill, and the Borough Hill, being the chief localities. Tesselated pavements, the foundations of large and spacious buildings, ornaments, implements, Samian ware, and coins mark the site as having been inhabited by various peoples from the Roman Empire. In particular, the town was given to Isurium an importance equal to that of York, Cirencester, and other towns of Roman importance. [R. C. G.]

ISUS ('Isos), a spot in Boiotia, near Anthedon, with vestiges of a city, which some commentators identify with the Homeric Ithaca. (Strab. ix. p. 405; Hom. Il. ii. 508.) There was apparently also a town Ithos in Megara; but the passage in Strabo in which the name occurs is corrupt. (Stab. l. c.)

ITALIA (Itraia), was the name given in ancient as well as in modern times to the country still called Italy; and was applied, from the time of Augustus, both by Greek and Latin writers, in almost exactly the same sense as at the present day. It was, however, at first merely a geographical term; the countries comprised under the name, though strongly defined by natural limits, and containing natural features being from the earliest ages preserved by different races, which were never politically united, held all over the Roman yoke, and were gradually blended, by the pervading influence of Roman institutions and the Latin language, into one common nationality.
ITALIA.

I. NAME.

The name of Italy was very far from being originally applied in the same extensive signification which it afterwards obtained. It was confined, in the first instance, to the extreme southern point of the Italian peninsula, not including even the whole of the modern Calabria, but only the southern peninsular portion of that country, bounded on the N. by the narrow isthmus which separates the Tertiary and Scythian gulfs. Such was the distinct statement of Xenophon (op. Strab. vi. p. 255); nor have we any reason to reject his testimony upon this point, though it is certain that this usage must have ceased long before the time of that historian, and is not found in any extant ancient author. At a subsequent period, and still in very early times, the appellation was extended to the whole tract along the shores of the Tarentine gulf, as far as Metapontum, and from thence across to the gulf of Poseidonia on the western seas; according to other statements, the river Liris was its northern limit on this side. (Strab. v. p. 269, vi. p. 234; Antiochus, ap. Dionys. i. 73.) This appears to have been the established usage among the Greeks in the fifth century B.C. Antiochus expressly excludes the Iapygian peninsula from Italy, and Thucydides clearly adopts the same distinction (viii. 35). The countries on the shores of the Tyrrhenian sea, north of the Pisanidion gulf, were then known only by the names of Opica and Tyrrhenia; thus Thucydides calls Cumae a city in Opica, and Aristotle spoke of Latium as a district of Opica. Even Theophrastus preserves the distinction, and speaks of the pine-trees of Italy, where those of the Brutian mountains only can be meant, as opposed to those of Latium. (Thuc. vi. 4; Arist. op. Dionys. i. 73; Theophr. H. P. v. 8.)

The name of Italy, as thus applied, seems to have been synonymous with that of Oenotria; for Antiochus, in the same passage where he assigned the narrowest limits to the former appellation, confined that of Oenotria within the same boundaries, and spoke of the Oenotrii and Itali as the same people. (op. Strab. vi. p. 254; op. Dionys. i. 12.) This is in perfect accordance with the statements which preserved the same name of Insulans and Albani or Albans, as the Greek name of Italians (Itali) from a chief of the name of Italia (Dionys. i. 12, 35; Virg. Aen. i. 533; Arist. Pol. vii. 10), as well as with the mythical genealogy according to which Italius and Oenotrus were brothers. (Serv. ad Aen. l. c.) Thucydides, who represents Italy as coming from Arcadia (vi. 2), probably adopted this last tradition, for the Oenotrians were generally represented as of Arcadian origin. Whether the two names were originally applied to the same people, or (as is perhaps more probable) the Itali were merely a particular tribe of the Oenotrians, whose name gradually prevailed till it was extended to the whole people, we have no means of determining. But in this case, as in most others, it is clear that the name of the people was antecedent to that of the country, and that Italia, in its original signification, meant merely the land of the Itali; though at a later period, by its gradual extension, it had altogether lost that national meaning. It is impossible for us to trace with accuracy the successive steps of this extension, nor do we know at what time the Romans first adopted the name of Italy as that of the whole peninsula. It would be still more interesting to know whether they received this usage from the Greeks, or found it already prevalent among the nations of Italy; but it is difficult to believe that tribes of different races, origin, and language, as the Etruscans, Umbrians, Sabellians, and Oenotrians, would have concurred in calling the country they inhabited by one general appellation. If the Greek account already given, according to which the name was first given to the Oenotrian part of the peninsula, is worthy of confidence, it must have been a word of Pelasgic origin, and subsequently adopted by the Sabellian and Ocean races, as well as by the Romans themselves.

The etymology of the name is wholly uncertain. The current tradition among the Greeks and Romans, as already noticed, derived it from an Oenotrian or Pelasgic chief, Italus; but this is evidently a mere fiction, like that of so many other eponymous heroes. A more learned, but scarcely more trustworthy, etymology derived the name from Italus or Itius, which, in Tyrrhenian or old Greek, is said to have signified an ox; so that Italy would have meant "the land of cattle." (Timaeus, op. Gall. xi. 1; Var. R. R. ii. 1, § 9.) The ancient form here cited is evidently connected with the Latin "vitulus" and it is probable that the name of the people was originally Vitus, or Vitae, in its Pelasgic form; for we find the same form retained by the Sabellians as late as the fifth century B.C., when the Samnite demarli (struck during the Social War, n. c. 90—88) have the inscription "Vitela" for Italia.

It is probably that the rapid extension of the Roman power, and the successive subjugation of the different nations of Central and Southern Italy by its victorious arms, tended also to promote the extension of the one common name to the whole; and there seems little doubt that as early as the time of Pyrrhus, this was already applied in nearly the same sense as afterwards continued to be the usage,—as comprising the whole Italian peninsula to the frontiers of Cisalpine Gaul, but excluding the latter country, as well as Liguria. This continued to be the customary and official meaning of the name of Italy from this time till the close of the Republic; and hence, even after the First Triumvirate, Gallia Cisalpina, as well as Transalpina, was allotted to Caesar as his province, a term which was never applied but to countries out of Italy, but long before the close of this period, the name of Italy would seem to have been often employed in its more extensive, and what may be termed its geographical, meaning, as including the whole land from the foot of the Alps to the Sicilian straits. Polybius certainly uses the term in this sense, for he speaks of the Romans as having subdued all Italy, except the land of the Gauls (Gallia Cisalpina), and repeatedly describes Hannibal as crossing the Alps into Italy, and designates the plains on the banks of the Rubus as in Italy. (Pol. i. 6, ii. 14. iii. 39. 54.) The natural limits of Italy are indeed so clearly marked and so obvious, that as soon as the name came to be once received as the designation of the country in general, it was almost inevitable that it should acquire this extensive; hence, though the narrow distinction between Italy and Cisalpine Gaul was retained by the Romans to the very end of the Republic, it is clear that the more extended use of the name was already familiar in common usage. Thus, already in n. c. 76, Pompeius employs the expression "in cœrœbus Italiae," of the passes of the Alps into Cisalpine Gaul (Sall. Hist. iii. 11); and Decimus Bru-
ITALIA.

us. in n. c. 43, distinctly uses the phrase of quae invitant Italiam, when he crosses the Alps. (Cicero, Pro Sest. 20.) Sallust also uses the name of Italy in the wider and more general sense, which was never thought of as excluding the province of Cisalpine Gaul, leads the later frequently to observe the official distinction. (Cass. B. G. v. 1, xi. 41, vii. 1; Cic. Phil. III. 4, v. 12.) But, indeed, had not this use of the name been already common, before it was to be officially adopted, that circumstance alone would scarcely have deduced it so familiar as we find it in the Latin writers of the Augustan age. Virgil, for instance, in celebrating the histories of Italy, never thought of excluding from that appellation the plains of Cisalpine Gaul, or the Alps at the foot of the Alps. From this time, indeed, when the rights of Roman citizens were extended to all the Cisalpine Gauds, no real distinction any longer subsisted between the different parts of Italy; but Cisalpine Gaul still formed a separate province under D. Brutus in n. c. 43 (Cic. Phil. iii. 4, 5, iv. 4, 9, &c.), and it is probable, that the name of the peninsula of Italy, the name of which is, so far as we know, purely poetical, nor can it be traced farther back than the Alexandrian writers Leuciphan and Apollonius Rhodius, who employed it familiarly (as did the Latin poets in imitation of them) as a poetical equivalent for Italy. [Auannon.]

As for the name of Saturnia, though it is found in a pretended Greek oracle cited by Dionysius (Stat. viii. 2, Dionys. i. 19), it may well be doubted whether it was ever an ancient appellation at all. Its obvious derivation from the name of the Latin god Saturns proves it to have been of native Italian, and not of Greek, invention, and probably this was the only authority that Dionysius had for saying it was the native name of Italy. But all the traditions of the Roman mythology connect Saturns so closely with Latium, that it seems almost certain the name of Saturns (if it was ever more than a poetical fabrication) originally belonged to Latium only, and was thence gradually extended by the Romans to the rest of Italy. Ennius seems to have used the phrase of "Saturns' territory" only in reference to Latium; while Virgil applies it to the whole of Italy. (Ennius, ap. Varr. l. L. v. 42; Virg. Georg. i. 173.) It is never used in either sense by Latin prose writers, though several authors state, as Dionysius did, that it was the ancient name of Italy. (Pestus, s. Saturna. p. 322; Justin. xiii. 1.)

II. BOUNDARIES AND PHYSICAL GEOGRAPHY.

There are few countries of which the boundaries are more clearly marked out by nature than those of Italy. It is well described by one of its modern poets as the land "di' Aemilia parte e l'mar circonda e l'Alpe;" and this single line at once enumerates all the principal physical features that impart to the country its peculiar physiognomy. Italy consists of a great peninsula, projecting in a SE. direction into the Mediterranean sea, and bounded on the W. by the portions of that sea commonly known as the Tyrrhenian and Sicilian seas, but comprised by the Romans under the name of Mare Inferius, or the Lower Sea; on the E. by the Adriatic, or the Upper Sea (Mare Superius), as it was commonly termed by the Romans, while to the Sw. extends inland, with a broad expansion, forming, as it were, the base or root by which it adheres to the continent of Europe, and

The name of Auannon, on the contrary, was one derived originally from one of the races which inhabited the Italian peninsula, the Aurunci of the Romans, who were known to the Greeks as the Auannon. These Auannonians were a tribe of Oicin or Osca race, and it is probable that the name of Auannon was at first applied much as that of Oicin or Osca was by Thucydides and other writers of the 5th century B. C. But, as applied to the whole peninsula of Italy, the name is, so far as we know, purely poetical; nor can it be traced farther back than the Alexandrian writers Leuciphan and Apollonius Rhodius, who employed it familiarly (as did the Latin poets in imitation of them) as a poetical equivalent for Italy.
around which sweeps the great chain of the Alps, forming a continuous barrier from the shores of the Mediterranean near Massilia to the head of the Adriatic at Trieste (Tergeste). From the western extremity of this vast mountain chain, where the ranges of the Maritime Alps abut immediately on the seas-shore, branches off the inferior, but still very considerable, chain of the Apennines, which, after sweeping round the Ligurian gulf, stretches in an unbroken line directly across to the shores of the Adriatic, and then, turning abruptly to the SE., divides the whole peninsula throughout its entire length, until it ends in the promontory of Leuco-peta, on the Sicilian sea. [APENNINUS.]

The precise limits of Italy can thus only be doubtful on its northern frontier, where the massive ranges of the Alps, though presenting, when viewed on the large scale, a vast natural barrier, are in fact indented and penetrated by deep and irregular valleys, which render it often difficult to determine the natural boundary; nor has this been always adopted as the political one. Along the coast of Liguria, between Massilia and Genua, the Maritime Alps send down successive ranges to the sea, forming great headlands, of which the most striking are: that between Novaf and Finale, commonly regarded by modern geographers as the termination of the Maritime Alps; and the promontory immediately W. of Monaco, which still bears the remains of the Tropae Anuasti, and the passage of which presents the greatest natural difficulties to the construction of a road along this coast. This mountain headland would probably be the best point to fix as the natural limit of Italy on this side, and appears to have been commonly regarded in ancient times as such; but when Augustus first extended the political limits of Italy to the foot of the Alps, he found it convenient to carry them somewhat further W., and fixed on the river Varus as the boundary; thus including Nicea, which was a colony of Massilia, and had previously been considered as belonging to Gaul. (Strab. iv. pp. 178, 184. v. p. 209; Hia. iii. 4. s. 5, s. 6, 7; d. i. 4. § 9; Itol. iii. 1 § 1; Lucan. 1. 404.)

Though this demarcation does not appear to have been always followed; for in the Itinerary of Anto-

nius Mauromerianus (p. 460.) we find the Alps Maritimi (meaning the mountain headland above described) fixed as the boundary between Italy and Gaul; it was generally adopted, and has continued without alteration to the present day.

The extreme NE. limit of Italy, at the head of the Adriatic Gulf, is equally susceptible of various determination, and here also Augustus certainly transgressed the natural limits by including Istria within the confines of Italy. (Plin. iii. 18. s. 22; 
Strab. v. p. 209, vii. p. 514.) But here, also, the reasons of political convenience, which first gave rise to this extension, have led to its subsequent adoption, and Istria is still commonly reckoned a part of Italy. The little river Formis, which flows into the Adriatic between Trieste and Copo d'Istria, was previously established as the boundary of Italy on this side: but the range of the Julian Alps, which, after sweeping round the Istrian gulf, stretches from the foot of the Apennines, and presents a continuous mountain barrier from hence to Trieste, would seem to constitute the true natural limit.

Even between these two extremities, the chain of the Alps does not always form so simple and clearly- 

marked a frontier as might at first be expected. It
banks of the Po; and so that Ariminum (Rimini), where their lowest slopes first descend to the sea-shore, is distant nearly 60 geog. miles from the mouth of that river, and it is almost as much more from thence to the foot of the Alps. It is this very plain, together with the hill-country on each side of it, formed by the lower slopes of the mountains, that constituted the country of the Cisalpine Gauls, to which the Romans gave the name of Gallia Cisalpina. The westernmost part of the same tract, including the upper basin of the Po, and the extensive hilly district, now called the Monserrato, which stretches from the foot of the Apennines to the south bank of the Po, was inhabited from the earliest periods by Ligurian tribes, and was included in Liguria, according to the Roman use of the name. At the opposite extremity, the portion of the great plain E. and N. of the Adige (Athesis), as well as the district now called the Friuli, was the land of the Veneti, and constituted the Roman province of Venetia. The Romans, however, appear to have occasionally used the name of Gallia Cisalpina, in a more lax and general sense, for the whole of Northern Italy, or everything that was not comprised within the limits of Italy as that name was understood prior to the time of Augustus. At the present day the name of Lombardy is frequently applied to the whole basin of the Po, including both the proper Gallia Cisalpina, and the adjacent parts of Liguria and Venetia.

The name of Northern Italy may be conveniently adopted as a geographical designation for the same tract of country; but it is commonly understood as comprising the whole of Liguria, including the sea-coast: though this, of course, lies on the S. side of the dividing ridge of the Apennines. In this sense, therefore, it comprises the provinces of Liguria, Gallia Cisalpina, Venetia and Istria, and is limited towards the N. by the Maera (Magra) on the W. coast, and by the Rubicon on that of the Adriatic. In like manner, the name of Central Italy is frequently applied to the middle portion, comprising the northern half of the peninsula, and extending along the W. coast from the mouth of the Maera to that of the Sileus, and on the E. from the Rubicon to the Brenta; while that of Southern Italy is given to the remaining part of the peninsula, including Apulia, Calabria, Lucania, and Bruttium. But it must be borne in mind that these names are merely geographical distinctions, for the convenience of description and reference, and do not correspond to any real divisions of the country, either natural or political.

2. Central Italy. — The country to which this name is applied differs essentially from that which lies to the N. of the Apennines. While the latter presents a broad level basin, bounded on both sides by mountains, and into which the streams and rivers converge from all sides, the centre of the Italian peninsula is almost wholly filled up by the lower ranges of the Apennines, the offsets and lateral branches of which, in some parts, descend quite to the sea, in others leave a considerable intervening space of plain or low country; but even the larger of these level tracts is insufficient as compared with the breadth of the plains of Northern Italy, to meet the claims of the Apennines, which from the neighbourhood of Ariminum assumes a generally S. direction, is very far too broad or uniform in its character. Nor can it be remedied, like the Alps or Pyrenees, as forming one continuous range, from which there

offsets of lateral arms or ranges, separated by deep intervening valleys. This is, indeed, the case, with considerable regularity, on the eastern side of the mountains, and hence the numerous rivers which descend to the Adriatic pursue nearly parallel courses at right angles to the direction of the main chain. But the central mass of the mountains, which comprises all the loftiest summits of the Apennines, is broken up and intersected by deep longitudinal valleys, sometimes-separated only by narrow ridges of moderate elevation, at others by rugged ranges rising abruptly to a height equal to that of the loftiest summits of the chain. The number of these valleys, occurring in the very heart of the Apennines, and often almost entirely enclosed by the mountains, is a feature in the physical geography of Italy which has in all ages exercised a material influence on its fortunes. The upland valleys, with their fine summer pasturages, were a necessary resource to the inhabitants of the dry plains of the south; and the peculiar configuration of these valleys opened out routes through the heart of the mountain districts, and facilitated mutual communication between the nations of the peninsula. It is especially in the southern part of the district that we are now considering that the Apennines assume this complicated and irregular structure. Between the parallels of 44° and 42° 30' N. lat. they may be regarded as forming a broad mountain chain, which has a direction nearly parallel with the line of coast of the Adriatic, and the centre of which is nowhere distant more than 40 geog. miles from the shore of that sea, while it is nearly double the same distance from that of the Tyrrhenian. Hence there remains on the W. side of the mountains an extensive tract of country, constituting the greater part of Etruria and the S. of Umbria, which is wholly distinct from the mountain regions, and consists in part of fertile plains, in part of a hilly, but still by no means mountainous, district. The great valleys of the Arno and the Tiber, the two principal rivers of Central Italy, which have their sources very near one another, but flow the one to the W. the other to the S., may be considered as the key to the geography of this part of the peninsula. Between them lies the hilly tract of Etruria, which, notwithstanding the isolation it is thrown into by some isolated summits, has nothing of the character of a mountain country, and a large part of which, as well as the portions of Umbria bordering on the valley of the Tiber, may be deservedly reckoned among the most fertile districts in Italy. South of the Tiber, again, the broad volcanic plains of Latium expand between the Apennines and the sea; and though those are interrupted by the isolated group of the Alban hills, and still more by the rugged mountains of the Velabrum, which between Teverina and Gaeta, descend quite to the sea-shore, as soon as these are passed, the mountains again recede from the sea-coast, and leave a considerable interval which is filled up by the hilly-plain of Campania.

Nothing can be more striking than the contrast presented by different parts of the countries thus comprised under the name of Central Italy. The snow still lingers in the upland pastures of Samnium and the Abruzzi, when the corn is nearly ripe in the plains of the Roman Campagna. The elevated districts of the Pelli, the Vestini, and the Marsi, were always noted for their cold and cheerful climate, and were better adapted for pasturage than the growth of corn. Even at Casalci, only 40 miles
distant from the Tyrrhenian sea, the olive would no longer flourish (Ovid, Fast. iv. 683); though it grows with the utmost luxuriance at Tiber, at a distance of little more than 15 miles, but on the southern slope of the Apennines. The richness and fertility of the Campanian plains, and the beautiful shores of the Bay of Naples, were proverbial; while the Samnite valleys, hardly removed more than a day's journey towards the interior, had all the characters of highland scenery. Nor was this contrast confined to the physical characters of the regions in question: the rude and simple mountaineers of the Sabine or Marsic valleys were not less different from the luxurious inhabitants of Etruria and Campania, and their frugal and homely habits of life are constantly alluded to by the Roman poets of the empire, when nothing but the memory remained of those warlike virtues for which they had been so distinguished at an earlier period.

Central Italy, as the term is here used, comprised the countries known to the Romans as Etruria, Umbria (including the district adjoining the Adriatic previously occupied by the Galli Senones), Regnium, Vestini, Marsiaci, Peligni, Marucini, and Frusani, all Samnium, together with Latium (in the widest sense of the name) and Campania. A more detailed account of the physical geography of these several regions, as well as of the people that inhabited them, will be found in the respective articles.

3. Southern Italy, according to the distinction above established, comprised the southern part of the peninsula, from the river Silarus on the W., and the Frente on the E., to the Iapygian promontory on the Ionian, and that of Leucepetra towards the Sicilian sea. It thus includes the four provinces or districts of Apulia, Calabria (in the Roman sense of the name), Lucania, and Bruttium. The physical geography of this region is in great part determined by the chain of the Apennines, which, from the frontiers of Samnium, is continued through the heart of Lucania in a broad mass of mountains, which is somewhat narrowed as it enters the Bruttian peninsula, but soon spreads out again sufficiently to fill up almost the whole of that district from shore to shore. The extreme southern mass of the Apennines forms, indeed, a detached mountain range, which in its physical characters and direction is more closely connected with the mountains in the N.E. of Sicily than with the proper chain of the Apennines [Apennines]; so that the notion entertained by many ancient writers that Sicily had formerly been joined to the mainland at Rhegium, though wholly false with reference to historical times, is undoubtedly true in a geological sense. The name of the Apennines is, however, universally given by geographers to the whole range which terminates in the bold promontory of Leucepetra (Capo dell'Africa). East of the Apennines, and S. of the Frente, there extends a broad plain from the foot of the mountains to the sea, forming the greater part of Apulia, or the tract now known as Puglia pianA while. S. of this, an extensive tract of hilly country (not, however, rising to any considerable elevation) branches off from the Apennines near Venusium, and extends along the frontiers of Apulia and Lucania, till it approaches the sea between Egnatia and Brundisium. The remainder of the provinces of Calabria or Messapia, though it may be considered in some degree as a continuation of the same tract, presents nothing that can be called a range of hills, much less of mountains, as it is erroneously represented on many maps. [Calabria.] Between the central mass of the Apennines (which occupies the heart of Lucania) and the Gulf of Tarentum, there is another broad and hilly tract, gradually descending as it approaches the shores of the gulf, which are bordered by a strip of alluvial plain, varying in breadth, but nowhere of great extent.

The Apennines do not attain to so great an elevation in the southern part of the Italian peninsula as in its more central regions; and, though particular summits rise to a considerable height, we do not here meet with the same broad mountain tracts or upland valleys as further northward. The centre of Lucania is, indeed, a rugged and mountainous country, and the lofty groups of the Monti della Maddalena, S. of Potenza, the Mt. Pollino, on the frontiers of Bruttium, and the Sila, in the heart of the latter district, were evidently, in ancient as well as modern times, wild and seceded districts, almost inaccessible to civilization. But the coasts both of Lucania and Samnium were regions of beauty and fertility; and the tract extending along the shores of the Tarentine gulf, though now wild and desolate, is cited in ancient times as an almost proverbial instance of a beautiful and desirable country. (Archil. ap. Athen. xii. p. 523.) The peninsula of Calabria or Messapia, as already remarked by Strabo, notwithstanding the absence of streams and the apparent aridity of the soil, is in reality a district of great fertility, as is also the tract which extends along the coast of the Adriatic from Etna to the mouth of the Ausodus; and, though the plains in the interior of Apulia are dry and dusty in summer, they produce excellent corn, and are described by Strabo as "brinching forth all things in great abundance." (Strab. vi. p. 284.)

The general form and configuration of Italy was well known to the ancient geographers. Polybius, indeed, seems to have had a very imperfect notion of it, or was singularly unhappy in his illustration; for he describes it as of a triangular form, having the Alps for its base, and its two sides bounded by the sea, the Ionian and Adriatic on the one side, the Tyrrhenian and Sicilian on the other. (Vol. ii. 14.) Strabo justly objects to this description, that Italy cannot be called a triangle, without allowing a degree of curvature and irregularity in the sides, which would destroy all resemblance to that figure; and that it is, in fact, wholly impossible to compare it to any geometrical figure. (Strab. v. p. 210.)

There is somewhat more truth in the resemblance suggested by Pliny,—and which seems to have been commonly adopted, as it is referred to also by Tacticus (Plin. iii. 5. s. 6; Rutil. Itin. ii. 17) — to the leaf of an oak-tree, though this would imply that the projecting portions or promontories on each side were regarded as more considerable than they really are. With the exception of the two great peninsulas or promontories of Calabria (Messapia) and Bruttium, which are attached to its lower extremity, the remainder of Italy, from the Padus and the Maeca southwards, has a general oblong form; and Strabo truly enough describes it, when thus considered, as much about the same shape and size with the Adriatic Sea. (Strab. v. p. 211.)

Its dimensions are very variously stated by ancient writers. Strabo, in the comparison just cited, calls it little less than 6000 stadia (600 geo. miles) long, and about 1300 stadia in its greatest breadth;
of the latter measurement is almost exact, but the former much overstated, as he is speaking there of Italy exclusive of Cisalpine Gaul. The total length of Italy (in the wider sense of the word), from the foot of the Alps near Aosta (Augusta Praetoria) to the Illyrian promontory, is about 620 geog. miles, as measured in a direct line on a map; but from the same point to the promontory of Leccepeira, which is the extreme southern point of Italy, is above 660 geog. miles. Pliny states the distance from the same starting-point to Rhegium at 1020 M. P., or 816 geog. miles, which is greatly overstated, unless we suppose him to follow the windings of the road instead of measuring the distance geographically. (Plin. iii. 5. s. 6.) He also states the greatest breadth of Italy, from the Varn to the Asia, at 410 M. P., which is very nearly correct; the actual distance from the Varns to the head of the Allitaric, measured in a straight line, being 300 geog. miles. (375 M. P.), while from the thee to the Asia is about 50 geog. miles. Pliny adds, that the breadth of the peninsula, from the mouth of the Tiber to those of the Aternum, is 136 M. P., which considerably exceeds the truth for that particular point; but the widest part of the peninsula, from Aranoi across to the Monte Arcentaro, is 130 geog., or 162 Roman, miles.

111. Climate and Natural Productions.

Italy was not less renowned in ancient than in modern times for its beauty and fertility. For this it was indebted in great part to its climate, combined with the advantages of its physical configuration. Extending from the parallel of 30° N. lat. to 46° 30', its southern extremity enjoyed the same climate with Greece, while its northern parts were covered with snow, and the Alban hills as covered with it on the first approach of winter (Hor. Carm. i. 9. Ep. i. 7. 10); and Juno was alluded to the Tiber being covered with ice, as if it were an ordinary occurrence (vi. 522). Some allowance may be made for poetical exaggeration; but still it is probable that the climate of Italy was somewhat colder, or rather that the winters were more severe than they now are, though this remark must be confined within narrow limits; and it is probable, that the change which has taken place is far more in favour than in Gaul or Germany.

Great stress has also been laid by many modern writers upon the fact that populous cities then existed, and a thriving agricultural population was found, on sites and in districts now desolated by malaria: and hence it is inferred that the climate has become much more unhealthy in modern times. But population and cultivation have in themselves a strong tendency to repress the causes of malaria. The fertile districts on the coasts of Southern Italy once occupied by the flourishing Greek colonies are now pestilential wastes; but they became almost desolate from other causes before they grew so unhealthy. In the case of Paestum, a marked diminution in the effects of malaria has been perceived, even from the slight amount of population that has been attracted thither since the site has become the frequent resort of travellers, and the partial cultivation that has resulted from it. Nor can it be asserted that Italy, even in its most flourishing days, was ever free from this scourge, though particular localities were undoubtedly more healthy than at present. Thus, the Maremma of Tuscany was noted, even in the time of Pliny, for its insalubrity (Plin. Ep. v. 6); the neighbourhood of Arezo was almost uninhabitable from the same cause, at a still earlier
The volcanic district of Rome, as we may term the more northern part, is about 10 miles in breadth; while that of Campania is about 60 miles long, with an average, though very irregular, breadth of 20. North of the former lie the detached summits of Mt. Amiata and Radiofani, both of them composed of volcanic rocks; while at a distance of 60 miles E. of the Campanian basin, and separated from it by the intervening mass of the Apennines, is situated the isolated volcanic peak of Mt. Vultur (Volturn), a mountain whose regular conical form, and the great crater-shaped basin on its northern flank, at once prove its volcanic character; though this also, as well as the volcanoes of Latium and Etruria, has displayed no signs of activity within the historical era. (Baccony, On Volcanoes, ch. xi.)

It is scarcely necessary to enumerate in detail the natural productions of Italy, of which a summary view has already been given in the passages cited from ancient authors, and the details will be found under the heads of the several provinces. But it is worth while to observe how large a portion of those productions, which are at the present day among the chief objects of Italian cultivation, and even impor to its scenery some of its most peculiar characters, are of quite modern introduction, and were wholly unknown when the Greek and Roman writers were extolling its varied resources and inexhaustible fertility. To this class belong the maize and rice so extensively cultivated in the plains of Lombardy, the oranges of the Ligurian coast and the neighbourhood of Naples, the ales and cactuses which clothe the rocks on the sea-shore in the southern provinces; while the mulberry tree, though well known in ancient times, never became an important object of culture until after the introduction of the silk-worm in the 15th century. Of the different kinds of fruits known to the ancient Romans, many were undoubtedly of exotic origin, and of some the period of their introduction was recorded; but almost all of them thrrove well in Italy, and the gardens and orchards of the wealthy Romans surpassed all others then known in the variety and excellence of their produce. At the same time, cultivation of the more ordinary descriptions of fruit was so extensive, that Varro remarks: "Abhorrentius comestivus est, ut tota postea videatur," (B. R. i. 245). Almost all ancient writers concur in praising the metallic wealth of Italy; and Pliny even asserts that it was, in this respect also, superior to all other lands; but it was generally believed that the government intentionally discouraged the full exploration of these mineral resources. (Plin. iii. 20. s. 24, xxxvii. 13. s. 77; Strab. vi. p. 286; Dionys. i. 57; Virg. Georg. ii. 165.) It is doubtful whether this policy was really designed to husband their wealth or to conceal their poverty; but it is certain that Italy was far from being really so rich in metallic treasures as was supposed, and could bear no comparison in this respect with Spain. Gold was unquestionably found in some of the streams which flowed from the Alps, and in some cases (as among the Istrian and Salassi) was extracted from them in considerable quantities; but these workings, or rather washings, appear to have been rapidly exhausted, and the gold-works on the frontiers of Noricum, celebrated for their richness by Polybius, had ceased to exist in the days of Strabo. (Strab. iv. p. 218.) Silver is enumerated, also, among the metallic treasures of
ITALIA.

Italy; but we have no specific account of its production, and the fact that silver money was unknown to the ancient nations of Italy sufficiently shows, that it was not found in any great quantity. The early coinage of Italy was of copper, or rather brass; and silver metal appears to have been extracted in large quantities, and applied to a variety of purposes by the Etruscans, from a very early period. The same people were the first to explore the iron mines of Lycia, which continued to be assiduously worked by the Romans; though the metal produced was thought inferior to that of Noricum. Of other minerals, cinna
dar (minimum) and calamine (cad-
mimium) are noticed by Pliny. The white marble of Lucca, also, was extensively quarried by the Romans, and seems to have been recognised as a superior material for sculpture to any of those derived from Greece.

IV. RIVERS, LAKES, AND MOUNTAINS.

The configuration of Italy is unfavourable to the formation of great rivers. The Padus is the only stream which deserves to rank among the principal rivers of Europe; even the Armys and the Ticinus, celebrated as are their names in history, being inferior in magnitude to that of Noricum. Of other minerals, cinna

dar (minimum) and calamine (cad-
mimium) are noticed by Pliny. The white marble of Lucca, also, was extensively quarried by the Romans, and seems to have been recognised as a superior material for sculpture to any of those derived from Greece.

The Padus, or Po, is by far the most important river of Italy, flowing from W. to E. through the very midst of the great basin or trough of Northern Italy, and receiving, in consequence, from both sides, all the waters from the southern declivities of the Alps, as well as from the northern slopes of the Apennines. Hence, though its course does not ex
ceed 380 miles, its limits and the direct distance from its sources in the Monti Velinius (Mt. V咬a) to its mouth in the Adriatic is only 230 miles, the body of water which it brings down to the sea, is very large. Its principal tributaries are as follows, beginning with those on the N. bank, and proceeding from W. E.:

(1) the Daria Minus (Dairin Ripar
ria), which joins the Po near Turin; (2) the Stura (Staro); (3) the Organ (Oro), (4) the S. Minus, or Dora Beltis; (5) the Ses-
sites (Seson); (6) the Ticino (Ticino); (7) the Lapi
urs (Lauber); (8) the Adria (Adria); (9) the Olim (Oylo); (10) the Mincus (Mincio). Equally numerous, though less important in volume and magnitude, are its tributaries from the S. side, the chief of which are:— (1) the Tanaro (Turano), flowing from the Maritime Alps, and much the most considerable of the southern rivers of the Po; (2) the Trebia (Trebbia); (3) the Taras (Taros); (4) the Ticins (Enza); (5) the Gabelli (Secchia); (6) the Sculena (Sarano); (7) the Reno (Reno); (8) the Vatrems (Vaterena). (Plin. lli. 16. s. 20.)

The first river which, descending from the Alps, does not join the Padus, is the Alps or Adige, which in the lower part of its course flows nearly parallel with the greater river for a distance of about 50 miles. E. of this, and flowing from the Alps direct to the Adriatic, come in succession, the Me

doscan or druna, the Plata or Piave, the Tia

vens (Tievens), and the Stura (Stura). Besides many smaller streams, which will be noticed under the article VENETIA.

Liguria, S. of the Apennines, has very few streams worthy of notice, the mountains here approaching so close to the coast as to leave but a short course for their waters. The most considerable are, the Varus (Varo), which forms the western limit of the province; the Batobba (Bajo), flowing through the land of the Umbrians, to the Maera (Mago), which divides Liguria from Etruria.

The rivers of Central Italy, as already mentioned, all take their rise in the Apennines, or the mountain groups dependent upon them. The two most im
portant of these are the Armys (Arno) and Tiberis (Tevere). The Ausar (Secchio), which now pursues an independent course to the sea a few miles N. of the Armys, was formerly a confluent of that river. Of the smaller streams of Etruria, which have their sources in the group of hills that separate the basin of the Armys from that of the Tiber, the most con
siderable are the Coccins (Cecins), the Umbro (Ombrone), and the Arminia (Fiora). The great valley of the Tiber, which has a general southerly direction, from its sources in the Apennines on the confines of Etruria and Umbria to its mouth at Ostia, a distance in a direct line of 400 geog. miles, is the most important physical feature of Central Italy. That river receives in its course many tribu
	ary streams, but the only one which is important in a geographical point of view are the Clans, the Nar, and the Asio. Of these the Nar brings with it the waters of the Velinius, a stream at least as considerable as its own.

South of the Tiber are the Luins (Gargliano or Livio), which has its sources in the central Apen
nines near the lake Fucinus; and the Vultur
sus (Vutturarum), which brings with it the collected waters of almost the whole of Samnium, receiving near Beneventum the tributary streams of the Calor (Calore), the Sabatus (Solbeto), and the Tanaro (Tumaro). Both of these rivers flow through the plain of Campania to the sea; south of that province, and separating it from Lucania, is the Silurus (Sale), which, with its tributaries the Calor (Calore) and Tanger (Negro), drains the western valleys of the Lucanian Apennines. This is the last river of any magnitude that flows to the western coast of Italy; further to the S. the Apennines approach so near to the shore that the streams which descend from them to the sea are mere mountain torrents of trifling length and size. One of the most con
siderable of them is the Laus (Lui), which forms the limit between Lucania and Bruttium. The other minor streams of those two provinces are enumerated under their respective articles.

Returning now to the eastern or Adriatic coast of Italy, we find, as already noticed, a large number of streams, descending from the Apennines to the sea, but few of them of any great magnitude, though those which have their sources in the highest parts of the range are formidable torrents at particular seasons of the year. Beginning from the frontiers of Cisalpine Gaul, and proceeding from N. to S., the most im
portant of these rivers are:— (1) the Arminus (Mareccio); (2) the Crastunus (Crauca); (3) the Picenus (Puglia); (4) the Metaurus (Metoaro);
ITALIA.

(5) the Aeolis (Esitia); (6) the Potentia (Potenza); (7) the Flusor (Chienti); (8) the Treuntus (Trento); (9) the Vonnamus (Vomano); (10) the Aternum (Aterno or Pescara); (11) the Sagrus (Sagro); (12) the Treuntus by the Tiberius (Fiumefreddo); (14) the Fento (Furtore); (15) the Cerbalus (Cerreta); (16) the Auidsus (Ostia), which has much the longest course of all the rivers falling into the Adriatic.

Beyond this, not a single stream worthy of notice flows to the Adriatic; those which have their sources in the central Alpines of Lucania all descending towards the Tarentine gulf; these are, the Bradanus (Bredano), the Casmentus (Bassiano), the Arcis (Apra), and the Siris (Sinuo). The only rivers of Bruttium worthy of mention are the Crathis (Crati) and the Neathus (Neto).

(The minor streams and those noticed in history, but of no geographical importance, are enumerated in the descriptions of the several provinces.)

The Italian lakes may be considered as readily arranging themselves into three groups:—1. The lakes of Northern Italy, which are on a far larger scale than any of the others, are all basins formed by the rivers which descend from the high Alps, and the waters of which are arrested just at their exit from the mountains. Hence they are, as it were, valleys filled with water, and are of elongated form and considerable depth; while their superfluous waters are carried off in deep and copious streams, which become some of the principal feeders of the Po. Such are the Lakes Verbanus (Lago Maggiore), formed by the Ticino; the Lake Labus (Lago di Como), by the Adda; the Lacus Sebinus (Lago d'Iseo), by the Ollius; and the Lacus Benacus (Lago di Garda), by the Mincius. To these Phiny adds the Lacus Eupilis, from which flows the Lamber or Lambro, a very trifling sheet of water (Phin. iii. 19. s. 23); while neither he, nor any other ancient writer, mentions the Lago di Lagunae, situated between the Lake of Como and Lago Maggiore, though it is inferior in magnitude only to the three great lakes. It is first mentioned by Gregory of Tours in the 6th century, under the name of Cesius Lacus, an appellation probably ancient, though not now found in any earlier author. 2. The lakes of Central Italy are, with few exceptions, of volcanic origin, and occupy the craters of long extinct volcanoes. Hence they are mostly of circular or oval form, of no great extent, and, not being fed by perennial streams, either require no natural outlet, or have their surplus waters carried off by very inconsiderable streams. The largest of these volcanic lakes is the Lacus Vulciniensis, or Lago di Bolsena, in Southern Etruria, a basin of about 30 miles in circumference. Of similar character and origin are, the Lacus Sabatinus (Lago di Bracciano) and Lacus Cininna (Lago di Vico), in the same district; the Lacus Alenus (Lago d'Albano) and Lacus Nemoresis (Lago di Nemi), in Latium; and the Lake Avernus in Campania. 3. Wholly differing from the preceding are the two most considerable lakes in this portion of Italy, the Lacus Trasimenus (Lago di Perugia) and Lacus Fucinus (Lago Fucino or Lago di Celano); both of which are basins surrounded by hills or mountains, leaving no natural outlet for their waters, but wholly unconnected with volcanic agency.

The most lying almost exclusively to either the great chain of the Alps, which bounds it on the N., or to that of the Apennines. The principal summits of the latter range have already been noticed under the article APENNINUS. The few outlying or detached summits, which do not properly belong to the Apennines are:—(1) the Monte Amani or Monte di Santa Fiora, in the heart of Etruria, which rises to a height of 4794 feet; (2) the Mons Ciminus, a volcanic group of very inferior elevation; (3) the Mons Albans, rising to above 3000 feet; (4) the Mons Vesuvius, in Campania, attaining between 3000 and 4000 feet; (5) the Mons Velite, on the opposite side of the Apennines, which measures 4333 feet; and (6) the Mons Garganites, an isolated mass, but geologically connected with the Apennines, while all the preceding are of volcanic origin, and therefore geologically, as well as geographically, distinct from the neighboring Apennines.

To these may be added the two isolated mountain promontories of the Mons Argentarius (Monte Argentario) on the coast of Etruria, and Mons Circeus (Monte Circeolo) on that of Latium,—both of them rising like rocky islands, joined to the mainland only by low strips of alluvial soil.

IV. ETHNOGRAPHY OF ANCIENT ITALY.

The inquiry into the origin and affinities of the different races which peopled the Italian peninsula before it fell altogether under the dominion of Rome, and the national relations of the different tribes with which the rising republic came successively into contact, is a problem which has more or less attracted the attention of scholars ever since the revival of letters. But it is especially of late years that the impulse given to comparative philology, combined with the spirit of historical criticism, has directed their researches to this subject. Yet, after all that has been written on it, from the time of Niebuhr to the present day, it must be admitted that it is still enveloped in great obscurity. The scantiness of the monuments that remain to us of the languages of these different nations; the various and contradictory statements of ancient authors concerning them; and the uncertainty, even with regard to the most apparently authentic of these statements, on what authority they were really founded; combine to embarrass our inquiries, and lead us to mistrust our conclusions. It will be impossible, within the limits of an article like the present, to enter fully into the discussion of these topics, or examine the arguments that have been brought forward by different writers upon the subject. All that can be attempted is to give such a summary view of the most probable results, as will assist the student in forming a connected idea of the whole subject, and enable him to follow with advantage the researches of other writers. Many of the particular points here briefly referred to will be more fully investigated in the several articles of the different regions and races to which they relate.

Leaving out of view for the present the inhabitants of Northern Italy, the Gauls, Ligurians, and Veneti, the different nations of the peninsula may be grouped under five heads:—(1) the Pelasgians; (2) the Oceanians; (3) the Sabellians; (4) the Umbrians; (5) the Etruscans.

1. PELASGIANS.—All ancient writers concur in ascribing a Pelasgic origin to many of the most ancient tribes of Italy, and there seems no reason to doubt that a large part of the popular notion of the peninsula was really of Pelasgic race, that is to say, that it belonged to the same great nation or family
which formed the original population of Greece as well as that of Epirus and Macedonia, and of a part at least of Thrace and Asia Minor. The statements and arguments upon which this inference is based are more fully discussed under the article Pelasgi.

It may here suffice to say that the general fact is put forward prominently by Dionysius and Strabo, and has been generally adopted by modern writers from Niebuhr downwards. The Pelasgian population of Italy appears in historical times principally, and in its unmixed form solely, in the southern part of the peninsula. But it is impossible to judge that it had, as was reported by traditions current in the days of the earliest historians, once time extended much more widely, and that Pelasgian tribes had been gradually pressed towards the south by the successively advancing mixed population, which appear under the name of the Oscans, or Oenotrians, and the Sclerilians. At the time when the first Greek colonies were established in Southern Italy, the whole of the country is properly known as Lucania and Bruttium was occupied by a people whom the Greeks called Oenotrians (Oenotrioi), and who are generally represented as a Pelasgian race. Indeed we learn that the Pelasgians themselves continued to call this people, though they had reduced to a state of servitude, Pelasgian (Strab. vi. 18. B. 2). We find, however, traces of the tradition that this part of Italy was at one time peopled by a tribe called Siculi, who are represented as passing over from thence into the island to which they gave the name of Sicily, and where alone they are found in historical times. (Strab. v. 115.) The name of these Siculi is found also in connexion with the earliest population of Latium (Latiun); both there and in Oenotria they are represented by some authorities as a branch of the Pelasgian race, while others regard them as a distinct people. In the latter case we have no clue whatever to their origin or national affinities.

Next to the Oenotrians come the Messapians or Inapians, who are represented by the Greek legends and traditions as of Pelasgic or Greek descent; and there seem certain grounds for assuming that the tradition was correct, though no value can be attached to the mythical legends connected with it by the literature of early Greek historians. Pelasgianmen, to whom a Pelasgic origin is thus assigned, are the Messapians and Sclerilians, in the Inapian people, and the Peucetians and Danii, in the country called by the Romans Apulia. A strong confirmation of the inference derived in this case from other authorities is found in the traces still remaining of the Messapian dialect, which appears to have borne a close affinity to Greek, and to have obtained such only in much the same degree as the Messapian and other eastern dialects. (Moormer, loc. cit. I. 8. Schwab.)

It is far more difficult to trace with any security the Pelasgic population of Central Italy, where it appears to have been very early blended with other national elements, and did not anywhere subsist in an unmixed form within the period of historical record. But various as have been the theories and conclusions to which the part of Etruria seems to be so good ground for assuming that the important element, both of the people and language, was Pelasgic, and that this element was predominant in the southern part of Etruria, while it was more to be and had been comparatively effaced in the northern districts. (Italici.)

The very name of Tyrrhenians, universally given by the Greeks to the inhabitants of Etruria, appears indisputably connected with that of Pelasgiacs; and the evidence of language affords some curious and interesting facts in corroboration of the same view. (Donat. C. iv. 7. v. 3. vi. 3. vii. 7. iv. 5. viii. 5. Pellegr. pp. 112—113.)

If the Pelasgic element was thus prevalent in Southern Etruria, it might naturally be expected that its existence would be traceable in Latium also; and accordingly we find abundant evidence that one of the component ingredients in the population of Latium was of Pelasgic extraction, though this did not subsist within the historical period in a separate form, but was already indissolubly blended with the other elements of the Latin nationality. (Lati.) The evidence of the Latin language, as pointed out by Niebuhr, in itself indicates the combination of a Greek or Pelasgic race with one of a different origin, and closely akin to the other nations with which we find predominant in Central Italy, the Umbrians, Oscans, and Sabines.

There seems to be also sufficient proof that a Pelasgic or Tyrrhenian population was at an early period settled along the coasts of Campania, and was probably at one time conterminous and connected with that of Lucania, or Oenotria; but the notices of these Tyrrhenian settlements are rendered obscure and confused by the circumstance that the Greeks applied the same name of Tyrrhenians to the Etruscans, who subsequently made themselves masters for some time of the whole of this country. (Campania.)

The notices of any Pelasgic population in the interior of Central Italy are so few and vague as to be scarcely worthy of investigation; but the traditions collected by Dionysius from the early Greek historians distinctly represent them as having been at one time settled in Northern Italy, and especially point to Spina on the Adriatic as a Pelasgic city. (Dionys. i. 17—21; Strab. v. p. 214.) Nevertheless it hardly appears probable that this Pelasgic race formed a permanent part of the population of these regions. The traditions in question are more fully investigated under the article Pelasgi. There is some evidence also, though very vague and indefinite, of a Pelasgic population on the coast of the Adriatic, especially on the shores of Picenum. (These notices are collected by Niebuhr, vol. i. pp. 49, 50, and are discussed under Picenum.)

2. Oscans. — At a very early period, and certainly before the commencement of historical record, a considerable portion of Central Italy appears to have been in the possession of a people who were called by the Greeks Opicans, and by the Latins Oscans, and when we are led to identify also with the Ausonians [Asiotes] the Greeks, and the Ausonians of Roman writers. From them was derived the name of Opician or Opica, which appears to have been the usual appellation, in the days both of Tuscylides and Aristotle, for the central portion of the peninsula, or the country north of what was then called Italy. (Tusc. l. 4.; Arist. Pol. vii. 10.) All the earliest authorities concur in representing the Oscans as the earliest inhabitants of Campania, and they were still in possession of that fertile district when the Greek colonies were planted there. (Strab. v. p. 242.) We find also statements which have every character of authenticity, that this same people then occupied the mountainous region after-
words called Samnium, until they were expelled, or rather subdued, by the Sabine colonists, who assumed the name of Samnites. (Id. p. 250.)

[Samnium.] Whether they were more widely extended we have no positive evidence; but there seems a strong presumption that they had already spread themselves through the neighbouring districts of Italy. Thus the Hirpini, who are represented as a Samnite or Sabellian colony, in all probability founded an Oscan population established in that country, as did the Samnites proper in the more northern provinces. There are also strong arguments for regarding the Volscians as of Oscan race, as well as their neighbours and inseparable allies the Aequians. (Niebuhr, vol. i. pp. 70—73; Donaldson, Varro-Wiess, pp. 4, 5.) It was probably also an Oscan tribe that was settled in the highlands of the Apennines about Rome, and which from thence descended into the plains of Latium, and constituted one important element of the Latin nation. [Latium.] It is certain that, if that people was, as already mentioned, in part of Pelasgic origin, it contained also a very strong admixture of a non-Pelasgic race; and the analogy of language leads us to derive this latter element from the Oscan. (Donaldson, Le.) Indeed the extent monuments of the Oscan language are sufficient to prove that it bore a very close relation to the oldest form of the Latin; and Niebuhr justly remarks, that, had a single book in the Oscan language been preserved, we should have had little difficulty in deciphering it. (Niebuhr, vol. i. p. 68.) It is difficult to determine the precise relation which this primitive Oscan race bore to the Sabines or Sabellians. The latter are represented as conquerors, making themselves masters of the countries previously occupied by the Oscans; but, both in Samnium and Campania, we know that the language spoken in historical times, and even long after the Roman conquest, was still called Oscan; and we even find the Samnites carrying the same language with them, as they gradually extended their conquests, into the furthest recesses of Bruttium. (Fest. s. v. Bilicraggi, Brutt. p. 35.) There seems little doubt that the Samnite conquerors were a comparatively small body of warriors, who readily adopted the language of the people whom they subdued, like the Normans in France, and the Lombards in Northern Italy. (Niebuhr, vol. i. p. 67.) But, at the same time, there are strong reasons for supposing that the language of the Sabines themselves, and therefore that of the conquering Sambian race, was not radically distinct from that of the Oscans, but that they were in fact cognate dialects, and that the two nations were members of the same family or race. The questions concerning the Oscan language, so far as it is known to us from existing monuments, are more fully adverted to under the article Osci; but it must be borne in mind that all such monuments are of a comparatively late period, and represent only the Sabello-Oscan, or the language spoken by the combined people, long after the two races had been blended into one; and that we are almost wholly without the means of distinguishing what portion was derived from the one source or the other.

3. The Sabellians.—This name, which is sometimes used by ancient writers as synonymous with that of the Sabines, sometimes to designate the Samnites in particular (Plin. iii. 12. s. 17; Virgil, Georg. ii. 167; Hor. Sat. i. 9. 29, ii. 1. 36; Heindorl. ad loc.), is commonly adopted by modern historians as a general appellation, including the Sabines and all those races or tribes which, according to the distinct traditions of antiquity, derived their origin from them. These traditions are of a very different character from most of those transmitted to us, and have apparently every claim to be received as historical. And though we have no means of fixing the date of the migrations to which they refer, it seems certain that these cannot be carried back to a very remote age; but that the Sabellian races had not very long been established in the extensive regions of Central Italy, where we find them in the historical period. Their extension still further to the S. belongs distinctly to the historical age, and did not take place till long after the establishment of the Greek colonies in Southern Italy.

The Sabines, properly so called, had their original abodes, according to Cato (ap. Dionys. ii. 49), in the lofty ranges of the central Apennines and the upland valleys about Amaterrus. It was from thence that, descending towards the western sea, they first began to press upwards the Aborigines, an Oscan colony which they expelled from the valleys about Bronte, and thus gradually extended themselves into the country which they inhabited under the Romans, and which still preserves its ancient name of La Sabina. But, while the nation itself had thus shifted its quarters nearer to the Tyrrhenian Sea, it had sent out at different periods colonies or bodies of emigrants, which had established themselves to the E. and S. of their original abodes. Of these, the most powerful and celebrated were the Samnites (Sumeri), a people who are universally represented by ancient historians as descended from the Sabines (Strab. v. p. 250; Fest. v. Samnites; Varr. L. L. vii. § 29) and this tradition, in itself sufficiently trustworthy, derives the strongest confirmation from the fact already noticed, that the Romans applied the name of Sabelli (obviously only another form of Sabini) to both nations indiscriminately. It is in true that the Samnites called themselves Sabini, or Savini, for the Oscan name "Sabini" is found on coins struck during the Social War, in which all probability belonged to the Samnites, and certainly not to the Sabines proper. Equally distinct and uniform are the testimonies to the Sabine origin of the Piceni or Picutes (Plin. iii. 13. s. 18; Strab. v. p. 240), who are found in historical times in possession of the fertile district of Picenum, extending from the central chain of the Apennines to the Adriatic. The Peligni also, as we learn from the evidence of their native poet (Ovid, Fast. iii. 92), claimed to be of Sabine descent; and the same may fairly be assumed with regard to the Vestini, a tribe whom we find in historical times occupying the very valleys which are represented as the original abodes of the Sabines. We know nothing historically of the origin of this people, more than of their neighbours the Marrucini; but we find them both of them quite so frequently with the Peligni and the Marsi, that it is probable the four constituted a common league or confederation, and this in itself raises a presumption that they were kindred races. Cato already remarked, and without doubt correctly, that the name of the Marrucini was directly derived from that of

ITALIA. 5.
ITALIA,

the Marsi (Cato, *ap. Priscian. ix. 9); and there can be no doubt that the same relation subsisted between the two nations: but we are wholly in the dark as to the origin of the Marsi themselves. Several circumstances, however, combine to render it probable that they were closely connected with the Sabines, but whether as a distinct offshoot from that people, or that the two proceeded from one common stock, we have no means of determining. [MARS.] The Frumenti, on the other hand, are generally represented as a Samnite race; indeed, both they and the Hirpini were so closely connected with the Samnites, that they are often considered as forming only a part of that people, though at other times they figure as independent and separate nations. But the traditions with regard to the establishment of the Hirpini and the origin of their name [Hirpini], seem to indicate that they were the result of a separate migration, subsequent to that of the body of the Samnites. South of the Hirpini, again, the Lucanians are universally described as a Samnite colony, or rather a branch of the Samnites, who extended their conquering arms over the greater part of Etruria, and even Australia, called by the Greeks Oesotria, and thus came into direct collision with the Greek colonies on the southern coasts of Italy. [MAGNA GARGULA.] At the height of their power the Lucanians even made themselves masters of the Bruttian peninsula; and the subsequent revolt of the Bruttii did not clear that country of these Sabellian invaders, the Bruttian people being apparently a mixed population, made up of the Lucanian conquerors and their Samnite overlords. [BRUTTII.] While the Samnites and their Lucanian progeny were thus extending their power on the S. to the Sicilian strait, they did not omit to make themselves masters of the fertile plains of Campania, which, together with the flourishing cities of Capua and Cumae, fell into their hands between 440 and 420 B. C. [CAMPANIA.] The dominion of the Sabellian race was thus established from the neighbourhood of Ancona to the southern extremity of Bruttium; but it must not be supposed that throughout this wide extent the population was become essentially, or even mainly, Sabellian. That people appears rather to have been a race of conquering war-ris; but the rapidity with which they became blended with the Oceanic populations that they found previously established in some part at least of the countries they subdued, seems to join to the conclusion that there was no very wide difference between the two. Even in Samnium itself (which probably formed their stronghold, and where they were doubtless more numerous in proportion) we know that they adopted the Ocean language; and that, while the Romans speak of the people and their territory as Sabellian, they designate their speech as Ocean. (Livy viii. 1, x. 19. 20.) In like manner, we know that the Lucanian invaders carried with them the same language into the hills of Bruttium; where the double origin of the people was shown at a late period by their continuing to speak both Greek and Ocean. (Fest. p. 55.) The relations between these Sabellian conquerors and the Ocean inhabitants of Central Italy render it, on the whole probable, that the two nations were only branches of one common stock (Niebuhr, vol. i. p. 104), related to another very much like the Normans, Danes, and Saxons. Of the language of the Sabines three views have unfortunately-carry any remains; but there are some words quoted by ancient authors as being at once Sabine and Ocean; and Varro (himself a native of Reato) bears distinct testimony to a connection between the two. (Varr. In L. Liv. viii. 29. ed. Miller.) On the other hand, there are evidences that the Sabine language had considerable affinity with the Umbrian (Donaldson, Varr. p. 8); and this was probably the reason why Zenodotus of Troezen (ap. Dionys. i. 49) derived the Sabines from an Umbrian stock. But, in fact, the Umbrian and Ocean languages were themselves by no means so distinct as to exclude the supposition that the Sabine dialect may have been intermediate between the two, and have partaken largely of the characters of both.

4. UMBRIANS.—The general tradition of antiquity appears to have fixed upon the Umbrians as the most ancient of all the races inhabiting the Italian peninsula. (Plin. iii. 14. s. 19; Flor. i. 17; Dionys. i. 19.) We are expressly told that at the earliest period of which any memory was preserved, they occupied not only the district where we find them in historical times, but the greater part of Etruria. And, as before observed, they held the fertile plains (subsequently wrested from them by the Etruscans and the Gauls) from the neighbourhood of Ravenna to that of Ancona, and apparently a large part of Picenum also. Thus, at this time, the Umbrians extended from the Adriatic to the Tyrrhenian sea, and from the months of the Podus nearly to those of the Tiber. Of their origin or national affinities we learn but little from ancient authors; a notion appears to have arisen among the Romans at a late period, though not attested by any writer of authority, that they were a Celtic or Gaulish race (Solin. 2. ii. 11; Serv. ad Aen. xii. 753; Isid. Orig. ix. 2), and this view has been adopted by many modern authors. (Walckenaer, *Geogr. des Gaules, vol. i. p. 10; Thierry, *Hist. des Gaules, vol. i.) But, in this instance, we have a much safer guide in the still extant remains of the Umbrian language, preserved to us in the celebrated Tabularium Engniumium (LIVIUM); and the researches of modern philologers, which have been of late years especially directed to that interesting monument, have sufficiently proved that it has no such close affinity with the Celtic as to lead us to derive the Umbrians from a Gaulish stock. On the other hand, these inquiries have fully established the existence of a general resemblance between the Umbrian, Ocean, and oldest Latin languages; a resemblance not confined to particular words, but extending to the grammatical forms, and the whole structure of the language. Hence we are fairly warranted in concluding that the Umbrians, Oscans, and Latins (one important element of the nation at least), as well as the Sabines and their descendants, were only branches of one race, belonging, not merely to the same great family of the Indo-European nations, but to the same subdivision of that family. The Umbrian may very probably have been, as believed by the Romans, the most ancient branch of these kindred tribes; and its language would thus bear much the same relation to Latin and the later Ocean dialects that Mosco-Gothic does to the several Teutonic tongues. (Donaldson, Varr. pp. 78, 104, 105; Schwegr, *Romische Geschichte, vol. i. p. 176.)

5. ETRUSCANS.—While there is good reason to suppose a general and even close affinity between the nations of Central Italy which have just been noticed, there are equally strong grounds for regarding the Etruscans as a people of wholly dif-
fert race and origin from those by which they were surrounded. This strongly marked distinctness from the other Italian races appears to have been recognised both by Roman and Greek writers. Dionysius even affirms that the Etruscans did not resemble, either in language or manners, any other people whatsoever (Dionys. i. 30); and, however we may question the generality of this assertion, the fact in regard to their language seems to be borne out by the still existing remains of it. The various theories that have been proposed concerning their origin, and the views of modern philologists in regard to their language, are more fully discussed under the article ETRURIA. It may suffice here to state that two points may be considered as fairly established:—1. That a considerable part of the population of Etruria, and especially of the more southern portions of that country, was (as already mentioned) of Pelasgic extraction, and continued to speak a dialect closely akin to the Greek. 2. That, besides this, there existed in Etruria a people (probably a conquering race) of wholly different origin, who were the proper Etruscans or Tuscan, but who called themselves Rasenas; and that this race was wholly distinct from the other nations of Central Italy. As to the ethnical affinities of this pure Etruscan race, we are almost as much in the dark as was Diodorus. But the recent philological inquiries appear to have established the fact that it may be referred to the same great family of the Indo-European tongues, though widely separated from all the other branches of that family which we find settled in Italy. There are not wanting, indeed, evidences of many points of contact and similarity, with the Umbrians on the one hand and the Pelasgians on the other; but it is probable that these are no more than would naturally result from their close juxtaposition, and that mixture of the different races which had certainly taken place to a large extent before the period from which all our extant monuments are derived. It may, indeed, reasonably be assumed, that the Umbrians, who appear to have been at one time in possession of the greater part, if not the whole, of Etruria, would never be altogether expelled, and that there must always have remained, even after the expulsion of the Vulci and Etrusci, a subject population of Umbrian race, as there was in the more southern districts of Pelasgian.

The statement of Livy, which represents the Rhetaeans as of the same race with the Etruscans (v. 33), even if its accuracy be admitted, throws but little light on the national affinities of the latter; for we know, in fact, nothing of the Rhetaeans, either as to their language or origin.

It only remains to advert briefly to the several branches of the population of Northern Italy. Of these, by far the most numerous and important were the Gauls, who gave to the whole basin of the Po the name of Gallia Cisalpina. They were universally admitted to be of the same race with the Gauls who inhabited the countries beyond the Alps, and their migration and settlement in Italy were referred by the Roman historians to a comparatively recent period. But this theory is fully given under Gallia Cisalpina. Adjoining the Gauls on the SW., both slopes of the Apennines, as well as of the Maritime Alps and a part of the plain of the Po, were occupied by the Ligurians, a people as to whose national affinities we are almost wholly in the dark. [Liguria.] It is certain, however, from the positive testimony of ancient writers, that they

were a distinct race from the Gauls (Strab. ii. p. 128), and there seems no doubt that they were established in Northern Italy long before the Gallic invasion. Nor were they by any means confined to the part of Italy which ultimately retained their name. At a very early period we learn that they occupied the whole coast of the Mediterranean, from the foot of the Pyrenees to the frontiers of Etruria, and the Greek writers uniformly speak of the people who occupied the neighbourhood of Massalia, or the modern Provence, as Ligurians, and not Gauls. (Strab. iv. p. 203.) At the same period, it is probable that they were more widely spread also in the basin of the Po than we find them when they appear in Roman history. At that time the Taurini, at the foot of the Cottian Alps, were the most northern of the Ligurian tribes, while S. of the Poans they extended probably as far as the Trebia. Along the shores of the Mediterranean they possessed in the time of Polybius the whole country as far as Pisa and the mouths of the Arno, while they held the fastnesses of the Apennines as far to the E. as the frontiers of the Arretine territory. (Pol. ii. 16.) It was not till a later period that the Macera became the established boundary between the Roman province of Liguria and that of Etruria.

Bordering on the Gauls on the E., and separated from them by the river Atthis (Adige), were the Veneti, a people of whom we are distinctly told that their language was different from that of the Gauls (Pol. ii. 17.), but of whom, as of the Ligurians, we know rather what they were not than what they were. The most probable hypothesis is, that they were an Illyrian race (Zeuss, Die Deutschen, p. 251.), and there is good reason for regarding the Veneti as a link between the Gauls and the Illyrians. On the other hand, the Carni, a mountain tribe in the extreme N. of Italy, who immediately bordered both on the Venetians and Istrians, were more probably a Celtic race (Carni).

Another name which we meet with in this part of Italy is that of the Euganei, a people who had dwindled into insignificance in historical times, but whom Livy describes as once great and powerful, and occupying the whole tract of the sea coast to the S. (v. 33.) Of their national affinities we know nothing. It is possible that where Livy speaks of other Alpine races besides the Rhetaeans, as being of common origin with the Etruscans (v. 33), that he had the Euganeans in view; but this is mere conjecture. He certainly seems to have regarded them as distinct both from the Venetians and Gauls, and as a more ancient people in Italy than either of those races.

V. History.

The history of ancient Italy is for the most part inseparably connected with that of Rome, and cannot be considered apart from it. It is impossible here to attempt to give even an outline of that history; but it may be useful to the student to present at one view a brief sketch of the progress of the Roman arms, and the period at which the several nations of Italy successively fell under their yoke, as well as the measures by which they were gradually consolidated into one homogeneous whole, in the form that Italy assumed under the rule of Augustus. The few facts known to us concerning the history of the several nations, before their conquest by the Romans, will be found in their respective articles: that of the Greek colonies in Southern Italy, and
their relations with the surrounding tribes, are given under the head of Magna Graecia.

I. Conquest of Italy by the Romans, n. c. 509—264.—The earliest wars of the Romans with their immediate neighbours scarcely come here under our consideration. Placed on the very frontier of three powerful nations, the infant city was from the very first engaged in perpetual hostilities with the Latins, the Sabines, and the Etruscans. And, however little dependence can be placed upon the details of these wars, as related to us, there seems no doubt that, even under the kings, Rome had risen to a superiority over most of her neighbours, and had extended her actual dominion over a considerable part of Latium. The earliest period of the Republic, on the other hand (from the expulsion of the Tarquins to the Gaulish invasions, n. c. 509—381), when stripped of the romantic garb in which it has been clothed by Roman writers, presents the spectacle of a difficult and often dubious struggle, with the Etruscans on one hand, and the Volscians on the other. The capture of Veii, in n. c. 396, and the permanent annexation of its territory to that of Rome, was the first decisive advantage acquired by the rising republic, and may be looked upon as the first step to the domination of Italy. Even the great calamity sustained by the Romans, when their city was taken and in part destroyed by the Gauls, n. c. 390, was so far iron permanently checking their progress, that it would rather seem to have been the means of opening out to them a career of conquest. It is probable that that event, or rather the series of predatory invasions by the Gauls of which it formed a part, gave a serious shock to the nations of Central Italy, and produced among them much disorganisation and consequent weakness. The attention of the Etruscans was naturally drawn off towards the N., and the Romans were able to establish colonies at Sutrium and Nepete; while the power of the Volscians appears to have been greatly enfeebled, and the series of triumphs over them recorded in the Fasti now marks real progress. That of M. Valerius Corvinus, after the destruction of Satricum in n. c. 346 (Liv. viii. 27; Fast. Capit.), seems to indicate the total subjugation of the Volscian people, who never again appear in history as an independent power. Before this period, n. c. 345, the Romans for the first time came into collision with the Samnites. That people were then undoubtedly at the height of their power: they and their kindred Sabellian tribes had recently extended their conquests over almost the whole southern portion of the peninsula (see above, p. 563); and it cannot be doubted, that when the Romans and Samnites first found themselves opposed in arms, the contest between them was one for the supremacy of Italy. Meanwhile, a still more formidable danger, though of much briefer duration, threatened the rising power of Rome. The revolt of the Latins, who had hitherto been among the main instruments and supports of that power, threatened to shake it to its foundation; and the victory of the Romans at the foot of Mt. Vesuvius, under T. Marcius and P. Decius (n. c. 340), was perhaps the most important in their whole history. Three causes have sufficed to terminate this formidable war (n. c. 340—338). The Latins were now reduced from the condition of dependent allies to that of subjects, whether under the name of Roman citizens or on less favourable terms (Latium); and the greater part of Campania was placed in the same condition.

At this time, therefore, only seventy years before the First Punic War, the Roman dominion still comprised only Latium, in the more limited sense of the name (for the Aeque and Hernici were still independent), together with the southern part of Etruria, the territory of the Volsci, and a part of Campania. During the next fifty years, which was the period of the great extension of the Roman arms and influence, the contest between Rome and Samnium was the main point of interest; but almost all the surrounding nations of Italy were gradually drawn in to take part in the struggle. Thus, in the Second Samnite War (n. c. 326—304), the names of the Lucanians and Apulians — nations with which (as Livy observes, viii. 25) the Roman people had, up to that period, had nothing to do — appear as taking an active part in the contest. In another part of Italy, the Marsi, Vestini, and Peligni, all of them, as we have seen, probably kindred races with the Samnites, took up arms at one time or another in support of that people, and were thus for the first time brought into collision with Rome. It was not till n. c. 311 that the Etruscans on their side joined in the contest: but the Etruscan War at once assumed a character and dimensions scarcely less formidable than that with the Samnites. It was now that the Romans for the first time carried their arms beyond the Clusian Hills; and the northern cities of Etruria, Perusia, Cortona, and Arezzo, now first appear as taking part in the war. [ETRURIA.] Before the close of the contest, the Umbrians also took up arms for the first time against the Romans. The peace which put an end to the Second Samnite War (n. c. 304) added nothing to the territorial extent of the Roman power; but nearly contemporary with it, was the revolt of the Hernicians, which ended in the complete subjugation of that people (n. c. 306); and a few years later the Aequians, who followed their example, shared the same fate, n. c. 302. About the same time (n. c. 304) a treaty was concluded with the Marsi, Marrucini, Peligni, and Frentani, by which those nations appear to have passed into the condition of dependent allies of Rome, in which we always subsequently find them. A similar treaty was granted to the Vestini in n. c. 301.

In n. c. 298, the contest between Rome and Samnium was renewed, but in this Third Samnite War the people of that name was only one member of a powerful confederacy, consisting of the Samnites, Etruscans, Umbrians, and Gauls; nevertheless, their united forces were defeated by the Romans, who, after several successful campaigns, compelled both Etruscans and Samnites to sue for peace (n. c. 290). The same year in which this was concluded witnessed also the subjugation of the Sabines, who had been so long the faithful allies of Rome, and now appear, for the first time after a long interval, in arms; they were admitted to the Roman franchise. (Liv. Epit. xi.; Vell. Pat. i. 14.) The short interval which elapsed before hostilities were generally renewed, afforded an opportunity for the subjugation of the Gallic peoples, whose territory was wasted with fire and sword by the consul Dolabella, in 283; and the Roman colony of Sena Gallica established in that part of Gaul. Meanwhile already in n. c. 282, the war was renewed both with the Etruscans and the Samnites; but this Fourth Samnite War, as it often called, was soon merged in one of a more extensive character. The Samnites were at first assisted by the Lucanians.
and Bruttians, the latter of whom now occur for the first time in Roman history (Liv. Epit. xii.); but circumstances soon arose which led the Romans to declare war against the Tarentines; and these called in the assistance of Pyrrhus, king of Epirus. The war with that monarch (the first in which the Romans were engaged against a foreign power) was at the same time decisive of the fate of the Italian peninsula. It was, indeed, the last struggle of the nations of Southern Italy against the power of Rome; on the side of Pyrrhus were ranged, besides the Tarentines and their mercenaries, the Samnites, Lucanians, and Bruttians; while the Latins, Campanians, Sabines, Umbrians, Volscians, Marrucini, Peligni, and Frentani, are enumerated among the troops which swelled the ranks of the Romans. (Dionys. xx. Fr. Deih.) Hence, the final defeat of Pyrrhus near Beneventum (b. c. 275) was speedily followed by the complete subjugation of Italy. Tar- rentum fell into the hands of the Romans in b. c. 272, and, in the same year, the consul Sp. Carvilius and Papirius Cursor celebrated the last of the many Roman triumphs over the Samnites, as well as the Lucanians and Bruttians. Few particulars have been transmitted to us of the petty wars which fol- lowed the Samnite war, except to the Romans the pominaeum. The Picentes, who were throughout the Samnite wars on friendly terms with Rome, now appear for the first time as enemies; but they were defeated and reduced to submission in b. c. 268. The subjection of the Gallienses followed, b. c. 266, and the same year records the conquest of the Samnites, probably including the other mountain tribes of the Umbrians. A revolt of the Volscians, in the following year (b. c. 265), apparently arising out of civil dissensions, gave occasion to the last of these petty wars, and earned for that people the credit of being the last of the Italians that sub- mitted to the Roman power. (Florus, i. 21.)

It was not till long after that the nations of Northern Italy shared the same fate. Casilipine Gaul and Liguria were still regarded as foreign provinces; and, with the exception of the Semones, whose territory was at one time conferred as a reward on a brave band of Frisian fugitives who had escaped from the Gallic nations had been assailed in their own abodes. In b. c. 232 the distribution of the "Gallienses ager" (the territory of the Semones) became the occasion of a great and formidable war, which, however, ultimately ended in the victory of the Romans, who immediately proceeded to plant the two colonies of Placentia and Cremona in the ter- ritory of the Gauls, b. c. 218. The history of this war, as well as of those which followed, is fully related under GALLIA CISALPINA. It may here suffice to mention, that the final conquest of the Boii, in b. c. 191, completed the subjection of Gaul, south of the Padus; and that of the Trans- puntane Gauls appears to have been accomplished soon after, though there is some uncertainty as to the exact period. The Venetians had generally been the allies of the Romans during these contests with the Gauls, and appear to have gained gradually and quietly from the condition of independent allies to that of dependents, and ultimately of subjects. The Istrians, on the contrary, were reduced by force of arms, and submitted in b. c. 177. The last people of Italy that fell under the yoke of Rome were the Ligurians. This hardy race of mountaineers was not subdued till after a long series of campaigns; and, while the Roman arms were over- throwing the Macedonian and Syrian empires in the East, they were still constantly engaged in an inglo- rious, but arduous, struggle with the Ligurians, on their own immediate frontiers. Strabo observes, that it cost them eighty years of war to secure the const- line of Liguria for the space of 12 stadion in width (iv. p. 263); a statement nearly correct, for the first of the Ligurian triumphs over the Romans was at b. c. 236, and the last in b. c. 158. Even after this last period it appears to have been a long time before the people were finally reduced to a state of tran- quillity, and lapse into the condition of ordinary Roman subjects.

2. Italy under the Romans. It would be a great mistake to suppose that the several nations of Italy, from the periods at which they successively yielded to the Roman arms and acknowledged the supremacy of the Republic, became her subjects, in the strict sense of the word, or were reduced under any uniform system of administration. The relations of every people, and often even of every city, with the supreme head, were regulated by special agreements or decrees, arising out of the circumstances of their conquest or submission. How various and different these relations were, is sufficiently seen by the instances of the Latins, the Campanians, and the Hernesians, as given in detail by Livy (c. 11 —14, i. 43). From the loss of the second decade of that author, we are unfortunately deprived of all similar details in regard to the other nations of Italy; and hence our information as to the relations established between them and Rome in the third century B. C., and which continued, with little alteration, till the outbreak of the Social War, n. c. 90, is unfortunately very imperfect. We may, how- ever, clearly distinguish two principal classes in which the Italians were then divided; those who possessed the rights of Roman citizens, and were thus incorporated into the Roman state, and those who still retained their separate national existence as dependent allies, rather than subjects properly so called. The first class comprised all those com- munities which had received, whether as nations or separate cities, the gift of the Roman franchise; a right sometimes conferred as a reward, and sometimes imposed as a penalty, with a view to break up more effectually the national spirit and organisation, and bring the people into closer dependence upon the supreme authority. In these cases the citizenship was conferred without the right of suffrage; but in most, and perhaps in all such instances, the latter privilege was ultimately conceded. Thus we find the Sabines, who in n. c. 290 obtained only the "civitas sine suffragio," admitted in n. c. 268 to the full enjoyment of the franchise (Vell. Pat. i. 14): the same was the case also, though at a much longer interval, with Formiae, Fundi, and Arpinum, which did not receive the right of suffrage till n. c. 188 (Liv. viii. 41, x. 1, xxxvii. 36), though they had borne the title of Roman citizens for more than a century. To the same class belonged those of the Roman colonies which were called "coloniae civium Romanorum," and which, though less numerous and powerful than the Latin colonies, were scattered through all parts of Italy, and included some wealthy and important towns. (A list of them is given by Madvig, de Colonias, pp. 295—303, and by Marquardt, Handb. der Römischen Alterthümer, vol. iii. pt. i. p. 18.)

To the second class, the "Socii" or "Civitates Feodlatae," which, down to the period of the Social War, included by far the largest part of the Italian
people, belonged all those nations that had submitted to Rome upon any other terms than those of citizenship; and the treaties (fideles), which determined their relations to the central power, included almost every variety, from a condition of nominal equality and independence (aequum foedus), to one of the most complete subjection. Thus we find Heraclea in Lucania, Neapolis in Campania, and the Camereti in Umbria, noticed as possessing particularly favourable treaties (Cic. pro Balb. 8, 20, 22); and even some of the cities of Latium itself, which had not received the Roman civitas, continued to maintain this nominal independence long after they had become virtually subject to the power of Rome. Thus, even in the days of Polybius, a Roman citizen might retire into exile at Tibur or Praeneste (Pol. vi. 14; Liv. xiii. 2), and the poor and decayed town of Laurentum went through the form of amnnally renewing its treaty with Rome down to the close of the Republic. (Liv. viii. 11.) Nor was this independence merely nominal: though politically dependent upon Rome, and compelled to follow her lead in their external relations, and to furnish their contingent of troops for the wars, of which the dominant republic alone reaped the benefit, many of the cities of Italy continued to enjoy the absolute control of their own affairs and internal regulations; the troops which they were bound by their treaty to furnish were not enrolled with the legions, but fought under their own standards as auxiliaries; they retained their own laws as well as courts of judicature, and, even when the Lex Julia conferred upon all the Italian allies the privileges of the Roman civitas, it was necessary that each city should adopt it by an act of its own. (Cic. pro Balb. 8.) Nearly in the same position with the dependent allies, however different in their origin, were the so-called "Coloniae Latinae;" that is, Roman colonies which did not enjoy the rights of Roman citizenship, but stood in the same relation to the Roman state that the cities of the Latin League had formerly done. The name was, doubtless, derived from a period when these colonies were actually sent out in common by the Romans and Latins; but settlements on similar terms continued to be founded by the Romans alone, long after the extinction of the Latin League; and, before the Social War, the Latin colonies included many of the most flourishing and important towns of Italy. (For a list of them, with the dates of their foundation, see Madvig, de Colonin., l. c.; Mommsen, Romische Munz.-Weiss, pp. 230—234; and Marquardt, l. c. p. 33.) These colonies are justly regarded by Livy as one of the main supports of the Republic during the Second Punic War (Liv. xxvii. 9, 10), and, doubtless, proved one of the most-eiternal means of consolidating the Roman dominion in Italy. After the dissolution of the Latin League, n. c. 338, these Latin colonies (with some few cities of Latium that, like Tibur and Praeneste, still retained their separate organisation) formed the "Roman Latium," or body of the Latins. The close connection of these with the allies explains the frequent recurrence of the phrase "socii et nomen Latium" throughout the later books of Livy, and in other authors in reference to the same period.

A great and general change in the relations previously subsisting between the Italian states and Rome was introduced by the Social War (n. c. 90—
89), and the settlement which took place in consequence of it. Great as were the dangers with which Rome was threatened by the formidable coalition of those who had so long been her bravest defenders, they would have been still more alarming had the whole Italian people taken part in it. But the allies who then rose in arms against Rome were almost exclusively the Sabellians and their kindred races. The Etruscans and Umbrians stood aloof, while the Sabines, Latins, Volscians, and other tribes who had already received the Roman franchise, supported the Republic, and furnished the materials of her armies. But the senate hastened to secure those who were wavering, as well as to disarm a portion at least of the openly disaffected, by the gift of the Roman franchise, including the full privileges of citizens: and this was subsequently extended to every one of the allies in succession as they submitted. There is some uncertainty as to the precise steps by which this was effected, but the Lex Julia, passed in the year 80 B.C., appears to have conferred the franchise upon the Latins (the "nomen Latinum," as above defined) and all the allies who were willing to accept the boon. The Lex Plinia Paphia, passed the following year, n. c. 89, completed the arrangement thus begun. (Cic. pro Balb. 8, pro Arch. 4; A. Gell. iv. 4; Appian, B. C. i. 49; Vell. Pat. ii. 16.)

By the change thus effected the distinction between the Latins and the allies, as well as between those two classes and the Roman citizens, was entirely done away with; and the Latin colonies lapsed into the condition of ordinary municipia. At the same time that all the free inhabitants of Italy, as the term was then understood (i.e. Italy S. of the Maera and Rubicon), thus received the full rights of Roman citizens, the same boon was granted to the inhabitants of Gallia Cisalpina, while the Transpadani appear to have been at the same time raised to the condition and privileges of Latins, that is to say, were placed on the same footing as if all their towns had been Latin colonies. (Ascon. in Prop. p. 5, ed. Orell.; Savigny, Verschrunne Schriften, vol. iii. pp. 290—308; Marquardt, Handb. vol. iii. p. 75.) This peculiar arrangement, by which the Jus Latii was revived at the very time that it became naturally extinct in the rest of Italy, is more fully explained under Gallia Cisalpina. In n. c. 49, after the outbreak of the Civil War, Caesar bestowed the full franchise upon the Transpadani also (Dion Cass. xii. 58), and from this time all the free inhabitants of Italy became united under one common class as citizens of Rome.

The Italians thus admitted to the franchise were all ultimately enrolled in the thirty-five Roman tribes. The principle on which this was done we know not; but we learn that each municipality, and sometimes even a larger district, was assigned to a particular tribe; so that every citizen of Arpinum, for instance, would belong to the Cornelian tribe, of Beesventum to the Stelantine, of Brixia to the Fabian, of Ticinum to the Papian, and so on.* But in so doing, all regard to that geographical distribution of the tribes which was undoubtedly kept in view in their first institution was necessarily lost; and we have not sufficient materials for attempting to determine how the distribution was made. A knowledge of it must, however, have been of essential importance so long as the Republic continued; and

* This did not, however, interfere with the personal right, where this previously existed, so that a Roman citizen already belonging to another tribe, who settled himself in any municipality, retained his own tribe.
In this sense we find Cicero alluding to "Italia tributum descripta" as a matter of interest to the candidates for public offices. (Q. Cic. de Petit. Cons. 8.)

3. Italy under the Roman Empire.—No material change was introduced into the political condition of Italy by the establishment of the imperial authority at Rome; the constitution and regulations of the municipia remained in force even at the end of the Republic, with only a few modifications, in full force. The most important of these was the system of municipal organisation, which pervaded every part of the country, and which was directly derived from the days of Italian freedom, when every town had really possessed an independent government. Italy, as it existed under the Romans, may be still regarded as an aggregate of individual communities, though these had lost all pretensions to national independence, and retained only their separate municipal existence. Every municipium had its own internal organisation, presenting very nearly a miniature copy of that of the Roman republic. It had its senate or council, the members of which were called Decuriones, and the council itself Ordo Decurionum, or often simply Ordo; its popular assemblies, which, however, soon fell into disuse under the Empire; and its local magistrates, of whom the principal were the Duumviri, or sometimes Quaestorii, answering to the Roman consuls and praetors: the Quinquennales, with functions analogous to those of the consuls; the Aediles and Questores, whose duties nearly corresponded with those of the same magistrates at Rome. These different magistrates were annually elected, at first by the popular assembly, subsequently by the Senate or Decuriones; the members of the latter body held their offices for life. Now as this municipal government confined to the town in which it was resident; every such Municipium possessed a territory or Ager, of which it was as it were the capital, and over which it exercised the same municipal jurisdiction as within its own walls. This district of course varied much in extent, but in many instances comprised a very considerable territory, including many smaller towns and villages, all which were dependent, for municipal purposes, on the central chief town. Thus we are told by Pliny, that many of the tribes that inhabited the Alpine valleys bordering on the plains of Gallia Cisalpina, were by the Lom Pompeia assigned to certain neighboring municipia (Legem Pompeiae attributi municipia, Plin. iii. 20. s. 24), that is to say, they were included in their territory, and subjected to their jurisdiction. Again, we know that the territories of Cremona and Mantua adjoined one another, though the cities were at a considerable distance. In like manner, the territory of Beneventum comprised a large part of the land of the Hirpin. It is this point which gives a great importance to the distinction between municipal towns and those which were not so; that the former were not themselves more important places, but were, in fact, the capitals of districts, into which the whole country was divided. The villages and minor towns included within these districts were distinguished by the form, or sometimes Quaestorii, vicu, castella," and were dependent upon the chief town, though sometimes possessing a subordinate and imperfect local organisation of their own. In some cases it even happened that, from local circumstances, one of these subordinate places would rise to a condition of wealth and prosperity far surpassing those of the municipium, on which it nevertheless continued dependent. Thus, the opulent watering-place of Baiae always remained, in a municipal sense, a mere dependency of Cumae.

The distinction between coloniae and municipia, which had been of great importance under the Roman republic, lost its real significance, when the citizens of both alike possessed the Roman franchise. But the title "municipia" was still retained by those towns which had received fresh colonies towards the close of the Republic under Caesar or the Triumvirs, as well as under the Empire. It appears to have been regarded as an honorary distinction, and as giving a special claim upon the favour and protection of the founder and his descendants; though it conferred no real political superiority. (Cicil. xvi. 13.) On the other hand, the Praefectura, or name also derived from the early republican period—were distinguished from the colonies and municipia by the circumstance that the juridical functions were there exercised by a Praefectus, an officer sent direct from Rome, instead of by the Duumviri or Quaestorii (whose legal title was Ilivilir or IIIIVirii Juri dicundo) elected by the municipality. But as these distinctions were comparatively unimportant, the name of "municipia" is not unfrequently applied in a generic sense, so as to include all towns which had a local self-government. "Oppida" is sometimes employed with the same meaning. Pliny, however, generally uses "oppida" as equivalent to "municipia," but exclusive of colonies: thus, in describing the eightith region, he says, "Coloniae Bononia, Brixillum, Mutina, et . . . Oppida Caesena, Cletana, Forum Choli, et." (in. 15. s. 20, et passim.) It is important to observe that, in all such passages, the list of "oppida" is certainly meant to include only municipal towns; and the lists thus given by Pliny, though disfigured by corruption and carelessness, were probably in the first instance derived from official sources. Hence the marked agreement which may be traced between them and the lists given in the Liber Columbarum, which, notwithstanding the corruptions it has suffered, is unquestionably based upon good materials. (Concerning the municipal institutions of Italy, see Savign, Fernández-Schroffen, vol. iii. pp. 279—412, and Gesch. des Rom. Rechts, vol. i.; Marquart, Handb. d. Röm. Alterthümer, vol. ii. p. 44—55; Horeck, Röm. Geschichten, book 5, chap. 3; and the article GALLIA CISALPINA.)

The municipal organisation of Italy, and the territorial distribution connected with it, lasted throughout the Roman empire, though there was always a strong tendency on the part of the central authority and its officers to encroach upon the municipal powers; and in one important point, that of their legal jurisdiction, those powers were materially circumscribed. But the municipal constitution itself naturally acquired increased importance as the central power became feeble and disorganised: it survived the fall of the Western Empire, and continued to subsist under the Gothic and Lombard conquerors, until the cities of Italy gradually assumed a position of independence, and the municipal constitutions which had existed under the Roman empire, became the foundation of the free republics of the middle ages. (Savign, Gesch. des Römischen Rechts im Mittel Alter, vol. i.)

The ecclesiastical arrangements introduced after the establishment of Christianity in the Roman empire, appear to have stood in close connection with the municipal limits. Almost every town which was then a flourishing municipium became the see of a
bishops, and the limits of the diocese in general coincided with those of the municipal territory. But in the period of decay and confusion that followed, the episcopal see often remained after the city had been ruined or fallen into complete decay; hence the ecclesiastical records of the early ages of Christianity are often of material assistance in enabling us to trace the existence of ancient cities, and identify ancient localities.

4. Political and Administrative Division under the Roman Empire. — It is not till the reign of Augustus that any division of Italy for administrative purposes occurs, and the reason is obvious. So long as the different nations of Italy preserved the semblance of independence, which they maintained till the period of the Social War, no uniform system of administration was possible. Even after that period, when they were all merged in the condition of Roman citizens, the municipal institutions, which were still in full force, appear to have been regarded as sufficient for all purposes of internal management; and the general objects of the State were confined to the ordinary Roman magistrates, or to extraordinary officers appointed for particular purposes.

The first division of Italy into eleven regions by Augustus, appears to have been designed in the first instance merely to facilitate the arrangements of the census; but, as the tainting of this was closely coupled with the levy of taxes, the same divisions were soon adopted for financial and other administrative purposes, and continued to be the basis of all subsequent arrangements. The divisions established by Augustus, and which have fortunately been preserved to us by Pliny (the only author who mentions their institution), were as follows:—

I. The First Region comprised Latium (in the more extended sense of that name, including the land of the Hernicans and Volsciens), together with Campania, and the district of the Picentini. It thus extended from the mouth of the Tiber to that of the Salaria; and the Anio formed its boundary on the N.

II. The Second Region, which adjoined the preceding on the SE., included Apulia, Calabria, and the land of the Hirpini, which was thus separated from the rest of Samnium.

III. The Third Region contained Lucania and Bruttium; it was bounded by the Salaria on the NW, and by the Brahman on the NE.

IV. The Fourth Region contained all Samnium, except the Hirpini, together with the Frentani, Marcellini, Marsi, Peligni, Aquilani, Vestini, and Sabini. It thus extended from the Anio to the frontiers of Picenum, and from the boundary of Umbriva on the N., to Apulia on the S. It was separated from the latter district by the river Tiberinus, and from Picenum by the Aternus.

V. The Fifth Region was composed solely of the ancient Picenum (including under that name the territory of Hadria and of the Praetutii), and extended along the Adriatic from the mouth of the Aternus to that of the Acis.

VI. The Sixth Region combined Umbria, together with the land N. of the Apennines, once occupied by the Semnian Gauls, and which extended along the coast of the Adriatic from the Acis to the Ariminum. On the W. it was separated from Etruria by the Tiber, along the left bank of which it extended as far as Orculum.

VII. The Seventh Region consisted of the ancient Etruria, and preserved the ancient limits of that country viz., the Tiber on the E., the Apennines on the N., and the Tyrrenian sea on the W., from the mouth of the Tiber to that of the Maera.

VIII. The Eighth Region, or Gallia Cispadana, extended from the frontiers of Liguria near Placentia, to Ariminum on the Adriatic, and was, and was occupied by the Apennines on the S., and by the Padus on the N.

IX. The Ninth Region comprised Liguria, extending along the sea-coast from the Maera to the Varus, and inland as far as the Padus, which formed its northern boundary from the confluence of the Trebi to its sources in Mt. Vestulius.

X. The Tenth Region was composed of Venetia, including the land of the Carni, with the addition of Istria, and a part of Gallia Cisalpina, previously occupied by the Cenonians, extending as far W. as the Adria.

XI. The Eleventh Region comprised Pannonia, or the whole tract between the Alps and the Padus, from the sources of the latter river to its confluence with the Adha.

It is probable, both from the silence of Pliny, and from the limited scope with which these divisions were first instituted, that the regions had originally no distinctive names applied to them; but these would be gradually adopted, as the division acquired increased political importance. No difficulty could arise, where the limits of the Region coincided (or nearly so) with those of a previously existing people, such as in the cases of Etruria, Liguria, Picenum, &c. In other instances the name of a part was given to the whole: thus, the first region came to be called Region Campumian: and hence, in the Liber Coloniarum, the "Civitates Campaniaces" include all Latium also. [CAMPANIA.] The name of Regii Summi or Samnium was in like manner given to the whole region, though perhaps not till after the northern part of it had been separated from the rest under the name of Valeria.

The division introduced by Augustus continued with little alteration till the time of Constantine. The changes introduced by Hadrian and M. Aurelius regarded only the administration of justice in Italy generally (Spartan, Iud. 22 ; Capit. M. Ant. 11); but in this, as well as in various other regulations, there was a marked approach to the assimilating the government of Italy to that of the provinces, and the term "Consularis," applied to the judicial officers appointed by Hadrian merely to denote their dignity, soon came to be used as an official designation for the governor of a district, as we find it in the Notitia. But the distinction between Italy and the provinces is still strongly marked by Ulpian, and it was not till the fourth century that the term "Provincia" came to be applied to the regions or districts of Italy (Mannen, ad Lib. Col. pp. 193, 194.).

The changes introduced into the divisions of Augustus, either before the time of Constantine or under that emperor, were the following;—I. The fourth region was divided into two, the southern
portion containing Samnium (to which the land of the Hirpini, included by Augustus in the second region, was reunited), together with the Frentani and Picenii; while the land of the Subites, the Marsi, and the Vestini, constituted a separate district, which bore the name of Valeria, from the great highway, the Via Valeria, by which it was traversed. 2. The portion of the sixth region which lay between the Apennines and the Adriatic (originally inhabited by the Galli) was separated from Umbria properly so called, and distinguished by the name of Picenum Annarium, while the true Picenum was called, for the sake of distinction, Picenum Suburbicarium.

3. The eighth region, or Gallia Cispadana, was divided into two, of which the westernmost portion assumed the name of Aeemilia, from the highroad of that name; an appellation which seems to have come into common use as early as the time of Martial (iii. 4. vi. 83); while the eastern portion, much the smaller of the two, received that of Flaminia, though the highroad of that name only extended to Ariminum, on the very frontier of this district. This new division seems to have been generally united with Picenum Annarium, though retaining its separate name. 4. The Alpes Cottiae, a mountain district which in the time of Augustus had still retained its nominal independence, though incorporated with the Roman empire by Nero, seems to have continued to form a separate district till the time of Constantine, who united it with the ninth region, the whole of which now came to be known as the Alpes Cottiae; while, still more strangely, the name of Liguria was transferred from this region, to which it properly belonged, to the eleventh region, or Gallia Transpadana; so that late writers speak of Mediolanum as the capital of Liguria.

(Liguria.] 5. The only other change that requires notice was the division of Eturia into two portions, called Tuscia Annornaria and Tuscia Urbica. This, as well as the similar distinction between the two Picennums, had its origin in the administrative arrangements introduced by Maximian, who, when he established the imperial residence at Milan, imposed upon the northern and adjoining provinces the task of finding supplies (amnona) for the imperial court and followers, while the other portions of Italy were charged with similar burdens for the supplies of the army (Momm. ad Lib. Col. pp. 195—200). Hence Trebellius Pollio, writing in the reign of Diocletian, after enumerating the districts of Southern and Central Italy, comprises all that lay N. of Flaminia and Eturia under the general appellation of "emniam annoraria regio."

(Treb. Poll. Frig. Tfr. 24.)

In addition to these changes, Constantine, in the general reorganisation of his empire, united to Italy the two provinces of Illyricum (including Vindelicia), as well as the three great islands of Sicily, Sardinia, and Corsica. These last, together with all the central and southern provinces of Italy, were placed under the jurisdiction of the Vicarius Urbis Roma, while all the northern provinces were subject to the Vicarius Italiae. The minor arrangements seem to have frequently varied in detail, but the seventeen provinces into which the "Diocesia Italiae" seems to have been now divided, are thus enumerated in the Notitia Dignitatum (ii. pp. 9, 10):—

1. Venetia.
2. Aemilia.
3. Liguria (i.e. Gallia Transpadana).
4. Flaminia et Picenum Annorum.
for a long time extended their dominion over a considerable part of the, and wrested from the inhabitants of Benevento the districts to which they gave the names of the Capitanata and the Basilicata (a part of which the Normans and the Papacy retained possession till the 11th century. It was then that a new enemy first appeared on the scene, and the Romans, under Robert Guiscard, completed the final expulsion of the Greek emperors from Italy. The capture of Bari in 1071, and of Salerno in 1087, destroyed the last vestiges of the dominion that had been founded by the generals of Justinian.

VI. POPULATION OF ITALY UNDER THE ROMANS.

The statements transmitted to us from antiquity concerning the amount of the population in different cities and countries are for the most part so vague a character and such uncertain authority as to be little worthy of consideration; but we have two facts recorded in connection with that of Italy, which may lead us to form at least an approximate estimate of its numbers. The first of these data is the statement given by Polybius, as well as by several Roman writers on the authority of Fabius, and which there is every reason to believe based on authentic documents, of the total amount of the forces which the Romans and their allies were able to oppose to the threatened invasion of the Gauls in B.C. 225. According to the detailed enumeration given by Polybius, the total number of men capable of bearing arms which appeared on the registers of the Romans and their allies, amounted to above 700,000 foot and 70,000 horsemen. Pliny gives them at 700,000 foot and 80,000 horse; while Eutropius and Orosius state the whole amount in round numbers at 800,000. (Pol. ii. 24; Dion. iii. 20. s. 24; Eutrop. iii. 5; Oros. iv. 13.) It is evident, from the precise statements of Polybius, that this was the total amount of the free population of military age (yov]6yrvatov paticLrov tov uvoi6votpov 6vua Bapataw), and not that which could be actually brought into the field. If we estimate the proportion of these to the total free population as 1 to 4, which appears to have been the ratio currently adopted in ancient times, we should obtain a total of 3,200,000 for the free population of the Italian peninsula, exclusive of the greater part of the Apennine Gaul, and the whole of Liguria*; and even if we adopt the proportion of 1 to 5, more commonly received in modern times, this would still give a total of only 4,000,000, an amount by no means very large, as the population of the same parts of Italy at the present day considerably exceeds 9,000,000. (Serristori, Statistica d'Italia.) Of the amount of the service population we have no means of forming an estimate; but it was probably not large at this period of the Roman history; and its subsequent rapid increase was contemporaneous with the diminution of the free population.

The complaints of the extent to which this had taken place as early as the time of the Graeco, and their lamentations over the depopulation of Italy (Plut. T. Gracch. 8), would lead us to suppose that the decrease of the Italian citizens had greatly fallen off. If this was the case in B.C. 153, the events of the next half-century—the sanguinary struggle of the Social War, which swept off, according to Velleius Paterculus (ii. 15), more than 300,000 men in the vigour of their age, and the cruel devastation of Sannium and Etruria by Sulla—were certainly not calculated to repair the deficiency. But, notwithstanding this, we find that the census of B.C. 70, which included all the new citizens recently admitted to the Roman franchise, and which did not yet comprise any population east of Italy, nor even the Transpadane Gauls, gave a result of 910,000 Roman citizens (capita civium); from which we may fairly infer a free population of at least 4,500,000. (Liv. Epit. xxvii. ed. Jahn, compared with Philostr., ap. Phot. Bibl. p. 84. ed. Bekker.) The rapid extension of a Roman population in Galia Cispadana, as well as in Venetia and Liguria, had evidently more than compensated for the diminution in the central provinces of the peninsula.

Of the populosity of Italy under the Empire, we have no data on which to found an estimate. But there are certainly no reasons to suppose that it ever exceeded the amount which it had attained under the Republic. Complaints of its depopulation, of the decay of flourishing towns, and the desolation of whole districts, are frequent in the writers of the Augustan age and the first century of the Christian era. We are told that Caesar in B.C. 46, already found a dreadful diminution of the population (6a]yovout taxiwm€v, Al. Cass. xxii. 25); and the period of the Tiberine wars must have tended greatly to a.) ravate the evil. Augustus seems to have used every means to recruit the exhausted population: but that his efforts were but partially successful is evident from the picture which Strabo (writing in the reign of Tiberius) gives us of the state of decay and desolation to which the once populous provinces of Sannium, Apulia, and Lucania, were in his day reduced; while Livy confirms his statement, in regard even to districts nearer Rome, such as the land of the Aequians and Volsciens. (Stab. v. p. 249; vi. pp. 253, 281; Liv. vi. 12.) Pliny, writing under Vespasian, speaks of the "latifundia" as having been "the ruin of Italy," and there seems no reason to suppose that this evil was afterwards checked in any material degree. The splendour of many of the municipal towns, and especially the magnificent public buildings with which they were adorned, is apt to convey a notion of wealth and opulence which it seems hard to combine with that of a declining population. But it must be remembered that these great works were in many, probably in most instances, created by the munificence either of the emperors or of private individuals; and the vast wealth of a few nobles was so far from being the sign of general prosperity, that it was looked upon as one of the main causes of decay. Many of the towns and cities of Italy were, however, no doubt very flourishing and populous; but numerous testimonies of ancient writers seem to prove that this was far from being the case with the country at large; and it is certain that no ancient author lends any countenance to the notion entertained by some modern writers, of "the incredible multitudes of people with which Italy abounded during the reigns of the Roman emperors." (Ad-
ITALIA.

(diaon. Remarks on Italy). (See this question fully discussed and investigated by Zumpt, über den Stand der Bevölkerung im Alterthum. 4to, Berlin, 1841.)

Gallia Cisalpina, including Venetia and the part of Liguria N. of the Apennines, seems to have been by far the most flourishing and populous part of Italy under the Roman empire. Its extraordinary natural resources had been brought into cultivation at a comparatively late period, and were still inexhausted; nor had it suffered so much from the civil wars which had given a fatal blow to the prosperity of the rest of Italy. It would appear also to have been comparatively free from the system of cultivation by slave labour which had proved so ruinous to the more southern regions. The younger Pliny, indeed, mentions that his estate near Comum, and all those in its neighbourhood, were cultivated wholly by free labourers. (Philo. Ep. iii. 19.) In the latter ages of the Empire, also, the establishment of the imperial court at Mediolanum (which continued from the time of Maximian to that of Honorius) must have given a fresh stimulus to the prosperity of this favoured region. But when the Empire was no longer able to guard the barrier of the Alps against the invasions of barbarians, it was on Northern Italy that the first brunt of their devastations nearly fell, and the more so as opulent cities in the plains of the Padus were plundered in succession by the Goths, the Huns, and the Lombards.

VII. Authorities.

Considering the celebrity of Italy, and the importance which it enjoyed, not only under the Romans but during the middle ages, and the facility of access which has rendered it so favourite a resort of travellers in modern times, it seems strange that our knowledge of its ancient geography should be still very imperfect. Yet it cannot be denied that this is the case. The first disadvantage under which we labour is, that our ancient authorities themselves are far from being as copious or satisfactory as might be expected. The account given by Strabo, though marked by much of his usual geographer and judgment, is by no means sufficiently ample or detailed to meet all our requirements. He had also comparatively little interest in, and was probably himself but imperfectly acquainted with, the early history of Rome, and therefore did not care to notice, or inquire after, places which had figured in that history, but were in his time sunk into decay or oblivion. Mela dismisses the geography of Italy very hastily, as being too well known to require a detailed description (ii. 4. § 1); while Pliny, on the contrary, apologises for passing but lightly over so important and interesting a subject, on account of the impossibility of doing it justice (ii. 5. s. 6). His enumeration of the different regions and the towns they contained is nevertheless of the greatest value, and in all probability based upon authentic materials. But he almost wholly neglects the physical geography, and enumerates the inland towns of each district in alphabetical order, so that his method of placing them gives us no assistance in determining their position. Ptolemy's lists of names are far less authentic and trustworthy than those of Pliny; and the positions which he professes to give are often but little to be depended on. The Itineraries afford valuable assistance, and perhaps there is no country for which they are more useful and trustworthy guides; but they fail us exactly where we are the most in want of assistance,—in the more remote and unfrequented parts of Italy, or those districts which in the latter ages of the Empire had fallen into a state of decay and desolation. One of the most important aids to the determination of ancient localities is unquestionably the preservation of the ancient names, which have often been transmitted almost without change to the present day; and even where the name is now altered, we are often enabled by ecclesiastical records to trace the ancient appellation down to the middle ages, and prove both the fact and the origin of its alteration. In numerous instances (such as Aletium, Sipontum, &c.) an ancient church alone records the existence and preserves the name of the decayed city. But two circumstances must guard us against too hasty an inference from the mere evidence of name: the one, that it not unfrequently happened, during the disturbed periods of the middle ages, that the inhabitants of an ancient town would migrate to another site, whether for security or other reasons, and transfer their old name to their new abode. Instances of this will be found in the cases of Abellinum, Aufidena, &c., and the most remarkable of all in that of Capua. Another source of occasional error is that the present apppellations of localities are sometimes derived from erroneous traditions of the middle ages, or even from the misapplication of ancient names by local writers on the first revival of learning.

One of the most important and trustworthy auxiliaries in the determination of ancient names and localities, that of inscriptions, unfortunately requires, in the case of Italy, to be received with much care and caution. The perverted ingenuity or misguided patriotism of many of the earlier Italian antiquaries has often led them either to fabricate or interpolate such documents, and this with so much skill and show of learning, that many such fictitious or apocryphal inscriptions have found their way into the collections of Gruter, Muratori, and Orelli, and have been cited in succession by numerous modern writers. Mannsman has conferred a great service upon the student of Italian antiquities by subjecting all the recorded inscriptions belonging to the kingdom of Naples to a searching critical examination, and carding from his valuable collection (Inscriptiones Regni Napolitani Littoriae, fol. Lips. 1852) all those of dubious authenticity. It is much to be desired that the same task may be undertaken for those of the rest of Italy.

The comparative geography of ancient and modern Italy had more or less engaged the attention of scholars from the first revival of learning. But of the general works on the subject, those before the time of Cluverius may be regarded more as objects of curiosity than as of much real use to the student. Bianco Flavio (Blondus Flavians) is the earliest writer who has left us a complete and connected view of Italian topography, in his Italia Illustrata (first published in 1474, afterwards with his other works at Basle, in 1531 and 1559); after him came Leonino Alberti, whose Descrizione di tutti l'Italia (Venice, 1511) contains some valuable notices. But the great work of Cluverius (Italia Antiqua, 2 vols. fol. Lugd. Bat. 1624) altogether superseded those which had preceded him, and became the foundation of all subsequent inquiries. Cluverius has not only brought together, with the most praiseworthy diligence, all the passages of
ancient authors bearing upon his subject, but he
had himself travelled over a great part of Italy,
noting their antiquities and observing the remains of
ancient towns. It is to be regretted that he has not
left us more detailed accounts of these remains of
antiquity, which have in many cases since disap-
ppeared, or have not been visited by any more recent
traveller. Lucas Holstenius, the contemporary and
friend of Cluverius, who had also visited in person
many of the more unfrequented districts of Italy,
has left us, in his notes on Cluverius (Adnotationes
et Cluverii Italiam Antiquam, 8vo. Rome, 1666),
a valuable supplement to the larger work, as well as
many important corrections on particular points.
It is singular how little we owe to the researches
of modern travellers in Italy. Not a single book of
travels has ever appeared on that country which
can be compared with those of Lenke or Dodwell in
Greece. Swinburne's Travels in the Two Sicilies
is one of the best, and greatly superior to the more
recent works of Keppel Craven on the same part of
Italy (Tour through the Southern Provinces of the
Kingdom of Naples, 4to. Lond. 1821; Excursions
in the Abruzzi and Northern Provinces of Naples,
2 vols. 8vo. Lond. 1838). Enestace's well-known
book (Classical Tour through Italy in 1802) is
almost wholly worthless in an antiquarian point of
view. Sir R. Hook's Classical Tour, intended as a
sort of supplement to the preceding, contains some
valuable notes from personal observation. Dennis's
recent work on Etruria (Cities and Cemeteries of
the Etruscans, 2 vols. 8vo. Lond. 1848) contains a
far more complete account of the antiquities and
topography of that interesting district than we pos-
sess concerning any other part of Italy. Sir W.
Gell's Topography of Rome and its Vicinity (2 vols.
8vo. Lond. 1834: 2nd edit. 1 vol. 1846*), taken in
conjunction with the more elaborate work of
Nibley on the same district (Annali della Curia dei
Dintorni di Roma, 3 vols. 8vo. Rome, 1849), sup-
plies much valuable information, especially what is
derived from the personal researches of the author,
but is far from fulfilling all that we require. The
work of Westphal on the same subject (Die Römische
Kampagne, 4to. Berlin, 1829) is still more imper-
fect, though valuable for the care which the author
bestowed on tracing out the direction and remains of
the ancient cities throughout the district in question.
Abeken's Mitt. Italien (8vo. Stuttgart, 1842) con-
tains a good sketch of the physical geography of
Central Italy, and much information concemmg
the antiquities of the different nations that inhabited it; but enters very little into the topog-
raphy of the regions he describes. The publi-
cations of the Instituto Archeologico a Rome (first
commenced in 1829, and continued down to the
present time), though directed more to archaeol-
gical than topographical researches, still contain
many valuable memoirs in illustration of the topo-
graphy of certain districts, as well as the still ex-
isting remains in ancient localities.

The local works and histories of particular dis-
tricts and cities in Italy are innumerable. But
very few of them will be found to be of any real
value to the student of ancient geography. The
erlier works of this description are usually charac-
terized by very imperfect scholarship, an almost
total want of criticism, and a blind cre-

* It is this edition which is always referred to in
the present work.
ITALICA.

Its coins, all of the imperial age, bear military emblems which attest the story of its origin, and on some of them is the title JULIA AUGUSTA. The city flourished under the Goths, and, for some time, under the Moors, who preserved the old name, in the form Italica or Tela; but, in consequence of a change in the bed of the river, its inhabitants abandoned it, and migrated to Seville. Hence, in contradistinction to the city which (although far more ancient, see Hispalis) became thus its virtual successor, Italica received the name of Old Seville (Sevilla la Vieja), under which name its ruins still exist near the wretched village of Santi Pocas, while the surrounding country retains the ancient name, los campos de Tela. The chief object in the ruins is the amphitheatre, which was in good preservation till 1774, "when it was used by the corporation of Seville for river dikes, and for making the road to Badajoz." (Ferd.) Mr. Ford also states, that "on Dec. 12, 1799, a fine mosaic pavement was discovered, which a poor monk, named Jose Masco, to his honour, enclosed with a wall, in order to save it from the usual fate in Spain. Didot, in 1802, published for Laberde a splendid folio, with engravings and description. . . . Now, this work is all that remains, for the soldiers of Soult converted the enclosure into a great pen." The only portion of the ruins of Italica to be seen above-ground consists of some vaulted brick tanks, called La Casa de los Baños, which were the reservoirs of the aqueduct brought by Adrian from Tejado, 7 leagues distant. (Casa. B. C. ii. 20; Bell. Alex. 53; Gell. Noct. Att. x. 13; Oros. v. 23; Geog. Rav.; Flor. Esp. 8. vol. xii, pp. 227, foll.; Coins, ap. Flor. Med. de Esp. vol. ii. p. 477; Monuets, vol. i. p. 17, Suppl. vol. i. p. 31; Sestini, p. 61; Eckhel, vol. i. p. 23; Uberti, vol. ii. p. 1. p. 372; Ford, Handbook of Spain, pp. 63, 64.)

ITALICA. [CORINTHUM.]

ITANUM PR. [ITANUS.]

ITANUS (ΙΤΑΝΟΣ, Ptol. iii. 17, § 4; Steph. B. Eth. Ιτανός, a town on the E. coast of Crete, near the promontory which bore the name of Itanus, (Plii. iv. 12.) In Coroessi’s map there is a place called Itanого, with a Palaekastro in the neighbourhood, which is probably the site of Itanus; the position of the headland must be looked for near Xecro flume (Hick, Kret., vol. i. p. 426), unless it be placed further N. at Capo Solomon, in which case the Greenes islands would correspond with the Onisla and Liuce of Pliny (l.c.; comp. Mus. Class. Antiq. vol. ii. p. 303).

According to Herodotus (iv. 151), the Theraeans, when founding Cyrene, were indebted for their knowledge of the Libyan coast to Coroessus, aseller of parpel at Itana. Some of the coins of this city present the type of a woman terminating in the tail of a fish. (Eckhel, vol. ii. p. 314.) This type, recalling the figure of the syrian goddess, coupled with the trade in parpel, suggests a Syrian origin.

[Œ. B. R.]
while he believed the modern capital town of Bathýs to occupy the site of Crocyía. (H. I. c.) It is true that Strabo (pp. 376, 433) places Aegilips and Crocyía in Lecass; but this appears inconsistent with Homer and other ancient authorities. (See Leake, l. c.)

Ithaca (Quatst. Græc. 43) and Stephanus B. (s. n.) state that the proper name of the ancient capital of Ithaca was Albesonea or Alacooneae, and that Ulysses bestowed this appellation upon it from his having been himself born near Alacooneae in Bactia. But this name is not found in Homer; and a passage in Strabo tends to identify it with the ruins on the ismuth of Æthos, where the fortress and royal residence of the Ithacan chiefs probably stood, on account of the advantages of a position so easily accessible to the sea both on the eastern and western sides. It is argued by Leake (l. c.) that the Homeric capital city was at Pélos, a little harbour on the NW. coast of the island, where some Hellenic remains may still be traced. For the poet (Od. iv. 844, seq.) represents the authors as lying in wait for Teneaclus on his return from Peloponnese at Aestorion, "a small island in the channel between Ithaca and Samos (Cephalonía)," where the only island is that now called Δομάνικος, situated exactly opposite the entrance to Port Pélos. The traditional name of Pélos is alone a strong argument that the town, of which the remains are still visible there, was that which Styxax (in Arar. mania), and still more especially Ptolemy (iii. 14), mentions as having borne the same name as the island. It seems highly probable that η πόλις, or the city, was among the Ithacans the most common designation of their chief town. And if the Homeric capital was at Pélos, it will follow that Mt. Neum, under which it stood ("Ithacês Νευμαν, Od. i. 81.), was the mountain of Exke (Thas Enos), at the northern extremity of the island, and that one of its summits was the Heraclean hill (Εύμαχος Νέμω, Od. xvi. 471) from which Eumenes saw the ship of Teneaclus entering the harbour. It becomes probable, also, that the harbour Ithethrun (Πεθηθρων), which was "under Neum" but "apart from the city" (νεαρή πόλις, Od. i. 185), may be identified with either of the neighbouring bays of Αλκα or Πρίκης. Near the village of Eupoloi may be observed the substructions of an ancient building; probably a temple. A steep path leads up a low cliff and into a little cleft in the rock. These remains are now called by the neighbouring peasants "the School of Homer."

The Homeric "Fountain of Arethusa" is identified with a copious spring which rises at the foot of a cliff fronting the sea, near the NE. extremity of Ithaca. This cliff is still called Κορας (KóraS), and is, doubtless, that alluded to at Od. xiv. 407, seq., xiv. 5, seq., xiv. 398. (See, especially on this point, Leake, l. c., and Mure, Tour in Greece, vol. i. p. 67, seq.)

The most remarkable natural feature of Ithaca is the Gulf of Molo, that inlet of the sea which nearly divides the island into two portions; and the most remarkable relic of antiquity is the so-called "Castle of Ulysses," placed, as has been already intimated, on the sides and summit of the steep hill of Æthos, on the connecting isthmus. Here may be traced several lines of inclosure, testify- ing the highest antiquity in the rude structure of massive stones which compose them. The position of several gates is distinctly marked; there are also traces of a tower and of two large subterranean cisterns. There can be little doubt that this is the spot to which Ciceró (de Orat. i. 44) alludes in praising the patriotism of Ulysses — "at Ithacam ilium in a perennis saxis tanquam inani altitum asperissimum vir immortalitati antecessor." The name of Æthos, moreover, reminds the striking scene in Od. ii. 146, seq. At the base of this hill there have been discovered several ancient tombs, sepulchral inscriptions, vases, rings, medals, &c. The coins of Ithaca usually bear the head of Ulysses, with the πιξες, or conical cap, and the legend Βαυκρα; the reverse exhibiting a cock, an emblem of the hero's vigilance, Athena, his tutelar deity, or other devices of like import. (See Eckhel.)

The Homeric port of Phorcys (Od. xii. 345) is supposed to be represented by a small creek now called Ξυρκά, probably because it is on the right of the entrance to the harbour of Bathýs, or by another creek now called Skhína, both on the southern side of the Gulf of Molo. (Leake, l. c.) At a cave on the side of Mount Stephanos or Morcogni, above this gulf, and at a short distance from the sea, is placed the "Grotto of the Nymphs," in which the sleeping Ulysses was deposited by the Phoenicians who brought him from Scherion. (Od. xii. 116, seq.) Leake (l. c.) considers this to be "the only point in the island exactly corresponding to the poet's description."

The modern capital of Ithaca extends in a narrow strip of white houses round the southern extremity of the horsehoe-shaped port, or "deep" (Βαυκρα), from which it derives its name, and which is itself but an inlet of the Gulf of Molo, often mentioned already. After passing through similar vicissitudes to those of its neighbours, Ithaca is now one of the seven Ionian Islands under the protectorate of Great Britain, and contains a population exceeding 10,000 souls, — an aristocratic and progressive community. It has been truly observed that there is, perhaps, no spot in the world where the influence of classical associations is more lively or more pure; for Ithaca is indebted for no part of its interest to the rival distinctions of modern annals, — so much as its name scarcely occurring in the page of any writer of historical ages, unless with reference to its poetical celebrity. Indeed, in A. D. 1504, it was nearly, if not quite, uninhabited, having been depopulated by the incursions of Corsairs; and record is still extant of the privileges accorded by the Venetian government to the Ithacans (probably from the neighbouring islands and from the mainland of Greece) by whom it was repopulated. (Leake, l. c.; Bowen, Ithaca in 1830, p. I.)

It has been assumed throughout this article that the island still called Ithaca is identical with the Homeric Ithaca. Of that fact there is ample testimony in its geographical position, as well as in its internal features, when compared with the Odyssey. To every scep-tic we may say, in the words of Athena to Ulysses (Od. xii. 344), —

ΔΑΛΙΟΝ ΒΗΣΤΕΙ ΠΟΛΟΝ ΧΩΣ ΜΟΡΟΝ ΝΤΕΑΘΗΚΑ.

(The arguments on the sceptical side of the question have been collected by Völcker, Homer, Geogr. 46

CoiN oF ITHACA.
ITIACESIAE INSULAE.

—74, but they have been successfully confuted by Bnkle von Liliesten, Uber das homerische Ihaca. The fullest authorities on the subject of this article are Gell, Geography and Antiquities of Ihaca, London, 1807; Leake, Northern Greece, vol. iii. pp. 24—55; Mure, Tour in Greece, vol. i. pp. 38—51; Bowen, Ihaca in 1850, London, 1852. [G. F. B.]

ITIACESIAE INSULAE, is the name given by Pliny (lik. vii. 13) to some small islets opposite to Vibo on the W. coast of Bruttium. These can be no other than some small rocks (too small to be marked on ordinary maps) which lie just opposite to the remains of Birona, in the Golfo di Stia, Euroenia, and on which some traces of ancient buildings (probably connected with that port) were still visible in the days of Barrio. (Barrius, de Situ Calabr., i. 13; Romanelli, vol. i. p. 57.) [E. H. B.]

ITHO'IME (Ἰθώμη; Ith. Θωμήν, θωμαίοι), 1. A town of Histiaeotis in Thessaly, described by Homer as the "rocky Ithome" (Ἰθώμη κλαιμακεσσίῳ, H. ii. 728) Placed by Strabo within a promontory formed by the four cities, Tricca, Metropolis, Pelinnaum, and Gompho. (Strab. v. p. 432.) It probably occupied the site of the castle which stands on the summit above the village of Faniri. Leake observed, near the north-western face of the castle, some remains of a very ancient Hellenic wall, consisting of a few large masses of stone, roughly hewn on the outside, but accurately jointed to another without cement. (Leake, Northern Greece, vol. iv. p. 516.)

It is a mountain fortress in Messenia, where the Messenians long maintained themselves against the Spartans in the First Messenian War. It was afterwards the citadel of Messene, when this city was founded by Epaminondas. For details, see Messene.

ITHO'RIA (Ἰθώρια), a town in Aetolia, near the Achelous, and a short distance south of Cnemus. It was situated at the entrance of a pass, and was strongly fortified both by nature and by art. It was taken by the Romans in B.C. 137, Placed by Strabo at the headland, b. v. 213. (Pol iv. 64.)

ITIUM PROMONTORIUM, is placed by Ptolemy (ii. 9, § 1) in Cetolgallia Belgica. After the months of the Seine, he mentions the outlet of the river Phrinus [Πρίνιδος], Icium (Ἰκείων Ἐξορος), and then Gorsiacum (Γόρσιακον ἔκβολον), which is Boulbagne. One of the old Latin versions of Ptolemy has Itim Promontorium, and others may have it too. He places Gorsiacum and Itim in the same latitude, and Itim due west of Gorsiacum. This is a great mistake, for Itim being Cap Grises, the relative position of the two places is north and south, instead of east and west. There is no promontory on this part of the French coast north or south of Boulbagne except Grises, at which point the coast changes its direction from south to north, and runs in a general ENE. direction to Calais, Gravelines, and Dunkerque. It is therefore certain that there is a great mistake in Ptolemy, both in the direction of the coast and the relative position of Gorsiacum and Itim. Cap Grises is a chalk cliff, the termination on the coast of the chalk hills which cross the department of Pas de Calais. The chalk cliffs extend a few miles on each side of Cap Grises, and are clearly seen from the English coast on a fine day. This cape is the nearest point of the French coast to the opposite coast of Kent. [G. L.]

ITIUS PORTUS (Ῥόδινος Πορτος, Strab. p. 199). When Caesar was preparing for his second British ex-

ITIUS PORTUS.

99

position (v. c. 54), he says (B. G. iv. 2) that he ordered his forces to meet at "Portus Itius, from which port he had found that there was the most convenient passage to Britannia,—about 30,000 passers." In his first expedition, B. G. v. 55, he says that he marched, with all his forces, into the country of the Morini, because the passage from that coast to Britain was the shortest (B. G. iv. 21); but he does not name the port from which he sailed in his first expedition; and this is an omission which a man might easily supply from his copy of this passage (or his copy of the Commentaries). It seems a plain conclusion, from Caesar's words (v. 2) that he sailed from the Itius on his first expedition; for he marched into the country of the Morini, in order to make the shortest passage (iv. 21); and he made a good passage (iv. 23). In the fifth book he gives the distance from the Itius to the British coast, but not in the fourth book; and we conclude that he ascertained this distance in his first voyage. Dümmler (Ge-Raebe Rhômes) says (p. 29) that he thinks that the passage in the fifth book is related to previous time. Caesar did not sail from Ithium on his first voyage. We must accordingly suppose that, having had a good passage on his first voyage to Britannia, and back to the place from which he had sailed, he chose to try a different passage the second time, which passage he had learned (cognovit) to be the most convenient (commodiissimam). Yet he landed at the same place in Britannia in both his voyages (v. 8); and he had ascertained (cognovit) in the first voyage, as he says, that this was the best landing-place. So Dümmler, in his way, may prove, if he likes, that Caesar did not land at the same place in both voyages.

The name Ithium gives some reason for supposing that Portus Ithium was near the Promontorium Itium; and the opinion now generally accepted is, that Portus Ithium is Wissant or Wissant, a few miles east of Cap Grises. The critics have fixed Portus Ithium at various places; but not one of these guesses, and they are all guesses, is worth notice, except the guess that Ithium in Homer's poem of Boulbagne. The name Gesorium is not Ithium, which is one objection to the supposition. The only argument in favour of Boulbagne is, that it was the usual place from which the Romans sailed for Britannia after the time of Claudius, and that it is in the country of the Morini. Gesorium was the best spot that the Romans could choose for a regular place of embarkation, for it is adapted to be the site of a town and a fortified place, and has a small river. Accordingly it became the chief Roman postition on this part of the French coast, [Gesorium].

The distance of Portus Ithium from the nearest port of Britannia, 30 M. P., is too much. It seems to be a just conclusion, that Caesar estimated the distance from his own experience, and therefore that he estimated it either to the cliffs about the South Foreland, where he anchored, or to the place seven or eight miles (for the MSS, of Caesar vary here) further along the coast, where he landed. It is certain that he first approached the British coast under the high cliffs between Folkestone and Walmer. It is a disputed point whether he went from his anchorage under the cliffs northwards to Deal, or southward to Sandgate or Hythe. This matter does not affect the position of Ithium, and it is not discussed here; but the writer maintains that Caesar landed on the beach at Deal. There are difficulties in this question, which the reader may examine by referring to the authorities mentioned at the end of this article. The pas-
ITIUS PORTUS.

sage in the fifth book (v. 8), in which Caesar describes his second voyage, shows very clearly where he landed. He sailed from Portus Itius, on his second expedition, at sunset, with a wind about SW, by W.; about midnight the wind failed him, he could not keep his course, and, being carried too far by the tide, at daybreak, when he looked about him, he saw Britannia on his left hand behind him. Taking advantage of the change of the tide, he used his oars to reach "that part of the island where he had found in the previous summer that there was the best landing." He had been carried a few miles past the Cantiurn Promontorium, or North Foreland, but not out of sight, and he could easily find his way to the beach at Deal. There are many arguments to show that Deal was Caesar's landing-place, as it was for the Romans under the empire, who built near it the strong place of Rutupiae (Richborough), on the Stour, near Sandwich.

D'Anville makes out Caesar's distance of 30 M.P. thus. He reckons 22 or 24 M.P., at most, from Portus Itius to the English cliffs, and 8 miles from his landage under the cliffs to his landing-place make up 30. Perhaps Caesar means to estimate the whole distance that he sailed to his landing-place; and if this is so, his estimate of "about 30 Roman miles" is not far from the truth, and quite as near as we can expect. Strabo (p. 199) makes the distance 320 stadia, or only 300, according to a note of Eustathius on Dionysius Periegetes (v. 556), who either found 300 in his copy of Strabo, or made a mistake about the number; for he derived his information about Caesar's passage only from Strabo. It may be observed here that Strabo mentions two expeditions of Caesar, and only one port of embarkation, the Itius. He understood Caesar in the same way as all people will do who can draw a conclusion from premises. But even 300 stadia is too great a distance from Wissant to the British coast, if we reckoned 8 stadia to the Roman mile; but there is good reason, as D'Anville says, for making 10 stadia to the mile here. Pliny gives the distance from Boulogne to Britannia, that is, we must assume, to the usual landing-place, Rutupiae, at 50 M.P., which is too much; but it seems to be some evidence that he could not suppose Boulogne to be Caesar's place of embarkation.

Caesar mentions another port near Itius. He calls it the Ulterior Portus (iv. 22, 23, 25), or Superior, and it was 8 M.P. from Itius. We might assume from the term Ulterior, which has reference to Itius, that this port was farther to the north and east than Itius; and this is proved by what he says of the wind. For the wind which carried him to Britannia on his first expedition, his direct course being nearly north, prevented the ships at the Ulterior Portus from coming to the place where Caesar embarked (iv. 23).

The Ulterior, or Superior, Portus is between Wissant and Caius, and may be Sangatte. Caius is too far off. When Caesar was returning from his first expedition (iv. 36, 37) two transport ships could not make the same portus—the Itius and the Ulterior or Superior—that the rest of the ships did, but were carried a little lower down (paulo infra), that is, further south, which we know to be Caesar's meaning by comparing this with another passage (iv. 28). Caesar does not say that these two ships landed at a "portus," as Ukert supposes (Gaulen, p. 554), who makes a port unknown to Caesar, and gives it the name "Inferior."

Du Cange, Camden, and others, correctly took Portus Itius to be Wissant. Besides the resemblance of name, Du Cange and Gibson have shown that of two middle age Latin writers who mention the passage of Alfred, brother of St. Edward, into England, one calls Wissant Portus Icenis, and the other Portus Wisaui. D'Anville conjectures that Wissant means "white sand," and accordingly the promontory Itius would be the White, a very good name for it. But the word "white," and its various forms, is Teutonic, and not a Celtic word, so far as the writer knows; and the word "Itius," existed in Caesar's time on the coast of the Morini, a Celtic people, where we do not expect to see a Teutonic name.

Wissant was known to the Romans, for there are traces of a road from it to Tarasuenna (Thorunum). It is no port now, and never was a port in the modern sense, but it was very well suited for Caesar to draw his ships up on the beach, as he did when he landed in England; for Wissant is a wide, sheltered, sandy bay. Freisart speaks of Wissant as a large town in 1346.

A great deal has been written about Caesar's voyages. The first and the best attempt to explain it, though it is not free from some mistakes, is Dr. Hall's, of which an exhibition is given in the Classical Museum, No. xiii., by G. Long. D'Anville, with his usual judgment, saw that Itius must be Wissant, but he supposed that Caesar landed at Hythe, south of Dover. Waickemaer (Geog. des Gaules, vol. i. pp. 448, 452) has some remarks on Itius, which he takes to be Wissant, and there are remarks on Portus Itius in the Quarterly Magazine for September, 1846, by H. L. Long, Esq. Perhaps the latest examination of the matter is in G. Long's edition of Caesar, Note on Caesar's British Expeditions, pp. 248—257. What the later German geographers and critics, Ukert and others, have said of these voyages is of no value at all.

[G. L.]
ITON or ITONUS (Itrov., Heron. C. Itron., Strab.), a town of Phthiotis in Thessaly, called by Homer "mother of rocks." (II. i. 696), was situated 60 stadia from Alus, upon the river Cuaris or Coralius, and above the Crocin plain. (Strab. i. p. 435.) Leake supposes the Khola to be the Cuaris, and places Itons near the spot where the river issues from the mountains; and as, in that case, iton possessed a portion of the pastoral highlands of Olyrhis, the epithet "mother of rocks" appears to have been well adapted to it. (Leake, Northern Greece, vol. iv. pp. 356, 357.) Ibn had a celebrated temple of Athena, called "the great temple of the Roman Athena," was carried by the Boeotians, when they were expelled from Thessaly, into the country named after them. (Strab. l. c.; Steph. B. s. e.; Apollod. ii. 7. § 7; Appollon. i. 531, with Schol.; Callim. Hygin. in Cer. 74; Paus. i. 13. § 2, iii. 9. § 13, iix. 34. § 1, x. 1. § 10; Plat. Pythii. 26.) ITONE (Itron.), a town in Lydian of unknown site. (Dionys. Per. 465; Steph. B. s. e. [L. S.]) ITUCI (Plin. iii. 1. s. 3), or ITUCI (Caesar; Itbrur, Appian, Hist. 66, 68), a city in the W. of Iltar in "the mountains of Spain." Under the Romans it was a colonia immensa, with the surname VICTUS JULIA, and it belonged to the conventus of Hispalius. Its probable site, in the opinion of Ukert, was between Martos and Espojo, near Valencia. (Ukert, vol. ii. pt. 1. p. 369; Caes, ap. Flores, Med. de Esp. vol. ii. p. 487; Minnet, vol. i. p. 18, Suppl. vol. i. p. 32; Sestini, p. 63; Eckhel, vol. l. p. 24.) [P. S.] ITUNA, in Britain, mentioned by Ptolemy (ii. 3. § 2) as an estuary immediately to the north of the Mediterranean sea —it was identified with the Solway Firth. [R. B. L.] ITUAREA (Itrosia), a district in the NE. of Palestine (Strab. xvi. p. 755; Plin. v. 19), which, with Trachein, belonged to the tetrarchy of Philip, (St. Luke, iii. 1; comp. Joseph. Ant. xv. 10. § 1.) The name is so loosely applied by the ancient writers that it is difficult to fix its boundaries with precision, but it may be said roughly to be traversed by a line drawn from the lake of Tiberias to Damascos. It was a mountainous district, and full of caverns, the inhabitants, a wild race (Cic. Philiv. ii. 24), favoured by the natural features of the country, were in the habit of robbing the traders from Damascos (Strab. xvi. p. 756), and were famed as archers. (Virg. Georg. ii. 448; Luceum. 230, 514.) At an early period it was occupied by the tribe of Jeetr (1 Chron. v. 19; Tragonan, LXX.), whose name is connected with that of Jeetor, a son of Ishmael. (1 Chron. l. 31.) The Itureans—either the descendants of the original possessors, or, as is more probable, of new comers—who had occupied this district after the exile, and assumed the original name—were eventually subdued by king Aristobulus, b.c. 100, who compelled them to be circumcised, and incorporated them in his dominions. (Joseph. Ant. xiii. 11. § 3.) The mountain district was in the hands of Ptolemaem, tetrach of Chalcis (Strab. xvi. i. 753); but when Pompeius came into Syria, Iturea was ceded to the Romans (Appian. Mithr. 106), though probably it retained a certain amount of independence under native vassal princes: M. Antonius imposed a heavy tribute upon it. (Appian, B. C. v. 7.) Finally, under Claudius, it became part of the province of Syria. (Tac. Ann. xii. 23; Dion Cass. lxx. 12.) The district El-Djebel, to the E. of Hermon (Djebel-elh-Scheikd), and lying W. of the Hudj road, which according to Burchhardt (Trav. p. 236) now contains only twenty inhabited villages, comprised the whole or the greater part of ancient Iturea. (Münter, der Reh. Histor. Havn. 1824 : comp. Winer, Realwörterbuch, s. v.; Eitfer, Erdkunde, vol. xv. pt. ii. pp. 354—357, 899.) [E. B. J.] ITURISSA. [Turissa.] ITYCA. [Tucci.] ITYS, in Britain, mentioned by Ptolemy (ii. 3. § 1) as a river lying north of the Epidaur promontory (Mall of Coutyre), with the river Langus between. In this letter—Loch Lithe—its is probably the Sound of Slet, between the Isle of Skye and the mainland. In the Monumenta Britannica we have Loch Terridon, Loch Doich, Loch Es. [R. G. L.] JUDAEA. [Palaestina.] JUDAI. [Palaestina.] IVERNIA. [Ileene.] IVERNIS (Iovenis), mentioned by Ptolemy (ii. 2. § 10) as one of the inland towns of Ireland, the others being Blugia, Bhaedra, Laberus, Macfolium, another place of the name, with Donaw, and Macolium with Mallon, in the strength of the names. Laberus, on similar but less satisfactory grounds, is Kil-loir in West Meath. Ivernus is identified by O'Connor with Don-kevon, on the Kenmare river; but the grounds on which this has been done are not stated. [R. G. L.] IVIA or JUVIA. [Galacia.] JULIA CONSTANTIA. [Osset.] JULIA PENDITA. [Uilla.] JULIA JOTIA (Jotia, 156), a city on the coast of Hispalius Barcino, between Gades and Belen, colonized by a population of Romans mixed with the removed inhabitants of the town of Zelis, near Tingis, on the Libyan shore of the Straits. Thus far Strabo (iii. p. 140) : later writers speak of a place named JULIA TRADUCTION OR SIMPLY TRANSDUCTION (Iovia Treadwocia) Vol. ii. 4. § 6; Marci, Hercal. p. 39; Geo, R., E. of Mellaria; and coins are extant with the epigraph JULIA TRADUCTX (Floriz, Med. de Esp. vol. ii. p. 386, Esp, vol. x. p. 50; Minnet, vol. i. p. 26; Sestini, vol. i. p. 49; Sestini, Med. Esp. p. 80; Num. Goth.; Eckhel, i rol. pp. 29—31.) Mela does not mention the place by either of these names; but, after speaking of Carteia, he adds the following remarkable words; et quam transvecti ex Afirica Phoeniciis inhabitan, atque unde nos annos, Tungentera. (Mela. ii. 6.) It can hardly be doubted that all these statements refer to the same place; for, the very names are identical, Transsectba being only the Latin translation of the word Jotia (from 7, eos, egeoseos ex) used by the Phoenician inhabitants to describe the origin of the city. Its site must have been at or near Tureja, in the middle of the European shore of the Straits, and on the S.—most point of the peninsula. (Mem. de l'Acad. des Ins. p. 103; Philos. Trans. xiii. p. 919; Mentelle, Geoq, Comp. Esp. Anc. p. 229; Eckert, ii. i. p. 344.) [P. S.] JULIA LIVIBIA. [Cerretani.] JULIA MYRTILIS. [Myrtillis.] JULIA ROMEILLA. [Hispalis.] JULIA TRANSDUCTA. [Juliana Joza.] JULIA VICTRIX. [Tarraclto.] JULIACUM, a town in Gallia Belgica. In the Antonine Itin. a road runs from Castellum (Cossat) through Tongem to Julicenac, and thence to Colonia (Cologne). Juliacum is 18 leagues from Colonia. Another road runs from Colonia Trinjana to h 3.
JULIANOPOLIS, and from Juliusiem through Tiberiacum to Cologne. On this read also Juliusiem is placed 18 leagues from Cologne. Juliusiem is Julius, or Julich, as the Germans call it, on the river Roer, on the carriage road from Cologne to Aix-la-Chapelle. The first part of the word seems to be the Roman name Julia, which is rendered more probable by finding between Juliusiem and Colonia a place Tiberiacum (Berecheim or Berghen). Acum is a common ending of the names of towns in North Gallia. [G. L.]

JULIANOPOLIS (Ἰουλιανόπολις), a town in Lydia which is not mentioned until the time of Hierostratus (p. 670), according to whom it was situated close to Manisa, and must be looked for in the southern parts of Mount Eucalyptus, between Philadelphus and Tralles. (Comp. Plin. v. 29.) [L. S.]

JULIUS [ΒΕΡΙΑΙΝΑ].

JULIUSBOA (Ἰουλιοβοᾶ), a town in Gallia Belgica, is the city of the Caleti, or Calebites as Ptolemy writes the name (ii. 8 § 3), who occupied the Pays de Coaux. [CALETI.] The place is Lilliborne, on the little river Bolbec, near the north bank of the Seine, between Barent and Candebre, in the present department of Seine Inferieure. It was probably the site of a Roman town and remains of an amphitheatre, a Grecian theatre, and an ancient harbour, have been discovered.

JULIBRIGA (Ἰούλιβριγά), the chief city of the Cantabri, in Hispania Tarraconensis, belonging to the conventus of Chiusa, stood near the sources of the Ebro, on the eminence of Retortillo, S. de Regos. Five stone hills still mark the boundary which divided its territory from that of Legio IV. It had its port, named Portus Victoriae Julianobrigiense, at Sonabas (Ptol. ii. 8 § 4, iv. 12 § 20), and a Latin name Liburnis. [P. S.]

JULIAMAGUS (Ἰουλιαμαγοῦς), a town of the Andevaci, in Gallia Lugdunensis, and their capital. (Ptol. ii. 8 § 8.) It is named Julianobogus in the Table, and marked as a capital. It is now Augers. [ANDECAV.]

JULIOTOLIS. [ΓΟΥΡΙΟΝΙΟΝ ΚΑΡΙΑΣ.] JULOPIA (Ἰουλιόπια). Pliny (vi. 23 § 26) among ancient geographers mentions this place among the towns of Lower Egypt. From the silence of his predecessors, and from the name itself, we may reasonably infer its recent origin. According to Pliny, Julianobogus stood about 20 miles distant from Alexandria, upon the banks of the canal which connected that city with the Coptic arm of the Nile. Some geographers suppose Julianobogus to have been no other than Nicopolis, or the City of Victory, founded by Augustus Caesar in n. c. 29, partly to commemorate his reduction of Aegypt to a Roman province, and partly to punish the Alexandrians for their adherence to Cleopatra and M. Antonius. Mannert, on the contrary (x. i. p. 626), believes Julianobogus to have been merely that suburb of Alexandria which Strabo (xvii. p. 755) calls Eleusis. At this place the Nile-boats, proceeding up or down, took in passengers. [W. B. D.]

JULIS. [Κεροίνα.] JULIUM CARNICUM (Ἰουλίου Καρνίκου, Plol: Zulgo), a town of the Carni, situated at the foot of the Julian Alps, which, from its name, would seem to have been a Roman colony founded either by Julius Caesar, or in his honour by Augustus. If Paulus Diaecusis is correct in ascribing the foundation of Forum Julii to the dictator himself (P. Diaec. Hist. Long. ii. 14), there is little doubt that Juliocarnicum dates from the same period, but we have no account of its foundation. Probably in one place distinctly describes it as in Noricum (viii. 7 § 4), in another more correctly as situated on the frontiers of Noricum and Italy (μεταφη της Τραίας και Ναυπακτίου, ii. 13 § 4). But Pliny expressly includes it in the territory of the Carni and the tenth region of Italy ("Julianenses Carnorum," iii. 19. p. 23), and its position on the S. side of the Alps clearly entitles it to be considered in Italy. Its position is correctly indicated by the Itinerary of Antoninus (p. 219), which places it 60 M. P. from Aquileia, on the road leading nearly due N. from that city over the Julian Alps. The first stage on this road, "Ad Tricesimum," still retains the name of Trigesumo, and the site of Julianum Carinicum is marked by the village of Zulgo (where some Roman remains have been discovered), in a side valley opening into that of the Tagliamento, about 4 miles above Tolmezzo. The pass from thence over the Monte di Sta. Croce into the valley of the Tagliamento is practicable only for mules, follows the line of the ancient Roman road, given in the Itinerary, and therefore probably a frequented pass under the Romans (ALPES, p. 110, No. 7); but the inscription on the faith of which the construction of this road has been ascribed to Julius Caesar is a palpable forgery. (Ouvr. Ital. p. 200.) [E. H. B.]

JUNCARIA, JUNCARIUS CAMPUS. [INDIGETES.]

JUXONIA INSULA. [FORUNTATU INS.] JURA. [HELVEITI; GALLIA, p. 951.]

JURCAE (Ἰουρκάιε). JUSOCAE (Ἰούσοκα).
JUSTIANA.

JUSTIANA. [CARThAGo; Hadrumetum] JUSTIANA PRIMA. [Scupt.]

JUSTIANOPOLIS. 1. A city in Epirus, formerly called Hadrianopolis. [Hadrianopolis.]

2. The later name of Hadrumetum in Africa. [Hadrumetum.]

JUTHUNGHI [Ἰοὐθῦγγος], a German tribe dwelling on the banks of the Danube. They are described by some ancient writers as a part of the Alemani (Amm. Marc. xvi. 6); but they belonged more probably to the Gothic race; even their name seems to be only a corruption of Gothones. (Ambros. Epit. 20.) Desipius, from whom we learn most about their history, calls them a Sthynith tribe, which, however, clearly means that they were Goths.

In the reign of the emperor Aurelian the Juthunghi invaded Italy, and, being defeated, they sued for peace, but were obliged to return with having effected their purpose: afterwards they made preparations for another invasion. (Desip. pp. 11, 12, 18, 19.) The elder, Nemesius and Belker. In these wars, however, they never appeared alone, but always in conjunction with others, either Alemani, Suevi, or Goths. (See Eusen Schmidt, de Origine Ostrogothorum et Visigothorum, p. 26; Latham, Tacit. Germ. Epig. p. cxiii.) [L. S.]

JUTTHAI [Ἰοὐτθαι, LXX.], a town of Judah (Jos. xv. 55), appropriated to the priests: according to Eusebius (Onomast. s. v. Ιετα) it was 18 M. P. from Eleutheropolis. Rander (Palaeot. p. 870) supposes this to have been the residence of Zacharias and Elisabeth. Juthunghi, the place mentioned in the New Testament, — the παλαι ἕνωσα of Luke, i. 39, being so written, or by a corruption from a softer pronunciation, instead of παλαίονα, the modern Ἐταί, on the site of the old town, in which there are said to be indications of old remains, preserves the ancient name. (Robinson, Bib. Res. vol. ii. pp. 190, 195, 628; Ritter, Erdkunde, vol. xv. pl. ii. pp. 638, 641; Winer, s. v.) [E. B. J.]

JUVAVIUM, JUVAVIA, a town in the interior of Noricum, on the left bank of the river Icarsus. It is the modern city of Salzburg, situated in an extensive and fertile valley, on the slope of a range of a high mountain. It is chiefly known from inscriptions: one of which (Orelli, no. 496) describes the place as a colony planted by the emperor Hadrian; but its genuineness is disputed. (Orelli, Inscription. vol. i. p. 138.) Juuvavium was the head-quarters of the fifth cohort of the first legion (Votl. Impcrn.) and the residence of the governor of the province. At an earlier period it seems to have been the residence of the native kings of Noricum. In the second half of the fifth century it was destroyed by the Heruli; but was restored as early as the seventh century, and still contains many beautiful remains of antiquity, especially mosaics. (Comp. Orelli, Inscription. nos. 406, 497; Itin. Ant. p. 235, where it bears the erroneous name of Jovav; Eugippi, Vit. S. Sever. 13, 24, where it is called Ipav; Vit. S. Rupert. ap. Basnage, tom. iii. pl. ii. p. 273; Eginhard, Vit. Caroli M. 39; Jacobit, ad reginam von Zustande der Gegendcn und Stadt Jacovins, Salzburg, 1784, fol.) [L. S.]

K.

KADES [Καιδης, LXX.], or KADESH-BARNEA, a site on the SE. of Palestine, with a fountain, En-

MISHPAT (Gen. xiv. 7, xvi. 14), where the Israelites encamped with the intention of entering the Promised Land (Num. xxxii. 8), and the point from which the spies were sent. (Num. xii. xiv. 40—45, xvi. 1—3; Deut. i. 41—44; comp. Judg. i. 17.) The supposition that the Kadesh-Barnea, to which the Israelites first came, is different from the Kadesh-Meribah, which formed their later encampment, where the wants of the people were miraculously supplied from the smitten rock (Num. xx. 14), recognises some difficulties. On the hypothesis that there were two places of this name, the first Kadesh and its localities agrees very well with the spring of Ain Kedce or Kedara, lying to the E. of the highest part of Djebel Holol, towards its N. extremity, about 12 miles from Marjeh Hadjar. (Beer-lahai-roi, Gen. xvi. 14, and something like due S. from Kholasa (Chezik, Josh. xv. 30), which has been identified by Mr. Rowlands (Williams, Holy City, vol. i. App. pp. 466—468) with the rock struck by Moses.

The second Kadesh, to which the Israelites came with a view of passing through the land of Edom, coincides better with the more easterly position of 'Ain el-Weibeh which Dr. Robinson (Bib. Res. vol. ii. pp. 582, 610, 622) has assigned to it (comp. Kitt. Scripture Lands, p. 82.) Ritter (Erdkunde, vol. xiv. pp. 1077—1089), who refers to the latest discoveries in this district, does not determine whether one Kadesh would sufficiently answer all the conditions required. (E. B. J.)

KADMONTES (Rebussonae, LXX.), a nation of Cannaen at the time that Abraham sojourned in the land (Gen. xvi. 19). The name Beni-Kedem, "children of the East" (Judg. vi. 3; comp. Isa. xii. 14), was probably not distinctive of, but collectively applied to various peoples, like the Saracens in the middle ages, and the Beduins in later times. (Ritter, Erdkunde, vol. xv. pt. i. p. 138.) [E. B. J.]

KAMON (Καώς, LXX.), a town in Gilead, belonging to the tribe of Manasseh, where Jair died. (Josh. xvii. 5; comp. Josh. Antiq. v. 7. § 6.) The Kamonna (Kauwad) of Eusheus, which lay 6 M. P. to the N. of Legio (Onomast. s. v.), must have been another place of the same name; but the city which Polybius (v. 70) calls Kamonus (Kauwos), and which was taken, with other places in Peraea, by Antiochus, is identical with the town in Gilead. (Rander, Palaeot. 649; Winer, s. v.; Von Ranner, Palaeot. p. 262; Ritter, Erdkunde, vol. xiv. p. 1026.) [E. B. J.]

KANAHI (Κανάω, LXX.). 1. A town in the N. district of Asher. (Josh. xiii. 28.) Dr. Robinson recognises it in the large village of Kuna, on the brow of the Wady-Ashür, near Tyre. 2. A river which divided the district of Manasseh from that of Ephraim (Josh. xvi. 8, xvii. 9, 10), probably the river which discharges itself into the sea between Caesarea and Apollonia (Arundinetis; comp. Schultens, I'ta Salut. pp. 191, 193), now the Nahar Abu Zobura. [E. B. J.]

KA'IHRABIS (Καϊχραβής), a fortified place in Idumaea, taken, with Kaphthura, by Cerealis, a.d. 69. (Joseph. B. J. i. 9. § 9.) [E. B. J.]

KEDEMOTH (Βασιλεῖα, LXX.), a city in the tribe of Reuben (Josh. xiii. 18), which gave its name to the wilderness of Kedemoth, on the borders of the river Arnon, from whence Moses sent messengers of peace to Sihon king of Heshbon (Deut. ii. 26.). Its site has not been made out. (Ritter, Erdkunde, vol. xv. pt. i. pp. 574, 1208; Winer, s. v.) [E. B. J.]
KEDESHE (Kafna, LXX.), 1. A town of Naphthali, 20 S. P. from Tyrre. (Euseb. Onomast. s. v. Cedeshe.) Its Canaanitish chiefest was slain at the conquest of the land (Josh. xii. 22); afterwards it belonged to the Levites, and was one of the cities of refuge. (Josh. xx. 7, xxxi. 32; 1 Chron. vi. 76.) Barak was born here (Judges, iv. 6); and Tidgith-Plesai made the conquest of it (2 Kings, xxv. 29). It was the scene of the victory of Jonathan Macabaeus over the prince of Demetrius (1 Macc. xi. 63-73), and was the birthplace of Tobias (Kēdās ṯyν ἑραθέαν, Tobit, i. 2). In Josephus, Kēdōs (Antiq. ix. 11, § 1). Kēdōs is mentioned in this book from the Kedem of the LXX., the boundary between Tyre and Galilee; during the war it appears to have been hostile to Galilee (B. J. ii. 18, § 1). The strongly fortified place in this district, called Kōdesōroi by the same writer (B. J. iv. 2, § 3), is probably the same as Kedeshe.

A village on the hills opposite the marshes of Hulēt-Brinias, still called Kedeshe, is identified by Dr. Robinson with the ancient city. (Bibl. Res. vol. iii. p. 355.) Kedes was visited in 1844 by the Rev. ED Smith, who has a full account of it in MS. (B. J. ii. 18, p. 263.)

2. A town in the S. district of the tribe of Judah, (Josh. xv. 23.)

KEDRON, KIDRON. [Jerusalem.]

KÉLÁI (Kédā, LXX.); KÉLA, Joseph. Antiq. vi. 13, § 1; Kōdā, Euseb., a city in the tribe of Judah. (Josh. xx. 44.) 8 M. P. from Elathopolis. (Euseb. Onomast. s. v.) When the city was besieged by the Philistines, David relieved it, but the thankless inhabitants would have delivered it into the hands of Saul. (1 Sam. xxi. 13.) It assisted in the building of the walls of Jerusalem (Neh. iii. 17, 18); and, according to tradition, the prophet Habakkuk was buried here. (Sozomen, E. F. vii. 29; Niceph. E. F. xi. 48; Ieland, Palest. p. 698; Winer, Biblisch. Reckwirt. s. v. Von Rammer, Palest. p. 107.) [E. B. J.]

KÉTITES (Ketān, LXX.), a semi-barbarous tribe of Midianites, dwelling among the Amalekites. (Gen. xxv. 19; Num. xxxii. 24; 1 Sam. xxv. 6.) Holub (Jethro), the father-in-law of Moses, and Heber, the husband of Zilpah, who gave Sisera (Judg. i. 16, iv. 11), belonged to this race. The Rechobites are mentioned, with other families, as belonging to the Kenites. (1 Chron. vi. 55; Jer. xxv. 2; Winer, s. v.) Ritter, Erdkunde, vol. xx. pp. 135-138; Ewald, Gesch. des Volkes Israel, vol. i. p. 357, vol. ii. p. 551.)

KENIZZITES (Kenāzōn, LXX.), a Canaanitish tribe. (Gen. xv. 19.) Caleb, the son of Jephunneh, is called a Kenizite (Num. xxxii. 12; Josh. xiv. 6), and Ohniah, his younger brother, is also called a son of Kenaz. (Judg. i. 13, iii. 9; comp. Josh. xiv. 17; 1 Chron. iv. 13.) Another branch of this race are referred to the Elamites. (Gen. xxxvi. 11; Winer, s. v.; Ritter, Erdkunde, vol. xv. p. 138; Ewald, Gesch. des Volkes Israel, vol. i. p. 639.) [E. B. J.]

KÉMANITH (Kemāniyāt, LXX.), a town of the tribe of Judah. (Josh. xv. 25.) It was probably the birthplace of the traitor Judas, who owed his surname (Yavazōwēn) to this place. (Comp. Winer, s. v. Judas.) Dr. Robinson (Bibl. Res. vol. ii. p. 472) has suggested that it may be represented by El-Kaurecōla, situated at the foot of the mountain ridge. of Shebon, where there are sites of ruins visible.

2. A town of Moab. (Jer. xlviii. 24, 41; Amos, ii. 2.) [E. B. J.]

KIRJATH, a word signifying in Hebrew "town," or "city," the following are the principal places to which this term is attached.

1. KIRJATH-MEMM (Kapānāth, LXX.), or the "double city," one of the most ancient towns in the country E. of the Jordan, as it was in the hands of the Einims (Gen. xiv. 5; comp. Ewald, Gesch. des Volkes Israel, vol. i. p. 308), who were expelled from it by the Moabites. (Josh. ii. 9, 11.) Kirjath-memim was afterwards assigned to the children of Reuben (Num. xxxii. 37; Josh. xiii. 19); but during the exile the Moabites recovered this and other towns. (Jer. xlviii. 1, 23; Ezek. xxv. 9.) Eusebius and Jerome (Onomast. s. v. Kapānāth) describe it as being full of Christians, and lying 10 M. P. W. of Medeba. Bearehardt (Prav. p. 567) heard of ruins called El-Teinem, half an hour W. of the site of Medeba, which he conjectures to have been this place, the last syllable of the name being there changed from m into n. This does not agree with the distance in the Onomasticon, but Jerome is probably in error in identifying the Christian town with the ancient Kirjathmemon, as the former is no doubt, from the data assigned by him, the modern Keremwt, S. of the Wady Zerka Main, and the latter the El-Teinem of Bearehardt, to the N. of the Wady. (Comp. Ritter, Erdkunde, vol. xx. pp. 1185, 1186.) There was another place of this name in the tribe of Naphtali. (1 Chron. vi. 76.)

2. KIRJATH-ARBA, the ancient name of Hebron, but still in use in the time of Nehemiah (xi. 25). [Hebron.]

3. KIRJATH-Baal. [Kirjath-Jearim.]

4. KIRJATH-Huzoth, or "city of streets," a town of Moab. (Num. xxxii. 39.)

5. KIRJATH-JEARIM, or "city of forests," one of the four towns of the Gibeonites (Josh. ix. 17), and not far distant from Beeroth (El-Birch). (Ezra, ii. 25.) At a later period the ark was brought here from Beth-Sheanesh (1 Sam. vii. 1, 2), and remained there till it was removed to Jerusalem (1 Chron. xiii. 6). The place was rebuilt and inhabited again after the exile (Ezra, i.e.; Neh. vii. 29). Josephus (Ant. vi. 1, § 4) says that it was near to Beit-Sheanesh, and Eusebius and Jerome (Onomast. s. v. Beal-Carathinum) speak of it, in their day, as a village 9 or 10 M. P. from Jerusalem, on the way to Diospolis (Lyddo). Dr. Robinson (Bibl. Res. vol. ii. pp. 334-337) has identified it with the present Keret-el-Enab, on the road to Ramleh. The Greeks have found the ANATHOTH of Jeremiah (xxii. 1; comp. Hevor in loc.; Onomast. s. v.; Joseph. Ant. x. 7, § 3,) which is now represented by the modern 'Anatit at Keret-el-Enab, but the ecclesiastical tradition is evidently incorrect. There was formerly here a convent of the Minorites, with a Latin church. The latter remains entirely deserted, but not in ruins; and is one of the largest and most solidly constructed churches in Palestine. (Ritter, Erdkunde, vol. xv. pp. 108-110.)

6. KIRJATH-NEHEM, or "city of the book." (Josh. xv. 15, 16; Judg. ii. 11,) also called KIRJATH-SANNAH, "city of palms." (Josh. xiv. 48.) Afterwards it took the name of Debir (Dēsp, LXX.), a "word" or "oracle." Debir was captured by Joshua (x. 38), but being afterwards rebuilt by the Canaanites, Caleb gave his daughter Achsah to Othniel, for his
bravery in carrying it by storm (Josh. xv. 16—20). It belonged afterwards to the priests. (Josh, xxxi. 15: 1 Chron. vi. 58.) Debir is afterwards lost sight of; but from the indications already given, it appears to have been near Hebron, but the site has not been made out. There was a second Debir in the tribe of Gad. (Josh. xiii. 26.) (Von Rammer, Palest. p. 182; Winer, s. r.)

Kir-Moab. (το τείχος της Μασαάθεδος, LXX.), "the stronghold of Moab." (Isa, xvi.), called also Kir-Moav. (Herod. ii. 17, 7, 11; Jer. xlviii. 31.) In the Chaldean version and the Greek of the Apocrypha, it appears in the form of Kerakka-Moab, and Ubaraka (Xaphaca, 2 Macc. xii. 17). Under this latter name, more or less corrupted, it is mentioned by Ptolemy (Χαφάκουα, v. 17; 3 §, comp. Χαφάκουα, Steph. B.) and other writers, both ecclesiastical and profane, down to the centuries before the Crusades. (Ablh-Išaş, Tab. Syr. p. 89; Schulz, Index ad Vit. Sabat. s. r.) The Crusaders found the name Xaphaka, and erected the fortress still known as Kerak, which, with that of Shobek, formed the centre of operations for the Latin E. of the Jordan. With the capture of these, after a long siege by Saladin, A. D. 1188, the dominion of the Franks over this territory terminated. (Wilken, die Kreuze, vol. iv. pp. 244—247.) The whole of this district was unknown till A. D. 1806, when Seetzen (Zachs, Monatl. Corr. xviii. pp. 433, foll.) penetrated as far as Kerak. A fuller account of the place is given by Burchardt (Trov. pp. 379—387), by whom it was next visited in 1812; and another description is furnished by Iryb and Mangels (Trov. pp. 361—370), who followed in the same direction in 1818. (Robinson, Bibl. Res. vol. ii. pp. 566—571; Ritter, Erdkunde, vol. xv. pp. 916, 1215.)

Kishon. (Chron.)

L.

Labanae Aueae. [Aueae Labanae.]

Labatoes. [Labeatis Laboris.]

Labeatis Lacus, a large lake of Roman Illyricum, situated to the N. of Scodra, the chief city of the Labeates (Liv. xiii. 21, xiv. 31, xiv. 26) or Labaeatae. (Plin. iii. 26.) It is now called the lake of Scutari, famous for the quantity of fish, especially of the "Cyprinus" family. The rivers, which drain the rocky district of Monte-Negro, discharge themselves into this lake, which communicates with the sea by the river Barbania. (Wilkinson, Dolzina, vol. i. pp. 411, 415, 476.)

[Labicum or Lavicium, sometimes also (Liv. ii. 39, iv. 45) Laticum, (το Λατικου: E. 4. Λατικος, Labicanus and Lavicanus: La Colonna), an ancient city of Latium, situated at the foot of the north-eastern slope of the Alban hills, and distant about 15 miles from Rome. Its foundation was ascribed, according to a tradition reported by Servius (ad Aen. vii. 796), to Gaius, a son of Minos; and Virgil (L. c.) mentions it among the cities which sent assistance to King Latins against Aeneas, so that he must have regarded it as more ancient than the Trojan settlement in Latium. But the current tradition, adopted by Dionysius, represented Labicum, in common with so many other Latin cities, as a colony of Alba. (Dionys. viii. 19; Diod. ap. Euseb. Arm. p. 185.) Whatever was its origin, we know with certainty that it was one of the cities of the Latin League, and as such retained, down to a late period, the right of participating in the sacrifices on the Alban Mount. (Dionys. vi. 61; Cie. pro Planc. 9.) It first appears in history as taking part in the league of the Latians against Rome previous to the battle of Regillus (Dionys. l. c.), and is afterwards mentioned among the cities which are represented as taken in succession by Coriolanus, during his campaign against the Romans. (Liv. ii. 39; Dionys. viii. 18.) It is not improbable that this legend represents the historical fact that Labicum, together with Bola, Pedum, and other places which figure in the same narrative, actually fell about that time into the hands of the Aequians, as Satricum, Corioli, and other towns further to the S. did into those of the Volscians. (Niebuhr, vol. ii. p. 259.) But during the subsequent wars of the Romans with the Aequians, Labicum always appears as a Latin city; and from its position on the frontier of Latium adjoining the Aequian and Umbrian frontier, it is not improbable that it was the place where the Romans begin to make incursions into the Aequian territory. Thus, in B. C. 458, its territory was ravaged by the Aequian general Graceus; and in 418 we find the Labicans themselves abandoning the Roman alliance, and joining the Aequians, together with whom they established a camp on Mount Agrippa. Their combined forces were, however, defeated by the Roman dictator Q. Servilius Priscus, and Labicum itself was taken by storm. In order to secure their new conquest against the Aequians, its allies respected nothing which occurs in the history of those contests. Thus, in B. C. 383, its territory was again ravaged by the Praenestines, at that time on hostile terms with Rome (Liv. vi. 21); and after a long interval, in B. C. 211, it once more sustained the same fate from the army of Hannibal. (Liv. xix. 9.)

From this time the name of Labicum disappears from history, but we learn that it still continued to be a municipium, though in a very poor and decayed condition, in the days of Cicero. (Cic. pro Planc. 9, de Leg. Agr. ii. 35.) Strabo, however, speaks of the town as in ruins, and Pliny mentions the population "ex agro Labicano" in a manner that seems to imply that, though they still formed a "populus" or community, the city no longer existed. (Strab. v. pp. 250, 257; Plin. iii. 5, s. 9.) In like manner we find the "ager Labicanus" elsewhere mentioned, but no further notice of the town. (Suet. Aug. 83.) The inhabitants seem to have, under the Roman empire, congregated together sporti in the neighbourhood of the station on the Via Labicana, called Ad Quintanas, and hence assumed the name of Labicii Quintianenses, which we meet with in inscriptions. (Orell. Inscr. 118, 5997.) The territory appears to have been one of great fertility, and was noted for the excellence of its grapes. (Sil. Ital. viii. 366; JUL. Capt. Cid. Alb. ii. 11.)

The position of Labicum has been a subject of much dispute, having been placed by different writers at Volturnum, Zagarolo, and Lugnano. But the precise statement of Strabo (v. p. 237) as to the course of the Via Labicana, together with the fact that he describes the ancient city as situated on a hill to the right of that road, about 120 stadia (15 Roman miles) from Rome, ought to have left no difficulty on the subject: and Holstenius long ago correctly placed the ancient city on the hill now
occupied by the village of La Colonna: a height, a little in advance of the Tuscan hills, and commanding the adjoining portion of the plain. It is about a mile from the 15th milestone on the Roman road, where, as we have seen, the suburb Ad Quintanas afterwards grew up, and is certainly the only position that accords with Strabo’s description. No ruins are visible; but the site is one well calculated for an ancient city, of small magnitude, and the discovery of the inscriptions already noticed in its immediate neighbourhood may be considered conclusive of the point. The modern Labico is only from the 11th century. (Holsten. Not. ad Ciss. p. 194; Fabret. de Aquaeduct. p. 182: Xibby, Dintorni di Roma, vol. ii. pp. 157—164.) Ferovini, in his elaborate work (Memorie della Prima e Seconda Citta di Labico, 4to, Roma, 1745), has laboured to prove, but certainly without success, that Labicum was situated on the Colle dei Quadri, near Lugnano, about 5 miles beyond La Colonna. The remains there discovered and described by him render it probable that Lugnano was an ancient site, probably that of Bola (Volat); but that Labicum was from Rome exudes the supposition that it was that of Labicum.

The Via Labicana, which issued from the Porta Esquilina at Rome together with the Via Praenestina, but separated from the latter immediately afterwards, held a course nearly parallel with it as far as the station Ad Quintanas; from whence it turned round the foot of the Alban hills, and fell into the Via Latina at the station Ad Pictas, where the latter road had just descended from Mount Alban. (Strab. v. p. 237; Itin. Ant., pp. 304, 305.) It is strange that the Itinerary gives the name of Labicana to the continuation of the road after their junction, though the Via Latina was so much the more important of the two. The course of the ancient Via Labicana may be readily traced from the gates of Rome by the Torre Pignatara, Centro Colle, Torre Nuova, and the Osteria di Fiscocchio to the Osteria della Colonna, at the foot of the hill of that name. This Osteria is 16 miles from Rome and a mile beyond the modern station at Ad Quintanas. From hence the road proceeded to Sun Cecario, and soon after, quitting the line of the modern road to Palomotone, struck off direct to join the Via Latina: but the exact site of the station Ad Pictas has not been determined. (Westphal, Rom. Kmappe, pp. 78—80: Gell’s Topogr. of Rome, p. 279.)

On the left of the Via Labicana, about thirteen miles and a half from Rome, is a small crater-formed lake, which has often been considered as the ancient Lacus Regillus: but the similar basin of the Lago di Corvijalle, near Tusculum, appears to have a better claim to that celebrated name. (Regillus Lacus.)

The course of the Via Labicana in the immediate neighbourhood of Rome was bordered, like the other highways that issued from the city, with numerous sepulchres, many of them on a large scale, and of massive construction. Of these, the one now known as the Torre Pignatara, about three miles from the Porta Maggiore, is represented by very ancient tradition, but with no other authority, as the mausoleum of Helena, the mother of Constantine the Great. (Xibby, vol. iii. p. 243.) We learn, also, that the family tomb of the emperor Diocletianus was situated on the same road, at the distance of 5 miles from Rome. (Sparrani. Did. Jul. 8.)
tania quae subjecta Pyreneis montibus est, (L.)) Their "pathless forests" (dein et silvestris genes, (L.)) lay S. of the Ceretani, W. of the Indicietes, and N. of the Lactetani. (It is impossible to avoid the suspicion that these names are identical, especially as we have the intermediate form Lactetani, and that Lactetana is only the N. part of Lactetania. Moreover, the name is confounded with the Jacentani in the Miss. of Cass. B.C. I. 60. Only a few names mentioned as belonging to them, and that without a name, but simply as having been taken by M. Cato. (Plut. Cat. Maj. 11; Liv. xxii. 23, 26, 60, et seq., xxvii. 24, 26, et seq., xxxii. 34, xxxiv. 20; Dion Cass. xlv. 10; Martial, i. 49. 22.) [P. S.]

LACHISH (Achaïs, LXX.; Ἀκαθίς, Ἀκαθίσα, Joseph.), a city to the south of the tribe of Judah (Jos. xv. 39), the capital of one of the petty kings or shekels of the Canaanites (x. 5). It was taken and destroyed by Josiah, (2 Kings, xx. 9,) and is joined with Adoraim and Azekah (2 Chron. xi. 9) as one of the cities built, or rather fortified, by Hezbobam. It was besieged by Sennacherr in his invasion of Judaea, b. c. 713. (2 Kings, xviii. 14, 17, xix. 8.) It is placed by Eusebius and St. Jerome (Onomast. s. e.) seven miles south of Eleutheropolis, in Durana or "the valley." (Jos. xv. 39.) But for this it might have been identified with Um Laksis, on the left of the road between Gaza and Hebron, about five hours from the former, where an ancient site "now covered confusedly with heaps of small round stones, among which are seen two or three fragments of marble columns." (Robinson, Bibb. Res. vol. ii. p. 388.) The objections to the identification are not, perhaps, so great as is represented; the title Um, equivalent to metropolis, would seem to mark it as a place of importance; and there is no other vestige of a town in those parts that can be referred to Lachish. It is considerably south of west from Beil Jibrin (Eleutheropolis), which is near enough to satisfy the distances, except in the parts with which he was familiar, and on the more frequented thoroughfares. No argument can be drawn from its juxtaposition with Adoraim and Azekah, in 2 Chron. xi. 9, as it might be near enough to group with them in a list of names which, it is evident, do not pretend to geographical precision. [G. W.]

LACICAI or LACIACUM (in the Poet. Table it is called Lacinacii), a town in the north-west of Noricum (It. Ant. pp. 253, 258). The name seems to be connected with "lacus," and thus to point to the lake district in upper Austria; hence some have identified the place with Suchalchen, or St. Georgen on the Attersee. But Muchar (Noricum, p. 257) is probably right in identifying it with Frankenmarkt. [L. S.]

LACIBI (Ptol. iii. 1, s. 3; Aeschinis, Pol. ii. 4. § 11), a tributary town of Hispania Baetica, which Fliny assigns to the conventus of Galles, while Plutarch places it among the cities of the Turduli, in or near the province of Hispania. [P. S.]

LACIBURGIO (Λακίβουργιος), a German town on the south coast of the Baltic, between the rivers Gauja, and Suemus or Suebus. It is mentioned only by Ptolomy (ii. 11. § 27), and it is certain that its site must be looked for to the west of Bornemunde, but the precise spot cannot be ascertained, whence some have identified it with Wisemar, others with Rotzenburg, and others again with Lauenburg. [L. S.]

LACIDAE. [Attica, p. 326, s.]

LACIUM. [Lacydias.]

LACIUM (τὸ Λακίυνον ἀπὸ τοῦ Καπο τῆς Κολονοῦ), a promontory on the E. coast of the Bruttian peninsula, about 6 miles S. of Crotona. It formed the southern limit of the gulf of Taranto, as the Iapygian promontory did the northern one; the distance between the two is stated by Strabo, on the authority of Polybius, to 700 stadia, while Pliny apparently (for the passage in its present state is obviously corrupt) reckons it at 75 Roman miles, or 600 stadia; both of which estimates are a fair approximation to the truth, the real interval being 65 geog. miles, or 650 stadia. (Strab. vi. p. 261; Ptol. iii. 11. s. 15; Mel. ii. 4. § 8.) The Lachian promontory is a bold and rocky headland, forming the termination of one of the off-shoots or branches of the great range of the Apennines (Lucan, i. 494; Ptol. iii. 5. s. 6): it was crowned in ancient times by the celebrated temple of the Lacinian Juno, the ruins of which, surviving through the middle ages, have given to the promontory its modern appellation of Capo delle Colonne. It is also known by that of Cape Noém, a name evidently derived from the Greek Ναός, a temple; and which seems to date from an early period, as the promontory is already designated in the Maritime Itinerary (p. 490) by the name of Ναός. That itinerary reckons it 100 stadia from the city of Crotona. Strabo gives the same distance as 150 stadia; but both are greatly overrated. Livy correctly says that the temple (which stood at the extreme point of the promontory) was only about 6 miles from the city. (Liv. xxiv. 3.) For the history and description of this famous temple, see CROTONA.

Pliny tells us (iii. 10. s. 15) that opposite to the Lacinian promontory, at a distance of 10 miles from the land, was an island called Dissocrus (the island of the Dissouri), and another called the island of Calypso. He seems to mean that Calypso, supposed to be the Ogygian temple of Homer's Iliad also mentions the island of Calypso immediately after the Lacinian promontory (§ 13, p. 5). But there is at the present day no island at all that will answer to either of those mentioned by Pliny: there is, in fact, no island, however small, off the Lacinian cape, and hence modern writers have been reduced to seek for the abode of Calypso in a small and barren rock, close to the shore, near Capo Rizzato, about 12 miles S. of Lacinium. Swinburne, who visited it, remarks how little it corresponded with the idea of the Homeric Ogygia; but it is difficult to believe that so trifling a rock (which is not even marked on Zannoni's elaborate map) could have been that meant by Scylax and Pliny. The statement of the latter concerning the island which he calls Dissocrus is still more precise, and still more difficult to account for. On the other hand, he adds the names of three others, Tiris, Ermanusa, and Melocessus, which he introduces somewhat vaguely, as if he were himself not clear of their position. Their names were probably taken from some poet now lost to us. [E. H. R.]

LACIPEEA. [Lusitania.]

LACIPPO (Λακίππος, Pol. ii. 4. § 11; LACHINO, coin of Sestini, Med. Is. p. 57; Monnet, Suppl.]

*The different positions that have been assigned to the island of Calypso, and the degree of probability of their claims, will be discussed under the article OGYGIA.*
LACMUS.

vol. i. p. 54), a tributary town of the Thracian Hispiana Baetica, near the shore of the Mediterranean, where its ruins are still seen at Aegippe, near Carraestr. Puteoli places it too far inland.

(Mela, ii. 6. § 7; Plin. iii. 1. s. 3; Carter, Travels, p. 128: Ubert, vol. ii. pt. 1. p. 348.) [P.S.]

LACMON (Αλκόμων, Herat. Fr. 70; Herod. ix. 92; Steph. B. s. r.) or LACMUS (Αλκόμων, Strab. vi. p. 271, vii. p. 316), the highest summit of Mount Pindus, the Zygia or ridge of Melissa. This is geographically the most remarkable mountain in Greece; situated in the heart of Pindus as to its breadth, and centrally also in the longitudinal chain which pervades the continent from Ν. to Σ. : it gives rise to five principal rivers, in fact to all the great streams of Northern Greece except the Prespes : north-eastward to the Haliacmon, south-eastward to the Pescius, southward to the Achelous, south-westward to the Arachthos, and north-westward to the Axios. (Leake, Northern Greece, vol. i. pp. 294, 411—415, vol. iv. pp. 240, 261. 276.)

LACOBRIA. [L. LUSTANIA; 2. V A C C A E L . ]

LACONIA, LACONICA, or LACEDAEMON, the south-eastern district of Peloponnesus.

I. NAME.

Its most ancient name was Lacedaemon (Λακε- δαιμων), which is the only form found in Homer, who applies this name as well to the country, as to its capital. (H. ii. 581, i. 239, 244, &c.) The usual name in the Greek writers was Laco nica (το Λακωνικα, σε ης), though the form Lacedaemon still continued to be used. (Heron. vi. E. B. J.) The Romans called the country LACONIA (Plin. xxv. 8. s. 53; Lyc. ii. 3) or LACONIA (Plin. vi. 23, s. 39, xvii. 18. s. 30), the latter of which is the form usually employed by modern writers. Mela (i. 2) also uses Laccon, which is borrowed from the Greek (το Λακωνικα γαλα, Ημ. Hymn. in Apollo. 410.) The Ethnic names are Λακες, Λακονοι, Λακεδαιμονες, Lat. Lacoon or Lacoon, Λακων, Λακωνιομενοι; from Λακων, Λακες, Λακος, Λακων. These names are applied to the whole free population of Laconia, both to the Spartan citizens and to the Priests, spoken of below (for authorities, see Clinton, F. H. vol. ii. pp. 345, 406). They are usually derived from a mythical hero, Lacoon or Lacedaemon; but some modern writers think that the root Λεκ is connected with Λακος, Λακος, Λακων, and was given originally to the central district from its being deeply sunk between mountains. (Curtius, Peloponnesos, vol. ii. p. 309.)

II. GENERAL DESCRIPTION OF THE COUNTRY.

The natural features of Laconia are strongly marked, and exercised a powerful influence upon the history of the people. It is a long valley, surrounded on three sides by mountains, and open only on the fourth to the sea. On the north it is bounded by the southern barrier of the Arcadian mountains, from which run in a parallel direction towards the south, the two lofty mountain ranges of Taygetus and Taygetos,—the former dividing Laconia and Messenia, and terminating in the promontory of Taenarum, now C. Matapan, the southernmost extremity of Greece and of Europe, the latter stretching along the eastern coast, and terminating in the promontory of Malea. The river Eurotas flows through the entire length of the valley lying between these mountain masses, and falls into the sea, which was called the Laconian Gulf. Laconia is well described by Empedocles as a country "hollow, surrounded by mountains, rugged, and difficult of access to an enemy" (ap. Strab. viii. p. 366); and the difficulty of invading it made even Epirus hesitate to enter it with his army, (Xen. Hell. v. 5, § 10.) On the northern side there are only two natural passes by which the plain of Sparta can be invaded. (See below.) On the western side the lofty masses of Taygetus form an almost insurmountable barrier; and the pass across them, which leads into the plain of Sparta, is so difficult as scarcely to be practicable for an army. On the eastern side the rocky character of the coast protects it from invasion by sea.

III. MOUNTAINS, RIVERS, AND PLAINS.

MOUNT TAYGETUS (Ταύγετος, το Ταύγετον ἄγρα, the common forms; Ταύγετος. Lucian, Icarom. 19: το Ταύγετα, Polyb. vi. 49: Ταύγετα, Virg. Georg. ii. 487: the first half of this word is said by Hesychius to signify great). This mountain is the left foot in Peloponnesus, and extends in an almost unbroken line for the space of 70 miles from Leucanari in Arcadia to C. Matapan. Its vast height, unbroken length, and majestic form, have been celebrated by both ancient and modern writers. Homer gives it the epithet of περιποίητον (Od. vi. 103), and a modern traveller remarks that, "whether from its real height, from the grandeur of its outline, or the abruptness of its rise from the plain, it created in his mind a stronger impression of stupendous bulk and loftiness than any mountain he had seen in Greece, or perhaps in any other part of Europe." (More, Tour in Greece, vol. ii. p. 221.) Taygetus rises to its greatest height immediately above Sparta. Its principal summit was called TALETUM (Ταλετόν) in antiquity; it was sacred to the Sun, and horses and other victims were here sacrificed to this god. (Paus. iii. 20. § 4.) It is now called S. Elias, to whose chapel on the summit an annual pilgrimage is made in the middle of the summer. Its height has been ascertained by the French Commissio to be 2400 meters, or 7992 English feet, and another supposed summit which was called EXORAS (Εχωρας, Belvedere, Paus. l. c.), which Leake identifies with Mt. Pxrimoithi, the highest summit next to S. Elias, from which it is distant 5½ geographical miles. The ancient names of none of the other heights are mentioned.

By the Byzantine writers Taygetus was called ΤΕΝΤΕΑΚΤΥΛΗ (το Τεντεάκτυλον), or the "Five Fingers," on account of its various summits above the Spartan plain. (Cosmat. Topogr. de Asia. vol. 50.) In the 13th century it bore the name of Molionio (δ Μολιονιο το Μολιονιο, see Leake, Peloponnesia, p. 138.) At the base of Taygetus, immediately above the Spartan plain, there is a lower ridge running parallel to the higher summits. This lower ridge consists of huge projecting masses of precipitous rocks, some of which are more than 2000 feet high, though they appear insignificant when compared with the lofty barrier of Taygetus behind them. After attaining its greatest elevation, Mt. Taygetus sinks gradually down towards the south, and sends forth a long and l-ey counterpart towards the Eurotas, now called Lykobolus (Λυκοβόλος, Wolf's-mountain), which bounds the Spartan plain on the south. If there contracts again, and runs down, as the backbone of a small peninsula, to the southernmost ex-
LAOCINIA.

of the territory of Greece. This montaneous district between the Laconian and Messenian gulls is now called "Meni, and is inhabited by the Maniates, who always maintained their independence, while the rest of Greece was subject to the Turks; the southern part of the peninsula, as well as the promontory, have the name of Messaia, in antiquity. [Tachorm.] Although there is no trace of any volcanic action in Mt. Taygetus, many of its chasms and the rest forms of its rocks have been produced by the numerous and violent earthquakes to which the district has been subjected. Hence Laconia is called by Homer "full of hollows" (ποιησις, II. ii. 581, Od. iv. 1), and Strabo describes it as a country easily shaken by earthquakes (Strab. viii. p. 367). In the fearful earthquake, which laid Sparta in ruins in B.C. 464, and killed more than 20,000 Laconianomianns, huge masses of rocks were rolled down from the highest peaks of Taygetus. (Plut. Cim. 16.)

On the sides of Mt. Taygetus are forests of deep green pine, which abounded in ancient times with game and wild animals, among which Paussanias mentions wild goats, wild bears, stags, and bears. The district between the summits of Teletum and Evoras was called Theras (Οίηας), or the hunting ground. (Paus. ii. 20, §§ 4, 5.) Hence Taygetos, or Tzakonia, was one of the favourite haunts of the hero Artemis (Od. vi. 103), and the excellence of the Laconian dogs was proverbial in antiquity. (Aristot. Hist. An. vi. 20; Xen. de Ven. 10, § 1; Virg. Georg. iii. 405; Hor. Epod. vi. 5.) Modern travellers tell us that the dogs of the country still support their ancient character for ferocity and courage. (Mure, vol. ii. p. 231.)

The southern part of Mount Taygetus is rich in marble and iron. Near Cenoe there were quarries of green porphyry, which was extensively employed by the Romans. (Croceae.) There was also another kind of marble obtained from quarries more to the south, called by the Romans Taenarian marble. The whetstones of Mount Taygetus were likewise in much request. (Strab. viii. p. 367; "Taenarius lapis," Plin. xxxvi. 22, s. 43; "cotes lacenicae ex Taygeto monte," Plin. xxxvi. 22, s. 47.) The iron found in the mountain was considered very good, and was much used in the manufacture of warlike weapons and agricultural instruments. (Eustath. ad H. ii. p. 298, ed. Rom.)

Mount Parnon (b Πάρνος, Paus. ii. 38, § 7) is of an entirely different character from the opposite range of Taygetus. It does not form one uninterrupted line of mountains, but is broken up into various detached masses of less elevation, which form a striking contrast to the unbroken and majestic barrier of Taygetus. The mass to which the name of Parnon was more especially applied was the range of mountains now called Maleri, forming the natural boundary between Arcadia, Laconia, and Argolis. It is 6355 feet high, and its summit is nearly equidistant from the Eurotas and the eastern coast. This mountain is continued in a general south-easterly direction, but how far southwards it continued to bear the name of Parnon is unknown. Its eastern declivities, which extend as far as the coast at a considerable elevation, contain the district now called Taeconia, a corruption of the word θεας κοινα, the inhabitants of which speak a dialect closely resembling the ancient Greek; of this an account has been given elsewhere. [Vol. I. p. 728.] On its western side Mt. Parnon sinks down more rapidly, and divides itself into separate hills, which bear the names of Bathosthenes, Olympus, Ossa, Thoerenax, and Menelax; the two last are opposite Sparta, and a modern observer describes Menelax as not remarkable either for height or variety of outline, but rising gradually in a succession of gentle ridges. (Mure, vol. ii. p. 225.) In its southern continuation, Mt. Parnon still continues of moderate height till near the commencement of the peninsula between the Myrtos and Laconian gulls, where it rises under the name of Mount Zara (Ζαραξ) to a height of 3500 feet, and runs along the eastern coast at a considerable elevation, till it reaches the promontory of Melen.

The Eubotias (Ευβοίαι) flows, as already observed, throughout the entire length of the valley between the ranges of Taygetus and Parnon. Its more ancient names were Bomycas (Βομυκάς, Eym. M. s. r.) and Himereus (Ιμερός, Pint. de Plut. 17): it is now called Iris and Niris in its upper and middle course, and Basilit-polymio from the time it leaves the Spartan plain till it reaches the sea. In its course three districts may be distinguished,—the vale of the upper Eurotas; the vale of the middle Eurotas, or the plain of Sparta; and the vale of the lower Eurotas or the plain of Sparta plain. 1. The Vale of the Upper Eurotas. The river Eurotas rises in the mountains which form the southern boundary of the Arcadian plains of Asea and Megalopolis. It was believed by both Paussanias and Strabo that the Alpheus and the Eurus had a common origin, and that, after flowing together for a short distance, they sank under ground; the Alpheus reappearing at Pegae, in the territory of Megalopolis in Arcadia, and the Eurotas in the Blemnitias in Laconia; but for a fuller account of their statements upon this subject the reader is referred to the article ALPHAEUS. All that we know for certain is that the Eurotas is formed by the union of several copious springs rising on the southern side of the mountain above mentioned, and that it flows from a narrow glen, which gradually opens towards the SSW. On the eastern side it keeps close to the mountains, while on the western side there is a little level ground and some mountain slopes between the river and the heights of Taygetus. At the distance of 6 miles from the Eurotas, 1 mile from Sparta, the Eurotas receives the Oenius (Οινίος, Polyb. ii. 65, 66; Athen. i. p. 31; Liv. xxxiv. 28), now called Klefebna, which rises in the watershed of Mt. Parnon, and flows in a general south-westerly direction; the principal tributary of the Oenius was the Gorgylus (Γοργυλος, Polyb. ii. 66), probably the river of Trestaen. (Lenke, Ptolemaicca, p. 547.) Near osis the union of the Oenius and the Eurotas, the mountains of Taygetus press close upon the river, but again almost immediately withdraw to a greater distance than before, and the river emerges into the Spartan plain. 2. The Vale of the Middle Eurotas. Sparta is situated at the commencement of this vale on the left bank of the Eurotas. Between the river and Mt. Taygetus the plain is of considerable extent. Its soil is particularly adapted for the growth of olives, which are in the present day prevalent to those of Athens; and the superiority of the soil of every other district of Greece. (Mure, vol. ii. p. 224.) The soil, however, cannot be compared with that of the rich Messenian...
LACONIA.

plain, and hence Euripides, in contrasting the two countries, describes Laconia as a poor land, in which there is a large tract of arable, but of laborious tillage (ap. Strab. viii. p. 366). This is in accordance with the account of Leake, who says that the soil of the plain is in general a poor mixture of white clay and stones, difficult to plough, and better suited to olives than corn. (Mure, vol. i. p. 148.) The plain, however, possesses a peculiar beauty, being sheltered on every side by mountains, and the scenery is of the most beautiful description. Hence Lacedaemon has been aptly characterized by Homer as "a hollow pleasant valley" (κοιλὴ χαράσσων, ii. ii. 581, iii. 443, Od. iv. 1). The climate is favourable to beauty; and the women of the Spartan plain are at present taller and more robust than the other Greeks, have more colour in general, and look healthier; which agrees also with Homer's λακωνικά γλυκάνακα (Leake, Mure, vol. iii. p. 149). The security of the Spartan plain against hostile attacks has been briefly alluded to. There were only two roads practicable for an invading army; one by the upper Eurotas, leading from southern Arcadia and Sterea Euboia; the other by the long and narrow valley of the Oenus, in which the roads from Tegea and Arcos united near Sellasia.

3. Vale of the Lower Eurotas. At the southern extremity of the Spartan plain, the mountains again approach so close, as to leave scarcely space for the presence of the Eurotas. The next of Alexander the western side are the long and lofty counterfork of Mt. Taygetus, called Lykobain, which has been already mentioned. This gorge, through which the Eurotas issues from the vale of Sparta into the maritime plain, is mentioned by Strabo (6 Ευρώτας — μεταξύ αυτῶν των μακρύν, viii. p. 343). It is about 12 miles in length. The maritime plain, which is sometimes called the plain of Helos, from the town of this name upon the coast, is fertile and of some extent. In the lower part of it the Eurotas flows through marshes and sandbanks into the Laconian gulf.

The banks of the Eurotas and the dry parts of its bed are overgrown with a profusion of reeds. Hence the epithets of διόνυσοφόρος and διόνυσις are frequently given to it by the poets. (Theogn. 785: Eurip. Iphig. in Aul. 179. Helen. 267.)

The only tributary of the Eurotas, which possesses an independent valley, is the Oenus already mentioned. The other tributaries are mere mountain torrents, of which the two following names have been preserved, both descending from Mt. Taygetus through the Spartan plain: Tiasa (Τιάσα, Paus. iii. 18. § 6; Athen. iv. p. 139), placed by Pausanias on the road from Amyclae to Sparta, and hence identified by Leake with the P塘-κλείμωνα; Puchalia (Φοχλαια, iii. 20. § 3), the river between Amyclae and Pharis. The Καύκων (Καυκός), mentioned in one of the ordinances of Lycurgus, was identified by later writers with the Oenus. (Plut. Lycur. 6.)

The streams Smenis and Scyrias, flowing into the sea on the western side of the Laconian gulf, are spoken of below. [See p. 114, b.]

Before leaving the rivers of Laconia, a few notes must be said respecting an ancient Laconian bridge still existing, which has been assigned to the remoter antiquity. This is the bridge of Xerokampo, built over a tributary of the Eurotas, about three hours' ride to the south of Sparta, just where the stream issues from one of the deepest and darkest

gorges of Taygetus. It was first discovered by Ross, and has been described by Mure, who supposes it to belong to the same period as the monuments of Mycenae. Even if it does not belong to so early a date, but is a genuine Hellenic work, it would establish the fact that the Greeks were acquainted with the use of the concentric arch at a very early period; whereas it has been usually supposed that it was not known to them till the time of Alexander the Great. The general appearance and character of this structure will be best seen from the annexed drawing taken from Mure. The masonry is of the polygonal species: the largest stones are those of the arch, some of which are from four to five feet long, from two to three in breadth, and between one and two in thickness. From the character of the structure, and from its remote situation, Mure concludes that it cannot be a Roman work; and there are strong reasons for believing that the Greeks were acquainted with the use of the arch at a much earlier period than has been usually supposed. (Mure, vol. ii. p. 247, seq.; comp. Leake, Peloponesiacus, p. 115, seq.)

BRIDGE OF XEROKAMPO.

There are no other plains in Laconia except the three above mentioned in the valley of the Eurotas; but on the slopes of the mountains, especially on those of Paroim, there is a considerable quantity of arable as well as pasture ground. The whole area of Laconia is computed to contain 1896 English square miles.

IV. HISTORY.

The political history of the country forms a prominent part of Grecian history, and cannot be narrated in this place at sufficient length to be of value to the student. But as the boundaries of Laconia differed considerably at various periods, it is necessary to mention briefly those facts in the history of the country which produced those changes.

It will be seen from the preceding description of the physical features of Laconia, that the plain of Sparta forms the very kernel and heart of the country. Accordingly, it was at all times the seat of the ruling class; and from it the whole country received its appellation. This place is said to have been originally inhabited by the Leleges, the most ancient inhabitants of the country. According to tradition, Lelex, the first king, was succeeded by his son Myles, and the latter by his son Eunatas, who collected into a channel the waters which were spread over the plain, and gave his own name to the river which he had thus formed. He died without male offspring, and was succeeded by Lacedaemon, the son of Zeus and Taygeta, who married Sparta,
the daughter of his predecessor. Lacedaemon gave to the people and the country his own name, and to the city which he founded the name of his wife. Amycla, the son of Lacedaemon, founded the city called Amycla in Arcadia. (Paus. iii. 1.) Subse-
quenty Lacedaemon was ruled by Achaeo princes, and Sparta was the residence of Menelaus, the brother of Achaeo. Menelaus was succeeded by Orestes, who married his daughter Hermione, and Orestes by his son Tisamenus, who was reign-
ing when the Dorians invaded the country under the guidance of the Heraclids. In the threefold di-
vision of Peloponnesus among the descendants of Her-
cules, Lacedaemon fell to the share of Eurysthenes and Procles, the twin sons of Achilles. Accord-
ing to the common legend, the Dorians conquered the Peloponnesus at once; but there is sufficient
evidence that they only slowly became masters of the
countries in which we afterwards find them settled; and in Laconia it was sometime before they
obtained possession even of all the places in the
plain of Sparta. According to a statement in Ephorus, the Dorian conquerors divided Laconia
into six districts; Sparta they kept for themselves; Amyclae was given to the Achaeo. Phthia, who
betrayed the country to them; while Las, Thauris, Aegys, and a sixth town the name of which is
lost, were governed by viceroys, and were allowed
364; on this corrupt passage, which has been hap-
pily restored, see Müller, Doriana, vol. i. p. 110,
transl. Niesbuhr, Ethnograph. vol. i. p. 56, trans-
sl. Kramer, ad Strab. i. 6.) It is probable that this
division of Laconia into six provinces was not ac-

tually made till a much later period; but we have
enough indications to show that during the time after
the Dorian conquest, the Dorians possessed only
a small portion of Laconia. Of this the most striking
proof is that the Achaean city of Amycla, distant
only 2½ miles from Sparta, maintained its indepen-
dence for nearly three centuries after the Dorian
conquest, for it was only subdued shortly before the
First Messenian War by the Spartan king Teleclos.
The same king took Phthia and Geronteia, both
Achaean cities; and his son and successor, Alcme-
nus, conquered the town of Hofles, upon the easter
near the mouth of the Eurotas. (Paus. iii. 2. §§ 6,
7.) Of the subjugation of the other Achaean towns
we have no accounts; but there can be little doubt
that they were mainly owing to the military organi-
sation and martial spirit which the Spartans had
acquired by the institutions of Lycurgus.
By the middle of the eighth century the Dorians
of Sparta had become undisputed masters of the
whole of Laconia. They now began to extend their
dominions at the expense of their neighbours. Origi-
nally Argos was the chief Dorian power in the
Peloponnesus, and Sparta only the second. In ancient
times the Argives possessed the whole eastern
coast of Laconia down to Cape Malea, and also the
island of Cythera (Herod. i. 82); and although we
have no record of the time at which this part of
Laconia was conquered by the Spartans, we may
safely conclude that it was before the Messenian
wars. The Dorians in Messenia possessed a much
more fertile territory than the Spartans in Laconia,
and the latter now began to cast longing eyes upon
the richer fields of their neighbours. A pretext for
war soon arose; and, by two long protracted and
obstinate contests, usually called the First and
Second Messenian wars (the first from 490 to
724, and the second from 478 to 468), the
Spartans conquered the whole of Messenia, expelled
or reduced to the condition of Helots the inhabit-
ants, and annexed their country to Laconia. The
name of Messenia now disappears from history;
and, for a period of three centuries, from the close
of the Second Messenian War to the restoration of the
independence of Messenia by Epaminondas, the
whole of the southern part of Peloponnesus, from
the western to the eastern sea, bore the appellation
of Laconia.

The upper parts of the valleys of the Eurotas and the Oenius, the districts of Sciritis, Belennatis,
Messenia, and Caryatis, originally belonged to the
Arcadians, but they were all conquered by the
Spartans and annexed to their territory before n.
s. 600. (Grote, Hist. of Greece, vol. ii. p. 588.) They
thus extended their territories on the north to what
may be regarded as the natural boundaries of Laco-
nia, the mountains forming the watershed between
the Eurotas and the Alpheus; but when they
crossed these limits, and attempted to obtain pos-
session of the plain of Tegea, they met with the
most determined opposition, and were at last obliged
to be content with the recognition of Sparta's
supremacy by the Tegeans, and to leave the latter in
the independent enjoyment of their territory.
The history of the early struggles between the
Spartans and Arcives is unknown. The district on
the coast between the territories of the two states,
and of which the plain of Thyreatis was the most
important part, inhabited by the Cyrenians, a Pe-
lagic people, was a frequent object of contest
between them, and was in possession, sometimes of
one, sometimes of the other, power. At
length, in n. s. 547, the Spartans assumed permanent
possession of it by the celebrated battle fought by
the 300 champions from either nation. [Cyr-
enia.] The dominions of the Spartans now extended
on the other side of Mount Parnon, as far as
the pass of Amigrae.
The population of Sparta was divided into the
countries of three classes of Spartans, Perioeci, and Helots. Of the condition of these classes a more particular account is given in the Dictionary of Antiqui-
ties, and it is only necessary to remark here that
the Spartans lived in Sparta itself, and were the
ruling Dorian class; that the Perioeci lived in the
different townships in Laconia, and, though freemen,
had no share in the government, but received all
their orders from the ruling class at Sparta; and
that the Helots were serfs bound to the soil, who
cultivated it for the benefit of the Spartan proprie-
tors, and perhaps of the Perioeci also. After the
extension of the Spartan dominions by the conquest of
Messenia and Cyrenia, Laconia was said to
possess 100 townships (Strab. viii. p. 362), among
which we find mentioned Anthusa in the Cyrenian
Thyreatis, and Alon in Messenia, near the frontiers
of Elis. (Steph. B. s. v. *Aithyria, *Aithyra.)
According to the common story, Lycurgus divided
the territory of Laconia into a number of equal lots,
of which 9000 were assigned to the Spartans, and
30,000 to the Perioeci. (Plut. Lyc. 8.) Some
ancient critics, however, while believing that Lyrc-
gus made an equal division of the Laconian lands,
supposed that the above numbers referred to the
distribution of the Lacedaemonian territory after the
incorporation of Messenia. And even with respect
to the latter opinion, there were two different state-
ments; some maintained that 6000 lots had been
given by Lycurgus, and that 3000 were allowed by king Polydorus at the end of the First Messenian War; others supposed that the original number of 4500 was doubled by Polydorus. (Plut. L.c.) From these statements attempts have been made by modern writers to calculate the population of Laconia, and the relative numbers of the Spartans and the Perioeci; but Mr. Grote has brought forward strong reasons for believing that no such division of the landed property of Laconia was ever made by Lycurgus, and that the belief of his having done so arose in the third century before the Christian era, when Aischylos made an attempt to find a fresh division of the land of Laconia. (Grote, Hist. of Greece, vol. ii. p. 521.) In any case, it is impossible to determine, as some modern writers have attempted, the land which belonged respectively to the Spartans and the Perioeci. All that we know is, that, in the law proposed by Agis, the land bound by the four limits of Pellene, Sallasia, Malea, and Taygetus, was divided into 4500 lots, one for each Spartan; and that the remainder of Laconia was divided into 15,000 lots, one for each Perioecian (Plut. Agis, 8.)

With respect to the population of Laconia, we have a few isolated statements in the ancient writers. Of these the most important is that of Herodotus, who says that the citizens of Sparta at the time of the Persian wars was about 8000 (viii. 234). The number of the Perioeci is nowhere stated; but we know from Herodotus that there were 10,000 of them present at the battle of Plataea, 5000 heavy-armed, and 5000 light-armed (ix. 11, 29); and, as there were 5000 Spartans at this battle, that is five-eighths of the whole number of citizens, we may venture to assume as an approximate number, that the Perioeci at the battle may have been also five-eighths of their whole number, which would give 16,000 for the males of full age. After the time of the Persian wars the number of the Spartan citizens gradually but steadily declined; and Clinton is probably right in his supposition that at the time of the invasion of Laconia, in b. c. 369, the total number of Spartans did not exceed 2000; and that Isocrates, in describing the original Dorian conquerors of Laconia as only 2000, has probably adapted to the description the number of Spartans in his own time. (Isocr. Panath., p. 286, c. 6.) In the 50 years after that event, in the time of Aristotle, they were scarcely 1000 (Aristot. Pol. ii. 6, § 11); and eighty years still later, in the reign of Agis, b. c. 244, their number was reduced to only 700 (Plut. Agis, 5.) The number of Helots was very large. At the battle of Plataea there were 33,000 light-armed Helots, that is seven for every single Spartan (Herod. ix. 28.) On the population of Laconia, see Clinton, F. H. vol. ii. p. 407, seq.

From b. c. 547 to b. c. 371, the boundaries of Laconia continued to be the same as we have mentioned before. But after the overthrow of her supremacy by the fatal battle of Leuctra, the Spartans were successively stripped of the dominions they had acquired at the expense of the Messenians, Arcadians, and Argives. Epanomousa, by establishing the independent state of Messenia, confined the Spartans to the country east of Mount Taygetus; and the Arcadian city of Megalopolis, which was founded by the same statesman, encroached upon the Spartan territory in the upper vale of the Eurotas. While the Thessals were engaged in the Sacred War, the Spartans endeavoured to recover some of their territory which they had thus lost; but it was still further circumscribed by Philip, the father of Alexander the Great, who deprived the Spartans of several districts, which he assigned to the Argives, Arcadians, and Messenians. (Polyb. ix. 28; Paus. iv. 28, § 2.) After the establishment of the Achaean League their influence in the Peloponnesian sank lower and lower. For a short time they showed unwonted vigour, under their king Cleomenes, whose resolution had given a new life to the state. They defeated the Achaeans in several battles, and seemed to be regaining a portion at least of their former power, when they were checked in their progress by Antonius Boon, whom the Achaeans called in to their assistance, and who completely humbled them in the fatal battle of Sellasia, b. c. 221. (Dict. of Biogr. art. Cleomenes.) Soon afterwards Sparta fell into the hands of a succession of usurpers; and of these Nabis, one of the most sanguinary, was compelled by T. Qunicius Flaminius, to surrender Gythium and the other maritime towns, which had sided with the Romans, and were now severed from the Spartan dominion and placed under the protection of the Achaean League, b. c. 195. (Strab. viii. p. 366; Thirwall, Hist. of Greece, vol. viii. p. 926.) The Greek colonies on the north coast of the Peloponnesus in the valley in which their Dorian ancestors had first settled, and, like them, were surrounded by a number of hostile places. Seven years afterwards, b. c. 188, Sparta itself was taken by Philopoemen, and annexed to the Achaean League (Plut. Phil. 16; Liv. xxxviii. 32—34); but this step was displeasing to the Romans, who viewed with apprehension the further increase of the Achaean League, and accordingly encouraged the party at Sparta opposed to the interests of the Achaean League; but the Roman conquest of Greece, which soon followed, put an end to these disputes, and placed Laconia, together with the rest of Greece, under the immediate government of Rome. Whether the Lacedaemonian towns to which Flamininus had granted independence were placed again under the dominion of Sparta, is not recorded; but we know that Augustus guaranteed to them their independence, and that they are henceforth mentioned under the name of Eleuther-Lacaeae. Pausanias says there were originally 24 towns of the Eleuther-Lacaeae, and in his time there were still 18, of which the names were Gythium, Teubrone, Las, Pyrrichus, Caereopolis, Oeuthus, Leuctra, Thalaphe, Alagonia, Geronia, Asopus, Aerine, Boeae, Zarax, Eptadunum Limera, Brasiea, Geronthae, Marios. (Paus. iii. 21. § 7.) Augustus showed favour to the Spartans as well as to the Lacedaemonians in general; he gave to Sparta the Messenian town of Cardamyle (Paus. iii. 26. § 7); he also annexed to Laconia the Messenian town of Pharae (Paus. iv. 30. § 2), and gave to the Lacedaemonians the island of Cythera. (Dios. Bith. 7.) At the end of the fourth century of the Christian era, Laconia was devastated by the Goths under Alaric, who took Sparta (Zosim. v. 6). Subsequently Slavonians settled in the country, and retained possession of it for a long time; but towards the end of the eighth century, in the reign of the empress Irene, the Byzantine court made an effort to recover their dominions in Peloponnesus, and finally succeeded in reducing to subjection the Slavonians in the plains, while those in Laconia who would not submit were obliged to take refuge in the fastnesses of Mt. Taygetus. When the Franks became masters of Laconia in the 13th century, they found upon
LAONIA.

the site of ancient Sparta a town still called Lace-
daimonia; but in a.d. 1248, William Villehardouin
built a fortress on one of the rocky hills at the foot
of Mt. Taygetus, about three miles from the city of
Lacedaemonia. Here he took up his residence; and
on this rock, called Mistra, usually pronounced
Mistras, a new town arose, which became the capital
of Laconia, and continued to be so till Sparta began
to be rebuilt on its ancient site by order of the
present Greek government. (Finlay, Medieval Greece,
p. 230; Curtius, Peloponnesos, vol. ii. p. 214.)

V. Towns.
1. In the Spartan Plain.—The three chief towns
were SPARTE, AMYCLAE, and PHARI, all situated
near one another, and upon some of the lower
heights close to the Eurotas. Their proximity
would seem to show that they did not arise at the
same time. Amyclae lay only 21 miles south of
Sparta, and appears to have been the chief place in
the country before the Doric invasion. South of
Amyclae, and on the road from this town to the sea,
was Phari, also an Achaean town in existence
before the Doric conquest. Therapne may be
regarded as an almost a part of Sparta. [SPARTE.]
On the slopes of Mt. Taygetus, above the plain,
there were several places. They were visited by
Pausanias (iii. 20, §§ 3—7), but it is difficult to
determine the road which he took. After crossing
the river Phellis, beyond Amyclae, he turned to
the right towards the mountain. In the plain was
a sanctuary of Zeus Messapes, belonging, as we learn
from Stephanus, to a village called MESSAPEAE
(Messaeum), and beyond it, at the entrance into
the mountains, the Homeric city of BRYSEAE. In
the mountains was a sanctuary of Demeter Eleusinia,
and 15 stadia from the latter LAPTHERACN, near
which was DERRHium, where was a fountain called
Anous. Twenty stadia from Derrhium was Har-
pellia, which borders upon the plain. Pausanias
gives no information of the direction in which he
proceeded from the Eleusinia to Harpelleia. Leuke
supposes that he turned to the south, and accord-
ingly places Harpelleia about 15 miles south
of the vale by the bridge of Xerokampéo; while Curtius, on
the contrary, imagines that he turned to the north,
and came into the plain at MISTRÉ, which he therefore
identifies with Harpelleia. It is impossible to de-
determine which of those views is the more correct.
The antiquities and inscriptions discovered at Mistré
prove that it was the site of an ancient town, and
Leuke conjectures that it represents the Homeric
Messae.

2. In the Vale of the Upper Eurotas.—The
road from Sparta to Megalopolis followed the vale
of the Eurotas. On this road Pausanias mentions first
several monuments, the position of one of which, the
tomb of Ladas, may still be identified. This tomb
is described as distant 30 stadia from Sparta, and
as situated above the road, which here passes very
near to the river Eurotas. At about this distance
from Sparta, Leake perceived a caveat in the rocks,
with two openings, one of which appeared to have
been fashioned by art, and a little beyond a semi-
circular sepulchral niche : the place is called by the
peasants thànhos Phrivos. (Leake, Morea, vol. iii.
p. 13.) Further on was the Characoma (Xαρακώμα),
a fortification, probably, in the narrow part of the
valley; above it the town PELLANA, the frontier-
fortress of Sparta in the vale of the Eurotas; and 100
stadia from Peliana, BELEMINA. (Paus. iii. 20. § 8
—21. § 3.) In the neighbourhood of Belemina
was ARGOS, originally an Achaean town, which
was conquered at an early period by the Spartans,
and its territory annexed to Laconia. In the upper
vale of the Eurotas was the Lacedaemonian Tele-
polis. (Livy. xxv. 27.) Pellana was one of the
three cities (Polyc. iv. 81); Belemina was un-
doubtedly another; and the third was either Argos
or CARYSTUS.

The road to TEGES and ARGOS ran along the vale
of the Oenus. (Paus. iii. 10. §§ 6—8.) After
crossing the bridge over the Eurotas, the traveller
saw on his right hand Mount Thorax, upon which
stood a colossal statue of Apollo Pythaeus, guarding
the city of Sparta, which lay at his feet. (Comp.
Hercul. i. 69.; Xen. Hell. vi. 5. § 27.) A little
further on in the vale of the Oenus, was SELASSIA,
which was the bulwark of Sparta in the vale of the
Oenus, as Pellana was in that of the Eurotas.
Above Selassia was a small plain, the only one in
the vale of the Oenus, bounded on the east by Mt.
Olympus and on the west by Mt. Evos: a small
stream, called Gorgylus, flowed through the western
side of the plain into the Oenus. This was the site
of the celebrated battle in which Chromomenes
was defeated by Pericles. [SELLASSIA.] In this plain
the road divided into two, one leading to Argos
and the other to TEGES. The road to Argos followed
the Oenus; and to the west of the road, about an
hour distant from the modern Avíkho, lay CAYKE.
From this place to the confines of the Thyreatis
in Argolis, was a forest of oaks, called SCOTTISAS (ΣΩΕΤΙΤΑΙ),
which derived its name from a temple of Zeus Scottius, about 10 stadia west of the road. (Paus. iii. 10. § 6; Polyc. xvi. 27.)
On the ridge of Mt. Parmos the boundaries of Argolis
and Laconia were marked by Hermæ, of which,
three heaps of stones, called oi χορφυκουρια (the slain),
may perhaps be the remains. (Ross, Reisen im Hel.
poon, p. 173.) There was also a town OENUS,
from which the river derived its name.

The road to TEGES, which is the same as the
present road from Sparta to Tripolaidi, after leaving
the plain of Pellana, passed into a high and moun-
tainous district, called SCROTTIS in antiquity. The
territory of Laconia extended beyond the highest
ridge of the mountain; and the chief source of the
Alpheus, called Sarantopetamos, formed the bound-
dary between Laconia and the Tegarits. Before
reaching the Arcadian frontier, the road went
through a narrow and rugged pass, now called KISSIÔR. The two towns in Scirios were SCIRION AND OKION, called IUN by Xenophon.

3. In the southern part of Laconia.—On the
road from Sparta to Gythium, the chief port of the
country, Pausanias (iii. 21. § 4) first mentions
CROCEAE, distant about 135 stadia from Sparta,
and celebrated for its quarries. GYTHIUM was 30
stadia beyond Croceae. Above Gythium, in the
interior, was ARGAE, to which a road also led
from Croceae. Opposite Gythium was the island
C¥NÄE. After giving an account of Gythium,
Pausanias divides the rest of Laconia, for the pur-
poses of his description, into what lies left and what
lies right of Gythium (en χροίσει τον Τηγηνιο, iii. 22.
§ 3—7 τα εν δυτικα τον Τηγηνιο, iii. 24. § 6).

Following the order of Pausanias, we will first
mention the towns to the left or east of Gythium.
Thirty stadia above Gythium was THRINACE, sit-
tuated upon a promontory, which formed the NE.
extremity of the peninsula terminating in Cape

1
Taenarum. Eighty stadia beyond Trinacius was Helos, also upon the coast. The read from Sparta to Helos followed the Eurotas the greater part of the way; and Leake noticed in several parts of the rock runs of chariot wheels, evidently the vestiges of the ancient carriage-road. (Leake, Morea, vol. i. p. 194.) Thirty stadia south of Helos on the coast was Acracia; and sixty stadia south of Acracia, Asopus, the later name of Cyperissi. Between Acracia and Asopus, Petronius mentions a town Bianmma (Βίανμμα, iii. 16, § 9), the name of which occurs in an inscription in the form of Biau

nopolis (Βιαυνονοποιι, Boeckh, Ins. No. 1336). Between Asopus and Acracia was an inland plain, called Leuce, containing in the interior a town of this name, and in the same neighbourhood was Pleiade. Returning to the coast, 50 stadia south of Asopus, was a temple of Asclepios, in a spot called Hypetereatum. Two hundred stadia south of Asopus was the promontory and peninsula Ono-

gnathus, connected with the mainland by a narrow isthmus, which is, however, generally covered with water. Between Ongnathus and Malea is a considerable bay, called Boeaticus Sinus, from the town of Boeae, situated at its head. In this neighbour-

hood were three ancient towns, called Etis, Apher-
oni, and Side, which were founded by the Dorians; the two former on the Boeaticus Sinus, and the other on the eastern sea north of Cape Malea. Between Boeae and Malea was Nymphaeum (Νυμφαειον or Νυμφαευον), with a cave near the sea, in which was a fountain of sweet water. Pausanias (ii. 23, § 2) calls Nymphaeum a Νέαμη, but, as there is no lake in this neighbourhood, Bollay conjectures (Re-

cherche, &c. p. 99) that we should read Αναμη, and places Nymphaeum at the harbour of Santa Marina, where a fountain of water issues from a grotto. The promontory or Malea (Μαλα, Steph. B. s. a. Μαλα, &c. iii. 52; Malea, Herod. i. 82; Strab. viii. p. 368), still called Malea, the most southern point in Greece with the exception of Taenarum, was much dreaded by the ancient sailors on account of the winds and waves of the two seas, which here meet together. Hence arose the proverb, “after doubling Malea, forget your country” (Strab. viii. p. 378), and the epithet of Statius, “formidatum Maleae caput” (vii. 437). On the promontory there was a statue of Apollo. (Steph. B. s. τον Δαφνιον, &τον Άγιον Malkos, Paus. iii. 12, § 8.) South of Malea was the island Cythera. Following the eastern coast we first come to Side, already mentioned; then to Epidileum, 100 stadia from Malea; next to Epidauros Limera, and successively to Zara, Cyphanta, and Prasiak ou Brachae, of which the last is near the confines of Argolis. The numbers in Pausanias, giving the distances of these places from one another, are corrupt: see Cyphanta. In the interior, between the Eurotas and the south-western shores of Parthen, Pausanias mentions Gerontitha, situated 120 stadia south of Acracia; Maris, 100 stadia east of Gerontitha; Glypta, also called Olympia, north of Maris; and Selinus, 20 stadia from Gerontitha.

Returning now to Gythium, we proceed to enumer-

ate the towns to the right, that is, west and south of this place, according to the plan of Pausanias (iii. 24. § 6, seq.); in other words, the towns in the peninsula through which Mount Taygetus runs. Forty stadia south of Gythium was Las, the interior; and a little below Las was the river Sicinos (Σικινός), rising in Mt. Taygetus, which Pausanias praises for the excellence of its water, now the river of Passare. Immediately south of this river was the temple of Artemis Dictyna, on a promontory now called Agthéromos; and in the same neighbourhood was a village called by Pausanias Arelaxon or Arelemon, where Las, the founder of the city of Lacon, was said to have been born. South of the promontory of Agthéromos is a stream, now called the river of Dikulena, the Scylas (Σκύλας) of Pausanias (ii. 25, § 1), beyond which were an altar and temple of Zeus; there are still some remains on the right side of the river near its mouth. Further south in the peninsula of Sketóri, inclosing a bay of the same name, which is conjectured to be the Sinus Aeolidiae of Pliny (iv. 5, 85); if so, we must place here Aegila, which is mentioned incidentally by Pausanias (iv. 17, § 1) as a town of Laconia. Inland 40 stadia from the river Scylas lay Pyrrichius. SE. of Pyrrichius on the coast was Tethybone. Between Tethybone and the Taenarian peninsula no town is mentioned, but at a place on the coast called Kikionia there are considerable remains of two temples. The Taenarian peninsula is connected with that of Taygetus by an isthmus half a mile across, and contains two harbours, named Psamathus and Archellos Portus (see TAENERAM); the extremity of the peninsula is C. Muttagon. Rounding the latter point, and ascending southwards, we come to the town of Taen-

arum, afterwards called Caeneopolis, 40 stadia above the Taenarian isthmus. Thirty stadia N. of Caeneopolis was the commencement of the promontory Thyrides, nearly as large as the Taenarian penis-

ula, but connected with the mainland by a much wider isthmus. On this promontory were the towns of Hipholla and Messa. North of Messa was Oetyles; but the distance of 150 stadia, assigned by Pausanias between the two places, is too much, [OETYLES.] Eighty stadia north of Oetyles was Thalamae, situated inland, and 20 stadia from Thalamae was Phipinis, upon the coast. Both these towns were upon the lesser Pampus, now called the Milton, which the Messenians said was originally the boundary of their territory. (Strab. viii. p. 368.) The northern extremity of this river was taken away from the Lacene-

monians by Philip in B.C. 338, and granted to the Messenians; but it is probable that the latter did not long retain possession of them. In the time of the Roman empire they formed part of Eleutherio-

Laconia. (Leake, Peloponnesiacus, p. 179.) Twenty stadia north of Phipnis, upon the coast, was Leuctra of Leuctrum; and 60 stadia north of the latter, Carmytle, at the distance of 8 stadia from the sea. North of Carmytle was Gerenia, the most northerly of the Eleuthero-Laconian towns. Thirty stadia from Gerenia, in the interior, was Alagonia.

(On the geography of Laconia, see Lecke, Morea and Peloponnesiacus; Bollay, Recherches, &c.; Ross, Reisen im Pelopon and Wanderungen in Griechenland; Curtius, Peloponomos.)

LACONIA.

LACRINGI.

LACONIMURGUS. [Crete, i. xii. v. &c.]

LACRINGI, mentioned by Capitolius (M. An-

tonia, c. 22), by Dion Cassius (lxxi. 12), and by Petrus Patricius (Excerpt. Legum, p. 124, ed. Bom), they were either Dacian or on the Dacian frontier, and
LACTARIUS MONS.

are known only from having, in the Marcomannic war, opposed a body of invading Astings, and, having so done, contracted an alliance with Rome. [R. G. L.]

LACTARIUS MONS (Πολυκτος Εθν. Monte S. Angelo), was the name given by the Romans to a mountain in the neighbourhood of Stabiae in Campania; it was derived from the circumstance that the mountain abounded in excellent pastures, which were famous for the quality of the milk they produced; which account the mountain was resorted to by invalids, especially in cases of consumption, for which a milk diet was considered particularly beneficial. (Cassiod. Ep. xi. 10; Galen, de Meth. Med. v. 12.) It was at the foot of this mountain that Nares obtained a great victory over the Goths under Teias in A. D. 533, in which the Gothic king was slain. (Procop. B. G. iv. 33, 36.) The description of the Mons Lactarius, and its position with regard to Stabiae, leave no doubt that it was a part of the mountain range which branches off from the Apenines near Nocera (Nuceria), and separates the Bay of Naples from that of Paestum. The highest point of this range, the Monte S. Angelo, attains a height of above 4000 feet; the whole range is Leonardian, and presents beautiful scenery as well as abundance. The name of Lettore, still borne by a town on the slope of the mountain side, a little above Stabiae, is evidently a relic of the ancient name. [E. H. B.]

LACTORA, in Gallia Aquitania, is placed by the Antonine Itin. on the road between Aquinum (Agen) and Clavennum (Auch), and 13 Gallic leagues from each. The distance and name correspond to the position and name of Lactorum. Several Roman inscriptions have been discovered with the name Lactorates, and Cirvitas Lactoriensum; but the place is not mentioned by any extant writer. [G. L.]

LACUS FELICIS, a place in Noricum, on the south of the Danube, 25 miles west of Arealpa, and 20 miles east of Lauresium (It. Ant. pp. 246, 248). According to the Not. Imper., where it is called Lacielaeis, it was the head-quarters of Noric horse archers. It is now generally identified with the town of Neulengbach, on the Danube. [L. S.]

LACYDON. [Massilia.]

LADE (Δανιά), the largest of a group of small islands in the Siusi Latimica, close by Miletus, and opposite the mouth of the Maeander. It was a protection to the harbours of Miletus, but in Strabo's time it was one of the haunts and strongholds of pirates. Lade is celebrated in history for the naval defeat sustained there by the Ionians against the Persians in B.c. 494. (Herod. vi. 8.; Thucyd. viii. 17, 24.; Strab. xiv. p. 635; Plut. i. 33. § 6; Steph. B. s. c.; Plin. v. 37.) That the island was not quite uninhabited, is clear from Strabo, and from the fact of Stephens B. mentioning the ethnic form of the name, Λαδεα. [L. D.]

LADICUS, a mountain of Gallicia, the name of which occurs in ancient inscriptions, and is still preserved in that of the Cadus de Cadico, near Monte-furado on the S.U. (Florez, Exp. S. vol. xvi, p. 63; Ubert, vol. ii. pt. 1. p. 575.) [P. S.]

LADOCIA (τὰ Δαδοκεα), a place in Arcadia, in the district Maenalia, and, after the building of Megalopolis, a suburb of that city, was situated upon the road from the latter to Pallantium and Tegesa. Here a battle was fought between the Manipicines and Tsegae, c. 423, and between the Achaeans and Cleomenes, c. c. 226. Thucydides calls it Ladeicum (Λαδείκειον) in Orestius. (Paus. viii. 44. § 1; Thuc. iv. 134; Pol. ii. 51, 55.) [Oresthia- sum.]

LAEAE (Λαεής), a Paeonian tribe in Macedonia, included within the dominion of Situles, probably situated to the E. of the Strymon. (Thuc. ii. 96.) [E. B. J.]

LAETA'NI or LEET'A'NI (Λαεταναί, Pol. ii. 6. §§ 18, 74; Λετάτων, Strab. iii. p. 159), a people on the N. part of the E. coast of Hispafia Tarraconensis, above the Costeant. Strabo merely speaks vaguely of the sea-coast between the Ethro and the Pyrenees as belonging to "the Latians and the Lartolaceti, and other such tribes," (κύριοι της Λατήτων και Δαρτολακτών και άλλων τομώντων), as far as Emporium, while Ptolemy places them about Barcino (Barcelona) and the river Rubricatus (Llubreagut); whence it appears they extended from below the Rubricatus on the SW. up to the borders of the Indigetes, upon the bay of Empieia, on the NE. They are undoubtedly the same people as the LAETANI of Flurn. (iii. 5. 4; comp. Inscr. grat. Leuca, p. 96), and speak of their country (Laetania) as producing good wine in abundance. (Plin. xiv. 6. 8. s.; comp. Martial, l. 27, 59. vii. 52; Sil. Ital. iii. 369. xv. 177.) Strabo describes it as a fertile country, well furnished with harbours. Besides their capital BARCINO (Barcelona), they had the following towns: (1.) On the sea coast, from SW. to NE.: BACTIO (Barralás, Pol. ii. 6. § 19; Bactoana; Marzor, p. 1033, no. 3.; Florez, Exp. S. vol. xxix. p. 56. Ber. xxix. p. 31; Marca, Hosp. ii. 15, p. 159), with a small river of the same name (Risias; Mela, ii. 6.); ILURO or ILURO, a city of the conventus of Tarracono, with the civilitas Romana (Mela, ii. 6.; Plin. iii. 3. 4.; Alcaupae, Pol. ii. 6. § 19, where the vulgar reading is Alcaupaeq.; prob. Matera, Marca, Hosp. ii. 15, p. 159; Florez, Exp. S. vol. xxix. p. 34.); BLANDA (Bordia, Pol. i. c. Blancs), on a height, to the left of the NE. of the mouth of the little river LARNUM (Teverda; Plin. iii. 3. 4.:) between Bactio and Iluro Ptolemy places the LUNAHUM P. (Alcoa- pov δωρο; probably the headland marked by the Torvo de Censorat). (2.) On the high road from Tarracon to Narbo Martius in Gaul (Itin. Ant. p. 398); FIXES, 20 M. P. W. of Barcino (near Martorell, on the right bank of the Llubreagut), marking doubtless the borders of the Lacaem and the Costean; then Barcino; next Praetorium, 17 M. P. (near Hostalric or Les Cases, where are great ruins; Marca, Hosp. ii. 20.); SERTORIAS or SECERBAS, 15 M. P. (prob. S. Pero de Sereca or San Seloni); AQUAE VOCONIAE, 15 M. P. (Caebas de Malavella). (3.) Other inland towns: RUBRICA- TATA (Ptol.); EGA, a municipium, whose site is unknown (Inscr. ap. Murator, p. 1106, no 7, p. 1107, no 1.; AQUAE CALDIAE, a civitas at- tependia, in the conventus of Tarracon (Pllin. iii. 3. 4.; Aquedusae, Cadba de Menyon, N. of Bar- ceana, Marca, Hosp. ii. 16, p. 167; Florez, Exp. S. vol. xxix. p. 37; Ubert, vol. ii. pt. 1. pp. 423, 424.) [P. S.]

LAETERA (Λατερά or Λατεραί, Procop. de Aed. iv. 6.), a town in the north of Mesia, on the Danube, and a few miles east of Viminacium. In the Notitia its name is Deeracta; it must have been near the modern Rama. [L. S.]
LAGUS.

Plistor even ascribes the foundation of that city to the Laevi, in conjunction with the Marici, a name otherwise wholly unknown, but apparently also a Ligurian tribe. There can be no doubt that in this part of Italy tribes of Gaulish and Ligurian origin were very much internixed, and probably the latter were in many cases confounded with the Gauls. [LIGURIA.]

LAGANIA (Aegypti), a village of the Tectus-sagae in Galatia, 24 miles to the east of Juliaspolis. It is not mentioned by any of the classical writers, but it must afterwards have increased in importance, for during the Christian period, it was the see of a bishop, and took the name of Anastasiopolis (Concil. Chalc. p. 662, and p. 95, where the name is misspelt Lagania; Hitt. Ant. p. 142, where the name is Lagynaeus; R. Hieros. p. 574, where we read Agarania). There is little doubt that the Latanio in Ptolemy (c. 1. § 14) and the Rheganipolia of Hierocles (p. 697) are the same as Lagania (comp. Theod. Syr. c. 2). Kiepert, in his map of Asia Minor, identifies it with Bég Basar. [L. S.]

LAGANIA (Aegypti: Eth. Agameron, Lagonia), a small town of Lucania, situated between Thurii and the river Silaris; which, according to the commonly received legend, was founded by a colony of Phocaeans under the command of Epeius, the architect of the wooden horse. (Strab. vi. p. 263, Libyca. Alex. 930; Testz. ad loc.) Strabo, the only geographical writer who mentions it, calls it only a fortress (φρούριον), and it was probably never a place of any importance; though deriving some celebrity in after times from the excellence of its wine, which was esteemed one of the best in Italy. (Strab. L. c.; Plin. xiv. 6. s. 8.) The statement of Strabo, above quoted, is the only clue to its position, which cannot therefore be determined with any certainty. Cluverius placed it at Novena, about 10 miles from the sea, and this conjecture (for it is nothing more) has been adopted by Romanelli. The wines of this neighbourhood are said still to preserve their ancient reputation. (Chuer. Ital. p. 1272; Romanelli, vol. i. p. 248.) [E. H. B.]

LAGECAMUM. [LEGECOLUM.

LAGINA (τὰ Λαγίνα), a place in the territory of Stratonicinae, in Caria, contained a most splendid temple of Hecate, at which every year, that festival of Athamas, were celebrated. (Her. G. v. p. 560.) Tacitus (Ann. iii. 62), when speaking of the worship of Trivia among the Stratonicinians, evidently means Hecate. The name of Lagina is still preserved in the village of Lanka, not far from the sources of the Taktina. Lagina, mentioned by Steph. B. as a πολιτικὸς Κόρις, seems to be the same as the Laguna of Strabo. [L. N.]

LAGONI (Aepyro), a town of the Arveae, in Hispania Tarraconensis, mentioned only by Dioscurus Siculus (Excerpt. vol. ii. p. 596). [P. P.]

LAGOS, a town in Phrygia, on the north-east of Mandraeopolis. (Liv. xxxviii. 15.) The town is mentioned only by Livy in his account of the progress of the Roman consul Cn. Manlius in Asia Minor, when Lages was found deserted by its inhabitants, but well provided with stores of every description, whence we may infer that it was a town of some consequence. [L. N.]

LAGU'SA (Λαγουσα, Λαγούσσα), an island in the Aegean sea, the name of which occurs in Strabo between those of Sicinus and Phoebusandras. Hence it is probably the same as Karitóttasa, a rocky islet between the two latter islands. But Kiepert,
LAGUSA.

in his map, identifies it with Polygenius. (Strab. x. p. 484; Steph. B. s. v.; Eustath. ad ll. ii. 625, p. 306.)

LAGUSA (Λαγούσα), one of a group of small islands in the bay of Telmissus in Lycia, 5 stadia from Telmissus, and 80 from Cissidae. (Plin. v. 35; Steph. B. s. v.; Stadi. Mar. Mag. § 226, &c.) This island is generally considered as the same as the modern Panagia di Cordialissia. [L. S.]

LAGUSSA, a group of small islands off the coast of Troy, to the north of Teneaia (Plin. v. 38; comp. Eustath. ad Hom. lli. ii. p. 306). Their modern name is Taeongam. [L. S.]

LALISI, the modern name of Dan. [D.N.]

LALASIS (Λάλασις, Prot. v. § 6, where some MSS. have Δαλλασις), a district in Cilicia, extending along Mount Taurus, above the district called Seleucia. Pliney (v. 23) also mentions a town Lalisia in Isauria, and this town accordingly seems to have been the capital of the district Lalisia, which may have extended to the north of Mount Taurus. It is probable, moreover, that the Isaurian town of Lalasis, the home of the Isaurian B. A., and to which, he says, was in his day called Delioside, is the name as Lalasis; and if so, it is identical with the Dalissas of Hieroelies (p. 710). Basilius of Scelucia informs us that the town stood on a lofty height, but was well provided with water, and not destitute of other advantages. (Wesseling, ad Hieroel. c. e.). From all these circumstances, we might be inclined to consider the reading Δαλλασις in Pliney the correct one, were it not that the coins of the place all bear the inscription Δαλλασις. (Sestini, p. 96.)

LALENESIS (Λαλενεσις or Δαλλασις, Prot. v. § 6), a small town in the district of Melitene in Armenia Minor, on the east of Zorograpos. Its site is unknown, and no ancient writer besides Ptolomy mentions it. [L. S.]

LALETANI. [Laeetani.]

LAM. [Vettieres.]

[P. S.]

LAMBER or LAMBRUS, a river of Northern Italy, in Gallia Transpadana, noticed by Pliney among the affluents of the Padus which join that river on its left or northern bank. (Flin. iii. 19. s. 23.) It is still called the Lamber, and rises in a small lake called the Lago di Paderno (the Epile Laces of Pliney), from whence it flows within 3 miles of Milan, and enters the Po about midway between the Ticino and the Adda. Sidonius Apollinaris contracts its stagnant and weedy stream (ulvusum Lambrum) with the blue waters of the Adda. (Ep. i. 5.) The Tabula as well as the Geographer of Ravenna give a town of the name of Lamburum, of which no trace is found elsewhere. It is probably a corruption of a station, Ad Lamburum, at the passage of the river of the same name, though the Tabula erroneously transfers it to the S. side of the Padus. (Tab. Peut.; Geogr. Lat. iv. 30.) [E. H. B.]

LAMBESE (Lam. Ant. pp. 32, 33, 34, 40: Tab. Peut.; Adsiusia, Pol. iv. 3. § 29; Lambrusa, Inscriptiones Augustae, ad. Donat. vi. 13; Lambrusiana Colonia, Cyprian. Epist. 53; Lambrus or Tizzur, large Ra.), one of the most important cities in the province of Nuniidus, below the mouth of the Massili. It lay near the confines of Mauretania, at the W. foot of M. Aurasius (Jabel-Arousé), 102 M. P. from Sissi, 118 from Theveste, and 84 from Cirta. It was the station of an entire legion, the Legio III. Augusta (Aegean τριτάς σταθμός, Polk. l. c. and Inscri. Its importance is attested by its magnificent ruins, among which are seen the remains of an amphitheatre, a temple of Aesculapius, a triumphal arch, and other buildings, enclosed by a wall, in the circuit of which 40 gates have been traced, 15 of them still in a good state of preservation. The silence of Procopius respecting such a city seems to imply that it had been destroyed before the age of Justinian. (Shaw, Travels, p. 57; Bruce, Ptolemyanische; Pellissier, Exploration Scientifique de l'Algérie, vol. vi. pp. 388, 389.) [P. S.]

LAMBRACCA or LAMBRICA, a town of the Galataeans in Galliaco Littore, near the mouth of the river Lagen in Ulla, not far from El-Padron. (Mela, iii. 1. § 8; Ukert, vol. ii. pt. I. p. 439.)

[P. S.]

LAMETINI (Λαμέτίνων), a city of Bruttium, mentioned only by Stephanus of Byzantium (s. v.), on the authority of Hecateus, who added that there was a river also of the name of LAMETUS (Λαμέτος). We find this again alluded to by Lycorephon. (Akez. 1085.) There can be no doubt that this is the stream still called Lamato, which flows into the gulf of Sts. Eugenia; and this is confirmed by the authority of Aristotle, who gives to that gulf, otherwise known as the Sinus Terminaeus or Hipponiates, the name of the Lametinae Gulf (δυο Λαμετινός κόλπος, Arist. Pol. vii. 10). Hence there can be little doubt that the city of Lametini also was situated on the shores of the same bay, though Stephanus vaguely calls it "near Cretum." (Steph. B. l. c.) No other writer mentions the name (which is evidently an ethnic name like Leontini), and it is probable that the town was destroyed or sunk into a dependent condition at an early period. An inscription, which records it as an existing municipal town in the time of Trajan, is almost certainly spurious. (Mommsen, Inscri. Rec. Num. Append. No. 936.) It is generally supposed to have been situated either at or near the modern village of Sta. Eugenia, but this is mere conjecture. [E. H. B.]

LAMAIA (Λαμαια; Ebb, Lausevi; Zetam), a town of the Mellenses, though afterwards separated from them, situated in the district Phthiotis in Thessaly. Strabo describes Lamia as situated above a plain which lies at the foot of the Maleac gulf, at the distance of 30 stadia from the Spercheius, and 50 stadia from the sea (ix. pp. 433, 435). Livy says that it was placed on a height distant seven miles from Heraclea, of which it commanded the prospect (xxvi. 25), and on the route which led from Thermopylae through the passes of Phthiotis to Thaumachi (xxxi. 4). Strabo further relates that it was subject to earthquakes (i. p. 60). Lamia is celebrated in history on account of the war which the Athenians and the confederate Greeks carried on against Antipater in B. C. 323. Antipater was at first unsuccessful, and took refuge in Lamia, where he was besieged for some time by the allies. From this circumstance this contest is usually called
LAMOTIS (Λαμότις), a district on the eastern coast of Cilicia Aspera, between the rivers Calydonus and Lamus. Its capital bore the name of Lamus, from which that of the district was derived. (Ptol. v. 8. § 6; comp. LAMUS.)

[L. S.]

LAMPAS (Λάμπας), a harbour on the E. coast of the Tauric Chersonese, 500 stadia from the Thebaid, and 320 stadia from Cria-Metopen. (Arr. Perip. p. 26; Anon. Perip. p. 6.) Arrian uses the two names Lamasp and Halmatis as if they belonged to the same place, but the Anonymous Coast-describer speaks of Lamasp alone. Halmatis probably took its name from being a place for salting fish. The name is preserved in the places now called Biene-Lambat and Kountouk-Lambat, Tartar villages at the end of a bay defended by the promontory of Plaka, near which ancient ruins have been found. (Dubois de Montperoux, l'égoge autour du Caucase, vol. v. p. 713, vol. vi. p. 460; Rennell, Cosmop. Geog. vol. ii. p. 340.)

[Eng. B. J.]

LAMβΑΤΑΙ or LAMPΑΓΛΕΙ (Λάμβάται or Λάμπαγάλει, Ptol. vii. 1. § 42), a small tribe who lived among the offshoots of the Imata, in the NW. part of India, about the sources of the Choüs (now Kaimuk), which is itself a tributary of the Kabad river.

[77]

LAMPE (Λάμπη), a town in Crete, also called Lampa (Λάμπη). Besides this town Stephanus B. (s. e.) mentions two other towns of this name, otherwise unknown, one in Arcadia and the other in Argolis.

LAMPIEA. [ΕΥΜΑΝΘΙΟΣ.]

LAMPETIA. [CLAMPETIA.]

LAMPONEIA or LAMPÓNION (Λαμπόνιον, Λαμπόνια), an Aelian town in the south-west of Crete, of which no particulars are known, except that it was annexed to Persia by the satrap Otanes in the reign of Darius Hystaspis. It is mentioned only by the earliest writers. (Herod. v. 26; Strab. xiii. p. 610; Stephan. B. s. e.)

LAMPRΑ [ΑΤΙΣΚΑ, p. 331 a.]

LAMPSACUS (Λάμψακος, Ath. Λαμψακον), sometimes also called Lampascum (Cic. in Terr. i. 24; Pompe. Mea. i. 19), was one of the most celebrated Greek settlements in Mycia on the Hellespont. It was known to have existed under the same name of Pitirimnous before it received colonists from the Ionian cities of Phocaea and Miletus. (Strab. xiii. p. 589; Stephan. B. s. e.; Plin. v. 40; Hom. II. i. 829; Plin. de Vitr. M. 18.) It was situated, opposite to Callipolis, in the Thracian Chersonese, and possessed an excellent harbour. Herodotus (vi. 37) relates that the elder Miltiades, who was settled in the Thracian Chersonese, made war upon the Lampsaecni, but that they took him by surprise, and made him their prisoner. Being threatened, however, by Croesus, who supported Miltiades, they set him free. During the Ionian revolt, the town fell into the hands of the Persians. (Herod. v. 117.)

The territory about Lampscenus produced excellent wine, whence the king of Persia bestowed it upon Themistocles, that he might thence provide himself with wine. (Thucyd. i. 135; Athen. i. p. 29; Dion. xi. 57; Plin. Hist. Nat. 29; Nepos, Them. 10; Anani. Mav. xxviii. 8.) But even while under the supremacy of Persia, it continued to be governed by a native prince or tyrant, of the name of Hippocles. His son Aeactides married Archelicea, a daughter of Phisstratus, whose tomb, commemorating her virtues, was seen there in the time of Theocritus (vi. 59). The attempt of

LAMIPSACUS.

COIN OF LAMIA.

LAMIA. [ΑΜΙΑ, ΝΗΛΑΙΑ]

LAMUSIC SINUS. (Σ Λαμισανός κόλπος), a name given by Pausanias to the Malian gulf, from the important town of Lamia. (Paus. i. 4. § 3, viii. 15. § 2. x. 1. § 2) In the same way the gulf is now called Zitini, which is the modern name of Lamia.

LAMNINUM (Λαμνίνη: Eth. Lamniniatis; near Farsalina, between Mantid and Alcarea), a town of the Carpiotani (mentioned by Ptolemy, though some suppose it to have belonged rather to the Dorians), in Hispания Taraceonisia. It was a stipendiary town of the conventus of New Carthage, and stood on the north road from Emerita to Carthage. The river Anas (Guadiana) rose in the lands of Laminum, 7 M. P. E. of the town. (Plin. l. a. 1. s. 23; s. 4; l. a. 8. s. 23; il. a. 1. 445, 446; Ptol. ii. 6. § 57; cicer. op. Flor. Epit. vol. iv. p. 38; vol. ii. pp. 122, 123; vol. vii. p. 149; Ubert, vol. ii. p. 811; in Plin. xxxvii. 21. s. 47, where Piny speaks of the whetstones found in Hither Spain as Cotes Flaminianae, Ubert supposes we ought to read Cotes Laminianae.)

[8. S.]

AMUS.
LANIUS.

Eugenus to seize the citadel, and thereby to make himself tyrant, seems to belong to the same period. (Atien. xi. p. 508.) After the battle of Mycale in B.C. 499, Lampacus joined Athens, but revolted after the failure of the great Athenian expedition to Sicily; being, however, unfortified, it was easily reconquered by a fleet under Strombichides. (Thuc. vii. 62.) After the time of Alexander the Great, the Lampascani had to defend their city against the attacks of Antiochus of Syria; they voted a crown of gold to the Romans, and were received by them as allies. (Livy. xxxiii. 38, xxxiv. 42, xiii. 6; Polyb. xxi. 10.) In the time of Strabo, Lampacus was still a flourishing city. It was the birthplace of many distinguished authors and philosophers, such as Charon the historian, Anaximenes the orator, and Metrodorus the disciple of Epicurus, who himself resided there for many years, and reckoned some of its citizens among his intimate friends. (Strab. l.c.; Diog. Laert. x. 11.) Lampacus possessed a fine statue by Lysippus, representing a prostrate lion, but it was removed by Azrippa to Rome to adorn the Campus Martius. (Strab. l.c.) Lampacus, as it is well known, was the chief seat of the obseene worship of Priapus, who was believed to have been born there of Aphrodite. (Atien. i. p. 50; Paus. ix. 31. § 2; Apoll. Rhod. i. 985; Ov. Fast. vi. 345; Virg. Georg. iv. 110.) From this circumstance the whole district was believed to have derived the name of Abarrus or Aparnis (Ἀπαρνίς), because Aphrodite denied that she had given birth to him. (Theophr. Hist. Plant. i. 6, 13.) The ancient name of the district had been Bebrycia, probably from the Thracian Bebryces, who had settled there. (Comp. Herod. i. 207; Charon, i. 215, 216; Xenoph. Anab. vii. 8. § 1; Polyb. v. 77; Plin. iv. 18, v. 40; Ptol. v. 2. § 2; Steph. B. s. v.) The name of Lampsakos is still attached to a small town near which Lampacus probably stood, as Lampsakos itself contains no remains of antiquity. There are gold and silver staters of Lampacus in different collections; the imperial coins have been traced from Augustus to Gallicanus. (Sestini, Mon. Vet. p. 73.)

[1 S.]

COIN OF LAMPSACES.

LANOUS, a town of Histiaeotis in Thessaly, on the borders of Arachana. (Livy. xxxii. 14.)

LAMPIRA. [Attica. p. 331, a.]

LAMUS (Ἄλαος), a village of Cilicia, at the mouth of the river Lamus, from which the whole district derived the name of Lamotis. The river is mentioned by Stephanus B. (from Alexander Polyhistor), and both the river and the village by Strabo (xiv. p. 671) and Ptolemy (v. 8. §§ 4, 6). The river, which is otherwise of no importance, formed the boundary between Cilicia Aspera and Cilicia Propria, and still bears the name of Lamus or Lamos. About the village of Lamus no particulars are known. (Comp. Nannus, Dionys. xxiv. 50; Hieroc. p. 709.)

LANGBARDI. 119

LANMION (Ἀλαμίων), a great harbour near Cape Heracleum, on the coast of Pontus, not far from Themessus. (Anonyn. Peripl. Pont. Env. p. 10.)

LANCE (Itin. Ant. p. 395), or LANCIA (Ἀλαλία, Dion Cass. iii. 23, 29; Flor. iv. 12; Oros. vi. 21), or LANCIATUM (Ἀλαλιατόρας, Ptol. ii. 6. § 29), the chief city of the LANCETTI (Ἀλαλιατόρας, Ptol. l.c.) or LANCIENSES (Plin. iii. 3. s. 4), a tribe of the Astures, in Hispania Tarraconensis. It was a strongly fortified, and was the most important city of that region, even more so than LEGIO VII GERMINA, at least before the settlement of the latter by the Romans, whom Lancia was destroyed, though it was again restored. It lay on the high road from Cassaragusta to Legio VII (Leus), only 9 M. P. from the latter, where its name is still to be traced in that of Solancio or Solancia. (Florus, Exp. S. vol. xvi. p. 16; Uberti, vol. ii. pt 1. p. 441.) [T. S.]

LANCIA, LANCIATI, LANCIATUM. [LANCE.]

LANCIA OPIPIDANA. [VEITONES.]

LANCIENSES [LANCE.]

LANCIENSES OCELENSES or TRANSCU- DANI. [OCELUM.]

LANGIBARDI, LONGIBARDI (Ἀγγοβαρδοί, Ἀγγοβαρδόνες, also Ἀγγοβασόνες and Ἀγγοβασάντος), a tribe of Germans whom we first meet with in the plain, south of the lower Elbe, and who belonged to the Suevi. (Strab. vii. p. 290, where Kramer reads Ἀγγοβαρδόνας; Ptol. ii. 11. §§ 9, 17.) According to Paulus Diaconus, himself a Langobard, or Lombard (Hist. Longob. i. 3, 8; comp. Isidor. Orig. ix. 2; Egin. M. s. v. Plinio), the tribe derived its name from the long beards, by which they distinguished themselves from the other Germans, who generally shaved their beards. But it seems to be more probable that they derived the name from the country they inhabited on the banks of the Elbe, where Bördle (or Bördl) still signifies "a fertile plain by the side of a river." A district near Mogdaburg is still called the lange Bördle (Wilhelm, Germanien, p. 286). According to this, Langobardi would signify "inhabitants of the long border of the river." The district in which we first meet with them, is the left bank of the Elbe, from the point where the Sula empties itself into it, to the front of the Chaini Miniae, to which they were bounded in the north by the Elbe, in the east by the Semnones, in the south by the Cherusci, and in the west by the Fesi and Angriavari. Names of the name of the Langobardi still occur in that country in such names as Bardengana, Bardewitt. The earliest writer who mentions the Langobardi as inhabiting these parts, is Velius Paterculus (ii. 106). But notwithstanding the unanimous testimony of the ancients that they were a branch of the Suevi, their own historian (Paul. Diacon. l.c.; comp. Euseb. Chron. ad an. 389) states that the Langobardi originally did not inhabit any part of Germany, but had migrated south from Scandinavia, where they had borne the name of Vinilii, and that they assumed the name Langobardi after their arrival in Germany. It is impossible to say what value is to be attributed to this statement, which has found as many advocates as it has haters. (Stephani L. c. it is clear that they occupied the northern bank of the Elbe, and it is possible that they were among those Germans whom Tiberius, in the reign of Augustus drove across the Elbe (Suet. Aug. 21). In their new country they were soon reduced to submission by Marobodus, but... 1 4
afterwards they shook off the yoke, and, in conjunction with the Semones, joined the confederacy of the Cheruscans against the Marcianus. (Tac. Ann. ii. 43.) When, in consequence of the murder of Arminius, the power of the Cheruscans was decaying more and more, the Langobardi not only supported and restored Italus, the king of the Cheruscans who had been driven to leave his own territory in the north, so as to occupy the country between Hallo, Magdeburg, and Leipzig. (Tac. Ann. xii. 17.) They were not a numerous tribe, but their want of numbers was made up for by their natural bravery (Tac. Germ. 40), and Velleius describes them as a "pocus etiam Germania feroci feror." Shortly after these events the Langobardi disappear from history, until they are mentioned again by Procopius (i.e.), who places them in the extensive territory between the Rhine and Weser, and even beyond the latter river almost as far as the Elbe. They thus occupied the country which had formerly been inhabited by the tribes forming the Cheruscan confederacy. This great extension of their territory shows that their power must have been increasing ever since their liberation from the yoke of Marnobroth. At this time, or again between the Rhine and the Langobardi for a considerable period. They are indeed mentioned, in an excerpt from the history of Petrus Patricius (Exc. de Legat. p. 124), as allies of the Obi on the frontiers of Pannonia; but otherwise history is silent about them, until, in the second half of the 5th century, they appear on the north of the Danube in Upper Hungary as tributary to the Heruli (Procop. de Bell. Goth. ii. 15, who describes them as Christians). Whether these Langobardi, however, were the same people whom we last met with between the Rhine and the Elbe, or whether they were only a band of emigrants who had in the course of time become so numerous as to form a distinct tribe, is a question which cannot be answered with certainty, although the latter seems to be the more probable supposition. Their natural love of freedom could not bear to submit to the rule of the Heruli, and after having defeated the king of the latter, they made him prisoner, and established a king of their own, named Quadi, likewise a Savinian tribe, and henceforth they were for a long time the terror of their neighbours and the Roman province of Pannonia. (Paul. Dicat. i. 22.) For, being the most powerful nation in those parts, they extended their dominion down the Danube, and occupied the extensive plains in the north of Dacia on the river Theiss, where they first came in conflict with the Goths, and entered Pannonia. (Paul. Dicat. i. 29.) The emperor Justinian, wanting their support against the Goths, gave them lands and supplied them with money (Procop. Bell. Goth. iii. 33), and under their king Audoin they gained a great victory over the Goths. (Paul. Dicat. iii. 25; Procop. Bell. Goth. iii. 34, iv. 18, 25.) Alboin, Audoin's successor, after having, in conjunction with the Avari, completely overthrown the empire of the Goths, led the Langobardi, in a.d. 568, into Italy, where they permanently established themselves, and founded the kingdom from which down to this day the north-east of Italy bears the name of Lombardy. (Exc. de Legat. pp. 303, 304; Mariss Eppic. Chron. Rom. ii. 412.) The occasion of their invading Italy is related as follows. When Alboin had concluded his alliance with the Avari, and had ceded to them his own dominions, Nursae, to take revenge upon Justin, invited them to quit their poor country and take possession of the fertile plains of Italy. Alboin accordingly crossed the Alps, and as the north of Italy was badly defended, he succeeded in a short time in establishing his kingdom, which continued to flourish until it was overpowered and destroyed by Charlemagne. (Paul. Dicat. ii. 5; Eginhard, Vit. Carol. M. 6.) The history of this singular people, whose name still survives, has been written in Latin by Paulus Diaconus, who, in his work, relates the history of Charlemagne, and by another Lombard of the 9th century, whose name is unknown. (Comp. Wilhelm, Germaniae, p. 281, foll.; Zeuss, die Deutschen und die Nachheilsträmme, p. 109, foll.; F. Duff, Quaest. de Antiquissima Longobardorum Historia, Berlin, 1830, &c.; Koch-Sternfeld, das Reich der Langobarden in Italien, Munich, 1839; Latham, Tac. Germ. p. 133, and Epxag. p. xxxiv.) [L. S.] LANGORIGA. [LUSTANIA.] LANUVIUM. (Ariovis., Strab.; Ariovis., Ptol.: Eeb. Aravvis., Lanuvius: Civitas Lavinia), an ancient and important city of Latium, situated on a lofty hill forming a projecting spur or promontory of the Alban Hills towards the S. It was distant about 20 miles from Rome, on the right of the Appian Way, rather more than a mile from the road. The name is often written in inscriptions, even of a good time, which shows how the confusion which arose in all our MSS. of ancient authors between it and Lavinium: the two names are so frequently interchanged as to leave constant doubt which of the two is really meant, and in the middle ages they appear to have been actually regarded as the same place; whence the name of "Civitas Lavinia" by which Lanuvium is still known, and which can be traced as far back as the fourteenth century. The foundation of Lanuvium was ascribed by a tradition recorded by Appian (B. C. ii. 20) to Dionysus; a legend probably arising from some fancied connection with the worship of Juno at Argos. A tradition that has a more historical aspect, though perhaps little more historical worth, represented it as one of the colonies of Alba. (Diod. viii. ap. Ennac. Arm. p. 185.) The statement of Cato (ap. Priscian. iv. 4. § 21) that it was one of the cities which was the seat of the first state, and formed part of the sacred temple of Diana at Aricia, is the first fact concerning it that can be looked upon as historical, and shows that Lanuvium was already a city of considerable power and influence. Its name appears also in the list given by Dionysius of the cities that formed the league against Rome in B.C. 496, and there is no doubt that it was in fact one of the thirty cities of the Latin League. (Dioys. v. 61; Niebuhr, vol. ii. p. 17.) But from this time we hear little of it, except that it was the faithful ally of Rome during her long wars with the Volscians and Aeumians (Liv. vi. 21): the position of Lanuvium would indeed cause it to be one of the cities most immediately interested in opposing the progress of the Volscians, and render it as it was the natural rival of Antium. We have no explanation of the cause, which, in B.C. 368, led the Lanuvians suddenly to change their policy, and take up arms, together with some other Latin cities, in favour of the Volscians (Liv. vi. 21). They must have shared in the defeat of their allies near Satricum; but apparently were not admitted to submission on honourable terms, and we hear no more of them till the great Latin War in B.C. 340, in which they took an active and important part. At first, indeed, they seem to have hesitated and delayed to take the field; but in the two last campaigns their forces are
particulary mentioned, both among those that fought at Paimum in u. c. 339, and the next year at Astura (Liv. viii. 12, 13). In the general settlement of affairs at the close of the war Lanuvium obtained the Roman civitates, but apparently in the first instance without the right of suffrage; for Festus, in a well-known passage, enumerates the Lanuvini among the communities who at one time enjoyed all the other privileges of Roman citizens except the suffrage and the jus magistratum (Liv. viii. 14; Festus, v. Municipium), a statement which can only refer to this period. We know from Cicero that they subsequently obtained the full franchise and right of suffrage, but the time when they were admitted to these privileges is unknown. (Cic. pro Babb. 13.)

From this time Lanuvium lapsed into the condition of an ordinary municipal town, and is mentioned chiefly in relation to its celebrated temple of Juno Sospita. It did not, however, fall into decay, like so many of the early Latin cities, and is mentioned by Cicero among the more populous and flourishing municipia of Latium, in the same class with Ariccia and Tusculum, which he contrasts with such poor and decayed places as Labicum and Colatia (Cic. de Leg. Agr. ii. 35). Its chief magistrate retained the ancient Latin title of Dictator, which was assumed by Annius Milo, the celebrated adversary of Clodius, in the days of Cicero. (Cic. pro Mil. 10; Orell. Inscr. 3786.) Previous to this period Lanuvium had suffered severely in the civil wars of Marius and Sulla, having been taken by the former at the same time with Antium and Ariccia, just before the capture of Rome itself, B. C. 87. (Appian, B. c. i. 69; Liv. Epit. 50.) Nor did it escape in the later civil wars: the treasures of its temple were seized by Octavian, and a part at least of its territory was divided among a colony of veterans by the dictator Caesar. (Appian, B. c. v. 24; Lib. Colon. p. 235.) It subsequently received another colony, and a part of its territory was at one time allotted to the vestal virgins at Rome. (Obi.) Lanuvium, however, never bore the title of a colony, but continued only to rank as a municipium, though it seems to have been a flourishing place throughout the period of the Roman Republic. It was the residence of the emperor Antoninus Pius, who in consequence frequently made it his residence, as did also his successors, M. Aurelius and Commodus: the last of these three is mentioned as having frequently displayed his skill as a gladiator in the amphitheatre at Lanuvium, the construction of which may probably be referred to this epoch. Inscriptions attest its continued prosperity under the reigns of Alexander Severus and Philippus. (Suet. Aug. 72; Tac. Ann. iii. 48; Capit. Ant. Pius, 1; Lampriid. Commnd. 1. 8; Vict. de Caes. 15; Orell. Inscr. 884, 3740, &c.)

Lanuvium was the place from which several illustrious Roman families derived their origin. Among these were the Anni, to which Milo, the adversary of Clodius, belonged by adoption, as well as the Papia, from which he was originally descended; the Roccia, and the Thoria (Cic. pro Mil. 10; Ascon. ad Milon. pp. 32, 53; Cic. de Divin. i. 36, ii. 31, de Fin. ii. 20), to which may probably be added, on the authority of coins, the Procilia and Mettia. (Eckhel, vol. v. pp. 253, 257, 289, 293.) We learn from Cicero that not only did the Roccia Gens derive its origin from Lanuvium, but the celebrated actor Roscius was himself born in the territory of that city. (Cic. de Div. i. 36.)

But the chief celebrity of Lanuvium was derived from its temple of Juno Sospita, which enjoyed a peculiar sanctity, so that after the Latin War in n. c. 338 it was stipulated that the Romans should enjoy free participation with the Lanuvians themselves in her worship and sacred rites (Liv. viii. 14): and although at a later period a temple was erected at Rome itself to the goddess under the same denomination, the consuls still continued to repair annually to Lanuvium for the purpose of offering solemn sacrifices. (Liv. xxxii. 50, xxxiv. 53; Cic. pro Marc. 41.) The peculiar garb and attributes of the Lanuvian Juno are described by Cicero (de Nat. Deor. i. 29), and attested by the evidence of numerous Roman coins: she was always represented with a goat's skin, drawn over her head like a helmet, with a shield in her hand, and a spear or halberd on the left arm, and wore peculiar shoes with the points turned up (calceolii reponilis). On coins we find her also constantly associated with a serpent; and we learn from Propertius and Aelian that there was a kind of oracle in the sacred grove attached to her temple, where a serpent was fed with fruits and cakes by virgins, whose chastity was considered to be thus put to the test. (Prop. iv. 8; Aelian, H. A. xli. 16, where the true reading is undoubtedly Anurouq, and not Anourop; Eckhel, vol. v. p. 294.)

The frequent notices in Livy and elsewhere of prodigies occurring in the temple and sacred grove of Juno at Lanuvium, as well as the allusions to her worship at that place scattered through the Roman poets, sufficiently show how important a part the latter had assumed in the Roman religion. (Livy. xxiv. 10, xxiv. 14, xxxi. 12, xii. 19; Cic. de Divin. i. 44, ii. 27; Ov. Fast. vi. 60; Sil. Ital. xiii. 36.) We learn from Appian that a large treasure had gradually accumulated in her temple, as was the case with most celebrated sanctuaries; and Pliny mentions that it was adorned with very ancient, but excellent, paintings of Helen and Atalanta, which the emperor Caligula in vain attempted to remove. (Plin. xxxv. 3, s. 6.) It appears from a passage in Cicero (de Fin. ii. 20) that Juno was far from being the only deity especially worshipped at Lanuvium, but that the city was noted as abounding in ancient temples and religious rites, and was probably one of the chief seats of the old Latin religion. A temple of Jupiter adjoining the forum is the only one of which we find any special mention. (Liv. xxxvii. 9.)

Though there is no doubt that Certa Larvinia occupies the original site of Lanuvium, the position of which is marked by Straus (Strab. v. p. 239; Sil. Ital. viii. 566), and we know from inscriptions that the ancient city continued in a flourishing condition down to a late period of the Roman empire, it is curious that scarcely any ruins now remain. A few shapeless masses of masonry, principally substructions and foundations, of which those that crown the summit
of the hill may possibly have belonged to the
of Juno Sospita; and a small portion of a theatre
brought to light by excavations in 1832, are all
that are now visible. The inscriptions discovered
on the spot belong principally to the time of
the Antonines, and excavations in the last century
brought to light many statues of the same period.
Abeker, Hiltel Itali. p. 215.)

Lanuvium, as already observed, was situated at a
short distance from the Appian Way, on the right of
that road; the station "Sub Lanuvium," marked in the
Tabula Peutingeriana between Aricia and Tres
Tabernae, was evidently situated on the high road,
probably at the eighteenth milestone from Rome,
from which point a branch road led directly to the
ancient city. (Westphal, Rom. Komp. p. 28; Nibby,
L. c.)

The remains of two other ancient roads may be
traced, leading from the W. and S. of the city in
the direction of Antium and Astura. The existence
of this line of communication in ancient times is
incidentally referred to by Cicero (ad Att. xii. 41,
43, 46). The tract of country extending S. of
Lanuvium in the direction of Antium and the Pen-
T Harness, was even in the time of Strabo very unhealthy (Strab. v. p. 251), and is now
almost wholly deserted. [K. E. H. B.]

LAODICEIA COMBUSTA (LAODICEIA NATAE-
KAVNAVΣ ET ΚΩΚΑΝΑΒΣΗ), one of the five cities built
by Seleucus I., and named after his mother Seleuce
Its surname (Lat. Combusta) is derived from Strabo
(xii. pp. 576, 579, xiii. pp. 516, 628, 637) from
the volcanic nature of the surrounding country, but
Hamilton (Researches, ii. p. 194) asserts that there is
"not a particle of volcanic or igneous rock in the
neighbourhood," and it may be added that if such
were the case, the town would rather have been
called A. ΤΩΝ ΚΩΚΑΝΑΒΣΗΩΝ. The most probable
solution undoubtedly is that the town was the
place where one destroyed by fire, and that on being rebuilt it
received the distinguishing surname. It was sit-
tuated on the north-west of Leuca, on the high road
leading from the west coast to Melitene on the
Euphrates. Some describe it as situated in Lycaonia
(Steph. B. s. v.; Strab. xvi. p. 662), and others as
a town of Pisidia (Soccat. Histor. Eccl. vi. 18; Hierocl.
p. 675), and Poteney (v. 4. § 10) places it in
Galatia; but this discrepancy is easily explained by
recollecting that the territories just mentioned were
often extended or reduced in extent, so that at one
time the town belonged to Lycaonia, while at another it
formed part of Pisidia. Its foundation is not men-
tioned by any ancient writer.

Both Leake (Asia Minor, p. 44) and Hamil-
ton identify Laodiceia with the modern Laalik; and
the former of these geographers states that at Laalik
he saw more numerous fragments of ancient architecture and sculpture than at any
other place on his route through that country.
Inscribed marbles, altars, columns, capitals, friezes, cornices, were dispersed throughout the streets,
and among the houses and burying grounds. From
this it would appear that Laodiceia must once
have been a very considerable town. There are
a few imperial coins of Laodiceia, belonging to
the reigns of Titus and Domitian. (Sestini, Mon.
Ant. p. 93; comp. Drachen, Gesch. des He-0.1. i. p. 663, 671.)

LAODICEIA AD LYCM (LAODICEIA PΩΣ ΤΩΡ
XEΩR: EΩΣ ΗΙΣΙΡΑ), a city in the south-west of
Lycaonia*, about a mile from the rapid river Lycaon,
Lycaon, is situated on the long spur of a hill between the
narrow valleys of the small rivers Asopus and
Caprus, which discharge their waters into the
Lycaon. The town was originally called Diospolis,
and afterwards Rhous (Phil. v. 29), and Laodiceia,
the building of which is ascribed to Antiochus
The towns of this wife Laodiceia, was probably
founded on the site of the older town. It was, not
far west from Colossae, and only six miles to the
west of Hierapolis. (Itt. Ant. p. 337; Tab. Peut.;
Strab. xii. p. 629.) At first Laodiceia was not a
place of much importance, but it soon acquired a high
degree of prosperity. It suffered greatly during the
Mithridatic War (Appian, Bell. Mithr. 20;
Strab. xii. p. 578), but quickly recovered under the
dominion of Rome; and towards the end of the
Republic and under the first emperors, Laodiceia
became one of the most important and flourishing
commercial cities of Asia Minor, in which large
money transactions and an extensive trade in wood
were carried on. (Cic. ad Fam. ii. 17, iii. 5;
Strab. xii. p. 577; comp. Vitruv. viii. 3.) The
place often suffered from earthquakes, especially
from the great shock in the reign of Tiberius, in
which it was completely destroyed. But the inha-
bitants restored it from their own means. (Tac.
Ann. xiv. 27.) The wealth of its inhabitants created
among them a taste for the arts of the Greeks, as
manifest from its ruins; and that it did not remain
behind-hand in science and literature is attested by
the names of the sceptics Antiochus and Theodas,
the successors of Aenesidemus (Diod. Laëet. ix. 11.
§ 106, 12, § 116), and by the existence of a great
medical school. (Strab. xii. p. 580.) During the
Roman period Laodiceia was the chief city of a
Roman conventus. (Cic. ad Fam. iii. 7, ix. 25,
xiii. 54, 67, xv. 4, ad Att. v. 15, 16, 20, 21, vi.
1, 2, 3, 7, in Terr. i. 30.) Many of its inhabitants
were Jews, and it was probably owing to this cir-
cumstance, that at a very early period it became
one of the chief seats of Christianity, and the see of
a bishop. (St. Paul, Ep. ad Coloss. ii. 1. 15, föll.;
x. 10, 20; Hierocl. p. 665.) The Byzantine writers
often mention it, under the name of a town called
Domnium; and it was fortified by the emperor Manuel.
(Nest. Chron. Ann. pp. 9, 81.) During the invasion
of the Turks and Mongols the city was much ex-
posed to ravages, and fell into decay, but the exis-
ting remains still attest its former greatness.
The ruins near Demetri are fully described in Pococke's,
Chandler's, Cockerell's, Arundel's and Leake's works.
515), "can exceed the desolation and melancholy
appearance of the site of Laodiceia: no picturesque
features in the nature of the ground on which it
stands relieve the dull uniformity of its undulating
and barren hills; and with few exceptions, its grey
and widely scattered ruins possess no architectural
merit to attract the attention of the traveller. Yet
it is impossible to view them without interest, when
we consider what Laodiceia once was, and how it is
connected with the early history of Christianity.
Its stadium, gymnasium, and theatre (one of which is in the state of great preservation, with its

* Poteney (v. 2. § 18) and Philostratus (Ivit. Sophi. i. 25) call it a town of Caria, while Stephanus
B. (s. v.) describes it as belonging to Lydian; which
arises from the uncertain frontiers of these countries.
seats still perfectly horizontal, though merely laid upon the gravel), are well deserving of notice. Other buildings, also, on the top of the hill, are full of interest; and on the east the line of the ancient wall may be distinctly traced, with the remains of a gateway; there is also a street within and without the town, flanked by the ruins of a colonnade and numerous pedestals, leading to a confused heap of fallen ruins on the brow of the hill, about 200 yards outside the walls. North of the town, towards the Lycus, are many sarcophagi, with their covers lying near them, partly imbedded in the ground, and all having long since lost their coverings.

Amongst other interesting objects are the remains of an aqueduct, commencing near the summit of a low hill to the south, whence it is carried on arches of small square stones to the edge of the hill. The water must have been much charged with calcareous matter, as several of the arches are covered with a thick incrustation. From this hill the aqueduct crossed a valley before it reached the town, but, instead of being carried over it on lofty arches, as was the usual practice of the Romans, the water was conveyed down the hill in stone barrel-pipes; some of these also are much incrusted, and some completely choked up. It traversed the plain in pipes of the same kind; and I was enabled to trace them the whole way, quite up to its former level in the town. ... The aqueduct appears to have been overthrown by an earthquake, as the remaining arches lean bodily on one side, without being much broken.

"The stadium, which is in a good state of preservation, is near the southern extremity of the city. The seats, almost perfect, are arranged along two sides of a narrow valley, which appears to have been taken advantage of for this purpose, and to have been closed up at both ends. Towards the west are considerable remains of a subterranean passage, by which chariots and horses were admitted into the arena, with a long inscription over the entrance. ... The whole area of the ancient city is covered with ruined buildings, and I could distinguish the sites of several temples, with the bases of the columns still in situ. ... The ruins bear the stamp of Roman extravagance and luxury, rather than of the stern and massive solidity of the Greeks. Strabo attributes the celebrity of the place to the fertility of the soil and the wealth of some of its inhabitants: amongst whom Hieron, having adorned the city with many beautiful buildings, bequeathed to it more than 2000 talents at his death." (Camp. Fellows, Journal written in Asia Minor, p. 280, fol.; Leake, Asia Minor, p. 251, fol.)

LAODICEA AD LIBANUM (Λαοδίκεια ἡ πρὸς Δέσποινα), mentioned by Strabo (xvi. p. 755) as the commencement of the Marsyas Campus, which extended along the west side of the Orontes, near its source [Marsyas Campus],

It is called Cabinda Laodicea by Ptolemy (Καβινδα Λαοδίκεια, v. 15), and gives its name to a district (Λαοδικια), in which he places two other towns, Paradisium (Παραδίσιον) and Jabrada (Ἰάβραδα). Pliny (v. 23), among other people of Syria, reckons it as orientem Laodicas, quia a Libanum cognominatur." [G.W.]

LAODICEA AD MARE, a city of Syria, south of Hieraclea [Vol. I. p. 1050], described by Strabo (xiv. p. 751, 752) as admirably built, with an excellent harbour, surrounded by a wall of great massiveness and particularly fruitful in vines, the wine of which furnished its chief supply to Alexandria. The vineyards were planted on the sides of gently-sloping hills, which were cultivated almost to their summits, and extended far to the east, nearly to Apameia. Strabo mentions that Delphiola, when he fled to this city before Cassius, distessed it greatly, and that, being besieged there until his death, he destroyed many parts of the city, with him, A. D. 43. [Dict. of Biog. Vol. I. p. 1050.] It was built by Seleucus Nicator, and named after his mother. It was furnished with an aqueduct by Herod the Great (Joseph. B. J. i. 21. § 11), a large fragment of which is still to be seen. (Shaw, Travels, p. 262.) The modern city is named ῾Λαοδίκη, and still exhibits faint traces of its former importance, notwithstanding the frequent earthquakes with which it has been visited. Ikey and Mangels noticed that "the Marina is built upon foundations of ancient columns," and "there are in the town, an old gateway and other antiquities," as also sarcophagi and sepulchral caves in the neighbourhood. (Travels, p. 223.) This gateway has been more fully described by Shaw (I. c.) and Pococke, as "a remarkable triumphal arch, at the Sc. corner of the town, almost entire; it is built with four entrances, like the Forum Jamt at Rome. It is conjectured that this arch was built in honour of Lucius Verus, or of Septimius Severus." (Description of the East, vol. ii. p. 197.) Shaw noticed several fragments of Greek and Latin inscriptions, dispersed all over the ruins, but entirely defaced. Pococke states that it was a very inaccessible place till within fifty years of his visit, when it opened a tobacco trade with Damietta, and it has now an enormous traffic in that article, for which it is far more celebrated than ever it was for its wine. The port is half an hour distant from the town, very small, but better sheltered than any on the coast. Shaw noticed, a lighthouse to the west of the town, "the ruins of a beautiful colossus, in figure like an amphitheatre, and capacious enough to receive the whole British navy. The mouth of it opens to the westward, and is about 40 feet wide." [G.W.]
LAPATHUS.

(Stony, xiii. 447), owed its name to the legendary Lapathus, a follower of Dionysus. Strabo (l.c.) says that he received a Spartan colony, headed by Fraxander. He adds, that it was situated opposite to the town of Naucissa, in Galicia, and possessed a harbour and docks. It was situated in the N. of the island, on a river of the same name, with a district called Lapethia (Aurelia, Ptol. v. 14. § 5). In the war between Ptolemy and Antigonus, Lapathus, with its king Praepus, sided with the latter. (Diod. xix. 59.) The name of this place was synonymous with stupidity. (Suid. a. v. Aurelia.) Pococke (Trav. in the East, vol. ii. pt. 1. p. 223) saw at Lapithos several walls that were cut out of the rock, and one entire room, over the sea; there were also remains of some towers and walls. (Mariti, Viaggi, vol. i. p. 125; Engel, Kypros, vol. i. pp. 57, 78, 174, 224, 364, 507.)

LAPATHUS, a fortress in the north of Thessaly, near Tempe, which Leake identifies with the ancient castle near Rapsania. (Liv. xiv. 2, 6; Leake, Northern Greece, vol. iii. pp. 397, 418.)

LAPHYSTHUM. [Borlotti, p. 414, b.]

LAPIDEI CAMPIT or LAPIDEUS CAMPUS (πέδιον Λαπίθεως, λαπίθεων πέδιον), in Gallia Narbonensis. Strabo (p. 182) says: "Between Massalia and the mouth of the Rhone there is a plain, about 1000 stadia in length, and as much in diameter, being of a circular form; and it is called the Stony, from its character; for it is full of stones, of the size of a man's fist, which have grass growing among them, which furnishes abundant food for animals; and in the middle there is standing water, and salt springs, and salt. Now all the country that lies above is windy, but on this plain especially the Melamborian (La Bère) comes down in squalls,—a violent and chilling wind: accordingly, they say that some of the stones are moved and rolled about, and that men are thrown down from vehicles, and stripped both of arms and clothing by the blast." This is the plain called La Crau, near the east side of the east branch of the delta of the Rhone, and near the Etan de Berre. It is described by Arthur Young (Travels, 4th, vol. 1. p. 379, 2nd ed.), who visited and saw part of the plain. He supposed that there might be about 136,780 English acres in this "Lapideus Campus," being so uniform a mass of round stones, some to the size of a man's head, but of all sizes less, that the newly thrown up shingle of a seaside is hardly less free from soil. Beneath these surface-stones is not so much a sand as a kind of cemented rubble, a small mixture of leam with fragments of stone. Vegetation is rare and miserable."

The only use that the uncultivated part is turned to, he says, is to feed, in winter, an immense number of sheep, which in summer feed in the Alps towards Barcelonette and Fastiment. When he saw the place, in August, it was very bare. The number of sheep said to be fed there is evidently an exaggeration. Some large tracts of the Crau had been broken up when he was there, and planted with vines, olives, and mulberries, and converted into corn and meadow. Corn had not succeeded; but the meadows, covered richly with "clover, chives, rib-grass, and avens," were beneficial. (La Crau has succeeded in its soil in its natural state. The name Crau is probably a Celtic word. In the Statistique du Départ. des Bouches du Rhone (tom. i. p. 190, quoted in Ucort's Gallien. 425) it is supposed that Craun, as it is there written, is a Ligurian word; which may be true, or it may not. What is added is more valuable information: "There is in Provence a number of places which have this name; and one may even say that there is not a group which has not in its territory a Craun." Aristotle (Strabo, p. 182) supposed that earthquakes, of the kind named Brastae threw up these stones to the earth's surface, and that they rolled down together to the hollow places in these parts. Posidonius, who, having traveled in Galia, had probably seen the Craun, supposed that the place was once a lake. Here the text in Strabo is obscure, and perhaps corrupt; but he seems to mean that the action of water rounded the stones, for he adds, after certain words not easy to explain, that (owing to this motion of the water?) "it was divided into many stones, like the pebbles in rivers and the shingle on the sea-shore. Strabo (whose text is here again somewhat corrupted) considers both explanations so far true, that stones of this kind could not have been so made of themselves, but must have come from great rocks being repeatedly broken. Another hypothesis, not worth mentioning, is recorded in the notes of Eustathius (ad Dionys. Perig. v. 76).

It is a proof of the early communication between the Phocaean colony of Massalia and other parts of Greece, that Aeschylos, whose geography is neither extensive nor exact, was acquainted with the existence of this stony plain; for in the Prometheus Unbound (quoted by Strabo) he makes Prometheus tell Hercules that when he comes into the country of the Ligyes, Zeus will send him a shower of round stones, to defeat the Ligurian army with. This stony plain was a good ground for mythological figments. (The following passages of ancient authors refer to this plain: Mel. ii. 5; Plin. iii. 4, xxi. 10; Gellius, ii. 22, and Seneca, Nat. Quaest. v. 12, who speak of the violent wind in this part of Gallia; and Dionys. Halicarn. i. 41, who quotes part of the passage from the Prometheus Unbound.)

This plain of stones probably owes its origin to the floods of the Rhone and the Durance, at some remote epoch when the lower part of the delta of the Rhone was covered by the sea.

LAPITIÆAE. [Lacoata, p. 113, a.]

LAPITHAS. [Elis, p. 817, b.]

LAPPA, LAMPS (Lautra, Ptol. iii. 17. § 10; Lauta, Lautwa, Hierocle; Lauta, Steph. B. ; Eth. Lauta, Lauta, Lauta, an inland town of Crete, with a district extending from sea to sea (Sévylx, p. 18), and possessing the port Phoenix. (Strab. x. p. 475.) Although the two forms of this city's name occur in ancient authors, yet on coins and in inscriptions the word Lappa is alone found. Stephanus of Byzantium shows plainly that the two names denote the same place, when he says that Xenophon, in his Critica, wrote the word Lappa, and not Lampa. The same author (a. v. Auta) says that it was founded by Acamennon, and was called after one Lampos, a Theraean; the interpretation of which seems to be that it was a colony of Tarrha.

When Lytus had been destroyed by the Cossians, its citizens found refuge with the people of Lappa (Olbr. 332). After the expulsion of Cydonia, Creousias, Lydus, and Eleutherius, to the arms of Messes, the Romans advanced against Lappa, which was taken by storm, and appears to have been almost entirely destroyed. (Dom Cass. xxxvi. 1.) Augustus, in consideration of the aid rendered to him by the Lappacans in his struggle with M. Antonius,
LAPURDUM, bestowd on them their freedom, and also restored their city. (Dion Cass. l. 12.) When Christianity was established, Lappa became the seat of its bishop, and this name of its bishop is recorded as present at the Synod of Ephesus, A.D. 431, and the Council of Chalcedon, A.D. 451, as well as on many other subsequent occasions. (Cornelius, Crota Sacra, vol. i. pp. 251, 252.)

Lappa was 32 M.P. from Eleutherna and 9 M.P. from Cissana, the port of Aptera (Pent. Tab.); distances which agree very well with Pollis, the modern representative of this famous city, where Mr. Pashley (Thornd. vol. i. p. 83) found considerable remains of a massive brick edifice, with buttresses 15 feet wide and of 9 feet projection; a circular building, 60 feet diameter, with niches round it 11 feet wide; a cistern, 76 ft. by 20 ft.; a Roman brick building, and several tombs cut in the rock. (Comp. Mus. Class. Antiq. vol. ii. p. 293.) One of the inscriptions relating to this city mentions a certain Marcus Aurelius Cleippus, in whose honour the Lapppenses erected a stamine. (Gruter, p. 1081.) Chishull, Antiq. Ant. p. 122; Mahillon, Mus. Ital. p. 33; Böckh, Corp. Inscrip. Gr. vol. ii. p. 428."

The head of its benefactor Augustus is exhibited on the coins of Lappa; one has the epigraph, ΘΕΩ KAIAPI ΣΕΒΑΣΤΟ; others of Domitian and Commodus are found. (Harduin, Num. Antiq. pp. 93, 94; Monnet, vol. ii. p. 286; Supplication. vol. i. p. 926; Bocche, vol. ii. pl. ii. p. 1493.) On the autonomous coins of Lappa, from which Spanheim supposed the city to have possessed the right of asylum, like the Grecian cities enumerated in Tacitus, see Eckel, vol. ii. p. 315. The maritime symbols on the coins of Lappa are accounted for by the extension of its territory to both shores, and the possession of the port of Phoenix. (E. B. J.)

LAPURDUM, in Gallia. This place is only mentioned in the Notitia of the Empire, which fixes it in Novempopulana; but there is neither any historical notice nor any itinerary measurement to determine its position. D'Anville, who assumes it to be represented by Bayonne, on the river Adour, says that the name of Bayonne succeeded to that of Lapurdum, and the country contained between the Adour and the Bidassoa has retained the name of Labourd. It is said that the bishopric of Bayonne is not mentioned before the tenth century, and a bishop of that town is still called bishop of Bayonne, and means "port." It seems probable that Lapurdum may have been on the site of Bayonne; but it is not certain. [G. L.]

LAR FLUVIUS. [Canisius Flumen.]

LARANA (lā Arāna; Etli. Arasvēr, I. Arasvēris; Larvada or Karavan), one of the most important towns of Lyciaonia, 400 stadia to the south-east of Ioniana. Strabo (xii. p. 569) states that the town belonged to Antipater of Decae, which shows that for a time it was governed by native princes. Respecting its history in antiquity scarcely anything is known beyond the fact that it was taken by storm, and destroyed by Perdiccas (Diod. xviii. 22); that it was afterwards rebuilt, and on account of the fertility of its neighbourhood became one of the chief seats of the Ionian pirates. (Anm. Marc. xiv. 2; comp. Steph. B. s. v.; Ptol. v. 6. § 17; Hdt. vi. 375; Euseb. Hist. Eccl. vi. 19.) Sinanis (s. v.) says that Larana was the birthplace of Nestor, an epic poet, and father of Pisander, a poet of still greater celebrity; but when he calls the former Arasvēris en Asias, he probably mistook Lycia for Lycosia. Leake (As. Min. p. 100) states that he found no Greek remains at Larana nor are there any coins belonging to the place. The ancient name Karavan, is still in common use among the Christians, and is even retained in the firmans of the Porte; but its more general name, Karavan, is derived from a Turkish chief of the same name; for it was at one time the capital of a Turkish kingdom, which lasted from the time of the partition of the dominion of the Seljukian muelladis of Iskander, until 1455, when it was conquered by the emperor Bayazid II. At present the town is but a poor place, with some manufactures of coarse cotton and woolen stuffs. Respecting a town in Cappadocia, called some Larana, see the article LEANDROS. [J. S.]

LARES (Soll. Jug. 90, where Laris is the acc. pl.: Adv. Gent., Procli. iv. § 28: the aid, form LARIBUS is given, not only, as is so usual, in the Itin. Ant. p. 26, and the Tab. Pent., but also by Augustine, deo. Donat. v. 20; and that this ablative was used for the nominative, as is common in the Romance languages, is shown by the Greek form Aegates, Procop. B. F. ii. 23, whence at once the modern name, Laribus or Loribus). An important city of Numidia, mentioned in the Jugurthine War as the place chosen by Marius for his stores and military chest. (Soll. Jug. l. c.) Under the Romans it became a colony, and belonged to the province of Africa and the district of Byzacena. Ptolemy places it much too far west. It lay to the E. of the Barcadus, on the road from Cartagin to Tharsate. 63 M. P. from the latter. In the later period of the Empire it had decayed. (PELLISSIER, Exploration Scientifique de l'Algérie, vol. vi. p. 375.) [P. S.]

LARGA, in Gallia, is placed by the Anton. Itin. between the two known positions of Epamandodesmus (Manlerec) and Men Brusiacus (Vieux Brusiac). The distance from Epamandodesmus to Larga is 24 M. P. in the Itin., and in the Table 16 Gallic leagues, which is the same thing. Larga is Largieten, or near the Largues, in the French department of Haut Rhin and in the neighbourhood of Altkirch. [EPAMANDODERUM.] [G. L.]

LARICA (Aegates, Ptol. vii. 1. § 4, 62), a rich commercial district on the extreme of India, described by Ptolemy as being between Syrastrene and Aravaca, and having for its chief town Barygaza. It is comprehended in the empire, and is included in the whole country. It must, therefore, have comprehended considerable part of Gavacotta, and some of the main land of India, between the gulfs of Barygaza and the Namada or Narbard. Ptolemy considered Larice to have been part of Indo-Sytthia (vii. 1. § 62), the Scythian tribes having in his day reached the sea coast in that part of India. [G. L.]

LARINU (lā Arinū; Ptol.; Arīva, Steph. B.; Etli. Arāwa, Steph. B.; but Arāvē, Ptol.; Larinau, και Lario Vecchio), a considerable city in the northern part of Apulia, situated about 14 miles from the sea, a little to the S. of the river Tifernus. There is much discrepancy among ancient authors, as to whether Larinum with its territory, extending from the river Tiffino to the Tifernus, belonged properly to Apulia or to the land of the Frentani. Ptolemy distinctly assigns it to the latter people; and Phini also, in one passage, speaks of the "Larinates cognominis Frentani;" but at the same time he distinctly places Larinum in Apulia, and not in the "regio Frentana," which, according to him, begins only from the Tifernus. Mela takes the same view, while Strabo, strangely enough, omits all
COIN OF LARINUM.

LARISSA. (Πάρνασσα, but on coins and inscr Ἀδανή or Λαρίσα: Ἐθν. Αρκοναύς, Λαρίσαν), a name common to many Pelasgic towns, and probably a Pelasgic word signifying city. (Comp. Strab. xiii. p. 620; Dionys. i. 21; Niebuhr, Hist. of Rome, vol. i. note 60.) Hence in mythology Larissa is represented as the daughter of Pelagus (Plut. ii. 24.

3, 8, 13, 15, &c.)

We learn from the Liber Colonarum that it received a colony under Cæsar (Livy Julia, Lib. Colon. p. 260); but it appears from inscriptions that it continued to retain its municipal rank under the Roman Empire. (Orell. Inscri. 142; Mommsen, Inscri. Regn. Neurop. pp. 272, 273.) The existing remains sufficiently prove that it must have been a large and populous town; but no mention of it is found in history after the close of the Roman Republic. Its name is found in the Itineraries in the fourth century (Itin. Ant. p. 314, where it is corruptly written Arecaus; Tab. Peut.); and there is no reason to suppose that it ever ceased to exist, as we find it already noticed as an episcopal see in the seventh century. In a.D. 842 it was ravaged by the Saracens, and it was in consequence of this calamity that the inhabitants appear to have abandoned the ancient site, and founded the modern city of Larino, a little less than a mile to the W. of the ancient one. The ruins of the latter, now called Larino Vecchio, occupy a considerable space on the summit of a hill called Monterone, about three miles S. of the Tifernus (Tiferus); there remain some remains of the ancient walls, as well as of one of the gates; the ruins of an amphitheatre of considerable extent, and of a building, commonly called H Palazzo, which appears to have stood in the centre of the town, adjoining the ancient forum, and may probably have been the Curia or senate-house. (Trin. Memorie di Larino, i. 10.)

The territory of Larinum seems to have originally extended from the river Tiferes to the Frento (Fortræ), and to have included the whole tract between those rivers to the sea. The town of Citernea, which was situated within these limits, is expressly called by Pliny a dependency of Larinum ("Larinum Citernejura," Plin. iii. 11. s. 16) and Teanum, which is placed by him to the N. of the Frento, was certainly situated on its right bank. Hence it is probable that the municipal territory of Larinum under the Roman government still comprised the whole tract between the two rivers. The Tabula places Larinum eighteen miles from Teanum in Apulia, and this distance is confirmed by an express statement of Cicero. (Tab. Peut.; Cic. pro Client. 9.)

There exist numerous coins of Larinum, with the inscription LARINOM in Roman letters. From this last circumstance they cannot be referred to a very early period, and are certainly not older than the Roman conquest. (Eckhel, vol. i. p. 107; Mommsen, Röm. Munzenkern, p. 355.) [E. H. B.]

mention of Larinum. (Ptol. iii. 1 § 65; Plin. iii. 11. s. 16; Mel. ii. 4. § 6.) Cæsar, on the other hand, distinguishes the territory of Larinum both from that of the Frenti and from Apulia ("per Larinum, Frentiensem, Larinatium, in Apuliem pervenit," B. C. i. 23). Livy uses almost exactly the same expressions (xxvii. 43); and this appears to be the real solution, or rather the origin of the difficulty, that the Larinates long formed an independent community, possessing a territory of considerable extent, which was afterwards regarded by the geographers as connected with that of their northern or southern neighbours, according to their own judgment. It may include the Minucius in the Second Region of Italy, of which he made the Tiferus the boundary, and thus came to be naturally considered as an appanage of Apulia: but the boundary would seem to have been subsequently changed, for the Liber Colonarum includes Larinum among the "Civitates Regiainis Samnii," to which the Frenti also were attached. (Lib. Colon. p. 260.)

Of the early history of Larinum we have scarcely any information. Its name is not even once mentioned during the long continued wars of the Romans and Samnites, in which the neighbouring Luceria figures so conspicuously. Hence we may probably infer that it was at this period on friendly terms with Rome, and was one of those Italian states that passed gradually and almost imperceptibly from the condition of allies into that of dependents, and ultimately subjects of Rome. During the Second Punic War, on the other hand, the territory of Larinum became repeatedly the scene of operations of the Roman and Carthaginian armies. Thus in B.C. 217 it was at Geranium, in the immediate neighbourhood of Larinum, that Hannibal took up his winter-quarters, while Fabius established his camp at Caleca to watch him; and it was here that the engagement took place in which the rashness of Minucius had so nearly involved the Roman army in defeat. (Pol. iii. 101; Liv. xxii. 18. 24, &c.) Again, in B.C. 207, it was on the borders of the same territory that Hannibal's army was attacked on its march by the praetor Hostilius, and suffered severe loss (Liv. xxvii. 40) ; and shortly after it is again mentioned as being traversed by the consul Claudius on his memorable march to the Metaurus. (Ibid. 43; Sil. Ital. xv. 565.) In the Social War it appears that the Larinates must have joined with the Frenti in taking up arms against Rome, as their territory was ravaged in B.C. 89 by the praetor C. Cosconius, after his victory over the Catilini near Causianum. (Appian, B. C. i. 52.) During the civil wars of Cæsar and Pompey, the territory of Larinum was traversed by the former general on his advance to Brundusium (Caes. B. C. i. 23). Pompey seems to have at one time made it his head-quarters in Apulia, but abandoned it on learning the disaster of Damitius at Corfinium. (Cic. ad Att. vii. 12. 13. b.)

From the repeated mention of these military operations of the territory of Larinum, while none occurs of the city itself, it would appear that the latter could not have been situated on the high road, which probably passed through the plain below it. But it is evident from the curation of Cicero in defence of A. Cluentius, who was a native of Larinum, that it was in his day a flourishing and considerable municipal town, with its local magistrates, senate, public archives, forum, and all the other appurtenances of municipal government. (Cic. pro Client. 5, 8, 13, 15, &c.)

LARINUM. (Ῥήματος τοις Αρκοναυάις, Λαρίσαν), a name common to many Pelasgic towns, and probably a Pelasgic word signifying city. (Comp. Strab. xiii. p. 620; Dionys. i. 21; Niebuhr, Hist. of Rome, vol. i. note 60.) Hence in mythology Larissa is repre-
LARISSA.

§ 1. or of Paeus, a Pelasgian prince. (Strab. xiv. p. 621.)

1. An important town of Thessaly, the capital of the district Pelasgiotis, was situated in a fertile plain upon a gently rising ground, on the right or south bank of the Peneias. It had a strongly fortified citadel. (Diod. xvi. 61.) Larissa is not mentioned by Homer. Some commentators, however, suppose it to be the same as the Pelasgic Argos of Homer (II. ii. 681), but the latter was the name of a district rather than of a town. Others, with more probability, identify it with the Arcadia of the poet. (II. ii. 738.) [See Vol. I. p. 209.] Its foundation was ascribed to Arcasius. (Steph. B. s. v.) The plain of Larissa was formerly inhabited by the Perrhaebi, who were partly expelled by the Larisaeans, and partly reduced to subjection. They continued subject to Larissa, till Philip made himself master of Thessaly. (Strab. ix. p. 440.)

The constitution of Larissa was democratical (Aristot. Pol. v. 6), and this was probably one reason why the Larisaeans were allies of the Athenians during the Peloponnesian War. (Thuc. ii. 22.) During the Roman wars in Greece, Larissa is frequently mentioned as a place of importance. It was here that Philip, the son of Demetrius, kept all his royal papers during his campaigns against Flamininus in Greece; but after the battle of Cynoscopae in n. c. 197, he was obliged to abandon Larissa to the Romans, having previously destroyed these documents. (Polyb. xviii. 16.) It was still in the hands of the Romans when Antiochus crossed over into Greece, n. c. 191, and this king made an ineffectual attempt upon the town. (Liv. xxxvi. 10.) In the time of Strabo Larissa continued to be a flourishing town (ix. p. 450).

It is mentioned by Hierocles in the sixth century as the first town in Thessaly (p. 649, ed. Wessel.). It is still a considerable place, the residence of an archbishop and a bishop, and containing 30,000 inhabitants. It continues to bear its ancient name, though the Turks call it Feneiulchir, which is its official appellation. Its circumference is less than three miles. Like other towns in Greece, which have been continually inhabited, it presents few remains of Hellenic times. They are chiefly found in the Turkish cemeteries, consisting of plain quadrangular stones, fragments of columns, mostly fluted, and a great number of ancient cippi and sepulchral slabs, which now serve for Turkish tombstones. (Leake, Northern Greece, vol. ii. p. 439, seq.)

COIN OF LARISSA.

2. LARISSA CREMASTE (Ἄρισσα Κρεμαστή), a town of Thessaly of less importance than the preceding one, was situated in the district of Phthiotis, at the distance of 20 stadia from the Malian gulf; upon a height advancing in front of Mount Othrys. (Strab. ix. p. 455.) It occupied the side of the hill, and was hence surmounted CremaSTE, as hanging on the side of Mt. Othrys, to distinguish it from the more celebrated Larissa, situated in a plain. Strabo also describes it as well watered and producing vines (ix. p. 440). The same writer adds that it was sur- named Pelagia as well as CremaSTE (L. c.). From its being situated in the dominions of Achilles, some writers suppose that the Roman poets give this hero the surname of Larissaeans, but this epithet is perhaps used generally for Thessalians. Larissa CremaSTE was occupied by Demetrius Poliorcetes in n. c. 309, when he was at war with Cassander. (Diod. xx. 110.) It was taken by Apaturius in the first war between the Romans and Philip, n. c. 200 (Liv. xxxi. 46), and again fell into the hands of the Romans in the war with Ptolemy, n. c. 171. (Liv. xlix. 56, 57.) The ruins of the ancient city are situated upon a steep hill, in the valley of Gardikili, at a direct distance of five or six miles from Khambo. The walls are very conspicuous on the western side of the hill, where several courses of masonry remain. Gell says that there are the fragments of a Doric temple upon the acropolis, but of these Leake makes no mention. (Gell, Itinerary of Greece, p. 252; Dodwell, Travels, vol. ii. p. 81; Leake, Northern Greece, vol. iv. p. 347.)

3. The citadel of Argos. [Vol. I. p. 262.]

LARISSA (Λάρισα). 1. A town in the territory of Epolyas, on the north bank of the Cinyrus, which flows through a most fertile district, producing an excellent kind of wine. It was situated at a distance of 180 stadia from Epolyas, and 30 from Tralles. (Strab. ix. p. 440, xiii. p. 620.) In Strabo's time it had sunk to the rank of a village, but it was said once to have been a πόλις, with a temple of Apollo. Cramer (As. Min. i. p. 558) conjectures that its site may correspond to the modern Tirik.

2. A place on the coast of Tres, about 70 stadia south of Alexandria Tres, and north of Hamaxitis. It was supposed that this Larissa was the one mentioned by Homer (II. ii. 841), but Strabo (xiii. p. 620) controverts this opinion, because it is not far enough from Trey. (Comp. Steph. B. s. v.) The town is mentioned as still existing by Thucydides (viii. 101) and Xenophon (Hellen. iii. 1. § 13; comp. Scylax, p. 36; Strab. ix. p. 440, xiii. p. 604). At the time of Strabo (p. 43) mention is made of hot springs near Larissa in Tres, which are still known to exist a little above the site of Alexandria Tres. (Voyage Fittorques, vol. ii. p. 438.)

3. Larissa, surmised Plirocon, a Pelasgian town in Aeolis, but subsequently taken possession of by the Aeolians, who constituted it one of the towns of their confederacy. It was situated near the coast, about 70 stadia to the south-east of Cyme (Strab. xii. p. 621; Herod. i. 149). Strabo, apparently for good reasons, considers this to be the Larissa mentioned in the Iliad (ii. 840). Xenophon (Hellen. iii. 1. § 7; comp. Cyrop. vii. 1. § 15) distinguishes this town from others of the same name by the epithet of "the Egyptian," because the elder Cyrus had established there a colony of Egyptian soldiers. From the same historian we must infer that Larissa was a place of considerable strength, as it was besieged in vain by Thymbraon; but in Strabo's time the place was deserted. (Comp. Plin. v. 32; Vell. Pat. i. 4; Vit. Hom. c. 11; Steph. B. s. v.; Pol. v. 2. § 5.)

LARISSA (Λάρισα), Xen. Anab. iii. 4. § 7, a town of Assyria, at no great distance from the left bank of the Tigris, observed by Xenophon on the
retreat of the Ten Thousand Greeks. It appears to have been situated a little to the north of the junction of the Lyces (Zelb) and the Tigris. Xenophon describes it as a deserted city, formerly built by the Medes, with a wall 25 feet broad, and 100 high, and extending in circumference two parasangs. The wall itself was constructed of bricks, but had a foundation of stone, 20 feet in height (probably a casing in stone on the lower portion of the brick). He adds, that when the Persians conquered the Medes, they were not at first able to take this city, but at last captured it, during a dense fog. Adjoining the town was a pyramid of stone, one plethron broad, and two plethra in height. It has been conjectured that this was the site of the city of Resen, mentioned in Genesis (x. 12); and there can be little doubt, that these ruins represent those of Noearid, now so well known by the excavations which Mr. Layard has conducted. 

LARISSA (Λαρίσσα), a city of Thrace, placed by Ptolemy in the district of Cassiots, in which Antioch was situated (v. 15. § 16), but probably identical with the place of the same name which, according to Strabo, was reckoned to Aphanis (xvi. p. 572), and which is placed in the Itinerary of Antoninus M. P. from Aphanis, on the road to Eumenis. D'Anville identifies it with the modern Koutal Sigeor, on the left bank of the Orontes, between Harah and Koutal el-Medjik or Aphanis. [G. W.]

LARISSUS or LARIUS, a river of Achæia. [Vol. i. p. 14. a.]

LARIUS LACUS (λιαριος λίμνη: Lago di Como), one of the largest of the great lakes of Northern Italy, situated at the foot of the Alps, and formed by the river Addua. (Strab. iv. p. 192; Plin. iii. 19. s. 23.) It is of a peculiar form, long and narrow, but divided in its southern portion into two great arms or branches, forming a kind of fork. The SW. of these, at the extremity of which is situated the city of Como, has no natural outlet; the Addua, which carries off the superfluous waters of the lake, flowing from its SE. extremity, where stands the modern town of Lecco. Virgil, where he is speaking of the great lakes of Northern Italy, gives this lake the epithet of a maximum (Georg. ii. 150); and Servius, in his note on the passage, tells us that, according to Cato, it was 60 miles long. This estimate, though greatly overrated, seems to have acquired a sort of traditioary authority: it is repeated by Cassiodorus (Var. Ep. xi. 14), and even in the Itinerary of Antoninus (p. 278), and is at the present day still a prevalent notion among the boatmen on the lake. The real distance from Como to the head of the lake does not exceed 27 Italian, or 34 Roman miles, to which five or six more may be added for the distance by water to Riva, the Lago di Riva being often regarded as only a portion of the larger lake. Strabo, therefore, is not far from the truth in estimating the Larius as 300 stadia (37 Roman miles) in length, and 30 in breadth. (Strab. iv. p. 209.) But it is only in a few places that it attains this width; and, owing to its inferior breadth, it is much more slender than the Benacus (Lago di Garda) or Verbano (Lago Maggiore). Its waters are of great depth, and surrounded on all sides by high mountains, rising in many places very abruptly from the shore: notwithstanding which their lower slopes were clothed in ancient times, as they still are at the present day, with rich groves of olives, and afforded space for numerous villas. Among these the most celebrated are those of the younger Pliny, who was himself a native of Comum, and whose paternal estate was situated on the banks of the lake, of which last he always speaks with affection as "Larius Niger." (Ep. ii. 8, vi. 24, vii. 11.) But, besides this, he had two villas of a more ornamental character, of which he gives some account in his letters (Ep. iv. 7): the one situated on a lofty promontory projecting out into the waters of the lake, over which it commanded a very extensive prospect, the other close to the water's edge. The description of the former would suit well with the site of the modern Villa Serbelloni near Bellagio; but there are not sufficient grounds upon which to identify it. The name of Villa Pliniana is given at the present day to a villa about a mile beyond the village of Torno (on the right side of the lake going from Como), where there is a remarkable intermittating spring, which is also described by Pliny (Ep. iv. 30); but there is no reason to suppose that this was the site of either of his villas. Claudian briefly characterizes the scenery of the Larius Lacus in a few lines (B. Get. 319—322); and Cassiodorus gives an elaborate, but very accurate, description of its beauties. The immediate banks of the lake were adorned with villas or palaces (prætoria), above which spread, as it were, the cypress-trees, the olive groves, and vineyards, which, over these again were vineyards, climbing up the sides of the mountains, the bare and rocky summits of which rose above the thick chestnut-woods that encircled them. Streams of water fell into the lake on all sides, in cascades of snowy whiteness. (Casiod. Var. xii. 14.) It would be difficult to describe more correctly the present aspect of the Lake of Como, the beautiful scenery of which is the theme of admiration of all modern travellers. Cassiodorus repeats the tale told by the elder Pliny, that the course of the Addua could be traced throughout the length of the lake, with which it did not mix its waters. (Plin. ii. 10. s. 106; Cassiod. L. c.) The same tale is told of the Lacus Lemanaeus, or Lake of Geneva, and of many other lakes formed in a similar manner by the stagnation of a large river, which enters them at one end and flows out at the other. It is remarkable that we have no trace of an ancient town as existing on the site of the modern Lecco, where the Addua issues from the lake. We learn, from the Itinerary of Antoninus (p. 278), that the usual course in proceeding from Curia over the Rhaetian Alps to Mediolanum, was to take boat at the head of the lake and proceed by water to Comum. This was the route by which Stilicho is represented by Claudian as proceeding across the Alps (B. Get. l. c.); and Cassiodorus speaks of Comum as a place of great traffic of travellers. (l. c.) In the latter ages of the Roman empire, a fleet was maintained upon the lake, the head-quarters of which were at Comum. (Not. Dign. ii. p. 118.)

The name of Lacus Larius seems to have been early superseded in common usage by that of Lacus Comanus, which is already found in the Itinerary, as well as in Paulinus Diaconus, although the latter author uses also the more familiar appellation (q.v. Ant. I. c. P. Diacon. Hist. v. 58, 39.) (F. H. B.)

LARIX or LARICE, a place on the southern frontier of Noricum, at the foot of the Julian Alps, and on the road from Aquileia to Lauracium. The town seems to have owed its name to the forests of larch trees which abound in that district, and its site
must be looked for between Idris and Kreatinburg, in Ilyricum. (H. Ant. p. 276; comp. Mucian, Doric. p. 247.)

LARNUM (Tordera), a small coast river in the territory of the Laietani, in Hispania Tarraconensis, falling into the sea between Iuro and Blanda. (Plin. iii. 3. s. 4.) It has been inferred that there was a town of the same name on the river, from Pliny's mention of the Larnenses in the conventus of Caesaraugusta: but it is plain that the Laietani belonged to the conventus of Tarraco. (Ukert, vol. ii. pt. I. p. 456, assigns these Larnenses to the Arevacum.)

LARTOLAEAEAEAE (Laietani).

LYRTYNA (Adymuna), the name of two towns in Boeotia, on the river Cephissus, distinguished as Upper and Lower Larymna. (Strab. ix. pp. 405, 406.) Strabo relates that the Cephissus emerged from its subterranean channel at the Upper Larymna, and joined the sea at the Lower Larymna; and that Upper Larymna had belonged to Phocis until it was annexed to the Lower or Boeotian Larymna by the Romans. Upper Larymna belonged originally to the Opiantian Locri, and Lycophron mentions it as one of the towns of Ajax Oileus. (Lycophr. 1146.) Pausanias also states, that it was originally Locrian; and he adds, that it voluntarily joined the Boeotians on the increase of the power of the Thebans. (Paus. ix. 23. § 7.) This, however, probably did not take place in the time of Epanomidas, as Sylva, who lived subsequently, still calls it a Locrian town (p. 23). Ulrichs conjectures that it joined the Boeotian league after Thebes had been rebuilt by Cassander. In n. c. 230, Larymna is described as a Boeotian town (Polyb. xx. 5, where Adymuna should be read instead of Adypirav); and in the time of Sulla it is again spoken of as a Boeotian town.

We may conclude from the preceding statements that the more ancient town was the Locrician Larymna, situated at a spot, called Anchoe by Strabo, where the Cephissus emerged from its subterranean channel. At the distance of a mile and a half Larymna had a port upon the coast, which gradually rose into importance, especially from the time when Larymna joined the Boeotian League, as its port then became the most convenient communication with the eastern sea (Lebadeia, Chaeaonia, Orchomenus, Copae, and other Boeotian towns). The port-town was called, from its position, Lower Larymna, to distinguish it from the Upper city. The former may also have been called more especially the Boeotian Larymna, as it became the sea-port of so many Boeotian towns. Upper Larymna, though it had joined the Boeotian League, continued to be frequently called the Locrian, on account of its ancient connection with Locri. When the Romans united Upper Larymna to Lower Larymna, the inhabitants of the former place were probably transferred to the latter; and Upper Larymna was henceforth abandoned. This accounts for Pausanias mentioning only one Larymna, which must have been the Lower city; for if he had visited Upper Larymna, he could hardly have failed to mention the eminacy of the Cephissus at this spot. Moreover, the ruins at Lower Larymna show that it became a place of much more importance than Upper Larymna. These ruins, which are called Kastri, like those of Delphi, are situated on the shore of the Bay of Larnass, on a level covered with bushes, ten minutes to the left of the mouth of the Cephissus.

LARS, 129

The circuit of the walls is less than a mile. The annexed plan of the remains is taken from Leake.

PLAN OF LARYMNA.

1. A small port, anciently closed in the manner here described.
2. The town wall, traceable all around.
3. Another wall along the sea, likewise traceable.
4. A mole, in the sea.
5. Various ancient foundations in the tower and acropolis.
6. A Sour.
7. Glyfomero, or Salt Source.
8. An oblong foundation of an ancient building.

Leake adds, that the walls, which in one place are extant to nearly half their height, are of a red soft stone, very much corroded by the sea air, and in some places are constructed of rough masses. The sour is high, with comparison to its length and breadth, and stands in its original place upon the rocks: there was an inscription upon it, and some ornaments of sculpture, which are now quite defaced. The Glyfomero is a small deep pool of water, impregnated with salt, and is considered by the peasants as sacred water, because it is cathartic. The sea in the bay south of the ruins is very deep: and hence we ought probably to read in Pausanias (ix. 23. § 7), Αδυμήν άρης ενεργειαν επι τον θάλασσαν, instead of Αδυμήν, since there is no land-lake at this place. The ruins of Upper Larymna lie at Bazaraki, on the right bank of the Cephissus, at the place where it issues from its subterranean channel. (Leake, Northern Greece, vol. ii. p. 287, seq.; Ulrichs, Reisen in Griechenland, p. 229, seq.)

LARSIUM. [Gythium.]

LASS (Aea, Hom.; Ant. Syl. Paus.; Strab. Aes. Steph. B. s. s. Ith. Aea), one of the most ancient towns of Laconia, situated upon the western coast of the Laconian gulf. It is the only town on the coast mentioned by Sylva (p. 17) between Teneaurs and Gythium. Sylva speaks of its port; but, according to Pausanias, the town itself was distant 10 stadia from the sea, and 40 stadia from Gythium. (Paus. ii. 24. § 6.) In the time of Pausanias the town lay in a hollow between the three mountains, Asia, Ilium, and Cacaudium; but the old town stood on the summit of Mt. Asia. The name of Las signified the rock on which it originally stood. It is mentioned by Homer (II. ii,

VOL. II.
LASAEA.

and is said to have been destroyed by the Lasceurs, who hence derived the name of Lasepras.

Strab. viii. p. 364; Steph. B. s. w. At.)—There was another Lasus in Lasepra, called Lasus. (Steph. B. s. w. Aepera.) In the later period it was a place of no importance. Livy speaks of it as "vicus maritimus" (xxxviii. 30), and Pausanias mentions the ruins of the city on Mt. Ase. Before the walls he saw a statue of Hercules, and a trophy erected over the Macedonians who were a part of Philip's army when he invaded Laconia; and among the ruins he noticed a statue of Athena Ase. The modern town was near a fountain called Galrops (Pelaeea), from the milky colour of its water, and near it was a gymnasium, in which stood an ancient statue of Hermes. Besides the ruins of the old town on Mt. Ase, there were also buildings on the two other mountains mentioned above; on Mt. Ilum stood a temple of Demeter, and on the summit a temple of Aesepous, and on Mt. Cucudanum a temple of Apollo Caurus.

Lasus is spoken of by Polybius (v. 19) and Strabo (vii. p. 363) under the name of Asine; and hence it has been supposed that some of the vestiges from Asine in Argolis may have settled at Las, and given their name to the town. But, notwithstanding the statement of Polybius, whom Strabo probably copied, we have given reasons elsewhere for believing that there was no Laconian town called Asine; and that the mistake probably arose from confounding "Asine" with "Ase," on which Las originally stood.

J. A. A. (Asine, No. 3.)

Las stood upon the hill of Passearo, which is now crowned by the ruins of a fortress of the middle ages, among which, however, Leake noticed, at the southern end of the eastern wall, a piece of Hellesan wall, about 50 paces in length, and two-thirds of the height of the modern wall. It is formed of polygonal blocks of stone, some four feet long and three broad. The fountain Galrops is the stream Turboergen, which rises between the hill of Passearo and the village of Kireyela, the latter being one mile and a half west of Passearo. (Leake, Morea, vol. i. p. 254, seq.; Peloponnesiaca, v. p. 150; B. hly. Recherches, iv. p. 87; Curtius, Peloponnesiaca, vol. ii. p. 273, seq.)

LASAEA (Asaeia), a city in Crete, near the rendezvous of the "Fair Havens." (Arke, xxviii. 8.) The city is not mentioned by any ancient writer, but it is probably the same as the Lasein of the Pausanias Tides, 16 M. P. to the E. of Gortyna. (Comp. Hick, Ke'lo, vol. i. pp. 412, 439.) Some MSS. have Lasan: others, Alasa. The Vol酮e runs Thalassa, which Leake contended was the true name. (Comp. Cernybe and. Thavos, Life and Epit. of St. Paul, vol. ii. p. 330.)

LATHON (Laithon or Lathone), the chief town of the most southern district of Arcadia in Elis proper, was situated upon the frontiers of Arcadia near Paphi. Curtius places it with great probability in the upper valley of the Lasion, at the Pakekastro of Kimeni, on the road from the Elplan Pylos and Epilyra to Paphi. Lathon was a frequent object of dispute between the Arcadiens and Elisians, both of whom laid claim to it. In the war which the Spartans carried on against Elis at the close of the Pel- opnian, the Arcadiens, under Pausanias, King of Syria, took Lathon (B. hly. xiv. 17). The invasion of Cynanias is not mentioned by Xenophon in his account of this war, but the latter author relates that, by the treaty of peace concluded between Elis and Sparta in B.C.

400, the Eleians were obliged to give up Lasion, in consequence of their being claimed by the Arcadians. (Xen. HII. iii. 2. § 30.) In B.C. 366 the Eleians were defeated by the Arcadians at Lasion in their own territory; when they took the town by surprise, but were shortly afterwards driven out of it again by the Arcadians. (Xen. HIL. vii. 4. § 13, seq.; Diod. xiv. 77.) In B.C. 219 Lasion was again a fortress of Elis, but the Eleian garrison at Lasion straightway deserted the place. (Polyb. iv. 72. 73.) Polybius mentions (v. 102) a fortified place named Pyrgos, which he places in a district named Passavd. (Leake, Morea, vol. ii. p. 200, seq.; Bobbaya, Recherches, iv. p. 125; Curtius, Peloponnesiaca, vol. i. p. 41.)

LASSORRA, a town of Galatia, mentioned in the Peut. Tab. as 25 miles distant from Eretria, whence we may infer that it is the same place as the Aerasia of Ptolemy (v. 4. § 9). The Antonine Itinerary (p. 203) mentions a town Adesara in about the same site.

LASSUS, a town of Crete, enumerated by Phiny (lv. 12) among his list of inland cities; A coin with the epigraph AAITOS, the Doric form for Aesara, is claimed by Echell (vol. ii. p. 316, comp. Sestini, p. 59) for this place.

LASUS.

LATHON (Laithon, Strab. xvii. p. 836, where the vulgar reading is Adoob; comp. xiv. p. 647, where he calls it Aesara; Poly. iv. 4. § 4; Aesara, Poly. Encre. ap Ath. ii. p. 71; Fluxus Letom, Plin. v. 5; Solin. 27; Lethes Amns, Lucan, xii. 355), a river of the Hesperides or Hesperites, in Cyrene. It rises in the Hercules Arcanas, and fell into the sea a little N. of the city of the Hesperides or Besherius; Strabo mentions it with the harbour of the city (Aega, Eces قد: that there is not the slightest reason for altering the reading, as Gosskurd and others do, into Aegon, will presently appear) and Seyruxi (p. 110, Grono.) mentions the river, which he calls Eceusatis (Ecesatis), as in close proximity with the city and harbour of Hesperides. Pliny expressly states that the river was not far from the city, and places or near it a sacred grove, which was supposed to represent the "Gardens of the Hesperides" (Plin. v. 5; see prev. ante oppidum fluxus Letom, locus Incr. uhi Hesperidiarum horti memorarum.) Athenaeus quotes from a work of Ptolemy Energetes praises of its fine pike and eels, somewhat inconsistent, especially in the mouth of a luxurious king of Egypt, with the mythical sound of the name. That name is, in fact, plain Doric Greek, descriptive of the character of the river, like our English Mole. So well does it deserve the name, that it occurrence of the notice of commentators and geographers, till it was discovered by Beechey, as it still flows "concealed" from such scholars as depend on vague guesses in place of an accurate knowledge.
of the localities. Thus the laborious, but often most inaccurate, compiler Forliger, while taking on himself to correct Strabo's exact account, tells us that "the river and lake (Strabo's harbour) have now entirely vanished;" and yet, a few lines down, he refers to a passage of Beechey's work within a very few pages of the place where the river itself is expressly described! (Forliger, Handbuch der alten Geographie, vol. ii. p. 528, note.)

The researches made in Beechey's expedition give the following results:—East of the headland on which stands the ruins of Hesperides or Berenice (now Bengazi) is a small lake, which communicates with the harbour of the city, and has its water of course salt. The water of the lake varies greatly in quantity, according to the season of the year; and is nearly dried up in summer. There are strong grounds to believe that its waters were more abundant, and its communication with the harbour more perfect, in ancient times than at present. On the margin of the lake is a spot of rising ground, nearly insulated in winter, on which are the remains of ancient buildings. East of this lake again, and only a few yards from its margin, there gushes forth an abundant spring of fresh water, which empties itself into the lake, "running along a channel of incalculable breadth, bordered with reeds and rushes," and "might be mistaken by a common observer for an inlet of the lake into the sandy soil which bounds it." Moreover, this is the only stream which empties itself into the lake; and indeed the only one found on that part of the coast of Cyrenaica. Now, even without searching farther, it is evident how well all this answers to the description of Strabo (xvii. p. 330):—"There is a promontory called Pseudopias, on which Berenice is situated, beside a certain Lake of Tritonis (παρὰ Νίμφη τις Τριτόνια), in which there is generally (μάρτυρα) a little island, and a temple of Aphrodite upon it; but there is or is it) also the Harbour of Hesperides, and the river Lathon falls into it." It is now evident how much the sense of the description would be impaired by reading Νίμφη for Νίμφη in the last clause; and it matters little whether Strabo speaks of the river as falling into the harbour because it fell into the lake which communicated with the harbour, or whether he means that the lake, which he calls that of Tritonis, was actually the harbour (that is, an inner harbour) of the city. But the little stream which falls into the lake is not the only representative of the river Lathon. Further to the east, in one of the subterranean caves which abound in the neighbourhood of Bengazi, Beechey found a large body of fresh water, being itself in the bowels of the earth; and the Bey of Bengazi affirmed that he had tracked its subterraneous course till he doubted the safety of proceeding further, and that he had found it as much as 30 feet deep. That the stream thus lost in the earth is the same which reappears in the spring on the margin of the lake, is extremely probable; but whether it be so in fact, or not, we can hardly doubt that the ancient Greeks would imagine the connection to exist. (Beechey, Proceedings, &c. p. 326, foll.; Barth, Wandervungen, &c. p. 387.)

LATMIA. (Λατμία), an inland town of Arabia Felix, mentioned by Ptolemy (vii. § 31), where there is no difficulty in identifying with the ancient site of the renowned El-Medineh, "the city," as it is called by the Goths attending the disciples of the false prophet. Its ancient name, Latmia, still exists in the native geographies and local traditions, which, with the definite article et prefixed, is as accurately represented by Latmippa as the Greek alphabet would admit. "Medineh is situated on the edge of the great Arabian desert, close to the chain of mountains which traverses that country from north to south, and is a continuation of Libanon. The great plain of Arabia in which it lies is considerably elevated above the level of the sea. It is ten or eleven days distant from Mecca, and has been always considered the principal fortress of the Hejaz, being surrounded with a stone wall. It is one of the best-built towns in the East, ranking in this respect next to Aleppo, though ruined houses and walls in all parts of the town indicate how far it has fallen from its ancient splendour. It is surrounded on three sides with gardens and plantations, which, on the east and south, extend to the distance of six or eight miles. Its population now consists of about 16,000 or 20,000—10,000 or 12,000 in the town, the remainder in the suburbs." (Burckhardt, Arabia, 321—400; Ritter, Erdkunde, vol. i. p. 15, ii. pp. 149, &c.)

LATIUM (ή Λατινία; Eth. and Adj. Latinus), was the name given by the Romans to a district or region of Central Italy, situated on the Tyrrhenian sea, between Etruria and Campania.

I. NAME.

There can be little doubt that Latium meant originally the land of the Latini, and that in this, as in almost all other cases in ancient history, the name of the people preceded, instead of being derived from, that of the country. But the ancient Roman writers, with their mental inflexibility in all matters of etymology, derived the name of the Latini from a king of the name of Latius, whilst they sought for another origin for the name of Latinum. The common etymology (to which they were obviously led by the quantity of the first syllable) was that which derived it from *Latinus,* and the usual explanation was, that it was so called because Saturn had there lain hid from the pursuit of Jupiter. (Vitr. Aen. viii. 322; Ov. Fast. i. 238.) The more learned derivations proposed by Sansius and Varro, from the inhabitants having lived hidden in caves (Sanius, ap. Serv. ad Aen. i. 6), or because Latinum itself was as it were hidden by the Apennines (Varr. ap. Serv. ad Aen. viii. 322), are certainly not more satisfactory. The form of the name of Latinum would at first lead to the supposition that the ethnic Latini was derived from it; but the same remark applies to the case of Samnium and the Samnites, where we know that the people, being a race of foreign settlers, must have given their name to the country, and not the converse. Probably Latini is only a lengthened form of the name, which was originally Latii or Latvi; for the connection which has been generally recognised between Latini and Lavinium, Latinus and Lavinus, seems to point to the existence of an old form, Lativus. (Doddal-on. Varrocontus, p. 6; Niebuhr, V. i. l. 2. Kunde, p. 352.) Varro himself seems to regard the name of Latinum as derived from that of Latini (L.L. v. § 32); and that it was generally regarded as equivalent to "the land of the Latini" is sufficiently proved by the fact that the Greeks always rendered it by Λατινίαν, or Η Αριστινάν. The name of Λατίνος is found only in Greek writers of a late period, who borrowed it directly from the Romans. (Appian, B. C. ii. 26; Herodian, i. 15.) From the same cause it must have proceeded that when the Latins ceased to
have any national existence, the name of Latium is still not unfrequently used, as equivalent to "mesum Latium," to designate the whole body of those who possessed the rights of Latins, and were therefore still called Latini, though no longer in a national sense.

The suggestion of a modern writer (Abeken, *Mittel Italic", p. 42) that Latium is derived from "li anus," broad, and means the broad plain or expanse of the Campagna (like Campania from " Campus"), appears to be untenable, on account of the difference in the quantity of the first syllable, notwithstanding the analogy of *marmie*, which has the first syllable short.

II. Extent and Boundaries.

The name of Latium was applied at different periods in a very different extent and specification. Originally, as already pointed out, it meant the land of the Latins; and as long as that people retained their independent national existence, the name of Latium could only be applied to the territory possessed by them, exclusive of the land of the Etruscans, Sabines, etc., who were at that period independent and often hostile nations. It was not till these separate nationalities had been merged into the common condition of subjects and citizens of Rome that the name of Latium came to be extended to all the territory which they had previously occupied; and was thus applied, first in common parlance, and afterwards in official usage, to the whole region from the borders of Etruria to those of Campania, or from the Tiber to the Liris.

Hence we must carefully distinguish between Latium in the original sense of the name, in which alone it occurs throughout the early Roman history, and Latium in this later or geographical sense; and it will be necessary here to treat of the two quite separately. The period at which the latter usage of the name came into vogue we have no means of determining; we know only that it was fully established before the time of Augustus, and is recognised by all the geographers. (Strab. v. pp. 228, 231; *Plin. iii. 5. s. 9; *Ped. iii. 1. §§ 5. 6.) Pliny designates the original Latium, or Latium proper, so called, as Latium Antiquum, to which he opposes the newly added portions, as Latium Adjunctum. It may, however, he doubted whether these appellations were ever adopted in common use, though convenient as geographical distinctions.

1. LATIUM ANTIQUUM, or Latium in the original and historical sense, was a country of small extent, bounded by the Tiber on the N., by the Apennines on the E., and by the Tyrrhenian sea on the W.; while on the S. its limits were not defined by any natural boundaries, and appear to have fluctuated considerably at different periods. Pliny defines it as extending from the mouth of the Tiber to the Circelian promontory, a statement confirmed by Strabo (Plin. iii. 5. s. 9; Strab. v. p. 231); and we have other authority also for the fact that at an early period all the tract of marshy plain, known as the Pontine Marshes, called "Pomptini Agri," extending from Velitrae and Antium to Circis, was inhabited by Latins, and regarded as a part of Latium. (Cato, *ap. Priscian. v. pp. 62.) Even of the adjoining mountain tract, subsequently occupied by the Volscians, a part at least must have been originally Latin, for Cora, Novii, and Sessa were all of the Latin citizen order, (Dionys. v. 61),—though, at a somewhat later period, not only had these towns, as well as the plain beneath, fallen into the hands of the Volscians, but that people had made themselves masters of Antium and Velitrae, which are in consequence repeatedly called Volscian cities. The manner in which the early Roman history has been distorted by poetical legends, and the confusions and alterations of ancient geography renders it very difficult to trace the course of these changes, and the alterations in the frontiers consequent upon the alternate progress of the Volscian and the Roman arms. But there seems no reason to doubt the fact that such changes repeatedly took place, and that we may thus explain the apparent inconsistency of ancient historians in calling the same places at one time Volscian, at another Latin, cities. We may also clearly discern two different periods, during the first of which the Volscian arms were gradually gaining upon those of the Latins, and extending their dominion over cities of Latin origin; while, in the second, the Volscians were in their turn giving way before the preponderating power of Rome. The Gaulish invasion (B.C. 390) may be taken, approximately at least, as the turning point between the two periods.

This period appears to have been somewhat similar, though to a less degree, on the Northern frontier, where the Latins adjoined the Sabine. Here, also, we find the same places at different times, and by different authors, termed sometimes Latium and sometimes Sabine, cities; and though in some of these cases the discrepancy may have arisen from mere inadvertence or error, it is probable that in some instances both statements are equally correct, but refer to different periods. The circumstance that the Anio was fixed by Augustus as the boundary of the First Region seems to have led to the notion that it was the northern limit of Latium also; and hence all the towns beyond it were regarded as Sabine, though several of them were, according to the general tradition of earlier times, originally Latin cities. Such was the confusion resulting from this cause that Pliny in one passage enumerates Nomentanum, Fidenae, and even Tiber among the Sabine towns, while he elsewhere mentions the two former as Latin cities,—and the Latin origin of Tiber is too well established to admit of a doubt. (Plin. iii. 5. s. 9. 12. 17.)

In the absence of natural boundaries it is only by means of the names of the towns that we can trace the extent of Latium; and here fortunately the lists that have been transmitted to us by Dionysius and Pliny, as well as those of the colonies of Alba, afford us material assistance. The latter, indeed, cannot be regarded as of historical value, but they were unquestionably meant to represent the fact, with which their authors were probably well acquainted, that the places there enumerated were properly Latin cities, and not of Sabine or Volscian origin. Taking these authorities for our guides, we may trace the limits of ancient Latium as follows:—1. From the mouth of the Tiber to the confluence of the Anio, the former river constituted the boundary between Latium and Etruria. The Romans, indeed, from an early period, extended their territory beyond the Tiber, and held the Janiculum and Campus Vaticorum on its right bank, as well as the so-called Septum Pagi, which they wrested from the Veientes; and it is probable that the Etruscans, on the other hand, had at one period extended their power over a part of the territory on the left bank of the Tiber, but that river nevertheless constituted the generally recognised geographical limit between Etruria and Latium. 2. North of the Anio the Latin territory
comprised Fidenae, Crustumerium, and Nomentum, all of which are clearly established as Latin towns, while Eretum, only 3 miles from Nomentum, is equally well established to be a Sabine origin. The line of demarcation is confirmed by Strabo, who speaks of the Sabines as extending from the Tiber and Nomentum to the Velitini. (Strab. v. p. 228.) From Nomentum to Tibur the frontier cannot be traced with accuracy, from our uncertainty as to the position of several of the towns in this part of Latium—Cornicum, Medullia, Cameria, and Ameria; but we may feel assured that it comprised the territory of the town of Cornilam (Met. S. Angelo and Monticelli), and from thence stretched across to the foot of Monte Cenano (Moos Lucretii), around the lower slopes of which are the ruins of sites or more of than one ancient city. Probably the whole of this face of the mountains, fronting the plain of the Campagna, was always regarded as belonging to Latium, though the inner valleys and reverse of the same range were inhabited by the Sabines. Tibur itself was unquestionably Latin though how far its territory extended into the interior of the mountains is difficult to determine. But if Empulum and Sassaia (two of its dependent towns) be correctly placed at Ampsijjione and near Siciliano, it must have comprised a considerable tract of the mountain country on the left bank of the Anio, Vario, on the other hand, and the valley of the Digesta, were unquestionably Sabine. 3. Returning to the Anio at Tibur, the whole of the W. front of the range of the Appennines from thence to Praeneste (Palestrina) was certainly Latin; but the limits which separated the Latins from the Aequians are very difficult to determine. We know that Bols, Pedum, Telerium, and Vitellia, all of which were situated in this neighbourhood, were Latin cities; though, from their proximity to the frontier, several of them fell at one time or other into the hands of the Aequians; in like manner we cannot doubt that the whole group of the Alban Hills, including the range of Mount Algidus, was included in the original Latin, though the Aequians at one time were able to occupy the heights of Algidus at the opening of almost every campaign. Valmontone, whether it represent Tolerium or Vitellia, must have been about the most advanced point of the Latin frontier on this side. 4. This line as already stated was the outwork of the great Latin War, n. c. 340; we find L. Annius of Setia, and L. Numius of Circeii, holding the chief magistracy among the Latins, from whom at the same time Livy expressly distinguishes the Volscians (Livy, viii. 3). These statements, combined with those of Pliny and Strabo already cited, seem to have no doubt that Latium was properly regarded as extending as far as Circeii and the promontory of the same name, and comprising the whole plain of the Pontine Marshes, as well as the towns of Cora, Norba, and Setia, on the E. side of that plain. On the other hand, Tarraecia (or Anxur) and Pirvernun were certainly Volscian cities; and there can be no doubt that during the period of the Volscian power they had wrested a great part of the tract just described from the dominion of the Latins. Antium, which for some reason or other did not form a member of the Latin League in its early period a Volscian city, and became one of the chief strongholds of that people during the fifth century n. c.

The extent of Latium Antiquum, as thus limited, was far from considerable; the coast-line, from the mouth of the Tiber to the Cirecean promontory, does not exceed 52 geographical or 65 Roman miles (Pliny erroneously calls it only 50 Roman miles); while the greatest length, from the Cirecean promontory to the Sabine frontier, near Eretum, is little more than 70 Roman miles; and its breadth, from the mouth of the Tiber to the Sabine frontier, is just about 30 Roman miles, or 240 stadia, as correctly stated by Dionysius on the authority of Cato. (Dionys. ii. 49.)

2. LATIUM NOVUM. The boundaries of Latium in the enlarged or geographical sense of the name are much more easily determined. The term, as thus employed, comprehended, besides the original territory of the Latins, that of the Aequians, the Hernicans, the Volsci, and the Aurunci or Ausonians. Its northern frontiers thus remained unchanged, while on the E. and S. it was extended so as to border on the Marsi, the Samnites, and Campania. Some confusion is nevertheless created by the new line of demarcation established by Augustus, who, while he constituted the first division of Italy out of Latium in this wider sense together with Campania, excluded from it the part of the old Latin territory N. of the Anio, adjoining the Sabines, as well as a part of that of the Aequians or Aequiculi, including Carsoli and the valley of the Turano. The upper valley of the Anio about Subiaco, on the other hand, together with the mountainous district extending from thence to the valley of the Sacco, constituting the chief abode of the Aequi during their wars with Rome, was wholly comprised in the newly extended Latium. To this was added the mountain district of the Hernici, extending nearly to the valley of the Liris, as well as that of the Volsci, who occupied the country for a considerable extent on both sides of the Liris, including the mountain district around Arpini and Atina, where Mark Antony and Cato have left us an impression of the extent they had at one time possessed of the territory of the Samnites. The limits of Latium towards the S., where its frontiers adjoined those of Campania, are clearly marked by Strabo, who tells us that Cassium was the last Latin city on the line of the Via Latina,—Teanum being already in Campania; while on the line of the Via Appia, near the sea-coast, Sinnus was the frontier town of Latium. (Strab. v. pp. 231, 233, 237; Plin. iii. 5. 9.) Pliny, in one passage, appears to speak of the Liris as constituting the boundary of this enlarged Latium (ib. § 56), while shortly after (§ 59) he terms Sinnus “oppidum extremum in adjecto Latio,” whence it has been supposed that the boundary of Latium was at first extended only to the Liris, and subsequently carried a step further so as to include Sinnus and its territory. (Cramer’s Italy, vol. ii. p. 11.) But we have no evidence of any such successive stages. Pliny in all probability uses the term “adjectum Latium” only as a central distinction from “Latium antiquum;” and the expression in the previous passage, “unde nomen Latii processit ad Lirum annexum,” need not be construed too strictly. It is certain, at least, that, in the days of Strabo, as well as those of Pliny, Si-
LATIUM.

III. Physical Geography.

The land of the Latins, or Latium in its original sense, formed the southern part of the great basin through which the Tiber flows to the sea, and which is bounded by the Cimini Hills, and other ranges of volcanic hills connected with them, towards the N., by the Apennines on the E., and by the Alban Hills on the S. The latter, however, do not form a continuous barrier, being in fact an isolated group of volcanic origin, separated by a considerable gap from the Apennines on the one side, while on the other they leave a broad strip of low plain between their lowest slopes and the sea, which is continued on in the level expanse of level and marshy ground, commonly known as the Pontine Marshes, extending in a broad band between the Volscian mountains and the sea, until it is suddenly and abruptly terminated by the isolated mass of the Cirenean promontory.

The great basin-like tract thus bounded is divided into two portions by the Tiber, of which the one on the N. of that river belongs to Southern Etruria, and is not comprised in our present subject. [Etruria.]

The southern part, now known as the Campania, may be regarded as a broad expanse of undulating plain, extending from the sea-coast to the foot of the Apennines, which rise from it abruptly like a gigantic wall to a height of from 3000 to 4000 feet, their highest summits even exceeding the latter elevation. The Monte Generoso, (4285 English feet in height) is one of the loftiest summits of this range, and, from the boldness with which it rises from the subjacent plain, and its advanced position, appears, when viewed from the Campagna, the most elevated of all; but, according to Sir W. Gell, it is exceeded in actual height both by the Monte Penneccio, a little to the NE. of it, and by the Monte di Giudicagolo, the central peak of the group of mountains which rise immediately above Praeneste or Palestrina. The citadel of Praeneste itself occupies a very elevated position, forming a kind of antarct or advanced post of the chain of Apennines, which here trends away suddenly to the eastward, sweeping round by Gnozzano, Olevano, and Rigate, till it resumes its general SE. direction, and is continued on by the lofty ranges of the Her- nican mountains, which bound the valley of the Socco on the E. and continue unbroken to the valley of the Liris.

Opposite to Praeneste, and separated from it by a breadth of nearly 5 miles of intervening plain, rises the isolated group of the Alban mountains, the form of which at once proves its volcanic origin. [Albanus Mons.] It is a nearly circular mass, of about 40 miles in circumference; and may be conceived as forming a great crater, the outer ridge of which has been broken up into numerous more or less detached summits, several of which were crowned in ancient times by towns or fortresses, such as Tusculum, Corbin, &c.; while at a lower level it throws out detached off-shoots, or outlying ridges, affording advantageous sites for towns, and which were accordingly occupied by those of Velitrae, Lanuvium, Alba Longa, &c. The group of the Alban mountains is wholly detached on all sides: on the S. a strip of plain, of such the same breadth as that which separated it from the Apennines of Praeneste, divides it from the subordinate, but very lofty mass of moun-

The volcanic origin of the greater part of Latium has a material influence upon its physical character and condition. The Alban mountains, as already mentioned, are unquestionably a great volcanic mass
which must at a distant period have been the centre of volcanic outbursts on a great scale. Besides the central or principal crater of this group, there are several minor craters, or crater-shaped hollows, at a much lower level around its ridges, which were in all probability at different periods centres of eruption. Some of these have been filled with water, and thus constitute the beautiful basin-shaped lakes of Albano and Nemi, while others have been drained at periods more or less remote. Such is the case with the Vallas Arcinica, which appears to have at one time constituted a lake [ARCIJA], as well as with the now dry basin of Cornafelle, below Tusculum, supposed, with good reason, to be the ancient Lake Regillus, and with the somewhat more considerable Lago di Castelfiorenza, adjoining the ancient Gabii, which has been of late years either wholly or partially drained. Besides these distinct foci of volcanic action, there remain in several parts of the Campagna spots where sulphurous and other vapours are still evolved in considerable quantities, so as to constitute deposits of sulphur available for economic purposes. Such are the Lago di Solfatarae near Tivoli (the Aquae Albulae of the Romans), and the Solfatarae on the road to Ardea, supposed to be the site of the ancient Oracle of Farno. Numerous localities of these sulphureous and mephitic exhalations are found in the ancient writers, and there is reason to suppose that they were in ancient times more numerous than at present. But the evidences of volcanic action are not confined to these local phenomena; the whole plain of the Campagna itself, as well as the portion of Southern Etruria which adjoins it, is a deposit of volcanic origin, consisting of the peculiar substance called by Italian geologists terra—an aggregate of volcanic materials, sand, small stones, and arsenic or cinders, together with pumice, varying in consistency from an almost incoherent sand to a stone sufficiently hard to be well adapted for building purposes. The hardest varieties are those now called peperino, to which belong the Lapis Galbinus and Lapis Albanus of the ancient. But even the common terra was in many cases quarried for building purposes, as at the Lapidicincie Rubane, a few miles from the city near the bank of the Tiber, and many other spots in the immediate neighbourhood of Rome. (Vitr. ii. 7.) Beds of true lava are rare, but by no means wanting: the most considerable are two streams which have flowed from the foot of the Alban Mount; the one in the direction of Ardea, the other on the line of the Appian Way (which runs along the ridge of it for many miles) extending as far as a spot called Capo di Bone, little more than two miles from the gates of Rome. It was extensively quarried by the Romans, who derived from thence their principal supplies of the hard basaltic lava (called by them silice) with which they paved their high roads. Smaller beds of the same material occur near the Lago di Castelfiorenza, and at other spots in the Campagna. (Concerning the geological phenomena of Latium see Dabhong On Volcanoes, pp. 162—173 ; and an Essay by Hoffmann in the Beschreibung der Stadt Rom, vol. i. pp. 45—81.)

The strip of country immediately adjoining the sea-coast of Latium differs materially from the rest of the district. Between the borders of the volcanic deposit just described and the sea there intervenes a broad strip of sandy plain, evidently formed merely by successive accumulations of sand from the sea, and constituting a barren tract, still covered, as it was in ancient times, almost wholly with wood. This broad belt of forest region extends without interruption from the mouth of the Tiber near Ostia to the promontory of Antium. The parts of it nearest the sea are rendered marshy by the stagnation of the streams that flow through it, the outlets of which to the sea are blocked up by the accumulations of sand. The headland of Antium is formed by a mass of limestone rock, forming a remarkable break in the otherwise uniform line of the coast, though itself of small elevation. A bay of about 8 miles across separates this headland from the low point or promontory of Astura: beyond which commences the far more extensive bay that stretches from the latter point to the mountain headland of Circei. The whole of this line of coast from Astura to Circei is bordered by a narrow strip of sand-hills, within which the waters accumulate into stagnant pools or lagoons. Beyond this again is a broad sandy tract, covered with dense forest and brushwood, but almost perfectly level, and in many places marshy; while from thence to the foot of the Volscian mountains extends a tract of a still more marshy character, forming the celebrated district known as the Pontine Marshes, and noted in ancient as well as modern times for its insalubrity. This lower strip of the country, which, from its N. extremity at Cisterna to the sea near Terracina, is about 30 Roman miles in length, with an average breadth of 12 miles, is perfectly flat, and, from the stagnation of the waters which descend to it from the mountains on the E., has been in all ages so marshy as to be almost uninhabitable. Pliny, indeed, records a tradition that there once existed no less than 24 cities on the site of what was in his days an unpeopled marsh, but a careful inspection of the locality is sufficient to prove that this must be a mere fable. (Plin. iii. 5. 8. 9.) The dry land adjoining the marshes was doubtless occupied in ancient times by the cities or towns of Satrium, Ulubrae, and Suessar Pometia; while on the mountain ridges overlooking them rose those of Cora, Nicba, Setia and Piverrum; but not even the name of any town has been preserved to us as situated in this marshy region itself. Even the statement hastily adopted by Pliny, though obviously inconsistent with the fact, that the whole of this alluvial tract had been formed within the historical period, a notion that appears to have arisen in consequence of the identification of the Mons Circeus with the island of Circe, described by Homer as situated in the midst of an open sea. This remarkable headland is indeed a perfectly insulated mountain, being separated from the Apennines near Terracina by a strip of level sandy coast above 8 miles in breadth, forming the southern extremity of the plain of the Pontine Marshes; but this alluvial deposit, which alone connects the two, must have been formed at a period long anterior to the historical age.

The Circean promontory formed the southern limit of Latium in the original sense. On the opposite side of the Pontine Marshes rises the lofty group of the Volscian mountains already described; and these are separated by the valley of the Tereus or Sacco from the ridges more immediately connected with the central Apennines, which were inhabited by the Aquilans and Hernicans. All these mountain districts, as well as those inhabited by the Volscians on the S. of the Liris, around Arpinum and Atina, partake of the same general character: they are occupied almost entirely by masses and groups of
limestone mountains, frequently rising to a great height, and very abrupt, while in other cases their sides are clothed with magnificent forests of oak and chestnut trees, and their lower slopes are well adapted for the growth of vines, olives, and corn. The broad valley of the Trens, which extends from the foot of the hill of Pometal to the valley of the Liris, is bordered on both sides by hills, covered with the richest vegetation, at the back of which rise the lofty ranges of the Volscean and Hircanian mountains. This valley, which is followed throughout by the course of the Vias Latina, forms a natural line of communica-
tion from the interior of Latium to the valley of the Liris, and so to Campania: the importance of which in a military point of view is apparent on many occasions in Roman history. The broad valley of the Liris itself opens an easy and unbroken communica-
tion from the heart of the Apennines near the Lake Eucinus with the plains of Campania. On the other side, the Anio, which has its sources in the rugged mountains near Trevi, not far from those of the Liris, flows in a SW. direction, and after changing its course abruptly two or three times, emerges through the gorge at Tivoli into the plain of the Roman Campagna.

The greater part of Latium is not (as compared with some other parts of Italy) a country of great natural fertility. On the other hand, the barren and desert aspect which the Campagna now presents is apt to convey a very erroneous impression as to its character and resources. The greater part of the volcanic plain not only affords good pasturage for sheep and cattle, but is capable of producing considerable quantities of corn, while the slopes of the hills on all sides are well adapted to the growth of vines, olives, and other fruit-trees. The vine of the Alban Hills was celebrated in the days of Horace (Hor. Carm. iv. 11. 2. Sat. ii. 8. 16), while the figs of Tusculum, the hazel-nuts of Praeneste, and the pears of Crustumium and Tibur were equally noted for their excellence. (Macrob. Sat. ii. 14. 15; Cat. R. R. 8.)

In the early ages of the Roman history the cul-
tivation of corn must, from the number of small towns scattered over the plain of Latium, have been carried to a far greater extent than we find it at the present day; but under the Roman Empire, and even before the close of the Republic, there appears to have been a continually increasing tendency to diminish the amount of arable cultivation, and increase that of pasture. Nevertheless the attempts that have been made in modern times to promote agriculture in the neighbourhood of Rome have sufficiently proved that its decline is more to be attributed to other causes than to the sterility of the soil itself. The tract near the sea-coast alone is sandy and barren, and fully justifies the language of Fabius, who called it " agram macerrimum, litterissimumque " (Serv. ad Aen. i. 3). On the other hand, the slopes of the Alban Hills are of great fertility, and are still studded, as they were in ancient times, with the villas of Roman nobles, and with gardens of the greatest richness.

The climate of Latium was very far from being a healthy one, even in the most flourishing times of Rome, though the greater amount of population and cultivation tended to diminish the effects of the malaria which at the present day is the scourge of the district. Scipio tells us that the territory of Ardea, as well as the tract between Antium and Lanuvium, and extending from thence to the Pontine

Marshes, was marshy and unwholesome (v. p. 231). The Pontine plains themselves are described as " pestiferous" (Sil. Ital. viii. 359), and all the attempts made to drain them seem to have produced but little effect. The unhealthiness of Ardea is noticed both by Macrobius, who calls it "a non curatae ut auctae saepe proverbial (Mart. iv. 60); and Cicero, in a passage where there was much less room for rhetorical exaggeration, praises the choice of Romulus in fixing his city "in a healthy spot in the midst of a pestilential region." ("Locum delectum in regione pestilenti salubrum," Cic. de Rep. ii. 6.)

But we learn also, from abundant allusions in ancient writers, that it was only by comparison that Rome itself could be considered healthy; even in the city malaria fevers were of frequent occurrence in summer and autumn, and Horace speaks of the heats of summer as bringing in "fresh figs and fresher cords." (Hor. Ep. i. 7. 1—9.) Frontinus also expands the increased supply of fresh water as tending to remove the causes which had previously rendered Rome "notorious for its unhealthy climate" ("causa gravioris coeli, quibus apud veteres urbis infamis aer futi," Frontin. de Aquaed. § 88). But the great accum-
ulation of the population at Rome itself must have operated as a powerful check; for even at the present day malaria is unknown in the most densely popu-
lated parts of the city, though those are the lowest in point of position, while the hills, which were then thickly peopled, are now almost uninhabited, are all subject to its ravages. In like manner in the Campagna, wherever a considerable nucleus of population was once formed, with a certain extent of cultivation around it, this would in itself tend to keep down the mischief; and it is probable that, even in the most flourishing times of the Roman Empire, this evil was considerably greater than it had been in the earlier ages, when the numerous free cities formed so many centres of population and agricultural industry. It is in accordance with this view that we find the malaria extending its ravages with frightful rapidity after the fall of the Roman Empire and the devastation of the Campagna; and a writer of the 11th century speaks of the deadly climate of Rome in terms which at the present day would appear greatly exaggerated. (Petrus Damiani, cited by Bunsen.) The unhealthiness arising from this cause is, however, entirely confined to the plains. It is found at the present day that an elevation of 350 or 400 feet above their level gives complete immunity; and hence Tibur, Tus-
culum, Aricia, Lanuvium, and all the other cities which were built at a considerable height above the plain were perfectly healthy, and were resorted to during the summer (in ancient as well as modern times) by all who could afford to retreat from the city and its immediate neighbourhood. (See on this subject Tournon, E'tudes Statistiques sur Rome, liv. i. chap. 9; Bunsen, Beschreibung der Stadt Rom, vol. i. pp. 98—108.)

IV. History.

1. Origina and Affinities of the Latins. — All ancient writers are agreed in representing the Latins, properly so called, as the inhabitants of Latium in the restricted sense of the term, as a distinct people
LATIUM.

137

from those which surrounded them, from the Volscians and Aequeans on the one hand, as well as from the Sabines and Etruscans on the other. But the views and traditions recorded by the same writers concur also in representing them as a mixed people, produced by the blending of different races, and not as the pure descendants of one common stock. The legend most commonly adopted, and which gradually became firmly established in the popular belief, was that which represented Latium as inhabited by a people termed Aborigines, who received, shortly after the Trojan War, a colony or band of emigrant Trojans under their king Aeneas. At the time of the arrival of these strangers the Aborigines were governed by a king named Latinus, and it was not till after the death of Latians and the union of the two races under the rule of Aeneas, that the combined people assumed the name of Latin. (Liv. i. 1. 2; Dionys. i. 45. 60; Strab. v. p. 229; Appian, Rom. i. 1.) But a tradition, which has much more the character of a national one, preserved to us on the authority both of Varro and Cato, represents the population of Latium, as it existed previous to the Trojan colony, as already of a mixed character, and resulting from the union of a conquering race, who descended from the Central Apennines about Reate, with a people whom they found already established in the plains of Latium, and who bore the name of Siculi. It is strange that Varro (according to Dionysius) gave the name of Aborigines, which must originally have been applied or adopted in the sense of Autochthones, as the indigenous inhabitants of the country [Abor- gines], to these foreign invaders from the north. Cato apparently used it in the more natural signification as applied to the previously existing population, the same which were called by Dionysius and Varro, Siculi. (Varr. ap. Dionys. i. 9. 10; Cato, ap. Priscian. v. 12. § 65.) But though it is impossible to receive the statement of Varro with regard to the name of the invading population, the fact of such a migration having taken place may be fairly admitted as worthy of credit, and is in accordance with all else that we know of the progress of the population of Central Italy, and the course of the several successive waves of emigration that descended from the central line of the Apennines. [ITALIA. pp. 84, 85.]

The authority of Varro is here also confirmed by the result of modern philological researches. Niebuhr was the first to point out that the Latin language bore in itself the traces of a composite character, and was made up of two distinct elements; the one nearly resembling the Greek, and therefore probably derived from a Pelasgic source; the other closely connected with the Oscean and Umbrian dialects of Central Italy. To this he adds the important observation, that the terms connected with war and arms belong almost exclusively to the latter class, while those of agriculture and domestic life have for the most part a strong resemblance to the corresponding Greek terms. (Niebuhr, vol. i. pp. 82, 83; Donaldson, Ver- romannia, p. 5.) We may hence fairly infer that the conquering people from the north was a race akin to the Oscans, Sabines and Umbrians, whom we find in historical times settled in the same or adjoining regions of the Apennines: and that the inhabitants of the plains whom they reduced to subjection, and with whom they became gradually mingled (like the Normans with the Saxons in England) were a race of Pelasgic extraction. This last circumstance is in accordance with the inferences to be drawn from several of the historical traditions or statements transmitted to us. Thus Cato represented the Aborigines (whom he appears to have identified with the Siculi) as of Hellenic or Greek extraction (Cato, ap. Dionys. i. 11. 13), by which Roman writers often mean nothing more than Pelasgic; and the Siculi, where they reappear in the S. of Italy, are found indissolubly connected with the Neotrians, a race whose Pelasgic origin is well established. [SICULI.]

The Latin people may thus be regarded as composed of two distinct races, both of them members of the great Indo-European family, but belonging to different branches of that family, the one more closely related to the Greek or Pelasgic stock, the other to that race which, under the various forms of Umbrian, Oscean and Sabellian, constituted the basis of the greater part of the population of Central Italy. [ITALIA.]

But whatever value may be attached to the historical traditions above cited, it is certain that the two elements of the Latin people had become indissolubly blended before the period when it first appears in history: the Latin nation, as well as the Latin language, is always regarded by Roman writers as one organic whole.

We may safely refuse to admit the existence of a third element, as representing the Trojan settlers, who, according to the tradition commonly adopted by the Romans themselves, formed an integral portion of the Latin nation. The legend of the arrival of Aeneas and the Trojan colony is, in all probability, a more fiction adopted from the Greeks (Schwagler, Rom. Gesch. vol. i. pp. 310—326); though it may have found some adventurists support from the existence of usages and religious rites which, being of Pelasgic origin, recalled those found among the Pelasgic races on the shores of the Aegean Sea. And it is in accordance with this view that we find traces of similar legends connected with the worship of Aeneas and the Penates at different points along the coasts of the Aegean and Mediterranean seas, all the way from the Troad to Latium. (Dionys. i. 46—55; Klausen, Aeneas u. die Penaten, book 3.) The worship of the Penates at Lavinium in particular would seem to have been closely connected with the Cabeidian worship so prevalent among the Pelasgians, and hence probably that city was selected as the supposed capital of the Trojans on their first settlement in Italy.

But though these traditions, as well as the sacred rites which continued to be practised down to a late period of the Roman power, point to Lavinium as the ancient metropolis of Latium, which retained its sacred character as such long after its political power had disappeared, all the earliest traditions represent Alba, and not Lavinium, as the chief city of the Latins when that people first appears in connection with Rome. It is possible that Alba was the capital of the conquering Oscean race, as Lavinium had been that of the conquered Pelasgians, and that there was thus some historical foundation for the legend of the transference of the supreme power from the one to the other: but no such supposition can claim to rank as more than a conjecture. On the other hand, we may fairly admit as historical the fact, that, at the period of the foundation or first origin of Rome, the Latin people constituted a national league, composed of numerous independent cities, at the head of which stood Alba, which exercised a certain supremacy over the rest. This vague superiority, arising probably from its greater actual power, appears to have given rise
LATIO M.

LATIUM.

to the notion that Alba was in another way the metropolis of Latium, and that all, or at any rate the greater part, of the cities of Latium were merely colonies of Alba. So far was this idea carried, that we find expressly enumerated in the list of such colonies places like Ardea, Tusculum, and Praeneste, which are noted by other authorities as being more ancient than Alba itself. (Liv. i. 32; Dionysius, iii. 34; Dio, vii. ap. Euseb. A. p. 185; Vict. Orig. Gest. Rom. 17.) [ALBA LONGA.] Pliney, however, preserved to us a statement of a very different stamp, according to which there were thirty towns or communities, which he terms the "populi Albenses," that were accustomed to share in the sacrifices on the Alban Mount. Many of these names are now obscure or unknown, several others appear to have been always inoccupable places, while a few only subsequently figure among the well-known cities of Latium. It is therefore highly probable that we have here an authentic record, preserved from ancient times, of a league which actually subsisted at a very early period, before Alba became the head of the more important and better known confederacy of the Latins in general. Of the towns thus enumerated, these were the number which can be determined with any certainty; and the tainty were all (with the remarkable exception of Fidenae) situated in the immediate neighbourhood of the Alban Hills; and thus appear to have been grouped around Alba as their natural centre. Among them we find Bolsa, Pedum, Tolseria, and Vettulina on the N. of the Alban Hills, and Corioli, Longara, and Polusaca on the S. of the same group. On the other hand, the more powerful cities of Aricia, Lanuvium, and Tusculum, though so much nearer to Alba, are not included in this list. But there is a remarkable statement of Cato (ap. Prisc. iv. p. 629), in which he speaks of the celebrated temple of Diana at Aricia, as founded in common by the people of Tusculum, Aricia, Lanuvium, Laurentum, Cori, Tibur, Pomaria, Ardea, and the Rutuli, that seems to point to the existence of a separate, and, as it were, counter league, subsisting at the same time with that of which Alba was the head. All these, or minor near, would seem, however, to have ultimately been merged in the general confederacy of the Latins, of which, according to the tradition universally adopted by Roman writers, Alba was the acknowledged head.

Another people whose name appears in all the earliest historical traditions of Latium, but who had become completely merged in the general body of the Latin nation, before we arrive at the historical period, was that of the Rutuli. Their capital was Ardea, a city to which a Greek or Argive origin was ascribed [ARDEA]: if any value can be attached to such traditions, they may be regarded as pointing to a Pelasgic origin of the Rutuli; and Niebuhr explains the traditional greatness of Ardea by supposing it to have been the chief city of maritime Latium, while it was still in the hands of the Pelasgians. (Niebuhr, vol. i. p. 44, vol. ii. p. 21.)

One of the most difficult questions connected with the early history of Latinus is the meaning and origin of the term "Prisci Latini," which we find applied by many Roman writers to the cities of the Latin League, and which occurs in a formula given by Livy that has every appearance of being very ancient. (Liv. i. 32.) It may readily be assumed that the term means "Old Latini," and Niebuhr's idea that Prisci was itself a national appellation has been generally rejected as untenable. But it is difficult to believe that a people could ever have called themselves "the old Latini:" and yet it seems certain that the name was so used, both from its occurrence in the formula just referred to which was in all probability borrowed from the old law books of the Fetiales, and from the circumstance that we find the name almost solely in connection with the wars of Ancus Marcius and Tarquinus Priscus (Liv. i. 32, 33, 38); and it never occurs at a later period. Hence it seems impossible to suppose that it was used as a term of distinction for the Latius properly so called, or inhabitants of Latium Antiquum, as distinguished from the Aequans, Volscians, and other nations subsequently included in Latium: a supposition adopted by several modern writers. On the other hand the name does not occur in the Roman history, prior to the destruction of Alba, and perhaps the most plausible conjecture is that the name was one assumed by a league or confederacy of the Latin cities, established after the fall of Alba, but who thus asserted their claim to represent the original and ancient Latin people. It must be admitted that this explanation seems to be capable of determination with any certainty; but the "Prisci Latini" were the colonies of Alba, which is found both in Livy and Dionysius (Liv. i. 3; Dion. i. 45), but this probably meant to convey nothing more than the notion already noticed, that all the cities of Latium were founded by such colonies. Livy, at least, seems certainly to regard the "Prisci Latini" as equivalent to the whole Latin nation, and not as a part distinguished from the rest. (Liv. i. 31.)

2. Relations of the Latins with Rome.—As the first historical appearance of the Latini is that of a confederacy of different cities, of which Alba was the head, so the fall and destruction of Alba may be regarded as the first event in their annals which can be termed historical. The circumstances transmitted to us in connection with this are undoubtedly poetical fictions; but the main fact of the destruction of the old city and downfall of its power is well established. This event must have been followed by a complete rearrangement in the previously existing relations. Rome appears to have speedily put forth a claim to the supremacy which Alba had previously exercised (Dionysius, iii. 34); but it is evident that this was not acknowledged by the other cities of Latium; and the Prisci Latini, whose name appears in history only during this period, probably formed a separate league of their own. It was not long, however, before the Romans succeeded in establishing their superiority: and the statement of the Roman annals, that the Latin league was renewed under Tarquinus Superbus, and the supremacy of that monarch acknowledged by all the other cities that composed it, forms a strong confirmation from the more authentic testimony of the treaty between Rome and Carthage, preserved to us by Polybius (iii. 22). In this important document, which dates from the year immediately following the expulsion of the kings (B.C. 509), Rome appears as stipulating on behalf of the people of Ardea, Antium, Laurentum, Circii, Tarquinia, and the other subjici (or dependent) cities of Latium, and even making conditions in regard to the whole Latin territory, as if it was subject to its rule. But the state of things which appears to have been at this time fully established, was broken up soon after; whether in consequence of the revolution at
LATIUM.

Rome which led to the abolition of the kingly power, or from some other cause, we know not. The Latin cities, which at first had been independent, and though the war which was marked by the great battle at the lake Regillus has been dressed up in the legendary history with so much of fiction as to render it difficult to attach any historical value to the traditions connected with it, there is no reason to doubt the fact that the Latins had at this time shaken off the supremacy of Rome, and that a war between the two powers was the result. Not long after this, in B.C. 493, a treaty was concluded with them by Sp. Cassius, which determined their relations with Rome for a long period of time. (Liv. ii. 33; Dion. vi. 96; Cic. pro Balb. 23.)

By the treaty thus concluded the Romans and Latins entered into an alliance as equal and independent states, both for offence and defence; all booty or conquered territory was to be shared between them; and there is much reason to believe that the supreme command of the allied armies was to be held in alternate years by the Roman and Latin generals. (Dionys. l. c.; Nieb, vol. ii. p. 40.) The Latin cities, which at this time composed the league or confederacy, were thirty in number: a list of them is given by Dionysius in another passage (v. 61), but which, in all probability, was derived from the treaty in question (Niebur, vol. ii. p. 23). They were:—Ardea, Aricia, Bovillae, Bovetum, Cornetum, Curventius, Cerei, Civoli, Corbio, Coa, Forcine (?), Gabii, Laurentum, Lavinium, Lanuvium, Labicum, Nomentum, Norba, Praeneste, Pedin, Querquetulum, Saturnium, Scapta, Setia, Tellense, Tibur, Tusculum, Toleria, Tricrium (?), Velitrae. The number thirty appears to have been a recognised and established one, not dependent upon accidental changes and fluctuations: the cities which composed the old league under the supremacy of Alba are also represented as thirty in number (Dionys. iii. 34), and the "populi Albenses," which formed the smaller and closer union under the same head, were, according to Pliny's list, just thirty. It is therefore quite in accordance with the usages of ancient nations that the league when formed anew should consist as before of thirty cities, though these could not have been the same as previously composed it.

The object of this alliance between Rome and Latium was to oppose a barrier to the rapidly advancing power of the Aequians and Volscians. With the same view the Hernicans were soon after admitted to participate in it (n. c. 486); and from this time for more than a century the Latins continued to be the faithful allies of Rome, and shared alike in her victories and reverses during her long and arduous struggle with their warlike neighbours. (Liv. vi. 2.) A shock was given to these friendly relations by the Gaulish War and the capture of Rome in B.C. 390; the calamity which then befell the city appears to have incited some of her nearest neighbours and most faithful allies to take up arms against her. (Varr. L. l. vi. 18; Liv. vi. 2.) The Latins and Hernicans are represented as not only refusing their contingent to the Roman armies, but supporting and assisting the Volscians against Rome. (Liv. vi. 20.) It is, however, well worth observing that the Latins, though they avoided as long as possible an open breach with Rome, it seems evident that the former close alliance between them was virtually at an end. (Liv. vi. 6, 7, 10, 11, 17.) But it would appear that the bond of union of the Latin League itself was, by this time, very much weakened. The more powerful cities are found acting with a degree of independence to which there was little or no parallel in earlier times: thus, in B.C. 383, the Lavinians formed an alliance with the Volscians, and Praeneste declared itself hostile to Rome, while Tusculum, Gabii, and Lubucum continued on friendly terms with the republic. (Id. vi. 21.) In B.C. 380 the Romans were at open war with the Praenestines, and in B.C. 360 with the Tiburtines, but in neither instance do the other cities of Latium appear to have joined in the war. (Id. vi. 27—29, vol. x. 10—12, 15, 19.) The repeated invasions of the Gauls, whose armies traversed the Latin territory year after year, tended to increase the confusion and disorder; nevertheless the Latin League, though much disorganised, was never broken up; and the cities composing it still continued to hold their meetings at the Lucus Feroniae, to deliberate on their common interests and policy. (Id. vii. 25.) In B.C. 338 the league with Rome appears to have been renewed upon the same terms as before; and in that year the Latins, for the first time after a long interval, sent their contingent to the Roman armies. (Liv. vii. 12.)

At length, in B.C. 340, the Latins, who had adhered faithfully to their alliance during the First Samnite War, appear to have been roused to a sense of the increasing power of Rome, and became conscious that, under the shadow of an equal alliance, they were gradually passing into a state of dependence and servitude. (Id. vii. 4.) Hence, after a vain appeal to Rome for the establishment of a more equitable arrangement, the Latins, as well as the Volscians, took part with the Campanians in the war of that year, and shared in their memorable defeat at the foot of Mount Vesuvius. Even on this occasion, however, the councils of the Latins were divided: the Latroentes at least, and probably the Lavinians also, remained faithful to the Roman cause, while Signia, Setia, Cireci, and Velitrae, though regarded as Roman colonies, were among the most prominent in the war. (Id. viii. 3—11.) The contest was renewed the next year with various success; but in B.C. 338 Furius Camillus defeated the forces of the Latins in a great battle at Pedum, while the other consul, C. Macius, obtained a not less decisive victory on the river Astura. The struggle was ended at an end, the Latins being submitted one after the other, and the Roman senate pronounced separately on the fate of each. The first great object of the arrangements now made was to deprive the Latins of all bords of national or social unity: for this purpose not only were they prohibited from holding general councils or assemblies, but the several cities were deprived of the mutual rights of "comanibus" and "commencium," so as to isolate each little community from its neighbours. Tibur and Praeneste, the two most powerful cities of the confederacy, and which had taken a prominent part in the war, were deprived of a large portion of their territory, but continued to exist as nominally independent communities, retaining their own laws, and the old treaties with them were renewed, so that as late as the time of Polybius a Roman citizen might choose Tibur or Praeneste as a place of exile. (Vol. i. 47.) Of all the others, Tusculum, on the contrary, received the Roman franchise; as did Lanuvium, Aricia, Podium, and Nomentum, though these last appear to have, in the first instance, received only the imperfect citizenship without the right of suffrage. Velitrae was
LATIUM.

more severely punished; but the people of this city also were soon after admitted to the Roman franchise, and the creation shortly after of the Maecian and Scipionic tribes was designed to include the new citizens added to the republic as the result of these arrangements. (Livy, viii. 14, 17; Niebuhr, vol. iii. pp. 140—145.)

From this time the Latins as a nation may be said to disappear from history; they became gradually more and more blended into one mass with the Roman people; and though the formula of "the allies and Latin nation" (socii et nomen Latium) is one of perpetual occurrence from this time forth in the Roman history, it must be remembered that this phrase includes also the citizens of the so-called Latin colonies, who formed a body far superior in importance and numbers to the remains of the old Latin people. [Italia, p. 90.]

In the above historical review, the history of the old Latins, or the Latins properly so called, has been studiously kept separate from that of the other nations which were subsequently included under the general appellation of Latium,—the Aequians, Hernicans, Volscians, and Ausians. The history of these several tribes, as long as they sustained a separate national existence, will be found under their respective names. It may suffice here to mention that the Ausians were reduced to complete subjection to Rome in B.C. 306, and the Aequians in B.C. 304; the period of the final subjugation of the Volscians is more uncertain, but we meet with no mention of them in arms after the capture of Pernum in B.C. 329; and it seems certain that they, as well as the Ausonian cities which adjoined them, had fallen into the power of Rome before the commencement of the Second Samnite War, B.C. 326. [Volsci.] Hence, the whole of the country subsequently known as Latium had become finally subject to Rome before the year 300 B.C.

3. Latium under the Romans.—The history of Latium, properly speaking, ends with the breaking up of the Latin League. Although some of the cities continued, as already mentioned, to retain a nominal independence down to a late period, and it was not till the close of the outbreak of the Social War, in B.C. 90, that the Lex Julia at length conferred upon all the Latins, without exception, the rights of Roman citizens, they had long before lost all traces of national distinction. The only events in the intervening period which belong to the history of Latium are inseparably bound up with that of Rome. Such was the invasion by Pyrrhus in B.C. 280, who advanced however only as far as Praeneste, from whence he looked down upon the plains around Rome, but without venturing to descend into it. (Enrop. ii. 12; Flor. i. 18, § 24.) In the Second Punic War, however, Hannibal, advancing like Pyrrhus by the line of the Via Latina, established his camp within four miles of the city, and carried his ravages up to the very gates of Rome. (Livy, xxxvi. 9—11; Vol. ix. 6.)

This was the last time for many centuries that Latium witnessed the presence of a foreign hostile army; but it suffered severely in the civil wars of Marius and Sulla, and the whole tract near the sea-coast, especially was ravaged by the Saunian auxiliaries of the former in a manner that it seems never to have recovered. (Strab. v. p. 232.)

Before the close of the Republic Latium appears to have lapsed almost completely into the condition of the mere suburban district of Rome. Tibur, Tusculum, and Praeneste became the favourite resorts of the Roman nobles, and the fertile slopes of the Alban Hills and the Apennines were studded with villas and gardens, to which the wealthier citizens of the metropolis used to retire in order to avoid the heat or bustle of Rome. But the plain immediately around the city, or the Campagna, as it is now called, seems to have lost rather than gained by its proximity to the capital. Livy, in more than one passage, speaks with astonishment of the inexhaustible resources which the infant republic appears to have possessed, as compared with the condition of the same territory in his own time. (Livy, vi. 12, vii. 25.)

We learn from Cicero that Gabii, Labicum, Collatia, Fidenae, and Bovillae were in his time sunk into almost complete decay, while even those towns, such as Aricia and Lanuvium, which were in a comparatively flourishing condition, were still very inferior to the épiplon municipal towns of Campania. (Ov. pro Pison. 9, de Leg. Agr. i. 53.) Nor did this state of things become materially improved even under the Roman Empire. The whole Laurentine tract, or the woody district adjoining the sea-coast, as well as the adjacent territory of Ardea, had already come to be regarded as unhealthy, and was therefore thinly inhabited. In other parts of the Campagna single farms or villages already occupied the sites of ancient cities, such as Antenaeum, Collatia, Fidenae, &c. (Strabo, vi. 7, § 32; Eutrop. ii. 12); and straggling colonies of cities of ancient Latium which in his time had altogether ceased to exist. (Plin. iii. 6, s. 9.)

The great lines of highway, the Appian, Latin, Salaria, and Velarian Ways, became the means of collecting a considerable population along their immediate lines, but appear to have had rather a contrary effect in regard to all intermediate tracts. The notices that we find of the attempts made by successive emperors to recruit the decaying population of many of the towns of Latium with fresh colonies, sufficiently show how far they were from sharing in the prosperity of the capital; while, on the other hand, these colonies seem to have for the most part succeeded only in giving a delusive air of splendour to the towns in question, without laying the foundation of any real and permanent improvement.

For many ages its immediate proximity to the capital at which it lay favored Latium from the ravages of foreign invaders; but when, towards the decline of the Empire, this ceased to be the case, and each successive swarm of barbarians carried their arms up to the very gates and walls of Rome, the district immediately round the city probably suffered more severely than any other. Before the fall of the Western Empire the Campagna seems to have been reduced almost to a desert, and the evil must have been continually augmented after that period by the long continued wars with the Gothic kings, as well as subsequently with the Lombards, who, though they never made themselves masters of Rome itself, repeatedly laid waste the surrounding territory. All the records of the middle ages represent to us the Roman Campagna as reduced to a state of complete desolation, from which it has never more than partially recovered. (Strab. v. p. 230; and Pliny gives a long list of Mariscus and Sulla, and the whole tract near the sea-coast, especially was ravaged by the Saunian auxiliaries of the former in a manner that it seems never to have recovered.) (Strab. v. p. 232.)

Before the close of the Republic Latium appears to have lapsed almost completely into the condition of the mere suburban district of Rome. Tibur, Tusculum, and Praeneste became the favourite resorts of the
LATIUM.

which the ancient Latium is known in modern times. [Campagna, p. 494.]

V. Political and Religious Institutions.

It is for the most part impossible to separate the Latin element of the Roman character and institutions from that which they derived from the Sabines; at the same time we know that the connection between the Romans and the Latins was so intimate, that we may generally regard the Roman sacred rites, as well as the political institutions, in the absence of all evidence to the contrary, as of Latin origin. But it would be obviously here out of place to enter into any detail as to those parts of the Latin institutions which were common to the two nations. A few words may, however, be added, concerning the constitution of the Latin League, as it existed in its independent form. This was composed, as has been already stated, of thirty cities, all apparently, in name at least, equal and independent, though they certainly at one time admitted a kind of presiding authority or supremacy on the part of Alba, and at a later period on that of Rome.

The general councils or assemblies of deputies from the several cities were held at the Lucus Feroniae, in the immediate neighbourhood of Alba; a custom which was evidently connected in the first instance with the sanctum sacrum of that city, but which was retained after the presidency had devolved on Rome, and down to the great Latin War of B.C. 340. (Cic. Q. Mar. ii. 53.) Each city had doubtless the sole direction of its own affairs; the chief magistrate was termed a dictator, a title borrowed from the Latins by the Romans, and which continued to be employed as the name of a municipal magistrate by the Latin cities long after they had lost their independence. It is remarkable that, with the exception of the mythical or fictitious kings of Alba, we meet with no trace of monarchical government in Latium; and if the account given by Cato of the consecration of the temple of Diana at Aricia can be trusted, even at that early period each city had its chief magistrate, with the title of dictator. (Cato, apo. Prisc. iv. p. 629.) They must necessarily have had a chief magistrate on whom the conduct of the fortunes of the whole League would devolve in time of war, as is represented as being the case with Manlius Octavinius at the battle of Regillus. But such a commander may probably have been specially chosen for each particular occasion. On the other hand, Livy speaks in B. C. 340 of C. Annius of Setia and L. Nummius of Circeii, as the two "praetors of the Latins," as if these were a customary and regular magistracy. (Livy. viii. 3.) Of the internal government or constitution of the individual Latin cities we have no knowledge at all, except what we may gather from the analogy of those of Rome or of their later municipal institutions.

As the Lucus Feroniae, in the neighbourhood of Alba, was the established place of meeting for political purposes of all the Latin cities, so the temple of Jupiter on the summit of the Alban Mount (Monte Cavo), was the central sanctuary of the whole Latin people, where sacrifices were offered on their behalf at the Feriae Latinae, in which every city was bound to participate, a custom retained down to a very late period by the Romans themselves. (Livy. xxii. 1; Cic. pro Planc. 9; Plut. iii. 6. s. 9.) In like manner there can be no doubt that the customary arrangements adopted by Roman generals of cele-

brating a triumph on the Alban Mount was derived from the times of Latin independence, when the temple of Jupiter Latialis was the natural end of such a procession, just as that of Jupiter Capitolinus was at Rome.

Among the deities especially worshipped by the Romans, it may suffice to mention, as apparently of peculiarly Latin origin, Janus, Saturnus, Faunus, and Ficus. The latter seems to have been so closely connected with Mars, that he was probably only another form of the same deity. Janus was originally a god of the sun, answering to Jana or Diana, the goddess of the moon. Saturnus was a terrestrial deity, regarded as the inventor of agriculture and of all the most essential improvements of life. Hence he came to be regarded by the pragmatically mythologers of later times as a very ancient king of Latium; and by degrees Janus, Saturnus, Ficus, and Faunus became established as successive kings of the earliest Latins or Abruzzi. To complete the series Latium was made the son of Faunus. This last appears as a gloomy and mysterious being, probably originally connected with the infernal deities; but who figures in the mythology received in later times partly as a patron of agriculture, partly as a giver of oracles. (Hartung, Religion der Römer. vol. ii.; Schwager, R. G. vol. i. pp. 212—225.)

The worship of the Penates also, though not peculiar to Latium, seems to have formed an integral and important part of the Latin religion. The Penates at Lavinium were regarded as the tutelary gods of the whole Latin people, and as such continued to be the object of the most scrupulous reverence to the Romans themselves down quite to the extinction of Paganism. Every Roman consul or praetor, upon first entering on his magistracy, was bound to repair to Lavinium, and there offer sacrifices to the Penates, as well as to Vesta, whose worship was closely connected with them. (Macrobi. Sat. iii. 4; Varr. L.L. v. 144.) This custom points to Lavinium as having been at one time, probably before the rise of Alba, the sacred metropolis of Latium; and it may very probably have been, at the same early period, the political capital or head of the Latin confederacy.

VI. Topography.

The principal physical features of Latium have already been described; but it remains here to notice the minor rivers and streams, as well as the names of some particular hills or mountain heights which have been transmitted to us.

Of the several small rivers which have their rise at the foot of the Alban hills, and flow from thence to the sea between the mouth of the Tiber and Antium, the only one of which the ancient name is preserved is the Numicus, which may be identified with the stream now called Río Torta, between Lavinium and Ardea. The Astrea, rising also at the foot of the Alban hills near Velletri, and flowing from thence in a SW. direction, enters the sea a little to the north of the promontory of Astura; it is now known in the lower part of its course as the Flumine di Conco, but the several small streams by the confluence of which it is formed have each their separate appellation. The Nymphaeus, mentioned by Pliny (iii. 5. s. 9), and still called La Nignà, rises immediately at the foot of the Volsinian mountains, just below the city of Norba; in Pliny's time it appears to have had an independent course to the sea, but now loses itself in the Pontine Marshes,
where its waters add to the stagnation. But the principal agents in this formation are those extensive marshes are the **Ufens** and the **Amasenus**, both of them flowing from the Volscian mountains and uniting their waters before they reach the sea. They still retain their ancient names. Of the lesser streams of Latium, which flow into the Tiber, we need only mention the celebrated **Alia**, which fills the river about 11 miles above Rome; the **Alma**, a still smaller stream, which joins it just below the city, having previously received the waters of the **Aqua Ferentina** (now called the **Murrana degli Orditi**), which have their source at the foot of the Alban Hills, near **Marina**; and the **Rivus Albus** (still called the **Rivo Albano**), which carries off the superfluous waters of the Alban lake to the Tiber, about four miles below it.

The mountains of Latium, as already mentioned, may be classed into three principal groups:—(1) the Apennines, properly so called, including the ranges at the back of Tiber and Praeneste, as well as the mountains of the Aequians and Hernicans; (2) the group of the Alban Hills, of which the central and highest summit (the **Monte Cavo**) was the proper source of the Albus Alenus of the ancients, while the part which lies toward the northwest was called the Volscian Mountains, and is now known as the **Mons Aldicus**; (3) the lofty group in the mass of the Volscian Mountains, frequently called by modern geographers the **Monti Lepini**, though we have no ancient authority for this use of the term. The name of **Mons Lepini** occurs only in **Cicero** (x. 141), as that of a mountain in the neighborhood of **Scaurna**. The **Mons Cauconulani** and **Caprioluca apae**, **Dornys**, i. 10) must evidently have been the detached limits of another range, which, wholly separate from the main ranges of the Apennines, now known as the **Monticelli**, situated between the Tiber and the **Monte Cenano**. The **Mons Saccar** celebrated in Roman history, was a mere hill of trifling elevation above the adjoining plain, situated on the right bank of the Anio, close to the **Via Nomentana**.

It only remains to enumerate the towns or cities which existed on the Alban soil, but as many of them had disappeared at a very early period, and all trace of their geographical position is lost, it will be necessary in the first instance to confine this list to places of which the site is known, approximately at least, reserving the more obscure names for subsequent consideration.

Beginning from the mouth of the Tiber, the first town is **Osia**, situated on the left bank of the river, and, as its name implies, originally close to the mouth, though it is now three miles distant from it. A short distance from the coast, and about 8 miles from Osia, was **Laurentum**, the reputed capital of the **Aborizae**, situated probably at **Tore di Patao**, or at least in that immediate neighborhood. About a mile further to the west, and about 13 miles from the sea, was **Lavinium**, the site of which may be clearly recognised at **Pisa Cura**. Since this time, and about the same distance from the sea, was **Ardea**, which retains its ancient name; and 13 or 14 miles further, on a projecting point of the coast, was **Anxium**, still called **Pitelli d' Arza**. Between 9 and 10 miles further on along the coast, was the town of **Atruria**, with the site of the same name; and from there a long tract of barren sandy coast, without a village and almost without inhabitants, extended to the **Cocca** promontory and the town of **Ciceri**, which was generally reckoned the last place in Latium Proper. Returning to Rome as a centre, we find N. of the city, and between it and the Sabine frontier, the cities of **Antennae**, **Fidenae**, **Cres- tumerium**, and **Nomentum**. On or around the group of the **Montes Cornimani**, were situated **Cornulum**, **Medullia**, and **Amelizia**: Cae- ciliae, **Sessula**, and, possibly, **Rhea/.** It is not necessary to be placed in the same neighborhood; and a little nearer Rome, on the road leading to Nomentum, was **Ficula**. At the foot, or rather on the lower slopes and undercarries of the main range of the Apennines, were **Tirra**, **Aesula**, and **Praeneste**, the latter occupying a lofty spur or projecting point of the Apennines, standing out towards the Alban Hills. This latter group was surrounded as it were with a crown or circle of ancient towns, beginning with **Corona** (Roscum Priori), nearly opposite to Praeneste, and continued on by **Tusculum**, **Alba**, and **Arcia**, to **Lancium** and **Velletra**, the last two situated on projecting outliers from the central group, standing out towards the Pontine Plains. On the skirts of the Volscian mountains or **Monti Lepini**, were situated **Signia**, **Cora**, **Noreia**, and **Setia**. The last three still standing on commanding heights, looking down upon the plain of the Pontine Marshes. In that plain, and immediately adjoining the marshes themselves, was **Ulytria**, and in all probability **Sessa Pometa** also, the city which gave name both to the marshes and plain, but the precise site of which is unknown. The other places within the marshy tract, such as **Forum Appia**, **Tes Tabernae**, and **Thipontium**, owed their existence to the construction of the **Via Appia**, and did not represent the reoccupying the ancient Latin towns. In the level tract, bordering on the Pontine Plains on the N., and extending from the foot of the Alban Hills towards **Antium** and **Ardea**, were situated **Satrium**, **Longula**, **Pullosca** and **Coriol**; all of them or places of which the exact site is still a matter of doubt, but which must certainly be sought in this neighborhood. Between the **Laurentine region** (Laurens tractus), as the forest district near the sea was called, and the name of **Pamphilia**, or replace ancient Latin towns. In the level tract, to which (or to a part of which) the name of **Campus Selenici** was given; and within the limits of this district were situated **Tellinae** and **Polionium**, as well as probably **Apollae**. **Bovillae**, at the foot of the Alban hills, and just on the S. of the Appian Way, was at one extremity of the same tract, while **Picuna** stood at the other, immediately adjoining the Tiber. In the portion of the plain of the **Campania** extending from the line of the **Via Appia** to the foot the **Apennines**, between the **Anio** and the **Alban Hills**, the only city of which the site is known was **Garbii**, 12 miles distant from Rome, and the same distance from Praeneste. Near the **Apennines** were **Scapta** and **Pedum**, as well as probably **Querquetula**; while **Labicum** occupied the hill of **La Colombian**, nearly at the foot of the **Alban group**. In the tract which extends southwards between the **Apennines of Praeneste and the Alban Hills**, so as to connect the plain of the **Campania** with the land of the **Hornicans** in the valley of the **Tennis** or **Necio**, were situated **Vetricia**, **Tolleum**, and probably also **Bola** and **Oritona**: though the exact site of all four is a matter of doubt. **Extrum**, which appears in history as a Volscian city, and is never mentioned as a Latin one, must nevertheless have been situated within the limits of the Latin territory, ap-
LATIUM.

Although some cities, which in the early ages of Latium formed members of the Latin League, or are otherwise conspicuous in Roman history, we find mention in Pliny of some smaller towns still existing in his time; of which the " Fabiones in Monte Albanu" may certainly be placed at Rocca di Papa, the highest village on the Alban Mount, and the Castriomnienses at Morino, near the site of Alba Longa. The list of the thirty cities of the League given by Dionysius (v. 61) has been already cited (p. 139). Of the names included in it, Buretum is wholly unknown, and must have disappeared at an early period. Carventum is known only from the mention of the Arx Carventana in Livy during the wars with the Aquaeans (v. 53, 55), and was probably situated somewhere on the frontier of that people; while two of the names, the Fortineii (Forpiv) and Tricrini (Trucrino), are utterly unknown, and in all probability corrupt. The former may probably be the same with the Foretii of Pliny, or perhaps with the Forentani of the same author, but both these are equally unknown to us.

Besides these Pliny has given a long list of towns or cities (ch. oppida, iii. 5. s. 9. § 68) which once existed in Latium, but had wholly disappeared in his time. Among these we find many that are well known in history and have been already noticed, viz. Satricum, Ponsae, Scapta, Politorium, Tellenia, Casenna, Ficana, Crustumerium, Ameriola, Medullia, Cornicum, Antemnsae, Catenac, Collatia. With these he joins two cities which are certainly of mythical character; Saturnia, which was alleged to have previously existed on the site of Rome, and Antipaeis, on the hill of the Janiculum; and adds three other names, Salmo, a place not mentioned by any other writer, but the name of which may probably be recognised in the modern Serramonte; Norba, which seems to be an erroneus repetition of the well-known Norba, already mentioned by him among the existing cities of Latium (ib. § 64); and Amatium or Asinum, of which no trace is found elsewhere, except the well-known city of the name in the Vestini, which cannot possibly be meant. But, after mentioning these cities as extinct, Pliny adds another list of the thirty cities of the League, which is ascribed to Plutarch, and is given to Parthia with them in the sacrifices on the Alban Mount, and which were all equally decayed. According to the punctation proposed by Niebuhr and adopted by the latest editors of Pliny, he classes these collectively as "populi Albenses," and enumerates them as follows: Albani, Aesulani, Acci- chenae, Abdelan, Bubetani, Bolani, Cusuetani, Coriolani, Fidenates, Fovetti, Hortenses, Latinenses, Longulani, Munda, Mercuriales, Mantucenses, Mu- nienses, Numiminienses, Olicinani, Octabani, Pedani, Pollusciun, Quercutelani, Sicani, Suecenses, Tole- rientes, Tutines, Vinitellitani, Velientes, Venetulani, Vitellenses. Of the names here given, eleven relate to well-known towns (Alba, Aesula, Bola, Coriolii, Fidenae, Longula, Pedum, Pollusca, Quercultula, Tolerium et Vitellia); the Bubetani are evidently the same with the Bubetani of Dionysius already noticed; the Fovetti may perhaps be the same as the Fovetti with the Fortineii of that author; the Hortenses may probably be the inhabitants of the town called by Livy Ortona; the Munitenses are very possibly the people of the town afterwards called Castraomniensem: but there still remain sixteen wholly unknown. At the same time there are several indications (such as the agreement with Dionysius in regard to the otherwise unknown Bubentani, and the notice of Aesulani and Quercultula, towns which do not figure in history) that the list is derived from an authentic source; and was probably copied as a whole by Pliny from some more ancient authority. The conjecture of Niebuhr, therefore, that we have here a list of the subject or dependent cities of Alba, derived from a period when they formed a separate and closer league with Alba itself, is at least highly plausible. The notice in the list of the Velientes is a strong confirmation of this view, if we can suppose them to be the inhabitants of the hill at Rome called the Velia, which is known to us as bearing an important part in the ancient sacrifices of the Septimontium. [ROMA.]

The works on the topography of Latium, as might be expected from the peculiar interest of the subject, are sufficiently numerous; but the older ones are of little value. Cluerius, as usual, laid a safe and solid foundation, which, with the criticisms and corrections of Holtensius, must be considered as the basis of all subsequent researches. The special works of Kircher (Vetus Latium, fol. Anst. 1671) and Volpi (Vetus Latium Profurnum et Sacrum, Rome, 1704—1748. 10 vols, 4to.) contain very little of real value. After the ancient authorities had been carefully brought together and revised by Cluerius, the great requisite was a careful and systematic examination of the localities and existing remains, and the geographical survey of the country. These objects were to a great extent carried out by Sir W. Gell (whose excellent map of the country around Rome is an invaluable guide to the historical inquirer) and by Professor Nibby. (Sir W. Gell, Topography of Rome and its Vicinity; with a large map to accompany it, 2 vols. 8vo. Lond. 1834; 2d edit. 1 vol. Lond. 1846. Nibby, Analisi storico-topografico Antiquaria della Carta dei Distinti di Roma, 3 vols. 8vo. Rome, 1837; 2d edit. Ib. 1849. The former work by the same author, Vangelo Antiquario nei Contorni di Roma, 2 vols. 8vo. Rome, 1819, is a very inferior performance.) It is unfortunate that both their works are deficient in accurate scholarship, and still more in the spirit of historical criticism, so absolutely necessary in all inquiries into the early history of Rome. Westphal, (Die Römischen Kirchen und Topographische Antiquarischer Hinsicht in der Rom. Welt, 4to. Berlin, 1829) published before the survey of Sir W. Gell, and consequently with imperfect geographical resources, attached himself especially to tracing out the ancient roads, and his work is in this respect of the greatest importance. The recent work of Bornmann (Alt-Latinische Chorographie und Städte- Geschichte, 8vo. Halle, 1829) contains a careful review of the historical statements of ancient authors, as well as of the researches of modern inquirers, but is not based upon any new topographical researches. Notwithstanding the labours of Gell and Nibby, much still remains to be done in this respect, and a work that should combine the results of such inquiries with sound scholarship and a judicious spirit of criticism would be a valuable contribution to ancient geography. [E. H. E.]

LATIUM.

LATIMUS SINUS. (A Lattica, Λατημιχόνον). a bay on the western coast of Caria, deriving its name from Mount Latmus, which rises at the head of the gulf. It was formed by the mouth of the river Maeander which flowed into it from the north-east. Its breadth, between Miletus, on the southern headland, and Pyrrha in the north, amounted to 30
the exception of the jamb of a gateway — now converted into a door-sill — of the reign of Tithonus HII. (xviiith dynasty), the remains of Latopolis belong to the Macedonian or Roman era. Ptolemy Evergetes, the restorer of so many temples in Upper Egypt, was a benefactor to Latopolis, and he is painted upon the walls of the temple followed by a tame lion, and in the act of striking down the chiefs of his enemies. The name of Ptolemy Epiptanes is found also inscribed upon a doorway. Yet, although from their scale these ruins are imposing, their sculptures and hieroglyphics attest the decline of Egyptian art. The prenoso, which alone exists, resembles in style that of Apollonopolis Magna (Edfou), and was begun not earlier than the reign of Claudius (A. D. 41 — 54), and completed in that of Vespasian, whose name and titles are carved on the dedicatory inscription over the entrance. On the ceiling of the prison is the largest Ptolemaic Zodiac. The name of the emperor Gota, the last that is read in hieroglyphics, although partially erased by his brother and murderer Caracalla (A. D. 212), is still legible on the walls of Latopolis. Before their own edifice, the Helvetii have destroyed even the basements of the earlier Egyptian temple. There was a smaller temple, dedicated to the same deities, about two miles and a half N. of Latopolis, at a village now called E'Deyr. Here, too, is a small Zodiac of the age of Ptolemy Evergetes (n. c. 246 — 221). This latter building has been destroyed within a few years, as it stood in the way of a new canal. The temple of Esneh has been cleared of the soil and rubbish which filled its area when Denon visited it, and now serves for a cotton warehouse. (Lepsias, Einleitnng, p. 63.)

The modern town of Esneh is the emporium of the Abyssinian trade. Its camel-market is much resorted to, and it contains manufactories of cotton, shawls, and pottery. Its population is about 4000. (W. B. D.)

LATOVICI (Aatdvook, Ptol. ii. 15. § 2), a tribe in the south-western part of Pannonia, on the river Savus. (Plim. iii. 28.) They appear to have been a Celtic tribe, and a place Praetorium Latovicorum is mentioned in their country by the Antonine Itinerary, on the road from Aemona to Sirmium, perhaps on the site of the modern Neustadt, in Illyria. (Comp. Zeuss, die Deutschen, p. 256.)

LATVUS SINCUS. [Mauretania.]

LATVUS, or LAVITUS. [T. E.]

LAVITRE, a station in Britain, on the road from Lundinum to Luguvallum, near the wall of Hadrian, distant, according to one passage in the Antonine Itin., 54 miles, according to another, 59 miles, from Eboracum, and 55 miles from Longvallum. (Anton. Itin. pp. 468. 476.) Perhaps the same as Boves, on the river Oreta, in the North Riding of Yorkshire. The church of Boves contains in the time of Camden a hewn slab, bearing an inscription dedicatory to the Roman emperor Hadrian, and there used for the communion table. In the neighbourhood of Boves, there are the remains of a Roman camp and of an aqueduct.

LAUGONA, the modern Looe, a river of Germany, on the east of the Rhine, into which it empties itself at Lahnstein, a few miles above Coblenz. The ancients praised it for its clear water (Venant. Port. vol. vii. 7. Geogr. Itn. iv. 24, where it is called Logna. (L. S.)
LAVINIUM. 145

injured as the Laurentes, though the injury was averaged at Lavinium,—a strong proof of the intimate relations which were conceived as existing between the two cities. The treaty between Rome and Lavinium was said to have been renewed at the same time (Liv. L. c.), and there is no doubt that both the Roman annals and traditions represented Lavinium, as well as Laurentum, as almost uniformly on friendly terms with Rome. It was, however, an independent city, as is proved by the statement that Collatini and Ardea, when banished from Rome, retired into exile at Lavinium. (Liv. ii. 2.) The only interruption of these friendly relations took place, according to Dionysius, a few years after this, when he reckons the Lavinians among the Latin cities which entered into a league against Rome before the battle of Regillus. (Dionys. v. 61.) There is, however, good reason to believe that the names there enumerated are in reality only those of the cities that formed the permanent Latin League, and who concluded the celebrated treaty with Sp. Cassius in n. c. 493. (Niebuhr, vol. ii. pp. 23, 24.)

Lavinium is next mentioned during the wars of Coriolanus, who is said to have besieged and, according to Livy, reduced the city (Liv. ii. 39; Dionys. viii. 21); but, from this time, we hear no more of it till the great Latin War in n. c. 340. On that occasion, according to our present text of Livy (viii. 11), the citizens of Lavinium are represented as sending auxiliaries to the forces of the League, who, however, arrived too late to be of service. But no mention occurs of Lavinium in the following campaigns, or in the general settlement of the Latin state at the end of the war; hence it appears highly probable that in the former passage Lavenium, and not Lavinium, is the city really meant; the confusion between these names in the MSS. being of perpetual occurrence. [LAVIUM] It is much more probable that the Lavinians were on this occasion also comprised with the Laurentes, who, as we are expressly told, took no part in the war, and in consequence continued to maintain their former friendly relations with Rome without interruption. (L. vi. l. c.) From this time no historical mention occurs of Lavinium till after the fall of the Roman Republic; but it appears to have fallen into decay in common with most of the places near the coast of Lavinium, and Strabo speaks of it as presenting the mere vestiges of a city, but still retaining its sacred rites, which were believed to have been transmitted from the days of Aeneas. (Strab. v. p. 262.) Dionysius also tells us that the memory of the three animals—the eagle, the wolf, and the fox—which were connected by a well-known legend with the foundation of Lavinium, was preserved by the figures of them still extant in his time in the forum of that town; while, according to Varro, not only was there a similar bronze figure of the celebrated sow with her thirty young ones, but part of the flesh of the sow herself was still preserved in pickle, and shown by the priestess (Liv. vi. i. 67, 59; and from Plut. R. Rep. 4.) The name of Lavinium is omitted by Pliny, where we should have expected to find it, between Laurentum and Ardea, but he enumerates among the existing communities of Latin the " Bionenses Lavini,"—an appellation evidently assumed by the citizens in commemoration of their supposed Trojan descent. (Plin. iii. 5. s. 9.)

Shortly after the time of Pliny, and probably in the reign of Trajan, Lavinium seems to have re-

LAVINIUM.
LAUNIUM.

received a fresh colony, which for a short time raised it again to a degree of prosperity. On this occasion it would appear that the Laurentines and Lavinians were united into one community, which assumed the name of LAURENTUM, and the citizens that of LAURENTIS LAVINATIS, names which from henceforth occur frequently in the inscriptions.

As a tribute to its ancient sacred character, though a fresh appportionment of lands necessarily attended the establishment of this colony, the territory still retained its old limits and regulations (lege et conscriptione viteri mutu, Lib. Colon. p. 234.) This union of the two communities into one has given rise to much confusion and misconception. Nor can we trace exactly the mode in which it was effected; but it would appear that Lavinium became the chief town, while the "p-pulls" continued to be often called that of the Laurentes, though more correctly designated as that of the Laurentes Lavinates.

The effect of this confusion is apparent in the commentary of Servius on the Aeneid, who evidently confounded the Lavinium of Virgil with the Lave-Lavinium of his own day, and thence, with the usual facility at which ancient names were interchanged, Lavinium was thenceforward called as the same city. (Serv. ad Aen. i. 2.)

But, even at such an earlier period, it would seem as if the "ager Laurentis," or Laurentine territory, was regarded as comprising Lavinium; and it is certainly described as extending to the river Nume.

LAUSANNE. Inscriptions discovered at Pratico enable us to trace the existence of this new colony, or revived Lavinium, down to the end of the 4th century; and its name is found also in the Itineraries and the Tabulae. (Itin. Ant. p. 301; Tab. Peut.; Orell. Inscr. 1063, 2179, 3218, 3921.)

We learn also from a letter of Symmachus that it was still subsisting as a municipal town as late as A.D. 391, and still retained its ancient religious character. Macrobius also informs us that in his time it was still custom for the Roman consuls and praetors, when entering on their office, to repair to Lavinium to offer certain sacrifices there to Vesta and the Penates,—a custom which appears to have been transmitted without interruption from a very early period. (Macrobr. Sat. ii. 4. § 11; Val. Max. i. 6. § 7; Symmach. Ep. i. 65.) The final decay of Lavinium was probably produced by the fall of paganism, and the consequent extinction of that religion reverence which had apparently been the principal means of its preservation for a long while before.

The position of Lavinium at Pratico may be considered as clearly established, by the discovery there of the numerous inscriptions already referred to relating to Laus-Lavinium; in other respects also the site of Pratico agrees well with the data for that of Lavinium, which is placed by Diodorus 24 stadia, or 3 miles, from the coast. (Dio., i. 56.)

The Itineraries call it 16 miles from Rome; but this statement is below the truth, the real distance being little, if at all, less than 18 miles. The most direct approach to it from Rome is by the Via Arilatina, from whence a side branch diverges soon after passing the Solfatara—a spot supposed to be the site of the celebrated grove and oracle of Faunus, referred to by Virgil [Ardea], which is about 4 miles from Pratica. The site of this latter village, which still possesses a church, a theatre, and other remains of ancient splendour, resembles that of most of the early Latin towns; it is a nearly isolated hill, with a level summit of no great extent, bounded by wooded ravines, with steep banks of tuft rock. These banks have probably been on all sides more or less scarped or cut away artificially, and some slight remains of the ancient walls may be still traced in one or two places. Besides the inscriptions already noticed, some fragments of marble columns remain from ancient buildings in the Roman period, while broken pottery and terra cottas of rude workmanship found scattered in the soil are the only relics of an earlier age. (Nibby, Distorni, vol. ii. pp. 206—237.)

LAVISCO or LABISCO, in Gallia Narbonensis, appears on a route from Mediolanum (Milan) through Durantonis (Monteuro ou Tarentinose) to Vienna (Via) on the Rhone. Lavisco is between Lescinum (Lescu, or Chaulérois ou Mont Lescu) and Augusta (Aoste ou Aosta), and 14 M. from each. D'Anville supposes that Lavisco was at the ford of the little river Laiuse, near its source; but the distance between Lescinum and Augusta is too much, and accordingly he would alter the figures in the two parts of this distance on each side of Lavisco, from 12th to 28th. (J. E.)

LAURO TIBUR. [Now Auro, Ptol. iii. (2.) § 66; Lobdelius.] A town of Gallia Transpadana, most mentioned by Piny, but placed by Ptolemy, together with Vercellae, in the territory of the Libici. The Itin. Ant. (pp. 282, 347) places it on the road from Ticinum to Vercellae, at 22 M. from the former and 26 from the latter city; these distances agree well with the position of Lobdelius, a small town on the right bank of the Apogna, about 10 miles from its confluence with the Po. According to the same itinerary (p. 340) another road led from thence by Elegemus and Quadrato to Augustaine Taurinorum, and in accordance with this, Antoninus Marcellinii (xv. 8. § 18) mentions Lauselum as on the direct road from Trinum to Taurin. It seems not to have enjoyed municipal rank in the time of Piny, but apparently became a place of more consideration in later days, and under the Leuward rule was a town of importance, as it continued during the middle ages; so that, though now but a poor decayed place, it still gives to the surrounding district the name of Lausellinae.

LAUREATA, a place on the coast of Daunia, which was taken by the traitor Haunius, for Totila and the Goths, in a. d. 543. (Pr.-cop. B. G. iii. 39; Le Beau. Bas Empire, vol. ix. p. 182.)

LAURENTUM. (Aepheusor, Strab. et al.; Au- penus, etc. D'Anverse; Torre di Paterno,) an ancient city of Latium, situated near the sea-coast between Ostia and Lavinium, about 16 miles from Rome. It was represented by the legendary history universally adopted by Roman writers as the ancient capital of Latium, and the residence of king Latinus, at the time when Aeneas and the Trojan colony landed in that country. All writers also concur in representing the latter as first landing on the shores of the Laurentine territory. (Liv. i. 1; Dionys. i. 45. 53; Strab. v. p. 229; Appian. Rom. i. 1; Vict. Orig. Gent. Rom. 13; Virg. Aen. vii. 43, &c.) But the same legendary history related that after the death of Latinus, the seat of government was transferred first to Lavinium, and subsequently to Alba; hence we cannot wonder that, when Laurentum appears in historical times, it holds but a very subordinate place, and appears to have fallen at an entirely incredible age, and of comparative insignificance. The historical notices of the city are indeed extremely few and scanty; the
most important is the occurrence of its name (or that of Laurenti; at least) together with those of Ardea, Antium, Circeii, and Tarraconae, among the allies or dependants of Rome, in the celebrated treaty of the Romans with Carthage in n. c. 509. (Pol. iii. 22.) From this document we may infer that Laurentum was then still a place of some consideration as a maritime town, though the proximity of the Roman port and colony of Ostia must have tended much to its disadvantage. Dionysius tells us that some of the Tarraconae had retired to Laurentum on their expulsion from Rome: and he subsequently notices the Lauretines among the cities which composed the Latin League in n. c. 496. (Dionys. v. 54, 61.) We learn, also, from an incidental notice in Livy, that they belonged to that confederacy, and retained, in consequence, down to a late period the right of participating in the sacrifices on the Alban Mount. (Livy. xxxvii. 3.) It is clear, therefore, that though no longer a powerful or important city, Laurentum continued to retain its independent position down to the great Latin War in n. c. 340. On that occasion the Lauretines are expressly mentioned as having been the only people who took no share in the war; and, in consequence, the treaty with them which previously existed was renewed without alteration. (Livy. viii. 11.) "From henceforth" (adds Livy) "it is renewed always from year to year on the 1st day of the Fercia Latium." This, the poor and decayed city of Laurentum continued down to the Augustan age to retain the nominal position of an independent ally of the imperial Rome.

No further notice of it occurs in history during the Roman Republic. Lucan appears to reckon it as one of the places that had fallen into decay in consequence of the Civil Wars (vii. 394), but it is probable that it had long before that dwindled into a very small place. The existence of a town of the name ("oppidum Laurentum") is, however, attested by Mel. Strabo, and Pliny (Mel. ii. 4. § 9; Strab. v. p. 232; Plin. iii. 5. s. 9), and the sea-coast in its vicinity was adorned with numerous villas, among which that of younger Pliny was conspicuous. (Plin. Ep. ii. 17.) It is remarkable that this author, in describing the site and its appearance, makes no allusion to Laurentum itself, though he mentions the neighbouring colony of Ostia, and a village or "vicius" immediately adjoining his villa; last may probably be the same which we find called in an inscription "Vicius Augustus Laurentum." (Grunter, Inscrip. p. 398, No. 7.) Hence, it seems probable that Laurentum itself had fallen into a state of great decay; and this must have been the cause that shortly after, the two communities of Laurentum and Lavinium were united into one municipal body, which assumed the appellation of Lauro-Lavinium, and the inhabitants that of Lauro-Lavinates, or Laurentes Lavinates. Sometimes, however, the united "populus" calls itself in inscriptions simply "Senatus populusque Laurentus," and in one case we find mention of a "Colonia Augusta Laurentiae Laviniae." (Lav. T. S. 134, p. 484, No. 3.) Nevertheless it is at least very doubtful whether there was any fresh colony established on the site of the ancient Laurentum; the only one mentioned in the Liber Coloninarum is that of Lauro-Lavinium, which was undoubtedly fixed at Lavinium (Pratica). [Lavinium.] The existence of a place bearing the name of Laurentum, though probably a mere village, down to the latter ages of the Empire, is, however, clearly proved by the Itineraries and Tabula (Itin. Ant. p. 301; Tab. Peut.) and it appears from ecclesiastical documents that the locality still retained its ancient name as late as the 8th century (Anastas. Vit. Pontif. ap. Nibby, vol. ii. p. 201). From that time all trace of it disappears, and the site seems to have been entirely forgotten.

Lauretum seems to have, from an early period, given name to an extensive territory, extending from the month of the Tiber nearly, if not quite, to Ardea, and forming a part of the broad littoral tract of Latium, which is distinguished from the rest of that country by very marked natural characteristics. [Latinum.] Hence, we find the Laurentine territory much more frequently referred to than the city itself; and the place where Aeanes is represented as landing is uniformly described as "in agris Laurenti," though we know from Virgil that he conceived the Trojans as arriving and first establishing themselves at the mouth of the Tiber. But it is clear that, previous to the foundation of Ostia, the territory of Laurentum was considered to extend to that river. (Serv. ed Aen. vii. 661, xi. 316.) The name of "ager Laurens" seems to have continued in common use to be applied, even under the Roman Empire, to the whole district extending as far as the river Numicius, so as to include Lavinium as well as Laurentum. It was, like the rest of this part of Latium near the sea-coast, a sandy tract of no natural fertility, whence Aeanes is represented as complaining that he had arrived "in agrum macerrimum, littorisassimunnum." (Fab. Max. ap. Serv. ed Aen. i. 3.) In the immediate neighbourhood of Laurentum were considerable marshes, while the tract a little further inland was covered with wood, forming an extensive forest, known as the Silva Laurentina. (Jul. Obess. 24.) The existence of this at the time of the landing of Aeanes is alluded to by Virgil (Aen. xi. 133, Sc.) Under the Roman Empire it was a favourite haunt of wild-boars, which grew to a large size, but were considered by epicures to be of inferior flavour on account of the marshy character of the ground in which they fed. (Verg. Aen. x. 709; Hor. Saec. ii. 4. 42; Martial, vi. 455.) Also to Virgil, no less than two tribes of Ctenii had a farm or villa in the Laurentine district, with a park stocked with wild-boars, deer, and other game. (Var. R. R. iii. 13.) The existence of extensive marshes near Laurentum is noticed also by Virgil (Aen. x. 107) as well as by Martial (x. 37. 5), and it is evident that even in ancient times they rendered this tract of country unhealthy, though it could not have suffered from malaria to the same extent as its modern times. The villas which, according to Pliny, lined the shore, were built close to the sea, and were probably frequented only in winter. At an earlier period, we are told that Scipio and Lælius used to repair to the seaside on the Laurentine coast, where they amused themselves by gathering shells and pebbles. (Cic. de Or. ii. 6; Val. Max. viii. 8. § 4.) On the other hand, the bay-trees (aemilius) which are seen to this day on the Sila Lavinia was said to abound were thought to have a beneficial effect on the health, and on this account the emperor Commodus was advised to retire to a villa near Laurentum during a pestilence at Rome. (Herod. i. 12.) The name of Laurentum itself was generally considered to be derived from the number of these trees, though Virgil would derive it from a particular and celebrated tree of the kind. (Vit. i. 2.)
LAURENTUM.

Orig. G. Rom., 10; Var. L. L. v. 152; Virg. Aen. viii. 59. 59.)

The precise site of Laurentum has been a subject of much doubt; though it may be placed approximately without question between Ostia and Praetoria, the latter having been already established as the site of Lavinium. It has been generally fixed at Torre di Paterno, and Gell asserts positively that there is no other position within the required limits "where either ruins or the traces of ruins exist, or where they can be supposed to have existed." The itinerary gives the distance of Laurentum from Rome at 16 m. P., which is somewhat less than the truth, if we place it at Torre di Paterno, the latter being rather more than 17 m. P. from Rome by the Via Laurentina; but the same remark applies to Lavinium also, which is called in the itinerary 16 miles from Rome, though it is full 18 miles in real distance. On the other hand, the distance of 6 miles given in the table between Lavinium and Laurentum coincides well with the interval between Praetoria and Torre di Paterno. Nibby, who places Laurentum at Casto Ceto, considers firmly that, admits that there are no ruins on the site. Those at Torre di Paterno are wholly of Roman and imperial times, and may perhaps indicate nothing more than the site of a villa, though the traces of an aqueduct leading to it prove that it must have been a place of some importance. There can indeed be no doubt that the spot was a part of the dependencies of Laurentum under the Roman empire, though it may still be questioned whether it marks the actual site of the ancient Latin city. (Gell. Top. of Rome, pp. 294—298; Nibby, Dintorni di Roma, vol. ii. pp. 187—203; Abeeken, Mitt. Ital. p. 62; Bormann, All. Lat. Corographie, pp. 94—97.)

It is hardly necessary to notice the attempts which have been made to determine the site of Fliny's Laurentine villa, of which he has left us a detailed description, familiar to all scholars (Vit. Ep. ii. 17). As it appears from his own account that it was only one of a series of villæ which adorned this part of the coast, and many of them probably of equal, if not greater, pretensions, it is evidently idle to give the name to a mass of brick ruins which there is nothing to identify. In their zeal to do this, antiquarians have overlooked the circumstance that his villa was evidently close to the sea, which at once excludes almost all the sites that have been suggested for it.

The road which led from Rome direct to Laurentum retained, down to a late period, the name of Via Laurentina. (Ovid, Fast. ii. 679; Val. Max. viii. 5. 66.) It was only a branch of the Via Ostiensis, from which it diverged about 3 miles from the gates of Rome, and proceeded nearly in a direct line towards Torre di Paterno. At about 10 miles from Rome it crossed the Tiber by a bridge, which appears to have been called the Ponte ad Decimin, and subsequently Pons Deciminus; hence the name of Decimo now given to a cascade or farm a mile further on; though this was situated at the 11th mile from Rome, as is proved by the discovery on the spot of the Roman milestone, as well as by the measurement on the map. Remains of the ancient pavement mark the course of the Via Laurentina both before and after passing this bridge. (Nibby, Dintorni, vol. i. p. 539, vol. iii. p. 621.)

Roman authors generally agree in stating that the place where the Trojans first landed and established their camp was still called Troia (Liv. i. 1; Cat. ap. Serv. ad Aen. ii. 5; Fest. v. Trinx, p. 367), and that it was in the Laurentine territory; but Virgil is the only writer from whom we learn that it was on the banks of the Tiber, near its mouth (Aen. viii. 36, ix. 459, 790, &c.). Hence it must have been in an area of the "auctor Laurentius," which was assigned to Ostia after the foundation of the colony; and Servius is therefore correct in placing the camp of the Trojans "circa Ostiam." (Serv. ad Aen. vii. 31.) The name, however, would appear to have been the only thing that marked the spot. [E. H. B.]

LAURENTIANUM PORTUS, a seaport on the coast of Etruria, mentioned only by Livy (xxx. 39.). From this passage it appears to have been situated between Cosa and Populonium; but its precise position is unknown. [E. H. B.]

LAURI, a place in North Gallia, on a road from Lugdunum Batavorum (Leiden) to Noviomagus (Nijmegen), and between Fretio (Vleuten) and Niger Pulius. It is 5 m. P. from Niger Pulius to Lauri, and 12 m. P. from Lauri to Fretio. No more is known of the place. [G. L.]

LAURIEUM or LAUREACUM, a town in the north of Noricum, at the point where the river Anius empties itself into the Danube. (Avien. Marc. xxxii. 10; It. Ant. pp. 231, 253, 241, 277; Gruter, Insocr. p. clxxiv. 3; Not. Imp. in the Tab. Pest. its name is misspelt Blabrioricum.) In a doubtful inscription in Gruter (p. 484. 3) it is called a Roman colony, with the surname Augusta: Lauricum was the largest town of Noricum Ripense, and was connected by high roads with Sermonia and Taurinum in Pannonia. According to the Antonine itinerary, it was the head-quarters of the third legion, for which the Notitia, perhaps more correctly, mentions the second. It was, moreover, one of the chief stations of the Danubian fleet, and the residence of its praefectus, and contained considerable manufactures of arms, and especially of shields. As the town is not mentioned by any earlier writers, it was probably built, or at least extended, in the reign of M. Aurelius. It was one of the earliest seats of Christianity in those parts, a bishop of Lauriacum being mentioned as early as the middle of the third century. In the fifth century the place was still so well fortified that the people of the surrounding country took refuge in it, and protected themselves against the attacks of the Alamanni and Thuringians; but in the 6th century it was deserted by the Avari, and although it was restored as a frontier fortress, it afterwards fell into decay. Its name is still preserved in the modern village of Lorich, and the celebrated convent of the same name, around which numerous remains of the Roman town may be seen extending as far as Ensae, which is about a mile distant. (Comp. Machar, Norici, i. p. 362, 268, 163, ii. p. 75.) [L.S.]

LAURUM (Augea, Herod. vii. 144; Augea, Thuc. ii. 535; J. Amphiaraus, l'opinion di gl'altro Amphiaraos, Aristoph. Ar. 1106, silver coins, with the Athenian figure of an owl), a range of hills in the south of Attica, celebrated for their silver mines. These hills are not high, and are covered for the most part with trees and brushwood. The name is probably derived from the shafts which were sunk for obtaining the ore, since Augea in Greek signifies a street or lane, and Augea would therefore mean a place formed of such lanes, — i. e., a mine of shafts, cut one into the other, like a catacomb. (Wordsworth, Athens and Attica, p. 209.) The mining district extended a little way north of
Sunium to Thorius, on the eastern coast. Its present condition is thus described by Mr. Dodwell:—

"One hour from Thorius brought us to one of the ancient shafts of the silver mines; and a few hundred yards further we came to several others, which are of a square form, and cut in the rock. We observed only one round shaft, which was larger than the others, and of considerable depth, as we conjectured, from the time that the stones, which were thrown in, took to reach the bottom. Near this are the foundations of a large round tower, and several remains of ancient walls, of regular construction. The traces are so extensive, that they seem to indicate, not only the buildings attached to the mines, but the town of Laurium itself, which was probably strongly fortified, and inhabited principally by the people belonging to the mines." Some modern writers doubt whether there was a town of the name of Laurium; but the grammarians (Suidas and Photius) who call Laurium a place (vóra) in Attica appear to have meant something more than a mountain; and Dodwell is probably correct in regarding the ruins which he describes as those of the town of Laurium. Near these ruins Dodwell observed several large heaps of scoria scattered about. Dr. Wordsworth, in passing along the shore from Sunium to Thorius, observes:—"The ground which we tread is strewn with rusty heaps of scoria from the silver ore which once enriched the soil. On our left is a hill, called Scord, so named from these heaps of scoria, with which it is covered. Here the shafts which have been sunk for working the ore are visible." The ores of this district have been a-certain to contain lead as well as silver (Walpole's Turkey, p. 426). This confirms the emendations of a passage in the Aristotelian Oceanomics proposed by Böck and Wordsworth, where, instead of Τύρων in Περὶ θηράματος Αθηναίων Αθηναίων συνεχείαν τον μέλανθι τον εκ των Τυρων παραλαβάνων, Böck suggests λαυριαίων, and Wordsworth ἄργυρων, which ought rather to be ἀργυρῶν, as Mr. Levin observes.

The name of Laurium is preserved in the corrupt form of Leugrama or Lagegremi, which is the name of a metochi of the monastery of Mendiéon.

The mines of Laurium, according to Xenophon (de Vettig. iv. 2), were worked in remote antiquity; and there can be no doubt that the possession of a large supply of silver was one of the causes of the early prosperity of Athens. They are alluded to by Auschylus (Pers. 235) in the line —

Ἄγγλοις πυγή τις ἀκτῶν ἐστιν, θυατεῖρος χήλων.

They were the property of the state, which sold or let for a long term of years, to individuals or companies, particular districts, partly in consideration of a sum or fine paid down, partly of a reserved rent equal to one twenty-fourth of the gross produce. Shortly before the Persian war there was a large sum in the Athenian treasury, arising out of the Laurium mines, from which a distribution of ten drachmae a head was going to be made among the Athenian citizens, when Themistocles persuaded them to apply the money to the increase of their fleet. (Herod. vi. 144; Plut. Them. 4.) Böck supposes that the distribution of ten drachmae a head, which Themistocles persuaded the Athenians to forgo, was made annually, from which he proceeds to calculate the total produce of the mines. But it has been justly observed by Mr. Grote, that we are not authorised to conclude from the passage in Herodotus that all the money received from the mines was about to be distributed; nor moreover is there any proof that there was a regular annual distribution. In addition to which the large sum lying in the treasury was probably derived from the original purchase money paid down, and not from the reserved annual rent.

Even in the time of Xenophon (Mem. iii. 6. § 12) the mines yielded much less than at an early period; and in the age of Philip, there were loud complaints of unsuccessful speculations in mining. In the first century of the Christian era the mines were exhausted, and the old scoriæ were smelted a second time. (Strab. ix. p. 399.) In the following century Laurium is mentioned by Pausanias (i. 1), who adds that it had once been the seat of the Athenian silver mines. (Dodwell, Tour through Greece, vol. i. p. 537, seq.; Wordsworth, Athens and Attica, p. 208, seq.; Walpole's Turkey, p. 425, seq.; Fiehler, Keine durch Griechenland, vol. i. p. 36, seq.; Leake, Descrip. of Attica, p. 63; Böck, Dissertation on the Silver Mines of Laurium, appended to the English translation of his Public Economy of Athens; Grote's Greece, vol. v. p. 71, seq.)

LAURUM, a village in Eubœa, more correctly written Loryum. [LORIUM.] 

LAUREON (Αὐρωύον: prob. Λαυρύος, W. of Xenarc, in Valencia), a town of Hispana Tarraconensis, near Suero, and not far from the sea. Though apparently an insignificant place, it is invested with great interest in history, both for the siege it endured in the Sertorian War, and as the scene of the death of C. Pompeius the Younger, after his flight from the defeat of Munda. (Liv. xxxiv. 17; Appian, B. c. 1, 109; Plut. Sert. 18, Pompe. 18; Flor. iii. 22, iv. 2, comp. Bell. Hisp. 37; Oros. v. 23; Ubert. vol. ii. pt. 1. p. 404.) [P. 8.]

LAUS (Λότος; Eth. Λάυος; near Scalos), a city on the W. coast of Lucania, at the mouth of the river of the same name, which formed the boundary between Lucania and Bruttium. (Strab. vi. pp. 253, 254.) It was a Greek city, and a colony of Sybaris; but the date of its foundation is unknown, and we have very little information as to its history. Herodotus tells us that, after the destruction of Sybaris in B.C. 510, the inhabitants who survived the catastrophe took refuge in Laus and Siculus (Herod. vi. 20); but he does not say, as has been supposed, that these cities were then founded by the Sybarites: it is far more probable that they had been settled long before, during the greatness of Sybaris, when Persia also was planted by that city on the coast of the Tyrrhenian sea. The only other mention of Laus in history is on occasion of a great defeat sustained there by the allied forces of the Greek cities in southern Italy, who had apparently united their arms in order to check the progress of the Lucanians, who were at this period rapidly extending their power towards the south. The Greeks were defeated with great slaughter, and it is probable that Laus itself fell into the hands of the barbarians. (Strab. vi. p. 253.) From this time we hear no more of the city; and though Strabo speaks of it as still in existence in his time, it seems to have disappeared before the days of Pliny. The latter author, however (as well as Ptolemy), notices the river Lalis, which Pliny concurs with Strabo in fixing as the boundary between Lucania and Bruttium. (Strab. i. c. ete. L. iii. 5, s. 10; Ptol. iii. 1. § 9; Steph. B. s. r. v.)

The river Lalis still retains its ancient name as the Loo, or Laina: it is a considerable stream, falling into the Gulf of Policastro. Near its sources
about 10 miles from the sea, is the town of Latus, supposed by CLuverius to represent the ancient Laus; but the latter would appear, from Strabo’s description, to have been nearer the sea. Romanielli would place it at Scala, a small town with a good port, about three miles X. of the mouth of the river; but it is more probable that the ancient city is to be looked for between this and the river Lus. (CLuver. Ital. p. 1262; Romanielli, vol. i. p. 393.) According to Strabo there was, near the river city, a temple or Heroon of a hero named Dracae, close to which was the actual scene of the great battle between the Greeks and Lucanians. (Strab. l. c.) Strabo speaks of a gulf of Laus, by which he can hardly mean any other than the extensive bay now called the Gulf of Policastro, which may be considered as extending from the promontory of Pyrna (Cape degli Infrascoli) to near Circeo. There exist coins of Laus, of ancient style, with the inscription AUNION; they were struck after the destruction of Sybaris, which was probably the most flourishing time in the history of Laus. [E. H. B.]

**TOWN OF LAUS.**

LAUS Pompeia, sometimes also called simply LAUS (Eth. Ladiens; Lodi Vercoch), a city of Gallia Transalpina, situated 16 miles to the NE. of Milan, on the highroad from that city to Piacenza. (Itin. Ant. pp. 98, 127.) According to Pliny it was an ancient Gaulish city founded by the Bolans soon after they crossed the Alps. (Plin. iii. 17, 8. 21.) It afterwards became a Roman municipal town, and probably assumed the epithet of Pompeia in compliment to Pompeius Strabo, who conferred the rights of Latin citizens upon the municipalities of Transalpine Gaul, but we find no special mention of the fact. Nor does any historical notice of Laus occur under the Roman Empire: though it seems to have been at that period a considerable town, and is termed in the Itineraries “Laudae civitas,” and by P. Dianius “Laudae civitas.” (Itin. Ant. p. 98; Itin. Hier. p. 617; P. Dian. v. 2.) In the middle ages Laus became an important city, and an independent republic, but was taken and destroyed in A. D. 1132 by the Maienses, and in 1158 the emperor Frederic Barba-rosa having undertaken to restore it, transferred the new city to the site of the modern Lodi, on the right bank of the Adda. The ancient site is still occupied by a large village called Lodi Vercoch, about 5 miles due W. of the modern city. It is correctly placed by the Itineraries 16 M. P. from Mediolanum, and 24 from Placentia. (Itin. Ant. p. 98.) [E. H. B.]

**LAUSONIUS LACUS.** in the country of the Helvetii. The Antiquus Itin. has a road from Mediolanum (Milan) through Geneva to Aargauernum (Strasburg). Sixteen Roman miles from Geneva, on the road to Strasburg, the Itin. has Equestris, which is Colonia Eques (or Noviodunum (Nyons)); and the next place is Lausus Lanium, 20 Roman miles from Equestris. To the next station, Urbia (Orbe), is 15 Roman miles. In the Table the name is “Lacus Lacum,” and the distances from Geneva to Colonia Equestris and Lacum Lacum are respectively 18 M. P., or 36 together. The Lacus Lanium is supposed to be Lautun, on the Lake of Geneva; or rather a place or district, as D’Anville calls it, named Tulli. The distance from Geneva to Nyons, along the lake, is about 15 English miles; and from Nyons to Lautun, about 22 or 23 miles. The distance from Geneva to Nyons is nearly exact; but the 20 miles from Equestris to the Lacus Lanium is not enough. If Tulli, which is west of Lautun, is assumed to be the place, the measures will agree better. D’Anville cites M. Bouchat as authority for an inscription, with the name Lautunnenses, having been dug up at Tulli, in 1739; and he adds that there are remains there. (Comp. Ucker’s note, Gallien, p. 491.)

**LAUTULAE or AD LAUTULAS (e. Autro, Dix, Dieol.). is the name given by Livy to the pass between Tarraconae and Fundi, where the road winds round the foot of the mountains, between them and the sea, so as to form a narrow pass, easily defensible against a hostile force. This spot figures on two occasions in Roman history. In n. c. 342 it was here that the mutiny of the Roman army under C. Marius Vitulus broke out; one of the discontented cohorts having seized and occupied the pass at Lautulae, and thus formed a nucleus around which the rest of the malcontents quickly assembled, until they thought themselves strong enough to march upon Rome. (Livy vii. 39.) At a later period, in n. c. 315, it was at Lautulae that a great battle was fought between the Romans, under the dictator Q. Fabius, and the Sarmatians. Livy represents this as a drawn battle, with no decisive results: but he himself admits that some annalists related it as a defeat on the part of the Romans, in which the master of the horse, Q. Anius, was slain (ix. 23). Diodorus has evidently followed the annalists thus referred to (xix. 72), and the incidental remark of Livy himself shortly after, that it caused great agitation throughout Campania, and led to the revolt of the neighbouring Italian cities, would seem to prove that the statement of the event is much more serious than he has chosen to represent it. (Livy. ix. 25; Niebuhr, vol. iii. pp. 228—231.) The locality is always designated by Livy as “ad Lautulas.” It is probable that this was the name of the pass, but whether there was a village or other place called Lautulae, we are unable to tell. The name was probably derived from the existence of warm springs upon the spot. (Niebuhr, l. c., note 399.) It is evidently the same pass which was occupied by Minucius in the Second Punic War, in order to guard the approach to Latiun from Campania (Livy. xxiii. 15), though its name is not there mentioned. The spot is now called Passo di Portella, and is guarded by a tower with a gate, forming the barrier between the Roman and Neapolitan territories. (Emoare, vol. ii. p. 309.) [E. H. B.]

**LAUSTA. [Christianez]**

LAZI (Maced., Arzian, Peripl. p. 11; Plin. vi. 4; Atoian, Joln. 10. § 5), one among the many tribes which composed the indigenous population which clustered round the great range of the Caucasus. This people, whose original seats were, according to Procopius (B. G. iv. 2), on the N. side of the river Phasis, gave their name, in later times, to the country which was known to the Greeks and Romans as Colchis, but which henceforth was called “Regio Lazica.” They are frequently mentioned in the
LEADIA. 151

Byzantine writers; the first that they appear in history was A.D. 456, during the reign of the emperor Marcian, who was successful against their king Gobazes. (Prisc. *Ecc. de Leg. Rom.* p. 71; comp. Le Beau, *Bas Empire*, vol. vi. p. 385.) The Lazic war, the contest of Justinian and Chosroes on the banks of the Phasis, has been minutely described by contemporary historians. (Procop. *B. P.* ii. 15, 17, 29, 29, 30, *B. G.* iv. 7—16. *Agath.* ii. iii. pp. 55—132, 141; Menand, *Protoc. *Ecc. de Leg. Gent.* pp. 99, 101, 133—147; comp. Gibbon, *c*. xiii.; Le Beau, vol. ix. pp. 44, 133.209—230.312—333.) In the Athus (pt. ii. pl. xiv.) to Dubois de Montpereux (*Ley. Voyage Autour du Caucuss*, comp. vol. ii. pp. 73—132) will be found a map of the theatre of this war. In A.D. 520, or 512 according to the era of theophanes, the Lazi were converted to Christianity (Gibbon, *c*.; Neander, *Gesch. der Christl. Religion*, vol. iii. p. 236), and, under the name of *Lazici*, are now spread through the country near the sea. angle of the Euxine from Gurjel to the neighborhood of Trebizond. Their language, belonging to the Indo-Germanic family, appears to contain remains of the ancient celtic idiom. (*Cosmas*, vol. ii. note 201, *trans.*; *Prichard, Physical Hist. of Mankind*, vol. iv. p. 263.)

LEADIA. [Λεαδία].

LEANDIS (Λεάνδης), a town in the eastern part of the strategy of Catania, in Armenia Minor, 18 miles to the south of Cucusus, in a pass of Mount Taurus, on the road to Anazarbus. (Ptol. *v.* 7. *§*. 7.) This town is perhaps the same as the larunda of the antenite itinerary (p. 211) and of Hierocles (p. 675), which must not be confounded with the larunda of Lycusania or Isauria. [*L. S.*]

LEANITAE. [Λεανίταις Σίνοις.]

LEANITES SINUS (Λεανίτις κόλας), a bay on the western side of the Persian Gulf, so named from the Arab tribe LEANITAE (Λεανίταις, Ptol. *vi.* 7. *§*. 18). They are placed north of Gerraah, between the Themis and the Abasrai. Pliny states that the name was variously written: *"Sinus intimus, in quo Lacuscum qui nominem idem: regio curum, in qua Lacuscum, vel, si Alius Anglicus, εἰς τὸν πάνταν, unum et ipsum sinum non-strii Aelanticum scriptus, aliis Aelanticum, Artemidorus Alanticus, Juba Aelanticum*" (vii. 28). Agra, which Pliny represents as the capital, is doubtless the *"Adari civitas*" (Αδαρίος πόλις) of Ptolemy, in the country of the Leantae. Mr. Forster regards the name as an abbreviated form of *"Sinus Kauhanites"* or *"Bay of Koushan", in which he discovers an idiomatic modification of the same name, the Arabic form for Haumen, — identical with the *Beni Khaleid,* — the inhabitants of the Avol or Hahviah of Scripture (*Havilah*). (*Geography of Arabia*, vol. i. pp. 48, 52, 53, vol. ii. p. 215.) The gulf apparently extended from the itamus Portus (Κόλονα) on the north, to the Chersonesia extremia (Rasool-Chör) on the south. [*G. W.*]

LEBADE. [Σεβλίνα.]

LEBADEIA (Λέβαδεια, Λεβάδεια, Λαβαδία, Λαβάδια, *Lestat. Leb.* 28; *Eh. Lebāsēi; Livadica*), a town near the western frontier of Boeotia, described by Strabo (ix. p. 414) as lying between Mt. Helicon and Chaeroneia. It was situated at the foot of a precipitous height, which is an abrupt northerly termination of Mt. Helikon. Pausanias relates (ix. 39. *§*. 1) that this height was originally occupied by the Homeric city of Midea (Μίδηα, *H. ii.* 507), from whence the inhabitants, under the conduct of Lebadas, an Athenian, migrated into the plain, and founded there the city named after him. On the other hand, Strabo maintains (ix. p. 413) that the Homeric cities Arne and Mideia were both swallowed up by the lake Copais. Lebadia was originally an insignificant place, but it rose into importance in consequence of its possessing the celebrated oracle of Trophonius. The oracle was consulted both by Hierocles (ix. 12) and by Marcian (Porph. *F. G.* viii. 134), and it continued to be consulted even in the time of Plutarch, when all the other oracles in Boeotia had become dumb. (Plut. *de Def. Orac.* 5.) Pausanias himself consulted the oracle, and he speaks of the town in terms which show that it was in his time the most flourishing place in Boeotia. But notwithstanding the sanctity of the oracle, Lebadia did not always escape the ravages of war. It was taken and plundered both by Lyseander and by Archelaus, the general of Mithridates. (Plut. *Lys. 28, Sull. 16.*) In the war against Persians, it exposed the side of the Romans, while Theses, Haliartus, and Coreeia declared in favour of the Macedonian king. (Polyb. *xxvii.* 1.) It continues to exist under the slightly altered name of Livadiia, and during the Turkish supremacy it gave its name to the whole province. It is still a considerable town, though it suffered greatly in the war of independence against the Turks.

The modern town is situated on two opposite hills, rising on each bank of a small stream, called Hercynia by Pausanias, but the greater part of the houses are on the western slope, on the summit of which is a ruined castle. Pausanias says that the Hercynia rose in a cavern, from two fountains, close to one another, one called the fountain of Oldiron and the other the fountain of Momcy, of which the persons who were going to consult the oracle were obliged to drink. The Hercynia is in reality a continuation of an occasional torrent from Mount Helipec; but at the southern extremity of the town, on the eastern side of the castle-lair, there are some copious springs, which were evidently the reputed fountains of the Hercynia. They issue from either side of the Hercynia, those on the right going to be the most copious, flowing from under the rocks in many large streams, and forming the main body of the river; and those on the left bank being insignificant and flowing, in the time of Dodwell, through ten small spouts, of which there are still remains. The fountains on the right bank are warm, and are called Chilid (χηλίδ), and sometimes χαλαβὰ φορά, or the water unit for drinking; while the fountains on the left bank are cold and clear, and are named Krya (κρύα, i.e., κρύα φόρας, the cold source, in opposition to the warm, Chilid). Neither of these two sets of fountains rise out of a cave, and so far do not correspond to the description of Pausanias; but there is a cavern close to each; and in the course of ages, since the destruction of the sacred springs of Trophonius, the fountains may easily have been choked up, and the springs have changed in different spots. The question, however, arises, which of the fountains contained the reputed springs of the Hercynia? The answer to this must depend upon the position we assign to the sacred grove of Trophonius, in which the source of the Hercynia was situated. Leake places the sacred grove on the right or eastern bank; but Ulrichs on the left, or western bank. The latter appears more probable, on account of the passage in Pausanias, *Δελτίον της*
LEBAEA.

The most remarkable object in the grove of Trophonius was the temple of the hero, containing his statue by Praxiteles, resembling a statue of Asclepius; a temple of Demeter, named Europa; a statue of Zeus-Hytonus (Pliouus) in the open air; and higher up, upon the mountain, the oracle (θυάτηρ). Still higher up was the hunting place of Persephone; a large unfinished temple of Zeus Basileus, a temple of Apollo, and another temple, containing statues of Cronus, Zeus, and Hera. Pausanias likewise mentions a chapel of the Good Daemon and of Good Fortune, where those who were going to consult the oracle first passed a certain number of days.

In the Turkish mosque, now converted into a church of the Panagia, on the western side of the river, three inscriptions have been found, one of which contains a dedication to Trophonius, and the other a catalogue of dedications in the temple of Trophonius. (See Böckh, Inscri. 1571, 1588.) Hence it has been inferred that the temple of Trophonius occupied this site. Near the fountain of Kephis there is a square chamber, with seats cut out of the rock, which may perhaps be the chapel of the Good Daemon and Good Fortune. Near this chamber is a cavern, which is usually regarded as the entrance to the oracle. It is 25 feet in depth, and terminates in a hollow filled with water. But this could not have been the oracle, since the latter, according to the testimony both of Pausanias and Philostratus, was not situated in the valley upon the Helleas, but higher up on the mountain. (Paus. ix. 39. § 4; Philostr. Vit. Apollo. viii. 19.) More justly expresses his surprise that Laski, after quoting the description of Pausanias, who says that the oracle was εν τοι τοιοδαπεδο, should suppose that it was situated at the foot of the hill. A person who consulted the oracle descended a well constructed of masonry, 12 feet in depth, at the bottom of which was a small opening on the side of the hill. Upon reaching the bottom he lay upon his back and introduced his legs into the hole, when upon a sudden the rest of his body was rapidly carried forward into the sanctuary. The site of the oracle has not yet been discovered, and is not likely to be, without an extensive excavation.

An account of the rites observed in consulting the oracle is given in the Dict. of Antig. p. 841, 2nd ed. (Delouw, Town through Greece, vol. i. p. 216, seq.; Locuir, Northern Greece, vol. i. p. 118, seq.; More, Town in Greece, vol. i. p. 233, seq.; Ulrich, Reisen in Griechenland, p. 164, seq.)

LEBAEA (Λεβαία), an ancient city in Upper Macedonia, and the residence of the early Macedonian kings, mentioned only by Herodotus (vii. 137).

LEBEN (Λεβέν), Strab. x. p. 478) or LEBENA (Λεβήνα), Polyb. iii. 17. § 4; Strabon; Phil. iv. 12, 7; Liodon, Pers. Poly., vii. 26, 27; Locuir, Port. Thr., a maritime town of Crete, which was a harbour of Gortyna, about 70 stadia inland. (Strab. L.c.) It possessed a temple of Asclepius, of great celebrity. (Tellinstr. Vitr. Apollon. ix. 11, and is represented by the modern hamlet of Leba. (Hick- Kreta, vol. i. pp. 394, 399.)

LEBECCHI. [Lunet.]

LEBEDONITA, a town upon the coast of Hissopia. To the west of this town, situated upon the mountain Seilius, at a great distance from Tarana. It is mentioned only by Avienus (Or. Marit. 509), in whose time, however, it had ceased to exist.

LEBEDOS (Λεβέδος; Eib. Λεβέδος), an ancient city on the western coast of Aisa Minor, 90 stadia to the east of Cape Myonnesus, and 120 to the north-west of Colophon. (Strab. xiv. p. 643.) The place was originally inhabited by Carians, until, on the immigration of the Ionians into Asia, it was taken possession of by them under the guidance of Andraemon, a son of Codrus. (Paus. vii. 3. § 2.) Strabo (xiv. p. 633), however, in speaking of the foundation of the Ionian cities, states that it was colonised by Androponus and his followers, having previously borne the name of Artis: the tomb of Andraemon, moreover, was shown in the neighbourhood of the place, where, on the road crossing the river, Hades. (Paus. i. 6.) For a long time Lebedos continued to be a city flourishing by its commerce, the fertility of its territory, and the excellent hot mineral springs in its neighbourhood, which still exist. (Hecat. Fragm. 219; Herod. i. 142; Thucyd. viii. 19.) It was afterwards nearly destroyed by Lygimachus, who transplanted its population to Ephesus (Paus. L.c. i. 9. § 8); after which time Lebedos appears to have fallen more and more into decay, so that in the days of Homer it was more deserted than Gabii or Fidenae. (Epist. i. 11. 7.) It is mentioned, however, as late as the 7th century of the Christian era (Aelian, V. H. viii. 5; Podt. v. 2. § 7; Mela, i. 17; Plin. H. N. v. 31; Hierocles, p. 660); and the Romans, in attempting to raise the place in some measure, established there the company of actors (τρίγυρον τοι ταυ λαονοου) who had formerly dwelt in Teos, whence during a civil commotion they withdrew to Ephesus. Attalus afterwards transplanted them to Myonnesus; and the Romans, at the request of the Teians, transferred them to Lebedos, where they were very welcome, as the place was very thinly inhabited. At Lebedos the actors of all India as far as the Hallespont had ever after an annual meeting, at which games were celebrated in honour of Dionysus. (Strab. xiv. p. 643.) Thus the site of Lebedos, marked by mounds, ruins, now called Ecclesia or Xingi, and consisting of masses of naked stone and bricks, with cement. There also exists the basement and an entire floor of a small temple; and nearer the sea there are traces of ancient walls, and a few fragments of Doric columns. (Chandler's Asia Minor, p. 125.) [L. S.]

LEBINIUS (Λεβίνιος), a small island in the Argaean sea, one of the Sporades, NE. of Amorgos, between which and Lebinius lies the still smaller island Cinarius. (Strab. x. p. 487; Steph. B. z. s. Sporadum; Phil. iv. 12, 23; Mela, ii. 7, 11; Ov. Met. vii. 222, 223, Ar. Am. ii. 81; Ross, Reise auf den Grecischen Inseln, vol. ii. p. 56.)

LEBONAH, a town in Palestine, north of Shiloh, identified by Mannheim with Leban, a village 4 hours S. of Nophis. (Judea, xxii. 19; Viner, Biblioth. Real- corder, i. 23.)

LEBUNI, [Lebunia.]

LECHAEUM. [Corinth, p. 682.]

LECTOCE, AD.
by the Jerusalem Lira, after Amausus (Orange), and xiii. 374, from it. D’Aunoy says that the distance is not great, for it seems that the place is at the passage of the small river Lec.

[ G. L. ]

**LECTUM (τὸ Λέκτω),** a promontory in the south-west of Tras, opposite the island of Lesbos. It forms the south-western termination of Mount Is. (Thom. L. xiv. 294; Herod. ii. 114; Thucyd. vii. 101; Pol. v. 2 § 4; Plin. v. 52; Liv. xxxvii. 37.) In the time of Strabo (xiii. p. 605, comp. p. 585) there was shown on Cape Lectum an altar said to have been erected by Agamemnon to the twelve great gods; but this very number is a proof of the late origin of the altar. Under the Byzantine emperors, Lectum was the northernmost point of the province of Asia. (Hieroc. p. 659.) Atthisenaeus (iii. p. 88) states that the purple shell-fish, found near Lectum as well as near Sigeum, was of a large size. The modern name of Lectum is Boda, or Santa Maria.

**LECTYTHUS (Λεκτυθος),** a town in the peninsula of Sithonia in Chalcidice, not far from Torone, with a temple to Athena. The town was attacked by Brasidas, who took it by storm, and consecrated the entire cape to the goddess. Everything was demolished except the temple and the buildings connected with it. (Thuc. iv. 115, 116.) [ E. B. J. ]

**LEDERATA OR LEADERATA (Λεδεράτα or Ατταρέα),** a fortified place in Upper Mysia, on a high road from Vinnacium to Dacia, on the river Margus. It was a station for a detachment of horse archers. (Procop. de Aed. iv. 6; Tab. Peut.; Notit. Imp., where it is called Leudatana.) Rains of ancient fortifications, commonly identified with the site of Lederata, are found in the neighbourhood of Rounce.

**LEDON (Λέδων; Eth. Λέδωτον),** a town of Phocis, north of Tithorea, the birthplace of Philematus, the commander of the Phocians in the Sacred War. In the time of Pausanias it was abandoned by the inhabitants, who settled upon the Cephisus, at the distance of 40 stadia from the town, but the ruins of the latter were seen by Pausanias. Leake supposes that the ruins of Palei Fera are those of Ledon. (Paus. x. 2 § 2, x. 3 § 2, x. 33 § 1; Leake, M. R. Greece, vol. ii. p. 89.)

**LEDON (Λέδων),** near Lecce, which the ecclesiastical writers mention as a bishop’s see. (Sozomen, H. E. v. 10; Niceph. Callist. viii. 42; Engel, Kypros, vol. i. p. 152.) [ E. B. J. ]

**LEDUS, or LEDUM, as Mela (ii. 5) names it, a small river of Galba Naborbaensis. Festus Avienus; (Ov. March. 590) names it Ledus. Mela speaks of the “Stagna Volcanum, Ledum flumen, castellum Lutera.” The Ledus is the Lec, which passes by Sextantia, to the east of Montale, and flows into the Etang de Maguelone or Perols below Lateral, now Latus or Latte. Pliny (ix. 8) gives the name of Stagnum Lutera to this Etang, and he speaks of it as abounding in mullets, and describes the way of taking them. The mullet is still abundant there. Pliny places the Stagnum Lateral in the territory of Nemausus (Nimes), which is at some distance. But the Etang and castle of Montale may be among the many small places (Plin. iii. 4) which were made dependent on Nemausus (Nemausianisbibus attributa).

[ G. L. ]

**LEÉTANI (Laéitani),**

**LEGGAE (Λέγγαι, Strab. xi. p. 503; Λέγγαι, Plut. Pomp. 35), a people on the shores of the Caspian, situated between Albania and the Amazons, and belonging to the Scythian stock. (Theophanes, ap. Strab. i. c.) The name survives, it has been conjectured, in the modern Leghi, the inhabitants of the E. region of Caucasus. (Comp. Pothoiki, *Lois dans les Steppes d’Astrakhan*; vol. i. p. 239.) [ E. B. J. ]

**LEGEDIA,** in Gallia, is placed by the Table on a road from Condate (Rennes) to Corinum, perhaps Choreon. It is 49 Gallic leagues from Condate to Legedia, and 19 from Legedia to Cassicia. None of the geographers agree about the position of Legedia. Wallenker places it at Uxbridge, near Lectum, in support of which there is some similarity of name.

[ G. L. ]

**LEGELIUM,** a town in Britain, mentioned in the Itinerary. At Castleford, in Yorkshire, the road fromIncoming (Aldeborough) crosses the river Aire; and in this neighbourhood coins and other antiquities have been dug up. A camp, however, has yet to be discovered. Castleford is generally identified with Legelinon.

Makecum is the first station from York on the way to London, 21 miles from the former town, and 16 from Danum (= Doncaster). This is from the 8th Itinerary.

In the 5th Legelium is exactly in the same position. This identifies the two. [ R. G. L. ]

**LEGIO (Λεγίο), a town of Palestine mentioned by Eusebius and S. Jerome. Its importance is greatly exaggerated by the fact that it is assumed by them as a centre from which to measure the distance of other places. Thus they place it 15 M. P. west of Nazareth, three or four from Tanaach (Onomast. s. v. Nazaret); Thaonach, Thaonach Canana, Apacriana. Israel (Palest. s. v. p. 873) correctly identifies it with the modern village Lege or el-Lejjien, "on the western border of the great plain of Edron", — which Eusebius and S. Jerome designate, from this town, μέγα πέλαγος Αύξηρων (Onomast. s. v. Potheinon), — "where it already begins to rise gently towards the low range of wooded hills which connect Carmel and the mountains of Samaria." Its identity with the Megiddo of Scripture is successfully argued by Dr. Robinson (Bib. Res. vol. iii. pp. 177—180). Megiddo is constantly joined with Tanaach, and Lejjen is the requisite distance from the village of Telchom, which is directly south of Tanaach. Both were occupied by the Canaanitish sheikhs (Josh. xii. 21), both assigned to the half-tribe of Manasseh, though lying within the borders of Issachar or Asher (xvii. 11; 1 Chron. vii. 29); both remain long unsubdued (Judges, i. 27). In the battle between Barak and Sisera "they fought in Tanaach by the Waters of Megiddo," — which waters issue from a copious fountain, the stream from which turns several mills, and is an important tributary to the Kishon (Maundrell, Journeys, March 22, p. 57.) This is probably the place mentioned by Shaw as the Ith-El-Kishon, or the head of the Kishon, under the south-east brow of Mount Carmel. Three or four of its sources, he says, lie within less than a furlong of each other, and discharge water enough to form a river half as big as the Isis. (Travels, p. 274, 4th ed.) It was visited and described by Mr. Welcker in 1842. He formed, March 25th, an hour and forty minutes from Tel-mandil (Bibliotheca Siceria, 1843, pp. 76—78.) The great caravan road between Egypt and Damascus passes through Lejjen; and traces of an old Roman road are to be seen at the south of the village. [ G. W. ]

**LEGIO VII. GEMINA (Tit. Ann. p. 395; Aciae & Peppinach, Pot. ii. 6 § 30: Lecon.), a
LEI.'"ONI (Aluviwn), the later name of the Hisonic ELOKE (Heliyron), accordtnv to Strabo, was a town of Perrachia in Thessaly, and was situated at the foot of Mount Olympus, not far from the Tatraios or Euxon. The Greeks of Euxon report that there are some remains of this city at Samo. (Hey, 11, 250; Strab. xix. p. 440; Steph. B. s. 0. Heliyron; Leake, Northern Greece, vol. iii. p. 345.)

LEIMON (A'retou), a town of Sarmatia Europaeus, which Poibey (iii. 5, 29) places on an affluent of the Borysthenes, but whether on the Dereon, or some other, is uncertain. LIAHUM (A'lyoum, Pol. iii. 5, 12), on the Pines Meotis, appears to be the same place repeated by an oversight. (Schafarik, Not. necr. p. 512.)

LEHOSYRHIUM. [Attica, p. 326, b.)

LEALANNVNIUS SINUS, in Britain, mentioned by Poibey (ii. 3) as lying between the estuary of the Cota ( Clyde) and the Epiian Promontory (Mall of Cantyre) = Loch Fheugh. [R. G. L.]

LELANUTS CAPMUS (tô א"לופטוס pe'idov), a fertile plain in Euboea, between Chalidcs and Eretra, which was an object of frequent contention between these cities. [Chalidcs.] It was the subject of volcanic action. Strabo relates that on one occasion a torrent of hot mud issued from it; and it contained some warm springs, which were used by the dictator Sulla. The plain was also celebrated for its vineyards; and in it there were mines of copper and iron. (Strab. 1. p. 58, x. p. 447, seq.; Hom. Hymn. in Apoll. 219; Theogn. 888; Leake, Northern Greece, vol. iii. p. 255.) Play mentions a river Lelantas in Euboea, which must have flowed through this plain, if it really existed. (Pllin. iv. 12. s. 21.)

LELEGES. (A'llyeców), an ancient race which was spread over Greece, the adjoining islands, and the Asiatic coast, before the Hellenes. They were so widely diffused that we must either suppose that their name was descriptive, and applied to several different tribes, or that it was the name of a single tribe and was afterwards extended to others. Strabo (viii. p. 322) regarded them as a mixed race, and was disposed to believe that their name had reference to this (tô σιλέκτους γεγονέων). They may probably be looked upon, like the Pelasgians and the other early inhabitants of Greece, as members of the great Indo-European race, who became gradually incorporated with the Hellenes, and thus ceased to exist as an independent people.

The most distinct statement of ancient writers on the origin of the Leleges is that of Herodotus, who says that the name of L leges was the ancient name of the Carions (Irod. i. 171). A later Greek writer considered the Leleges as standing in the same relation to the Carians as the Helots to the Laconians and the Penetae to the Thessalians. (Athen. vi. p. 271.) In Homer both Leleges and Carians appear as equals, and as auxiliaries of the Trojans. (Iliad. 42.) The Leleges were ruled by Alces, the father-in-law of Priam, and inhabit a

LEI.'"ONI. Roman city of Asturia, in Hispam Tarracenses, admirably situated at the confluence of two tributaries of the Eo, at the foot of the Asturian mountains, commanding and protecting the plain of Lein, as its name implies, it grew out of the station of the new 7th legion, which was raised by the emperor Galba in Hispam (Tac. Hist. ii. 11; Suet. Galba, 10.) Taetus calls the legion GALBIANA, to distinguish it from the old LEI.'"ONI CLAUDIA, but this appellation is not found on any genuine inscriptions. It appears that they have received the appellation of Gemina (respecting the use of which, and Gemella, see Caesar Hist. iii. 3) on account of its amalgamation by Vespasian with one of the German legions, not improbably the LEGIO I. GERMANICA. Its full name was VII. GEMINA FELIX. After serving in Pannonia, and in the civil wars, it was settled by Vespasian in Hispam Tarracenses, to supply the place of the VI. Victrix and X. Gemina, two of the three legions ordinarily stationed in the province, but which had been withdrawn to Germany. (Tac. Hist. ii. 11, 67, 86, iii. 7, 10, 21—25, iv. 39; Inscrip. ap. Gruter, p. 245, no. 2.) That its regular winter quarters, under later emperors, were at Lein, on the banks of the Iberus, and between the Pagus, the Poegeny, and the Notitia Imperii, as well as from a few inscriptions (Muratori, p. 2037, no. 8, A.D. 150; p. 335, nos. 2, 3. A.D. 163; p. 336, no. 3. A.D. 167; Gruter, p. 260, no. 1, A.D. 216;) but there are numerous inscriptions to prove that a strong detachment of it was stationed at Tarra, the chief city of the province. (The following are a selection, in order of time.—Ovill, no. 5496, A.D. 182; no. 48815; Gruter, p. 365, no. 7.) In these inscriptions the legion has the surnames of P. F. ANTONINIANA, P. F. ALEXANDRIANA, and P. F. SEVERIANA ALEXANDRIANA; and its name occurs in a Greek inscription as AET. Z. ΔΙΑΘΥΣ (C. I. vol i. no. 4022), while another mentions a χαλιάρχης ὑπὸ Πηλίου λεγέων ἐκφθορά (C. I. vol. i. no. 1126.) There is an inscription in which is found a "Tribunus Militum Legio VII. GEMINAE FELICIS IN GERMANIA," from a comparison of which with two inscriptions found in Germany (Leine, Schroffen, vol. i. nos. 11, 62; Borgeschi, sulle iscr. Rom. del Reno, p. 26), it has been inferred that the legion was employed on an expedition into Germany under Alexander Severus, and that this circumstance gave rise to the erroneous designation of Πηλιαρχος in the text of Poegeny. (Bickell, A.D. pt. ii. pp. 1026, seq.; Marggraf's Becker, Rom. Alterthum, vol. iii. pt. 2, p. 354; Goodfriend, in Pauly's Realencyclopädie, s. e. Legion.)

The station of this legion in Asturia grew into an important city, which resisted the attacks of the Gotth to A.D. 586, when it was taken by Levicgilco; and it was one of the few cities which the Gotths allowed to retain their fortifications. During the struggle with the Arab invaders, the same fortress, which the Romans had built to protect the plain from the incursions of the mountain tribes, became the advanced post which covered the mountain, as the last refuge of Spanish independence. After yielding to the first assault of the Moors, it was soon recovered, and was restored by Ordulo I. in 830. It was again taken by Al Mansur in 996, after a year's siege; but was recovered after Al Mansur's defeat at Caledonhà, about A.D. 1093; repulsed by Alonso V., and enlarged by Alonso I., under whose successor, Don Pedro, it ceased to be the capital of the kingdom of Leon, by the removal of the court to Strrille. The greater portion of the Roman walls may still be traced. (Fard., Handb. of Spain, p. 318.)
town called Pedasus at the foot of Mount Ida. (II. xxi. 86.) Strabo relates that Leleges and Carians once occupied the whole of Ionia, and that in the Milas pass of Asia Minor they were sufficiently defended by nature and the parts of the Leleges were shown. He further says that the two were so intermingled that they were frequently regarded as the same people. (Strab. vii. p. 321, xiii. p. 611.) It would therefore appear that there was some close connection between the Leleges and Carians, though they were probably different peoples. The Leleges seem at one time to have occupied a considerable part of the western coast of Asia Minor. A grandson of this Lelex is said to have led a colony of Mecarian Leleges into Messenia, where they founded Pylos, and remained until they were driven out by Noleus and the Pelasgians from Iolcos; whereupon they took possession of Ylis in Eolis. (Paus. v. 36. § 1.)

The Lacedaemonian traditions, on the other hand, represented the Leleges as the autochthons of Laconia; they spoke of Lelex as the first native of the soil, from whom the people were called Leleges and the land Lelega; and the son of this Lelex is said to have been the first king of Messenia. (Paus. iii. 1 § 1, iv. 1. §§ 1, 5.) Aristotle seems to have regarded Lencadia, or the western parts of Aetolia, as the original seats of the Leleges; for, according to this writer, Lelex was the autochthon of Lencadia, and from him were descended the Telebans, the ancient inhabitants of the Taphian islands. He also regarded them as the same people as the Locrians, in which he appears to have followed the authority of Hesiod, who spoke of them as the subjects of Lecrus, and as produced from the stones with which Dencalian reaped the earth after the deluge. (Strab. vii. pp. 321, 322.) Hence all the inhabitants of Mount Paromus, Locria, Rhodians, Boeotians, and others, are sometimes described as Leleges. (Comp. Dionys. Hal. i. 17.) (See Thrilval, History of Greece, vol. i. p. 22.)

LEMANIS PORTUS (Κανάς Λεμηνίς, Plut. ii. 3. § 4), one of the chief seaports of Britain, situated in the territories of the Cantii; the site near Lympne, in Kent. The road from Dueroportum to Portus Lemanis (Itin. Anton. iv.) is extant nearly its entire length, and known by the name of Stone Street.

The harbour or port is no longer to be traced, owing to the silting up of the sea; but it must have been situated opposite to West Hythe and Lympne. The remains of the castrum, called Stifford Castle, to the west of West Hythe, and below Lympne, indicate the quarters of the Turneconnian soldiers stationed there in defence of the Lituss Saxonicum. (Not. Dig.) Recent discoveries have shown that a body of marines (Clusiarii Britannici) were also located at the Portus Lemanis, and at Dulwich (Dovey). An altar was also found, revealing the remains of a British temple (Norfolk on Excavations made at Lympne.). The Portus Lemanis is laid down in the Peutingerian Tables, and it is mentioned by the anonymous Geographer of Ravenna.

The Roman station was situated on the slope of a hill. Like that of Richborough (Rutupiae), it was walled on three sides only; the side facing the sea being sufficiently defended by nature and the banks, such as we see at other Roman castra where the engineers have availed themselves of a natural defence to save the expense and labour of building walls. The fortress enclosed about 10 acres. The walls, in part only now standing, were upwards of 20 ft. high, and about 10 ft. thick; they were further strengthened by semicircular solid towers. The principal entrance was on the north, facing the site of the village of West Hythe. It was supported by two smaller towers, and, as recent excavations prove, by other constructions of great strength. Opposite to this, on the west, was a postern gate, of narrow dimensions. At some remote period the castrum was shuttered by a land-slip, and the lower part was carried away, and separated entirely from the upper wall, which alone stands in its original position. To this cause is to be ascribed the present disjoined and shattered condition of the lower part. Parts of the wall and the great gateway were completely buried. The excavations alluded to brought them to light, and enabled a plan to be made. Within the area were discovered the walls of one of the barracks, and a large house with several rooms heated by a hypocaust.

[GL. E.]

LEMANUS or LEMANNUS LACUS (Λεμάνιον, Λεμάνιον Λίμνη; Leman Lake or Lake of Geneva), Caesar says (B. G. i. 8) that he drew his rampart against the Helvetii from "the Lacus Lemannus, which flows into the Rhone, as far as the Jura;" a form of expression which some of the commentators have found fault with and altered without any reason. The name Λεμάνιον Λίμνη in Ptolemy's text (ii. 10. § 2) is merely a copyist's error. In the Antonine Itin. the name Lemanus Lacus occurs; and in the Table, Loomannus Lacus. Nolli (ii. 6.), who supposes the Rhodanies to rise not far from the sources of the Rhone and the Ister, says that, "after being received in the Lemanus Lacus, the river maintains its current, and flowing entire through it, runs out as large as it came in." Strabo (p. 271) has a remark to the same purpose, and Pliny (ii. 105), and Ammianus Marcellinus (xxv. 11). This is not the fact, as we may readily suppose, though the current of the Rhone is perceptible for some distance after the river has retired over the east end of the lake of Geneva. Austrinus (De Clor. Urb. Narbo) makes the lake the chief source of the Rhodanies:

Qua rapituras praecipuus Rhodanis genitore Lemanno;

but this poetical embellishment needs no remark.

The Lake of Geneva is an immense hollow filled by the Rhone and some smaller streams, and is properly described under another title. (Lacus Belnanus.)

[GL.]

LEMAV [GALLACLA]

LEMINCUM, in Gallia Narbonensis, is placed in the Table and the Antonine Itin. on a road from the Alpes Graiae (Little St. Bernard) to Vienna (Vienna). Lemincum is Lemena, near Chambery, and there is also, according to some authorities, a Mont Lemine. The next station to Leminicum on the road to Vienna is Labicenum. (Larissien.)

[GL.]

LEMNOΣ (Λήμνος; Ecil. Αὔρως), one of the larger islands in the Aegean sea, situated nearly midway between Mount Athos and the Hellespont. According to Pline (v. 12, s. 23), it lay 22 miles SW. of Imbrus, and 87 miles SE. of Athens, but the
LEMMOS.

LEMMOS.

latter is nearly double the true distance. Several ancient writers, however, state that Mount Athos cast its shadow upon the island. (Soph. ap. Schol. ad Theocr. vi. 76; Plin. L. c.) Pliny also relates that Lemnos is 112 miles in circuit, which is perhaps not far from the truth, if we reckon all the windings of the coast. Its area is nearly 150 square miles. It is of an irregular quadrilateral shape, being nearly divided into two peninsulas by two deep bays, Port Paradies on the N., and Port St. Antony on the S. The latter is a large and convenient harbour. On the eastern side of the island is a bold rock projecting into the sea, called Aeschylos E^rnanos λέπσις Αίμων, in his description of the beacon fires between Mount Ida and Mycenae, announcing the capture of Troy. (Asch. Agam. 283: comp. Soph. Hylas. 149.) Hills, but of no great height, cover two-thirds of the island; they are barren and rocky, and there are very few trees, except in some of the narrow valleys. The whole island bears the strongest marks of the effects of volcanic fire; the rocks, in many places, are like the burnt and vitrified scoria of furnaces. Hence we may account for its connection with Hephaestus, who, when hurled from heaven by Zeus, is said to have fallen upon Lemnos. (Hom. H. i. 594.) The island was therefore sacred to Hephaestus. (Schol. Thuc. ii. 25. 436; Or. Fast. iii. 82,) who was frequently called the Lemnian god. (Or. Met. iv. 185; Verg. Aen. viii. 454.) From its volcanic appearance it derived its name of Athaliaia (Αθηάλαια, Polyb. ap. Steph. B., and Erym. M. s. v. Αθηάλαια.) It was also related that from one of its mountains, called Monychius (Μονυχιος), fire was seen to blaze forth. (Antimach. ap. Schol. ad Nearch. Thuc. iv. 753; Lydippus. 227; Hesych. s. v.) In a village in the island, named Choros, there is a hot-spring, called Thormia, to which a commodious bath has been built, with a lodging house for strangers, who frequent it for its supposed medicinal qualities. The name of Lemnos is said to have been derived from the name of the Great Goddess, who was called Lemnos by the original inhabitants of the island. (Hecat. ap. Steph. B. s. v.)

The earliest inhabitants of Lemnos, according to Homer, were the Sintresses (Σιντρίσες), a Thracian tribe; a name, however, which probably only signifies robbers (from σιντρίζει). (Hom. H. i. 594, Od. viii. 294; Strab. vii. p. 331, x. p. 457, xii. p. 549.) When the Argonauts landed at Lemnos, they are said to have found it inhabited only by women, who had murdered all their husbands, and had chosen as their queen Hypsipyle, the daughter of Thous, the former king of the island. (See Dict. of Ruins, art. Hymettus.) Some of the Argonauts settled here, and became by the Lemnian women the fathers of the Minyae (Μίνυαι), the later inhabitants of the island. The Minyae were driven out of the island by the Tyrenian Pelasgians, who had been expelled from Attica. (Herod. iv. 143, v. 137; Apoll. Rhod. v. 608, seq., and Schol. Apollod. i. 9, § 17, iii. 6, § 44.) It is also related that these Pelasgians, out of revenge, made a descent upon the coast of Attica during the festival of Artemis at Brauron, and carried off some Athenian women, whom they made their concubines; but, as the children of these women despoiled their half-brothers born of Pelasgian women, the Pelasgians murdered both them and their Athenian mothers. In consequence of this atrocity, and of the former murder of the Lemnian husbands by their wives, "Lemnian Doles" (Λημνιών ὅλαι) became a proverb throughout Greece for all atrocious acts. (Herod. vi. 128; Estast. ad II. p. 158, 11, ad Dionys. Per. 347; Zenob. iv. 91.) Lemnos continued to be inhabited by Pelasgians, when it was conquered by Otanes, one of the generals of Darius Hystaspis (Herod. v. 26); but Miltiades delivered it from the Persians, and made it subject to Athens, in whose power it remained for a long time. (Herod. vi. 157; Thuc. iv. 28, viii. 57.) In fact, it was always regarded as an Athenian possession, and accordingly the peace of Antalcidas, which declared the independence of all the Grecian states, nevertheless allowed the Athenians to retain possession of Lemnos, Imbros, and Seyros. (Xen. Hell. iv. 8. § 12, v. 1. § 31.) At a later period Lemnos passed into the hands of the Macedonians, but it was restored to the Athenians by the Romans. (Polyb. xxx. 18.)

In the earliest times, Lemnos appears to have contained only one town, which bore the same name as the island (Hom. J. xiv. 230); but at a later period we find two towns, Myrina and Hephasteas. Myrina (Μηρινα: Eth. Μηρησαιων) stood on the western side of the island, as we may infer from the statement of Pliny, that the shadow of Mt. Athos was visible in the forum of the city at the time of the summer solstice. (Plin., Nat. Hist. iii. 140; Steph. B. s. v.; Polyb. iii. 13. § 4.) On its site stands the modern Kastro, which is still the chief town in the place. In contains about 2000 inhabitants; and its little port is defended by a pier, and commanded by a ruinous medieval fortress on the overhanging rocks. Hephasteas, or HEPHAESTIA (Ἡφαστεια, Ηϕαστεια: Eth. Ηϕασταίσας) was situated in the northern part of the island. (Herod., Plin., Polyb. i. cc. Stepb. B. s. v.) There are coins of Hephasteia (see below), but none of Myrina, and none bearing the name of the island. (Eckhel, vol. ii. p. 51.)

According to Pliny (xxxvi. 13. s. 19) Lemnos had a celebrated labyrinth, supported by 150 columns, and with gates so well poised, that a child could open them. Pliny adds, that there were still traces of it in his time. Dr. Hunt, who visited the island regarded in 1801, attempted to explore the ruins of this labyrinth, and was directed to a subterraneous stoa, in an uninhabited part of the island, near a bay, called Porphis. He here found extensive ruins of an ancient and strong building that seemed to have had a ditch round it communicating with the sea. "The edifices have covered about 10 acres of ground; there are foundations of an amazing number of small buildings within the outer wall, each about seven feet square. The walls towards the sea are strong, and composed of large square blocks of stone. On an elevated spot of ground in one corner of the area, we found a subterraneous staircase, and, after lighting our tapers, we went down into it. The entrance was difficult; it consisted of 31 steps, and about every twelfth one was of marble, the others of common stone. At the bottom is a small chamber with a well in it, by which probably the garrison was supplied: a censer, a lamp, and a few matches, were lying in a corner, for the use of the Greek Christians, who call this well an Αγία θια, or Holy Fountain, and the ruins about it Παντηνα Κοππικος. The peasants in the neighbourhood had no knowledge of any sculpture, or statues, or medals having ever been found there." It does not appear, however, that these ruins have any relation to the labyrinth
LEMONES.

mentioned by Pliny; and Dr. Hunt thinks that they are probably those of the citadel of Hephaestias.

The chief production of the island, was a red earth called terra Lemnia or sigillata, which was employed by the ancient physicians as a remedy for wounds and the bites of serpents; and which is still much valued by the Turks and Greeks for its supposed medicinal virtues. It is dug out of a hill, made into small balls, and stamped with a seal containing Arabic characters.

The ordinary modern name of the island, is Stolimene (στολιμήνες), though it is also called by its ancient name.

There were several small islands near Lemnos, of which the most celebrated was Chryse (Χρυσή), where Philoctetes was said to have been abandoned by the Greeks. According to Pausanias, this island was afterwards swallowed up by the sea, and another appeared in its stead, to which the name of Hieron was given. (Eustath. ad Hom. ii. p. 530; Appian, Mithr. 77; Paus. viii. 33. § 4.)

(Rhode, Rev. Lemonene, Ventisl. 1529; Hunt, in Walford's Travels, p. 54, seq.)

LEONTES.

We may add that there were two Bituriges, Bituriges Cubi and Bituriges Vivisci; and Volcae Arecomican and Volcae Tectosages. If the text of Caesar then is right, there were Armorican Lemovices as well as the Lemovices of the Lemovética; and we must either keep the name as it is, or change it. The emendation of some critics, adopted by D'Anville, rests on no foundation. Wackenroder finds in the district which he assigns to the Lemovices Armorican, a place named La Lemovicta, in the arrondissement of Nantes, between Machecoul, Nantes and Saint-Léger; and he considers this an additional proof in favour of a conjecture about the text of Ptolemy in the matter of the Lemovices as to which he justifies his own remarks may be read. (Geogr. &c. des Gaules, vol. i. p. 368.)

[137]

[5. L.]

LEMOVIIL, a German tribe, mentioned by Tacitus (Germ. 43) as living with the Rugi on the coast of the Ocean, that is, the Baltic Sea. Tacitus mentions three peculiarities of this tribe and other tribes in these districts (the modern Pommeranien),—their round shields, short swords, and obedience towards their chiefs. (Comp. Zeuss, die Deutschen, p. 155.)

[7. S.]

LENTIA (Lēntiā), a small place in Noricum on the Danube, on the road from Lausiacum. According to the Notitia Imperii, from which alone we learn anything about this place, it appears that a prefect of the Legio Italica, and a body of horse archers, were stationed there. (Comp. Gruter, Inscription. p. 541. 10; Machar, Noricum, l. p. 284.)

LENTIENSES, the southernmost branch of the Lemains, which occupied both the northern and southern borders of the Lacus Brigantinus. They made several irruptions into the province of Raetium, but were defeated by the emperor Constantinus. (Ann. Marci. xiv. 3, xxi. 10; Zeuss, die Deutschen, p. 369, foll.)

[7. S.]

LENTIULAE or L'ENTOLAE, a place in Upper Pannonia, on the principal highroad leading through that country, and 32 Roman miles to the south-east of Julia. (It. Ant. p. 130; It. Hieros, p. 562; Geogr. Rev. iv. 19.) Ptolemy (ii. 15. § 5) mentions a town Λέντιολος in the same neighbourhood, which is perhaps only a slip for Λέντιολος. Some identify the place with the modern Bertentza, and others with Leitichang. (Comp. Gruter, Inscription. p. 541. 10; Machar, Noricum, l. p. 284.)

[7. S.]

LEOU PLEVIUS. [LEONTES.]

LEON (Ariov. Legg.) 1. A point on the S. coast of Crete, now Punta di Leonidi. (Ptol. iii. 17. § 4; Höck, Kreta, vol. i. pp. 394, 413.)

[8. B. J.]

2. A promontory of Euboea. S. of Eretria, on the έυρική λέες. (Ptol. iii. 15. § 24.)

[7. S.]

3. A place on the E. coast of Sicily, near Syracuse, where both the Athenians and Romans landed when they were going to attack that city. (Thuc. vi. 97; Liv. xxiv. 29.)

[8. RACUSAE.]

LEONICA. [LEONTES.]

LEONTES (Λέωντας ποταμού ένθαλα), a river of Phocis, placed by Ptolemy between Boytius and Sidon (v. 15, p. 137); consistently with which notice Strabo places Leontopolis between the same two towns, the distance between which he states at 400 stadia. He mentions no river of this name, but the Taunus (Ταύνας ποταμός), the grove of Ascalaphus, and Leontopolis, which would doubtless correspond with the Lion river of Ptolemy; for it is obviously an error of Pliny to place "Leontes opidum" between "Berytus" and "Flumen Lyceos" (v. 20). Now, as the Tarnus of Strabo is clearly
LEONTINI.

identical with Naer-el-Dâmis, half way between Lejriat and Saida, Lion's town and river should be looked for south of this, and north of Sidon. The only stream in this interval is Naer-el-Aidy, called also in its upper part Naer Barâle, which Dr. Robinson has shown to be the Bostræmus Fluvius, [Bostrænus.] This, therefore, Mamert seemed to have sufficient authority for identifying with the Leontes. But the existence of the Libyca—a name supposed to be similar to the Leontes—between Sidon and Tyre, is thought to corroborate the conjecture that Phoenicy has dispossessed the Leontes, which is in fact identical with the anonymous river which Strabo mentions near Tyre (p. 758), which can be no other than the Libyce (Robinson, Bib. Hist. vol. ii. pp. 408 —410, and notes). No great reliance, however, can be placed on the similarity of names, as the form Leontes is merely the inflexion of Aeocor, which was not likely to be adopted in Arabic. It is far more probable that the classical geographer in this, as in other cases, translated the Semitic name. [See Canis and Lycus.] Besides which the Libyca does not retain this name to the coast, but is here called Naer-el-Kaisinig, the Cassiter of Mannadrell (March 20, p. 48; Ireland, Palestine, p. 230, 231.)

LEONTINI. (Aeocor: th. Aeocora: Leontis.) A city of Sicily situated between Syracuse and Catana, but about eight miles from the sea-coast, near a considerable lake now known as the Lago di Leontini. The name of Leontini is evidently an ethnic form, signifying properly the people rather than the city itself; but it seems to have been the only one in use, and is employed both by Greek and Latin writers (declined as a plural adjective*), with the single exception of Phoenicy, who calls the city Aeocor or Leontium. (Ptol. iii. 4 § 13.) But it is clear, from the modern form of the name, Leontini, that the form Leontini, which we find universal in writers of the best ages, continued in common use down to a late period. All ancient writers concur in representing Leontini as a Greek colony, and one of those of Chalcidian origin, being founded by Chalcidian colonists from Naesos, in the same year with Catana, and six years after the parent city of Naesos, (Herod. vol. i. c. 793; Strabo, vol. viii. 14.) According to Timaeides, the site had been previously occupied by Siculi, but these were expelled, and the city became essentially a Greek colony. We know little of its early history; but, from the strength of its position and the extreme fertility of its territory (renowned in all ages for its extraordinary richness), it appears to have early attained to great prosperity, and became one of the most considerable cities in the E. of Sicily. The rapidity of its rise is attested by the fact that it was able, in its turn, to found the colony of Euboea (Strab. vi. p. 272; Synn. Ch. 287), apparently at a very early period. It is probable, also, that the three Chalcidian cities, Leontini, Naesos, and Catana, from the earliest period adopted the same line of policy, and made common cause against their Doric neighbours, as we find them constantly doing in later times.

The government of Leontini was an oligarchy, but it fell at one time, like so many other cities of Sicily, under the yoke of a despot of the name of Panaetois, who is said to have been the first instance of the kind in Sicily. His usurpation is referred by Eusebius to the 43rd Olympiad, or n. c. 608. (Arist. Pol. v. 10, 12; Euseb. Ambr. vol. ii. p. 109.)

Leontini appears to have retained its independence till after n. c. 498, when it fell under the yoke of Hippocrates, tyrant of Gela (Hierol. vii. 154); after which it seems to have passed in succession under the authority of Gelaen and Hieron of Syracuse; as we find that, in n. c. 476, the latter despot, having expelled the inhabitants of Catana and Naxos from their native cities, which he peopled with new colonists, established the exiles at Leontini, the possession of which they shared with their former citizens. (Diod. xi. 49.) We find no special mention of Leontini in the revolutions that followed the death of Hieron; but there is no doubt that it regained its independence after the expulsion of Tharsybus, n. c. 466, and the period which followed was probably that of the greatest prosperity of Leontini, as well as the other Chalcidice cities of Sicily. (Diod. xi. 72, 76.) But its proximity to Syracuse became the source of fresh troubles to Leontini. In n. c. 427 the Leontines found themselves engaged in hostilities with their more powerful neighbour, and, being unable to cope single-handed with the Syracusans, they applied for support not only to their Chalcidian brethren, but to the Athenian democracy, which sent a fleet of twenty-six ships under the command of Laches and Charonides. (Thuc. iii. 56; Diod. xii. 53.) The operations of the Athenian fleet under Laches and his successors Pythodorus and Euryomedon were, however, confined to the part of Sicily adjoining the Straits of Messana; the Leontines received no direct support from them; but, after the war had continued for some years, they were included in the general partition of Italy, n. c. 423, which for a time secured them in the possession of their independence. (Thuc. iv. 53, 65.) This, however, did not last long; the Syracusans took advantage of intestine dissensions among the Leontines, and, by exasperating the cause of the oligarchy, drove the democratic party into exile, while they adopted the oligarchy and richer classes as Syracusan citizens. The greater part of the latter part of the city, therefore, and the whole of the country, migrated to Syracuse; but quickly returned, and for a time joined with the exiles in holding it out against the power of the Syracusans. But the Athenians, to whom they at first applied, were unable to render them any effectual assistance; they were a second time expelled, n. c. 422, and Leontini became a mere dependency of Syracuse, though always retaining some importance as a fortress, from the strength of its position. (Thuc. vi. 4; Diod. xii. 83.)

In n. c. 417 the Leontine exiles are mentioned as joining with the Segestans in urging on the Athenian expedition to Sicily (Diod. xii. 83; Plat. Nic. 12); and their restoration was made one of the avowed objects of the enterprise. (Time. vi. 50.) But the failure of that expedition left them without any hope of restoration; and Leontini continued in its subordinate and fallen condition till n. c. 406, when the Syracusans allowed the half-ruinied Agriculturists, after the capture of their own city by the Carthaginians, to establish themselves at Leontini. The Greek and Carthaginianus followed their example the next year; the Leontine exiles of Syracuse at the same time took the opportunity to return to their native city, and declare themselves independent, and the treaty of peace concluded by Dionysius with Himilco, in n. c. 406, expressly stipulated for the

* Polybius uses the fuller phrase ἐν τῶν Αἰγύπτου πόλιν (vi. 6).
freedom and independence of Leontini. (Diod. xiii. 89, 113, 114; Xen. Hell. ii. 3. § 5.) This condition was not long observed by Dionysius, who no sooner found himself free from the fear of Carthage than he turned his arms against the Chalcidic cities, and, after reducing Catana and Naxos, compelled the Leontines, who were now bereft of all their allies, to surrender their city, which was for the second time deserted, and the whole people transferred to Syracuse, n. c. 403. (Id. xiv. 14, 15.) At a later period of his reign (n. c. 394) Dionysius found himself compelled to appease the discontent of his mercenary troops, by giving up to them both the city and the after, Hieropyrgis and Leontini, when they established themselves to the number of 10,000 men. (Id. xiv. 78.) From this time Leontini is repeatedly mentioned in connection with the civil troubles and revolutions at Syracuse, with which city it seems to have constantly continued in intimate relations; but, as Strabo observes, always shared in its disasters, without always paraling of its prosperity. (Strab. vi. p. 274.) Thus the Leontines were especially active against the younger Dionysius, and open their gates to Dion (Diod. xvi. 16; Plut. Dion. 39, 40). Some years afterwards their city was occupied with a military force by Ilicetas, who from thence carried on war with Timoleon (Ib. 78, 82); and it was not till after the great victory of the latter over the Carthaginians (n. c. 340) that he was able to expel Ilicetas and make himself master of Leontini. (Ib. 82; Plut. Timol. 32.) That city was not, like almost all the others of Sicily, restored on this occasion to freedom and independence, but was once more incorporated in the Syracusan state, and the inhabitants transferred to that city. (Diod. xvi. 82.) At a later period the Leontines again figure as an independent state, and, during the wars of Agathocles with the Carthaginians, on several occasions took parts against the Syracusans. (Diod. xix. 110, xx. 32.) When Pyrrhus arrived in Sicily, n. c. 278, they were subject to a tyrant or despot of the name of Hersacleides, who was one of the first to make his submission to that monarch. (Id. xxii. 8, 10, Exc. II. p. 497.) But not long after they appear to have again fallen under the yoke of Syracuse, and Leontini was one of the cities of which the sovereignty was secured to Hieron, king of Syracuse, by the treaty concluded between him and that statesman. After the commencement of the First Punic War, n. c. 263. (Id. xxiii. Exc. II. p. 502.) This state of things continued till the Second Punic War, when Leontini again figures conspicuously in the events which led to the fall of Syracuse. It was in one of the long and narrow streets of Leontini that Hieronymus was assassinated by Diomones, n. c. 215 (Liv. xxiv. 7; Polyb. vii. 6); and it was there that, shortly after, Hieronymus and Epicyrus first raised the standard of open war against Rome. Marcellus hastened to attack the city, and made himself master of it without difficulty; but the severities exercised by him on this occasion inflamed the minds of the Syracusans to such an extent as to become the immediate occasion of the rupture with Rome. (Liv. xxiv. 30, 39, 39.) Under the Roman government Leontini was restored to the position of an independent municipal town, but it seems to have sunk into a state of decay. Cicero calls it "misera civitatis atque inamis" (Verr. ii. 66); and, though its fertile territory was still well cultivated, this was done almost wholly by farmers from other cities of Sicily, par-

particularly from Centuripe. (Ib. iii. 46, 49.) Strabo also speaks of it as in a very declining condition, and though the name is still found in Pliny and Pomponius, it seems never to have been a place of importance under the Roman rule. (Strab. vi. p. 273; Mel. ii. 7. § 16; Plin. iii. 8. s. 14; Ptol. iii. 4. § 13.) But the great strength of its position must have always preserved it from entire decay, and rendered it a place of some consequence in the middle ages. The modern city of Leontini, which preserves the ancient site as well as name, is a poor place, though with about 5000 inhabitants, and suffers severely from malaria. No ruins are visible on the site; but some fragments of structures are extant on the rocky sides of the hill on which it stands are believed by the inhabitants to be the work of the Laestrygones, and greatly described as such by Fazello. (Fazell. de Reb. Sic. iii. 3.) The situation of Leontini is well described by Polybius: it stood on a broken hill, divided into two separate summits by an intervening valley or hollow; at the foot of this hill on the west side, flowed a small stream, which he calls the Lissos, now known as the Flume Ruina, which falls into the Lake of Leontini, a little below the town. (Pol. vii. 6.) The two summits just noticed, being bordered by precipitous cliffs, formed, as it were, two natural citadels or fortresses; it was evidently one of these which Thucydides mentions under the name of Phocaea, which was occupied in n. c. 422 by the Leontine exiles who returned from Syracuse. (Thuc. v. 4.) Both heights seem to have been fortified by the Syracuseans, who regarded Leontini as an important fortress; and we find them alluded to as "the forts" (τὰ φωφόρα) of Leontini. (Diod. xiv. 58, xxii. 8.) Diodorus also mentions that one quarter of Leontini was known by the name of "The New Town" (ἡ νέα πόλις, xvi. 72); but we have no means of determining its locality. It is singular that no ancient author alludes to the Lake (or as it is commonly called the litoria) of Leontini, a sheet of water of considerable extent, but stagnant and shallow, which lies immediately to the N. of the city. It produces abundance of fish, but is considered to be the principal cause of the malaria from which the city now suffers. (D'Orville, Sicula, p. 168; Smyth's Sicily, pp. 157, 158.)

The extraordinary fertility of the territory of Leontini, or the Laestrygonian Campania [Laestrygones], was evidently the plain extending from the foot of the hills on which Leontini was situated to the river Synaesius, now known as the Piano di Catania. We have no explanation of the tradition which led to the fixing on this fertile tract as the abode of the fabulous Laestrygones. Leontini was noted as the birthplace of the celebrated orator Gagias, who in n. c. 427 was the head of the deputation sent by his native city to
LEONTIUM. (Ἀεόντιον; Εθ. Αεόντης), a town of Achaia, was originally not one of the 12 Achaean cities, though it afterwards became so, succeeding to the place of Thyres. It is only mentioned by Polybius, and its position is uncertain. It must, however, have been an inland town, and was probably between Pharsae and the territory of Aegium, since we find that the Eleans under the Aetolian general Eurydias, after marching through the territory of Pharsae as far as that of Aegium, retreated to Leontium. Leake places it in the valley of the Sellinas, between the territory of Trimara and that of Aegium, at a place now called Ai Anville, from a ruined church of that name near the village of Gavramian. Callicrates, the compiler of the Romans during the later days of the Achaean League, was a native of Leontium. (Ptol. ii. 41, v. 94, xxvi. 1; Leake, Morea, vol. iii. p. 419.)

LEONTOPOLYS. [Νίκηφωριον.]

LEONTOPOLYS. [Λιοντες.]

LEONTOPOLYS (Λεόντωπος πόλις, Ptol. iv. 5, § 51; Strab. xvii. pp. 892, 812; Aedot. Hieronym. ed. Joriniu. ii. 6; Leont. Opollum, Plin. v. 20, s. 17), the capital of the Leontopoleitae nome in the Delta of Egypt. It stood in lat. 30° 6' N., about three geographical miles S. of Thiumi. Strabo is the earliest writer who mentions either this nome, or its chief town: and it was probably of comparatively recent origin and importance. The lion was not among the sacred animals of Aegypt; but that it was occasionally done-to death and kept in the temples, may be inferred from Diodorus (ii. 84) and Plutarch. The sacred lions, employed in the chase of deer, wolves, &c., are found in the hunting-pieces delineated upon the walls of the grottoes at Besikhassan. (Wilkinson, M. and C. vol. iii. p. 16.) In the reign of Ptolemy Philometer (B.C. 180-145) a temple, modelled after that of Jerusalem, was founded by the celebrated Jewish priest Onias. (Joseph. antiq. Jud. xiii. 3, § 3; Hieronym. in Iudaei. ed. xi.) The Hebrew colony, which was attracted by the establishment of their national worship at Leontopoli, and which was increased by the refugees from the oppressions of the Seleucid kings in Palestine, flourished there for more than three centuries afterwards. In the reign of Vespasian the Leontopoleitai temple was closed, amid the general discouragement of Judaism by that emperor. (Joseph. B. J. vii. 10, § 4.) Antiquarians are divided as to the real site of the ruins of Leontopoli. According to D'Anville, they are covered by a mound still called Tel-Essoubie, or the "Lion's Hill." (Comp. Champollion, Egypte, vol. ii. p. 110, seq.) Jerom, on the other hand, maintains that some tumuli near the village of El-Mengibel in the Delta, represent the ancient Leontopoli. And this supposition agrees better with the account of the town given by Xenophon of Ephesus. (Ephes. iv. p. 280, ed. Bippus.)

LEOPONTIUS (Λεόποντιος, called Leopethymus or Leopethymus by Pliny, v. 31, s. 39; the MSS. vary), a mountain in the northern part of Lesbo, near Methymna. Pliny states (Natural. Hist. lib. 9) that it is the highest mountain in the island; but this does not appear to be consistent with modern surveys. Its present name is said to be Mount S. Theodore. The sepulchre and tomb of the hero Palamedes are alleged to have been here. (Tzetzes, Lyaeor. Casandr. 1095; Philostr. Heroic. p. 716, Vit. Apollo. Tyren. iv. 13, 150, also 16.154.) In Antigonus of Carystus (c. 17) there is a story given, on the authority of Myrtilus the Lesbian, concerning a temple of Apollo and a shrine of the hero Leopontius, connected with the same mountain. Here, also, according to Theophrastus (De Sign. Plut. et Leont. p. 783, ed. Schreiber), an astronomer called Matricetas made his observations. (J. S. H.)

LEPISUS MONS is the name given by Columella (x. 131), the only author in whom the name is found, to a mountain near Sigeia in Latium, probably one of the waterfalls or cascades of the great mass of the Volscaen Apennines. The name of Monte Lepini is frequently applied by modern geographers to the whole of the lofty mountain group which marks off the valley of the Sobrino from the valley of the Pontine Marshes [Latium]; but there is no ancient authority for this. ([E. H. B.]}

LEPIDOTON POLIS (Λπιδωτωτωϊ, Ἀπιδωτωτα) πόλις, Ptol. iv. 5, § 72), a town in Upper Egypt, situated in the Panopolite nome, and on the eastern side of the Nile. It was about four geographical miles N. of Cheonobus. Lat. 26° 2' N. This was doubtless the place at which Herodotus had heard that the fish _lepidotus_ was caught in great numbers, and even received divine honours (ii. 72; comp. Minutol, p. 414; Champollion, Egypte, vol. i. p. 248). Lepidoton-Polis was probably connected with the Osirian worship, for, according to the legend, Isis, in her search for the limbs of Osiris, who had been cut into pieces by Typhon, traversed the marshes in a boat made of papyrus (Bara), and in whatsoever place she found a monster, there she buried it. It is likely she discovered the limbs, excepting one, which had been devoured by the fishes _phylaxes_ and _lepidotus._ No remains of Lepidoton-Polis have been discovered. ([W. B. D.]

LEPONTH (Λεώπονθα, Strab., Ptol.), an Alpine people, who inhabited the valleys on the south side of the Aups, about the head of the two great lakes, the Lago di Como and Lago Maggiore. Strabo tells us distinctly that they were a Helvetic tribe (v. p. 206), and adds that, like many of the other minor Alpine tribes, they had at one time spread further into Italy, but had been gradually driven back into the mountains. (Ib. p. 204.) There is some difficulty in determining the position and limits of their territory. Caesar tells us that the Rhine took its rise in the country of the Lepontii (B. G. iv. 10), and Pliny says that the Uerri (or Vizersi), who were a tribe of the Leponti, occupied the sources of the Rhone (Ptol. iii. 20. s. 24). Ptolemy, on the contrary (iii. i. § 38), places them in the Cottian Alps; but this is opposed to all the other statements, Strabo distinctly connecting them with the Rhetians. Their name occurs also in the list of the Alpine nations on the triumph of Augustus (ap. Plin. l. c.), in a manner quite in accordance with the statements of Caesar and Pliny; and on the
LEPREUM.

whole we may safely place them in the group of the Alps, of which the Mount St. Gothard is the centre, and from which the Rhone and the Rhine, as well as the Besse and the Ticino, take their name and which is still given to the upper valley of the Ticino, near the foot of the St. Gothard, is very probably derived from the name of Lepontii. Their chief town, according to Ptolemy, was Oscula or Oscella, which is generally supposed to be Domino d’Osola; but, as the Lepontii are erroneously placed by him in the Cotician Alps, it is perhaps more probable that the town meant by him is the Oself or Eself of the ancient authors, which was really situated in that district. [OCEUML]

The name of ALPS LEPTONIC or Lepontian Alps, is generally given by modern geographers to the part of this chain extending from Monte Rosa to the St. Gothard; but there is no ancient authority for this use of the term. [E. H. B.]

LEPREUM (of Aére rampant, Sogli, Strap, Posta; Aereon, Pansa, Aristoph. Av. 149; Aéreou, Ptol. iii. 16. § 18; Eth. Aéretara), the chief town of Triphylia in Elis, was situated in the southern part of the district, at the distance of 100 stadia from Sartium, and 40 stadia from the sea. (Strab. viii. p. 344.) Sylaxus and Ptolemy, less correctly, describe it as lying upon the coast. Triphylia is said to have been originally inhabited by the Caunians, whence Lepreon is called by Callimachus (Hymn. in Iov. 39) Καυνάων πτολέμεος. The Caunians were afterwards expelled by the Myracs, who took possession of Lepreon. (Herod. iv. 148.) Subsequently, and probably soon after the Messenian wars, Lepreon and the other cities of Triphylia were subdued by the Eleians, who governed them as subject places. [See Vol. i. p. 818, b.] The Triphylian cities, however, always bore this yoke with impunity; and Lepreon took the lead in their frequent attempts to shake off the Eleian supremacy. The greater impatience of Lepreon is shown by the fact that it was the only one of the Triphylion towns which took part in the Peloponessian war. (Herod. ix. 28.) In B. c. 421 Lepreon, supported by Sparta, revolted from Elis (Thuc. v. 31); and at last, in 400, the Eleians, by their treaty with Sparta, were obliged to relinquish their authority over Lepreon and the other Triphylion towns. (Xen. Hell. iii. 2. § 25.) When the Spartan power had been broken by the treaty of Leuctra (479), the inhabitants of Triphylia endeavored to recover their supremacy over Lepreon and the other Triphylion towns; but the latter protected themselves by becoming members of the Arcadian confederacy, which had been recently founded by Epaminondas. (Xen. Hell. vi. 5. § 2, seq.) Hence Lepreon is called an Arcadian town by Sylaxus and Pliny, the latter of whom erroneously speaks both of a Lepreon in Elis (iv. 5. c. 6), and of a Lepreon in Arcadia (iv. 5. s. 10). Pausanius also states that the Lepreatae in his time claimed to be Arcadians; but he observes that they had been subjects of the Eleians from ancient times,—that as many of them as had been victors in the public games were proclaimed as Eleians from Lepreon,—and that Aristophanes describes Lepreon as a city of the Eleians. (Paus. v. 5. § 3.) After the time of Alexander the Eleians much reduced the Triphylian cities, which therefore were obliged to join the Aeolian league along with the Eleians. But when Philip, in his war with the Actolians, marched into Triphylia, the inhabitants of Lepreon rose against the Eleian garrison in their town, and declared in favour of Philip, who thus obtained possession of the place. (Polyb. iv. 77, 79, 80.) In the time of Pausanias the only monument in Lepreon was a temple of Demeter, built of brick. In the vicinity of the town was a fountain named Arene. (Paus. v. 5. § 6.) The territory of Lepreon was rich and fertile. (Κατά χόα εδώκαν, Strab. vii. p. 345.) The ruins of Lepreon are situated upon a hill, near the modern village of Storici. These ruins show that Lepreon was a town of some size. A plan of them is given by the French Commission, which is copied in the work of Curtius. They were first described by Dacier, but it takes half a century to ascend from the first traces of the walls to the acropolis, which is entered by an ancient gateway. * The towers are square; one of them is almost entire, and contains a small window or arrow hole. A transverse wall is carried completely across the acropolis, by which means it was anciently divided into two parts. The foundation of this wall, and part of the elevation, still remain. Three different periods of architecture are evident in this fortress. The walls are composed of polygons: some of the towers consist of irregular, and others of rectangular quadrilaterals. The ruins extend far below the acropolis, on the side of the hill, and are seen on a flat detached knoll." (Doddew, Tour through Greece, vol. ii. p. 347; Leuke, Morea, vol. i. p. 56; Boblaje, Recherches, q.e. p. 105; Curtius, Pelopo- nicum, vol. ii. p. 84.)

LETSIA (Lipsia), a small island of the Icarian sea, in the north of Leros, and opposite to the coast of Caria. It is not mentioned by any ancient author except Pliny (H. N. v. 34). [L. S.]

LEPTIS (Λεπτία, Λεπτίανα, Λεπτικίανα, Λεπτίνα, etc., Plin. vi. 29 s. 34), the modern Ras-el-Asf, in lat. 23° N., was a headland of Upper Egypt, upon the confines of Achaea, which projected into the Red Sea at Sinus Immundus (Red Land). It formed the extremity of a volcanic range of rocks abounding in mines of gold, copper and topaz. [W. B. D.]

LEPTIS, a town of Hispания Baetica, mentioned only in the Bell. Afr. 57, where the word is perhaps only a false reading for LAELPA, near the mouth of the Anas. [P. S.]

* LEPTIS (LIV. XXXIV. 62; CaeS. B. C. ii. 58; Hirt. Bell. Afr. 6, 7, 9, 62; Mela, i. 7. § 2; Plin. vi. 4 s. 3), also called PLENTIA MINOR. PARVA (AeTos y μικρά, Plin. iv. 3. § 10; Leptiminos or Leptis Minus, Itin. Ant. 58; Tab. Pont.; Geogr. Rav. iii. 5. § 5; Eth. Leptiani; Lenta, R.), a city on the coast of Byzacium, just within the SE. headland of the Sicani Neapolitani, 18 M. F. S. of Hadruntum, and 33 M. F. N. of Thydrus, and one of the most flourishing of the Phoenician colonies on that coast, notwithstanding the epithet PARVA, which is merely used by late writers to distinguish it from the still more important city of LEPTIS MAGNA. It was a colony of Tyre (Sull. Jug. 19; Plin. l. c.), and, under the Carthaginians, it was the most important place in the wealthy district of EMPELAC, and its wealth was such that it paid to Carthage the daily tribute of an Euboic talent. (Liv. l. c.) Under the Romans it was a liber civitas, at least in Pliny's time: whether it became a colony afterwards depends on the question, whether the coins bearing the name of LEPTIS belong to this city or to Leptis Magna.

* Derived from a Phoenician word signifying a naval station.
LEPTIS MAGNA.

[See below, under Leptis Magna.] Its ruins, though interesting, are of no great extent. (Shaw, Travels, p. 109; Barth, Wanderungen, 2e, p. 161.)

LEPTIS MAGNA (ἡ Λέπτις μεγάλη, Λεπτι-μάγνα, Procop. B. V. ii. 21; also Λέπτις; simply; alt. Νεάπολις; Leptimaginesis Civitas, Cod. Just. i. 27. 2; Eub. and Adj. Leptimaginos, Leptimana: Lepta, large Ru.), the chief of the three cities which formed the African Tripolis in the district between the Syrtis (Regio Syrtica, alt. Tripolitana), on the N. coast of Africa; the other two being Oea and Sabrata. Leptis was one of the most ancient Phoenician colonies on this coast, having been founded by the Sidonians (Sall. Jug. 19, 78); and its site was one of the most favourable that can be imagined for a city of the first class. It stood at one of those parts of the coast where the table-land of the Great Desert falls off to the sea by a succession of mountain ridges, enclosing valleys which are thus sheltered from those encroachments of sand that cover the shore where no such protection exists, while they lie open to the breezes of the Mediterranean. The country, in fact, resembles, on a small scale, the terraces of the Cyrenaic coast; and its great beauty and fertility have excited the admiration alike of ancient and modern writers. (Annona, lib. 6; Delius, Cellas; Beechy; Barth, &c.) Each of these valleys is watered by its streamlet, generally very insignificant and even intermittent, but sometimes worthy of being styled a river, as in the case of the Cynyps, and of the smaller stream, farther to the west, upon which Leptis stood. The excellence of the site was much enhanced by the shelter afforded by the promontory Heremmem (Ras-al-Asham), W. of the city, to the route inland from its front. The ruins of Leptis are of vast extent, of which a great portion is buried under the sand which has drifted over them from the sea. From what can be traced, however, it is clear that these remains contain the ruins of three different cities.

1. The original city, or Old Leptis, still exists in its ruins the characteristics of an ancient Phoenician settlement; and, in its site, its sea-walls and quays, its harbour, and its defences on the land side, it bears a striking general resemblance to Carthage. It was built on an elevated tongue of land, jutting out from the W. bank of the little river, the mouth of which formed its port, having been artificially enlarged for that purpose. The banks of the river, as well as the seaward face of the promontory, are lined with walls of massive masonry, serving as sea-walls as well as quays, and containing some curious vaulted chambers, which are supposed to have been docks for ships which were kept (as at Carthage) for a last resource, in case the citadel should be taken by an enemy. These structures are of a harder stone than the other buildings of the city; the latter being of a light sandstone, which gave the place a glittering whiteness to the voyager approaching it from the sea. (Stadiasmus Mar. Mag. p. 453, G. p. 257, 11.) On the land side the isthmus was defended by three lines of massive stone walls, the position of each being admirably adapted to the nature of the ground; and, in a depression of the ground between the outmost and middle line, there seems to have been a canal, connecting the harbour in the mouth of the river with the road-lead W. of the city. Opposite to this tongue of land, on the E. side of the river, is a much lower, less projecting, and more rounded promontory, which could not have been left out of the system of external works, although no part of the city was built upon it. Accordingly we find here, besides the quays along the river side, and vaults in them, which served for warehouses, a remarkable building, which seems to have been a fort. Its superstructure is of brick, and certainly not of Phoenician work; but it probably stood on foundations coeval with the city. This is the only example of the use of brick in the ruins of Leptis, with the exception of the walls which surround the sea-defences already described. From this eastern, as well as from the western point of land, an artificial mole was built out, to give additional shelter to the port on either side; but, through not permitting a free egress to the sand which is washed up on that coast in vast quantities with every tide, these mole have been the chief cause of the destruction, first of the port, and afterwards of the city. The former event had already happened at the date of the Stadiasmus, which describes Leptis as having no harbour (ἀλιμένος). The harbour still existed, however, at the time of the restoration of the city by Septimius Severus, and small vessels could even ascend to some distance above the city, as is proved by a quay of Roman work on the W. bank, at a spot where the river is still deep, though its mouth is now lost. (Commodus, p. xvi.

2. The Old City (ἡ νεότερη) thus described became gradually, like the Byrsa of Carthage, the citadel of a much more extensive New City (Νεάπολις), which grew up beyond its limits, on the W. bank of the river, where its magnificent buildings now lie hidden beneath the sand. This New City, as in the case of Carthage and several other Phoenician cities of like growth, gave its name to the place, which was hence called Neapolis, not, however, as at Carthage [comp. Carthago, Vol. I. p. 529. § 12], to the house of the old name, Leptis, which was never entirely lost, and which became the prevailing name in the later times of the ancient world, and is the name which the ruins still retain (Lebuta). Under the early emperors both names are found almost indifferently; but with a slight indication of the preference given to Neapolis, and it seems probable that the name Leptis, with the epithet Magna, distinguished it from Leptis Parva, prevailed at last for the sake of avoiding any confusion with Neapolis in Zeugitana. (Strab. xvii. p. 835, Νεάπολις, ἡ καὶ Λέπτων καλοῦσιν; Mela, however, i. 7. § 5, has Leptis only, with the epithet altera: Pliny, v. 4. s. 4, misled, as usual, by the abundance of his authorities, makes Leptis and Neapolis different cities, and he distinguishes this from the other Leptis as Leptis altera, quae coimaginatur magna: Prolemy, iv. 3. § 13, has Νεάπολις ἡ καὶ Λέπτων μεγάλη: Itin. Ant. p. 63, and Tab. Pict. Leptis Magna Colonia; Sylv. pp. 111, 112, 113, Groner. Να Πόλις; Stadiasmus. p. 455, Λέπτις, vulg. Λέπτις, the coins all have the name Leptis simply, with the addition, on some of them, of the epithet Colonia Victrix Julia; it is very uncertain to which of the two cities of the name these coins belong; Eckhel, vol. iv. pp. 130, 191; Bauche, s.n.) Western from Sarsi that the commercial intercourse of Leptis with the native tribes had led to a sharing of the con- umbium, and hence to an admixture of the language of the city with the Libyean dialects (Job. 78). In fact, Leptis, like the neighbouring Tripoly, which, with a vast interior site, has succeeded to its position, was the great emporium for the trade with the Garamantes and Libyana and the eastern part of
LERA.N.

Imer Libya. But the remains of the New City seem to belong almost entirely to the period of the Roman Empire, and especially to the reign of Septimius Severus, who restored and beautified this his native city. (Spart. Soc. 1: Aurel. Vict. Ep. 20.) It had already before acquired considerable importance under the Romans, whose cause it espoused in the war with Jugurtha (Sall. Jug. 77-79; as to its later condition see Tac. Hist. iv. 50); and if, as Echall inclines to believe, the coins with the epi-
graph COL. VIC. JUL. IEP. belong mostly, if not entirely, to Leptis Magna, it must have been made a colony in the earliest period of the empire. It was still a flourishing and populous fortified city in the 4th century, when it was greatly injured by an as-
sault of a Libyan tribe, called the Auricansi (Aunci-
num. xxviii. 6); and it never recovered from the blow.

3. Justinian is said to have enclosed a portion of it with a new wall; but the city itself was already too far buried in the sand to be restored; and, as far as we can make out, the little that Justinian attempted seems to have amounted only to the en-
closure of a suburb, or old Libyan camp, some dis-
tance to the E. of the river, on the W. bank of which the city itself had stood. (Procop. de Aed. vi. 4: comp. Barth.) Its rain was completed during the Arab conquest (Leo, Afr. p. 435); and, though we find it, in the middle ages, the seat of populous Arab camps, no attempt has been made to make use of the splendid site, which is now occupied by the insignificant village of Leghbat, and the hamlet of El-Hish, which consists of only four houses. (For particulars of the ruins, see Lucas, Proceedings of the Association, &c. vol. ii. p. 56. Lond. 1510; Della Cella, Viaggio, &c. p. 40; Beechey, Proceedings, &c. chap. vi. pp. 50, 51; Russell’s Barbery; Barth, Wanderungen, &c. pp. 305—315.)

COIN OF LEPTIS.

LERN.A. 163

LENA. 163

fixed more accurately by the Itin. than by the geographers. Lerina, from which the modern name Lérinis comes, is very small; it is called St. Honorat, from a bishop of Arles in the 6th century, who was also a saint.

[L.]

LERNA or LERNE (Λέρνη, Λέρνη), the name of a marshy district at the south-western extremity of the Argive plain, near the sea, and celebrated as the spot where Hercules slew the many-headed Hydra, or water-snake. [See Dict. of Biogr. Vol. ii. p. 394.] In this part of the plain, there is a number of copious springs, which overflow the district and turn it into a marsh; and there can be little doubt that the victory of Hercules over the Hydra, is to be understood of a successful attempt of the ancient lords of the Argive plain to bring its marshy extremity into cultivation, by draining its sources and embanking its streams. The name of Lerna is usually given to the whole district (Paus. ii. 15. § 5, ii. 24. § 3, iii. 36. § 6, iii. 38. § 1; Plut. Cleom. 15), but other writers apply it more particularly to the river and the lake. (Strab. viii. p. 365.) The district was thoroughly drained in antiquity, and covered with sacred buildings, of which Pausanias has left us an account (ii. 36. 37). A road led from Argos to Lerna, and the distance from the extreme of the city to the sea-coast of Lerna was 40 stadia. Above Lerna is the Mountain Pontikes (Ποντίκες), which according to Pausanias absorbs the rain water, and thus prevents it from running off. On its summit, on which there are now the rains of a mediæval castle, Pausanias saw the remains of a temple of Athena Saitis, and the foundations of the house of Hippomedon, one of the seven Argive chiefs who marched against Thebes. (Δέοντας Θήρα Κρόνους: "Ποντίκες, Πασχατομένος, Ἐπικαρπάς." Livy. 14.)

The grove of Lerna, which consisted for the most part of plane trees, extended from Mount Pontinus to the sea, and was bounded on one side by a river called Politius, and on the other by a river named Anymon. The grove of Lerna contained two temples, in one of which Demeter Prosymnus and Dionysus were worshipped, and in the other Dionysus Sanses. In this grove a festival, called the Lerneia, was celebrated in honour of Demeter and Dionysus. Pausanias also mentions the fountain of Amphitaurus, and the Alycanian pool (عقودα Αμφιταύρος), through which the Argives say that Dionysus descended into Hades in order to recover Semele. The Alycanian pool was said to be unapproachable, and the emperor Nero in vain attempted to reach its bottom with a sounding line of several fathoms in length. The circumference of the pool is estimated by Pausanias only as one-third of a stadium; its margin was covered with grass and rushes. Pausanias was told that, though the lake appeared so still and quiet, yet, if any one attempted to swim over it, he was dragged down to the bottom. Here Prosymnus is said to have pointed out to Dionysus the entrance in the lower world. A nocturnal ceremony was connected with this legend; expiatory rites were per-
formed by the side of the pool, and, in consequence of the impurities which were then thrown into the pool, the proverb arose of a Lerna of ills. (Αμφιταύριον λίμνα; see Preller, Demeter, p. 212.)

The river Pontinus issues from three sources at the foot of the hill, and joins the sea north of some mills, after a course of only a few hundred yards. The Anymon is formed by seven or eight copious sources, which issue from under the rocks, and which are evidently the subterraneous outlet of one of
LEROS.

The katavotha of the Arcadian valleys. The river soon after enters a small lake, a few hundred yards in circumference, and surrounded with a great variety of aquatic plants, and it then forms a marsh extending to the sea-shore. This lake is now walled in, and the water is diverted into a small stream which turns some mills standing close to the sea-shore. This lake is evidently the Alkyonian pool of Pausanias; for although he does not say that it is formed by the river Anymon, there can be no doubt of the fact. The lake answers exactly to the description of Pausanias, with the exception of being larger; and the tale of its being unattainable is still related by the millers in the neighbourhood. Pausanias is the only writer who calls this lake the Alkyonian pool; other writers gave it the name of Lernaean; and the river Anymon, by which it is formed, is likewise named Lerna. The fountain of Amphiraurus can no longer be identified, probably in consequence of the enlargement of the lake. The station of the hydra was under a palm-tree at the source of the Anymon; and the numerous heads of the water-snake may perhaps have been suggested by the numerous sources of this river. Anymon is frequently mentioned by the poets. It is said to have derived its name from one of the daughters of Danaus, who was beloved by Poseidon; and the river gushed forth when the nymph drew out of the rock the trident of the god. (Hygin. Fab. 169.) Hence Euripides (Phoen. 188) speaks of Πορχίκην Ἀμφιραβὰς (Comp. Propert. ii. 26, 47; Ov. Met. iii. 240.)

LEROS (Λέρος : Eth. Λέρος; Leros), a small island of the Aegan, and belonging to the scattered islands called Sporades. It is situated opposite the Sounian Isthmus, on the north of Calvyna, and on the south of Lepsia, at a distance of 320 stadia from Cos and 350 from Myndus. (Stadium. Morph. Magi, §§ 246, 250, 252.) According to a statement of Anaximenes of Lampsacus, Leros was, like Eros, colonised by Milesians. (Strab. xiv. p. 635.) This was probably done in consequence of a suggestion of Hecataeus; for on the breaking out of the revolt of the Ionians against Persia, he advised his countrymen to erect a fortress in the island, and make it the centre of their operations, if they should be driven from Miletus. (Herod. v. 125; comp. Thucydr. viii. 27.) Before its occupation by the Milesians, it was probably inhabited by Diocani. The inhabitants of Leros were notorious in antiquity for their ill nature, whence Plutarches sang of them: —

Λέρον κακόν, οὐχ ὁ μίν, δὲ ἦν οὐδὲ.
Πατέτε, πλὴν Προκλέους καὶ Προκλάπτη Λέρος.

(Strab. x. p. 487, &c.) The town of Leros was situated on the west of the modern town, on the south side of the bay, and on the slope of a hill; in this locality, at least, distinct traces of a town have been discovered by Ross. (Reisen auf d. Griech. Inseln, ii. p. 119.) The plan of Hecataeus to fortify Leros does not seem to have been carried into effect. Leros never was an independent community, but was governed by Miletus; as we must infer from inscriptions, which also show that Milesians continued to inhabit the island as late as the time of the Romans. Leros contained a sanctuary of Artemis Partheneos, in which, according to mythology, the sisters of Meleager were transformed into goulaeforms (μελεαγρίδας; Anton. Lib. 2; comp. Ov. Met. viii. 553, &c.); this is called "the Lady of the island, who always was the mistress of the sanctuary of the goddess." (Athen. xiv. p. 655.) In a valley, about ten minutes' walk from the sea, a small convent still bears the name of Partheni, and at a little distance from it there are the ruins of an ancient Christian church, evidently built upon some ancient foundation, which seems to have been that of the temple of Artemis Partheneos. "This small island," says Ross, "though envied on account of its fertility, its smiling valleys, and excellent harbours, is nevertheless scorned by its neighbours, who charge its inhabitants with niggardliness" (l. c. p. 122; comp. Bickh, Corp. Inscrip. n. 2265; Ross, Inscrip. ined. ii. 188.)

LESBOS.

(Λέσβος : Eth. and Adj. Λέσβιος, Λέσβιος, Λέσβιος, Lesbians, Lesbians, Lesbicae, fem. Λέσβια, Λέσβια, Lesbias, Lesbians; in the middle ages it was named Mitylene, from its principal city; Geog. Rat. v. 211; Smidt, s. e.; Hierol. p. 686; Eastab. ad H. ii. 129, Od. iii. 170; hence it is called by the modern Greeks Mitylen or Metelino, and by the Turks Medilli or Medelini Admasi.) Like several other islands of the Aegean, Lesbos is said by Strabo, Pliny and others to have had various other names, Isa, Himete, Lasia, Pelagia, Aeorgia, Aethiepe, and Macaria. (Strab. ii. p. 190, v. p. 128; Flin. v. 31 (39); Diod. iii. 55, v. 81.)

Lesbos is situated off the coast of Mysia, exactly opposite the opening of the gulf of Adramyttium. Its northern part is separated from the mainland near Assos [Assos] by a channel about 7 miles broad; and the distance between the south-eastern extremity and the islands of Argynnasae [ARGYNNASAE] is about the same. Strabo reckons the breadth of the former strait at 60 stadia, and Pliny at 7 miles; for the latter strait see Strab. xiii. pp. 616, 617, and Xen. Hell. i. 6. §§ 15—28. The island lies between the parallels of 38° 58' and 39° 24'. Pliny states the circumference as 168 miles, Strabo as 1100 stadia. According to Choseul-Gouffier, the latter estimate is rather too great. Scylax (p. 56) assigns to Lesbos the seventh rank in size among the islands of the Mediterranean sea.

In shape Lesbos may be roughly described as a series of triangles of which face respectively the NW., the NE., and the SW. The northern point is the promontory of Argennem, the western is that of Sirius (still called Cape Signir), the south-eastern is that of Malea (now called ZetitsPoorou or Cape St. Mary). But though this description of the island as triangular is generally correct, it must be noticed that it is penetrated far into the interior by two gulfs, or sea-locks as they may properly be called, on the south-western side. One of these is Port Hiero or Port Olive, "one of the best harbours of the Archipelago," opening from the sea about 4 miles to the westward of Cape Malea, and extending about 8 miles inland among the mountains. It may be reasonably conjectured that its ancient name was Portus Hieraeum; since Pliny mentions a Lesbian city called Hiera, which was extinct before his time. The other arm of the sea, to which we have already alluded, is almost a direct line between the former and Cape Signir. It is the "beautiful and extensive basin, named Port Callon" and anciently called Euripus Pyrrhanicus. From the extreme narrowness of the entrance, it is less adapted for the
LESBO.
purposes of a harbor. Its ichthyology is repeatedly mentioned by Aristotle as remarkable. (Hist. Animal. v. 10, § 2, v. 13, § 10, viii. 20, § 15, ix. 25, § 8.)
The surface of the island is mountainous. The principal mountains were Ordynnus in the W., Olympia in the S., and Lepeithymus in the N. Their elevations, as marked in the English Admiralty Charts, are respectively 1,780, 3,070, and 2,750 feet; and in this excellently climate and fine air of Lesbos are celebrated by Diidorus Siculus (v. 82), and it is still repleted to be the most healthy island in the Archipelago. (Pundy's Sailing Directory, p. 154.) Tacitus (Ann. vi. 3) calls it "insula nobilis at montana." Agates were found there (Plin. xxxvii. 54), and its quarries produced variegated marble (xxxvii. 5). The well-known Lesbian wines ("innocents poena Lesbii," Hor. Carm. i. 17, 21) were famous in the ancient world; but this of a more particular account is given under Mytilene. The trade of the island was active and considerable; but here again we must refer to what is said concerning its chief city Mytilene. At the present day the figs of Lesbos are celebrated; but its chief exports are oil and gull-nuts. The population was estimated, in 1816, at 5,000 Greeks and 80 Turks.

Tradition says that the first inhabitants of Lesbos were Pelasgians; and Xanthus was their legendary leader. Next came Ionians and others, under Mæcarus, who is said by Diidorus (v. 80) to have introduced written laws two generations before the Trojan war. Last were the Aeolian settlers, under the leadership of Lesbus, who appears in Strabo under the name Grans, and who is said to have married Mæthymna, the daughter of Mæcarus. Mytilene was the elder daughter. This is certain, that the early history of Lesbos is identical with that of the Aeolians. Strabo regards it as their central seat (σχήδων μητρόπολις, xiii. pp. 616, 622). In mercantile enterprise, in resistance to the Persians, and in intellectual eminence, the insular Aeolians seem to have been favorably contrasted with their brethren on the continent. This which Homer calls (v. 790, 30th v. and 27th s.) and "Aeolideis" (Carm. ii. 13, 24, iii. 10. 31) was due to the genius of Lesbos; and Nieuwen's expression regarding this island is, that it was "the pearl of the Aeolian race." (Lectures on Ancient Ethnology and Geography, vol. i. p. 218.)

Lesbos was not, like several other islands of the Archipelago, such as Cor, Chios and Samos, the territory of one city. We read of six Aeolian cities in Lesbos, each of which had originally separate possessions and an independent government, and which were situated in the following geographical order. Mæthymna (now Molivos) was on the north, almost immediately opposite Assos, from which it was separated by one of the previously mentioned straits. Somewhere in its neighbourhood was Arimba, which, however, was incorporated in the Mæthymnian territory before the time of Herodotus (i. 131). Near the western extremity of the island were Antissa and Eresus. The former was a little to the north of Cape Sigirum, and was situated on a small island, which in Pliny's time (ii. 91) was connected with Lesbos itself. The latter was on the south of the promontory, and is still known under the name of Erinai, a modern village, near which ruins have been found. At the head of Port Caloni was Pyrrha, which in Strabo's time had been swallowed up by the sea, with the exception of a suburb. (Strab. xiii. p. 618; see Plin. vi. 31.) The name of Peræ is still attached to this district according to Pococke. On the eastern shore, facing the mainland, was Mytilene. Besides these places, we must mention the following:—Hiera, doubtless at the head of Port Olitér, said by Pliny to have been destroyed before his day; Agámele, a village in the neighbourhood of Pyrrha; Náfe, in the plain of Mæthymna; Alchous, the present Methymna, and Mytilene; and Polium, a site mentioned by Stephanus B. Most of these places are noticed more particularly under their respective names. All of them decayed, and became unimportant, in comparison with Mæthymna and Mytilene, which were situated on good harbours opposite the mainland, and convenient for the coading-trade. The annals of Lesbos are so entirely made up of events affecting these two cities, especially the latter, that we must refer to them for what does not bear upon the general history of the island.

From the manner in which Lesbos is mentioned both in the Iliad and Odyssey (II. xxiv. 544, Od. iv. 342), it is evident that its cities were populous and flourishing at a very early period. They had also very large possessions on the opposite coast. Lesbos was not included in the conquests of Croesus (Herod. i. 27). The severe defeat of the Lesbians by the Samians under Polykrates (iii. 39) seems only to have been a temporary disaster. It is said by Herodotus (i. 151) that at first they had nothing to fear, when Cyrus conquered the territories of Croesus on the mainland; but afterwards, with other islanders, they seem to have submitted voluntarily to Hargapous (i. 169). The situation of this island on the very confines of the great struggle between the Persians and the Greeks was so critical, that its fortunes were seriously affected in every phase of the long conflict, from this period down to the peace of Antalcidas and the campaigns of Alexander.

The Lesbians joined the revolt of Aristagoras (Herod. vi. 3, 8), and one of the most memorable incidents in this part of its history is the consequent hunting down of all its inhabitants, as well as those of Chios and Teos, by the Persians. Mæthymna (v. 931, xiv. 388) was exempted from the punishment. After the battle of Salamis and Mycale they boldly identified themselves with the Greek cause. At first they attached themselves to the Lacedaemonian interest; but before long they came under the overpowering influence of the naval supremacy of Athens. In the early part of the Peloponnesian War, the position of Lesbos was more favorable than that of the other islands; for, like Corcyra and Chios, it was not required to furnish a money-tribute, but only a naval contingent (Thuc. ii. 9). But in the course of the war, Mytilene was induced to intrigue with the Lacedaemonians, and to take the lead in a great revolt from Athens. The events which fill so large a portion of the third book of Thucydides—the speech of Cleon, the change of mind on the part of the Athenians, and the narrow escape of the Lesbians from capture by Croesus by the sending of a second ship to overtake the first—are perhaps the most memorable circumstances connected with the history of this island. The lands of Lesbos were divided among Athenian citizens (καλο-ποιοι), many of whom, however, according to Boeckh, returned to Athens, the rest remaining as a garrison. Mæthymna had taken no part in the revolt, and was exempted from the punishment. After the Sicilian expedition, the Lesbians again invaded the territory of Croesus in their allegiance to Athens; but the result was unint-
LEBOS.

important (Thucyd. viii. 22, 23, 32, 100). It was near the coast of this island that the last great naval victory of the Athenians during the war was won, that of Conon over Callisthenus in the Mardonion. On the destruction of the Athenian force by Lyander at Aegospotami, it fell under the power of Sparta; but it was recovered for a time by Thyrusbulus (Xen. Hell. iv. 8, §§ 28—30). At the peace of Antalcidas it was declared independent. From this time to the establishment of the Macedonian empire it is extremely difficult to fix the fluctuations of the history of Lesbos in the midst of the varying influences of Athens, Sparta, and Persia.

After the battle of the Granicus, Alexander made a treaty with the Lesbians. Menon the Rhodian took Mytilene and fortified it, and died there. Afterwards Hierocles reduced the various cities of the island under the Macedonian power. (For the history of these transactions see Arrian, Exp. Alex. vii. 2; Curt. Hist. Alex. iv. 5.) In the war of the Romans with Persia, Labo destroyed Antissa for siding with the Macedonians, and incorporated its inhabitants with those of Methymna (Liv. xiv. 31. Hence perhaps the true explanation of Pliny's remark, l. c.). In the course of the Mithridatic War, Mytilene incurred the displeasure of the Romans by delivering up M. Aquilinus (Vell. Pat. i. 18; Appian, Mithr. 21). It was also the last city which held out after the close of the war, and was reduced by M. Minucius Thermus,—an occasion on which Julius Cæsar distinguished himself, and earned a civic crown by saving the life of a soldier (Liv. Epit. 89; Secr. Cest. 2; see Cíc. contra Bell. ii. 16). Pompey, however, was induced by Theophranes to make Mytilene a free city (Vell. Pat. i. c.; Strab. xiii. p. 617), and he left there his wife and son during the campaign which ended at Pharsalus. (Appian, B. C. ii. 83, Plut. Pompe. 74, 75.) From this time we have to regard Lesbos as a part of the Roman province of Asia, with Mytilene distinguished as its chief city, and in the enjoyment of privileges more particularly described elsewhere. We may mention here that a few imperial coins of Lesbos, as distinguished from those of the cities, are extant, of the reigns of M. Aurelius and Commodus, and with the legend KOINON ΑΕΞΙΩΝ (Eichhel, vol. ii. p. 501; Mionnet, vol. iii. pp. 34, 35).

A number of provinces under Constantine, Lesbos was placed in the Provincia Iamburana (Hieroc. p. 856, ed. Wosselein). A few detached notices of its fortunes during the middle ages are all that are given here. On the 13th of August, A.D. 802, the empress Irene ended her extraordinary life here in exile. (See Le Beau, Hist. du Bas Empire, vol. xii. p. 400.) In the thirteenth century, contemporaneously with the first crusade, Lesbos began to be affected by the Turkish conquest. The Emir of Surnyna, succeeded in taking Mytilene, but failed in his attempt on Methymna. (Anna Coss. Alex. ib. vii. p. 362, ed. Bomn.) Alexis, however, sent an expedition to retake Mytilene, and was successful (ib. ix. § 425). In the thirteenth century Lesbos was in the power of the Latin emperors of Constantinople, but it was recovered to the Greeks by James Duces Vatatzes, emperor of Nicaea (See his life in the Acta of Biographia, the fourteenth century). Jeanne Palaeologus gave her sister in marriage to Francesco Gattelazza, and the island of Lesbos as a dowry; and it continued in the possession of this family till its final absorption in the Turkish empire (Ducas, Hist. Byzant. p. 46, ed. Bomn.). It appears, however, that these princes were tributary to the Turks (ib. p. 328). In 1457, Mahomet II. made an unsuccessful assault on Methymna, in consequence of a suspicion that the Lesbians had aided the Catalan buccaneers (ib. p. 338; see also Vertot, Hist. de l'Ordre de Malte, ii. 258). He did not actually take the island till 1462. The history of the amanul of Ducas himself is closely connected with Lesbos; he resided there after the fall of Constantinople; he conveyed the tribute from the reigning Gatezino to the sultan at Adrianople; and the last paragraph of his history is an unfinished account of the final catastrophe of the island.

This notice of Lesbos would be very incomplete, unless something were said of its intellectual eminence. In reference to poetry, and especially poetry in connection with music, no island of the Greeks is so celebrated as Lesbos. Whatever other explanation we may give of the legend concerning the head and lyre of Orpheus being carried by the waves to its shores, we may take it as an expression of the fact that here was the primitive seat of the music of the lyre. Lesches, the cyclic minstrel, a native of Pyrrha, was the first of its series of poets. Terpander, though his later life was chiefly connected with the Peloponnese, was almost certainly a native of Lesbos, and probably of Antissa: Arion, of Methymna, appears to have belonged to his school; and no two men were so closely connected with the early history of Greek music. The names of Alcaeus and Sappho are the most imperishable elements in the renown of Mytilene. The latter was sometimes called the tenth Muse (as in Plato's epigram, Σαπφώ Ανεόδωτος ἐξ θέατρον; and a school of poets (Lesbiadum turba, Ovid, Her. xv.) seems to have been formed by her. Other, without entering into the discussions, by Welcker and others, concerning the character of Sappho herself, we must state that the women of Lesbos were as famous for their prophecy as for their beauty. Their beauty is celebrated by Homer (Il. ix. 219, 271), and, as regards their prophecy, the proverbial expression λεοντάω affixes a worse stain to their island than κρηπιδως does to Crete.

Lesbos seems never to have produced any distinguished painter or sculptor, but Hellanicus and Theophranes the friend of Pompey are worthy of being mentioned among historians; and Pictacus, Theophrastus, and Pitarus are known in the annals of philosophy and science. Pittacus was famous also as a legislator. These eminent men were all natives of Mytilene, with the exception of Theophrastus, who was born at Ereus.

The fullest account of Lesbos is the treatise of S. L. Plein, Lesbacorum Liber, Berlin, 1826. In this work is a map of the island; but the English Admiralty charts should be consulted, especially Nos. 1654 and 1665. Further refer to reviews of Plein's work by Meier in the Holl. Allg. Lit. Zeit. for 1827, and by O. Müller in the Gott. Götz. and Anz. for 1828; also to Olander's Beiträge zur Kunde der Insel Lesbos, Hamb. 1827. Information regarding the modern condition of the island will be obtained from Pococke, Tournefort, Richter, and Prokesch. [J. S. H.]

LESORA MONS (Monte Lecche), a summit of the Apennines, above 4000 feet high, is mentioned by Salomoni Appolinarius (Carm. 24, 44) as containing the source of the Tanis (Turn):—

"Hinc le Lecora Cancamus Scytharum
Vinum acspicit citiusque Tarum."
LETTAUS

The pastures on this mountain produced good cheese in Pliny's time (H. N. xi. 42), as they do now. Mont Leucie gives its name to the French department Leucie. [G. L.]

LESSA, Aegina), a village of Epidaurus, upon the confines of the territory of Argos, and at the foot of Mount Arachneaeus. Pausanias saw there a temple of Athena. The ruins of Lessa are situated upon a hill, at the foot of which is the village of Lykovardia. On the outside of the walls, near the foot of the mountain, are the remains of an ancient pyramid, near a church, which contains some Ionic columns. (Paus. ii. 23. § 10; Leake, Morea, vol. ii. p. 419; Bobblye, Recherches, &c. p. 53; Curtius, Peloponnesos, vol. ii. p. 418.)

LESTADAES. [NAXOS.]

LE'SURA, a branch of the Mosella (Mesaet), mentioned by Ausonius (Mosella, v. 365). He calls it "exils," a poor, ill-fed stream. The resemblance of name leads us to conclude that it is the Leoir or Lisse, which flows past Wittlich, and joins the Mosella on the left bank. [G. L.]

LETANDROS, a small island in the Aegean sea, near Amorgos, mentioned only by Pliny (v. 12. s. 23).

LETE (Aethyn; Eth. Asevna), a town of Macedon, which Stephanus B. asserts to have been the native city of Narcissus, the admirals of Alexander the Great; but in this he is certainly mistaken, as Narcissus was a Cretan. (Comp. Arrian, Ind. 18; Dion. xix. 15.) [E. B. J.]

COIN OF LETE.

LETHAUES (Aepnapos, Strab. x. p. 478; Ptol. iii. 17. § 4; Enstat. ad Hom. ii. ii. 646; Solin. 17; Vib. Seq. 13), the large and important river which watered the plain of Gortyna in Crete, now the Melopomiti. [E. B. J.]

LETHAEUS (Aepnapos), a small river of Caria, which has its sources in Mount Pactyes, and after a short course from north to south discharges itself into the Maeander, a little to the south-east of Magnesia. (Strab. xii. p. 554. xiv. p. 647; Athen. xv. p. 683.) Arundel (Seven Churches, p. 57) describes the river which he identifies with the ancient Lethaeus, as a torrent rushing along over rocky ground, and forming many waterfalls. [L. S.]

LETHES PL. [GALLACIA.]

LETOPOLES (Aepnapos) Maris, Ptol. iv. 5. § 46; Aepnapos, Steph. B. B. e.; Letus, Itin. Anton. p. 156; Eth. AepnaposAepnapos), a town in Lower Egypt, near the apex of the Delta, the chief of the nome Leto-polites, but with it belonging to the nomes or prefecture of Memphis. (Strab. xvii. p. 807.) It was probably situated on the banks of the canal of Memphis, a few miles SW. of Cercosauron, Leto, from whom the town and the nome derived their name, was an appellation of the deity Athes, one of the eight Di'i Maiors of Aegypt. Lat. 36° N. [W. B. D.]

LETRINI (Aepnapos, Paus.; Aetnapos, Xen.), a town of Pisatis in Elis, situated near the sea, upon the Sacred Way leading from Elis to Olympia, at the distance of 180 stadia from Elis, and 120 from Olympia. It was said to have been founded by Letareus, a son of Pelops. (Paus. vi. 22. § 8.) Together with several of the other dependent towns of Elis, it joined Agis, when he invaded the territories of Elis; and the Eleians were obliged to surrender their supremacy over Letrini by the peace which they concluded with the Spartans in B. C. 400. (Xen. Hell. iii. 2. §§ 25, 30.) Xenophon (L. c.) speaks of Letrini, Amphikti, and Marganeis as Triphylian places, although they were on the right bank of the Alpheus; and if there is no corruption in the text, which Mr. Grote thinks there is (Hist. of Greece, vol. p. 415), the word Triphylian must be used in a loose sense to signify the dependent townships of Elis. The Asteraios gewi are mentioned by Lycophon (158). In the time of Pausanias nothing remained of Letrini except a few houses and a temple of Artemis Alpheaeus. (Paus. L. c.) Letrini may be placed at the village and monastery of St. John, between Pyrgo and the port of Antikolly, where, according to Leake, among many fragments of antiquity, a part of a large statue was found some years ago. (Leake, Morea, vol. ii. p. 188; Bobblye, p. 130, &c.; Curtius, Peloponnesos, vol. i. p. 72.)

LEVACI, a people in Caesar's division of Gallia, which was inhabited by the Belgae. The Levaci, with some other small tribes, were dependent on the Nervii. (B. G. v. 39.) The position of the Levaci is unknown. [G. L.]

LEVAE FANUM, in Gallia Belgica is placed by the Table on the road from Lugdunum Batavorum (Leidse) to Nervianum (Nympheus). Levae Fanum is between FlCEO (Vleuten) and Carvo; 25 M. P. from Fléo and 12 from Carvo. (Carvo.) D'Anville, assuming that he has fixed Carvo right, supposes that there is some omission of places in the Table between Fléo and Carvo, and that we cannot rely upon it. He conjectures that Levae Fanum may be a little beyond Duratece, on the bank opposite to that of the Batavi, at a place where he calls Livens-diel (vallis Levae), this Lova being some local divinity. Walckenaer fixes Levae Fanum at Leuvres. [G. L.]

LEUCA (rè Auvare), Strab.: Leuca), a small town of Calabria, situated close to the Iapygian promontory, on a small bay immediately to the W. of that celebrated headland. Its site is clearly marked by an ancient church still called Sta. Maria di Leuca, but known also as the Madonna di Finistera, from its situation at the extreme point of Italy in this direction. The Iapygian promontory itself is now known as the Capo di Leuca. Strabo is the only author who mentions a town of this name (v. p. 281), but Lucan also notices the "secreta litiora Leucae" (v. 375) as a port frequented by shipping; and its advantageous position, at a point where so many ships must necessarily touch, would soon create a town upon the spot. It was probably never a municipal town, but a large village or borough, such as now exists upon the spot in consequence of the double attraction of the port and sanctuary. (Iamboldi, Coroestr. dell' Italia, vol. ii. p. 442.)

Strabo tells us (I. c.) that the inhabitants of Leuca showed there a spring of fresh water, which they pretended to have arisen from the wounds of some of the giants which had been expelled by Hercules from the Thilean plains, and who had taken refuge here. These giants they called Luteuni,
and hence gave the name of LEUCANIA to all the surrounding district. The same story is told, with some variations, by the pseudo-Aristotle (de Mirab., 97); and the name of Luntania is found also in Lycothron (Alex. 975), whose expressions, however, would have led us to suppose that it was in the neighbourhood of Siris rather than of the Iapygian promontory. Tactesus (ad loc.) calls it a city of Italy, which is evidently only an erroneous inference from the words of his author. The Laterini of Scylax, whom he mentions as one of the tribes that inhabited Lapygia, may probably be only another form of the same name, though we meet in no other writer with any allusion to their existence as a real people. [E. H. B.]

LEUCA, the name given by Pomponius Mela (1.16), to a district on the west of Halcarneaus, between that city and Myndus. Thamy (H. N. v. 29) mentions a town, Leucopalis, in the same neighbourhood, of which, however, nothing else is known to us. [L. S.]

LEUCADIA. [LEUCAS.]

LEUCAE or LEUCE (Λευκαία, Λευκήν), a small town of Ionia, in the neighbourhood of Phecaea, was situated, according to Pliny (v. 31), "in a promontory and island full." From Scylax (p. 37) we learn that it was a place with harbours. According to Diadorus (xx. 18) the Persian admiral Tachos founded this town on an eminence on the sea coast, in n. c. 322; but shortly after, when Tachos had died, the Gallusians and Cymeans quarrelled about its possession, and the former succeeded by a stratagem in making themselves masters of it. At a later time Leucae became remarkable for the battle fought in its neighbourhood by the consul Licinius Crassus and Aristonicus, n. c. 131. (Strab. xiv. p. 646; Justin, xxxvi. 4.) Some have supposed this place to be identical with the Leucanum mentioned by Thucydides (viii. 24); but this is impossible, as this latter place must be looked for in Chios. The site of the ancient Leucae cannot be a matter of doubt, as a village of the name of Leuке, close upon the sea, at the foot of a hill, is evidently the modern representative of its ancient namesake. (Arundell, "Grecian Churches," p. 295.) [L. S.]

LEUCAE (Λευκαία), a town of Leucadia situated at the northern extremity of the plain Leucae, now called Peloponnesus, which extended inland Leucania, and the Aeine and Aegaeus on the eastern side of the Leucanian gulf. (Polyb. v. 19; Liv. xxi. 27; Strab. viii. p. 363; Leake, Morca, vol. i. p. 226, seq.; Robinson, "Richerchis," c. 95; Curtius, "Peloponnesus," vol. ii. p. 290.)

LEUCÆUM, a town in Britain, mentioned in the Itinerary as being 13 miles from Leuca Dumanticum, and 15 from Nolium. The difficulties involved in this list (viz. that of the 12th Itinerary) are noticed and explained under MRIDUNUM. The Monumenta Britannica suggests both Glanthurby in Somersetshire, and L'eyhov in Glamorganshire. [R. G. L.]

LEUCAS (Λευκά), a place in Bithynia, on the river Gallas, in the south of Nicaea, is mentioned only by Anna Comnena (p. 470); but can be easily identified, as its name Lēfyso is still borne by a neat little town in the middle of the beautiful valley of the Gallas, near the River, on p. 12.13.) [L. S.]

LEUCAS, LEUCADIA (Λευκά, Λευκαία, Λευκάδια, Λευκήν), Thuc. Xев., Strab.; Aevocas, Thuc. Liv.: Eth. Aevocas), an island in the Ionian sea, separated by a narrow channel from the coast of Arcadia. It was originally part of the mainland. (Ael. Nis. 377; comp. Strab. x. p. 451, 452.) Homer also mentions its well-fortified town NEREUS (Νηρευς, l.c.) Its earliest inhabitants were Leleges and Thebantians (Strab. vii. p. 322), but it was afterwards peopled by Acranians, who retained possession of it till the middle of the seventh century n. c., when the Corinthians, under Cypselus, founded a new town near the isthmus, which they called Leucae, where they settled 1000 of their citizens, and to which they removed the inhabitants of the old town of Nereus, (Strab. l.c.; Scylax, p. 13; Thuc. i. 50; Plut. Them. 24; Synm. China, 464.) Scylax says that the town was first called Epileucadia. The Corinthian colonists dug a canal through this isthmus, and thus converted the peninsula into an island. (Strab. l.c.) This canal, which was called Dorycys, and was, according to Pliny, 3 stadia in length (Dorycys, Polyb. v. 5; Plin. iv. 1. s. 2), was after filled up by deposits of sand; and in the Peloponnesian War, it was no longer available for ships, which during that period were conveyed across the isthmus on more than one occasion. (Thuc. iii. 81, iv. 8.) It was in the same state in n. c. 218; for Polybios relates (v. 3) that Philip, the son of Demetrius, had his galleys drawn across this isthmus in that year; and Livy, in relating the siege of Leucadia by the Romans in n. c. 157, says, "Leucadia, nunc insula, et rursus fatea quod perdum murum est, ab Acraniis divisa" (xxxiii. 17). The subsequent restoration of the canal, and the construction of a stone bridge, both of which were in existence in the time of Strabo, were no doubt the work of the Romans; the canal was probably restored soon after the Roman conquest, when the Romans separated Leucas from the Arcadian confederacy, and the bridge was perhaps constructed by order of Augustus, whose policy it was to facilitate communications throughout his dominions.

Leucadia is about 20 miles in length, and from 5 to 8 miles in breadth. It resembles the Isle of Man in shape and size. It consists of a range of limestone mountains, terminating at its north-eastern extremity in a bold and rugged headland, whence the coast runs in a south-west direction to the promontory, anciently called Leucates, which has been uncovered by the fall of the older of the two hills on the name of the cape, as well as of the island, is of course derived from its white cliffs. The southern shore is more soft in aspect, and more sloping and cultivated than the rugged rocks of the northern coast; but the most populous and wooded district is that opposite Arcadia. The interior of the island wears everywhere a rugged aspect. There is but little cultivation, except where terraces have been planted on the mountain sides, and covered with vineyards. The highest ridge of the mountains rises about 3000 feet above the sea.

Between the northern coast of Leucadia and that of Arcadia there is at present a lagoon about 3 miles in length, while its breadth varies from 100 yards to a mile and a half. The lagoon is in most parts only about 2 feet deep. This part of the coast requires a more particular description, which will be given by the accompanying plan. At the north-eastern extremity of Leucadia a little, or spit, of sand, 4 miles in length, sweeps out towards Arcadia. (See Plan, A.) On an isolated point opposite the extremity of this sandbank, is the fort of Santa Maria, erected in the middle ages by one of the Latin princes, but repaired.
and modelled both by the Turks and Venetians. (Plan, B.) The fort was connected with the island by an aqueduct, serving also as a causeway, 1300 yards in length and over 280 feet wide (Plan, 3). It was originally built by the Turks, but was ruined by an earthquake in 1825, and has not since been repaired. It was formerly the residence of the Venetian governor and the chief men of the island, who kept here their magazines and the ears (δυνατία) on which they carried down their oil and wine from the island districts, at the nearest point of the island. The congregation of buildings thus formed, and to which the inhabitants of the fortress gradually retired as the seas became more free from corsairs, arose by degrees to be the capital and seat of government, and is called, in memory of its origin, Amazicili (Ἀμαζίχις). (Plan, C.) Hence the fort alone is properly called Santaaura, and the capital Amazicili; while the island at large retains its ancient name of Leucadia. The ruins of the ancient town of Leucadia are situated a mile and a half to the SE. of Amazicili. The site is called Kullipen, and consists of irregular heights forming the last falls of the central ridge of the island, at the foot of which is a narrow plain between the heights and the lagoon. (Plan, D.) The ancient inclosure is almost entirely traceable, as well round the brow of the hill on the northern, western, and southern sides, as from either end of the height across the plain to the lagoon, and along its shore. This, as Leake observes, illustrates Livy, who remarks (xxvii. 17) that the lower parts of Leucadia were on a level close to the shore. The remains on the lower ground are of a more regular, and, therefore, more modern masonry than on the heights above. The latter are probably the remains of Neritus, which continued to be the ancient acropolis, while the Corinthians gave the name of Leucadia to the town which they erected on the shore below. This is, indeed, in opposition to Strabo, who not only asserts that the name was changed by the Corinthian colony, but also that Leucus was built on a site different from that of Neritus. (x. p. 452.) But, on the other hand, the town continued to be called Neritus even as late as the Peloponnesian War (Thuc. iii. 7); and numerous instances occur in history of different quarters of the same city being known by distinct names. Opposite to the middle of the ancient city are the remains of the bridge and causeway which here crossed the lagoon. (Plan, I.) The bridge was rendered necessary by a channel, which per- rades the whole length of the lagoon, and admits a passage to boats drawing 5 or 6 feet of water, while the other parts of the lagoon are not more than 2 feet in depth. The great squared blocks which formed the ancient causeway are still seen above the shallow water in several places on either side of the deep channel, but particularly towards the Acarnanian shore. The bridge seems to have been kept in repair at a late period of time, there being a solid cubical fabric of masonry of more modern workmanship erected on the causeway on the western bank of the channel. Leake, from whom this description is taken, argues that Strabo could never have visited Leucadia, because he states that this isthmus, the ancient canal, the Roman bridge, and the city lay in the same place; whereas the isthmus and the canal, according to Leake, were near the modern fort Santa Maura, at the distance of 3 miles north of the city of Leucus. But K. O. Müller, who is followed by Bowen and others, believes that the isthmus and canal were a little south of the city of Leucus, that is, between Fort Alexander (Plan, 2) on the island, and Paleocogia on the mainland (Plan, 8). The channel is narrowed at this point, not being more than 100 yards across; and it is probable that the old capital would have been built close to the isthmus connecting the peninsula with the mainland. It has been conjectured that the long spit of sand, on which the fort Santa Maura has been built, probably did not exist in antiquity, and may have been thrown up at first by an earthquake.

Between the fort Santa Maura and the modern town Amazicili, the Anglo-Ionian government have constructed a canal, with a towing-path, for boats drawing not more than 4 or 5 feet of water. (Plan, 4.) A ship-channel, 16 feet deep, has also been commenced across the whole length of the lagoon from Fort Santa Maura to Fort Alexander. This work, if it is ever brought to a conclusion, will open a sheltered passage for large vessels along the Acarnanian coast, and will increase and facilitate the commerce of the island. (Bowen, p. 78.)

LEUCAS

169

PLAN.

A. Spit of sand, which Leake supposed to be the isthmus.
B. Fort Santa Maura.
C. Amazicili.
D. City of Leucus.
E. Site of isthmus, according to K. O. Müller.
1. Remains of Roman bridge.
2. Fort Alexander.
3. Paleocogia.
4. New canal.
5. Turkish aqueduct and bridge.

Of the history of the city of Leucus we have a few details. It sent three ships to the battle of Salamis (Herod. viii. 45); and as a colony of Corinth, it sided with the Lacedaemonians in the Peloponnesian War, and was hence exposed to the hostility of Athens. (Thuc. iii. 7.) In the Macedonian period Leucus was the chief town of Acarnania, and the place in which the meetings of the Acarnanian confederacy were held. In the war between Philip and the Romans, it sided with the Macedonian monarch, and was taken by the Romans after a gallant defence, B. C. 197. (Liv. xxxiii. 17.) After the conquest of Persia, Leucus was separated by the Romans from the Acarnanian confederacy.
LEUCAS.

It is said to be a place of importance from a late period, as appears from the fact that the bishop of Leucas was one of the allies of the Council of Nice in A.D. 325. The descent of Leucans, like that of other Greek towns, was originally aristocratical. The large estates were in the possession of the nobles, who were not allowed to alienate them; but when this law was abolished, a certain amount of property was no longer required for the holding of public offices, by which the government became democratic. ( Aristotle, Pol. ii. 4. § 4.)

Besides Leucas we have mention of two other places in the island, Phatra (Strab. xix. p. 15), and Hellomenium (Eumaen. Thuc. iii. 94). The latter name is preserved in a 19th-century, or a 17th-century, forces tradition. It is perhaps represented by the Heloic, which stands at the head of the bay called Bouthi.

The celebrated patronymic LEUCATAS (Aegeas, Strab. xix. p. 13; Strabo, x. pp. 452, 456, 461), also LEUCATAS OF LEUCATE (Iam. ii. 1. 2; Straban, iii. 474, with 676; Cassius, Bell. Grec. 184); Liv. xxvi. 268, naming the north-western extremity of the island, is a broken white cliff, rising on the west side perpendicularly from the sea to the height of at least 2000 feet, and sloping obliquely into it on the other. On its summit stood the temple of Apollo, hence surmised Leucataes (Strab. x. p. 452), and Leucataes (Or. Triat. 1. 42, v. 2. 75; Ptolemy, ii. 11. 69). This cliff was beloved by the mariners; hence the words of the Plautus (Arr. ii. 274):—

"Mox a Leucatae nimbus caemini montis, \nLeucatini pustis aperunt Apollo.
"

It still retains among the Greek mariners of the present day the old fame which it bore in early times. The waters of the dark water, the strong currents, the margas and the rocks, are all as before. At the annual festival of the god celebrated it was the custom to throw a cargo into the sea; to break his sail; to load his arms with stones, and if necessary, with iron hawks were attached to him, and if necessary the waters were ready to seek him. (Strab. xix. 452; Or. Hes. iv. 156; C. Triat. v. 2. 76; C. Tuk. iv. 18.) These figures are to be taken an expiatory rite, and is supposed to be practised in the island after the same manner. It has been proposed to regard the island as the seat of the temple of Poseidon, from the strength of its military importance, from the range of the Is. (See Dict. of Geog. Vol. iii. p. 708.) Col. W. Welch, in August, 1862, named a temple in the island as an altar. (History of the Archipelago, p. 383.) Many of the persons are supposed to be buried in the rock; another existence, as it is supposed, in the temple at Leucate. I was Arcadian of Hancassavos, the city of N. The is the inscription of Greece, 1913, R. H. Ev. op. Cit. Vol. 100, p. 153, a., ed. Bodeker.)

(Greece, North. Greece, vol. i. p. 10; Bawden, Handbook for Travellers in Greece, p. 73, seq.)

TAIGNETUS, and that the extent of the range is 300 stadia. (Comp. Theophrast. H. P. iii. 11, iv. 1.) Pliny, who knew the author, held a bold and beautiful notion of the "White Mountains" is still called by its ancient title in modern Greek, τον άστυ Βούνα, or, from the inhabitants, τον Σαφούνα Βούνα. Crest is the only part of Greece in which the word θύρα is still common use, denoting the loftier parts of any mountains. Trees grow on all these rocky mountains, except on quite the extreme summits. The commonest tree is the pine or ilex. (Pliny, H. N. i. p. 31, vol. ii. p. 190.)

[Leucosia,] a town in Caria, apparently in the plain of the Meander, on the borders of a lake, whose water was hot and in constant commotion. (Xen. Hell. iv. 8. § 17, iii. 2. § 19.) From the latter of the passages here referred to, we learn that the town possessed a very revered sanctuary of the god; hence assumed Arsenius Leucophasyrenos or Leucophuryne. (Pans. i. 26. § 4; Strab. xiv. p. 647; Tac. Ann. iii. 62.) The poet Nicander spoke of Leucophrys as a place distinguished for its fine roses. (Ath. xiv. p. 683.)

Respecting Leucophasy, the ancient name of Teodos, see Teodos.

LEUCOSIA (Λευκωσία), a small island off the coast of Asia Minor, separated only by a narrow channel from the headland which forms the southern boundary of the gulf of Patras. This headland is called by Lycophron ἄφηγη Ειρηνης, "the promontory of Neptunus," and his commentators tell us that it was commonly known as Pedalium Promontorium (το τρύποντιον). (Lycophr. Alex. 729; and Tzetz. ad loc.) But no such name is found in the geographers, and it seems probable that the promontory itself, as well as the little island off it, was known by the name of Leucosia. The former is still called Panta della Lecceat, the island, which is a mere rock, is known as Isola Piana. It is generally said to have derived its ancient name from one of the Siculi, who was supposed to have been buried there (Lycophr. l. c.; Strab. l. c.; Plin. iii. 7. s. 13); but Dionysius (who writes the name Leucosia) asserts that it was named after a female cousin of Aeaca, and the same account is adopted by Solinus, (Dionys. i. 53; Solin. 2. § 13.) We learn from Synnecochus (Epp. v. 13, vi. 25) that the opposite promontory was selected by wealthy Romans as a site for their villas; and the remains of ancient buildings, which have been discovered on the little island itself, prove that the latter was also so devoted to similar purposes. (Romanelli, vol. i. p. 345.)

[Leucosia,] a city of Cyprus, which is mentioned only by Hierocles and the ecclesiastical historian Sozomen (H. E. i. 3, 10). The name is preserved in the modern Leukosia or Lefkosia, the capital of the island. (Engel, Kypros, vol. i. p. 150; Murili, Viaggio, vol. i. p. 89; Polike, Trav. in the East, vol. ii. pt. i. p. 221.)

LEUCOSYRI (Λευκόσυροι), the ancient name of the Syrians inhabiting Cappadocia, by which they were distinguished from the more southern Syrians, who were of a darker complexion. (Hierod. ii. 72, vii. 72; Strab. xvi. p. 757; Plin. H. N. vi. 3; Eustath. ad Dionys. 775, 970.) They also spread over the western parts of Pontus, between the Black Sea, the Tauric Chersonese, and the river Iris and Halys. In the time of Xenophon (Anab. v. 6. § 8, &c.) they were united with Paphlagonia, and governed by a Paphlagonian prince, who is said to have had an army of 124,000 men, mostly horsemen. This name was often used by the Greeks, even at the time when it had become customary to design.
nate all the inhabitants of the country by their native, or rather Persian name, Cappadoce; but it was applied more particularly to the inhabitants of the coast district on the Euxine, between the rivers Halys and Iris. (Hecat. Fragmenta, 194, 200, 320; Marcian. Herod. p. 72.) Potommy (v. 6, § 2) also applies the name exclusively to the inhabitants about the Iris, and treats of their country as a part of the province of Cappadocia. The Leucoteans were regarded as colonists, who had been planted there during the early conquests of the Assyrians, and were successively subject to Lydia, Persia, and Macedon; but after the time of Alexander their name is scarcely mentioned, the people having become entirely amalgamated with the nations among which they lived. [L. S.]

LEUCOTHEES FANUM (Αρχονθέας Λεσίων), a temple and oracle in the district of the Moschi in Coelehis. Its legendary founder was Phryxus; the temple was plundered by Pharnaces and then by Mithridates. (Strab. xi. p. 498.) The site has been placed near Surae, on the frontiers of Imetria and Kortubia, where two large "tumuli" are now found. (Dubois de Montperceux, L'ouage Autour du Cюnose, vol. ii. p. 349, comp. p. 17, vol. iii. p. 171.) [E. B. J.]

LEUCOTHEUM. [LECCOLLA.]

LEUCTRA (τα Αιτωντα). 1. A village of Bococi, situated on the road from Thebes to Plataea (Strab. ix. p. 414), and in the territory of the former city. (Xen. Hell. vi. 4, § 4.) Its name only occurs in history on account of the celebrated battle fought in its neighbourhood between the Spartans and Thebans, n. c. 371, by which the supremacy of Sparta was for ever overthrown. In the plain of Leuctra, was the tomb of the two daughters of Seccasas, a Leucotian, who had been violated by two Spartans, and had afterwards slain themselves; this tomb was crowned with wreaths by Epaminondas before the battle, since an oracle had predicted that the Spartans would be defeated at this spot (Xen. Hell. vi. 4, § 7; Diod. xv. 54; Paus. ix. 13, § 3; Plut. Pelo. cc. 20, 21). The city of Leuctra, is sometimes supposed to be repre- sented by the village Oenoe or Enoe (Λενοί) which are situated immediately below the modern village of Rimokastro. But these ruins are clearly those of Theseiae, as appears from the inscriptions found there, as well as from their importance; for Leuctra was never anything more than a village in the territory of Theseiae, and had apparently ceased to exist in the time of Strabo, who calls it simply a τόπος (x. p. 414). The real site of Leuctra, " is very clearly marked by a tumulus and some artificial ground on the summit of the ridge which borders the southern side of the valley of Theseiae. The battle of Leuctra was fought probably in the valley on the northern side of the tumulus, about midway between Theseiae and the western extremity of the plain of Pharsa. Clen- broius, in order to avoid the Boeotians, who were expecting him by the direct route from Phoci, marched by Thisbe and the valleys on the southern side of Mount Heleon; and having thus made his appearance suddenly at Creusa, the port of Theseia, captured that fortress. From thence, he moved upon Leuctra, where he intrenched himself on a rising ground; after which the Thebans encamped on an opposite hill, at no great distance. The position of the latter, therefore, seems to have been on the eastern prolongation of the height of Rimok- 

LEUCUS (Pydna.)

LEV. [PALESTINA.]

LEUNI (Αενών), a tribe of the Vineidii, which Potommy (v. 13, § 1) places between the Runcatae and Cassantae. The form of the name has been the subject of discussion; Mannert maintaining that it ought to be written Λεων, and that it is the general name of several tribes in those parts, such as the Βεναωον and Αλανοι. But nothing certain can be said about the matter; and all we know is, that the Leuni must have dwelt at the foot of the Alps of Sulbarg, in the south eastern part of Bavaria. [L. S.]
LETONI.

LEVO'NI (Leucaros), a tribe mentioned by Ptolemy (ii. 11, § 35) as dwelling in the central part of the island of Scandinia. No further particulars are known about them. (Comp. Zemis, die Deutschen, p. 158.)

LEUPHANA (Leucida), a town mentioned by Ptolemy (ii. 11, § 27) in the north of Germany, on the west of the Edbe; it probably occupied the site of the modern Lüneburg. (Wilhelm, Germania, p. 161.)

LEUTERNA or LEUTARIA. (Lecca.)

LEUTOAUXUM, a place in Lusonia Superior. 12 Roman miles east of Murca, on the road from Apulia to Sirmium (Iun. Hieros. p. 561); hence it seems to be identical with the place called Al Labores in the Peutinger Table. [L.S.]

LEXOVII (Lexovii), Strabo, p. 189; (Lexovii, Ptol. ii. 8. § 2), a Celtic people, on the coast of Gallia, immediately west of the mouth of the Seine. When the Veneti and their neighbours were preparing for Caesar's attack (n. c. 56), they applied for aid to the Osini, Lexovi, Nanuceti, and others. (B. G. iii. 9, 11.) Caesar sent Subius against the Unelli, Curiosolites, and Lexovi, to prevent their joining the Veneti. A few days after Subius reached the country of the Unelli, the Aureli Enbiruvicites and the Lexovi warded the Veneti off by the threat of war; and they joined Viridovix, the chief of the Unelli. The Gallic confederates were defeated by Subius, and compelled to surrender. (B. G. iii. 17—19.) The Lexovi took part in the great rising of the Gallic against Caesar (n. c. 52); but their force was only 3000 men. (B. G. vii. 75.) Wackemaker supposes that the territory of the Lexovi of Caesar and Ptolemy comprised both the territories of Lissone and Lowena, though there was a people in Iagoesus named Baicosess; and he further supposes that these Baicosessae and the Viducassae were dependent on the Lexovi, and within their territorial limits. [Baroeces.] The capital of the Lexovi, or Civitas Lexoviorum, as it is called in the Notitia. Province, is Lissone, in the French department of Calvados. [Novomagus.] The country of the Lexovi was one of the parts of Galia Cenomanorum, and the passage to Britain was made.

LIRBA (Aile), a small place in Mesopotamia, mentioned by Polybius (v. 51) on the march of Antiochus. It was probably situated on the road between Nisias and the Tigris. [V.]

LIBANUS MONS (Alebaros tepos), in Hebrew Lebanonos (12771), a celebrated mountain range of Syria, or, as St. Jerome truly terms it, "mones Pheacis altissimae." (Onomast. c. v.) Its name is derived from the root לרבא, "to be white," as St. Jerome also remarks, "Libanus Aelebaros, id est, 'cander' interpretatur" (Ado. Jovianum, tom. iv. col. 172): and white it is, "both in summer and winter; in the former season on account of the natural colour of the barren rock, and in the latter by reason of the snow," which indeed "remains in some places, near the summit, throughout the year." (Ithry and Mangits, Oct. 50 and Nov. 1.) Aliseion is made to its snows in Jer. xvii. 14; and it is described by Tacitus as "tantes inter arborum opuscatum filumque nivilus." (Hist. v. 6.) Lebanon is much celebrated both in sacred and classical writers, and, in particular, much of the subllime imagery of the prophets of the Old Testament is borrowed from this mountain. (e.g. Psal. xxix. 5, 6, civ. 16—18; Cant. iv. 8, 11, 15, v. 15; Isai. xi. 13; Hos. iv. 5—7; Zeck. xi. 1, 2.) It is, however, chiefly celebrated in sacred history for its forests of cedar and fir, from which the temple of Solomon was constructed and adorned. (1 Kings, v. 2 Chron. iii.) It is clear from the sacred history that Mount Lebanon was, in Solomon's time, subject to the kings of Tyre; but at a later period we find the king of Assyria felling its timber for his military engines (Isai. iv. 8, xxxvii. 24; Ezek. xxxii. 16); and Dedanites Scythians relates that Antigonus, having collected from all quarters hewers of wood, and sawyers, and shipbuilders, brought down timber from Libanun to the seas, to build himself a navy. Some idea of the extent of its pine forests may be formed from the fact recorded by this historian, that 8000 men were employed in felling and saving it, and 10000 beasts in transporting it to its destination. He correctly describes the mountain as extending along the coast of Tyre and Bybuls, as far as Sidon, abounding in cedars, and firs, and cypresses, of marvellous size and beauty (xix. 58); and it is singular that the other classical geographers were wholly mistaken as to the course of this remarkable mountain chain, both Ptolemy (v. 13) and Strabo (xvi. p. 753) representing the two almost parallel ranges of Libanus and Anti-Lebanus ascommencing near the sea and running from west to east, in the direction of Damascus, and Anti-Lebanus on the south; and it is remarkable that the Septuagint translators, apparently under the same erroneous idea, frequently translate the Hebrew word Lebanon by ἀστλασέας (e. g. Deut. i. 7, iii. 25, xi. 24; Josh. i. 4, ix. 1). Their relative position is correctly stated by Eusebius and St. Jerome (a. e. Antilibanus), who place Anti-Lebanus to the east of Libanus and in the vicinity of Damascus. [Anti-Lebanus.]

Lebanon itself may be said to commence on the north of the river Leontes (el-Kasiinigeh), between Tyre and Sidon; it follows the course of the coast of the Mediterranean towards the north, which in some places washes its base, and in others is separated from it by a plain varying in extent: the mountain attains its highest elevation (nearly 12,000 feet) about half way between Beirœt and Tripoli. It is now called el-Kisna; the ancient names of it, by which it is peopled,—the southern part being inhabited by the Metwili; to the north of whom, as far as the road from Beirœt to Damascus, are the Druses; the Maronites occupying the northern parts, and in particular the district called Kesrouan. (Robinson, Edil. Rec. vol. iii. p. 439; Burckhardt, Syria, pp. 192—209.) It still answers, in part at least, to the description of St. Jerome, being "fortissimam et vimineam," though it can be no longer said "desertissimam arborum coniferis protegitur" (Comment. in Obser. c. xiv.): and again,—"Nihil Libani in terra repromissionis excelsi est, nec memoriosissim atque condensissim." (Comment. in Zachariae, c. xii.) It is now chiefly fruitful in vines and mulberry trees; the former celebrated from of old (Hos. xiv. 7), the latter introduced with the cultivation of the silk-worm in comparatively modern times. Its extensive pine forests have entirely disappeared, or are now represented by small clusters of firs of no imposing growth, scattered over the mountain in these parts where the soft sandstone (here of a redish hue) comes out from between the Jura limestone, which is the prevailing formation of the mountain, and limestone, which is the prevailing formation of the mountain, and to be the patriarchs of all of their species now existing,
LIRARNA.

The only two torrents which could have effected such havoc as that described by Pausanias are the river, as Plinius and A. v. L. 23. 2. 24. As the river Libethra was near Heraclea, it may be concluded that the Sus, was the same river as the Eupicus, and that Libethra was situated not far from its junction with the sea, as the upper parts of the slope towards Libethra, are secured from the ravages of the torrent by their elevation above its bank.

It might be supposed, from the resemblance, that the modern Malathea [Dieuck] is a corruption of the ancient Libethra: the similarity is to be attributed, perhaps, to the two names having a common origin in some word of the ancient language of Macedonia. (Leake, Northern Greece, vol. iii. pp. 413, 422.)

Libethra, Libethrias. [Helcon.]

LIBIA. [Aethioneis.]

LIBICII or LIBICI (Aethione, Pol.; Authenticum, Ptol.), a tribe of Gallicone Gauls, who inhabited the part of Gallia Transpadana about the river Sesta and the neighbourhood of Veruncula. They are first mentioned by Polybius (ii. 17.), who places them, together with the Laevi (Aethoii), towards the sources of the Padus, and W. of the Issubres. This statement is sufficiently vague: a more precise clue to their position is supplied by Pliny and Ptolemy, both of whom notice Verucula as their chief city, to which the latter adds Lanneculium also. (Plin. iii. 17. § 21; Ptol. iii. 1. § 36.) Pliny expressly tells us that they were descended from the Sallies, a people of Ligurian race; whence it would appear probable that the Libicii as well as the Laevi were Ligurian, and not Gaulish tribes [Laevi], though settled on the N. side of the Padus. Livy also speaks, but in a passage of which the reading is very uncertain (x. 35.), of the Sallivi (the same people with the Sallies) as crossing the Alps, and settling in a valley near the Sesta. (E. B.)

LIBISOSONA (cognomine Forcaugustana, Plin. ii. 3. s. 4; Inscr. ap. Gruter, p. 260. no. 3; Lilibiosa, Cois, op. Sextini, p. 168; Libisiosa, Hist. Ant. p. 446; Aethoica, Ptol. ii. 6. § 59; Lilibiosa, Geog. Lav. iv. 44; Leuca, a city of the Orcuti, in Hispania Tarraconensis, 14 M. P. N. of the sources of the Anas, on the high-road from Laminium to Cassaraguntia. It was an important place of trade, and, under the Romans, a colony, belonging to the conventus of Cassaraguntia (Plin. i. c.; Ubert, vol. ii. pt. 1. pp. 411, 412.) [P. S.]

LIBRATH (Aethoii, Aetobii), generally mentioned in connection with Laodich, from which it could not be far distant [Lachish]. (Jos. xiii. 29—32; 2 Kings. xiii. 8.) It belonged to Judah (Jos. xv. 42), and is recognised by Usener as a village in the district of Ekronopolis. (Usner. s. v. Asdor.) Dr. Robinson could not succeed in recovering any traces of its name or site (Bib. Res. vol. ii. p. 389.)

LIBNIAI, a river in Ireland, mentioned by Ptolemy (ii. 2. § 4) as on the west coast, = the river

LIBRA. [Aebera.]

LIBRIA or LIBIA, a river of Gallia Narbonensis, which Pliny (iii. 4) mentions after the Arauris (Herculanum), and his description proceeds from west to east. It is said (Harduin's Pliny) that all the MSS. have the reading "Liburia." Harduin takes the Libri to be the Lex, but this is the Lexus. [Livy.] It has been conjectured that the Libria is the Liberum, though this river is said of the west. [G. L.]

LIBUL. [Lidici.]

LIBUM (Âdow), a town in Bithynia, distant according to the Itin. Anton. 23, and according to the Itin. Hier. 20 miles N. of Nicæa. (L. i. 5. viii. p. 24.) [L. S.]

LIBUNCAE. [Gallaecia, p. 534, b.]

LIBURNI (Âdospol, Seyl. 7)? Strab. vi. p. 269. vii. p. 317? Appian, Ill. 12? Steph. B.? Schol. ad Nicand. 607? Pomp. Mela. ii. 3. § 12? Plin. iii. 25? Flor. ii. 5), a people who occupied the N. part of Illyricum, or the district called LIBURNA (Âdospol xwba, Seyl. p. 7? App. Pol.) Plut. ii. 16? § 8, vii. 7? § 7? Plin. iii. 6, 23, 26? Pust. Tab. Orelli, Inscr. n. 664). The Liburnians were an ancient people, who, together with the Scylians, had occupied the opposite coast of Pisenium; they had a city there, Trentum, which had continued in existence amidst all the changes of the population (Plin. iii. 18). Niebuhr (Hist. of Rome, vol. i. p. 50, trans.) has conjectured that they were a Pelasgian race. However this may be, it is certain that at the time when the historical accounts of these coasts begin they were very extensively diffused. Corcyra, before the Greeks took possession of it, was peopled by them. (Strab. vi. p. 269.) So was Issa and the neighbourings islands. (S. ad Apollon. iv. 564.) They were also considerably extended to the N., for Nercium, it is evident, had been previously inhabited by Liburnian tribes; for the Vindicelae were Liburnians (Serv. ad Virg. Aen. i. 243), and Strabo (iv. v. 206) makes a distinction between them and the Bruni and Genuani, whom he calls Libyrians. The words of Pliny (i. c.), too, seem distinctly to term the Veneti Liburnians, for the "innermost realm of the Liburnians" must have been the goal at which Antenor is said to have arrived. Driven out from the countries between Pannobia and the Veneti by the Gallic invasion, they were compressed within the district from the Titus to the Arisa, which assumed the title of Liburnia. A wild and piratical race (Liv. x. 2), they used privateers ("loubii," "nares Liburnicae") with one very large lateen sail, which, adopted by the Romans in their struggle with Carthage (Eutrop. ii. 22) and in the Second Macedonian War (Liv. xiii. 48), supplied gradually the high-bulwarked galleys which had formerly been in use. (Cas. B. C. iii. 5; Hor. Epod. i. 1.) Liburnia was afterwards incorporated with the province of Dalmatia, and Ladera, its capital, was made a Roman colony. In A.D. 654 Heracleus invited the Chorvats or Chrobati, who lived on the N. side of the Carpathians, in what is now S. Poland or Galicia, to occupy the province as vassals of the Empire (Const. Perp. de Adv. Imp. c. 31). This connection with the Byzantine Court, and their occupation of countries which had embraced Chris- tianity in the Apostolic age (Titus was in Dalmatia in the time of St. Paul, II. Ep. Tim. iv. 10), naturally led to the conversion of these Slavonian strangers as early as the 7th century. (Comp. Scharfirk, Stor. Alt. vol. ii. pp. 377—309; Nege- hauer, Die Sud-Slaven, pp. 224—244.) Strabo (vi. p. 315) extends the coast-line of Liburnia as far as 1500 stadia; their chief cities were Ladera and the "conventus" or congress of Scorciöa, at which the inhabitants of fourteen towns assembled (Plin. iii. 25). Besides these, Pliny (l. c.) enumerates the following — Aloma, Flamen, Tartesa, Soria, Lop- sica, Ortojula, Vegum, Argantum, Carthuni, Arroma, and Civitas Pavan. [E. B. J.]

LIBURINCAE INSULAE. [Ilyricum.]

LIBURNUM or LIBURNI PORTUS, a seaport on the coast of Eturia, a little to the S. of the Portus Pisinus, near the mouth of the Arunus, now called Livorno. The ancient authorities for the existence of a port on the site of this now celebrated seaport are discussed under PORTUS PISINUS. [E. L. B.]

LIBURNUS MONS, a mountain in Apulia, mentioned only by Polybus, in his description of Hannibal's march into that country, c. 217 (Pol. iii. 100), from which it appears to have been the name of a part of the Appennines on the frontiers of Samnium and Apulia, not far from Luceria; but it cannot be more precisely identified. [E. L. B.]

LIBYA (Âdow), was the general appellation given by the ancient historians to that portion of the old continent which lay between Aegypt, Aethiopia, and the shores of the Atlantic, and which was bounded to the N. by the Mediterranean sea, and to the S. by the river Oceana. With the increase of geographical knowledge, the latter mythical boundary gave place to the equatorial line; but the actual form and dimensions of Africa were not ascertained until the close of the 13th century A.D.; when, in the year 1497, the Portuguese doubled the Cape of Good Hope, and verified the assertion of Herodotus (iv. 42), that Libya, except at the isthmus of Suez, was surrounded by water. From the Libya of the ancients we must abstract such portions as have been already described, or will hereafter be mentioned, in the articles entitled AEGYPTUS, AETHIOPIA, AFRICA, ATLAS, BARCA, CASTIGLIO, CYRINE, MAREMARCA, MAURETANIA, the OAKES, SABAEA, N. Trench. The ancients indeed, the boundaries of Libya are the same with those of modern Africa as far as the equator. The limits, however, of Libya Interior, as opposed to the Aegyptian, Aethiopian, Phoenician, Grecian, and Roman kingdoms and commonwealths, were much narrower and less distinct. The Nile and the Atlantic Ocean bounded it respectively on the east and west; but to the north and south its frontiers were less accurately traced. Some geogra- phers, as Ptolemy, conceived that the south of Libya joined the east of Asia, and that the Indian Ocean was a vast salt lake: others, like Agatharchides, and the Alexandrian writers generally, maintained that it stretched to the equator, and they gave to the unknown regions southward of that line the general title of Agysyma. We shall be assisted in forming a just conception of Libya Interior by tracing the progress of ancient discovery in those regions.

Progress of Discovery. — The Libya of Homer (Od. iv. 87, xiv. 295) and Herodotus (Theog. 739; comp. Strab. i. p. 29) comprised all that portion of the African continent which lay west of Lower and Middle Aegypt. They knew it by report only, had no conception of its form or extent, and gave its in-
Libya.

habitants the general name of Achetopis, the dark or black coloured men. Between n. c. 630—620, Battus of Tharros, being commanded by the oracle to lead a colony into Libya, inquired anxiously "where Libya was," although at that time the position of Aegypt, and probably that of the Phoenician Carthage, was not yet known to him. Hence we may conclude that, in the 7th century B. c., the name Libya, as the generic appellation of a continent within sight of Sicily, and within a few days' sail from Peloponnesus, was either partially adopted by or wholly unknown to the Greeks. The Phoenicians were among the first explorers, as they were among the earliest colonisers of Libya; but they concealed their knowledge of it with true commercial jealousy, and even as late as the 6th century B. C. interdicted the Roman and Etruscan mariners from sailing beyond the Fair Promontory, (Polyb. III. 22.) About sixty years before the journey of Herodotus to Aegypt, i. e. n. c. 523, Cambyses explored a portion of the western desert that lies beyond Elephantine; but his expedition was too brief and disastrous to afford any extension of geographical acquaintance with the interior. Herodotus is the first traveller whose account in any way can be relied upon; and his information was probably derived, in great measure, from the caravan guides with whom he conversed at Memphis or Naucratis in the Delta. By the term Libya, Herodotus understood sometimes the whole of ancient Africa (IV. 42), sometimes Africa exclusive of Aegypt (II. 17, 18, IV. 167). He defined its proper eastern boundary to be the isthmus of Suez and the Red sea, in opposition to those who placed it along the western bank of the Nile. In this opinion he is supported by Strabo (i. pp. 86, 174) and Ptolemy (ii. I. § 6, IV. 5, § 47); and his description of the Great Desert and other features of the interior prove that his narrative generally rests upon the evidence of travellers in that region. The next step in discovery was made by the Macedonian kings of Aegypt. They not only required gold, precious stones, ivory, and aromatics, for luxury and art, and elephants for their wars, but were also actuated by a zeal for the promotion of science. Accordingly, Ptolemy Philadelphus (Diod. i. 37; Plin. vi. 29) and Ptolemy Euergetes (n. c. 283—222) sent forth expeditions to the coast and mouth of the Red sea, and into the modern Nubia. Their investigations, however, tended more to extending acquaintance with the country between the cataracts of the Nile and the straits of Bab-el-Mandeb than to the examination of Western Libya. About 200 years before our era, Eratosthenes described Libya, but rather as a mathematician than a geographer. He defines it to be an acute angled triangle, of which the base was the Mediterranean, and the sides the Red sea, on the east, and on the west an imaginary line drawn from the Pillars of Hercules to the Sinus Adiabatus. The wars of Rome with Carthage, and the destruction of that city in n. c. 146, tended considerably to promote a clearer acquaintance with Libya interior. Polybius, commissioned by his friend and commander, Scipio Aemilianus, visited Aegypt and many districts of the northern coast of Africa, and explored its western shores also, as far as the river Bambotas, perhaps Cape Non, lat. 26° N., where he found the crocodile and hippopotamus. Unfortunately, the record of his journey has perished, although it was extant in the 1st century A. D., and is cited by Phylus (vi. 1) and Stephanos of Byzantium (e. e. 146, 236), Taş公司章程, خالقیه, Βούκουρες; comp. Cosse- liu, Néographes sur les Géographie Ancienne, tom. ii. pp. 1—30.)

The events of the Jugurthine War (n. c. 111—106) led the Romans farther into the interior. The historian Sallust, when prator of Numidia, and subsequently governor of Africa, found many pagan inhabitants of prehistoric times, that may be considered as the products of the indigenous races of Libya. He mentions the Gaetuli as the rude Aborigines, who fed on the flesh of wild beasts, and on the roots of the earth. They dwelt near the torrid zone ("c. hand procul ab ardoris") and, whose huts (mapalas) resembled inverted boats. In n. c. 17, Aedius Gallus conducted, by the command of Augustus, an expedition into Aegypti and Numidia, and extended the knowledge of the eastern districts. The difficulties of the road and the treachery of his guides, indeed, rendered his attempt unpromising; but in the year following, Petronius requested an inroad of the Aethiopians, and established a line of military posts south of Elephantine (Strab. xvii. p. 615; Dion Cass. iv. 6). In n. c. 19, L. Cornelius Balbus attacked the Garamantes with success, and ascertained the names at least of many of their towns. (Flor. iv. 12; Plin. v. 75.) The expedition then acquired was employed by Strabo in his account of Libya. Again, in Nero's reign, an exploring party was despatched to the Abyssinian highlands, with a view of discovering the sources of the Nile. (Plin. vi. 32; Senee. Nat. Quaest. vi. 8.) But the Romans became acquainted with portions of the Libyan desert, less through regular attempts to penetrate it on either side, than from their desire to procure wild beasts for the amphitheatre. Under the emperors, especially, the passion for exhibiting rare animals prevailed; nor have we reason to suspect that these were found in the cultivated northern provinces, whence they must have been driven by the colonial herdsmen and farmers, even while Cyrene and Carthage were independent states. At the secular games exhibited by the emperor Philip the Arabian (A. D. 248), an incredible number of Libyan wild beasts were slaughtered in the arena, and the Roman hunters who collected them must have visited the Sáhara at least, and the southern slope of Atlas; nor, since the hippopotamus and the aligator are mentioned, is it improbable that they even reached the banks of the Somal. Of all the ancient geographers, however, Claudius Ptolemy, who flourished in the second century A. D., displays the most accurate and various acquaintance with Libya interior. Yet, with the works of his predecessors before him, the scientific labours of the Alexandrines, and the Roman surveys, Ptolemy possessed a very inadequate knowledge of the form and extent of this continent. His tables show that its western coast had been explored as far as 11° lat. N.; and he was aware of the approximate position of the Fortunate Islands (now the Canaries), since from them, or some point in them, he calculated all his eastern distances or longitudes. He was also better acquainted than any of his predecessors with the eastern coast, and with the tracts which intervened between the left bank of the Nile and the Great Desert. He mentions an expedition conducted by a Roman officer named Maternus, who, setting forth from Tripoli, advanced as far southward as the neighbourhood of the lake Tchad, and, perhaps, even to Timbuctoo. He has also given, with probable correctness, the position of a number of places in the interior, along a river which he calls
the Nile. Thence moreover assigns to Africa a greater extent & of the equator: but here his know-
ledge becomes more erroneous, as he seems to have
struck into the Atlantic instead of curving eastward;
and he concluded that the southern parts of Libya
joined the eastern parts of Asia, and consequently
was either incredible or ignorant of the Peripitus
of the Phenicians in the reign of Pharaoh Necho.
Pliny adds little to our information respecting
Libya beyond its northern and eastern provinces,
though he contributes to its geography a number of
strange and irreconcilable names of places. He
had seen an abstract at least of the journal of Poly-
bius, and he mentions an expedition in A. D. 41 by
Suetonius Paulinus, which crossed the Atlas range,
and explored a portion of the desert beyond. But
both Pliny and Pomponius Mela are at once too
vague and uncertain in their accounts to have added
much to our knowledge of the interior.
The persecutions which were mutually inflicted
by the Christian sects upon each other in the 3rd
and 4th centuries A. D., the expulsion of the Dona-
tists, Montanists, Circumcellions, &c., from the
ecclesiastical provinces of the Roman church, drove
even beyond the Atlas region thousands of fugitives,
and combined with the conquests of the Arabs in the
7th century in rendering the interior more per-
ishable and better known. Yet neither the fugitives
nor the conquerors have materially increased our
acquaintance with these regions. The era of dis-
covev, in any extensive sense of the term, com-
mensa with the voyages of the Portuguese at the
close of the 15th and the commencement of the
16th century. But their observations belong to
the geography of modern Africa.
We have reserved an account of the two most me-
moreable expeditions of the ancients for the discovery
of the form and dimensions of the Libyan continent,
partly on account of their superior importance, if
they are authentic, and partly because the results
of them have been the subject of much discussion.
Herodotus (iv. 42) alleges as one reason for his
belief that Libya, except at the isthmus of Sace, is
surrounded by water, a story which he heard of its
circumnavigation by the Phenicians in the reign
and by the command of Pharaoh Necho, king of
Egypt. This supposed voyage was therefore made
between the 4th and 5th centuries B.C.
According to Herodotus, whose narrative is indeed
meagre enough, Pharaoh Necho desired to connect
the Mediterranean with the Red sea by a canal from
Bubaslis to the Delta to the Arvinoite bay near
Sace. He abandoned this project at the bidding of
the priests, and then ordered his pilots to attempt
the passage from the one sea to the other by a dif-
f erent channel. For this purpose his fleet, manned
entirely by Phenicians, set sail from the Red sea,
coast Egypt and Aethiopia, and passed into the
Indian ocean. At the end of three years they
took the mouth of the Nile, having, as they
affirmed, circumnavigated the continent. Twice they
landed,—probably at the season of the monsoons,—
laid up their ships, sowed the fields, and reaped the
harvest, and then proceeded on their course. They
alleged,—and their assertion is remarkable, although
Herodotus does not believe it,—that they were
sailing westward the sun was on their right hand.
The probability or improbability of this voyage has
been canvassed by Mannert (Geograph. der
Griech. und Romans, vol. x. pt. 2, pp. 491—511),
by Gosselin (Geographie des Grecs Analyté, tom.
Vol. II. 1, pp. 108, &c.), Renewel (Geogr. of Herod. vol. ii.
p. 348—363), and Heeren (Idem, vol. i. p. 364).
We do not consider that its improbability is by any
means fully established; the voyage, however, is
too tedious and difficult to be repeated by the naviga-
tors of antiquity, and its results for commerce and
geographical knowledge were accordingly unimpor-
tant. The most striking argument for the circum-
navigation having been accomplished is the reported
phenomenon of the sun appearing on the right hand,
or to the north of the voyagers; nor were the Phine-
ian galleys less competent to the voyage than the car-
rels which conveyed Columbus across the Atlantic,
or Di Gama round the Cape. On the other hand,
we must admit the improbability of some of the cir-
cumstances narrated. Herodotus heard the story
150 years after the supposed voyage had been made:
that time an extraordinary expedition beyond the Red sea may have been magnified into
a complete Peripitus. Again, for sowing and reaping
on an unknown coast, for laying up the ships, &c.,
the time allowed,—three years,—is too short. More-
over, no account is made for opposition from the
inhabitants of the coast, or for the violent winds
which prevail at the Cape itself. The notion which
Herodotus entertained, and which long afterwards
prevailed, that Libya did not extend so far S. as the
equator, is not an argument against the fact of the
circumnavigation; for the brevity of Herodotus's state-
ment, in a matter so important to geography, shows
that he had taken little pains in sifting the tra-
tition.
A second ancient voyage is better authenticated.
This was rather an expedition for the promotion of
trade than of geographical discovery. Its date is
uncertain: but it was undertaken in the most flori-
ishing period of the Punic Commonwealth,—i. e.,
in the interval between the reign of Darius Hy-
stapes and the First Punic War (B. c. 521—264).
Hanno, a subject or king, as he is vaguely termed
of Carthage (Geogr. Græc. Minæ, tom. i. Bernardly),
with a fleet of 60 galleys, having on board 30,000
men, set sail from that city through the Straits of
Gibraltar with a commission to found trading-
stations on the Atlantic coast, the present empire
of Morocco. How far he sailed southward is the sub-
ject of much discussion. Gosselin (Geograph. des An-
ciens, vol. i. p. 119, &c.) so shrinks Hanno's voyage as
to Cape Vosa, in 25°. This is the southern terminus,
while Bœdell extends it to Sierra Leone, within 8°
of the equator (Geog. of Herod. vol. ii. p. 348).
The mention of a river, where he saw the crocodile and the river-horse, renders it
probable that Hanno passed the Senegal at least. Of
the fact of the voyage there is no doubt. The record
of it was preserved in an inscription in the temple
of Kronos at Carthage. There it was copied and trans-
lated into his own language by some Greek traveller
or merchant. (Bochart, Geogr. Sacri, i. 33; Cam-
Hudson; Beugainville, Descovertes d'Hanno Mèm.
de l'Afrique des Inspect, tomo. xxvi. xxvii.; Heeren, Idem, vol. i. p. 564.)
A third and much later Peripitus is that which
goes under the name of Arrian. It is probably
a work of the first century A. D. It is the record
or log-book of a trading-voyage on the eastern coast
of Libya, and is chiefly valuable as a register of the
articles of export and import in the markets of the
Red sea, of the Arabian and Persian coast, of the
western shores of India, and the eastern shores of Africa. The extreme south point of the former is the headland of Kilaia, probably the modern Chypre, in India Major (see Vincent’s Travels in India, vol. ii. p. 74 seq.). With their present acquaintance with Libya Interior, and their misconception of its extent, it is not surprising that the more ancient geographers should have been hesitating to which portion of the old continent Libya should be assigned. It was sometimes regarded as an independent division of the earth, and sometimes as part of Asia, and even of Europe. (Agath. ii.; Herod. iv. 42; Varr. L.L. iv. 5; Scal. Hist. Jugurth. 17; Hecat. Ptolemy. iv. 41.) Malosiou (Geog. ii. 27.) As the topography of the interior is very uncertain, we shall examine rather the general physical phenomena of this region, than attempt to assign a local habitation to tribes who roamed over the waste, or to towns of which the names are doubtful and disguised, even when genuine, by the Greek or Roman orthography of their Libyan titles.

1. The Great Desert.—Herodotus (ii. 32, iv. 181) divides Libya N. of the equator into three regions:—(1) The inhabited, which is described under the several heads of Africa, Atlas, Carthage, Cyrene, &c.; (2) the wild heath territory [Atlas]; and (3) the Desert. These divisions correspond nearly to the modern districts of Durbere, Biskiedjerdal, and Sahara. The latter region (Φόβος φαεάνως, Herod. iv. 181) extends from the Atlantic to Aegypt, and is continued under the same degrees of latitude through Arabia, Asia, the southern provinces of Persia, to Mauritania in Northern India. Contrasted with the vale of Biskiedjerdal, the rich arable districts of Africa Propria, and especially with the well-watered Aegypt, the Sahara is one of the most dreary and inhospitable portions of the world. To its real barrenness and solitude the ancients ascribed also many fabulous terrors, which the researches of modern travellers have dispelled. It was believed to swarm with serpents, which, by their number and their venom, were able to impede armies in their march (Lcucan, Pharsal. ix. 765) ; its tribes shrieked like bats, instead of uttering articulate sounds (H. iv. 183) ; its pestilential winds struck with instant death men and animals, who transversed them (Arrian, Exp. Afr. iii. 3) ; and its eddies of sand buried the slain. These descriptions are, however, much exaggerated. (4) Al Kharda, or fifty-day’s gale, as the Arabs term it, the Siwariim (sown, ploughed) of the Arabs, blows at the summer solstice from S. and SE. over a surface scoured by an almost vertical sun, and thus accumulates heat, which dries up all moisture, relaxes the muscular powers, and renders respiration difficult. But though it effebeles, it does not necessarily kill. The real peril of the route, which from very remote ages has been trodden by the caravans, lies in the scarcity of supply of water, and in the obliteration of the track by the whirlwinds of sand. (Bruce, Travels, vol. vi. p. 458; Burchhardt, Volub. vol. i. p. 207.) The difficulty of passing the Libyan Desert was, in fact, diminished by the islands or oases, which served as stepping-stones across it. Of these cases a more particular description is given elsewhere (Oasis), but they are too important a feature of this region to be quite omitted from an account of it. Herodotus (iv. 181) mentions a chain of these patches of verdure extending from E. to W. through Libya. Sometimes they are little more than halting-
The mountain and river system of Libya Interior has been partly described in the article Atlas; and the principal features of its indigenous population under the heads Gaetuli and Garamantes. It will suffice, then, to point out here the effect which the general conformation of the mountains has upon the climate and the rivers. The absence of snow on the Atlas range denies to this continent, in its northern portion, that privilege of partial refrigeration, although in the loftier regions of the Aethiopian highlands the heat is mitigated by the ice upon their summits. Hence arises the superior volume of the Aethiopian rivers, the tributaries of the Nile, and the milder temperature of the plains surrounding the lake of Dumbia, which, although within the tropics, enjoy a perpetual spring. Again, the northern range of Atlas runs so close to the Mediterranean that the wash-trough is brief and abrupt, and the rivers are properly mountain streams, which, after a short course, discharge themselves into the sea. The western slope of the Libyan Montes also presents a succession of terraces, which do not propel the rivers with force enough upon the lowlands to produce a continuous course; so that either they lose themselves in swamps, or are absorbed by the sands. In some cases, indeed, they conceal with the well-known activity of the Carthaginians, which in their turn drain off their superfluous waters in thread-like rivulets. On the southern inclination of Atlas, there is a similar impediment to the formation of large rivers, and not until within a few degrees of the equator, and in districts beyond the bounds of ancient Libya, do we meet with majestic streams, like the Scenyl, the Quevra, &c., rivalling the Nile. On this side, indeed, the irrigated portions of the lowlands are rich pasture-lands, and the Great Desert is bounded and encroached upon by luxuriant patches both of forest and arable land.

The more remarkable mountains not included in the Atlas range are the following:—On the northern frontier of the Desert, Mess Ater or Neger (Plln. v. 5. s. 5, vi. 30. s. 35.), the modern Harrouch or Black Mountain, which, running from east to west, separated the Oasis Pharaon (Pelasus) from Africa Romana. Westward of this was the Usargala (Ouarghala ṭəṛ, Ptol. vi. 6. § 7, &c.), the present Authunek-soum-soujaid, which ran far into the territory of the Garamantes, and contained the sources of the river Bagrada. This may be regarded as a continuation of the Atlas Major, S. of Numidia and Mauratania. Next, running in a N. direction to the verge of Numidia, and a branch of the Usargala, was Mounfour (τὸ Μουφόρ) (Phinte), in which the river Cyphos arises. Along the Atlantic coast, and parallel with the Greater Atlas, were the following mountains and headlands:—Mount Szagopala (Σαγώπαλα, Ptol. iv. 6. § 8, &c.), from which the river Subus sprang, to SW. of which was Mount Mundrus (τὸ Μόνδρυς ἄρος), a long chain of hills, reaching to the parallel of the Fortunate Islands, and containing the fountains of all the rivers that discharge themselves into the Salatus to the Massa, or from Cape Non to Cape Bogiahor. Mt. Caphas (Κάφας), 8 degrees to S., from which the Dardas flowed, stretched in a S.E. direction far into the Desert: Mount Rossaddus (τὸ Ροσάδαυς ἄρος) terminated its headland of the same name, probably Cape Blanco, and in it rose the river Starchir. Of all these mountains, however, the most remarkable as regards the Libyan rock system, because it exhibited unquestionable traces of volcanic action, was that denominated the Chariot of the Gods (Θεοῦ Οὐχύρας), probably the present Kong, or Sierra Leone. This was the extreme point of ancient navigation on the Atlantic; for the Phoenician Peripus, if it indeed was actually performed, formed the single exception to the otherwise universal ignorance of the coast beyond. As far as modern discoveries have made known the interior, Libya, from the ocean to the large range of Egypt, is crossed by a succession of highlands, arising at certain points to a considerable elevation, and sending forth terraces and spurs towards the south. It is possible that these may form a continuous chain, but our acquaintance with its bearings is very imperfect. The ancient geographers distinguished some portions of these highlands by the names of Mount Bardetus (Bārdētus ἄρος), west of the Lunae Montes; and in the same line, but at a considerable interval, M. Mosche (Μοσχής); Ziphia (Ζήφια), north of Mosche; and, approaching the Atlantic, Mount Ion ('Ιών ἄρος), and Danchis (Δάνχις). In a line with the Chariot of the Gods, and northward of the line of Bardetus, were the elevations Aravaltes (Ἀράβαλτες) and Arangus (Ἀράγγυς), the latter of which ran down to the equatorial Sea. These, with Mount Thals (τὸ Θάλς ἄρος), and, further south, a range entitled the Garamantic Pharan or Cembe (ἀ Γαραμαντική φάραντη), may be regarded as offsets of the Aethiopian highlands. That these mountains contain considerable mineral wealth is rendered probable by their feeding the sources of rivers in the gold region, and from the copper pyrites discovered on their flanks. That they were the cradles of innumerable streams is also certain from the rich pasture and woodland which mark the confines of the equatorial region of Libya Interior.

The voyage of Hamno was undertaken for the purpose of planting upon the coast of the Atlantic trading stations, and to secure with the regions that produced gold, aromatics, and elephants, a ready communication with Carthage than could be maintained across the Sābara. That this trade was materially impaired when the Romans became masters of Africa, is probable, because the conquering people had little genius for commerce, and because they derived the same articles of trade through the more circuitous route of Egypt and Aethiopia. Yet the knowledge acquired by the Carthaginians was not altogether lost, and the geographers of the empire have left us some important information respecting the western coast of Libya as far as 110° N. lat. According to Polydoros, the principal promontories were, beginning from the
Libya.

N.—Gammaria (Tawrapia Saya), probably Cape Nun; Scylax's Axthromos, Cape Boustica; Asiamarum (Apparitarsos), Cape Cervino, the westmost point of the continent, lying between the mouths of the Darudas and the Stachir; the headland of Byses-
dium, Cape Blanco, a continuation of the mountain
ridge of that name, and a few miles southward of
Asiamarum; the promontories of Cathason (79
Kababsi Saya), Cape Daecra, near the mouth of the
Nia, and of the Hesperides, celebrated in fable (Estrifiokipar, Pos.). Hesperian Curs, Plin. v. 1.
s. 1; the Cape Verde of the Portuguese; lat.-By-
the term of Hannae's voyage, the basaltic rock en-
titled the headland of Notium (Nobro: nipar). Cape
Rozo, or Red Cape, from the colour of its surface.
Between the two last-mentioned projections lay the
Hesperian bay (Estrifio kopaxa), which, owing to
their misconception of the extent of this continent,
the ancients regarded as the southern boundary of
Libya, the point from which it creased towards Asia,
or where the great Western Ocean commenced.

While enumerating the mountains which con-
cedal their springs, we have nearly exhausted the
catalogue of the Libyan rivers which flow into the
Atlantic. It is a consequence of the terraced con-
formation of the interior, that the streams would, for
the most part, take an easterly or a westerly direc-
 tion. Those which ran east were the tributaries of
the lakes, marshes, and rivers of Aithiopia, and, with
the exception of such as fed the Askaras and the
Astaboras, have been scarcely explored. On the
western side the most important were (Pos. iv. 6. 8)
the Subus (Subos), the modern Sus, and combining,
if not the same, with the Chretes (Xeptrya) and the
Xion (Xio) (Sclayx, p. 53), had its source in Mr.
Sagopara, and entered the Atlantic below the fur-
thest western projection of the Greater Athas. Mr.
Mandras gave birth to the Sabaths, at the mouth
of which stood a town of the same name; the
Chusarxos (Xourorupas) apparently the Caesars of
Polybius (ap. Plin. v. 1. s. 1); to the Ophoides
(Ophiaditga) and Novius (Naios), between the head-
lands of Gammarium and Sobos; and, lastly, the
Mas-sa or Masaust. (Polyb. 1. c.) In Mount Caphas
arises a more considerable stream than any of the above-men-
tioned, the modern Rio de Oruro, the ancient Darudas (Adopros, Adoparos), which contained
crocodiles, and discharged itself into the Nigritia
Mundus. The appearance of the crocodile in this
river, and the dark population which inhabited its
banks in common with those of the Niper, led many of
the ancient geographers to imagine that the Nile,
wherein similar phenomena were observed, took a
westerly course S. of Moroe, and, crossing the con-
tinent, emptied itself a second time into the sea in
the extreme west. The Athiopians Hesperi were
among the consequences of this fiction, and were
believed to be of the same race with the Athiopians of
the Nile. Next in order southward was the Stachir
(Srixyo), which rose in Mr. Yesadus, and, after forming the Lake Chonia, proceeded in a
SE. direction to the bay of the Hesperides.
The Stachir is probably represented by the present St.
Antonio river, or Rio de Guan, and seems to answer to the Sabelus of Polybius (ap. Plin. 1. c.),
The same bay receives the waters of the Nia, the
Bambotas of Polybius, the Pampeus, Sperve, Tiu.
River, as well as the crocodile, inhabits its streams,
and the hides of the former were exported by the
neighbouring tribe of Daraite to Car-
thage. The Maithilus, the present Gambi, de-

sends into the Atlantic from the Theus Ocheuma, a
1065. N. of the Hippodrome of the Athenians
(Christomoyos Athosa), or Cape Roze, with which
terminates the geographer Ptolemy's Itinerary of
the Libyan coast. He mentions, indeed, a few rivers
in the interior which have no outlet to the sea,
but form vast inland lakes. These are, probably,
either tributaries of the Niber, or the upper portion
of the arms of the Niber itself; but the course of the
streams that flow southward to Nigritia and the
Right of Tennis belongs rather to modern than to
ancient geography. It is worthy of notice, how-
ever, that tumours at least of the dimensions of the
Niber must have reached the ears of the old geo-
graphers (Ael.athem. i. 10; Plin. v. 1. s. 1), since
they ascribe to the Ger or G"ir (Tab. Puteing. Giri),
a course of more than 300 miles, with a further
elevation to the N. of 100, where it ends in the lake
Chelonides. The direct mainstream was re-
presented as diving underground, reappearing on the
surface, and finally discharging itself into a lake
called Nuba.

Libya, indeed, "is a region of extensive lakes; of
which there appear to be a great number on the
lowlands of its east coast, in which many of
the rivers from the edge of the table-land terminate." (Somerville, Physical Geol. vol. ii. p. 9.) In Libya
N. of the equal the following were known to the
ancients.—The Tritonis (Aeschyl. Ennem. 289; Pindar. Pyth. iv. 56; Sclayx, p. 499; Herod. iv. 178),
the lake of the Hesperides (Strab. xvii. p. 856);
the Libyan Palus, which was connected with the
Niger by one of its tributaries; the Chonia, near
the eastern flank of the Mount Ryssadium; the Nigritia,
into which the upper portion of the Nigir flowed,
probably the present Jlobleh of the Arabs, or the
Black-Water, SW. of Timbuctoz the Nuba, in
which the river Ger terminates, and which answers
to Lake Tchend, or Now in Bormun, and whose
dimensions almost entitle it to the denomination of a
fresh-water sea; and lastly, the cluster of lakes
to Chelenides, perhaps the modern Fitter,
into which an arm of the tier flows, and which are
surrounded with jungle and pastures celebratals
for their herds of elephants. Salt-water lakes abound
on the northern extremity of the Sibdra, and
the salt obtained from them has been in every age an
article of barter with the south, where that necessity
of life is wholly wanting. It is obtained either from
these lakes, which, dried up by the summer heat,
leave behind a vast quantity of salt, covering ex-
tensive patches of the earth, or from large bogs,
or layers, which frequently extend for many miles,
and rise into hills. The inhabitants of Nigritia purchase
salt with gold-dust. A scarcity of salt in Kasrtha
and Timbuctoz is equivalent to a famine in other
lands. At such times the price of salt becomes an
extraction, that Leo Africans (p. 250) saves an
ass's lead sold at Timbuctoz for eighty ducats.
The neighbourhood of the lakes is also celebrated for
the number and luxuriance of its date trees. To
the borderers of the Desert the date tree is what
the bread-fruit tree is to the South Sea islands.
Its fruit is food for both men and cattle: it was capable
of being preserved for a long time, and conveyed
to great distances; while, from the sap or fruit of the
tree (Pos. iv. 990), the Tenebra (Cape Corveiron 1739) was extracted a liquor equally intoxicating with wine.

Population.—Herodotus (iv. 168—199) distin-
guishes four main elements in the population of
Libya,—(1) the Libyans, (2) the Athiopians,
in all ages, constant warfare, waged with the sole purpose of supplying the slave-markets of the North and East.

The fauna of Libya must not be unnoticed. In the northern deserts tawny and grey tints are the prevailing colours, not merely in birds and beasts, but also in reptiles and insects. In consequence of the extension of this barren region from North Africa through Arabia to Persia and India, many similar species of animals are common to both continents,—the ass, antelopes, leopards, panthers, and hyaenas. The cat tribe prevails in great beauty and variety; the lion of Mount Atlas is said to be the strongest and most formidable of his species. The African elephant is different from the Asiatic, and has always been preferred to it for military purposes. The hippopotamus, which was known to the ancients as the inhabitant of the Senegal and the Upper Nile, appears to be a different species from that which is found in the inter-tropical and southern parts of the continent. The magot or Barbary ape was known to the ancients, and is mentioned by the Byzantine writers as imported for the menageries of Constantinople. The giraffe and camelopard is found as far north as the Great Desert. It appears on the monuments of Aegypt, and was exhibited in the imperial triumphs at Rome. The Atlas region contains two kinds of fallow-deer, one of which is the common fallow-deer of Europe. The ex of Nubia, Akassina, and Baranus is remarkable for the extraordinary size of its horns, which are sometimes two feet in circumference at the root. Of the Libyan animals generally it may be remarked, that while the species which require rich vegetation and much water are found in the Atlas valleys and the plains below them, the desert abounds in such as are content with scantier herbage,—such as the deer, the wild ass, and the antelope. These being fleet of foot, easily remove from the scorched to the green pasture, and find a sufficient supply of water in the course of the river beds.

As regards its Flora, the northern coast of Africa, and the range of the Atlas generally, may be regarded as a zone of transition, where the plants of southern Europe are mingled with those peculiar to Africa. The Greek and Phoenician colonists built their naval armaments of the pine and oak of Mount Atlas, the Aleppo pine and the sandarach or Thuya articulata, being celebrated for their close grain and durability. The vegetation of the interior has been already in part mentioned. The large forests of date-palms, along the southern base of the Atlas, are its principal woodland. The date tree is indigenous, but improved by cultivation. Of the Desert itself stupendous tracts are the only produce besides the coarse prickly grass (penestum echotum), which covers large tracts, and supplies fodder to the camels.

For the authorities upon which this account of Libya rests, see, besides the ancient writers already cited, the travels of Shaw, Hornemann, Burckhardt; Ritter's Erdkunde, Africa; Heeren, Ideen, vol. i.; Mommsen's Geographie, Libya; and Maiebrum, Afrique.

LIBYCA PALUS. [LIBYA, p. 180, b.; TEITON.]
LIBYARCHAE. [MAHMAKIA.]
LIBYCUS MONTES. [AEGYPTUS, p. 37; OASIS.]
LIBYCM MARE. [VIA DESERT PELAGOS, PIVUS- TIVIS LIPPA], was the name applied to that part of the Mediterranean which washed the shores of N. Africa, from the E. coast of Africa Propria on
LIBYCUS NOMOS.

LIBYCUS, a tribe of the S. shores of Crete, and the coast of Egypt, on the E., where it joined the Marc Aequalium; the two Syres belonged to it. (Strabo. ii. pp. 122, 123, x, pp. 475, 488; Athen. i. 3; ii. 14; Dion. Per. 104; Mela, i. 4, ii. 7; Plin. v. 11; Plut. H N. v. 43; [L. S. xvi. 25].)

LIBYCUS NOMOS. [MAMMARCHA.]

LIBYPHOENICES (Aegyptienses, sometimes spelt Aegyptienses), a portion of the population of N. Africa, who are defined by Livy, in accordance with the significance of their name, as "nietum Punicum Afris genus" (Livy. xxi. 22). Diodorus gives a somewhat fuller account of them, as one of the four races who inhabited the Carthaginian territory in N. Africa, namely, the Pane inhabitants of Carthage, the Libyphoenicians, the Libyans, and the Numidians; and he says that the Libypho-

nicians possessed many of the cities on the coast, and had the tie of intermarriage with the Carthaginians (Diod. xx. 55). Pliny restricts them to the S. part of the ancient territory of Carthage. (Plin. v. 4, s. 3: Libyphoenices recutior et Punicum formem incipient; and there can be no doubt, from the facts of the case, that the original seat of the race was in the country around Carthage. It is not, however, equally clear whether the Libyphoe-

nicians of the Carthaginian colonies along the coast of Africa are to be regarded as a race arising out of the intermarriage of the original Punic settlers with the natives of the surrounding country, or as the descendants of Libyphoenicians from the country round Carthage, who had been sent out as colonists. The latter is the more probable, both from indications which we find in the ancient writers, and from the well-known fact that, in all such cases, it is the half-bred which multiplies rapidly, so as to make it a matter of importance for the members of the pure and dominant caste to find a seat for the increasing numbers of the race below them. That such was the policy of Carthage with regard to the Libyphoenicians, and moreover that they were marked by the energy and success which usually distinguishes such half-bred races, we have some interesting proofs. The defence of Agrigentum against the Romans, during the Second Punic War, was signalised by the skill and energy of Matines, a Libyphoenician of Hipponium, whom Livy describes as "vir suppis, et sub Hannibale magistro hostis bellis pertulerit" (Livy. x. 40). The mention of his native place, Hipponium, on the Bruttian coast, a city which had been for some time in the hands of the Carthaginians, is a proof of the tendency to make use of the race in their foreign settlements; while the advantage taken by Hannibal of his talents agrees with the fact that he employed Libyphoenician cavalry in his armies. (Polyb. iii. 33; Liv. xxii. 22.) Niebuhr has traced the presence of Libyphoenicians in the Punic settlements in Sardinia, and their further mixture with the Sardinians, as attested by Cicero in an interesting fragment of his speech for Scipio. (Lectures on Anc. Geo. vol. ii. p. 275.) Avienus mentions the "wild Libyphoenicians" on the S. coast of Spain, E. of Cadiz. (Or. Mar. 419.) Perhaps the half-
bred races of the Spanish colonies in America furnish the closest analogy that can be found to the Libyphoenician subjects of Carthage. [L. S.]

LIBYSA (Africa or Aegypti, PoL. v. 1, § 13; Eth. Aegyptiaco), a town on the coast of the Sinus Aquitanus, Euboea, on the front from Nicesus to Chalcidian. It was celebrated in antiquity as the place containing the tomb of the great Hannibal. (Plut. Flam. 20; Steph. B. s. v.; Plin. H N. v. 43; Amm. Marc. xxii. 9; Enotrop. iv. 11; Diod. Ant. p. 139; Ael. Hist. p. 572.) In Pliny's time the tomb of Hannibal was noticed only because of the tumulus of Hannibal. According to Appian (Sypr. 11), who evidently did not know the town of Libyssa, a river of Phrygia was called Libyssa, and he states that from it the surrounding country received the name of Libyssa. The slight resemblance between the name Libyssa and the modern Gheboe has led some geographers to regard the latter as the site of the ancient town; but Knake (Acta Minor, p. 9), from an accurate computation of distances, has shown that the modern Halapea is much more likely to be the site of Libyssa. [L. S.]

LICATTI, or LICATTII (Andaetae, or Andaetae), a tribe of the Vindelici, dwelling on the banks of the river Licius or Lucus, from which they derived their name. (Plut. ii. 13, § 3.) Strabo (iv. p. 206) mentions them among the most audacious of the Vindelician tribes. Pliny (iii. 24), who calls them Licates, enumerates them among the Alpine tribes subdued by Augustus. [L. S.]

LICHADES (ai Aegyptes), a group of three small islands between the promontory of Cenaeum in Eubea and that of Caemidies in Locris. They are said to have derived their name from Licus, who was here thrown into the sea by Hercules, when he was suffering from the poisoned garment. (Strab. i. p. 60, ii. p. 426; Plin. iv. 12. s. 20; Less. Northern Greece. ii. p. 177.)

LICIAS, LICUS (Aegypt: Lech), a small river in Vindelicia. (Plut. ii. 12, § 2, 13. § 1; Ven. Fort. 117. S. Mart. iv. 641.) It assumed the modern form of its name as early as the time of the Lombards. (Paul. Disc. Longp. ii. 13.) Its only tributary of any note was the Vindro or Vindus. It has its sources in the Alps, and flowing in a northern direction, enters itself into the Danube, not far from Drususjurg. [L. S.]

LICENIANA. [Lustania.]

LIDE (Athen), a mountain in Caria, in the neighborhood of Pedasus. In the war of Cyrus against the Carians, the Pedasaeans alone of all the Carians maintained themselves against Harpalus, the Persian commander, by fortifying themselves on Mount Lide but in the end they were also reduced. (Herod. i. 173, viii. 104.)

LIGATUN, a people of Gallia Narbonensis, mentioned by Pliny (iii. 4): "Regio Oxshorum Libi-
n omnique; super quoque Suetri, &c." The next ligio to the east that he mentions is "Regio Deci-

norum." If we can make a safe conclusion from Pliny's text, the Ligati must have been close to the Oxshui, with the Deciates to the east, and somewhere between the Argentum river and Antipilis. Wackenroder (Geo. g. vol. ii. p. 42) places the Ligati in the parts about Saint-Vallier, Collem, and Fonten. [G. L.]

LIGER, LIGEIS (Acigyn, Acyelp: Loire), a river of Gallia, which has the largest basin of all the French rivers. The orthography seems to be Liger or Aegyyn (Caes. iii. 9, ed. Schneider), though the Romans made both syllables short. In Caesar (vii. 53), the nominative "Liger" occurs, and the genitive "Ligeris." In B. G. vii. 5, 11, the accusative "Ligerum," according to some editors "Ligerrum." The objective is "Ligere," if it is right, must have a nominative "Liger." The forms "Liger," "Li-
But these verses are spurious. (See the Notes in Oudendorp's edition.) According to Strabo, the Loire rises in the Cévennes (τὰ Κέαμνα), and flows into the ocean. But he is mistaken as to the course of the Loire, for he makes both the Garonne and the Loire flow parallel to the Pyrenees; and he was further mistaken in supposing the axis of the Pyrenees to be south and north. (Gallia Transalpina, vol. i. p. 949.) He estimates the navigable part of each river at 2000 stadia; but the Loire is a much longer river than the Garonne. He says that the Loire flows past Genabum (Oriens), and that Genabum is situated about half way between the commencement of the navigable part of the river and its outlet, which lies between the territory of the Pictones on the south, and the territory of the Namnetes on the north; all which is correct enough. (Strab. iv. pp. 189, 190, 191.) He adds that there was a trading place (εμπορικων), named Corbilo [Corbilo], on the river, which Polybius speaks of. It appears that Strabo did not distinguish the Elaver (Allier) from the Loire, for he says: "the Arvernii are situated on the Loire, and their chief city is Nennessus, which lies on the river; and this river, flowing past Genabum, the trading town of the Cor- nutes, which is situated about the middle of the navigable part, discharges itself into the ocean." (p. 191.) But Nennessus is near the Allier.

Caesar was acquainted both with the Elaver (vii. 34, 35) and the river properly called the Loire. He crossed the Elaver on his march to Gergovia. (Gergovia.) He remarks that the Allier was not generally fordable before the autumn; and in another place (B. G. vii. 53) he describes his passage over the Loire at a season when it was swollen by the melted snow. When Caesar was preparing for his naval warfare with the Veneti, he had ships built on the Loire. (B. G. iii. 9.) He does not tell us where he built them, but it may have been in the country of the Andes or Andeacvi, which he held at that time.

Of the four passages which were made in Strabo's time from Gallia to Britannia, one was from the mouth of the Loire; and this river was one line of commercial communication between the Provincia and Britannia. Goods were taken by land from the Provincia to the Loire, and then carried down the Loire. (Strab. iv. p. 189.) Pliny (iv. 18) calls the Loire "flumen clarum," which Forbiger explains by the words "clear stream;" but this does not seem to be what Pliny means. Tibullus (i. 7, 11) says,

"Testis Arar Rhodanumque ceder magnumque Gar- nunna, Carauti et flavi caerulea lympha Liger."

This seems to be all that the ancient geographers have said of the Loire. The Elaver (Allier) rises in Mons Lessara (Mont Lozère), not very far from the source of the Loire, and on the north-west side of the Cévennes. It flows north through the fertile Lignaque d'Avergne, and after a course of about 200 miles joins the Loire at Noviodunum or Ne- vorium (Nervey). The Loire rises in Mont Mezenc, and flows north to its junction with the Allier in a valley between the valley of the Allier and the basin of the Rhone. From Nervey the course of the Loire is north-west to Gensio (Orléans); and from Orléans it has a general west course to the ocean, which it enters below Nantes. The whole length of the river is above 500 miles. Several large rivers flow into it on the left side below Orléans; and the Magpone on the right side below Tours. The area of this river-basin is 50,000 square miles, or as much as the area of England. The drainage from this large surface passes through one channel into the sea, and when the volume of water is increased by great rains it causes inundations, and does great damage.

[GL.]

LIGURES, [Liguria] LIGURES FAEBIAMI ET CORNELIANI [Hirpini].

LIGURIA (Arçogia, Poli; but in earlier Greek writers always Ἀργοταυία; the people were called by the Greeks Argorías, but by later writers Arγoríνα; by the Romans Ligures; but the adjective form, Liguricis) are mentioned in many provinces or regions of Northern Italy, extending along the N. coast of the Tyrrhenian sea, from the frontiers of Gaul to those of Etruria. In the more precise and definite sense in which the name was employed from the time of Augustus, and in which it is used by the geographers (Strabo, Pliny, Ptolemy, &c.), Liguria was bounded by the river Varus on the W., and by the Alae on the E., while towards the N. it extended across the chain of the Maritime Alps and Apennines as far as the river Padus. The Trebia, one of the conduits of the Padus on its right bank, appears to have formed the limit which separated Liguria from Gallia Cispadana. In this sense, Liguria constituted the ninth region of Italy, according to the division of Augustus, and its boundaries were fixed by that monarch. (Plin. iii. 5. s. 7; Strab. v. p. 218; Mel. ii. 4. § 9; Plin. iii. 1. § 8.)

But Liguria, in its original sense, as "the land of the Ligurians," comprised a much more extensive tract. All the earliest authors are agreed in representing the tribes that occupied the western slopes of the Maritime Alps and the region which extends from thence to the sea at Massilia, and as far as the mouths of the Rhone, as of Ligurian, and not Gaulish origin. Thus Aschoylus represents Hercules as contending with the Ligurens on the stony plains near the mouths of the Rhone, Herodotus speaks of Ligurians inhabiting the country above Massilia, and Hecateaeus distinctly calls Massilia itself a city of Liguria, while he terms Narbo a city of Gaul. Scaevius also assigns to the Ligurians the coast of the Mediterranean sea as far as the months of the Rhone; while from that river to Emporium in Spain, he tells us that the Ligurians and Iberians were intermingled. The Halieut, who, according to Avienus, were the earliest inhabitants of the country around Narbo, were, according to Hecateaeus, a Ligurian tribe. (Aschyl. op. Strab. iv. p. 183; Hecat. Fr. 19, 20, 22, ed. Klaenius; Herod. v. 9; Syl. p. 2. §§ 3, 4; Avien. Or. Marit. 584; Strab. iv. p. 203.) Thucydides also speaks of the Ligurians having expelled the Sicaniens, an Iberian tribe from the banks of the river Scuavis, in
Liguria.

Itaria, thus pointing to a still wider extension of their power (Thuc. vi. 2.) But while the Ligurian settlements to the W. of the Rhone are more obscure and uncertain, the tribes that extended from that river to the Maritime Alps and the confines of Italy—the Salvars, Oxybius, and Decibetes—are assigned on good authority to the Ligurian race. (Strab. vii. 202, 203; Pol. xxxvii. 7, 8.) On their eastern frontier, also, the Ligurians were at one time more widely spread than the limits above described.

Polibius tells us that in his time they occupied the sea-coast as far as Pissum, which was the first city of Etruria: and in the interior they held the mountain districts as far as the confines of the Arbrutes. (Pol. ii. 16.) In the narrative of their wars with Rome in the 2nd century B.C., as given in Livy, we find them extending to the same limits; and Lycothron represents them at a much earlier period as stretching far down the coast of Etruria, before the arrival of the Tyrrhenians, who wrested from them by force of arms the site of Pisa and other cities. (Lycophr. Ant., 1356.) The population of Corsica also is ascribed by Seneca, and probably with good reason, to a Ligurian stock. (Cons. Nat.) On the N. of the Apennines, in like manner, it is probable that the Ligurian tribes far more widely spread, before the settlement of the Gauls, who occupied the fertile plains and drove them back into the mountains. Thus the Laevi and Libiri, who occupied the banks of the Ticinus, appear to have been of Ligurian race (Plin. iii. 17. s. 21; Liv. v. 25.) the Taurini, who certainly dwelt on both banks of the Padus, were unquestionably a Ligurian tribe; and there seems much reason to assign the same origin to the Sinuaiti.

In regard to the national affinities or origin of the Ligurians themselves, we are also at least in the dark. We know only that they were not either Iberians or Gauls. Strabo tells us distinctly that they were of a different race from the Gauls or Celts who inhabited the rest of the Alps, though they resembled them in their mode of life. (Strab. ii. p. 128.) And the same thing is implied in the marked distinction unheirarchically observed by Livy and other Roman writers between the Gaulish and Ligurian tribes, notwithstanding their close geographical proximity, and their frequent alliance in war. Dionysius says that the origin and descent of the Ligurians was wholly unknown, and Cato appears to have acquiesced in a similar conclusion. (Dionys. i. 82; Cato, op. Serv. ad Aen. xi. 718.) But all ancient authors appear to have agreed in regarding them as one of the most ancient nations of Italy; and on this account Philiesus represented the Siculi as a Ligurian tribe, while other authors assigned the same origin to the Aborigines of Lutium. (Dionys. i. 10, 1.) Several modern writers have maintained the Celtic origin or affinity of the Ligurians. (Cluver. Ital. pp. 49-51; Grégoire, Hist. d'Ital., vol. ii. pp. 5-7.) But the authority of Strabo seems decisive against any close connection between the two races: and it is impossible, in the absence of all remains of their language, to form even a reasonable conjecture as to their more remote affinities. A fact mentioned by Plutarch (Mar. 19.) according to whom the Ligurians in the army of Marius called themselves in their own language Ambrianus, though curious, is much too isolated and uncertain to be received as reasonable proof of a common origin with the Gauls of that name.

The name of the Ligurians appears to have been obscurely known to the Greeks from a very early period, for even Herodotus noticed them, in conjunction with the Scythians and Thracians,—evidently as one of the most distant nations of the then known world. (Herod. op. Strab. vii. p. 360.) But from the time of the foundation of the flourishing Greek colony of Massilia, which speedily extended not only over the whole of its Commerce but its colonies, as far as Liguria, as well as those of Iberia, the name of the Ligurians must have become familiar to the Greeks, and was, as we have seen, well known to Hecataeus and Asclepius. The Ligurians seem also from an early period to have been ready to engage as mercenary troops in the service of more civilized nations; and we find Ligurian auxiliaries already mentioned in the great army of the Carthaginian general Hamilcar, in n.c. 450. (Herod. vii. 155; Diod. xi. 1.) The Greek despotai in Sicily continued to recruit their mercenary forces from the same quarter as late as the time of Agathocles. (Diod. xxi. 3.) The Greeks of Massilia founded colonies along the coast of Liguria as far as Nicaea and the Portus Herculis Motiaci, but evidently never established their power far inland, and the mountain tribes of the Ligurians were left in the enjoyment of unmeddled independence.

It was not till the year 237 B.C. that the Ligurians, for the first time, came into contact with the armies of Rome; and P. Lentulus Caudinius, one of the consuls of the following year, was the first who celebrated a triumph over them. (Eustroph. iii. 2; Liv. Epit. xxii. Fast. Capit.) But the successes of the Romans at this period were evidently very partial and incomplete, and though we find one of the consuls for several years consecutively sent against the Ligurians, and the name of that people appears three times in the triumphal Fasti (n.c. 235—223), it is evident that nothing more was accomplished than to prevent them from keeping the field and compel them to take refuge in the mountains (Sueton. viii. 18, 19). The Ligurian tribes with whom the Romans were at this time engaged in hostilities were exclusively those on the N. of the Apenines, who made common cause with the neighbouring Gaulish tribes of the Boians and Casilinums. These petty hostilities were for a time interrupted by the more important contest of the Second Punic War. During that struggle the Ligurians openly sided with the Carthaginians: they sent support to Hannibal, and furnished an important contingent to the army with which Hasdrubal fought at the Metaurus. Again, before the close of the war, when Mago landed in their territory, and made it the base of his operations against Cato and Gaius Gaull, the Ligurians espoused his cause with zeal, and prepared to support him with their whole forces (Liv. xxi. 33, xxvii. 47, xxviii. 36, xxix. 5.) After the untimely fate of Mago, and the close of the war, the Romans were in no haste to punish the Ligurians and Gauls for their defection, but those nations were the first to take up arms, and, at the instigation of the Carthaginian Hannibal, broke out into open hostilities, (n. c. 200.), and attacked the Roman colonies of Placentia and Cremnea. (Liv. xxxi. 10.)

From this time commenced the long series of wars between the Romans and Ligurians, which continued with little intermission for above eighty years. It would be impossible to give here any detailed account of these long protracted, but desultory hostilities; indeed we possess, in reality, very little information concerning them. So long as the books of Livy are pre-
LIGURIA.

served to us, we find perpetually recurring notices of campaigns against the Ligurians; and while the Roman arms were overwhelming the powerful empires of Macedonia and Syria in the East, one, and sometimes both, of the consuls were engaged in petty and inglorious hostilities with the hardy mountaineers of Liguria. But the annual records of these campaigns for the most part throw but little light on the true nature and extent of the power of the Roman arms. It is evident, indeed, that, notwithstanding the often repeated tales of victories, frequently celebrated at Rome by triumphs, and often said to have been followed by the submission of the whole Ligurian nation, the struggle was really an arduous one, and it was long before the Romans made any real progress in the reduction of their territory.

One of the most formidable and powerful of the Ligurian tribes was that of the Apuani, who inhabited the lofty group of mountains bordering on Etruria, and appear at B.c. 454, in the Memoriale, and afterwards in the Maera and Assar (Aegropa and Sorchedo), while they extended eastward along the chain of the Apennines to the frontiers of the Arretines and the territory of Mutina and Bovonia. To oppose their incursions, the Romans generally made Phœa the head-quarters of one of their armies, and from thence carried their arms into the heart of the mountains; but their successes seldom effected more than to compel the enemy to disperse and take refuge in their villas and castles, of which they were mountain fastnesses in which they were generally able to defy the Roman arms. It was not till B.c. 180 that the first effectual step was taken for their reduction, by the consuls Cornelius and Baebius, who, after having compelled them to a nominal submission, adopted the expedient of transporting the whole nation (to the number of 40,000, including women and children) to a distance from their own country, and settled them in the heart of Samnium, where they continued to exist, under the name of "Ligures Conamnati et Basanenses," for centuries afterwards. (Livy. xlv. 38, 41.) The establishment of Roman colonies at Phœa and Luca a few years afterwards tended to consolidate the conquest thus obtained, and established the Roman dominion permanently as far as the Maera and the port of Luna. (Id. xl. 43. xli. 13.) The Finiati, a tribe on the N. of the Apennines, near the sources of the Scenenna (Panaro), had been reduced to subjection by C. Flaminius in B.c. 157, and the obscure tribes of the Bregiati, Garuli, Heracites, and Lapaeini appear to have been finally subdued in B.c. 175. (Id. xxxix. 2, xlii. 19.) The Inganni, one of the most powerful tribes on the coast to the W. of Genoa, had been reduced to nominal submission as early as B.c. 151, but appear to have been still very imperfectly subdued; and they, as well as their neighbours the Inteni, continued to harass the territory of the Romans, as well as of their allies the Masilians, by piratical expeditions. (Livy. xl. 15, 25-28, 41.) In B.c. 173 the Statilius were reduced to subjection (Id. xlii. 8, 9); and the name of this people, which here appears for the first time, shows that the Romans were gradually, though slowly, making good their advance towards the W. from the year 167 B.C., when we lose the guidance of Livy, we are unable to trace the Ligurian wars in any detail, but we find triumphs over them still repeatedly recorded, and it is evident that they were still unsubdued. In B.c. 154 the Romans for the first time attacked the Ligurian tribes of the Oxybilli and Decinates, who dwelt W. of the Varus, and were therefore not included in Italy, according to its later limits. (Liv. Epit. xlvii.; Polyb. xxxiii. 7.) It was not till more than thirty years afterwards (B.c. 123-122) that two successive triumphs celebrated the reduction of the more powerful tribes of the Vercoriti and Salluvii, both of them in the same neighbourhood. But while the Ligurian tribes W. of the Maritime Alps were thus brought gradually under the dominion of Rome, it is evident that the submission of those in Italy was still incomplete; and in B.c. 117. Q. Marcinius for the last time earned a triumph "de Liguribus." (Fast. Capit.) Even after this, M. Acinilius Scarrus is said to have distinguished himself by fresh successes over them; and the construction by him (B.c. 109) of the Via Acinii, which extended along the coast from Luna to Vada Sabatia, and from thence inland across the Apennines to Bertona, may be considered as marking the period of the final subjugation of Liguria. (Strab. v. p. 217; Ann. Vict. de Vitr. Illustre. 72.) But a remarkable expression of Strabo, who says that, after eighty years of warfare, the Romans only succeeded in securing a space of 12 stadia in breadth for the free passage of public officers, shows that even at this time the subjection of the mountain tribes was but imperfect. (Strab. iv. p. 203.) Those which inhabited the Maritime Alps, indeed, were not finally reduced to obedience till the reign of Augustus, B.c. 14. (Dion Cass. liv. 24.) This had, however, been completely effected at the time that Strabo wrote, and Liguria had been brought under the same system of administration with the rest of Italy. (Strab. l.c.) The period at which the Ligurians obtained the Roman franchise is unknown; it is perhaps probable that the towns obtained this privilege at the same time with those of Cœtianiae (B.c. 89); but the mountain tribes, even in the days of Pliny, only enjoyed the Latin franchise. (Plin. iii. 20. s. 24.)

In the division of Italy under Augustus, Liguria (in the more limited sense, as already defined) constituted the ninth region (Plin. iii. 5. s. 7), and its boundaries on the E. and W. appear to have continued unchanged throughout the period of the Roman Empire: but the Cottian Alps, which in the time of Augustus still constituted a separate district under their own native chieftain, though dependent upon Rome, and, from the reign of Nero to that of Constantine, still formed a separate province, were incorporated with Cœtianiae with Liguria; and from this period the whole of the region thus constituted came to be known as the Alps Cottiae, while the name of Liguria was transferred (on what account we know not) to the eleventh region, or Gallia Transpadana [Italia, p. 93]. Hence we find late writers uniformly speaking of Mediolanum and Tenuim as cities of Liguria, while the real land of the Ligurians had altogether lost that appellation, and was known only as "the province of the Cottian Alps." (Lib. Pros. 17; P. Duc. Hist. Lang. ii. 15, 16; Jornand. Get. 30, 42; Pliny. E. G. i. 14; Boccard, Hist. Not. Dign. ii. pp. 442, 443.) It is evident that long before this change took place the Ligurians must have lost all traces of their distinct nationality, and become blended into one common mass with the other Italian subjects of Rome.

Liguria is throughout the greater part of its extent a mountainous country. The Maritime Alps, which formed the western boundary, descend completely to the sea in the neighbourhood of Nice and
LIGURIA.

Monaco, while the main chain of the same mountains, turning off from the general direction of the central chain of the Alps near the sources of the Var (Varus), is prolonged in a lofty and rugged range till it reaches the sea between Noli and Savona. The lateral ranges and offsets which descend from these mountains to the sea occupy the whole line of coast from Monaco to Savona. Hence this line has always been one where there has been much difficulty in making and maintaining a practicable road. It was not till the reign of Augustus that the Romans carried a highway from Vada Sbbatha to Autepeia and in the middle ages, when the Roman roads had fallen into decay, the whole of this line of coast became proverbial for the difficulty of its communications. (Orosie, Perg, ii. 49.) From the neighbourhood of Vada Sbbatha or Savona, where the Alps may be considered to end and the Apennines to begin, the latter chain of mountains runs nearly parallel with the coast of Liguria throughout its whole extent as far as the river Maira; and though the range of the Apennines is far inferior in elevation to that of the Maritime Alps, they nevertheless constitute a mountain mass of a rugged and difficult character, which leaves scarcely any level space between the foot of the mountains and the sea. The northern declivity of the Apennines is less abrupt, and the mountains gradually subside into ranges of steep wooded hills as they approach the plains of the Po; but for this very reason the space occupied by the mountains and hilly tract is more extensive, and constitutes a broad belt or band varying from 15 to 30 miles in width. The narrowest portion of the range, as well as one of the lowest, is immediately at the back of Genua, and for that reason the pass from that city to Tortona was in ancient as well as modern times one of the principal lines of communication with the interior. Another natural pass is marked out by a depression in the ridge between the Maritime Alps and Apennines, which is crossed by the road from Savona to Genua. This line of road communicates with the plain at the N. foot of the Maritime Alps, extending from the neighbourhood of Coni and Mondovi to that of Turin, which is one of the most extensive tracts of fertile and level country comprised within the limits of the ancient Roman E. E. Of the hilly tract of the Apennines, Montecat extends from the foot of the Apennines (on the northern slope of which they are, in fact, mere continuations) quite to the bank of the Po; but are of moderate elevation and constitute a fertile country. Beyond these, again, another tract of plain occurs, but of less extent; for though it runs far up into the mountains near Nort, it is seen hemmed in again by the hills which descend to Tortona (Tortona, Venaria (Iria), and Casteggio (Casalbis), so as to leave but a narrow strip of plain between them and the banks of the Po.

The physical features of Liguria naturally exercised a marked influence on the character and habits of its inhabitants. It was with the tribes who occupied the lofty and rugged ranges of the Apennines E. of the Maira (where these mountains rise to a much greater elevation, and assume a much more Alpine character, than in any part of Liguria proper) that the Romans waged their longest and most obstinate contests; but all the tribes who inhabited the upper valleys of the central chain, and the steep and rugged declivities of the Apennines towards the sea, partook of the same hardy and warlike character. On the other hand, the Statielli, Vaganzia, and other tribes who occupied the more fertile hills and valleys on the N. coast of the Apennines, were evidently reduced with comparatively little difficulty. It is to the former portion of the Ligurian people that the character and description of them which we find in ancient writers may be considered almost exclusively to apply. Strabo says that they dwelt in scattered villages, tilling the soil with difficulty, on account of its rugged and barren character, so that they had almost to quarry rather than dig it. But their chief subsistence was derived from their herds, which supplied them with flesh, cheese, and milk; and they made a kind of drink from barley. Their mountains also supplied timber in great abundance and of the largest size. Genua was their principal emporium, and thither they brought for export timber, cattle hides, and honey, in return for which they received wine and oil. (Strab. iv. p. 202, v. p. 218; Diod. v. 39.) In the days of the geographer they produced but little wine, and that of bad quality; but Pliny speaks of the Ligurian wines with commendation. (Strab. p. 202; Plini. civ. 6. s. 8.) The nature of their country and the life they led inclined them to handiwork ("assuetum nudo Ligurum," Var. G. ii. 168), "Ligures montani duri et agrestes," Cie. de Leg. Agr. ii. 23) and they were distinguished for their agility, which admirably fitted them for the chase, as well as for the kind of predatory warfare which they so long maintained against the Romans. Cato gave them the character of being treacherous and deceitful,—an opinion which seems to have been generally adopted by the Romans (Serv. ad Aen. xl. 700, 715,) and must naturally have grown up from the nature of the wars between them; but they appear to have served faithfully, as well as bravely, in the service of the Greeks and Carthaginians, as mercenary troops, at a later period, as auxiliaries in those of Rome. (Diod. v. 39.; Plut. Mor. 19; Tac. Hist. ii. 14.) The troops they furnished were almost exclusively infantry, and, for the most part, light-armed; they excelled particularly as slingers (Pseudo Aisistr. Miscr. 90); but their regular infantry carried oblong shields of brass, resembling those of the Greeks. (Diod. l.c.; Strab. iv. p. 202.) During the period of their independence, they not only made plundering incursions by land into the neighbouring countries, but carried on piracy by sea. They were also distinguished for their hardihood and daring as navigators, as well as in all their other pursuits. (Diod. v. 39.; Liv. xl. 18, 28.) The mountain tribes resembled the Gauls and Germans in the custom of wearing their hair long; on which account the wilder tribes, which were the last to have their independence, were known as the Ligures Capillati or Cornuti (Aulis Euporat cie. Dini Cass. liv. 24.; Plini. iii. 20. s. 24.; Liv. Oenom. i. 442); and the cropping their hair was regarded as a proof of their subservience to Rome. Among the more peculiar natural productions of Liguria are noticed a breed of dwarf horses and mules, called by the Greeks χυρισμενος; and a kind of mineral resembling amber, called λιγυρισμενος, which appears to have been confounded by Theophrastus with genuine amber. (Strab. l.c. 202; Theophr. de Isid. §§ 28, 29.)

The Ligurians were divided, like most nations in a similar state of society, into a number of tribes, which at one time had little, if any, political bond of union beyond the temporary alliances which they might form for warlike objects; and it is evident, from the account of the wars carried on by
them with the Romans, that these leagues were extremely variable and partial. The names of many of the different tribes have been transmitted to us; but it is often difficult, or impossible, to determine with any degree of certainty the limits of their respective territories. It is probable, as pointed out by Pliny, that these limits themselves varied much at different times (Plin. iii. 5. s. 6), and many of the minor tribes, whose names are mentioned by Livy in the history of the Roman conquest of Liguria, seem to have at a later period disappeared altogether. The only tribes concerning whom we have any tolerably definite information are:—1. the Apuani, in the valley of the Maera, and about the Portus Luni; but the greater part of the territory which had once belonged to this powerful tribe was not included in Roman Liguria. 2. The Etruscan, who may be placed with much probability in the upper valley of the Ceculeana, or Pormaro, on the N. side of the Apennines (a district still called Frignano) so that they also were excluded from Liguria in the later sense of the term. 3. The Etruscans may perhaps be placed in the valley of the Varo, the most considerable affluent of the Magra, called by Pliny the Etruscan, though we have only an inscription (Genau), were evidently the inhabitants of Genoa and its immediate neighbourhood. 4. The Celti, mentioned in the same inscription, adjacent the Etruscans on the W., and were apparently separated from them by the river Porcu-
stra, or Polocera. 5. The more powerful and celebrated tribe of the Ingenui may be placed with certainty on the coast near Albenga (Albium Ingenuanum), though we cannot fix their limits with any precision. The tribe of the W. of the Ingenuae: their chief town was Alkum Ioncinidum, now Ventimiglia. 6. The Veneti inhabited the country on both sides of the Varus, as its name is evidently retained by the town of Varso, some miles W. of that river; while Cemenu-
ales, about 5 miles to the E. of it, also belonged to them. (Plin. iii. 5. s. 7.) Of the tribes N. of the Apennines, or inhabiting the valleys of that range which slope towards the Padus, the most conspicuous were the Liguri. The capital was Augustus Vagiennorum, now Bere, between the Stura and the Tagaro, while their confines appear to have extended as far as the Monte Vivo and the sources of the Po. 7. The Taurisci, whose position is marked by the celebrated watering-place of Aquae Statiellae, now Acqui. 3. The Taurisci, whose capital was Augustus Taurinorum, now Turin, and who appear to have occupied the whole country on both sides of the Padus, from the foot of the Cottian Alps to the banks of the Po. The Etruscans the (Pier. ii. 3; Plin. iii. 5. s. 7) may be placed, according to a local antiquity, in the hills of the Astigianae. The same thing is the case with the names of three Ligurian tribes cited by Stephanus of Byzant-

ium (c. v.) from Thesaurus,—the Arxhaxi, Publaxi, and Ipseraxi. Of these we do not know even whether they dwelt in Italy or on the southern coast of Gaul.
LIGURIA.  

the Laragna, that falls into the sea at Chiavari; and the Boacetii of the same author, which can be no other than the Varus, the most considerable tributary of the Magra. Much more considerable than these, both in the volume of water and length of their course, are the streams which flow from the N. slopes of the Apennines towards the Padus. But of these, the only ones whose names are found in any ancient author, are the Taurisii, or Tavena, one of the most important of the southern tributaries of the Padus; the Straca, which joins the Tavera near Pollentia; and the Tarcha, which rises in the Apennines, not far from Genoa, and falls into the Po near Piacentia, forming during a part at least of its course the boundary between Liguria and Gallia Cispadana.

The rivers marked in this part of Italy in the Tabulae are so confused, and the names so corrupt, that it is useless to attempt to identify them.

The native Ligurians lived for the most part in mere villages and mountain fastnesses ("castella vicique," Liv. xii. 17; Strab. v. p. 218), and had probably few towns. Even under the Roman government there seem to have been few places which deserved the name of towns along the seacoast, or among the inner ranges of the Apennines; but on the northern slopes of these mountains, where they approached or opened out into the plains, these grew up rapidly and rose to great importance;—so that Pliny says this part of Liguria held in his time, "omnia nobilissima ephipimentum" (Phil. iii. 5. s. 7). Those which he proceeds to enumerate are:—LIBEREA (between Apouta and Savareale), DETONIA (Tortona), IRIO (Yughera), BARGERVATE (of uncertain site). INDUSTRIA (at Montec, on the right bank of the Po), POLLENTIA (Poldena), CAEERA POTENTIA (Urbettam), FORUM fulvii, called VALENTINUM (Valenza), AGUSTA VAGENNIORUM (Vare). ALBA Tostertia (Abito). ASTA (Asi). AQUAE STATILLII (Acqui).

To these must be added AII for a TIBERIUM, which was certainly a Ligurian town, though, from its position on the left bank of the Padus, it is enumerated by Pliny with the cities of the xith region, or Gallia Transpadana. In the same district were FORUM VIIRII, in the territory of the Vacuieri, and OCELUM, now Corea, in the valley of Finestre. Segusio (Susa) was probably a Gallo-Roman rather than a Ligurian town. In addition to these may be mentioned CLASTIUM (Castejo), which is expressly called by Livy a Ligurian town, though situated on the Gallic frontier, and Corea, now Corea, in the upper valley of the Torone. Guidubum, mentioned by Livy together with Clastidium (xxxii. 29), and Carystium, noticed by the same author as a town of the Statelli (xiii. 7), are otherwise wholly unknown.

Along the coast of Liguria, beginning from the Varus, the towns enumerated by Pliny or Paelocy are:—NICAEA (Viver), CINCENIUM (Ciniec, a short distance inland), PORTUS HERULICUS MONORIO (Monaco), ALBREUM INGILUS (Albeg), VADAE SABATIA (Vado, near Savona), GIUNA, PORTUS DELPHINI (Porto Fino), TICULUM (probably Tepo, near Scorici), Segesta (probably Scorici), PORTUS VENERIS (Porto Vener), and PORTUS ERIUS (Lovari), both of them on the Gulf of Spezia, which was called as a whole the PORTUS LUNAE [LUNA]. The other names enumerated in the Itineraries are for the most part very obscure and uncertain, and many of them, from their very form, are obviously not the names of towns or even villages, but of mere stations or "mutationes." The few which can be determined with any certainty have their modern names annexed in the Itineraries here given.

1. The coast road from the Varus to the Macra is thus given in the Tabula Peutingeniana;—

VARUS II. (Vary).  

CINICE (Ciniez),  

in Alpe Marinum, (Turbo).  

ALBINTENELIUM (Vininnigidu).  

GALLIA CISPADANA.  

LUCA BORMONI.  

ALLINGANUM (Allengna).  

VADAE SABATIA (Vado).  

VIRUS VIRGINUS.  

ALBA DURITA (Albsode).  

AD NAVALLIA.  

IVILIA.  

AD FIGLIUM.  

GENNA (Gow).  

RIVIA.  

AD SOLARIA (Solaro near Chiavari).  

AD MONILIA (Moniglia).  

ALPE PONIMIO.  

BORON.  

LUNA (Luani).  

2. The same line of route is thus given (in the contrary direction) in the Itinerary of Antoninus (p. 283):—

LUNA.  

BAREAS (probably Boacetias fl.; Vara).  

BODELIA.  

TELUATA (perhaps identical with the Tigullia of Pliny: Trepcon).

ABINTENELIUM (Vininnigidu).  

LAMAOEM (Monton).  

ALPE SUMMA (Turbo).  

CINCENIUM (Ciniez).  

VARY BOMEN (Luc).  

* It is evident that the Antonine itinerary here quoted is very corrupt, and makes a sudden turn inland from Bormora, and then bends back again by Aque Statue to the coast at Vado Sabata, from whence it resumes the line of coast road. A comparison with the Tabulae (as given in fac-simile by Mannert), in which both lines of road are placed side by side, will at once explain how this error originated, and points out a source of corruption and confusion in our existing copies of the itinerary, which has doubtless operated in many other cases where it cannot now be so distinctly traced.
LIGUSTICUM MARE

3. The most important of the routes in the interior of Liguria was that landing from Genoan
island by Liburnian to Deritosa, from whence a
branch communicated, through Iria and Cumole-
magus, with Placentia; while another branch passed by
Aquae Statiilieae to the coast at Vada Sabata.
(The stations on both these roads have been already
given in the preceding route). From Aquae Stati-
illeiae another branch led by Pollentia to Augusta
Taurinum. (Tab. Pent.) [E. II. B.]

LIGUSTICUM MARE (to Agrigentum Olybenc, Strabo i. p. 122), was the name given in ancient
times to a promontory on the north-western
shore of the Mediterranean sea which
adjoined the coast of Liguria, and lay to the N.
of the Tyrrhenian sea. The name was applied (like
all similar appellations) with considerable vagueness,
sometimes as limited to what is now called the Gulf of
Genoa,—in which sense it is termed the LIGUSTICUS
Sinus by Florus (iii. 6, § 9), — at others in a
much wider sense, so that Plyny speaks of Corsica as an
island "in Ligustico marie."
Some of the Greek
geographers included under the name the whole ex-
tended coast of Liguria, as well as the Mediterranean
sea which comprised the MARE GALILEUM of the Romans, or
the modern Gulf of Lyons. The more limited use
of the name seems, however, to have been the more
usual, at all events in later times, and is elsewhere
adopted by Pliny himself. (Phli. iii. 5, s. 10, 6.
12: Strabo. 1. c.; Ttol. iii. 1. § 3: Agathem. i. 3;
Donys. Per. 76; Priscian, Per. 50.) [E. II. B.]

LILAEA (Alaema; Eth. Alaeis), a town of
Piacia, situated at the foot of Mount Farnassus, and
at the source of the Cephissus. (Bom. ii. p. 522,
Hygin. Fab. 240; Strabo. iv. pp. 407, 424.;
Paus. ix. 24. § 1. x. 33. § 3: Stat. Theb. vii. 343.)
It was distant from Delphi by the road over
Farnassus 180 stadia. (Paus. I. e.) It is not men-
tioned by Herodotus (viii. 31) among the towns
destroyed by the Persians; whence we may con-
jecture that it belonged at that time to the Dorians,
who made their submission to Xerxes. (Leake,
Northern Greece, vol. ii. p. 90.) It was destroyed
at the end of the Sacred War; but was soon after-
wards restored. (Likewise to those of Eran
tius, but subsequently threw off the Macedon-
ian yoke. Pausanias saw at Lilaea a theatre,
a grotto, and bathes, with temples of Apollo and
Artemis, containing statues of Athenian workman-
ship, and of Puteal marble. (Paus. x. 33. § 4; see
also x. 3. § 1. x. 8. § 10; Lycoph. 1073; Steph.
B. s. e.) The ruins of Lilaea, called Paleokastro,
are situated about half a mile from the sources
of the Cephissus. The entire circuit of the forti-
cation exists, partly founded on the steep descent
of a rocky hill, while the remainder encompasses a
level space at its foot, where the ground is covered
with ruins. Some of the towers on the walls
are almost entire. The sources of the Cephissus, now
called Kefalovryges (Kefalofor'wv), are said by
Pausanias very often to issue from the earth,
especially at midday, with a noise resembling the
rushing of a ball; and Leake found, upon inquiry,
that though the pre-exist natives had never made any
such observation at Kefalovryges, yet the water
often rises suddenly from the ground in larger
quantities than usual, which cannot but be accom-
panied with some noise. (Dodwell, Classical Tour,
71, 84;) Podalyri. (iii. 15. § 13) erroneously calls
Lilaea a town of Doris.

LILIMUM or LILLEM (Alia\iow, Alie\iow), a
commercial place (emporium) on the coast of Bio-
thusia, 40 stadia to the east of Dia; but no par-

culars are known about it. (Arrian, Periplus, p. 13;
Anonym, Periplus 3.) It is possible that the place
may have derived its name from the Lilaeus, which
Pliny (II, N. v. 43) mentions among the rivers of
Bithynia. [L. 8.]

LILYBAEUM (Aio\ie\iow; Eth. Alie\iow\iow, Li-
lybateneis; Marzala), a city of Sicily, situated on
the promontory of the same name, which forms
the extreme W. point of the island, now called Capu
Bosco. The promontory of Lilybaeum is mentioned
by many ancient writers, as well as by modern
geographers, as one of the three principal headlands
of Sicily, from which that island derived its name of
Trinacria. It was the most westerly point of the
island and that nearest to Africa, from which it was
distant only 1000 stadia according to Polybius, but
Strabo gives the distance as 1500 stadia. Both
statements, however, exceed the truth; the real dis-
tance from Cape Bon, the nearest point of the coast
of Africa, being less than 50 geographical miles, or 900
265, 287; Mol. ii. 7; Plin. iii. 8. s. 14; Ptol. ii.
18; Diod. v. 2, xiii. 54; Steph. B. s. r; Dionys. \r. 470.) The headland itself is a low but rocky point,
continued out to sea by a reef of hidden rocks and
shaols, which rendered the navigation dangerous,
though there was a safe port immediately adjoin-
ing the promontory. (Vol. L e.; Virg. Aen. iii.
76.)

Diodorus tells us distinctly that there was no
town upon the spot until after the destruction of
Motta by Donysius of Syracuse, in B. C. 367, when
the Carthaginians, instead of attempting to re-
trench that city, settled its few remaining inhabitants
on the promontory of Lilybaeum, which they fortified
and converted into a stronghold. (Diod. xiii. 54.
xxii. 10.) It is, therefore, certainly a mistake
(though one of which we cannot explain the origin)
when that author, as early as B. C. 454, speaks of
the Lilybaeans and Segestians as engaged in war on
account of the territory on the banks of the river
Muratoris (Eth. 464.) The promontory and port
were, however, frequented at a much earlier date;
we are told that the Cnidianus under Pentathlus,
who afterwards founded Lipara, landed in the first
instance at Lilybaeum (Id. v. 9); and it was also
the point where, in B. C. 409, Hannibal landed
with the great Carthaginian armament designed for
the attack of Selinus. (Id. xiii. 54.) Diodorus tells
us (I. e.) that on the promontory was a well (\rpe\iaw),
from whence the city took its name; this was ob-
viously the same with a source or spring of fresh
water rising in a cave, now consecrated to St. John,
and still regarded with superstitious reverence.
(Fazzel. de Ach. Sic. vii. 1; Smyth's Sicily, p. 228.)

It is clear that the new city quickly rose to pro-
spersity, and became an important stronghold of the
Carthaginian power, succeeding in this respect to the
situation that Motta had previously held. [MOTYA.
] Its proximity to Africa rendered it of especial im-
portance to the Carthaginians in securing their com-
}munications with Sicily, while the danger which
would threaten these cities if a foreign power were
in possession of such a fortress, immediately opposite
to the gulf of Carthage, led them to spare no pains
for its security. Hence Lilybaeum twice became the
last bulwark of their power in Sicily. In B. C. 276
it was besieged by Pyrrhus, who had already reduced
all the other cities of Sicily, and expelled the Car-
LILYBAEUM.

The Carthaginians from all their other strongholds. But they continued to throw in supplies and reinforcements by sea to Lilybaeum, so that the king, after a siege of two months, was compelled to abandon the enterprise as hopeless. (Diod. xxx. 10. Exc. Hoesch. pp. 498, 499.) But it is the memorable siege of Lilybaeum by the Romans in the First Punica War which has given to this city its chief historical celebrity. When the Romans first commenced the siege in the fifteenth year of the war, n. c. 250, they were already masters of the whole of Sicily, with the exception of Lilybaeum and Drepanum; and hence they were able to concentrate all their efforts and employ the armies of both consuls in the attack of the former city, while the Carthaginians on their side exerted all their energies in its defence. They had just before removed thither all the inhabitants of Selinus (Diod. xxxiv. 1. p. 506), and in addition to the citizens there was a garrison in the place of 10,000 men. (Pol. i. 42.) The city appears to have occupied the whole of the promontory, and was fortified on the land side by a wall flanked with towers and protected by a deep ditch. The Romans at first attacked this vigorously, but all their efforts were frustrated by the courage and activity of the Carthaginian commander Hamilco; their battering engines were burnt by a salry of the besieged, and on the approach of winter the consuls were compelled to convert the siege into a blockade. This was easily maintained on the land side, but the Romans in vain endeavoured to exclude the besieged from succours by sea. A Carthaginian fleet under Hannibal succeeded in making good its entrance into the port; and the skilful Carthaginian captains were able to elude the vigilance of the Roman cruisers, and keep up free communications with the besieged. The Roman consuls next tried to block up the entrance of the port with a mound, but this was soon carried away by the violence of the waves; and soon after, Whilst, the Carthaginian commander-in-chief, who lay with a large fleet at Drepanum, totally defeated the Roman fleet under the consul P. Claudius, n. c. 249. This disaster was followed by the almost total loss of two Roman fleets in succession by shipwreck, and these accumulated misfortunes compelled the Romans to abandon the very attempt to contest the dominion of the sea. But though they could not in consequence obtain any efficient blockade, they still continued to keep in Lilybaeum on the land side, and their armies continued (encamped before the city for several years in succession. It was not till the tenth year of the siege that the victory of C. Latatus Catulus at the Aegates, n. c. 241, compelled the Carthaginians to conclude peace, and to abandon the possession of Lilybaeum and Drepanum, which up to that time the continued efforts of the Romans had failed in wresting from their hands. (Pol. i. 41— 54, 59—62; Diod. xxxiv. 1. 3, 11. Exc. H. pp. 506—509. Exc. Vales. p. 562; Zonar. vin. 16—17; Oros. iv. 10.)

Lilybaeum now passed into the condition of a Roman provincial town; but it continued to be a flourishing and populous place. Its position rendered it now as important a point to the Romans for the invasion of Africa, as it had previously been to the Carthaginians for that of Sicily; and hence its name is one of frequent occurrence during almost all periods of Roman history. Thus, at the outbreak of the Second Punica War, n. c. 218, Lilybaeum was the station of the Roman fleet under the praetor M. Acilius, who defeated a Carthaginian force that had attempted to surprise that important post. (Liv. xxi. 49, 50.) During the course of the same war it was the point from whence Roman commanders repeatedly made predatory descents with small squadrons upon the coast of Africa; and towards the close of the same memorable contest, n. c. 204, it was from this base sailed with the fleet and army which were destined for the conquest of Africa. (Liv. xxx. 31, xxxvii. 5, xxiv. 24.) In like manner it was at Lilybaeum that the younger Scipio Africanus assembled his fleet and army in n. c. 149, preparatory to passing over into Africa (Diod. xxxiii. 6); and in the Civil Wars Caesar made it his head-quarters when preparing for his African campaign against Scipio and Juba, n. c. 47. (Hirt. B. Afl. 1. 2, 37; Appian. B. C. ii. 95.) It was also one of the chief naval stations of Sextus Pompeius in his war with Augustus, n. c. 36. (Appian. B. C. v. 97, 122; Dom Cass. xlix. 8.) Nor was the importance of Lilybaeum confined to these warlike occasions; it is evident that it was the habitual port of communication between Sicily and Africa, and must have derived the greatest prosperity from the constant traffic which arose from this circumstance. Hence we find it selected as the habitual place of residence of one of the two quattuor of Sicily (Psene. Aenon. in Terr. pp. 100; and Cann. v. 11) and Caesar, who was in those times that Scipio sailed from Lilybaeum, calls it "splendidissima civitas" (Terr. v. 5.) It was one of the few cities of Sicily which still retained some importance in the time of Strabo. (Strab. vi. p. 272.) Its continued prosperity under the Roman Empire is sufficiently attested by inscriptions: from one of these we learn that its population was divided into twelve tribes; a rare mode of municipal organisation. (Tarquiniana Inscr. Sicil. pp. 7, 15, 49; Orell. Inscr. 151, 1691, 3718.) In another inscription there is the title of a colonia; the time when it became such is uncertain; but probably not till the reign of Hadrian, as Pliny does not mention it among the five colonies founded by Augustus in Sicily. (Plin. iii. 8. 14; Pol. iii. 4. § 5; Itin. Ant. pp. 86, 89, 96; Zumpt. de Coloni. p. 409.)

After the fall of the Roman Empire Lilybaeum still continued to be one of the most important cities of Sicily. It is mentioned as such under the successive dominion of the Odys and Vandals (Procop. B. C. i. 8. ii. 5); and during the period of the Arabian dominion in Sicily, that people attacked so much value to its port, that they gave it the name of Marena Ala, the port of God, from whence has come its modern appellation of Marsala. It was not till the 16th century that this celebrated port was blocked up with a mole or mound of sunken stones by order of the Emperor Charles V., in order to protect it from the attacks of the Barbaric corsairs. From that period Trapani has taken its place as the principal port in the W. of Sicily, but Marsala is still a considerable town, and a place of some trade, especially in wine. (Smyth's Sicily, p. 232.) Very few vestiges of the ancient city remain, but numerous fragments of sculpture, vases, and other relics, as well as coins, have been discovered on the site; and some portions of an ancient aqueduct are still visible. The site of the ancient port, though now filled with mud, may be distinctly traced, but it is of small extent, and I could never have had a depth of more than 12 or 14 feet. The rocks and shales, which even in ancient times rendered it difficult of
approach (Pol. i. 42), would now effectually prevent it from being used as a port for large vessels. (Smyth, l.c. pp. 233, 234.)

It is a strong proof of the extent to which Greek culture and civilisation were diffused throughout Sicily, that, though we have no account of Lilybaeum being at any time in possession of the Greeks, but, on the contrary, we know positively that it was founded by the Carthaginians, and continued in their hands till it passed under the dominion of Rome, yet the name of Lilybaeum are exclusively Greek; and we learn from Cicero that it was possible for a man to acquire a knowledge of the Greek language and literature in that city (Cic. in Concil. 12).

[C. E. B.]

COIN OF LILYBAEUM.

LIMENAE (Ageta), also called LIMNOPOLIS (Agetis polis), a place in the north of Paestum, which is mentioned only by ecclesiastical writers (Hierosol. p. 672; Concil. Chalced. p. 670; Concil. Const. iii. p. 670, where it is called Annesa.) The ancient ruins of Gallanda, on the east of the lake of Eurydor, are believed to belong to Limenae. (Arundale, Discov. in Asia Minor, vol. i. p. 326; Franz, Fünf Inschriften, p. 35.) [L. S.]

LIMENIA (Aegae), a town of Cyprus, which Strabo (x. 683) places S. of Soli. It appears from some ecclesiastical documents cited by Wesseling (Ap. Hierosol.) to have been 4 M. P. from Soli. Now Limonas. (Engel, Kypros, vol. i. p. 77.) [E. H. B.]

LIMINGA, river and town. [GALLACEIA.]

LIMICI. [GALLACEIA.]

LIMIGANTES. The ordinary account of the Limigantes is as follows. In A.D. 334—337, the Saracen, in alliance with the Vandals under Visimar, provoked the indignation of Constantine by their inroads on the Empire. He leaves them to the sword of Germanic the Gothic king. Reduced and humbled by him, they resort to the expedient of arming their slaves. These rebels against their masters, whom they either reduce or expel. Of those that leave their country, some take arms under the Gothic king, others retreat to the ports beyond the Carpathians; a third portion seeks the service of Rome, and is established, to the number of 30,000, in different parts of Pannonia, Thrace, Macedonia, and Italy (Gibbon, c. xvii. with note).

Zeuss (Die Deutschen, s. e. s. v. Sarmaeae) holds that others were transplanted to the Rhine, believing that a passage in Ausonius applies to them. (Ad Mosa. i. 5—8.) This may or may not be the case. The most important elements of the account are, that the slaves who were thus armeid and thus rebelled, are called Limigantes—this being the name they take in Gibbon. Their scene of action was the part about the present town of Petersвардеin, on the north bank of the Danube, nearly opposite the Sorrian frontier, and in the district between the Theiss and the great bend of the Danube. Here lay the tract of the Sarmaeae, and Jazyges Metamaciae, a tract which never was Roman, a tract which lay as a March or Roman- dary, with Pannonia on one side and Dacia on the other, but belonging to neither. Observe the words in Italics.

In his note, Gibbon draws special attention to "the broken and imperfect manner' in which the "Gothic and Sarmanian wars are related." Should this remark stimulate the inquiries of the historian, he may observe that the name Limigantes is not found in the authority nearest the time, and of the most importance in the way of evidence, viz. Ammianus Marcellinus. Ammianus speaks only of servil et dominio: — "Sarmatae liberis ad discipulos servorum rebellium appellati (xxix. 6. 15)."

On the other hand, it is only in a work of such inferior authority (at least, for an event A.D. 337) as the Chronicle of Jerome (Chronicon Hieronymi) that the name Limigantes is found; the same work stating that the masters were called Ararcaniades.

To say nothing about the extent to which the story has a suspicious similarity to the other, or older account of the expulsion of the masters by the slaves of the same sort, the utter absence of either name in any other writer is remarkable. So is their semi-Latin form.

Can the whole account of the slave insurrection be problematical—based upon a confusion of names which will be shown to be highly probable? Let us bear in mind the locality of these Limigantes, and the language of those parts in contact with it which belonged to Rome. The locality itself was a Limes (eminently so), and the contiguous tongue was a Limigana Rustica in which such a form as Limigantes would be evolved. It is believed to be the Latin name of the Sarmatians and Jazyges of what may be called the Daco-Pannonian March.

The account of the Servile War is susceptible of a similar explanation. Ammianus is nearly the last of the authors who uses the name Servi, which will, ere long, be replaced, to a great extent, by the name Servi. (Cassius Dio.) Early and late, this name has always suggested the idea of the Latin Servus,—just as its partial equivalent Scut-does of the English Slave. It is submitted that these Servi of Ammianus (Limigantes of the Chronicle) are the Servi (Servae) of the Marches, now beginning to be called by the name by which they designated themselves rather than by the name by which they were designated by their neighbours. [R. G. L.]

LIMITES ROMANI. Sometimes simply Limes or LIMITES, is the name generally applied to the long line of fortifications constructed by the Romans as a protection of their empire, or more directly of the Decumanus agrif, against the invasions of the Germans. It extended along the Danube and the Rhine, and consisted of forts, ramparts, walls, and palisades. The course of these fortifications, which were first commenced by Drusus and Tiberius, can still be traced with tolerable accuracy, as very considerable portions still exist in a good state of preservation. Its whole length was about 350 English miles, between Cologne and Ratisbon. It begins on the Danube, about 15 miles to the north-west of Ratis- bon, whence it proceeds in a north-western direction under the name given to it in the middle ages of "the Devil's Wall" (Taufelsmauer), or Pfahlmaur. For a distance of about 60 miles it was a real stone wall, which is still in a tolerable state of preservation, and in some places still rises 4 or 5 feet above the ground; and at intervals of little more than a mile, remnants of round towers are visible. This wall terminates at Pfahlheim in Wurttemberg. From
LIMNAE.

LIMONUM.

LIMNUS, an island off the coast of Ireland, mentioned by Ptolemy (ii. 2), as lying to the east of Ireland, and being uninhabited. Pliny also mentions it (iv. 30). It is probably Lambay Island. However, the Monumenta Britannica not only suggests for Limno (Ptolemy's Limnos) the modern names of Lambay, Lynam, and Romany, but they also distinguish it from Limnos (Pliny's Limnos) which they make Imbiky.

LIMONE. [LIMONE.]

LIMONUM or LIMONUM (Limnus, Ptol. ii. 7, § 6; Poetiês, the capital of the Pictores or Pictavi, one of the Celtic nations south of the Loire. The name is first mentioned in the eighth book of the Gallic war (viii. 26. 27). At a later time, after the fashion of many other capital towns in Galilla, it took the name of the people, Pictavi, whence comes the modern name Poitières. (Amnianus Marcellinus, xv. 11.) Though De Valois and others did not admit Limonum to be Poitières, and fixed Angouleme in the capital of the Lamouries at Limoges, the evidence of the roads shows that Limonum must be Poitières. Magnon, a writer of the 9th century, calls Poitières by the name of Pictavus Limonum; and inscriptions also found at Poitières confirm the other evidence. There is a place called Foué Poitières, more than 15 miles north of Poitières, but though it seems to have been an old town, it is quite a different place from the Poitières which is the site of Limonum. The compact of the Pictavi cost the Romans little trouble, we may suppose, for little is said of them. In 51 C. Caesar, in legatus of Caesar, came to the relief of Duratius, a Gaul and a Roman ally, who was blockaded in Limonum by Dumennacs, the chief of the Austes. The siege was raised, and Dumennacs was subsequently defeated.

The remains of the huge amphitheatre of Limonum are described by M. Dufour, in his Histoire de Poitou (quoted in the Guide du Voyageur, par Richard et Hoquart). M. Dufour found the walls of the amphitheatre three feet thick and a half below the present level of the soil. The walls are seven French feet thick. It is estimated that this amphitheatre
LIMYRA.

would contain 20,000 spectators, from which estimate we must conclude that the dimensions and outline of the building can be accurately determined. M. Durfou says: "On the level of the present soil, there are some vestiges of the corridors or covered porticoes, which led, by means of the vomitoria, into the different galleries: the part which is least damaged at present is in the stable of the Hotel d'Evreux. A principal arch, which led into the arena, is still nearly entire, though the interior facings have been almost completely removed."

"G. L. [Atius]."

LINDUM (Linuporos). 1. A town in Britain; the modern Lincoln. Ptolemy (ii. 3. § 20) places Lindum and Rage, or Ratae, to the district of the Coritani. In the list of the anonymous Geographer of Ravenna it appears as Lindum Colonia; in the Itinerary of Antoninus, simply as Lindum. Among the prelates who attended the Synod of Arles, A.D. 314, was "Adelphus de civitate colonia Lindinensium," which we must read Lindinensium, for at the same council London was represented by Restitus; and that Lindes was a colony may be accepted from the authority cited above, and also from the form in which the word occurs in Beda (Hist. Eccles. ii. 16, "Civitas Lindocolina.") Lindum occurs in Antoninus in the iter from Londinium to the great Wall; in that from Eburacum to Lindinium; and in another from Londinium, in which it is the terminus.

The Roman remains extant at Lincoln are among the most important and interesting in this country. It is perhaps the only town in England which preserves one of the original Roman gateways, and in the present day. This is the Newport Gate, which is wholly of Roman masonry, as is also the narrow side entrance for foot passengers. Originally there were two of the latter, but one is walled up in a modern building. Another of the Roman gateways was discovered, a few years since, near the castle. There is also a long extent of the Roman sewer remaining at Lincoln, and a considerable number of inscriptions, chiefly sepulchral. The Mint Wall, as it is called, is a side wall of a Roman edifice, apparently of a public description. From the course of the remains of the external walls, the Romans seem to have found it necessary to extend the circular wall of Lincoln.

2. A town of the Damni, in the northern part of Britain, placed by Ptolemy (ii. 3. § 9) a little to the north of the Clyde. Horsley suggests Kirkintilloch, on the Wall of Antoninus Pius, as the site of this Lindum.

[L. R. S.]

LINDUS (Linuporos; L CORE), one of the most important and most ancient towns in the island of Rhodes, was situated on the eastern coast, a little to the north of a promontory bearing the same name. The district was in ancient times very productive in wine and figs, though otherwise it was, and is still, very barren. (Philost. Icon. ii. 24.) In the Homeric Catalogue (II. 5. 636) Lindus, together with the two other Rhodian cities, Ialysus and Camirus, are said to have taken part in the war against Troy. Their inhabitants were Dorians, and formed the three Dorian tribes of the island, Lindus itself being of one of the Dorian hexamers in the south-west of Asia Minor. Previous to the year B. C. 408, when Rhodes was built, Lindus, like the other cities, formed a little state by itself, but when Rhodes was founded, a great part of the population and the common government was transferred to the new city. (Diod. xii. 75.) Lindus, however, though it lost its political importance, still remained an interesting place in a religious point of view, for it contained two ancient and much revered sanctuaries,—one of Athena, hence called the Lindia, and one of Hera, or Herakleia. A temple of Hera, remarkable, according to Lactanitus.

VOL. II.
LINGONES.

(i. 31), on account of the vituperative and injurious language with which the wise-man was condolenced. This temple contained a painting of Hercules by Parrhasius; and Lindus appears to have possessed several other paintings by the same artist. ( Athen. xi. p. 583, x.c. p. 587.) Lindus also was the native place of Celidus, one of the Seven Sages of Greece; and Athenaeus (viii. p. 360) has preserved a pretty poem ascribed to Celidus, and which the Lidian boys used to sing as they went round collecting money for the return of the swallows in spring.

The site of Lindus, as described by Strabo, "on the side of a hill, looking towards the south and Alexandria," cannot be mistaken; and the modern neat little town of Lindos is exactly the spot occupied by the ancient Dorian city. The place and its many ancient remains have often been visited and described, and most recently by Ross in his Reisen auf den Griech. Inseln, vols. iii. and iv., from which it appears that ancient remains are more and more destroyed. There are many tombs cut in the rocks, some of which have had beautiful architectural ornaments; some of a theatre at the foot of the hill; and on the acropolis are seen the ruins of two Greek temples, which, to judge from inscriptions, belonged to the Lindian Athena and Zeus Polies. The number of inscriptions included in the native place of Celidus, one of the Seven Sages of Greece; and Athenaeus (viii. p. 360) has preserved a pretty poem ascribed to Celidus, and which the Lidian boys used to sing as they went round collecting money for the return of the swallows in spring.

The site of Lindus, as described by Strabo, "on the side of a hill, looking towards the south and Alexandria," cannot be mistaken; and the modern neat little town of Lindos is exactly the spot occupied by the ancient Dorian city. The place and its many ancient remains have often been visited and described, and most recently by Ross in his Reisen auf den Griech. Inseln, vols. iii. and iv., from which it appears that ancient remains are more and more destroyed. There are many tombs cut in the rocks, some of which have had beautiful architectural ornaments; some of a theatre at the foot of the hill; and on the acropolis are seen the ruins of two Greek temples, which, to judge from inscriptions, belonged to the Lindian Athena and Zeus Polies. The number of inscriptions included in the native place of Celidus, one of the Seven Sages of Greece; and Athenaeus (viii. p. 360) has preserved a pretty poem ascribed to Celidus, and which the Lidian boys used to sing as they went round collecting money for the return of the swallows in spring.

The site of Lindus, as described by Strabo, "on the side of a hill, looking towards the south and Alexandria," cannot be mistaken; and the modern neat little town of Lindos is exactly the spot occupied by the ancient Dorian city. The place and its many ancient remains have often been visited and described, and most recently by Ross in his Reisen auf den Griech. Inseln, vols. iii. and iv., from which it appears that ancient remains are more and more destroyed. LIPAR.

(Both he and Pliny inform us that it was originally called Melignu (Me-Acrynus); a name that must probably be referred to the Greek colony; although ancient writers affirm that it derived the name of Lipara from Liparus, a son of Auson, who reigned there before Aeolus, so that they must have referred the name of Melignu to a purely fabulous age. (Plin. iii. 9. s. 14; Diod. v. 7.) The name of Aeolus himself is inseparably connected with the Aeolian islands, and there can be no doubt that his abode was placed by the earliest mythical traditions in Lipara itself, though in later times this was frequently transferred to Strongyle. [AEOLEAE ISLANDIARUM, P. 283.]

In the historical period the first mention that we find of Lipara is the settlement there of a Greek colony. This is assigned by Diodorus to the 50th Olympiad (n. c. 580—577); and there seems no reason to doubt this date, though Eusebius (on what authority we know not) carries it back nearly 50 years, and places it as early as n. c. 627. (Diod. v. 9; Eusèbe, Arcu. p. 197; Clinton, F. B. vol. i. p. 329—331.) The colonists were Doriens from Cuinids and Rhodes; but the formation of these was prede- nated, and the leader of the colony, Pentathilus, was himself a Cuinid, so that the city was always reckoned a Cuinid colony. (Diod. l. c.; Paus. x. 11. § 3; Thuc. iii. 88; Strab. vi. p. 275; Seym. Ch. 263.) According to some accounts Pentathilus did not himself live to reach Lipara, but the colony was founded by his sons. (Diod. l. c.) Of its history we know scarcely anything for more than a century and a half, but are told generally that it attained to considerable power and prosperity; and that the necessity of defending himself against the Tyrrhenian pirates led the Liparaeans to estab- lish a naval force, with which they ultimately obtained some brilliant victories over the Tyrrhenians, and commemorated these successes by costly offer- ings at Delphi. (Strab. l. c.; Diod. v. 9; Paus. x. 11. § 3, 16. § 7.) It appears, however, that the Liparaeans themselves were sometimes addicted to piracy, and on one occasion their corsairs intercepted a valuable ship belonging to the Romans who were sending to Delphi; but their chief magistrate, Timocrates, immediately caused it to be restored and forwarded to its destination. (Diod. xiv. 93; Liv. v. 28; Val. Max. i. 1. § 4.)

The territory of Lipara, though of small extent, was fertile, and produced abundance of fruit; but its more important resources were its mines of alum, arising from the volcanic nature of the soil, and the abundance of thermal sources proceeding from the same cause. The inhabitants of Lipara not only cultivated their own island, but the adjoining ones of Hiera, Strongyle, and Didyme as well; a proof that the population of Lipara itself must have been considerable. (Thuc. iii. 88; Diod. v. 10; Paus. x. 11. § 4; Strab. vi. p. 275.)

At the time of the first Athenian expedition to Sicily under Laches (n. c. 427) the Liparaeans were in alliance with the Syracuseans, probably on account of their Dorian descent; for which reason they were attacked by the Athenian and Elegian fleet, but with no serious result (Thuc. iii. 88; Diod. xii. 54.). In n. c. 396 they again appear as in friendly relations with Syracuse, and were in consequence attacked by the Carthaginian general Himilo, who made himself master of the city and exacted a con- tribution of 30 talents from the inhabitants. (Diod. xiv. 56.) It does not appear that the Carthaginians at this time retained possession of Lipara; and we subsequently find it in the enjoyment of independ- ence referred to n. c. 304, when the island was suddenly attacked by Agathocles. In the midst of profound peace, and without even a pretext for the general calamity. The invader carried off a booty of 50 talents, which was, however, lost on his voyage to Sicily in a storm, which was naturally attributed to the wrath of Aeolus. (Id. xx. 101.) It could not have been long after this that Lipara fell under the yoke of Carthage, to which city it was subject at the out- break of the First Punic War (n. c. 264), and from its excellent ports, and advantageous situation for trading, became one of the chief Carthaginian naval forts. Its capture by the Carthaginian fleet in 537—536 B.C., was the first act of the Second Punic War (n. c. 214), when the Carthaginian fleet was invested in its immediate neighbourhood (Id. 25): but a few years later it was at length taken by the Romans, under C. Aurelius, and remained in their hands from this time (n. c. 251. (Id. 93; Diod. xxiii. 20; Zonar. viii. 14; Oros. iv. 8; Fronto. Suriat. iv. 1. § 51.)

At the commencement of the Second Punic War a considerable Carthaginian squadron was wrecked on the shores of Lipara and the adjoining island of Vulcano (Liv. xix. 49); but from this time we find no historical mention of it till the war between Octavian and Sextus Pompeius in Sicily, in n. c. 36, when Lipara and the adjoining islands once more appear as of considerable importance. It was occupied and fortified by Pompeius, but taken by Agrippa, who afterwards established his fleets at the island of Vulcano, and from thence threatened the forces of Pompeius at Mykle and Messana. (Appian, B. C. v. 97, 105, 112; Dion Cass. xix. 1. 7.) There seems no doubt that Lipara continued to enjoy consider- able prosperity under the Roman government. Diodorus praises its fertility, as well as the excel- lence of its ports; and says that the Liparaeans de- veloped a large commerce from the monopoly of the trade in alum. (Diod. v. 10.) Clever, indeed, was the manner in which Lipara was enabled to preserve its monopoly, by purchasing the monopoly of the trade in a large number of shipbills, and occupying many of the adjacent harbours, so that it became a favourite resort of sea-rascals. (Appian, B. C. v. 97, 105, 112; Dion Cass. xix. 1. 7.)

LIPAR.

Under the Roman Empire Lipara was sometimes used as a place of exile for political off- enders (Dion Cass. lxxxvi. 6); and before the fall of the Western Empire it became a favourite resort of monks. At an earlier period of the Empire it was frequented for its hot baths (Plin. xxxi. 6. s. 52; Diod. v. 10), which are still in use at the present day, being supplied from thermal springs: some remains of ancient buildings, still visible, appear to have been connected with these establishments. A few fragments of walls may also be traced on the hill crowned by the modern castle; and many coins, fragments of sculpture, &c., have been discovered on the island. (Smyth's Sicily, p. 262.)

D'Orville, Sicile, p. 18.)

Under the Roman Empire Lipara was sometimes used as a place of exile for political off- enders (Dion Cass. lxxxvi. 6); and before the fall of the Western Empire it became a favourite resort of monks. At an earlier period of the Empire it was frequented for its hot baths (Plin. xxxi. 6. s. 52; Diod. v. 10), which are still in use at the present day, being supplied from thermal springs: some remains of ancient buildings, still visible, appear to have been connected with these establishments. A few fragments of walls may also be traced on the hill crowned by the modern castle; and many coins, fragments of sculpture, &c., have been discovered on the island. (Smyth's Sicily, p. 262.)
Strabo and some other ancient writers speak of volcanic phenomena as occurring on the island of Lipara itself (Strab. vi. p. 275); but though it abounds in hot springs, and outbreaks of volcanic vapour, it does not appear probable that any volcanic eruptions on a larger scale have occurred there within the period of history. Those of the neighbouring island of Heem (the Volcani Insula of the Romans, now Vulcano), from its proximity to Lipara, of which it was a more dependent, are sometimes described as if they had occurred at Lipara itself. (Oros. v. 10; Jul. Obs. 89.) The volcanic phenomena of the Aeolian islands in general are more fully noticed under the article AEOLIAE INSULARUM.

[ E. H. E.]

COIN OF LIPARA.

LIPARIS (Aìmara), a small river in the east of Crete, which emptied itself into the sea at Sobi, and was believed to derive its name from the oily nature of its waters. (Plin. v. 22; Antig. Caryst. 150; Vitruv. viii. 3.)

LIPAXUS (Aìrìagòs), a town of Crusis, or Corea, in Macedonia, mentioned only by Heictaeus (Steph. B. s. v.) and Herodotus (vii. 123).

LIPPON, AD. [Vettones.]

LIPSIDRUM [Attica, p. 326, b.]

LICTUENTI (Licentia), a considerable river of Venetia, which rises in the Julian Alps to the N. of Opietergium (Odero), and flows into the Adriatic near Caorle, about midway between the Poze (Plavis) and the Togliamento (Tilaventum). (Plin. iii. 18. v. 22.) It had a port of the same name at its mouth. Servius (ad Aen. ix. 679) correctly places it between Atinium and Concordia. The name is not found in the Itineraries, but Paulus Diaconus mentions the "pont Luginetiae fluminis" on the road from Forum Jullii towards Patavium. (P. Diacon. Hist. Lang. v. 39; Anon. Ravenna. iv. 36.)

LIRIA. [Edeta.]

LIMIBES (Aquiapolis), a town in the north of Germany, between Mariana and Lephana, about 10 miles to the north of Hamburg. Its exact site, however, is unknown. (Ptol. ii. 14. § 27.)

LIRIS (Aìpis : Gariglumo), one of the principal rivers of central Italy, flowing into the Tyrrhenian Sea a little below Minturnae. It had its source in the central Apennines, only a few miles from the Lucus Flumen, of which it has been sometimes, but erroneously, regarded as a subterranean outlet. It flows at first in a SE. direction by a long trough-like valley, parallel to the general direction of the Apennines, until it reaches the city of Sora, where it turns abruptly to the SW., and pursues that course until after its junction with the Trerus or Sacco, close to the site of Frejelles; from thence it again makes a great bend to the SE., but ultimately resumes its SW. direction before it enters the sea near Minturnae. Both Strabo and Pliny tell us that it was originally called Cimis, a name which appears to have been common to many Italian rivers [Clanis]: the former writer erroneously assigns its sources to the country of the Vestini; an opinion which is adopted also by Lucan. (Strab. v. p. 233; Lucan. ii. 423.) The Liris is noticed by several of the Roman poets, as a very gentle and tranquil stream (Hor. Carm. i. 51. 8; St. Al. iv. 948), a character which it well deserves, on account of lower part of its course where it is described by a modern traveller as "a wide and noble river, winding under the shadow of poplars through a lovely vale, and then gliding gently towards the sea." (Pestace's Classical Tour, vol. ii. p. 320.) But nearer its source it is a clear and rapid mountain river, and at the village of Isola, about four miles below Sora, and just after its junction with the Fibrenus, it forms a cascade of above 90 feet in height, one of the most remarkable waterfalls in Italy. (Craven's Abruzzi, vol. i. p. 93.)

The Liris, which is still called Liri in the upper part of its course, though better known by the name of Gariglumo, which it assumes when it becomes a more considerable stream, has a course altogether of above 60 geographical miles: its most considerable tributary is the Trerus or Sacco, which joins it about three miles below Cenopo. A few miles higher up it receives the waters of the Fibrenus, so celebrated from Cicero's description (ad Leg. ii. 3); which is, however, but a small stream, though remarkable for the clearness and beauty of its waters. [Fibrenus.] The Molis (Melfa), which joins it a few miles below the Sacco, but from the opposite bank, is equally inconsiderable.

At the mouth of the Liris near Minturnae, was an extensive sacred grove consecrated to Marius, a nymph or local divinity, who was represented by a tradition, adopted by Virgil, as mother of Latinus, while others identified her with Circe. (Virg. Aen. vii. 47; Lastant. Inst. Div. i. 21.) Her grove and temple (Lucan's Marica; Map. Ital. Plut. Mar. 39) were not only objects of great veneration to the people of the neighbouring town of Minturnae, but appear to have enjoyed considerable celebrity with the Romans themselves. (Strab. v. p. 233; Liv. xxvii. 37; Serv. ad Aen. vii. 47.) Immediately adjoining its mouth was an extensive marsh, formed probably by the stagnation of the river itself, and celebrated in history in connection with the adventures of Marius. [E. H. B.]

LISAE (Aloue), a town of Crusis or Corea, in Macedonia, mentioned only by Herodotus (vii. 123). [Crusis.]

LISIAE, a town of Histiaeotis, in Thessaly, on the borders of Athamania. (Liv. xxxiii. 14.)

LISIA. [Jacetani.]

LISIA (Aloue, Procop. B. G. i. 7; Hirt. Anton.), an island off the coast of Illyricum, placed by Pliny (iii. 30) over against Iaderia. Ungnem, noted for its marbles, and an island which obtained a momentary importance during the wars of the Venetians, represents Lissia. (Wilkinson, Palmatia and Montenegro, vol. i. p. 78.)

LISSUS. [Leonine.]

LISUS (Aloue, Ptol. iii. 17. § 3), a town on the S. coast of Crete, which the anonymous Coast-describer places between Soia and Calabude. (Stratium.) The Pentinger Table gives 16 M. P. as the distance between Cantanum and Lissia. This Cretan city was an episcopal see in the time of Hierocles. (Comp. Cornel. Crete Sacra, vol. i. p. 285.) The order in which he mentions it with the other bishopric
In the W. part of the island agrees very well with the
supposition that its site was on the spot now
called Haghio Kyriko. This place occupies a small
Rivulet of the hills facing the sea, like a theatre.
Nestor's crown of Eumenides, Homer's reference to
be vestiges of an ancient temple, consisting of
granite columns, and white marble fragments, ar-
chitraves, and pediments. Further on, appears to
have been another temple, and a theatre. The tombs
are on the SW. side of the plain. They are worked
independent of the rock, with arched roofs. There
are perhaps fifty of them. (Pashley, Tran. vol. ii.
p. 58; Mau, Chas. Ant. vol. ii. p. 298.)
Of all the towns which existed on this part of the
coast, Liparos alone seems to have struck, which
is a fact which agrees very well with the evidence sup-
plied by its situation, of its having been a place of
some trading importance. The harbour is mentioned
by Sylax (p. 18), and the types of the coins are
either maritime, or indicative of the worship of Dise-
tyna, as might have been expected on this part of
the island. The obverse of one coin bears the
impress of the caps and stars of the Dioscuri, and
its reverse a quiver and arrow. On the second coin
the caps and stars are replaced by a dolphin, and
inside the quiver a female head. This temple of Artemis or Dictynta. (Comp. Eckfeld, vol. ii.
p. 315.)
[16. B. J.]
LISTUS (Διζσιος, Strab. vii. p. 316; Ptol. ii. 16.
§ 5; Scoph. B.; Hierocles; P. T. Tab.), a town of
Iliyrium, at the mouth of the river Drilo. Dionysius
the elder, in his schemes for establishing settlements
among the Illyrian tribes, founded Listus. (Polio,
ax. 13.) It was afterwards in the hands of the Illyrians,
who, after they had been defeated by the Romans, city
without a castle. But its situation is so strong, and the
river vessels were not allowed to sail. (Polyl. ii. 12.)
B. c. 211, Philip of Macedon, having surprised
the citadel Acrolissus, compelled the town to surren-
der. (Polyl. viii. 15.) Gentius, the Illyrian king,
collected his forces here for the war against Rome.
(Liv. xlvii. 30.) A body of Roman citizens was stationed there by Caesar (B. C. iii. 26—29)
to defend the town; and Fliny (iii. 20), who says
that it was 100 M. F. from Epidaurus, describes it as
a small town. (Dion. Hal. iv. 45.) The town more
probably called Illyria, and it now bears the name of Lescah
(Leake, Northern Greece, vol. iii. p. 477; Schafarik, Star.
Alt. vol. ii. p. 275.)
[16. B. J.]
LISTA (Λιστα), a very ancient city of Central
Italy, which, according to Varro (ap. Dion. Hal.
ii. 14.), was the metropolis of the Aborigines, when
that people still dwelt in the mountain valleys
around Reate. It was surprised by the Sabines by
a night attack from Ambrussum; and the inhabit-
ants took refuge in some towers there and after
several fruitless attempts to recover possession of
their city; but failing in this, they declared it, with
the surrounding territory, sacred to the gods, and
imprisoned curs on who should occupy it. This
circumstance probably accounts for the absence of
all other mention of it; though it would seem
that its ruins still remained in the time of Varro,
or at least that its site was clearly known. This
has been in modern times a subject of much dispute.
According to the present text of Dionysius, it was
situated 24 stadia from Tiora, the ruins of which
are probably those at Castore near Sta. Anaolilia,
in the upper valley of the Salto, 36 miles from Ricti.
Bunsen places it at Sta. Anatolia itself,
where there are some remains of an ancient city.
But Holstenius long ago pointed out a site about 3
miles from Leute it self, on the road from thence to
Civita Ducale, still called Monte di Lotta, where
there still stand remains of a town, called Antium,
Martelli, and Sir W. Gel, the remains of an ancient
city, with walls of polygonal construction, and a
site of considerable strength. The situation of
these ruins would certainly be a more probable posi-
tion for the capital of the Aborigines than one so
far removed as Sta. Anaolilia from their other settle-
ments, and would accord better with the natural
line of advance of the Sabines from Ambrussum, which
must have been by the pass of Anthereo and the valley of
the Felino. In this case we must understand the distance of 24 stadia (3 miles), as
stated by Dionysius (or rather by Varro, whom he cites),
as having reference to Leute itself, not to
Tora. (Bunsen, Antiq. Stabilimenti Italic., in
Ann. d. Inst. Arch. vol. vi. p. 137; Gel's Topo-
p. 114.)
[L. B. B.]
LISTEON (Λιστέων), a place in Epius Nova,
mentioned by Hierocles with a fortress Alisternus
(Λιστέων, Procop. de Aed. iv. 4). It is probably
represented by the castle of Kifissos, situated on the river Aous (Tione), which is
mentioned by Constantia (Καστελλία, ii. 32; comp.
Anna Comnena, xiii. p. 390) in the fourteenth
century, together with other places which are still
to be recognised as having been the chief strong-
holds in this part of Greece. [Aous.] (Leake, Northern Greece, vol. i. p. 383.)
[16. B. J.]
LITABA. [Vaccaei.]
LITANA SILVA, a forest in the territory of the
Boians in Cisalpine Gaul, probably in the de-
feat of the Roman consul L. Postumius, in B. C. 216.
On this disastrous occasion the consul himself
perished, with his whole army, consisting of two
Roman legions, augmented by auxiliaries to the
amount of 25,000 men. (Liv. xxiii. 24: Frontin.
Strat. i. 6. § 4.) At a later period it witnessed,
on the other hand, a defeat of the Boians by the
Roman consul L. Valerius Flaccus, in B. C. 195. (Liv.
xxiv. 22.) The forest in question appears to have
been situated somewhere between Bononia and Pla-
centia, but its name is never more mentioned
after the reduction of Crispinian Gaul, and its exact site
cannot be determined. It is probable, indeed, that
a great part of the tract between the Apennines and
the marshy ground on the banks of the Padus was
at this time covered with forest.
[16. H. B.]
LITANOBREGA, in Gallia, is placed by the An-
tonine Itin. between Caesaromagus (Beavaria) and
Augustomagus, which D'Anville supposes to be Sen-
lis. According to his reading, the Itin. makes it
xvii. Gallic leagues from Caesaromagus to Litan-
brig, and iii. from Litanobrega to Augustomagus.
Walckenaer (Geog. de, vol. iii. p. 55) makes the
first distance xvi., and the second iii.; and he places
Caesaromagus at Verbeire, near the river Autone.
The Table mentions no position between Caesaromagus and Augus-
tomagus, but it makes the whole distance
diiii. We may assume that Litanobrega was situ-
ated at a ford or bridge over a river, and this river is
the Oise. D'Anville first thought that Litanobrega
might be Pont Sainte-Maxence, for a Roman road
from Beavaria, called Brunchaut, passes by Cler-
mont, and joins a road from Pont-Sainte-Maxence.
But the numbers in the Itin. fall short of the dis-
tance between Beavaria and Senlis; and accordingly
o 3
D'Anville gave up Pont-Sainte-Maxence, and fixed Litornum at Creil on the Oise, and along this line the distances of the Table agree pretty well with the real distances. Walckenaer fixes Litornum at Pont-Sainte-Maxence. The solution of this difficulty depends on the position of Augustomagus; or if we are content with the evidence for fixing Litornum at Pont-Sainte-Maxence, we cannot place Augustomagus at Senlis. [Augustomagus.] [G.L.]

LITERNUM (Antegnen. Strabo: Attrepop. Pol.: Eth. Liternus: Tor di Patria,) a town on the sea-coast of Campania, between the mouth of the Vulturnus and Cumae.* It was situated at the mouth of a river of the same name (Strab. v. p. 243; Liv. xxxii. 29), which assumed a stagnant character as it approached the sea, so as to form a considerable marshy pool or lagoon, called the Literna Palus (Sil. Ital. vii. 278; Stat. Silv. iv. 3. 66), and bordered on either side by more extensive marshes. It is not quite clear whether there was to be placed any importance, and establishment of the Roman colony: Livy's expression (l.c.) that that colony was sent “ad ostia Liternae fluminis,” would seem to imply the contrary; and though the name of Liternum is mentioned in the Second Punic War, it is in a manner that does not clearly prove there was then a town there. (Liv. xxxii. 35.) But the notice in Festus (v. Praefecturae), who mentions Liternum, with Capua, Cumae, and other Campanian towns, among the Praefecturae, must probably refer to a period earlier than the Roman settlement. It was not till the year B. C. 194 that a colony of Roman citizens was settled at Liternum at the same time with one at Vulturnum: they were both of the class called “coloniae maritimae civitum,” but were not numerous, only 300 colonists being sent to each. (Liv. xxxii. 29, xxxiv. 43.) The situation of Liternum also was badly chosen: the marshy character of the neighbourhood rendered it unhealthy, while the adjoining tract on the sea-coast was sandy and barren; hence, it never seems to have risen to be a place of any importance; and establishment of the Roman colony is evidently not to be referred to from the circumstance that it was the place which Scipio Africanus chose for his retirement, when he withdrew in disgust from public life, and where he ended his days in a kind of voluntary exile. (Liv. xxviii. 52, 53; Seneca, Ep. 86; Val. Max. v. 3. § 1; Oros. iv. 20.) At a later period, however, Augustus settled a fresh colony at Liternum (Tab. Colon. p. 235), and the construction by Domitian of the road leading along the sea-coast from Nunessus to Cumae must have tended to render it more frequented. But it evidently never rose to be a considerable place; under the Roman Empire its name is mentioned only by the geographers, and in the Itinera in connection with the Via Domitiana already noticed. (Strab. v. p. 243; Med ii. iv. 9 § 9; Ptol. iii. 5. s. 9; Ptol. iii. 1. § 6; Itin. Ant. p. 122; Tab. Peut.) We learn, however, that it still existed as a “civitas” as late as the reign of Valentinian II. (Symmach. Ep. vi. 5;) and it was probably destroyed by the Vandals in the 6th century.

The villa of Scipa, where he spent the latter years of his life, was still extant in the days of Seneca, who has left us a detailed description of it, and strongly contrasts the simplicity of its arrangements with the luxury and splendour of those of his own time. (Ep. 86.) Pliny also tells us, that some of the olive trees and myrtles planted by the hands of Scipio himself were still visible there. (Plin. xvi. 44. s. 85.) It is certain that his tomb also was situated at Liternum in the days of Strabo and Livy, though it would appear that there was great doubt whether he was really buried there. The well-known epitaph which, according to Valerianus Maximus, he caused to be engraved on his tomb,— "Ingrata patria, ne osa quidem me habes,"—could certainly not have been extant in the time of Seneca, who treats the question as one of mere conjecture, though he inclines to the belief that Africanus was really buried there, and not in the tomb of the Scipios at Rome. (Seneca, l. c.; Val. Max. v. 3. § 1; Strab. iv. xxxviii. 230.)

The site of Liternum is now marked by a watch-tower called Tor di Patria, and a miserable village of the same name; the adjoining Lago di Patria is unquestionably the Literna Palus, and hence the river Liternus can be no other than the small and sluggish stream which forms the outlet of this lake to the sea. At the present day the Lago di Patria communicates with the river Chamus or Laguna, and is formed by one of the arms of that stream. It is not improbable that this was the case in ancient times also, for we have no account of the mouth of the Chamus, while the Liternus is mentioned only in connection with the town at its mouth. [Class.] The modern name of Patria must certainly have been derived from some tradition of the epitaph of Scipio already noticed, though we cannot explain the mode in which it arose; but the name may be traced back as far as the eighth century. There are scarcely any ruins on the site of Liternum, but the remains of the ancient bridge by which the Via Domitia here crossed the river are still extant, and the road itself may be traced from hence the whole way to Cumae. [E. H. B.]

LITHKRUS (Λίθρος), the name of the northern branch of Mount Parnassus in Pentus, which, together with Mount Ophiusimus in the north-west of Amasia, enclosed the extensive and fertile plain of Phanarea. (Strab. xii. p. 556.) Hamilton (Researches, vol. i. p. 349) believes that these two ancient hills answer to the modern Riner Dagh and Oktober Dagh. [L. S.]

LIVIANA, in Gallia Narbonensis, is placed by the Table and the Jerusalem Itin. between Carcena (Cursusonnae) and Narbo (Narbonne). It is the next station to Carcena, and xix. from it: the station that follows Liviana is Usuerva, or Usuerna, or Usuerna. The site is uncertain. [G. L.]

LIX, LIXUS. [Mauretania].

LIZIZIS. [Azizis].

LOBETANI (Λοβετανοὶ), one of the lesser peoples in the NE. part of Hispina Tarraconensis, in our position E. of the Cultellini, and N. of the Bassetani, in the SW. of Almerania. The only city mentioned as belonging to them was Lobetum (Λοβετοῦρ), which D'Anville identifies with Requena, but Ucetor with Albarracin. (Ptol. ii. 6. § 60; Coins ap. Sestini, p. 169; Ucetor, vol. ii. pt. 1, pp 322, 464.)

LOBETUM. [Lobetani]

LOCORITUM (Λοκορίτορ), a town on the river Main in Germany, and probably the same as the
LOCKRI. 199

modern Lohr. (Pol. ii. 11. § 29.) Its name seems to be of Celtic origin. (Camp. Steiner, Das Maingebiet, p. 125. [L S ]

LOCKAS. (Cursia, p. 691, a.)

LOCRI EPICUMEDII, OPUNTII. (Locri.)

LOCRI OZOLAE. (Locri.)

LOCRI (Anc.) was sometimes called, for distinction's sake, LOCRI EPIZEPHYRII (Atop. £.) (Ambige, Thuc. v. i. 1; Pind. Od. xii. 15; Strab.; Steph. B.: Eih. Alopóis, Locraea; Ruins near Gerace), a city on the SE. coast of the Bruttian peninsula, not far from its southern extremity, and one of the most celebrated of the Greek colonies in this part of Italy. It was a colony, as its name obviously implies, of the Locrians in Greece, but there is much discrepancy as to the tribe of that nation from which it derived its origin. Strabo affirms that it was founded by the Locri Ozolae, a leader named Euanthes, and conquers Ephorus for ascribing it to the Locri Opuntii; but this last opinion seems to have been the one generally prevalent. Syrnias Chiusus mentions both opinions, but seems to incline to the latter; and it is adopted without question by Pausanias, as well as by the poets and later Latin authors, whence we may probably infer that it was the tradition adopted by the Locrians themselves. (Strab. vi. p. 299; Syrnias. Ch. 513—317; Paus. iii. 19. § 12; Virg. Aen. iii. 599.) Unfortunately Polybius, who had informed himself particularly as to the history and institutions of the Locrians, does not give any statement upon this point. But we learn from him that the origin of the colony was ascribed by the tradition current among the Locrians themselves, and sanctioned by the authority of Aristotle, to a body of fugitive slaves, who had carried off their mistresses, with whom they had previously carried on an illicit intercourse. (Pol. xii. 5. 6. 10—12.) The same story is alluded to by Dianysius Periegetes (365—367). Pausanias would seem to refer to a wholly different tale where he says that the Lacedaemonians sent a colony to the Epi zeephyrian Locri, at the same time with one to Crotona. (Paus. iii. 3. § 1.) These were, however, in both cases, probably only additional bands of colonists, as Lacedaemon was never regarded as the founder of either city. The date of the foundation of Locri is equally uncertain. Strabo (L. c.) places it a little after that of Crotona and Syracuse, which he regarded as nearly contemporary. He adds, however, that Euanthes was the first of the settlers, and that the name Locri was given in his last opinion. [CROTONE.] Eusebius, on the contrary, brings it down to so late a date as B.C. 673 (or, according to Hieronymus, 683); but there seems good reason to believe that this is much too late, and we may venture to adopt Strabo's statement that it was founded soon after Crotona, if the latter he placed about 710 B.C. (Euseb. Arm. p. 105; Clinton F. H. vol. i. p. 186, vol. ii. p. 410.) The traditions adopted by Aristotle and Polybius represented the first settlers as gaining possession of the soil from the native orientains (whom they called Siculi), by a fraud not unlike those related in many similar legends. (Pol. xii. 6.) The fact stated by Strabo that they first established themselves on Cape Zephyrum (Capo di Brucanne), and subsequently removed from thence to the site which they ultimately occupied, about 15 miles further N., is supported by the evidence of their distinctive appellation, and may be depended on as accurate. (Strab. l. c.)

As in the case of most of the other Greek colonies in Italy, we have very scanty and imperfect in-formation concerning the early history of Locri. The first event in its annals that has been transmitted to us, and one of those to which it owes its chief celebrity, is the legislation of Zaleucus. This was said to be the most ancient written code of laws that had been given to any Greek state; and though the history of Zaleucus himself was involved in great obscurity, and mixed up with much of fable (ZALEUCUS, Biogr. Dict.), there is certainly no doubt that the Locrians possessed a written code, which passed under his name, and which continued down to a late period to be in force in their city. Even in the days of Pindar and of Demosthenes, Locri was regarded as a model of good government and order; and its inhabitants were distinguished for their adherence to established laws and their aversion to all innovation. (Pind. Od. x. 17; Schol. ad loc.; Strab. vi. p. 260; Demosth. adv. Timarch. p. 743; Did. xii. 20, 21.)

The period of the legislation of Zaleucus cannot be determined with certainty: but the date given by Eusebius of Ol. 30, or n. c. 660, may be received as approximately correct. (Euseb. Arm. p. 105; Clinton, vol. i. p. 193.) Of its principles we know but little; and the quotations from his laws, even if we could depend upon their authenticity, have no reference to the political institutions of the state. It is certain that the government of Locri was an aristocracy, in which certain select families, called the Hundred Houses, enjoyed superior privileges: these were considered to be derived from the original settlers, and in accordance with the legend concerning their origin, were regarded as deriving their nobility from the female side. (Pol. xii. 5.)

The next event in the history of Locri, of which we have any account, is the memorable battle of the Sagras, in which it was said that a force of 10,000 Locrians, with a small body of auxiliaries from Rhegium, totally defeated an army of 130,000 Crotoniats, with vast slaughter. (Strab. vi. p. 261; Cic. de N. D. ii. 2; Justin, xx. 3, 5.) The extraordinary character of this victory, and the exaggerated and fabulous accounts of it which appear to have been circulated, rendered it proverbial among the Greeks (ἐνδειγματα τεων ε'τι Σαγρας, ο. κ. τ.) Yet we have no means of assigning its correct place in history, its date being extremely uncertain, some accounts placing it after the fall of Sybaris (n. c. 510), while others would carry it back nearly 50 years earlier. [CROTONE.]

The small number of troops which the Locrians are represented as bringing into the field upon this occasion, as compared with those of Crotona, would seem to prove that the city was not at this time a very powerful one; at least it is clear that it was not to compare with the great republics of Sybaris and Crotona. But it seems to have been in a flourishing condition; and it must in all probability be the period that we must refer the establishment of its colonies of Hippionium and Medma, on the opposite side of the Bruttian peninsula. (Syrnias. Ch. 308; Strab. vi. p. 256.) Locri is mentioned by Herodotus in n. c. 493, when the Samian colonists, who were on their way to Sicily, touched there (Herod. vi. 23); and it appears to have been in a state of great prosperity when its praises were sung by Herodotus, in n. c. 484. (Pind. Od. x. x. xi.) The Locrians, from their position, were naturally led to maintain a close connection with the Greek cities of Sicily, especially with Syracuse, with their friendship with which we should seem to have dated, according to some accounts,
LOCRI.

from the period of their very foundation. (Strab. vi. p. 259.) On the other hand, they were almost constantly on terms of hostility with their neighbours of Rhgium, and, during the rule of Amazias, in the latter city, were threatened with complete destruction by that despot, from which they were saved by the intervention of Heron of Syracuse. (Pind. Pyth. ii. 35; and Schol. ad loc.) In like manner we find them, at the period of the Athenian expeditions to Sicily, in close alliance with Syracuse, and on terms of open enmity with Rhegium. Hence they at first engaged in actual hostilities with the Athenians under Laches; and though they subsequently concluded a treaty of peace with them, they still refused to admit the great Athenian armament, in B.C. 415, even to anchor on their coasts. (Thuc. iii. 99, 115, iv. 1, 24, v. 5, vi. 44, vii. 1; Diod. xiv. 54, xiii. 3.) At a later period of the Peloponnesian War they were among the few Italian cities that sent auxiliary ships to the Lacedaemonians. (Thuc. viii. 91.)

During the reign of the eunuchs of Syracuse, the bonds of amity between the two cities were strengthened by the personal alliance of that monarch, who married Doris, the daughter of Xenetos, one of the most eminent of the citizens of Locri. (Diod. xiv. 44.) He subsequently adhered steadfastly to this alliance, which secured him a footing in Italy, from which he derived great advantage in his wars against the Rhegians and other states of Magna Graecia. In return for this, as well as to secure the continuance of their support, he conferred great benefits upon the Locrians, to whom he gave the whole territory of Calabria, after the destruction of that city in B.C. 389; to which he added that of Hippomion in the following year, and a part of that of Scyllum. (Diod. xiv. 100, 106, 107; Strab. p. 261.) Hippomion was, however, again wrested from them by the Carthaginians in B.C. 379. (Id. xv. 24.) The same intimate relations with Syracuse continued under the younger Dionysius, when they became the source of great misfortunes to the city; for that despot, after the capture of Rhegium (356), withdrew to Locri, where he seized on the citadel, and established himself in the possession of despotic power. His rule here is described as extremely arbitrary and oppressive, and stained at once by the most excessive arrears and unbridled licentiousness. At length, after a period of six years, the Locrians took advantage of the absence of Dionysius, and drove out his garrison; while they exercised a cruel vengeance upon his unfortunate wife and daughters, who had fallen into their hands. (Justin. xxi. 2, 3; Strab. vi. p. 259; Arist. Pol. v. 7; Church. op. Athenol. viii. 341.)

The Locrians are said to have suffered severely from the oppressions of this tyrant; but it is probable that they sustained still greater injury from the increasing power of the Bruttians, who were now become most formidable neighbours to all the Greek cities in this part of Italy. The Locrians never appear to have fallen under the yoke of the bar- bartians, but it is certain that their city declined greatly in power and prosperity. (As not again mentioned till the wars of Pyrrhus. At that period it appears that Locri, as well as Rhegium and other Greek cities, had placed itself under the protection of Rome, and even admitted a Roman garrison into its walls. On the approach of Pyrrhus they expelled this garrison, and declared themselves in favour of that monarch (Justin. xviii. 1); but they had soon cause to regret the change: for the garrison left there by the king, during his absence in Sicily, conducted itself so ill, that the Locrians rose against them and expelled them from their city. On this account they were severely punished by Pyrrhus on his return from Sicily; and, not content with exactions from the inhabitants, he carried off a great part of the sacred treasures from the temple of Proserpine, the most celebrated sanctuary at Locri. A violent storm is said to have punished his iniquity and compelled him to restore the treasures. (Appian. Sycen. iii. 12; Liv. xxv. 15; Val. Max. i. 1, Ext. § 1.)

After the departure of Pyrrhus, the Locrians seem to have submitted again to Rome, and continued so till the Second Punic War, when they were among the states that threw off the Roman alliance and declined in favour of the Carthaginians, after the battle of Cannae, B.C. 216. (Liv. xxii. 61, xxiii. 30.) They soon after received a Carthaginian force within their walls, though at the same time the state seemed still to enjoy almost equal terms. (Liv. xxiv. 1.) When the fortune of the war began to turn against Carthage, Locri was besieged by the Roman consul Crispinus, but without success; and the approach of Hannibal compelled him to raise the siege, B.C. 209. (Id. xxv. 25, 28.) It was not till B.C. 205, that Scipio, when on the point of sailing for Africa, was enabled, by the treachery of some of the citizens, to surprise one of the forts which commanded the town; an advantage that soon led to the surrender of the other citadel and the city itself. (Id. xxiv. 6—8.) Scipio confined the charge of the city and the command of the garrison to hislegate, Q. Pleminius; but that officer conducted himself with such cruelty and rapacity towards the unfortunate Locrians, that they rose in tumult against him, and a violent sedition took place, which was only appeased by the intervention of Scipio himself. That general, however, took the part of Pleminius, whom he continued in his command; and the Locrians were expelled, and the city declared free (B.C. 203, 202). He then took the garrison, and carried it to Rome, and there treated it as a prisoner of war. (Diod. xvi. 100, 101; Val. Max. i. 1; Strab. vi. p. 259; Plut. Tim. v. 4.)

This is the last mention of Locri in the ancient writers, who do not mention the event of the battle of Liponeium, which was fought in that year. (Liv. xxx. 56.) From this time we hear little of Locri. Notwithstanding the privileged condition conceded to it by the senate, it seems to have sunk into a very subordinate position. Polybius, however, speaks of it as in his day still a considerable town, which was hound by treaty to furnish a certain amount of naval auxiliaries to the Romans. (Pol. xii. 5.) The Locrians were under particular obligations to that historian (ib.) and at a later period we find them enjoying the special patronage of Cicero (Cic. de Leg. ii. 6), but we do not know the origin of their connection with the great orator. From Strabo's account it is obvious that Locri still subsisted as a town in his day, and it is noticed in like manner by Pliny and Ptolomy (Strab. vi. p. 259; Plin. iii. 5, s. 10; Pol. iii. 1, § 10). Its name is not found in the Itineraries, though they describe this coast in-
siderable detail; but Procopius seems to attest its continued existence in the 6th century (B. G. i. 15), and it is probable that it owed its complete destruction to the Saracens. Its very name was forgotten in the middle ages, and its site became a matter of dispute. This has however been completely established by the researches of modern travellers, who have found the remains of the ancient city on the sea-coast, near the modern town of Gerace. (Cluver, Ital. p. 1301; Romanelli, vol. i. p. 159; Cramer, vol. ii. p. 411; Riedesel, Voyage dans la Grande Grce, p. 148.)

The few ruins that still remain have been carefully examined and described by the Duc de Luynes. (Ann. d. Inst. Arch. vol. ii. pp. 5—12.) The site of the ancient city, which may be distinctly traced by the vestiges of the walls, occupied a space of near two miles in length, by less than a mile in breadth, extending from the sea-coast at Torre di Gerace (on the left bank of a small stream called the Fiume di S. Iario), to the first heights or ridges of the Apennines. It is evidently to these heights that Strabo gives the name of Mount Exops (Εύωπς), on which he places the first foundation of the city. (Strab. vi. p. 259.) The same heights are separated by deep ravines, so as to constitute two separate summits, both of them retaining the traces of ancient fortifications, and evidently the "two citadels not far distant from each other" noticed by Livy in his account of the capture of the city by Scipio. (Livy. xxix. 6.) The city extended from hence down the slopes of the hills towards the sea, and had unquestionably its port at the mouth of the little river S. Iario, though there could never have been a harbour there in the modern sense of the term. Numerous fragments of ancient masonry are scattered over the site, but the only distinct traces of any ancient edifice are those of a Doric temple, of which the basement alone now remains, but several columns were standing down to a recent period. It is occupied by a farm-house, called the Casino dell' Imperatore, about a mile from the sea, and appears to have stood without the ancient walls, so that it is not improbable the ruins may be the remains of the celebrated temple of Proserpine, which we know to have occupied a similar position. (Livy. xxix. 18.)

The ruins of Locri are about five miles distant from the modern town of Gerace, which was previously supposed to occupy the site of the ancient city (Cluver, L. c.; Barr. de Sit. Calabr. iii. 7), and 15 miles from the Capo di Bracuano, the Zephyrian promontory.

The Locrians are celebrated by Pindar (Ol. x. 18, xi. 19) for their devotion to the Muses as well as for their skill and courage in war. In accordance with this character we find mention of Xenocrates and Erasippus, both of them natives of Locri, as poets of some note; the lyric poet Thersares was probably also a native of the Epizephyrian Locri. (Schol. ad Pind. Ol. xi. 17; Beekch, ad Ol. x. p. 197.) The Pythagorean philosophy also was warmly taken up and cultivated there, though the authorities had refused to admit any of the political innovations of that philosopher. (Porphyry, Fh. Pyth. 56.) But among his followers and disciples several were natives of Locri (Ambr. Vit. Pyth. 267), the most eminent of whom were Timaeus, Eratocrates, and Aecrion, from whom Plato is said to have imbibed his knowledge of the Pythagorean tenets. (Cic. de Fin. v. 29.) Nor was the cultivation of other arts neglected. Euenus, a Locrian citizen, was cele-

brated for his skill on the cithara; and the athlete Eutymus of Locri, who gained several prizes at Olympia, was scarcely less renowned than Milo of Crotona. (Strab. vi. pp. 253, 260; Pans. vi. 6. §§ 4—11.)

The territory of Locri, during the flourishing period of the city, was certainly of considerable extent. Its great augmentation by Dionysius of Syracuse has been already mentioned. But previous to that time, it was separated from that of Rhegium on the SW. by the river Hales or Alice, while its northern limit towards Caulonia was probably the Sagras, generally identified with the Alaro. The river Buthrotus of Livy (xxix. 7.), which appears to have been but a short distance from the town, was probably the Noeiro, about six miles to the N. Thucydides mentions two other colonies of Locri (besides Hipponium and Medma already noticed), to which he gives the names of Ione and Melae, but no other trace is found of either the one or the other. (Thuc. v. 5.)

[Ε. Η. Ρ.]

COIN OF THE LOCRI EPIZEPHYRI.

**LOCRI (Λοκρί; Eθβ. Λοκρί; in Latin also Locri, but sometimes Locrenses).** The Locri were an ancient people in Greece, and were said to have been descended from the Leleges. This was the opinion of Aristotle; and other writers supposed the name of the Locrians to be derived from Locus, an ancient king of the Leleges. (Aristot. Hist. op. Strab. vii. p. 322; Scymnus Ch. 590; Dicerarch. 71; Plin. iv. 7. s. 12.) The Locrians, however, must at a very early period have become intermingled with the Hellenes. In the Homeric poems they always appear as Hellenes; and, according to some traditions, even Deucalion, the founder of the Hellenic race, is said to have lived in the Locrian town of Opas or Cynus. (Pind. Ol. ix. 63, seq.; Strab. ix. p. 425.) In historical times the Locrians were divided into two distinct tribes, differing from one another in customs, habits, and civilisation. Of these the eastern Locrians, called the Oupnii and Epizefyni, dwelt upon the eastern coast of Greece, opposite the island of Euboia; while the western Locrians dwelt upon the Corinthian gulf, and were separated from the former by Mount Parnassus and the whole of Doris and Phocis. (Strab. ix. p. 425.) The eastern Locrians are alone mentioned by Homer; they were the more ancient and the more civilised: the western Locrians, who are said to have been a colony of the former, are not mentioned in history till the time of the Peloponnesian War, and are even then represented as a semi-barbarous people. (Thuc. i. 5.) We may conjecture that the Locrians at one time extended from sea to sea, and were torn asunder by the immigration of the Phocians and Dorians. (Nicolah, Lectures on Ancient Ethnography, vol. i. p. 123.)

1. LOCRI EPIZEFYNI AND OUPNII (Επίζεφυνις, Ὄουπνις), inhabited a narrow strip upon the eastern coast of Greece, from the pass of Thermopylae to the mouth of the river Cephissus.
Their northern frontier town was Aylia, which bordered upon the Maenians, and their southern fron-
tier town was Larymna, which at a later time be-
longed to Bosotia. The Locrians, however, did not
inhabit this coast continually, but were separated
by a narrow slip of Phocis, which extended to the
Euborean sea, and contained the Phocian seaport
town of Dalphus. The Locrians north of Dalphus
were called Epicanemidii, from Mount Cunoeus; and
those south of this town were named Opunii, from
Opus, their principal city. On the west the Locrians
were separated from Phocia and Bosotia by a range of
mountains, extending from Mount Mantinea, or
perhaps from the coast. The northern part of this
range, called Mount Cunoeus (Strab. ix. pp. 416,
425), now Tiladada, rises to a considerable height,
and separated the Epicanemidii Locri from the Pho-
cians of the upper valley of the Cephissus; the
southern portion, which bore no specific name, is not
so lofty as Mount Cunoeus, and separated the Opun-
tian Locrians from the north-eastern parts of Bosotia.
Lateral branches extended from these mountains to
the coast, of which one terminated in the promontory
Creek of Theresia, or Theramenes, and another, called
Lichades; but there were several fruitful valleys,
and the fertility of the whole of the Locrian coast
is praised both by ancient and modern observers.
(Strab. ix. p. 425; Forchhammer, Helena. pp. 11
—12; Grote, Hist. of Greece, vol. ii. p. 384.) In
consequence of the proximity of the mountains to
the coast there was no room for any considerable
rivers. The largest, which, however, is only a
mountain torrent, is the Bocharicus (Bochysis),
called also Manos (Mansus) by Strabo, rising in
Mount Cunoeus, and flowing into the sea between
Scarpheia and Theramnes. (Herod. ii. ii. 533; Strab.
ix. p. 426; Ptol. iii. 15. § 11; Plin. iv. 7. s. 12;
Leake, Northern Greece, vol. ii. p. 67.) The only
other river mentioned by name is the Platanius
(Paltanaus, Paus. iv. 24. § 5), a small stream,
which flows into the Opuntian gulf near the Bosotian
frontier; it is the river which flows from the modern
village of Prakynis. (Leake, vol. ii. p. 174.) The
Opuntian gulf (δ' οποντιον αλατία, Strab. ix.
p. 416. 425) separated the town of Opus, at a consid-
table bay, shallow at its
inner extremity. In this bay, close to the coast, is
the small island of Atalanta. [Atalanta, No. 1.]

There are three important passes across the Locrian
mountains into Phocis. One leads from the territory
of the Epicanemidii, between the summits of Mount
Calidromus and Mount Cunoeus, to Tithronum, in
the upper valley of the Cephissus; a second across
Mount Cunoeus to the Phocian town of Eleaion; and
a third from Opus to Hyampolis, also a Phocian
town, whence the road ran to Abae and Orchom-
eness.

The eastern Locrians, as we have already said,
are mentioned by Homer, who describes them as
following Ajax, the son of Oileus, to the Trojan
War in forty ships, and as inhabiting the towns of
Cyamus, Opus, Calalium, Bassa, Scarpe, Aegaeum,
Tarpe, and Theramnes. (H. ii. 327—535.) Neither
Homer, Herodotus, Thucydides, nor Polybius, make
any distinction between the Opuntii and Epicanem-
idii; and, during the flourishing period of Greek
history, Opus was regarded as the chief town of the
eastern Locrians. Even Strabo, from whom the
distinction is chiefly derived, in one place describes
Opus as the metropolis of the Epicanemidii (ix.
p. 416); and the same is confirmed by Piny (X.
7. § 12) and Stephanus (v. E. Orat.); from Leake
vol. i. p. 181.). In the Persian War, the Opuntian
Locrians fought with Leucippus the Thermopylaeans,
and also sent seven ships to the Grecian fleet. (Herm.
vii. 203, viii. 1.) The Locrians fought on the side
of Sparta in the Peloponnesian War. (Thuc. ii. 9.)

The following is a list of the Locrian towns:
1. Of the Epicanemidii: along the coast from N. to
S., Alceana; Nicaea; Scarpe or Scarpheia; Ther-
amnes; Cunoeus or Cunemides; more inland,
Tarpe, afterwards Pharygai; Angelae. — 2.
Of the Opuntii: along the coast from N. to S.,
Acheron; Nicae; Hyampolis; Halae; Larymna, which
at a later time belonged to Bosotia; more inland,
Callarbius; Naelys; Corseia.

COIN OF THE LOCRI OPUNTII.

II. LOCI OZOAE (Οζόας), inhabited a district:
upon the Corinthian gulf, bounded on the north
by Doris and Artaon, on the east by Phocia, and
on the west by Aetolia. This district is mountainous,
and for the most part unproductive. The de
chvalies of Mount Parmassus from Phocia, and of
Mount Cynus from Aetolia, occupy the greater part of it.
The only river, of which the name is mentioned, is
the Hylasteis, now the Mormo, which runs in a
south-westerly direction, and falls into the Corinthian
gulf near Naupactus. The frontier of the Locri
Ozoe on the west was close to the promontory
Anthririm, opposite the promontory Rhium on the
coast of Achaea. [Anthririm, which was in the
territory of the Ledi, is spoken of elsewhere. [Vol.
I. p. 13.]) The eastern frontier of Locri, on the
coast, was close to the Phocian town of Cynus,
and the Corinthian gulf washed on its western side
the Locrian, and on its eastern the Phocian coast.
The origin of the name of Ozoe is uncertain. Various
corrections were proposed by the ancients. (Paus.
iv. 38. § 1, seq.) Some derived it from the verb
οιος, "to smell," either from the steen arising
from a spring at the foot of Mount Taphissus,
whereas the centaur Nessus is said to have been
buried, and which still retains this property (cf.
Strab. x. p. 427), or from the abundance of aspho-
del, which scented the air. (C. Arctatus, op.
Plut. Quaest. Grcece, 14.) Others derived it from
the dusk-scented skins which were worn by the ancient
inhabitants; and the Locrians themselves from the
branches (ζος) of a vine which was produced in
their country in a marvellous manner. The Locri
Ozoea are said to have been a colony from the
Opuntian Locrians. They first appear in history
in the time of the Peloponnesian War, as has been
mentioned above, when they are mentioned by Thucy-
dides as a semi-barbarous nation, along with the
Aetolians and Arcadians, whom they resembled in
their armur and mode of fighting. (Thuc. i. 5,
iii. 94.) In B.C. 426 the Locrians promised to
assist Demosthenes, the Athenian commander, in
his invasion of Aetolia; but, after the defeat of
Demosthenes, most of the Locrian tribes submitted
The chief and only important town of the Oceae was Antissa, situated on the borders of Phocis. The other towns, in the direction of W. to E., were Molycereia; Naupactus; Oeneon; Anticheria or Anticyra; Eupallium; Epythrae; Tolo-phon; Hesseus; Oeantihia or Oeanthia; Ipenus; Chalaecum; more inland, Aegithium; Pothania; Creycleum; Teichium; Olerap; Messapia; Hyle; Tritaea; Myonia.

On the geography of the Locrian tribes, see Leske, *Northern Greece*, vol. ii. pp. 66, seq., 170, seq., 557, seq.

LOGI or LUGI (Λογί or Λογί), a people in North Britain, mentioned by Ptolemy (iii. 3. § 12) as a population to the south of the Mertae, and west of the Cornubia. This gives the part about the Durnoeh, Cronmerty, and Murray Firths. [R. G. L.]

LOGIA, a river in Ireland, mentioned by Ptolemy as between the Vandaerias and the Rhogobdian promontory. Probably [see VANDERIUS] the Lagan, falling into Belfast Lough, name for name, and place for place. [R. G. L.]

LONCIUM (Liena), a place in the south of Noricum, on the right bank of the river Drauven. at the point where it receives the Isel. (Itin. Ant. p. 273.) The whole district about Liena abounds in Roman antiquities. (Gruter, *Inscript. p. 267, 9; Macuar, *Noricum*, p. 254.)

LONDIUM (Ludovio, Itol. ii. 3. § 27; Au- dario, Steph. B. s. v.; Londium, Tac. Ann. xiv. 33; Oppianum Londinense, Eumen, *Paneg. Const.* 17; Londinii, Ann. Marc. xx. 1), the capital of Roman Britain. Ptolemy (L. c.) places Londinium in the district of the Cantii; but the correctness of this position has very naturally been questioned. Modern discoveries have, however, decided that the southern limits of the city, in the time of Hadrian and Antoninus Pius, extended a considerable distance into the territory of the Cantii; and Ptolemy, therefore, was not altogether unwarranted in placing Londinium in this division of Britain. In earlier times the city was confined to the northern bank of the Thames.

The earliest mention of it is by Tacitus, in his work on the events of the insurrection of the Britons in the reign of Nero. As Britain was only fully subjugated by Claudius, Londinium must have had rapidly advanced to the importance it assumes in the narrative of this historian. Although it is not mentioned by Julius Caesar or by other early writers, the peculiar natural advantages of the locality point it out as one of the chief places of resort of the merchants and traders who visited Britain from the Cantihart and parts of other parts of the continent. At the comparatively early period in the Roman domination referred to Londinium is spoken of as a place of established mercantile reputation. The three chief cities of Britain at this period were Verulamium, Camulodunum, and Londinium. At Camulodunum a colony of veterans had been established; Verulamium had received the rights and privileges of a municipality; Londinium, without such distinctions, had attained by home and foreign trade that pre-eminence which ever marked her as the metropolis of Britain.

At this period we must infer that Londinium was without external walls; and this absence of mural defences appears to have been common also to Verulamium and to Camulodunum. The Britons passed by the fortified places and attacked at once the rich and populous cities inadequately defended. Camulodunum was the first to fall; Londinium and Verulamium speedily followed in a similar catastrophe.

The Itinerary of Antoninus, which is probably not later than the time of Severus, affords direct evidence of the chief position which Londinium held among the towns and cities of Britain. It occurs in no less than seven of the itineraries, and in six of these it stands either as the place of departure or as the terminus of the routes; no other town is introduced so conspicuous

The historical mention of Londinium occurs in the panegyric of Eumenius addressed to Constantius Caesar (p. 17), in which it is termed "oppidum Londiniense." After the defeat of Allectus, the victorious Romans marched directly on Londinium, which was being plundered by the Franks and other foreign mercenaries, who made up the greater part of the usurper's forces.

Ammianus Marcellinus, who wrote at a later period, states that, in his time, Londinium was called Augusta, an honourable appellation not unfrequently conferred on cities of distinction. In this writer we find the word written as it is pronounced at the present day:—"Egressus, tendensque ad Londinium vetus oppidum, quod Augustam posteritas appellavit" (xxvii. 8, comp. xxviii. 3). In the Notitia Dignitatum we find mention of a "Præfectus Thesaurorum Angustensium in Britannia;" and in the Chorography of Ravenna the complete form, Londinium Augusta, is given.

Monumental remains show that Londinium contained buildings commensurate in grandeur and extent with its historical claims. The foundations of the wall which bordered the river, when laid open a few years since, was almost wholly composed of materials used in buildings which were anterior to the period when the wall was built; but it was impossible to decide the dates of either. The stones of which this wall was constructed were portions of columns, friezes, cornices, and also foundation stones. From their magnitude, character, and number, they gave an important and interesting insight into the obscure history of Roman London, in showing the architectural changes that had taken place in it. Similar discoveries have been made in various parts of the modern city which more fully developed the *debris* of an ancient city of importance; other architectural fragments have been found; walls of vast strength and thickness have been noticed; and within the last twenty years, at least thirty tesselated pavements have been laid open, of which some were of a very fine kind. (*Archaeologia*, vol. xxvii. xxviii. seq.). Londinium, once enclosed at first, was subsequently in early times walled; but it occupied only part of the site it eventually covered (*Archaeologia, vol. xxix.*). The line of the wall of Roman London is well known, and can still, in parts, be traced. Where it has been excavated to the foundation, it appears based upon a bed of clay and flints; the wall itself, composed of rubble and hard mortar, is faced with small squared stones and bonding tiles; its thickness is about 12 feet; its original height was probably between 20 and 30 feet; it was flanked with towers, and had a
least seven gates. By the sides of the chief roads stood the cemeteries, from which enormous quantities of sepulchral remains have been, and still are, procured. Among the inscriptions, are records of soldiers of the second, the sixth, and the twentieth legions. (Col. Ant. vol. i.) We have no evidence, however, to show that the legions themselves were ever quartered at Londinium. The only troops which may be considered to have been stationed in this city were a cohort of the native Britons (Col. Ant. vol. i.); but it is not known at what particular period they were here. It is, however, a rather remarkable fact, as it was somewhat contrary to the policy of the Romans to station the auxiliaries in their native countries.

Traces of temples and portions of statues have also been found in London. The most remarkable of the latter is, perhaps, the bronze head of Hadrian found in the Thames, and the large bronze hand found in Thames Street. In reference to the statues in bronze which adorned Londinium and other cities of Roman Britain, the reader may be directed to a curious passage in Geoffrey of Monmouth. That writer relates (xii. 13), that, after the death of Cadwalla, the Britons embalmed his body and placed it in a bronze statue, which was set upon a bronze horse of wonderful beauty, and placed over the western gate of London, as a trophy of victory and as a terror to the Saxons.

All that we are called upon to consider in this statement is, whether it is at all likely that the work would have been invented in the 6th century, and whether it is not very probable that the story was made up to account for some Roman works of art, which, for centuries after the Romans had left Britain, remained a wonder and a puzzle to their successors. Equestrian statues in bronze were erected in Britain by the Romans, as is proved by a fragment found at Lincoln; but in the subsequent and middle ages such works of art were not fabricated.

We have above referred to the "Præpositus Thesaurorum Aquae Sulis." Numerous coins are extant of the mint of Londinium. Those which may be certainly thus attributed are of Cambodunus, Alleustas, Constantinus, and the Constantine family. (Akerman's Coins of the Romans relating to Britain.) With respect to the precise position of the public buildings, and, indeed, of the general distribution of the Roman city, but little is known; it is, however, very certain, that, with some few exceptions, the course of the modern streets is no guide to that of the ancient. This has also been remarked to be the case at Tréveri and other ancient cities. [C.R.S.] LONDORBUS (Awdæsæ, Folt. ii. 5. § 10; Avisnægæ, Marc. Heald. p. 43; Berlingasæ), a small island, and the only one, belonging to the province of Lusitania, lay off the promontory Lucania (C. Carmina). [F. S.] LONGANUS (Λωγανος), a river in the N. of Sicily, not far from Mylae (Milaæ), celebrated for the victory of Heron, king of Syracuse, on the Mamertines in b. c. 279 (Vit. i. 9; Diod. xiii. 19; Exc. H. p. 349, where the name is written Λωγανος, but the same river is undoubtedly meant). Polybius describes it as "in the plain of Mylae" (κατὰ Μυλαε ἐς εἰς), but it is impossible to say, with certainty, which of the small rivers that flow into the sea near that town is the one meant. The Flumne di Sante Lucia, about three miles south-west of Milææ, has perhaps the best claim; though Claviers fixes on the Flumne di Costro Reale, a little more distant from that city. (Clav. Sicil. p. 303.)

LONGATICA, a town in the S. of Pannonia Superior, on the road from Aquileia to Emonae. Now Logatec, according to Mucher. (It. Anton.; H. Héros; Tof. Ped.; Mucher, Noricum, p. 252.)

LONGOBARDI. [LANGOBARDI.]

LONGONES [SARDINIA.]

LONGIVUS, a town in Britain, mentioned in the Notitia, and nowhere else. It was, probably, in the neighbourhood of the Cumberland and Westmoreland lakes; but beyond this it is not safe to go further in the way of identification; though the Monument Britannicus makes it Lancaster. [R. G. L.]

LONGULA (Λονγουλα; Etb. Longulanaus; Buon Riposo), an ancient city of Latium, which seems to have been included in the territory of the Volsci. It first appears as a Volscian city, which was taken by assault by the Roman consul Postumus Communis in B.C. 333; (Liv. ii. 13; Dionys. vi. 91.) BUT it was recovered by the Volscians under the command of Coriolianus, in B.C. 488 (Liv. i. 39; Dionys. viii. 36); in both cases it is described as falling an easy prey to the invading army, and was probably not a place of any great importance; indeed Livy's expressions would lead us to infer that it was a dependency of Anxium. After this it is only incidentally mentioned; once, as the place where the Roman army under L. Aeminius encamped in the war against the Volsciains, B.C. 482 (Dionys. viii. 55); and again, at a much later period in the Samnite Wars, B.C. 309. (Liv. ix. 39.) Its name is after this found only in Pliny's list of the cities of Latium which were in his time utterly decayed and deserted. (Plin. iii. 5. s. 9.) As he enumerates it among the cities that shared in the sacrifices on the Alban Mount, it would seem to have been originally a Latin city, though it had fallen into the hands of the Volsciains before its name appears in history.

All the above passages would lead us to place Longula in the neighbourhood of Anxium, while the two former connect it closely with Polusca and Corioli. These are all the data which we have for determining its position, which must therefore be in some degree matter of conjecture, especially as that of Polusca and Corioli is equally uncertain. But Nibby has pointed out a locality which has at all events a plausible claim to be that of Longula, in the casale, or farm-house, now called Buon Riposo, on the right of the road from Rome to Anxium, about 27 miles from Rome, and 10 in a straight line from Porta d'Anzio.* The farm, or tenuta, of Buon Riposo lies between that of Carrocceto on the one side, and Ardea on the other; while the site occupied by the casale itself, and which was that of a castle in the middle ages, is described as one of those which is so clearly marked by natural advantages of position that it could scarcely fail to have been chosen as the site of an ancient city. No ruins remain; but perhaps these could hardly be expected in the case of a town that ceased to exist at so early a period. (Nibby, vol. i. p. 326; Alken, Mittel-Italien, p. 72.) [E. H. B.]

* The position assigned to Buon Riposo on Gell's map does not accord with this description of the site given by Nibby; but this part of the map is very imperfect, and evidently not derived from personal observation. Gell's own account of the situation of Buon Riposo (p. 185), though less precise, agrees with that of Nibby.
LONGUS PROMONTORIUM. [Sciellia.]

LONGUS, in North Britain, mentioned by Ptolemy (ii. 3) as a river to the north of the Euphan Promontory (Mull of Cantyre). Identified in the Monumenta Britannica with Lynedoch, Innerheath, and Loch Melfort. [R. G. L.]

LOPADUSSA (Lopadusia, Strab. xvii. p. 584; Lopadousia, Ptol. iv. 3. § 54 : Lepadusia), a small island off the E. coast of Africa Propria, opposite to the town of Thapsus, at the distance of 80 stadia, according to an ancient Porphyris (Austin. Bibli. Matrit. Cod. 488), but according to the Ptolemaic record in the beginning of the 3rd. B.C. P.M. i. 18, N. of Cercina, and makes its length about 6 M. P. (Plin. iii. 8 s. 14, v. 7. s. 7.) It really lies about 80 English miles E. of Thapsus, and about 90 NE. of Cercina.

LOPHIS. [Boeotia, p. 413, s.]

LOPOSAGUUM, in Gallia, is placed by the Table between Vesontio (Besançon) and Epananduoarum (Ulanerne). It is xiiii leagues from Vesontio. D'Anville supposes that it may be a place called Banameceae. Near to it, on the bank of the river Theudianus (Zernoagunus): perhaps the same place as the Ospela of the Geographer of Ravenna. [E. B. J.]

LORIUM, or LAURIUM, a village in Southern Etruria and station on the Via Aurelia, 12 miles from Rome. (Itin. Ant. p. 290; Tab. Pent.) It is chiefly known from the circumstance that the family of Antoninus Pius had a villa there, in which that emperor was brought up, and where he afterwards constructed a palace or villa on a more magnificent scale, which was his residence at the time of his death. (Jul. Capit. Ant. P. 12; Vict. de Caes. 15, Epit. 15; Hetrop. viii. s.) It was afterwards a favourite place of resort with his successor M. Aurelius, as we learn from his letters to Fronto (Fronto, Ep. ii. 19, iii. 20, vi. 3, &c.); but had already fallen into decay in the time of the Antonines. Tertullian says it was the favourite resort of the beautiful ladies. Although no other mention of Laurium occurs except in the itineraries, by which we are enabled to fix its position with certainty. The 12th mile from Rome coincides with a bridge over a small stream between a farm called Bollaccia and the Castel di Guido: here the remains of ancient buildings and sepulchres have been found; and on the high ground above are the ruins of an edifice of a more extensive and sumptuous character, which, from the style of construction, may probably have belonged to the villa of the Antonines. (Nibby, vol. ii. p. 271.)

The name is variously written Lorium, Lorii, and Laurium, but the first form, which is that adopted in the epistles of Fronto and M. Aurelius, is the best warranted. The place appears to have continued to be inhabited during the early ages of Christianity, and we even meet with a bishop of Lorium in the 5th century. [E. B. J.]

LORIUM (or Adrom), a small fortified place with a port, close to Cape Cyanosoma, on the westernmost point of the Rhodian Chersonesus, in Caria. Its harbour was about 20 Roman miles distant from Rhodes. (Liv. xxxvii. 17, xlv. 10; Steph. B. s. c.; Plin. v. 29; Ptol. v. 2. § 11; Thucyd. viii. 43; Strabo. Quaest. Nat. iii. 19; Appian, Bell. Civ. iv. 72.) Strabo (xiv. p. 652) applies the name Loryna to the whole of the rocky district, without mentioning the town. The Larumna of Mela (i. 18) and the Lorinna of the Tah. Pent, perhaps refer to Loryna, although it is also possible that they may be identical with a place called Larymna mentioned by Pliny in the same district. Leake (Asia Minor. p. 223) regards the ruins in the west of Port Aposthecus as belonging to the ancient town of Loryna. These ruins are seen on the spur of a hill at the south-western entrance of the port; the town was long and narrow, running from west to east; on each of its long sides there are still visible six or seven square towers, and one large round one at each end ; the round tower at the east end is completely demolished. The town was served almost to their entire height, and built in the best style, of large square blocks of limestone. Towards the harbour, in the north, the town had no gate, and on the south side alone there appear three rather narrow entrances. In the interior no remains of buildings are discernible, the ground consisting of the bare rock, whence it is evident that the place was not a town, but only a fort. Sculptures and inscriptions have not been found either within or outside the town, but several tombs with bare stelae, and some ruins, exist in the valley at the east of the harbour. (Ross, Reisen auf den griech. Inseln, vol. iv. pp. 46, &c.)

LORNE, a fortress in Mesopotamia, situated on the northern frontier, upon Mount Iza. (Amm. Marc. xix. 9.)

LOSA, a station in Gallia Aquitania, placed by the Antonine Itinerary on the road from Pompela (Pompeia) in Spain to Burdigala (Bordeaux). From Segusa (Excusae or Excusora) to Losa is xii. (leagues), from Losa to Boii (Boiot) xii., and from Boii to Burdigala xvi. D'Anville considers Losa to be at a little canto, as he calls it, named Loche. Walckenaer fixes it at the Bois de Liovages. [G. L.]

LOSERIUM (Aspertov), a fortress in Lusace, built by Justinian (Procop. de Aed. iii. 7). The Dubois de Montpereaux (Voyage Autour du Canace, vol. ii. p. 360) identifies it with the modern village of Lounsiatheri.

LOSSONUS. [Oldoson.]

LOTOPHAGI (Lotophagai, i. e. lotus-eaters), a people on the N. coast of Africa, between the Syrtis, who first appear in mythical, but afterwards in historical geography. Homer (Od. ix. 84, et seq.) represents Ulysses as coming, in his wanderings, to the coast of the Lotophagi, who compassed the destruction of his companions by giving them the lotus to eat. For whoever of them ate the sweet fruit of the lotus, lost all wish to return to his native country, but desired to remain with the Lotophagi, feeding on the lotus, and forgetful of return. (The poetical idea is explicated more straightforwardly by Tennyson in his Lotus-Eaters, works, vol. i. pp. 175 — 184.) The Greeks of the historical period identified the country of these Lotus-eaters with the coast between the Syrtis, where they found an indigenous tribe, who used to a great extent (Heredotus says, as their sole article of food) the fruit of a plant, which they therefore supposed to be the lotus of Homer. To this day, the aboriginal inhabitants of the caves along the same coasts eat the fruit of the plant, which is doubtless the lotus of the ancients, and drink a wine made from its juice, as the ancient Lotophagi also did (Hered. iv. 177). This plant, the Zephyrus Lotus or Rhannuus LOTUS (jujube tree) of the botanists (called by the Arabs Seccuda), is a prickly branching shrub, bearing fruit of the size of a wild plum, of a
saffron colour and sweetish taste (Herodotus likens its taste to that of the date). It must not be con- founded with the celebrated Egyptian lotus, or water-lily of the Nile, which was also used for food. (There were, in fact, several plants of the name, which are carefully distinguished by Luschek and others.)

The ancient geographers differ as to the extent of coast which they assign to the lotophagi. Their chief seat was around the Lesser Syrtis, and eastward ineludibly towards the Great Syrtis; but Mela carries them into Cyrenaica. They are also placed in the large island of Melissos or Lothopagitae, E. of the Lesser Syrtis. (Hom. Herod. II. x. Xen. Anab. ii. 2. § 25; Suid. p. 47; Mela, i. 7. § 5; Plin. v. 4. s. 4; Str. iii. 340; Hygin. Feb. 125; Shaw; Della Cella; Barth; Heren, Indeis, vol. ii. p. 54; Biter, Fowkweek, vol. i. 989.) [P.S.]

LOTUM, in Gallia, is placed by the Antonine Itin. on a road from Julii- bona (Lillebonne) to Rotomagus (Rouen). It is vi. leagues from Juliiho- na to Lotum, and xiii. from Lotum to Rotomagus. The actual distances seem to fix Lotum at or near Caudebec, which is on the north bank of the Seine between Lillebonne and Rouen. [G.L.]

LOXA, in Britain, mentioned by Ptolemy (ii. 13) as a river on the western coast of Scotland, north of the Forth (Ogd. Xe. 126), and at this period (Lucian, Mon. Brit. 32) it is called the Murray Firth. Identified in the Monumenta Britannica with the Leth in Sutherland; the Lossie, and Cromarty Firth. [R.G.L.]

LUANCY, [Gallaecia.]

LUBAFI, [Gallaecia.]

Lucia (Audia, Strab. Prot. Fth. Lucensis; Luca), a city of Etruria, situated in a plain at the foot of the Apennines, near the left bank of the Ascan (Seckel) about 12 miles from the sea, and 10 NE. of Pisa. Though Luca was included within the limits of Etruria, as these were established in the time of Augustus (Plin. iii. 5. 8; Prot. iii. i. § 47), it is very doubtful whether it was ever an Etruscan town. No mention of it is found as such, and no Etruscan remains have been discovered in its neighbourhood. But it is probable that the Etruscan at one time extended their power over the level country at the foot of the Apennines, from the Arno to the Mauro, leaving the Ligurians in possession of the mountains,—a position which, probably, was subject to them. At a later period, however, it had certainly fallen into the hands of the Ligurians, and being retaken from them by the Romans, seems to have been commonly considered (until the reign of Augustus) a Ligurian town. For this reason we find it comprised within the province assigned to Caesar, which included Liguria as well as Cispadine Gaul. (Suet. Caes. 24.)

The first mention of Lucia in history is in n. c. 218, when Livy tells us that the consul Sempronius retired there after his unsuccessful contest with Hannibal. (Livy, xxi. 59.) It was, therefore, at this period certainly in the hands of the Romans, though it would seem to have subsequently fallen again into those of the Ligurians; but it is strange that during the long protracted wars of the Romans with that people, we meet with no mention of Luca, though it must have been of importance as a frontier town, especially in their wars with the Apamni. The next notice of it is that of the establishment there of a Roman colony in n. c. 177. (Vell. Pat. i. 15; Liv. xii. 13.) There is, indeed, some difficulty in regard to this; the MSS. and editions of Livy vary between Luca and Luna; but there is no such discrepancy in those of Velleius, and there seems at least no reason to doubt the settlement of a Latin colony at Luna, while that mentioned in Livy is a "colonia civium" may, perhaps, with more probability, be referred to Luna. (Madvig, de Colon. p. 287; Zumpt, de Colon. p. 349.) That at Luna became, in common with the other Latin colonies, a municipal town by virtue of the Lex Julia (n. c. 49), and hence is termed by Cicero "municipium Lucense." (Cic. ad Fam. xii. 13.) It appears to have been at this time a considerable town, as we find it repeatedly selected by Caesar during his administration of Gaul as the frontier town of his province, to which he repaired in order to concert with his friends, or with the leaders of political parties at Rome. (Suet. Caes. 24; Plut. Caes. 21, Crass. 14, Pomp. 51.; Cic. ad Fam. i. 9. § 9.) On one of these occasions (in n. c. 56) there are said to have been more than 200 senators assembled at Luca, including Pompey and Crassus, as well as Caesar himself. (Plut. l. c.; Appian, B. C. i. 17.)

Lucia would seem to have received a fresh colony before the time of Pliny, probably under Augustus. (Plin. iii. 5. 8; Zumpt, de Colon. p. 349.) It is possible that it may have been one of the little colonies to the south of the Empire; but it seems to have continued to be a provincial town of some consideration; it was the point where the Via Claudia, proceeding from Rome by Arretium, Florentia, and Pavia, was met by other roads from Parma and Piac. (Plut. l. c.; Prot. iii. 1. § 47; Plin. Nat. pp. 283, 284, 289; Tab. Pent.) During the Gothic wars of Naples, Luca figures as an important city and a strong fortress (Acauth. B. G. i. 13.), but it was not till after the fall of the Lombard monarchy that it attained to the honour of provincial importance, and the trade which brought the city during the middle ages. Luca is still a flourishing city, with 25,000 inhabitants; the only relics of antiquity visible there are those of an amphitheatre, considerable part of which may still be traced, now converted into a market-place called the Piazza del Mercato, and some small remains of a theatre near the church of Sta. Maria di Corte Landini. [E. H. B.]

LUCANUS, a river of Bruttium. (Bruttii, P. 456.)

LUCANIA (Lucaania, Strab. The name of the people is written Lucaeae by Strabo and Polybius, but Ptolemy has Lokakoei, and this is found also on coins), a province or district of Southern Italy, extending across the province of the Tyrrhenian sea to the Gulf of Tarentum, and bounded by the Bruttians on the N. by Samnium and Apulia on the S., and by Campania, or the district of the Picentini, on the NW. Its more precise limits, which are fixed with unusual unanimity by the geographers, were, the river Silauryus and NW., in the Bradimnus, which flows into the Gulf of Tarentum, just beyond Metapontum, on the NE.; while the mouths of the Latiis and the Crathis marked its frontiers towards the Bruttians on the two sides of the peninsula. (Strab. vi pp. 252, 253, 255; Plin. iii. 5. 10, 11. 15; Prot. iii. i. §§ 8, 9.) Its northern frontier, from the sources of the Silaury to those of the Bradimnus, must have been an arbitrary line; but nearly following the main ridge of the Apennines in this part of its course. It thus comprised the modern prov- inces of the Basilicata, together with the greater part of the Principato Cilicieare and the extreme northern portion of Calabria.
LUCANIA.

Lucania is evidently "the land of the Lucanians"; but though no territorial designation in Italy became more clearly marked or generally adopted than this appellation, it was not till a comparatively late period that it came into use. The name of the Lucanians was wholly unknown to the Greeks in the days of Thucydides; and the tract subsequently known as Lucania was up to that time generally comprised under the vague appellation of Oenotria, while its coasts were included in the name of Magna Graecia. Sylva is the earliest author in whom the name of Lucania and the Lucanians is found; and he describes them as extending from the frontiers of the Samnites and Iapygians to the southern extremity of the Bruttian peninsula. (Scyl. pp. 3, 4, 5. §§ 12, 13.) We are fortunately able to trace with certainty the historical causes of this change of designation.

The earliest inhabitants of the part of Italy afterwards known as Lucania, were the Oenotrians and Pelasgians. These are generally referred to a Pelasgic stock. [Ital. p. 84. The few particulars transmitted to us concerning them are given under OENOTRIA.] These races appear to have been unwarlike, or at least incapable of offering any material opposition to the arms of the Greeks; so that when the latter established a line of colonies along the shores of the Tyrrhenian sea and the gulf of Tarentum, they seem to have reduced the barbarians of the interior to a state of at least nominal submission with but little difficulty. Thus Sybaris extended her power from sea to sea, and founded the colonies of Poseidonia, Lais, and Scirrus on the western coast of Oenotria; while further to the S. Crotona and Locri followed her example. It is probable, however, that the Greeks as well as arms. The Pelasgic races of Oenotria were probably assimilated without much difficulty with their Hellenic rulers; and there seems reason to believe that the native races were to a considerable extent admitted to the privileges of citizenship, and to a certain extent, if we may judge from the distance the Greeks extended their power in the south, to a considerable extent, if we may judge from the distance the Greeks extended their power in the south, to exercise an influence in the customs of the new colonies. We are, however, still very imperfectly furnished with information in regard to the Lucanians; and, in the first place, we are unable to assign to them a definite name. Their origin is therefore unknown; for the derivation of it from a leader of the name of Lucius (Plin. xxx. 6. c.; Elym. Magn. z. 2. Aranuici) is too obviously a mere etymological fiction of late days to deserve attention. Nor have we any distinct information as to the period of their first appearance and establishment. Strabo describes them, without doubt, correctly, as first expelling (or more properly subduing) the Oenotrians and Chones, and then turning their arms against the Greek cities on the coast. But it is not till they came into contact with these last that we have any account of their proceedings; and we have, therefore, no information as to the commencement of their career. Even their wars with the Greeks are known to us only in a very imperfect manner; so that we can scarcely trace the steps of their progress. But it is probable that it was not till after the conquest of Campania (about b.c. 420) that the Samnites began to extend their conquests to the southward. Niebuhr has justly observed that the tranquil foundation of the Athenian colony at Thurii, in b.c. 412, and the period of prosperity which allowed it at first to rise rapidly to power, sufficiently prove that the Lucanians had not as yet become formidable, or had not given any difficulty, or that on this side of the peninsula (Nieb. vol. i. p. 96). But they seemed to have first turned their arms against the Greek cities on the W. coast, and established a permanent footing in that quarter, before they came into collision with the more powerful cities on the Tarentine gulf. (Strab. i. p. 254.) Poseidonia was apparently the first of the Greek cities which yielded to their arms, though the date of its conquest is uncertain. [PAESTUM.] It was probably soon after this that the Thuriants, under the command of Channidis, were engaged in war with the Lucanians, in which they appeared to have obtained some considerable successes. (Polyaen. ii. 10.) But the progress of the latter was still unchecked; and the increasing danger from their power led to the formation, in b.c. 393, of a defensive league among all the principal cities of Magna Graecia, with a view of resisting the Lucanians on the N., and the power of Dionysius on the S. (Diod. xiv. 91.) They might reasonably suppose that their combined arms would easily effect this; but only three years later, in b.c. 390, the forces of the confederates, among whom the Thurians took the lead, sustained a great defeat near Lais, in which it is said that 10,000 of the Greeks perished. (Diod. xiv. 101, 102; Strab. vi. p. 253.) After this success, the Lucanians seem to have spread themselves with but little opposition through the southern peninsula of Italy. The wars of the elder Dionysius in that region must have indirectly favoured their progress by weakening the Greek cities; and though he did not openly support the Lucanians, it is evident that he looked upon their successes with no unfavourable eyes. (Diod. xiv. 102.) Their continued advance towards the south, however, would soon render them in their turn a source of umbrage to the Syracuseans despoits, who had established a permanent footing in the Italian peninsula; hence we find the younger Dionysius engaged in hostilities with the Lucanians, but apparently with little success; and after a vain attempt to exclude them from the southern extremity of the Bruttian peninsula, by fortifying the isthmus between the Hirpian and Scyllacian gulf, he was obliged to conclude a treaty of peace with them in b.c. 358. (Diod. xvi. 5; Strab. vi. p. 261.) This was about the period during which the Lucanians had attained their greatest power, and extended their dominion to the limits which we find assigned to them by Sylva (pp. 3, 4). They
had not, however, subdued the Greek cities on the coast, some of which fell at a later period under the yoke of the Bruttians; while others maintained their independence, though for the most part in a decayed and enfeebled condition, till the period of the Roman dominion. [Magna Graecia.] Shortly afterwards, the narrative that is more formidable perhaps, than most recent acquisition, by the revolt of the Bruttians, who, from a mere troop of outlaws and banditti, gradually coalesced into a formidable nation. [Bruttii:] The establishment of this power in the extreme south, confined the Lucanians within the limits which are commonly assigned from this time forth to their territory; they seem to have acquired, after a brief struggle, in the independence of the Bruttians, and soon made common cause with them against the Greeks. Their arms were now principally directed against the Tarentines, on their eastern frontier. The latter people, who had apparently taken little part in the earlier contests of the Greeks with the Lucanians, were now compelled to provide for their own defence; and successively called in the assistance of Archilamus, king of Sparta, and Alexander, king of Epirus. The former monarch was slain in a battle against the Lucanians in B.C. 338. and his whole army cut to pieces (Diod. xvi. 63, 89; Strab. vi. p. 290); but Alexander, with the Bruttians, and supported by the Samnites, attacked the Lucanians in a great battle near Paestum, as well as in several minor encounters, took several of their cities, and carried his arms into the heart of Brut- tumult, where he ultimately fell in battle near Pan- dosia, B.C. 326. (Liv. viii. 24; Justin. xii. 2, xxiii. i; Strab. vi. p. 256.) It would appear as if the power of the Lucanians was considerably broken at this period; and in n. c. 303, when we next hear of them as engaged in war with the Tarentines, the very arrival of Cleonymus from Sparta is said to have terrified them into the conclusion of a treaty. (Diod. xx. 104.)

Meantime the Lucanians had become involved in relations with a more formidable power. Already, in n. c. 326, immediately after the death of Alexander king of Epirus, the Lucanians are mentioned as voluntarily concluding a treaty of peace and alliance with Rome, which was then just entering on the Second Samnite War. (Liv. viii. 25.) We have no explanation of the causes which led to this change of policy; just before, we find them in alliance with the Samnites, and very shortly after they returned once more to their old allies. (Ib. 27.) But though they were thus brought into a state of direct hostility with Rome, it was not till n. c. 317, that the course of events allowed the Romans to punish their defection. In that year the consuls for the first time entered Lucania, and took the town of Nocera by assault. (Liv. iv. 20.) The Lucanians were evidently included among the towns which met an end to the Second Samnite War (n. c. 304), and from this time continued steadfast in the Roman alliance; so that it was the attack made on them by the Samnites which led to the Third Samnite War, n. c. 298. (Liv. x. 11.) Throughout that struggle the Lucanians seem to have been faithful to Rome; and were probably admitted to an alliance on favourable conditions at its close. But in n. c. 286, they having turned their arms against Thurii, the Romans took up the cause of the besieged city, and declared war against the Lucanians, over whom M. Curius is said to have celebrated an ovation. (Ann. Vict. de

LUCANIA. 

LUCANIA. 

Vir Illust. 33); and four years afterwards (n. c. 282) the allied forces of the Lucanians and Samnites, which had again beleaguered Thurii, were defeated in a great battle by C. Fabricius. (Val. Max. i. 8, § 6.) On the arrival of Pyrrhus in Italy (n. c. 281) the Lucanians were among the first to declare in favor of that mighty monarch; but it was not till after his victory at Heraclea that they actually sent their contingent to his support. (Plut. Pyrr. 13, 17; Zonar. viii. 3.) The Lucanian auxiliaries are especially mentioned in the service of that prince at the battle of Asculum (Dionys. xx., Fr. Didot); but when Pyrrhus withdrew from Italy, he left his allies at the mercy of the Roman arms, and the Lucanians in particular, were exposed to the full brunt of their resentment. After they had seen their armies defeated, and their territory ravaged in several successive campaigns, by C. Fabricius, Corbulonius Rufus, and M. Curius, they were at length reduced to submission by Sp. Carvilius and L. Papirius Cursor in n. c. 272. (Zonar. viii. 6; Eutrop. ii. 14; Liv. Epit. xiii. xiv., Fast. Capit.)

From this time the Lucanians continued in undis- turbed subjection to Rome till the Second Punic War. In the celebrated register of the Roman forces in n. c. 225, the Lucanians (including, probably, the Bruttians, who are not separately noticed) are reck- oned as capable of bringing into the field 30,000 foot and 3000 horse, so that they must have been still a numerous and powerful people. (Pol. ii. 24.) But they suffered severely in the Second Punic War. Having declared in favour of Hannibal after the battle of Cannae (n. c. 216), their territory became during many successive campaigns the theatre of war, and was ravaged, in turn, by both contending armies. Thus, in n. c. 214, it was the scene of the contest between Scipio Africanus and Hammo; in the following year Gracchus employed the whole campaign within its limits, and it was in Lucania that general met with his untimely death in the summer of n. c. 212. (Liv. xxi. 61, xxiv. 20, xxv. 1, 16.) At length, in n. c. 209, the Lucanians, in conjunction with the Hirlipani, abandoned the alliance of Hannibal, and betrayed the garrisons which he had left in their towns into the hands of the Romans; in consideration of which service they were admitted to favourable terms. (Id. xxv. 15.) They did not, however, yet escape the evils of war; and were again ravaged by the success of the campaign of Marcellus and Crispinus against Hannibal, in which both consuls perished; and it was not till after the battle of the Metaurus, in n. c. 207, that Hannibal withdrew his forces into Brut- tum, and abandoned the attempt to maintain his footing in Lucania. (Liv. xxi. 51, xxvii. 11.)

Strabo tells us that the Lucanians were punished by the Romans for their defection to Hannibal, by being reduced to the same degraded condition as the Bruttians. (Strab. vii. p. 251.) But this can only be true of those among them who had refused to join in the general submission of the people in n. c. 209, and clinging to Hannibal to the last; the others were restored to a somewhat favourable condition, and continued to form a considerable nation; though, if we may trust to the statement of Strabo, they never recovered from the ravages of this war. But it was the Social War (n. c. 90—88) that gave the final blow to the prosperity of Lucania. The Lucanians on that occasion were among the first to take up arms; and, after bearing an important part throughout the contest, they still, in conjunction with
the Samnites, preserved a hostile attitude when all the other nations of Italy had already submitted and received the Roman franchise. (Appian, B. C. i. 39, 51, 53.) In the civil war between Marius and Sulla, which immediately followed, the Lucanians, as well as the Samnites, actively espoused the cause of the Marian party; and a Lucanian legion fought in the Battle of the Colline Gate. They in consequence were exposed to the full vengeance of the conqueror; and Lucania, as well as Samnia, was laid waste by Sulla in a manner that it never recovered. The remaining inhabitants were admitted to the Roman citizenship, and from this time the Lucanians ceased to be a people, and soon lost all traces of distinct nationality. (Appian, B. C. i. 90 —93, 96; Strab. vi. pp. 253, 254.)

Of Lucania under the Roman government we hear but little; but it is certain that it had fallen into a state of complete decay. The Greek cities on its coasts, once so powerful and flourishing, had sunk into utter insignificance, and the smaller towns of the interior were poor and obscure places. (Strab. l. c.) Nor is there any appearance that it ever recovered from this state of depression under the Roman Empire. The Liber Coloniarum mentions only eight towns in the whole province, and all of these were in the subordinate condition of "praefectores," and Thera-patra, which now ties states its coasts, must have begun to act as soon as the population had disappeared; and the mountain region of the interior was apparently then, as at the present day, one of the wildest regions of Italy. Large tracts were given up to pasture, while extensive forests afforded subsistence to vast herds of swine, the flesh of which formed an important part of the supplies of the Imperial City. The mountain forests were also favourite resorts of wild bears, and contained abundance of bears, which were sent from thence to the amphitheatres at Rome. (Hor. Sat. ii. 3. 234, 8. 6; Martial, de Spect. 8; Varr. L. L. v. § 100.) Lucania was comprised together with Bruttium in the third region of Augustus, and the two provinces continued to be united for administrative purposes throughout the period of the Roman Empire. Even after the fall of the Western Empire, we meet with mention of the "Corrector Lucaniae et Bruttiorum."

Lucania long continued to acknowledge the supremacy of the Eastern Emperors; and the modern province of the Basilicata is supposed to have derived its name from the emperor Basilius II. in the 10th century. (Plin. iii. 5. s. 10; Not. Dign. ii. p. 64; Orell. Inscr. 1074; Trev. Poll. Tetr. 24; P. Dian. ii. 17; Cassiod. Var. hist. 46.)

The physical characters of Lucania are almost wholly determined by the chain of the Apennines, which enters at its northern front, and from thence traverses the province in its whole extent. These mountains form a lofty group on one side immediately on the frontiers of Samnium, and from thence the main chain is continued nearly due S. to the frontiers of Bruttium; a little before reaching which, it rises again into the very lofty group of Monte Pollino, the highest summit of which attains an elevation of above 7000 feet. Throughout its course this chain approaches considerably nearer to the western than the eastern coast; but it is not till after passing the frontier of Bruttium that it becomes a complete divide; and it continues for a considerable distance. In the more northern part of Lucania the space between the central chain and the Tyrrhenian sea is almost filled up with ranges of lofty and rugged mountains, leaving only here and there a small strip of plain on the sea-coast; but towards the eastward, the mountains sink much more gradually as they approach the gulf of Tarantum, constituting long ranges of hills, which gradually subside into the broad strip of plain that borders the gulf the whole way from the mouth of the Deio (Sisno) to that of the Bradas. This is its tract of plain, in many places marshy, and now desolate and unhealthy, that was celebrated in ancient times for its almost matchless fertility. (Archiloch. ap. Athen. xii. 25.) South of the river Sis, the oaks of the Apenines, descending from the lofty group of Monte Pollino as a centre, again approach close to the shore, filling up the greater part of the space between the mouth of the Sis and that of the Crathis; but once more inclining as they approach the latter river, so as to leave a considerable tract of fertile plain bordering its banks on both sides.

The lofty group of mountains just noticed as situated on the frontiers of Lucania and Samnia, sends down its waters towards both seas, and is the source of the most considerable rivers of Lucania. Of these the Silaris (Sela) flows to the gulf of Paestum, receiving in its course the waters of the Talanger (Tanagra) and Calor (Calore), both considerable streams, which join it from the S. On the other side, the Bracatum (Braciano), which rises to the N. of Potentia, and the Cassetts (Bosento), which has its source in the Monti della Madalanza, a little to the S. of the same town, flow to the S.E., and pursue a nearly parallel course the whole way to the gulf of Tarentum. The Aciris (Agri) and the Siris (Siso), which rise in the central chain farther to the S., have also a general SE. direction, and flow to the gulf of Tarentum. The Crathis, further down the same course, which forms near its mouth the limit between Lucania and Bruttium, belongs in the greater part of its course exclusively to the latter country. But the Sybaris, now the Cassite, a much less considerable stream, immediately to the N. of the Crathis, belongs wholly to Lucania. The Acandumus (Colundro), which falls into the sea between the Sybaris and the Siris, is a very trifling stream. On the W. coast of Lucania, the only river, besides the Sybaris and its tributaries, worthy of notice, is the Lusi, or Lao, which forms the southern boundary of Lucania on its junction with the Pyxus (Besento), flowing by the town of the same name (Buxantum), is but a trifling stream; and the Melphis (Melpa), which enters the sea by the promontory of Palmarus, though noticed by Pliny (iii. 5. s. 10), is not more considerable. The Heles or Elecs, which gave name to Elea or Velia, is somewhat more important, but by no means a large stream. (Velia.)

The western coast of Lucania is marked by several bold and prominent headlands, formed by the ridges of the Apennines, which, as already stated, descend quite to the sea, and end abruptly on the coast. The most northern of these, forming the southern limit of the extensive gulf of Paestum, is called by Lycurphon Epidius, but was more commonly known as the Posidum or Posidionum Promontorium. S. of this was the more celebrated promontory of Palmarus, still called Capo di Paestum, with a port of the same name; and beyond this, again, the promontory of Pyxus (now Capo Inenarius), which bounded the Gulf of Policentor on the N. Viewed on a larger scale, these three headlands may

VOL. II.
LUCANIA.

be regarded as only the salient points of one large projecting mass which separates the gulf of Paestum from that of Polistena. The latter seems to have been known in ancient times as the gulf of Laüs. Opposite to the headland called Posidonium was the small islet named by the Greeks Livciosia, from which the promontory now derives the name of Puntat di Lecosa; and a little further S., off the coast of Vena, were the two islands (also mere rocks) called by Pliny, the Discover of the Sirens. (Strab. vi. p. 252; Plin. iii. 7. s. 13.)

The towns of Lucania may be conveniently enumerated in two classes:—the first comprising those along the coasts, which were almost without exception of Greek origin; the other containing the towns of the interior, which were for the most part, either native Lucanian settlements, or Roman colonies of a later date. On the W. coast, proceeding along the shore of the Tyrrhenian sea, from N. to S., were:—

- Posidonia, afterwards called Paestum, a very little town, situated in the same neighbourhood; 
- Eleutheria, supposed to have occupied the site of Supri; 
- Blanda, now Maratea; and 
- Laüs, which was at the mouth of the river of that name, on its right bank. On the E. coast, bordering on the gulf of Tarasantum, and beginning from the Grafsis, stood Thiuri, replacing the ancient city of Sybaris, but not occupying precisely the same site; 
- Stes, which had in like manner been succeeded by the more recent settlement of Hiraca, a few miles further N.; and, lastly, Metapontum, on the southern bank of the river Bradanus.

The principal towns in the interior were:—

Potentia, still called Potenza, and the capital of the province known as the Basilicata; 
Atina, still called Atina, in the upper valley of the Tanage; 
Voluntinum or Volcentum, now Bescano; 
Nemirosa, of uncertain site, but apparently in the same neighbourhood; 
Euturnum (Eutob), which is expressly called by Pliny, a Larus; 
Enea, or Vella, situated to the N. of the Silanos; 
Baltiana, Banchi, a few miles from Venusia, on the very frontiers of Apulia, so that it was sometimes referred to that country; 
Grumentum (near Saponara), one of the most considerable towns in Lucania; 
Nerulum, probably at La Rotonda, and 
Muranum, still called Murano, almost adjoining the frontier of Bruttium. 
Casinum or Coscinum may probably be placed at Padula, in the upper valley of the Tanage, and 
Tequium at Bussola, in the same neighbourhood; 
while La Polia, in the same valley, occupies the site of Forum Populi; 
Scantia, noticed only by Pliny, is probably the place now called Simcab; 
the Tergi and Usans, of the same author are wholly unknown, unless the former name be corrupted from that of Tegani, already noticed. (Plin. iii. 11. s. 15; Lib. Colon. p. 269.) Of the few names mentioned by Strabo (vi. p. 234), those of Vertinum and Calitarno are wholly unknown. 

The existence of a Lucanium Pontia and Pandosia, in addition to the Bruttian cities of those names, is a subject of great doubt.

The principal line of high-road through Lucania was the Via Popilia (regarded by the Itineraries as a branch of the Via Appia), which, in its course from Capua to Rhegium, traversed the whole province from N. to S. The stations on it given in the Antonine Itinerary, p. 109, are (proceeding from Nuceria):—

LUCERIA.

Ad Tanacrum - - - xxv.
Ad Caloreum - - - xxiv.
Marcellana - - - xxv.
Caesarina - - - xxi.
Nerulum - - - xxii.
Sib Murano - - - xiv.

The Tabula gives a place which it calls Vienus Mendomensis (?) as the intermediate station between Marcellana and Nerulum. All these stations are very doubtful, the exact line of the ancient road through this mountain country having never been traced with accuracy. Another road, given in the Tabula, led from Potentia by Anxua (Anzi) and Grumentum to Nerulum, where it joined the Via Popilia. The other roads in the interior, given in the Itinerary and the Tabula, are very corrupt; we may, however, ascertain that there was a line of road proceeding from Venusia through Potentia to Heracles and Thiuri, and another from Potentia to join the Via Popilia at Marcellana, being probably the direct line of communication between Potentia and Rome. Lastly, there was a line of road along the coast, following its level shores from Tarasantum by Metapontum and Heracles to Thiuri.

[Pliny, Hist. Nat. xliii. 34.]

COIN OF LUCANIA.
after an obstinate resistance, made himself master of the city, which was defended by a garrison of above 7000 Sammites. (Id. ix. 12—15.) Besides recovering the hostages, he obtained an immense booty, so that Luceria was evidently at this period a flourishing city, and Diodorus (xix. 72) calls it the most important place in Apulia. A few years after (n. c. 314), the city was again betrayed into the hands of the Sammites; but was quickly recovered by the Romans, who put to death all the inhabitants to the sword, and sent thither a body of 2500 colonists to supply their place. (Id. ix. 26; Vell. Pat. i. 14; Diod. xix. 72.) The possession of so important a stronghold in this part of the country became of material service to the Romans in the subsequent operations of the war (Diod. l. c.); and in n. c. 294, the Sammites having laid siege to it, the Roman consul Attilius advanced to its relief, and defeated the Sammites in a great battle. According to another account, Luceria afforded shelter to the shattered remnants of the consular army after he had sustained a severe defeat. (Liv. x. 35, 37.)

Not less important was the part which Luceria bore in the Second Punic War. The establishment of this powerful colony in a military position of the utmost importance, was of signal advantage to the Romans, and all their operations in Apulia, and it was repeatedly chosen as the place where their armies took up their winter quarters, or their generals established their head-quarters during successive campaigns in Apulia. (Liv. xxii. 3, xxiii. 37, xxiv. 14, 20; Pol. iii. 88, 100.) But though it was thus exposed to a more than ordinary share of the sufferings of the war, Luceria was nevertheless one of the eighteen Latin colonies which in n. c. 209 expressed their readiness to continue their contributions of men and money, and which, in consequence, received the thanks of the senate for their fidelity. (Liv. xxvii. 10.)

From this time we meet with no notice of Luceria till near the close of the Roman Republic; but it appears from the manner in which Cicero speaks of it (pro Cluent. 69) that it was in his time still one of the most considerable towns in this part of Italy; and in the Civil War between Caesar and Pompey, it is evident that such importance was attached to its possession by the latter, who, for some time made it his headquarters before he retired to Brutium. (Caes. B. C. i. 24; Cic. ad Att. viii. 12, viii. 1; Appian, B. C. ii. 38.) Strabo speaks of Luceria as having fallen into decay. Like Cassino and Arpi (vi. p. 284): but this can only be understood in comparison with its former prosperity; for it seems certain that it was still a considerable town, and one of the few in this part of Italy that retained their prosperity under the Roman Empire. Pliny terms it a Colonia, and it had therefore probably received a fresh colony under Augustus (Plin. xi. 16; Lib. Colon. p. 310; Zumpt, de Colon. p. 349). Its colonial rank is also attested by inscriptions (Monumen. Itauc. R. N. pp. 50, 51); and from the Tabula it would appear to have been in the 4th century one of the most considerable cities of Apulia (Tab. Peut., where the indication of a great building with the name "Pratorium Lucarium" evidently points to the residence of some provincial magistrate). Even after the fall of the Roman Empire Luceria long retained its prosperity, and is enumerated in the 7th century by P. Diaconus among the "urbes satis opulentas" which still remained in Apulia. (P. Dia. ii. 21.) But in a.D. 663 it was taken by the emperor Constans II. from the Lombards, and utterly destroyed (Id. v. 7). Nor does it appear to have recovered this blow till it was restored by the emperor Frederic II. in 1227. The modern city of Lucero still retains its episcopal see and about 12,000 inhabitants. It occupies the ancient site, on a hill of considerable elevation (one of the last underfalls of the Appennines) overlooking the extensive and fertile plains of Apulia. Livy speaks of it as situated in the plain ("urbs sita in plano," ix. 26); but if this was the case with the Apulian city, the Roman colony must have been removed to the heights above, as existing remains have no doubt that the ancient city occupied the same site with the modern one. The remains of buildings are not of much importance, but numerous inscriptions, fragments of sculpture, &c. have been found there. The inscriptions are collected by Menemen (Inscr. Itaca. Neap. pp. 50—54). The neighbourhood of Luceria was celebrated in ancient, as it still is in modern, times for the abundance and excellence of its wool (Hor. Carm. iii. 15. 14), an advantage which was indeed common to all the neighbouring district of Apulia. (Strab. vi. p. 284; Plin. vili. 48; K. Craven, Southern Tour, p. 45.)

Ptolemy writes the name Noceria; and that this is not merely an error of the MSS. in our existing copies is shown by the circumstance that the epithet Apula is added to it (Noceria Apsalav, Plut. iii. 1. § 72), as if to distinguish it from other towns of the name. Appian also writes the name Noceria (B. C. ii. 38); and the same confusion between Nocere and Lucera occurs perpetually in the middle ages. But the correctness of the orthography of Luceria is well established by inscriptions and coins. The latter which have the name Luceri in Roman characters are certainly not earlier than the establishment of the Roman colony. [E. H. B.]

**Coin of Luceria.**

**LUCERIA.**

**LUCEUM.** [Brevium.]

**LUCENES CALLAICI.** [Gallarca.]

**LUCENTUM.** (Plin. iii. 3. 4; Lucania, Mel.)

**LUCENSIAE CALLAICI.** [Gallarca.]

**LUCENAE OPIDUM.** [Italiviva.]

**LUCOPHILA (Anxovriae).** in North Britain, mentioned by Ptolemy (ii. 3) as one of the towns of the Novantae (Calloway). Ethelbald was born there. Probably, this bay on Isle Bay, in Wigtownshire. The Monumenta Britannica suggests Broughton, and Whitekirk. [E. G. L.]

**LUCETIILIS MONS.** (Monte Gennaro), a mountain in the land of the Sabines, whose name is known to us only from the mention of it by Horace, who calls it the pleasant Lucetiiis, whose shades could allure Fauns himself from Mount Lyceum (Hor. Carm. i. 17.) It is evident from the expressions of the poet that it was in the immediate neigh-
bourgeois of his Sabine farm; and this is admitted by all the old commentators, who with one accord call it "Mons in Sabiniis," but without giving any further clue to its position. The identification of this must therefore depend upon that of Horace's Sabine villa; but this being clearly established near Licenza [Digentia], we cannot refuse to recognise Luceritius in Monte Genaro, a lofty mountain mass which rises nearly due W. of Licenza, standing out prominently towards the plain of the Campagna, so that it is one of the most conspicuous of the Apennines as seen from Rome. On the sides towards the plain it rises very steeply and abruptly, but on the reverse or Sabine side it has a much more gentle slope, and fully deserves Horace's epithet of "amoenus,"—being furred by deep valleys, the sides of which are clothed with woods, while nearer the summit are extensive pastures, much resorted to by cattle in summer. (Gell, Top. of Rome, pp. 270—72; Nibby, In Sabinis, p. 107.) The highest point is 4285 English feet above the sea.

Whether the name of Mons Luceritius was applied to the highest part of the mountain, now called Monte Genaro, which is so conspicuous from Rome, or was a more local appellation for the peaks nearer the valley of the Digenza, cannot now be determined; but there is little doubt that the two names belong at least to the same mass or group of mountains. [E. H. B.]

**Lucus Lucanus (L. 3. Aquinoi vicus; Strab: Lucum Lucrino), a salt-water lake or lagoon, adjoined the gulf of Baiae on the coast of Campania. It was situated just at the bright and immost part of the deep bay between Patellai and Baiae, and was separated from the outer sea only by a narrow strip or bank of sand, in all probability of natural origin, but the construction of which was ascribed by a tradition or legend, frequently alluded to by the Roman poets, to Hercules, and the road along it is said to have been commonly called in consequence, the Via Herculis or Herculanum. According to Strabo it was 80 stades in length, and wide enough to admit of a road for waggoners. (Diod. iv. 22; Strab. v. p. 245; Lycoopl. Alex. 697; Propert. iv. 18. 4; Sil. italic. xii. 116—120.) On the other side, the Lucrine lake was separated only by a narrow space from the lake Avrumus, which was, however, of a wholly different character, being a deep basin of fresh water, formed in the crater of an extinct volcano; while the Lucas Lucrumus, in common with all similar lagoons, was very shallow, and was for that reason well adapted for producing oysters and other shell-fish, for the excellence of which it was celebrated. (Hor. Epod. ii. 49, Sat. ii. 4, 32; Juven. iv. 141; Petron. Sat. p. 424; Martial, vi. 11. 5, xiii. 90; Vari. ap. Non. p. 216.) These oyster-beds were so valuable as to be farmed out at a high price, and Caesar was induced by the contractors to repair the dyke of Hercules for their protection. (Serv. ad Georg. i. 161.)

The Lucrine lake is otherwise known chiefly in connection with the most wonderful works of Art upon the site of the so-called Julius Puteiis, alluded to in two well-known passages of Virgil and Horace. (Verg. Georg. i. 161—168; Hor. Ars Poet. 63.) It is not easy to understand exactly the nature of these works; but the object of Agrippa was obviously to obtain a perfectly secure and land-locked basin, for anchoring his fleet and for exercising his newly-raised crews and rowers. For this purpose he seems to have opened an entrance to the lake Avrumus by a cut or canal from the Lucrine lake, and must, at the same time, have opened a channel from the latter into the bay, sufficiently deep for the passage of large vessels. But, together with this work, he strengthened the natural barrier of the Lucrine lake against the sea by an artificial dyke or dam, so as to prevent the waves from breaking over it as they previously did during heavy gales. (Strab. v. p. 243; Dion Cass. xlvii. 50; Sec. Aug. 16; Vell. Pat. iii. 7d; Serv. ad Georg. ii. 254; Plin. xxxvi. 15. s. 24.) It is clear from the accounts of these works that they were perfectly successful for a time, and that they appear to have excited the greatest admiration; but they were soon abandoned, probably from the natural difficulties proving insuperable; and, from the time that the station of the Roman fleet was established at Misenum, we hear no more of the Julian Port. Even in the time of Strabo it seems to have fallen into complete disuse, for he says (v. p. 245), he speaks of the latter as useless as a harbour, and accessible only to small vessels, but producing abundance of oysters. At a later period Cassiodorus (Var. is. 6) describes it in a manner which implies that a communication was still open with the lake Avrumus as well as with the sea. The two lakes are now separated by a considerable breadth of low sandy ground, but it is probable that this was formed in part by the memorable volcanic eruption of 1538, when the hill now called Monte Novo, 413 feet in height and above 8000 feet in circumference, was thrown up in the course of two days, and a large part of the Lucrine lake filled up at the same time. Hence the present aspect of the lake, which is reduced to a mere marshy pool full of reeds, affords little assistance in comprehending the Julius Puteiis, that the lake Avrumus was deep and well adapted for a port, but could not be used as such on account of the Lucrine lake, which was shallow and broad, lying between it and the sea (v. p. 244). And again, a little farther on (p. 245), he speaks of the latter as useless as a harbour, and accessible only to small vessels, but producing abundance of oysters.

LUCUS ANGITIAE (Edh. Lucenais: Luce), a place on the W. shore of the lake Fucinus, in the territory of the Marsi, originally, as its name imports, nothing more than a sanctuary of the goddess Angitia, but which seems to have gradually grown up into a town. This was sometimes called, as we hear from an inscription, Angitia; but the name of Lucas or Lucus Angitiae must have been the more prevalent, as we find the inhabitants styled by Pliny simply Lucenses, and the modern name of Luce or Luigi points to the same conclusion. It is evident, both from Pliny and from the inscription referred to, that it was a municipal town, having its own local magistrates. (Plin. iii. 12. s. 17; Orell. Inscri. 115.) About half a mile N. of the modern village of Luce, and close to the shores of the lake, is the remains of an ancient wall constructed in the polygonal style, but which, from its condition, could never have been designed as fortifications; and these probably formed part of the sacred enclosure or Prebendal of the grove and temple. The site is now marked, as is so often the case in Italy, by an ancient church. (Nibby, Viaggio Antic. vol. i. p. 210; Class. Mem. vol. ii. p. 175, note.) Virgil alludes in a well-known passage to the "nemus Angitiae" (Aen. vii. 759), where the name of the
LUCUS AUGUSTI.

LUCUS AUGUSTI, now called Callatia Narbonensis, and east of the Rhone, which Tacitus (Hist. i. 66) calls "municipium Voscontorum;" and Pliny (iii. 4) names Vasio (Vaison) and Lucas Augusti the two chief towns of the Vosconti. Lucas is placed in the Itins, on a road from Vajinum (Gap) to Lugdunum (Lyons); it is the first stage after Mons Selenus, and lies between Mons Selenus and Den Voscontorum (Dio). The name is preserved in Luc. "This town has been destroyed by the fall of a rock, which occasioned a great inundation of water. The presence of the Danube, has caused the river to spread out and form lakes which have covered part of its territory: there remains, however, in the neighbourhood and at the outlet of these lakes a place which preserves the name of Luc." (D'Anville, Notice, &c.). It is stated in the Guide du Voyageur (Richard et Hoequart), that "on the mountain called the Pied de Luc, in the commune of Lue-en-Diois, there are considerable remains of old buildings. The column of the public forum in this little place is a fragment of an old capital, and the basin is a sarcophagus of bluish marble." There is an inscription on it in Roman characteristics.

LUCUS AUGUSTI (Αυγούστου, Plut. ii. 6. §2: Lugd., a city in the centre of Gallican, in Hispamia Tarraconensis, was originally the chief town of the insignificant tribe of the Cayori, but under the Romans it was made the seat of a conventus judicis, and became one of the two capitals of Gallican, and gave its name to the Callatiae Lyonnae. (Gallican). The Conventus Lyonnae, according to Pliny, began at the river Navilius, and contained 16 peoples, besides the Celci and Lobani; and though these tribes were insignificant, and their names barbarous, there were among them 166,000 freemen (Plinii. iii. 3. s. 4. iv. 20. s. 34). The city stood on one of the upper branches of the Minus (Minn), on the road from Bragaia to Asturica (A. H. Ant. pp. 424, 430), and had some famous baths, of which there are now no remains. (Floros, Ep. S. vol. xii., s. Ubert, vol. ii. p. 1. p. 437). [P. S.]

LUCUS FERONIÆ. [Feronia.]

LUCUS HE'CATES (Σαύρος Ε'κεταυς έκφωρ, Plut. iii. 5. §7), the westernmost point of the peninsula of Hyblaen, now the alluvial tongue of land Cumbarum.

LUCUS MARICÆ. [Lirius.]

LUDIAN, LYDIAS (Αὐγούστου, Herod. vil. 127; Auson. Erat. Bocch. 555; Neil. p. 26; Plut. iii. 13. §15). On the river of Thracian, Plut. vii. p. 530), a river of Batiainis in Macedonia, or district of Batiainis, according of Pella. In the time of Herodotus (l. c.) it joined the Haianon, but a change has taken place in its course, as it is now an affluent of the Axios (Vardhuri). The river which now emerges from the lower end of the lake of Pella is called Karavanik or Matrovenik. The river of Mogfia, now called Karavanik, by the Turks, Meglenitnii, by the Bulgarian, and by the Greeks Moglenitiko, which falls into the lake of Pella, and which in its course before entering the lake follows the same direction as the Matrovenik, was probably called by the ancients the Lydias. (Lowke, Northern Greece, vol. iii. pp. 270, 437.) [E. B. J.]
LUGDUNUM.

Body of Alamanii (Amnian. Morcell. xvi. 11). The place is entered in the Claud. Caesar Augustus on some inscriptions, a name probably given to it in the time of the emperor Claudius.

In the angle between the Arve and the Rhodanias was the Acì Augustus, dedicated to Augustus by all the Gallic states. On this large altar there was an inscription which contained the names of the sixty states; and there were as many figures, intended to represent each state. If the figures were not reliefs on the altar, they may have been statues placed round the altar, or near it. The passage of Strabo (p. 92) appears to be corrupt; but, as it is explained by Gossckind (Tranul. i. p. 331), there was also a large statue of Augustus, which may have been in the middle of the sixty. There was an annual solemn celebration at this altar, which was observed even when Don Cassius was writing. (Don. liv. 32.) The time when this altar was built is fixed by the Epitome of Livy (Ep. 137) in the year in which there was a disturbance in Gallia on account of the census. This year was n. c. 12. Suetonius (Claud. 2) fixes the dedication of the Altar of Augustus in the consulship of Julia Antonius and Fabius Africanus (n. c. 10), on the first of August, which was the birthday of the emperor Claudius, who was a native of Lugdunum. The first priest of the altar was C. Julius Veruncuridubius, an Aeduan. The celebration at the altar of Lugdunum is alluded to by Juvénal in the line (i. 44, and Heinrich's note), —

"Ant Lugdunensem rictor dicturn ad aram." 

Lugdunum was the seat of a Christian church at an early period. In the time of Marcus Aurelius (about A. D. 172, or perhaps A. D. 177, according to some computations) there was a furious persecution of the Christians at Lugdunum. The sufferings of the martyrs are told by Eusebius with some manifest absurdities and exaggerations; but, the fact of a cruel persecution cannot be disputed. The letter of the churches of Lugdunum and Vienne to the churches of Asia and Phrygia is preserved by Eusebius (Hist. Eccles. v. 1); and it states that Aurelius, who was then at Rome, was consulted by the Gallic governor about the treatment of the Christians. The answer was that those who confessed to being Christians should be put to death, and that those who denied it should be set free. We have however only one version of the story, though no excuse can be made for the Roman philosophic emperor, if men were put to death only because they were Christians. Frennem, one of the Christian fathers, was bishop of Lugdunum. He is said to have succeeded Petinius, who perished A. D. 177, in the religious persecutions at Lugdunum.

The part of Gallia which Caesar called Celtica became under Augustus Gallia Lugdunensis, of which Lugdunum was the capital; but Lugdunum was contracted within narrower limits than Celtica by the extension of the province of Aquitania [Aquitanis : Gallia Trans. Vol. i. p. 965].

The Romans covered the soil of Lyon with houses, temples, theatres, palaces and aqueducts. Nature made it to be the site of a large city. There are few remains of Roman Lugdunum. Time, the invasion of the barbarian, and the employment of old materials for other purposes, have left only scanty fragments of the works of the most magnificent of all city-builders. There are some remains on the Place des Minimes which are supposed to have been a theatre. On the west side of the Saône there are traces of a camp capable of holding several legions. It was bounded and defended on the west by the hills of the Forces and on the north by the heights of St. Didier and of the Mont d'Or. The Saône defended it on the east side. The camp had no water, but the Romans found a supply in the chain of mountains which bounds it on the west. Water was brought along the valleys and the sides of the hills in a regular slope all the way, and under ground through a distance measured along its line of more than 24 miles. In its course the aqueduct collected water from seventeen springs and large sources. The height of the channel or passage for the water, measured inside, was near five feet; the vault or roof was semicircular. There were openings at intervals by which workmen could go in to clean and repair the channel. It was constructed with great care, and the two sides were covered with a double layer of cement. All this construction was buried in a cutting six feet and a half wide and near ten feet deep; and a great part of this cutting was made in the solid rocks. Another aqueduct was constructed from Mont Pilat to the site of the hill of Fourviéres, a distance of more than 50 miles along the course of the aqueduct. There were in all fourteen aqueduct bridges along this line; one of them at the village of Champenost still has ninety arches well preserved. There was a third aqueduct from Mont d'Or.

Two bronze tablets were dug up at Lyon in 1529, on which is inscribed the Oraatio of the emperor Claudius on the subject of giving the Roman citizens to the Gallic city. (Theod. Ann. xi. 24, and Oberlin's edition of Tacitus, vol. ii. p. 306.) Gallia Trans. Vol. i. p. 965.) There are many modern works on Lyon and its antiquities. The principal are mentioned by Forbiger (Habebuch, etc. vol. iii. p. 210.)

LUGDUNUM BATAVORUM.

LUGDUNUM or COXVENAE. [Convense.] LUGDUNUM BATAVORUM (Adaybörers, Prot. ii. 9. § 4: Leiden). The two elements Lug and dun appear in the name of this remote city and in two other Gallic names, which is one evidence of the Celtic race having once occupied the flat country about the outlets of the Rhine. The Roman Huns, have marked a road running from Leiden through Cologne to Venetia (Immenstadt) on the Upper Danube Circle of Bavaria. The routes are not the same all through, but the commencement of the road and the termination are the same. This route in fact followed the basin of the Rhine from the Lake of Constance to the low and sandy shores of the North Sea.

The words "Caput Germaniarum" placed before the name Lugdunum in the Antonine Itini, probably do not mean that it was the capital of the Germaniae, but this was certainly not so, but that it was the point where the two provinces called Germaniae commenced on this northern limit. It has been supposed that Leiden in the province of Holland is not the Roman Lugdunum, because no Roman remains have been found there, though the absence of
LUGUS LACUS. them would certainly not be conclusive against Leiden. But remains have been dug up in the neighborhood of Leiden, and an inscription of the time of Septimius Severus. (Ubert, Gallien, p. 534.) [G. L.]

LUGUS LACUS (Λουόγος Λακ), a lake in the land of the Lapodes in Illyricum, now Lake Zirbitz. (Strab. vii. p. 314.)

LUGIDUNUM (Λουίςδούμο), a town in the east of Germany, the site of which must be looked for in Slesia, either at Breslau or Liaguitz. (Ibid. ii. 11. § 28.) [L. S.]

LUGII. [Lugii.]

LUGIO'TUM (Λουίςδοουρ), a town in the south of Pannonia Inferior, was the capital of a district. (Ibid. ii. 16. § 5.) In the Peuting. Table it is called Logio, and it is, perhaps, to be looked for near the site of the modern Botta, at the entrance of the Sorèze into the Danube. [L. S.]

LUGUVALLUM, or LUGUVALLIUM (Anton., Itin.), LUGUBALUM (Ravenna), now Carilide. This town is not mentioned by Ptolemy; neither does it occur in the Notitia. The reason of its omission in the latter work may be, that, although it stands upon the line of the Wall, the proximity of the great castra, as well as its own strength and population, rendered a fixed garrison unnecessary. Beda (in Pian. Cod. ital. t. 3, fo. 222) describes the town of Lugubalus, as seen being the walls and a fountain built by the Romans; "veut ad Lugubalum civitate, quae populus Anglorum corrupto Luel vocatur, ut alliqueque regiain. Poster a, ten die ded ecentibus eum civibus ut videret moenia civilitatis, fortemque in ex mino quaedam Romanorum opera estructum." Leland (Itin. vol. vii. p. 54), after speaking of the Roman architectural and other remains often brought to light in Carilide, adds, "the hole site of the town is sore changed. For where as the streees were and great edifices now be vacant and garden plottes." But few remains, if any, of the Roman town are, at the present day, to be noticed; but whenever excavations are made to any considerable depth, the foundations of the buildings of Luguvallum are almost always met with. Very recently a deep drain having been sunk on the north side of the castle, the course of the Great Wall has been ascertained; previously, the direction it took from Sumeriz, where there was a fortified camp, was uncertain, as above ground in the immediate vicinity of Carilide. It has been entirely pulled down. [C.R.S.]

LUMBERTANII. [Vasones.]

LUNA. 215

LUNA. (Λουν. Strab. Λουν. Poly. ; Λουνια νυος, Stephan. B.; Eth. Lunenses; Luni.) a city of Etruria, situated on the left bank of the Maera, a short distance from its mouth, and consequently on the very borders of Liguria. There is indeed considerable discrepancy among ancient authors as to whether it was an Etruscan or a Ligurian city; and it is only from this cause more or less the circumstance of its position on the immediate frontier of the two countries, but from its having been successively occupied and held by both nations. Pliny calls it "the first city of Etruria:" and Strabo begins to reckon the Etrurian coast from thence: Ptolemy also mentions it first in order among the cities of Etruria; while Mela, on the contrary, assigns it to the Ligurians. ("Luna Ligurum," Mel. ii. 4. § 9; Strab. v. p. 222; Plin. iii. 5. s. 8; Poly. iii. i. § 4.) From the time when the Maera became the established limit between Liguria and Etruria, there could be no doubt as to Luna being geographically included within the latter country: but it is certain that when the Romans first came into collision with the Ligurians, that people was in possession of Luna and the surrounding territory, and indeed held the whole country from the Maera to the mouth of the Arnum. (Pol. ii. 16; Liv. xxxiv. 56; xxxix. 52, etc.) Livy, however, tells us that the territory of Luna, in which the Roman colony was founded, and which had been taken by them from the Ligurians, had previously belonged to the Etruscans (Liv. xli. 13), and this seems to be the true explanation of the case. Both Luna and Luca, with the whole of the fertile and level country adjoining them at the foot of the Apennines, seem to have really belonged to the Etruscans during the height of their power, but had fallen into the hands of the Ligurians, before that people came into contact with Rome. We have, however, scarcely any account of Luna as an Etruscan city, no Etruscan remains have been found there, and there is certainly no foundation for the views of some modern writers who have supposed it to be one of the chief cities of Etruria, and one of the twelve that composed the League. (Dennis's Etruria, vol. ii. p. 79.)

The first historical mention of Luna itself (as distinguished from its more celebrated port) is that of its capture by the Romans under Domitius Calvinus, 222, in the Second Punic War: it was still in Strabo's time, but a small and inconsiderable city. (Lib. Colon. p. 223; Strab. v. p. 222.) No historical notice of it is found under the Roman Empire, but its continued existence down to the fifth century is attested by Pline, Ptolemy, the Itineraries, and Rutilius, as well as by inscriptions found on the spot. (Plin. iii. 5. s. 8; Poly. iii. i. § 4; Ith. Ant. i. 293; Ith. Marit. p. 501; Rutil. Hist. ii. 63—68.) We learn also that it was celebrated for its wine, which was high priced, and was reckoned the best in Etruria, and is still esteemed. (Strab. v. p. 67.), as well as for its cheese, which were of vast size, some of them weighing as much as a thousand pounds. (Plin. xi. 42. s. 97; Martian. xii. 30.)

But the chief celebrity of Luna in imperial times was derived from its quarries of white marble, the same now known as Carrara marble, and which was considered equal, if not superior in quality, to the finest Greek marbles. It is first mentioned as employed at Rome for building purposes in the time of Caesar, and from the age of Augustus research was very extensively employed, as may still be seen in the Panteleon, the Pyramid of Caius Cestius,
LUNA.

&c. But it was speedily adopted for statutory purposes also, for which it was esteemed a finer material even than the Parian. (Plin. xxxvi. 5. s. 4, 6. s. 7; Strab. v. p. 222; Sil. Ital. viii. 489; Rutul. ii. c.; Stat. iv. 2. 4, 23.) The buildings of Luna itself, and even its walls, are said to have been constructed wholly of it, whence Rutilius calls them "canedita moenia;" and Cyprianus, an anti- quarian of the 15th century, who visited the ruins of Luna, has left the same fact. The period of the final decay of Luna is uncertain. It was taken and plundered by the Normans in 857, but was probably not destroyed; and Dante, writing after 1300, speaks of Luna as a city that had sunk gradually into complete decay (Par. xvi. 73); which was doubtless accelerated by the malaria, from which the neighbourhood now suffers severely. When it was visited by Cyprianus of Acconia, the ruins were still extensive and in good preservation; but little now remains. Vestiges of an amphitheatre, of a semi-circular building which may have been a theatre, of a circus, and piscina, as well as fragments of columns, pedestals, &c., are still however visible. All these remains are certainly of Roman date, and no vestiges of Etruscan antiquity have been found on the spot. The ruins, which are obviously those of a small town, as it is called by Strabo, are situated about 4 m. S. of Savona, and little more than a mile to the sea. (Dennis's Etruria, vol. ii. pp. 73-84; Targioni-Tozzetti, Viaggio in Tessaglia, vol. i. p. 403-416; Poynes, Memorie della Città di Luna, 4to. Turin, 1838.)

Far more celebrated in ancient times than Luna itself was its port, or rather the magnificent gulf that was known by that name (Portus Luniæ, Liv., Plin., &c.; Λυναϊκή λιμήν, Strab.), now called the Gulf of Spezia. This is well described by Strabo as one of the largest and finest harbours in the world, containing within itself many minor ports, and surrounded by high mountains, with deep water close in to the land. (Strab. v. p. 222; Sil. Ital. viii. 482.) He adds, that it was well adapted for a people that had so long possessed the dominion of the sea—a remark that must refer to the Etruscans or Tyrrhenians in general, as we have no allusion to any naval supremacy of Luna in particular. The great advantages of this port, which is so spacious as to be capable of containing all the navies of Europe, seem to have early attracted the attention of the Romans; and long before the subject of the mountain tribes of Liguria was completed, they were accustomed to use the Luna Portus the station or rendezvous of their fleets which were destined either for Spain or Sardinia. (Liv. xxxiv. 8, xxxix. 21, 32.) It must have been on one of these occasions (probably in company with M. Cato) that it was visited by Ennius, who was much struck with it, and celebrated it in the opening of his Annals (Ennius, ap. Porph. Sot. vi. 9.) At a later period it seems to have been resorted to also for its mild and delightful climate. (Porph. l. c.) No doubt can exist that the port of Luna is identical with the modern Gulf of Spezia; but it is certainly curious that it should have derived that name from the town or city of Luna, which was situated on the left bank of the Magra, at least five miles from the gulf, and separated from it, not only by the river Magra, but by a considerable range of rocky hills, which divide the Gulf of Spezia from the valley of the Magra, so that the gulf is not even within sight of Luna itself. It is this range of hills which at their extremity form a promontory, called by Ptolemy Luna Promontorium (Σηλαδής ἄκρων, Ptol. iii. 1. § 4), now the Panta Bianca. It is true that Strabo places Luna on the right bank of the Murra; but this is a mere mistake, as he is certainly speaking of the Roman town of Luna; it is possible that the Etruscan city of that name may not have occupied the same site with the Roman colony, but may have been situated on the right bank of the Murra, but even then, it would have been some distance from the port. Dobiennis and some other writers have endeavoured to prove that the port of Luna was situated at the mouth of the Murra; and it is probable that the town may have had a small port or landing-place at that point; but the celebrated Port of Luna, described by Strabo and extolled by Ennius, can certainly be no other than the Gulf of Spezia.

The Gulf of Spezia is about 7 miles in depth by 3 in breadth; it contains within itself (as usually observed by Strabo) several small ports, two of which are noticed by Ptolemy under the names of Portus Veneris (Ἀριστοκλῆς Αἰμιλίας), still called Porto Vener, and situated near the western extremity of the gulf; and Portus Eruci (Ἐρυκίου κόλπος), now Lerici, on the E. shore of the gulf. The former name is found also in the Maritime Itinerary. (Ptol. iii. 1. § 3; Itin. Marit., p. 502.)

[LUNAE MONTES (Σηλαδής ὅροι Αὔστρους, Ptol. iv. 8. §§ 3, 6), from high mountains, and from the lakes formed by their melting snows, Ptolemy derives the sources of the Sile. Their position is unknown, and if they have any real existence, they must be placed S. of the Equator. (W. B. D.)

[LUNAE PORTUS. [LUNA.]

[LUNAE PROMONTORIIUM (Σηλαδής ὅροι ἄκρων, Ptol. ii. 5. § 4), a headland on the W. coast of Liguria, placed by Ptolemy 10 minutes N. of the mouth of the Tarus, and therefore corresponds to the C. du Roca, near Cìntra, where Asenius found ruins of what he took for a temple of the Sun and Moon, which he describes (Ap. Lycon. p. 392.) Others, however, identify it with the more northern C. Carceri; and, in fact, the accounts of the headlands on this coast are confused in a manner familiar to the ancient writers. (P. S.)

[LUNARUM PROMONTORIIUM (Ἀσάπονια ἄκρων, Ptol. ii. 6. § 19; C. Torbruna, NE. of Bar celona), a headland on the coast of the Baetuli, in Hispania Tarraconensis, formed by one of the SE. spurs of the Pyrenees. (P. S.)

[LUNNA. [ASTERES.]

LLUS, a town, was on a road from Leg du nium (Lyrom) to Augustodunum (Autun). The first station after Lugdunum is Asa Paulini, 15 M. P. from Lugdunum, and then Luna 15 M. P. from Asa Paulini, according to the Antonine Itin. [ASA PAULINE]. In the Table it is 24 M. P. from Lugdunum to Auspice, as the name is written in the Table, and Asa P'na is omitted. Luna and Ludum are probably the same place; and the site is uncertain. (G. L.)

[LUPIA. [LUTULI.]
Poteden would lead us to suppose that it was a maritime town. (Plin. iii. 11. s. 16; Ptol. iii. 1. § 14.) Appian also speaks of Octavian as landing thereon his return to Italy, immediately after Caesar's death, when he halted some days at Lupiae, before venturing to advance to Brundisium, until he received fresh information from Rome. (Appian, B. C. iii. 10.) There seems, however, no doubt that the ancient Lupiae occupied the same site as the modern Lecce, though it may have had a port or landing-place of its own. The above passage of Appian is the only mention of it that occurs in history; but a tradition preserved to us by Julius Capitolinus (M. Ant. I.) ascribed its foundation to a king of the Salatines, named Malemus, the son of Damusus. There is little doubt that it was really a native Valentinian city; nor is there any foundation for supposing that it had received a Greek colony. Pausanias, in a passage which has given rise to much confusion, in treating of the treasury of the Sybarites at Olympia, tells us that Sybaris was the same city which was called in his time Lupia, and was situated between Brundisium and Hdruntum. (Paus. vi. 19. § 9.) The only reasonable explanation of this strange mistake is, that he confused Lupiae in Calabria (which is sometimes written Lupia) with the Roman colony of Copia in Lucania, which had in fact arisen on the site of Taurii, and, therefore, in a manner succeeded to Sybaris. But several modern writers (Romanelli, Crumr, &c.) have adopted the mistake of Pausanias, and affirmed that Lupiae was previously called Synaris, though it is evidently of the well-known city of Sybaris that that author is speaking. We hear but little of Lupiae as a Roman town, though its importance has been much more than of some importance, and is mentioned by all the geographers.

The "ager Lyppeinensis" (sic) is also noticed in the Liber Coloniarum; but it does not appear that it received a colony, and the inscriptions in which it appears to have been colonized are, in all probability, spurious. Nor is there any ancient authority for the name of Lyceum or Lyca, which is assigned to the city by several local writers: this form, of which the modern name of Lecce is obviously a corruption, being first found in documents of the middle ages. (Cass. Dio. xxv. p. 292; Mel. ii. 4. § 7; Rin. Ant. p. 118.)

The modern city of Lecce is a large and populous place, and the chief town of the province called the Terra di Otranto. No ancient remains are now visible; but Galateo, writing in the 15th century, tells us that there were then extensive subterranean remains of the ancient city — vast arches, covered galleries and foundations of ancient buildings — upon which the modern city was in great measure built. Writers and other relics of antiquity have also been brought to light by excavations, and an inscription in the Messapan dialect. (Galateo, de Sit. Itupph. pp. 81—86; Romanelli, vol. ii. pp. 83—93; Mannens, Unter Ital. Dialecte, p. 59.)

LUPODU'NUM, a place on the river Nicer (Neckar) in Southern Germany. (Anon. Mon. 423; Symmachus, p. 16, ed. Niebuhr.) It is probably the same place as the modern Ludenburg on the Necker, though some identify it with the name of which the emperor Valentine built on the banks of the Neckar. (Ann. Marc. xxvii. 2.)

LUPPHURDUM (Λούφόρδομον), a town in the north of Germany. (Ptol. ii. 11. § 28.) Its site is generally identified with Wittenberg or Meissen; but it seems more probable that it was situated near Leipzig, on the river Lupa, from which it may have derived its name. (L. S.)

LU'TPIA, a town of the Lepidae. (σπουδαστήρ, Luppia, a navigable river in the north-west of Germany, which was well known to the Romans, from its sources to the point where it empties itself into the Rhine. Its sources are in the interior of Germany, not far from those of the Amnia. (Eumus.) (Veil. Pat. ii. 105; Tac. Ann. i. 60, ii. 7, Hist. v. 22; Pomp. Mela, iii. 3. § 3; Strab. vii. p. 291; Don Coss. liv. 33.) Strabo (l. c.) had a very incorrect notion of the course of the Lupi, for he describes it as flowing through the country of the Bructeri Miners, and as discharging its waters, like the Ammia, into the ocean; he, moreover, places it about 600 stadia from the Rhine. Tacitus (Ann. ii. 7) mentions a Roman fort built on its banks. (L. S.)

LU'TPIA (Λυπτια), a place of considerable importance in the north of Germany, between the rivers Allis and Visarzis, above Mona Melibocus. (Ptol. ii. 11. § 28, viii. 6. § 3.) It is generally identified with the modern town of Lupta. (L. S.)

LUSI (Λούσι), Paus., Steph. B. s. v.; Λυσίος, Λυσίος, Ξ. D.; Steph. B. s. v.; Ebd. Λυσίας, λυσίΤις, Steph. B.; Λυσίσ, Χ. Abab. iv. 2. § 21), a town in the north of Acrenia, originally independent of, but afterwards subject to, Creitor. (Cleit. Lusi.) Lusi was situated in the upper valley of the Arianus, and probably on the site of Sondinu, which stands in the NE. corner of the valley at the foot of Mt. Kheinace (the ancient Arianian mountains), and on the road from Triopolis to Cadiz. The upper valley of the Arianus, now called the plain of Sondinu, consists of two plains, of which the more easterly is the one through which the Arianus flows, the waters of which force their way through a gorge in the mountains into the plain of Creitor, now Kottara, to the south. The more westerly plain of Sondinu is entirely shut in by a range of hills; and the waters of three streams which flow into this plain are carried off by a war!&dquo; oil, after forming an inundation, apparently the Lucae Citiorianus mentioned by Pllny (xxxii. 2. s. v. Lupa.) The air is damp and cold; and in this locality the best hemp-wick was grown (Theod. ix. 15. § 8).

Lusi was still independent in the 5th Olympiad; since one of its citizens is recorded to have gained the victory in the 11th Pythiad. (Paus. viii. 18. § 8.) Its territory was ravaged by the Aetolians in the Social War (Polyb. iv. 18) but in the time of Pausanias there were no longer even any ruins of the town. (Paus. 1. c.) Its name, however, was preserved in the consequence of its temple of Artemis Lusia or Hespera (the "Soother"). The goddess was so called, because it was here that the daughters of Proetus were purified from their madness. They had concealed themselves in a large cavern, from which they were taken by Melampus, who cured them by sacred expiations. Thereupon their father Proetus founded this temple of Artemis Hespera, which was regarded with great reverence throughout the whole Peloponnesus as an inviolable asylum. It was plundered by the Aetolians in the Social War, and was situated near Lusi, at the distance of 40 stadia from Cynactia. (Paus.; Polyb. iv. 11. c.; Cal. Dian. 233.) The interior of the temple, with the purification of the daughters of Proetus, is re-
presented on an ancient vase. (Millián, Pinturas de Vasos, pl. 52; Müller, Dissertation der alt. Kunst, t. 11.) The ruins, which Dalvall discovered above Lodi towards the end of the plain, and on the road to Cyneth, are probably those of the temple of Artemis. Leake discovered some ancient foundations at the middle fountain of the three in the more westerly of the two plains of Soutolide, which he supposes to be the remains of the temple. One of the officers of the French Commission observed a large grotto on the western side of the Aragonian mountains, in which the inhabitants of Soutolide were accustomed to take refuge during war, and which is probably the one intended in the legend of the daughters of Proetus. (Dodwell, Classical Tour, vol. ii. p. 447; Leake, Morea, vol. ii. p. 109, vol. iii. pp. 168, 181; Bohlaye, Recherches, &c. p. 153; Curtius, Peloponnesus, vol. i. p. 375, seq.)

LUSITANIA (ἡ Λυσιτανία, ἡ Λοσιτανία, Strab. Λυσιτανία, Diod., Sec. Phil., Stph. B. 1. Eth. Aegypti, Lusitani), originally derived the same name as their city of Lusitania. The name is generally understood in the same sense, as the name of one of the three provinces, into which Hispania was divided by Augustus. (Hispania, p. 1081, Nos. 3, 4.)

1. Extent and boundaries. — Like the modern Portugal, it lay on the W. side of the peninsula, extending from its SW. point (Sacrarium, C. S. Vincent), eastwards to the mouth of the Anas (Guadiana), and northwards along the W. coast; but here, as well as in the interior, the boundaries of the two countries were very different. Lusitania occupying only two-thirds of the W. coast, and Portugal more than three-fourths. The former had its N. boundary at the Duero (Duoro), the latter at the Minius (Minho); and the Portuguese province, called Entre Duoro e Minho, as lying between these rivers, as well as that of Troy or Montes E. of it, were anciently the part of Gallaecia which belonged to the Celtae Bracari. But on the E. side, inland, Lusitania had a much wider extent than Portugal. Both rest on the same base, as their S. side is only the coast between C. S. Vincent and the mouth of the Guadiana, and at first the boundary runs N. nearly along the same line, namely the course of the Guadiana, the slight difference being in favour of Portugal, which has a slip on the E. side of the river. But, from a point on the river, a little below Badajoz, and a little above its intersection with the Meridan of 7° W. long, the boundaries diverge; that of Portugal taking a general direction N., with a slight bearing to the E.; till it strikes the Duoro at its great bend from SW. to NW. (where the Apeeda joins it), and running up the river to its great bend in the opposite direction, below the Estor; while that of Lusitania continued up the Anas eastward, towards the middle of the Peninsula, to a point considerably above Metellinum (but not very certainly defined), whence it followed a N. direction to the Duero, which it met at a point below the river Pistorum (also not very well defined). Thus, Lusitania continued, on this side, the N. part of Spanish Extremadura, and the S. part of Leon; and the part of the province thus lying E. of Modern Portugal, correspond very nearly to the territory of the Vettones. These are the boundaries of the Roman province, as constituted under Augustus; but there are considerable variations in the extent assigned to this province by various writers, especially according to the was used, in the wider sense, for the province, or in the narrower meaning, for the country of the Lusitani. In this first and narrowest sense, it included only the district between the Tagus and the Duero, from the Atlantic on the W., to about the present frontier of Portugal on the E. Next, the supposed or actual connection of these people with their Northern neighbours, the Callaei, "Arabri, " and Astures, led to their being, at least in part, included under the same name, and accordingly Strabo defines Lusitania as the country N. of the Tagus, bounded on the W. & N. by the Ocean. (Strab. iii. p. 147.) But just above he says, that the greater part of the Lusitani, meaning those N. of the Duero, had obtained the name of Callaei; and elsewhere he expressly states that the whole region N. of the Duera, which was formerly called Lusitania, was now called Callaecia. (iii. p. 166.) On the E., says Strabo (I. c.), it bordered on the Carpetani, Vettones, Vacaces, and Callaei, and other tribes of less note; and he adds that these also were sometimes called Lusitani, thus pointing to the extension of the name towards the east. Then, again, on the S. of the Tagus, where the country seems originally to have belonged to the Tenetani, with an intermixture of Celtic tribes (Celtici), the long and obstinate war carried on by the Romans drove away many of the Lusitanians and their allies into the district, which thus came naturally to be included under the name of Lusitania. (Strab. iii. p. 139.) Finally, under Augustus, the boundaries were fixed as above stated.

2. Dimensiones. — Acquirra, as quoted by Pliny, assigned to the province, together with Asturia and Gallaecia, a width of 536 M. P.; and a length of 540 M. P. (Plin. iv. 21. s. 35.) Strabo makes its length 3000 stadia, and its width considerably less (iii. p. 153, as amended by Xylander; it should be remembered that the width is reckoned, as Strabo expressly says, along the E. side, i.e. from N. to S., in conformity with his general views respecting the form of the peninsula, which are explained under Hispania.)

3. Physical Geography. — Strabo's description of Lusitania (l. c.) as lofty and rugged on the E. side, and level towards the sea, with the exception of minor ridges of mountains, is tolerably correct. A more exact account of its relation to the whole formation of the surface of the peninsula is given under Hispania (§ V. No. 5, pp. 1083, 1086), together with a description of the coast and the chief promontories. Its surface is roughly divided by the Mons Herminius (Sierra de Estrella), which ends in the peninsula of Lisbon, into the two great basins of the Tagus and the Duero; but it is also intersected by numerous offsets from the great central chain of the peninsula. Besides the great river Tagus, which bisects it, there are several others, of more or less importance, which flow in the same general direction, and flow into the sea on the W. coast; but of these none require special notice, except the Calliunus (Kallimnos, Salado), which flows N. from the M. Curcurs in the extreme S., and falls into the sea, N.E. of the Tagus, and the Minia (Montego) and Vaca (Venga), between the Tagus and the Duero.

* The discrepancies among the ancient writers respecting the names of the rivers between the Tagus and the Minus have been noticed under Gallaecia: the following conjectures, by Groskurd, of their various statements, may be useful.
LUSITANIA.

The country, being irrigated by these rivers, and penetrated by their navigable streams, as well as enriched by the gold and silver found in their beds and in mines, was rich and fertile, Strabo tells us; but its prosperity was greatly checked by the predatory habits of its people, who neglected the culture of the soil, to give themselves up to war and robbery. This evil tendency, however, he ascribes chiefly to the mountain-ers, by whose attacks the inhabitants of the lowlands were involved in the same disorder. (Strab. iii. p. 154.)

4. Population.—The province, as finally constituted, contained the countries of five chief peoples, and of innumerable petty tribes, most of whom, however, may be included among these five. Thus, for example, the 30 (some read 50) tribes (Arms, mentioned by Strabo, between the Tagus and the Artaxia, are doubtless but subdivisions of the Caliace and Lusitanii. The five chief peoples of Lusitanii (the Roman province) were:—(1) The Lusitanii, on the W. coast between the Durins and the Tagus, and extending also (as explained above) S. of the latter river. (2) E. of them the Vettiones, between the Durins and the Anas. (3) S. of these two were the TURDULI VETERI, a branch of the ancient population of Bactica, who (according to the common opinion of the ancients) had crossed the Anas, but whose presence should perhaps rather be referred to an ancient occupation of the country up to the Tagus. (4) S. of them again, in the district between the lower course of the Anas and the S. and W. coasts, were a branch of the Turdetani, to whom similar remarks apply. (5) Lastly, in various positions, we find remnants of the old Celtic population, preserving the name of Celts. The chief traces of them are on the SE. of the lower Tagus, between it and the great bend of the Anas; but whose presence should perhaps rather be referred to an ancient occupation of the country up to the Tagus.

5. The LUSITANII (AUGUSTA, Strab.; AUGUSTAURI, Dio., Pol.), are designated by Strabo as "the chief of the nations of Iberia, and the one most frequently and longest engaged in war with the Romans," a distinction which, certainly, not even the Celtiberians could dispute with them. The history of the wars referred to has been given in outline under Hispania, and of that last great contest may be read in the histories of Rome and under VIRIATVS (Diet. of Rome). It was evident that this war was won to prove that though the Lusitanii formed a compact state, under one national government, its force was impaired by a certain defect of real union among the numerous minor peoples of whom Strabo speaks. (Nebra, Lectures on Anc. Ethnog. and Geog. vol. ii. p. 297.) The full account of their manners and customs given by Strabo (iii. pp. 154—156), may be more conveniently studied in the original than repeated here in its many details.

6. Lusitania as a Roman Province.——(LUSITANIA PROVINCIAS, inscr. ap. Gruter, p. 31, No. 383.) The position of Lusitanii, after its conquest by the Romans, first as a part of Hispania Ulterior, and already under Julius Caesar, tending to a separate constitution; its formation into a distinct province, under Augustus; its civil and military government; its three convents of EREMERA AUGUSTA, PAX JULIA, and SCALARIUS, with the number and rank of the towns included in them; and its position under the later empire, are all given under HISPANIA (pp. 1081, 1082.)

7. Cities and Towns.—(Those of the VETTONES are given under the article.)—The city of LISBON (Port. Lisboa) was, under the same name [OULISIO], the ancient capital of the Lusitanians, and though the Romans degraded it from that rank, in favour of their own military colonies, it remained a place of great commercial importance. Its political rank was transferred, under the Romans, to SCALARIUS (Santarem), a colony, and seat of a conventus juridicus, higher up the river, on its right bank. But the true Roman capital was EREMERA AUGUSTA (Merida) in the SE. of the province, on the right bank of the Anas, a colony founded by Augustus. The chief roads leading through the province from Emerita, with the places on them, were as follows:—1. FROM EREMERA, E. up the NW. to CAERETANUS, "per Lusitaniam," as the Itinerary expressly says, although it lies entirely S. of the Anas (Itin. Ant. pp. 444, 445); thus suggesting a doubt whether the boundary of Lusitanii was not carried as far S. as the MARIANUS (Sierra Morena); the places on the road, which are commonly assigned to Badia, are: — CONTOSOLLA, 12 M. P. (Alange?); MIRORRIGA, 36 M. P. (Capilla); Sisalone, or SISANO, 13 M. P. (Ainalon); CARCVIVUM, 20 M. P. (Carcaudum?); AD TURRES, 26 M. P. (CEIATARATI?), where, if not sooner, the name of Badia begins. 2. FROM EREMERA, due N. to SANTANCIO (Salamanca) and Asturica, through the territory of the VETTONES. (Itin. Ant. p. 433; for the places see VETTONES.) 3. FROM EREMERA, NW. to the Tagus, and down the right side of the river to OLOSI (Itin. Ant. pp. 419, 420?) — PLAGIALIA, 30 M. P. (RAPPEVERA, Cortes; El-Commandante, Laqte); AD VII ARAS, 20 M. P. (CISSEVERA, Cortes, Arronches, Mentele and Laqte); MONTORIO, 20 M. P. (Morga); LUSITANIA, 25 M. P. (Ponte de Vedra); LOSERVI, 35 M. P. (Gregor); REYDA, 46 M. P. (Talas); VILLA VELHA, 10 M. P. (Laqte); TELICCI, 32 M. P. (ABRAXES or Pemhele?); SCALARIUS, 32 M. P., a colony and conventus, with the surname Praesidium ju—

* The numbers on all the roads from Emerita to Olosi are very corrupt: they do not agree with the totals given at the head of each route; and many of them are evidently too short.
LUTETIA.

LUTETIA PARISIORVM (Aaaworwia, Ptol. ii. 8. § 13: Aaaworwia, Strabo, p. 194), the city of the Parisii, a Gallic people on the Seine. Lutetia is mentioned by Caesar (B. G. vi. 3), who held a meeting of the Gallic states there in the spring of B. C. 53. He calls it Lutetia Parisiorum; and in his narrative he speaks of Labiones in B. C. 52, he says (B. G. vii. 57) that Lutetia is an island in the Seine (Seine). Strabo copies this description from Caesar. Vellius Sequester (p. 17. ed. Oeriëri) also describes Lutetia, as he writes it, as being on an island.

The Parisii were the neighbours of the Senones. There had been some kind of political union between the Parisii and the Senones before Caesar's Gallic campaigns (B. G. vi. 3), but at the time when Caesar mentions them, they seem to have been separate states. When Vercingetorix (p. 63. 52) rose against the Romans, the Senones, Parisii, and others joined him immediately; and the Parisii sent 8,000 men to oppose Caesar at Alesia (B. G. vii. 4. 75). Though a part of the little territory of the Parisii was north of the Seine, we must conclude from Caesar's narrative that they were a Celtic people. The diocese of Paris represents the territory of the Parisii.

Lutetia, like many other Gallic towns, finally took the name of the river and was called Lutetia Parisiorum, whereas the modern name of Paris, Zosimus (iii. 9) calls it Parisium. It appears from the Notit. Dign. that the Romans had a fleet at Paris; and from the words in the Notit. "Præfectus classis Anderitumorum Parisiis," D'Auville conjectures that the name "Anderitum" implies a place Anderitum, which he further supposes to be Andréi, immediately below the junction of the Seine and Oise. An inscription dug up in 1711 among other ancient monuments in the church of Notre Dame de Paris, contained the words "Vixit in Parisiatici," and De Valois observes that as the people of Paris had always a fleet before their eyes, they may from this circumstance have taken the ship which appears in the arms of the city.

The position of Lutetia at Paris is determined by the description of the place, the name, and the measurements of the roads from Aenatem (Sens), Bolomua (Rouen), and Genuanium (Orleans), which meet at Lutetia. When Caesar held the meeting of the states of Gallia at Lutetia, the town was cen-
LUTETIA.

fixed to the island which afterwards was called La Cité (civitas), a name given to the old Roman part of several French towns. But the island on which stands the church of Notre Dame was then and for a long time after of less extent than it is now; for the site of the Place Dauphine was once two small islands which were not joined together and united to the Cité before the sixteenth century; and the spot called Le Terroir was another addition produced by the ruins of the buildings which were erected in this part of the city. Paris was never a large place under the Roman dominion. Ammianus (xxv. 11) calls it a Castellum, and Julian (Maximogon, p. 840) and Zosimus names it a small city (σηματικόν. Zosimus, who was no great geographer, places it in Germany. Lutetia may probably have occupied some ground on the north or on the south side of the river, or even on both sides, for the island was joined to the mainland by bridges in Caesar's time (B. G. vii. 58), made of wood, as we may assume. Julian spent a winter in Paris, a.d. 358, and was proclaimed Augustus there. (Ammian. Marcell. xxv. 2, 8, xx. 4.) The Franks under Clovis took Paris about the close of the fifth century A. D.; and about a.d. 508 Clovis made Paris its residence.

![Diagram of Paris and its surroundings]

A. A. The river Sequana (Seine).
B. B. The river Matrona (Marne).
1. Lutetia (Paris), on an island.
2. Melodium (Meulan), on an island or point.

The scale is in English miles.

When Caesar (B. c. 52) was setting out to attack Germania, he sent Labienus with four legions against the Senones and Parisii. (B. G. vii. 54.) Labienus advanced upon Lutetia from Agédenicum, where he left his stores. His march was along the left bank of the Senone. The command of the Gallic forces occupied a marshy tract, the water of which ran into the Seine, and here he waited, with the intention of preventing the Romans from crossing the river (B. G. vii. 57) to Lutetia. Labienus attempted to make a road across the marsh, but, finding it impossible, he left his camp silently in the night, and, returning by the route by which he had advanced, he reached Melodium (Meulan), a town of the Senones on an island in the Seine. He there seized about fifty vessels, and easily got possession of Meulan. After repairing the bridge from the island to the right bank of the river, he carried over his men to the right side, and marched again upon Lutetia. He took the vessels with him, and used them, as we must suppose, for crossing the Matrona (Marne), though the Marne is not mentioned in the narrative. Before Labienus could reach Paris, the Galli set Lutetia on fire, and broke down the bridges which united the island to the main. They also quitted the marsh, and placed themselves on the banks of the Seine opposite to Lutetia and to the camp of Labienus, which was on the right side of the river. In the meantime Caesar's defeat before Germonia was known, and Labienus was threatened by his army from the north by the Boierns in front of him, on the opposite side of the river, were the Parisii and their allies. His safety depended on getting to the left bank of the Seine, and he accomplished it by a clever movement. Soon after nightfall he left half a legion in his camp; he ordered another half legion, with their baggage, to march up the river, making a loud noise; and he sent up the river, in the same direction as the half legion as many boats as he could collect, which made a great splashing with their oars, as if the ships that he brought from Melodium four miles down the river, and, soon after despatching the half legion down the river, he marched with his three legions down the stream in great silence, and found his ships. The scents of the enemy, who were placed all along the stream, were surprised and slaughtered, for there was a great storm raging, and they were off their guard. The three legions were carried across the river in the vessels. The enemy were confounded by the unusual noise purposely made in the Roman camp, by the boats moving up the river, and by the news of the enemy crossing lower down. Accordingly, the Galli left part of their forces to watch the opposite camp, and sent another part up the river towards Metiedominum, as it is in Caesar's text, which is either a mistake for Melodium, or it is some place higher up the Seine than Paris. Either supposition will explain Caesar. The Galli led the rest of their forces to oppose the three legion which had crossed the Seine with Labienus, and, having attacked them, they defeated, dispersed, and dispersed. Labienus led his troops back to Agédenicum, where his stores and baggage were. This is the substance of Caesar's narrative, which is correctly explained by D'Auville (Noticia, etc. art. Melodium), and Ubert (Gallien, p. 476) has done well in following him. Some of the old critics completely misunderstood Labienus' movements; and even, of late years, the passage has been wrongly explained.

The Romans built both on the island La Cité and on both sides of the Seine, but the Roman memorials of Paris are very few. Some sculptured stones were dug up under the choir of Notre Dame. The inscriptions were of the time of Tiberius Caesar, and show that the Roman and Gallic deities were worshipped jointly. The remains of a subterranean aqueduct have been discovered both on the north and south sides of the river. The materials of the Roman city were doubtless employed for more recent constructions, and thus Roman Lutetia has disappeared.

LUTEVA. (Eth. Lutetian: Lodère), in Gallia Narbonensis, is placed by the Table, where the name is written Luteva, on a road from Arétia (Agde) to Segobodunum (Rhodes). Pliny (iii. 5) says, "Lutevani qui et Foronarcomemenses," whence it has been
can hardly that he means the Πορτοκάλιον mentioned by Ptolemy as being in the country of Seleucia in Cilicia. [Carpentoraste.] But the name Luteva, the modern name Loutre, and the Ifin, seem to determine the position of Luteva; and if Phleis is right, we must suppose that Luteva was also named Forma Neronis. [G. L.]

LUTIA (Aurcia), a considerable town of the Arcadians, in hispania Cisalpina, and studied by Appian (Hist. civ. 93. 94). The modern name is Luteria.

LUTTOMAGUS, a place in Noricum, according to the Table on a road from Samarcobava (4 times) to Cynothin Monasterium. The site is uncertain. D'Arville has followed Cuvier in writing the same Luttomagus; but it is Lintuagus in the Table. [G. L.]

LUXOR (Δοξά), a small river on the coast of hispania Baelo; between the Bacin (Gadohanicus) and the Arosc (Gauhochia; Plut. lib. 13. 6). [P. S.]

LUXORIUM. This name appears on some inscriptions; the modern name is Luxeuil, in the French department of the Upper Saône. Luxorium is on the Brenon, and it was warm but s. The name on the inscriptions is said to be Luxorium or Luxorivm. These inscriptions were published by Caylus, but they may not be genuine. In the life of St. Columban, written in the seventh century, Luxorivm is mentioned:—"Castrum quoque nunc possit, priscis temporibus Luxorivm nuncupatur, ubi etiam Therman eximio operae instruxerunt sancti. Mense primo natae baptismi, " (Arville, Notes, &c.; Warburton, Glog. vol. i. p. 320.) [G. L.]

LYCABETUS MONS. [Athelnae. p. 303, b.]

LYCAEA. [Lycaon.]

LYCAEUS or LYCEUS (γό Arkeion ὅπος, ὡς Arcadia: ἦσσ γυναῖκα τῆς Arcadia, in the district of Parthisia, from which there is a view of the greater part of Peloponnesus. Its height has been determined by the French Commission to be 4659 feet. It was one of the chief seats of the worship of Zeus in Arcadia, and on the summit of it there was an altar of Zeus, Lycaeus, together with a Hippodrome and a stadium, where games called Lycaean were celebrated in honour of Zeus (Arcus). These games are said to have resembled the Roman Lyciaea, and were sometimes celebrated by Arcadians when in foreign countries. (Plint. Cret. 61: Nov. Anab. 2. § 10.) Near the hippodrome was a temple of Pan, who is also called Lycaean. There are still remains of the hippodrome extending from S. to N.; and near its northern extremity there was an altar of a goddess, about 30 feet in length from E. to W. A little further W. is a rock called Heleus, apparently part of a temple; and near the south end of St. Elias is said to be the garden called Demeleus, where the altar of Zeus formerly stood. In the eastern part of the mountain stood the sanctuary and temples at Ap. Parthias or Phytias, and left of it is the sacred grove of the Cretans. (Paus. vol. 38: Plut. col. 143. 425; Theocr. iv. 121; Verg. Georg. vi. 18: liv. 314: Aen. vol. 344.) The place where St. Yma lived is Mr. Cereas (Ceratoeum), which was the birthplace of Mr. Lyceus. (Paus. vol. 41, § 83; comp. Strabo. p. 348.) Ceratoeum is shown by Ross to be N. of Tereias, and is only called Mt. Notos (Νοτος ὄρος), near Lykera (Paus. vol. 38. § 11.), was before a part of the Ascanian Terrae. Less: More: loc. iii. p. 313, s. P. Mem. loc. p. 244: Euseb. loc. in Ptolem. vol. i. pp. 88, 91; Curtius, Ptolem. vol. i. pp. 294, 338.)

LYCAONIA (γι Λοκανία: Ete. Anakm. Arcadia), a province of Asia Minor, bordering, in the east, on Cappadocia, in the south on Cilik, in the west on Pisidia and Phrygia, and in the north on Galatia. These frontiers, however, were not always the same, but the fluctuation becomes most perplexing at the time when Asia was under the influence of the Romans. It gave portious of Lycaonia sometimes to the one, and sometimes to the other; as the Romans, while they incorporated the greater part with the province of Cappadocia, whence Ptolemy (v. 6. § 16) treats it as a part of Cappadocia. The name Lycaonia, however, continued to be applied to the country down to a late period, as we see from Hierocles (p. 675) and other Christian writers.

Lycaonia is, on the whole, a plain country, but the southern and northern parts are surrounded by high mountains; and the north, especially, was a cold and bleak country, but very well adapted as pasture-land for sheep, of which king Archelaus is said to have possessed no less than 300 flocks. Their wood was rather coarse, but still yielded considerable profit to the proprietors. The country was also rich in wild ass. Its chief mineral product was salt, the soil down to a considerable depth being impregnated with salt. In consequence of this the country had little drinking-water, which had to be obtained from very deep wells, and in some parts was sold at a high price. This account of the country, furnished by Strabo (iii. 568), is fully confirmed by modern travellers. The streams which come down from the surrounding mountains do not form rivers of any importance, but unite in several lakes, among which the salt lake Tatta, in the north-east, is the most important.

The Lycaonians of Lycaonia, although Eustathius (ad Dionys. Per. 587) connects their name with the Arcadian Lycaon, according to which they would be Pelasgians, are never mentioned in his history, and the time of the expedition of Cyrus the Younger (306 B.C.), by which the Arcadians, who were passing through their country in five days, gave it up to plunder because they were hospitable. (Xen. Anab. 1. 2. § 19; comp. 2. 2. § 23, Cyr. cyp. vol. 2. § 200.) While the Lycaonians were, and to what branch of the human family they belonged, is uncertain; but from the Acts of the Apostles (xiv. 11) it appears that they speak a peculiar language. It is also well attested that they the Phrygians, they were a hardy and warlike race, which owned no submission to the Persian monarchs, and lived by plunder and force. (Dio. Per. 57. 1.) (Avien. 1020.) Their principal towns, which are few in number, and all of them appear to have been very small, were: IONINGI. LARBETICIA COMBRITA, DERRIO, ANTHOCHEIA, and LARANIA: the less important ones were Tyriam. V. VASATA, SOTRA, ILISTRA, and CHEROSAPAME. As to their early history, we know nothing about the Lycaonians; but they seem to have had gradual and advanced westward, for in time of Crouesus the Persians occupied the country as far as the river Hayes, and Nymphium reaches to the easternmost part of Phrygia, so that the Lycaonians must have continued their resistance in the western most while the Persians were in the west end after that time, for it is certain that the Persian was in the centre of Lycaonia. It has already been remarked that they were a people who fought against Persia, but afterwards they shared the fate
of all the other nations of Asia Minor, being successively
under the rule of Alexander the Great, the
Scythians, Antiochus, Emperors of Pergamus, and
finally under the Emperors. (Liv. xxi 54. xxviii. 33. 56.) Under this change of rulers, the character
of the people remained the same: daring and in-
tractable, they still continued their wild and lawless
habits, though in the course of time many Greek
seekers must have taken up their abode in the
Lycaonian towns. Under their chief Amyntas, how-
ever, whom Strabo even calls king, and who was his
own contemporary, the country acquired a greater
political consistency. [Dict. of Biogr. under Amy-
ntas. B.c. 156.] After the death of Amyntas, his
whole kingdom, which he had greatly extended,
fell into the hands of the Romans, who constituted
the greater part of Lycaonia as a part of their pro-
vince of Cappadocia.

We may add, that Strabo regards Isauria as a part
of Lycaonia. [Isauria.] [L.N.]

LYCASTUS (Λυκαστος; Eth. Λυκαστοριον), a town of Crete, mentioned in the Homeric catalogue
(I. ii. 647; comp. Pomp. Mela. ii. 7. § 13; Plin. iv. 12). Strabo (z. p. 479) says that it had entirely
disappeared, which he attributes to the devastation by the Cnossians. According to Polybius (xxii. 15)
the Lycaonian district was afterwards wrested from Cnossus by the Cretans, who gave it to the
neighbouring town of Rhucus. In Mr. Pashley's
map the site is fixed at Κανεωρία. (Hick. Crete,
vol. i. pp. 15, 414.) [E. B. J.]

LYCASTUS or LYCASTUM (Λυκαστος), a very
ancient town in Pontus, on a river bearing the same
name. It was situated 20 stadia south-east of Amasus.
(Asia Minor. vol. i. p. 747; Polyb. Peri. p. 35; Soc.
Peri. Pont. Eufr. p. 10; Steph. B. s. c. Xanth. v. 1; Plin.
vi. 3; Mela. i. 19, who calls it Lycastor.) Place-names
(ap. Schol. ad Apoll. Rhod. ii. 373, comp. ad ii.
101) spoke of a town of Lycaonia, inhabited by
Amazons, and situated between Thersemys and
Canaea. The river Lycaus was but a small stream,
which after a short course emptied itself into the
Exoite chas. by the town of Lycaus. (Syyl. Marisc. Pinn. ill. cc.)

LYCNIA (Ληκνια), Ath. v. 303, b.)

LYCHNIDUS (Λιχνίδος; Eth. Λιχνίδων, Λυ-
χνίτης, Steph. B.; Ptol. iii. 13. § 32), the chief town
of the Larissaeans in Lycaonia. From its position
on the frontier it was always a place of considerable
importance, and the name frequently occurs in the
wars of the Romans with Philippus V. and Perseus,
kings of Macedonia. (Liv. xxvii. 32. xxxii. 34.
xiii. 9, 10, 21; Apoll. Polyb. xviii. 30.) After-
wards it continued to be, as on the Cilician way
described by Polybius (Λιχνίδων, xxxiv. 12), one of
the principal points on the Egyptian road. (Strab.
in the Jerusalem Itinerary the original reads Cedro.)
Under the Byzantine empire it appears to have been
a large and populous town, but was nearly destroyed
by an earthquake during the reign of Justinian.
ed. Bonn; Niep. Callist. xvi. 3.) Lychnides, which
from the data of the Itineraries must be placed near
the N. extremity of the Lycaonian district, on its
E. slopes, is also mentioned by the geographer, (Pub.
h. xvi. p. 281), was afterwards replaced by the more
northerly Achidna (στυγν Λιχνίδα, Ουρώνια, Αχι-
δνας, of the Byzantine writers; Anna Comm. xiii. p. 371; Ce-
the capital of the Bulgarian empire. Some geo-
graphers have supposed that Achidna is the same
as Justiniana; this identification, which is a mis-
take, has arisen from the circumstance that the
metropoleis of Achidna called themselves after the
emperor Justinian. [Just. vii. 1; Kastend. (SchAFAR., Stor. Alt. vol. i. p. 227.) The Slavonic name survives in the modern
Akrhilna, on the NE. shores of the lake. [E. B. J.]

LYCHNITIS. 1. (Ἀχιδνίτης; Λιχνίτης).

LYCIA (Λυκία; Eth. Λυκίον), a country on the
south coast of Asia Minor, forming part of the
region now called Tekke. It is bounded on the
west by Caria, on the north by Phrygia and Pisidia, and
on the north-east by Pamphylia, while the whole
of the south is washed by the part of the Medi-
terranean called the Lycian sea. The western
frontier is formed by the river Glanum and Mount
Dysopia (Strab. xiv. p. 664), the northern by the
range of Mount Taurus, and the eastern one by
Mount Climax. The whole extent of the country,
from east to west, amounts, according to Strabo, to
1720 stadia; this measurement, however, must have
been made along the line of coast, for a straight line
from east to west does not amount to more than one-
half that distance. Its extent from the sea to the
northern boundary is different in the different parts,
but is everywhere smaller than that to east to west.
Until very recently, Lycia, with its rich
remains of antiquity, was almost a terra incognita,
—having never been visited by European travellers,
until Sir Charles Fellows, in 1858, and a second
time in 1840, travelled the country; since which
time it has been explored and described by several
other men of learning and science, whose works
will be noticed below.

1. Name of the Country. — The name Lycia and
Lycians is perfectly familiar to Homer. In the
poet appears to have been better acquainted with
Lycia than with some other parts of Asia Minor, for
he knew the river Xanthus and Cape Chimaera.
(II. vii. 171. 8c, c. 430. xii. 312 &c, Od. v. 282,
and elsewhere.) But, according to Herodotus (i.
173), the ancient name of the country had been
Mylia (Μύλια), and that of the inhabitants
Solymos (Σολύμων), and Trebile or Tereblia (Τρε-
βίλια or Τρεβίλια). These latter are said to
have been conquered, and expelled from the coast
districts by Sarpedon, the brother of Minos, who,
with a band of Cretans, invaded the country and
conquered it, but without changing either its name
or that of the people. But in his reign, Lycus, the
LYCIA.

The inhabitants of Lycia, as we have seen above, were the Solymi, who are generally believed to have been a Phoenician or Semitic race. We are not informed why these Solymi were called Termilae; but the probability is, that the Solymi and the Termilae were two different tribes occupying different parts of the country at the same time, and that while the Solymi were driven into the northern mountains by the invaders, the Termilae were subdued, and received from their conquerors the name of Lycians. This seems clearly to follow from the account of Herodotus and the fragments quoted by Stephens Buxantius. The Termilae were no doubt as foreign to the Hellenic stock of nations as the Solymi. The conquerors of the Termilae, that is the Lycians proper, are said to have come from Crete, which, before its occupation by the Dorians, was inhabited by barbarous or non-Hellenic tribes, whence it follows that the conquering Lycians must likewise have been barbarians. Their struggles with the Solymi appear to have lasted long, and to have been very severe, for Bellerophon and other mythical heroes are said to have been fighting against the warlike Solymi. (Hom. II. vi. 184, Od. vi. 263.) From the recently discovered Lycian inscriptions, composed in an alphabet partly Greek and partly foreign, it has been inferred, that after the conquest of Lycia by the Persians, the great body of the nation changed its character, at least in some parts, which are supposed to have been occupied by Persians; and this theory is believed to derive support from the Lycian inscriptions, which Mr. Sharpe and others believe to contain a language akin to the Persian. Thus by its freedom from all foundation, for we never find that the Persians colonised the countries conquered by them, and the Lycian language is as yet utterly unknown. All we can say is, that the Lycian alphabet seems to be a variety of the Graeco-Phoenician or Graeco-Semitic character, and that there is no evidence to show that in the historical ages the Lycians changed their character as a nation. They were and remained barbarians in the Greek sense, though they adopted and practised to a great extent the arts and modes of civilised life, such as they existed among the Greeks.

4. Institutions, etc. of the Lycians. — In the Homeric poems the Lycians appear as governed by kings (Hom. H. vi. 173; Dict. of Biog., s. v. Sarpedon); but in the historical times we find Lycia as a confederation of free cities, with a constitution more wisely framed perhaps than any other in all antiquity. An authentic account of this constitution has been preserved by Strabo. It was the political unity among the towns of Lycia that made the country strong and enabled it to fight against the encroachments of Croesus, while all the surrounding nations were compelled to own his sway. When and by whom this federal constitution was devised, we are not informed, but it reflects great credit upon the political wisdom of the Lycians. They were a peaceable and well-conducted people, and took no part in the piracy of their maritime neighbours, but remained faithful to their ancient institutions, and on this account were allowed the enjoyment of their free constitution by theRomans. It was under the dominion of this state that Strabo saw its working. The confederacy then consisted of 23 towns, from which the deputies met in a place fixed upon each time by common consent. The six largest towns, Xantius, Pataraya, Pinara, Olympius, Myra, and Tylos, had each three votes at the common diet; the towns of more moderate size had two, and the remaining small places one each. The executive of the confederacy was in the hands of a magistrate called Lycarch (Λυκαρχός), whose election was the first business of the congress, and after which the other officers of the confederacy were chosen. The judges, also, as well as the magistrates, were elected from each city according to the number of
LYCIA.

its votes; taxation and other public duties were regulated on the same principle. In former times, the deputies constituting the council had also decided upon every war, and in all other affairs; but this of course ceased when Lycia acknowledged the supremacy of Rome. This happy constitution lasted until the time of the emperor Claudius, when Lycia became a Roman province, as is mentioned below. (Strab. xiv. p. 664, &c.) The laws and customs of the Lycians are said by Herodotus to have been partly Carian and partly Cretan; but in one point they differed from all other men, for they derived their names from their mothers and not from their fathers. If any one was called to give an account of his parentage, he enumerated his mother, grandmother, great-grandmother, &c. (Herod. i. 173.) Herodotus (vii. 92), in describing their armour, mentions in particular, hats with plumes, greaves, short swords, and sickles. Respecting the religion of the Lycians nothing is known, except that they worshipped Apollo, especially at Patara; but whether this was the Greek Apollo, or a Lycian god identified with him, cannot be said with certainty, though the former is more probable, if we attach any meaning to the inscriptions. The sacred name of the Lycian language, the Lycian and Greek, shows that the latter language had become so familiar to the people that it was thought desirable, or even necessary, to employ it along with the vernacular in public decrees and laws about and after the time of the Persian wars; and it must have been this circumstance that stopped or prevented the development of a national literature in Lycia. The influence of Greek literature is also attestable by the theatres which existed in Lycia, though in what was called the Thespian order. The Laws, in which the Lycians were to be governed, must have been performed, and have been understood and enjoyed by the people. In the arts of sculpture and architecture, the Lycians attained a degree of perfection but little inferior to that of the Greeks. Their temples and tombs abound in the finest sculptures, representing mythological subjects, or events of their own military history. Their architecture, especially that of their tombs and sarcophagi, has quite a peculiar character, so much so that travellers are thereby enabled to distinguish whether any given place is really Lycian or not. These sarcophagi are adorned by a structure with pointed arches, and richly decorated with sculptures. One of these has been brought to this country by Sir C. Fellows, and may now be seen in the British Museum. The entrances of the numerous tombs cut in the faces of lofty rocks are formed in the same way, presenting at the top a pointed arch, which has led Sir C. Fellows to compare them to Gothic or Elizabethan architecture. If we examine the remains of the towns of Patara and Tlos, in the way of Sir C. Fellows, Texier, and Forbes and Spratt, we cannot avoid coming to the conclusion that, in all the arts of civilised life, the Lycians, though barbarians, were little inferior to the Greeks.

6. History.—Lycia and the Lycians act rather a prominent part in the Homeric account of the Trojan War, where they are described as the allies of the Trojans. Sarpedon and Glaucus, are the two Lydian heroes in the war; but the part was minnow also with the earlier legends of Lycia,—as that about Bellerophon, which he introduces into the parley between Glaucus and Diomed. Pandarus, another hero on the side of the Trojans, came from a district about the river Aespeus, which was likewise called Lycia, and which was supposed by the ancient commentators to have been peopled by colonists from Lycia, the subject of this article (II. ii. 824, &c., iv. 91, v. 165; comp. Strab. xii. p. 572. xiii. p. 989); and when and why the Lycians settled in those districts, is a matter of some time when, and the circumstances under which, Lycians settled in Troas. During the period from the Trojan times down to the Lydian conquests under Croesus, the Lycians are not mentioned in history; but that conqueror, who was successful in all other parts of Asia Minor, failed in his attempts upon the Lycians and Cilicians. (Herod. i. 28.) When Cyrus overthrew the Lydian monarchy, and his general Harpagus invaded the plain of the Xanthus, the Lycians offered a determined resistance; but when it was found that both history and tradition are scarce and indefinite as to the situation, the men of Xanthus assembled in the citadel their women, children, slaves, and treasures, and then set fire to them. They themselves then renewed the fight against the enemy, but all perished, except a few Xanthians who happened to be absent during the battle. [XANTHUS.] Lycia thence became a part of the Persian monarchy, but, like all Persian provinces, retained its own constitution, being obliged only to pay tribute and furnish its contingents in the Persian wars. In the revolt of the Asiatic Greeks, the men of Xanthus assembled in the citadel their women, children, slaves, and treasures, and then set fire to them. They themselves then renewed the fight against the enemy, but all perished, except a few Xanthians who happened to be absent during the battle. [XANTHUS.] Lycia thence became a part of the Persian monarchy, but, like all Persian provinces, retained its own constitution, being obliged only to pay tribute and furnish its contingents in the Persian wars. In the revolt of the Asiatic Greeks, the men of Xanthus assembled in the citadel their women, children, slaves, and treasures, and then set fire to them. They themselves then renewed the fight against the enemy, but all perished, except a few Xanthians who happened to be absent during the battle. [XANTHUS.] Lycia thence became a part of the Persian monarchy, but, like all Persian provinces, retained its own constitution, being obliged only to pay tribute and furnish its contingents in the Persian wars. In the revolt of the Asiatic Greeks, the men of Xanthus assembled in the citadel their women, children, slaves, and treasures, and then set fire to them.
LYCIA.

LYCO or LYCOA, a small town of Hispiana Baetica, mentioned only by Livy (xxxvii. 47). [P. 85.]

LYCOA (Λυκοά), a town of Arcadia in the district Macedi, at the foot of Mt. Macedonia, with a temple of Artemis Lyceas. It was in ruins in the time of Panainos, and is represented by the Palolokastron between Arachna and Kardereiki. (Paus. viii. 34. § 4. 36. § 7; Steph. B. s. c.; Leake, Descrip. ii. p. 82; Boldyae, Recherches, ou. p. 171; Ross, Recit en Peloponnese, p. 120; Curius, Peloponnes, vol. i. p. 358.) There was another Lycoa not far from the Alpheios, near its junction with the Lissus or Gortynus, at the foot of Mt. Lycaus. (Pol. xvi. 17.) It has been conjectured that the proper name of the latter of these towns was Lyceas, since Panainos (viii. 27. § 4) speaks of the Lyceaeae (Λυκεανθρα) as a people in the district of Gymnias, and Stephainos mentions a town Lyceas (Λυκεας). (Leeke, Morea, vol. ii. p. 304.)

LYCOCNE (Λυκοκνη), a mountain of Arcolis, on the road from Argos to Tegea. (Paus. ii. 24. § 6.)

[See Vol. i. p. 201, h.]

LYCOTOLIS (Λυκότολις), of the Hellenes, in lat. 27° 10' 14'' N.; the modern K Soviet, on the western side of the Nile. The shield of a king named Reennan, who reigned in Uj Per Egypt, probably during the shepherd dynasty in the Lower Country, has been discovered here. (Rosellini, Mon. Clr. i. 81. Lycopolis has no remarkable ruins, but in the excavated chambers of the adjacent rocks are found mummies of wolves, confirming the origin of its name, as well as a tradition preserved by Dioscorus (ii. 88; comp. Aelian. Hist. An. x. 28), to the effect that an Aethiopian army, invading Egypt, was repulsed beyond the city of Lycaon by herdsmen of wolves. Osiris was worshiped under the symbol of a wolf at Lycopolis: he having, according to a myth, come from the shades under that form, to aid Isis and Herus in their combat with Typhon. (Champollion, Descrip. de l'Egypte, vol. i. p. 276; Jobb, Egypte, vol. ii. ch. 13.)

2. The Deltaic Lycopolis (Λυκοπολίς), Strab. xvii. p. 802; Steph. B. c. s.), was an insignificant town in the Schemytne nome, in the neighbourhood of Moches, and, from its appendage, apparently founded by a colony of Osiran priests from Upper Egypt. The Deltaic Lycopolis was the birthplace of the Neo-Platonic philosopher Plotinus, A.D. 265. (Sidky, p. 3015.)

LYCOSERIA. [Delphi, p. 768.]

LYCOSURA (Λυκόσωρα: Eth. Λυκόσωραί), a town of Arcadia, in the district Parrhasia, at the foot of Mt. Lycaonas, and near the river Pelianstan (Gastrictis), on the road from Megalopolis to Phigalia. It is called by Panainos the most ancient town of Arcadia, and is said to have been founded by Lycomenes, son of Pelasgus. It was in ruins in the time of Panainos, since its inhabitants had been transplanted to Megalopolis upon the foundation of the latter. The remains of this town were first discovered by Diodorus, near the village of Staota, and have since been more accurately described by Ross. The ruins are called Palakrombras and Sanderkastron. (Paus. vii. 28. § 1, viii. 4. § 5, viii. 38. § 1; Diod., Travels in Greece, vol. ii. p. 305; Leake, Morea, vol. ii. p. 312; Ross, Recit en Pel-
LYCIA.

ponnes, p. 87; Curtius, Peloponnesos, vol. i. p. 295.)

LYCUS, LYTTUS (Δόκτωρ, Δόκτως : Εθν. Δόκτωρ, Δόκτως, Pol. iii. 17. § 10), one of the most considerable cities in Lycia, which the ancients called Hierocles in the Homeric catalogue. (H. ii. 647, xvii. 611.) According to the Hesiodic Theogony (Theog. 747), Rheia gave birth to Zeus in a cave of Mt. Aegaeon, near Lycus. The inhabitants of this ancient Doric city called themselves colonists of Sparta (Arist. Pol. i. ii. 7), and the worship of Apollo appears to have prevailed there. (Callim. Hymn. Apollo, 33; comp. Müller, Dorians, vol. i. pp. 141, 227, trans.) In b. c. 344, Phalaecus the Phocian assisted the Cnossians against their neighbours, and took the city of Lycus, from which he was driven out by Archidamus, king of Sparta. (Istod. xvi. 62.) The Lycians, at a still later period, were engaged in frequent hostilities with Cnossus, and succeeded in creating a formidable party in the island against that city. The Cnossians, taking advantage of their absence on a distant expedition, surprised Lycus, and utterly destroyed it. The citizens, on their return, abandoned it, and found refuge at Lampa. Polybius (iv. 53, 54), on this occasion, bears testimony to the high character of the Lycians, as compared with their countrymen. They afterwards recovered their city by the aid of the Gortyrians, who gave them a place called Dia-tonion, which they had taken from the Cnossians. (Polyb. xxiii. 15, xxiv. 53.) Lycus was sacked by Metellus at the Roman conquest (Liv. Epit. xci.; Flor. iii. 7), but was existing in the time of Strabo (s. p. 479) at a distance of 80 stadia from the Libyan sea. (Strab. p. 476; comp. Steph. B. s. v.; Strab. p. 18; Plin. iv. 12; Hesych. s. v. Λυκος, Αρχιδαμος ήτοι ή την ακροπολιν Λυκου.) The site still bears the name of Λύκτο, where ancient remains are now found. (Pashley, Trav. vol. i. p. 269.) In the 16th century, the Venetian MS. (Musa. Class. Ant. vol. ii. p. 274) describes the walls of the ancient city, with circular bastions, and other fortifications, as existing upon a lofty mountain, nearly in the centre of the island. Numerous vestiges of ancient structures, tombs, and broken marbles, are seen, as well as an immense arch of an aqueduct, by which the water was carried across a deep valley by means of a large marble channel. The town of Anxone, and the harbour of Chersonesus are assigned to Lycus. The type on its coins is usually an eagle flying, with the epigraph ΑΣΗΝΩΝ. (Eckhel, vol. ii. p. 316; Höck, Kreta, vol. i. pp. 13, 408, vol. ii. pp. 431, 446, vol. iii. pp. 430, 465, 508.) [E. B. J.]

LYCUS (Δόκτωρ), is the name of a great many rivers, especially in Asia, and seems to have originated in the impression made upon the mind of the beholder by a continual rushing down the side of a hill, which suggested the idea of a wolf rushing at his prey. The following rivers of this name occur in Asia Minor: —

1. The Lycus of Bithynia: it flows in the east of Bithynia in a western direction, and empties itself into the Euxine a little to the south of Heraclea Pontica, which was twenty stadia distant from it. The breadth of the river is stated to have been two stadia, and the plain near its mouth bore the name of Campus Lycus. (Sicyon, p. 34; Orph. Ar. god. 720; Arm. Perip. p. 14; Anonym. Perip. p. 3; Xenoph. Anab. vi. 2. § 3; Ov. Epist. ex Pont. x. 47; Memnon, ap. Phot. 51; Plin. vi. 1, who erroneously states that Heraclea was situated on (opusitum) the river.)

2. The Lycus of Cilicia is mentioned only by Pliny (v. 22) as flowing between the Pyramus and Piraeus.

3. The Lycus of Lydia was a tributary of the Hermus, flowing in a south-western direction by the town of Thyateira: whether it emptied itself directly into the Hermus, or only after its juncture with the Hyllus, is uncertain. (Plin. vi. 31; comp. Wheel. vol. i. p. 233; P. Lucas, Troisieme voyage, vol. i. p. 139, who, however, confounds the Lycus with the Hermus.)

4. The Lycus of Phrygia, now called Teheruk-Su, is a tributary of the Maeander, which it joins a few miles south of Tripolis. It had its sources in the eastern parts of Mount Cadmus (Strab. xiv. p. 578), not far from those of the Hermus itself, and flowed in a western direction towards Colophon, near which place it disappeared in a chasm of the earth; after a distance of five stadia, however, its waters reappeared, and, after flowing close by Laodicia, it discharged itself into the Maeander. (Herod. vii. 30; Plin. v. 29; Pol. vi. 2. § 8; Hamilton, Researches, vol. i. p. 508, &c., and Journal of the Royal Geogr. Soc. vii. p. 60, who re-discovered the chasm in which the Lycus disappears, amid the ruins near Cloreg.)

5. Pontus contains two rivers of this name: —

(a.) A tributary of the Iris in the west, is now called Kulei Hisper. It has its sources in the hills of Lesser Armenia, and, after flowing for some time in a south-western direction, it turns towards the north, passing through Nicopolis, and emptying itself into the Iris at Magnopolis. The Lycus is almost as important a river as the Iris itself (Strab. xi. p. 529, xii. p. 547, 556; Plut. Lucul. 13; Plin. vi. 3. 4; Ov. Epist. ex Pont. iv. 16. 47; Hieroc. p. 703; Act. Matthias, vol. iii. Jul. p. 46.). A tributary of the Acampus or Apsarhais, in the eastern part of Pontus, and is believed to answer to the modern Gorgoro. (Pol. vi. 6. § 7)

6. According to Curtius (iii. 1), the river Mar-syas, which flowed through the town of Celanae, changed its name into Lycus at the point where it rushed out of the f r i c t ions of the place. [L. S.]

LYCUS (Αξώρ), a river of Assyria, also called Zabatas. [ZABATUS.] LYCUS (Αξώρ), a river of Syria, between an- cient Bybium and Berytus. (Strab. xv. p. 755; Plin. v. 20.) Although both these geographers mention the river Alesinus as distinct from this, more to the north, between Palae-Byblius and Byblius, the two rivers have been sometimes confounded. Their

COIN OF LYCUS.

LYCURIAS (Ανακωχαί), a village in Arcadia, which still retains its ancient name, marks the boundaries of the Pheneagae and Clariori. (Paus. viii. 19. § 4; Leake, Morea, vol. iii. p. 143; Boblaye, Recerchees, &c. p. 156; Curtius, Peloponnesos, vol. i. p. 198.)
LYCUS.  

Wolf-river is plainly identical with the Dog-river of the present day (Nahr-el-Keb), about 2 hours' south of Beirut; which derives its name, says Maundrell, from an idol in the form of a dog or wolf, which was worshipped, and is said to have pronounced oracles, at this place. It is remarkable for an ancient viaduct cut in the face of a rocky promontory immediately on the south side of the work of Antoninus Pius, as a Latin inscription, copied by Maundrell, and still legible, records (Journey, March 17, pp. 35-37). Conformable inscriptions and figures resembling those found at Behistun [Bagistanus Mons] would seem to indicate that the Roman emperor did but repair the work of some Persian king. There are casts of the inscriptions and figures in the British Museum.  

[O. W.]

LYCUS (Asow), a river of Surnatta, which flows through the country of the Thapsiadectans, and discharges itself into the Palmus Medius. (Herod. iv. 124.) Herodotus was so much in error about the position of the Maeotis, that it is difficult to make out his geography here. The Lycus has been identified with the Lagares of Phiny (vi. 7), or the upper course of the Volonta. (Comp. Schafarik, Svar. Alt. vol. i. p. 499.) Kennell (Greg. of Herod. vol. i. p. 119) supposes it may be the Medecultan. It must be distinguished from the Lykos of Poleyn (iii. 5. § 13), which is the modern Kulimts. (Schafarik, Svar. Alt. vol. i. p. 134.)

LYCUS (Asow, Ptol. v. 14. § 2), a river of Cyprus, W. of Amanthus. At a little distance inland from Cape deli' Gatte [Curtas] are some salt marshes, which receive an arm of a river corresponding with the Lykos of Poleyn. (Engel, Kappros, vol. i. 37.)

LYDIA. [Diospolis.]

LYDIA (Iliada: Eth. Abdoi, Lydus), a country in the western part of Asia Minor. Its boundaries varied at different times: Originally it was a small kingdom in the east of the Phrygian colony; but during the period of the Persian dominion it extended to the south as far as the river Maeander, and, perhaps, even to Mount Mesegeus, whence some writers speak of the Carian towns of Arcosia, Trales, Nysa, and Magnesia on the Maeander, as Lydian towns, and Strabo (xii. p. 577) mentions the Maeander as the frontier between Lydia and Caria. To the east it extended as far as the river Lycus, so as to embrace a portion of Phrygia. In the time of Ctesias, the kingdom of Lydia embraced the whole of Asia Minor between the Aegean and the river Halys, with the exception of Cilicia and Lydia. The limits of Lydia during the Roman period are more definitely fixed; for it bordered in the north on Mysia, from which it was separated near the coast by the river Hermes, and in the inland parts by the range of Mount Tmolus; to the east it bordered on Phrygia, and to the south on Caria, from which it was separated by Mount Mesegeus. In the west it was bounded by the Aegean (Plin. v. 39; Strab. i. p. 58, ii. p. 130, xii. pp. 572, 577, &c.), whence it is evident that it embraced the modern province of Samothrace and the northern part of Siphylis. This extent of country, however, includes also Ionia, or the coast country between the mouth of the Hermus and that of the Maeander, which was, properly speaking, no part of Lydia. [Ionia.]

1. Physical Features of Lydia.—In the southern and western parts Lydia was a mountainous country, being bounded on the south by the Messogetes, and traversed by the range of Tmolus, which runs parallel to it, and includes the valley of the Caystrus. In the western parts we have, as continuations of Tmolus, Mounts Dracos and Olympus, in the north of which rises Mount Sipylos. The extensive plains and valleys between these heights are traversed in a western direction by the rivers Caystrus and Hermus, and their numerous tributaries. The whole country was one of the most fertile in the world, even the sides of the mountains admiring of cultivation; its climate was mild and healthy, though the country has at all times been visited by severe earthquakes. (Xenoph. Cyrop. vi. 2. § 21; Strab. i. p. 58.) Its most important productions were an excellent kind of wine, saffron, and gold. The accounts of the ancients about the quantity of gold found in Lydia, from which Creesus was believed to have derived his wealth, are so doubt exaggerated, for in later times the sand of the river Pactolus contained no gold at all, and the proceeds of the gold mines of Mount Tmolus were so small as scarcely to pay for the labour of working them. (Strab. xiii. p. 591.) The plains about the Hermus and Caystrus were the most fertile parts of the country, if we except the coast districts of Ionia. The most celebrated of these plains and valleys bore distinct names, as the Chelidianian, the Caystrian, the Hyrcanian; and the Caycasaean. Some of these plains also contained lakes of considerable extent, the most important of which are the Gygaeia Lucus, on the north of the Hermus, and some smaller ones in the neighbourhood of Ephesus, which were particularly rich in fish. The capital of the country at all times was SARDIS.

2. Names and Inhabitants of the Country.—In the Homeric poems the names Lydia and Lydians do not occur; but the people dwelling about Mount Tmolus and Lake Gygeus, that is the country afterwards called Lydia, near the name Meones or Meonos (Meyers, ii. 865, v. 43, x. 431), and are allied with the Trojans. The earliest author who mentions the name Lydians is the lyric poet Musæus (Fragm. 14, ed. Bergk), whose native city of Colophon was conquered by the Lydians. Herodotus (i. 7) states that the people originally called Meonos afterwards adopted the name of Lydians, from Lydus the son of Atys; and he accordingly regards Lydians and Meonians as the same people. But some of the ancient writers, as we learn from Strabo (xii. p. 572, iv. p. 679), considered them as two distinct races,—a view which is unquestionably the correct one, and has been adopted in modern times by Niebuhr and other inquirers. A change of name like that of Meonians into Lydians alone suggests the idea of the former people being either subdued or expelled by the latter. When once the name Lydians had been established, it was applied indiscriminately to the nation that had been conquered by them as well as to the conquerors, and hence it happens that later writers use the name Lydians even when speaking of a time when there were no Lydians in the country, but only Meonians. We shall first endeavour to show who the Meonians were, and then proceed to the more difficult question about the Lydians and the time when they conquered the Meonians. The Meonians unquestionably belonged to the Indo-European stock of nations, or that branch of them which is generally called Tyrrhenian or Pelasgian; for these latter "inhabited Lesbos before the Greeks took possession of those islands (Strab. v. p. 221,
LYDIA.

xii., p. 621), and, according to Monneret the Ebean, the whole coast of Ionia, beginning from Mycale, and of Aeolis. (Niebuhr, Hist. of Rome, vol. i. p. 32.) They no doubt extended beyond the coast into the interior of the country. The existence of a Pelasgian population is probably also implied in the statement that the most ancient dynasty, of Lydia was Hecatæidae, and that Lydia was a brother of Tyrrhenia. The Lydians, on the other hand, are expressly stated to have had nothing in common with the Pelasgians (Dionys. i. 30), and all we know of them points to more eastern countries as their original home. It is true that Herodotus connects the Heracleidae dynasty with that of Assyria, but if any value can be attached to this statement at all, it refers only to the rulers; but it may be as unconfirmed as his belief that most of the Greek institutions had been derived from Egypt.

The Lydians are described as a kindred people of the Carians and Mysians, and all three are said to have had one common ancestor as well as one common language and religion. (Herod. i. 171.) The Carians are the only one of these three nations that are mentioned by Homer. It is impossible to ascertain what country was originally inhabited by the Lydians, though it is reasonable to assume that they occupied some district near the Maeonians; and if it is certain that the Phrygians, who are said to have migrated into Asia from Thrace, may have pressed upon the Lydians, and thus forced them to make conquests in the country of the Maeonians. The time when these conquests took place, and when the Maeonians were overpowered or expelled, is conjectured by Niebuhr (Lect. on Anc. Hist. vol. i. p. 87) to have been the time when the Heracleidae dynasty was supplanted by that of the Mermnadæ, who were real Lydians. This would place the conquest of Maeonia by the Lydians about the year B.C. 720. The Maeonians, however, after this, still maintained themselves in the country of the Upper Hermus, which continued to be called Maeonia; whence Ptolemy (v. 2, § 21) speaks of Maeonia as a part of Lydia. Phiny (v. 30) also speaks of the Maeon as the inhabitants of a district between Philadæphus and Traeæ, and Hierocles (p. 670) and other ecclesiastical writers mention there a small town called Maeonia, which Mr. Hamil. (Cambridge Antiq. Journ. vol. i. p. 104) supposed to identify with the ruins of Megara, about five miles west of Sandal. To what branch of the human family the Lydians belonged is a question which cannot be answered, any more than that about their original seats; all the Lydian words which have been transmitted to us are quite foreign to the Greek, and their kinmen, the Carians, are described as a people speaking a barbarous language.

3. Institutions and Customs.—Although the Lydians must be regarded as barbarians, and although they were different from the Greeks both in their language and in their religion, yet they were capable, like some other Asiatic nations, of adopting or developing institutions resembling those of the Greeks, though in a lesser degree than the Carians and Lyicians, for the Lydians always lived under a monarchy, and never rose to free political institutions. They and the Carions were both gifted nations; they cultivated the arts, and were in many respects little inferior to the Greeks. Previous to the conquest by the Persians, they were an industrious, brave, and warlike people, and their cavalry was regarded as the best at that time. (Herod. i. 79; Munning, l. c.) Cyrus purposely crushed their warlike spirit, forbade them the use of arms, and caused them to practice dancing and singing, instead of cultivating the arts of war. (Herod. i. 154; Justin, i. 8.) The increasing power of monarchy was probably the reason why the Greeks ascribed to them the invention of gymnastic games. (Herod. i. 94.) The mode of life thus forced upon them by their conquerors gradually led them to that degree of effeminacy for which they were afterwards so notorious. Their commercial industry, however, continued under the Persian rule, and was a source of great prosperity. (Herod. i. 14, 25, 51, &c.) In their manners the Lydians differed but little from the Greeks, though their family institutions were more loose, and is manifest from the fact of their daughters generally gaining their dowries by public prostitution, without thereby injuring their reputation. (Herod. i. 93.) The moral character of the Lydian women necessarily suffered from such a custom, and it cannot be matter of surprise that ancient Greek authors speak of them with contempt. (Strab. xi. p. 583, xiii. p. 627.) As to the religion of the Lydians we know very little; their chief divinity appears to have been Cybele, but they also worshipped Artemis. At Erythæa and in the Attic islands, they had a great many shrines dedicated to the goddess. (Herod. ii. 182; Dionys. Perig. 842,) and the phallic worship seems to have been universal, whereas we still find enormous phalli on nearly all the Lydian tombs. (Hamilton's Researches, vol. i. p. 145.) The Lydians are said to have been the first to establish ins for travellers, and to coin money. (Herod. i. 94.) The Lydian coins display Greek art in its highest perfection; they have no inscriptions, but are only adorned with the figure of a lion, which was the tail-man of Sardis. We do not know what language they used, or had any alphabet or literature of their own; the want of these things can scarcely have been felt, for the people must at an early period have become familiar with the language and literature of their Greek neighbours.

4. History.—The Greeks possessed several works on the history of Lydia, and one of them was the production of Xanthus, a native of Sardis, the capital of Lydia; but all have perished with the exception of a few insignificant fragments. If we had the work of Xanthus, we should doubtless be well formed on various points on which we can now only form conjectures. As it is, we owe nearly all our knowledge of Lydian history to Herodotus. According to him (i. 7) Lydia was successively governed by three dynasties. The first began with Lydus, the son of Aty, but the number of its kings is not mentioned. The second dynasty was that of the Heracleidae, beginning with Agam, and ending with Candaules, whom the Greeks called Myrsilus. The commencement of the Heracleidae dynasty is about B.C. 1200; they are connected in the legend in Herodotus with the founder of Nineveh, which, according to Niebuhr, means either that they were actually descended from an Assyrian family, or that the Heracleidae dynasty submitted to the supremacy of the king of Nineveh, and thus connected itself with the race of Nineus and Behs. The Heracleids maintained themselves on the throne of Lydia, in an unbroken succession, for a period of 506 years. The third dynasty, or that of the Mermnadæ, probably the first really Lydian rulers, commenced their reign, according to some, in B.C. 713 or 716, and according to Eusebius, twenty-two years later. Giges,
LYCIA.

The first king of the Lycean dynasty, who is said to have married Candia, is a purely mythical personage, at least the story which Herodotus relates about him is nothing but a popular tradition. He reigned until B.C. 678, and conquered several of the adjacent countries, such as a great part of Mycia and the shores of the Hellespont, and annexed to his dominions the cities of Colophon and Magnesia, which had until then been quite independent of both the Maenicians and the Lydians. Gyges was succeeded by Arīis, who reigned from B.C. 678 to 629, and, continuing the conquests of his predecessor, made himself master of Priene. His reign, however, was disturbed by the invasion of his kingdom by the Cimmerians and Trebess. He was succeeded by Sadyattes, of whom nothing is recorded except that he occupied the throne for a period of twelve years, from B.C. 629 to 617. His successor Alyattes, from B.C. 617 to 560, expelled the Cimmerians from Asia Minor, and captured most of the Ionian cities.

In the east he extended his dominion as far as the river Haly, where he came in contact with Cyzareus the Mede. His successor Cremus, from B.C. 560 to 546, extended his conquests so far as to embrace the whole peninsula of Asia Minor, in which the Lyceans and Cionians alone successfully resisted him. He governed his vast dominions with justice and moderation, and his rule was scarcely felt by the subjects. But the Lydians and the Cimmerian and Persian monarchy were competing states, and separated from each other only by the river Haly, a conflict was unavoidable, and the kingdom of Lydia was conquered by Cyrus. The detail of these occurrences is so well known that it does not require to be repeated here. Lydia became annexed to the Persian empire. We have already noticed the measures adopted by Cyrus to deprive the Lyceans of their warlike character; but as their country was always considered the most valuable portion of Asia Minor, they continued to resist, under Lybian and some small tribes, apparently of Macedonian origin, together with the Myrians, treacherous traitors, and demanded from it an annual tribute for the royal treasury of 500 talents. (Hered. ii. 90.)

Sardae now became the residence of a Persian satrap, who seems to have ranked higher than the other governors of provinces. Afterwards Lydia shared the fate of all the other Asiatic countries, and was soon no longer so extensive, so that in the time of Strabo it still ranked (p. 631) even the language of the Lyceans had entirely disappeared, the Greek having taken its place. After the death of Alexander, Lydia was subject for a time to Antiochus, who set himself up as king at Sardae, but was afterwards overthrown and put to death by Antiochus. (Dio. v. 57.) After the defeat of Antiochus by the Romans, Lydia was annexed by them to the kingdom of Epirus. (Liv. xxxviii. 39.) At a still later period it formed part of the provinces of the last Roman Empire. (Dio. p. 590.) It was the political center of the Elymaeans, of the Parthians, and of the Huns, and was the last place of settlement of the Turks. (Comp. Th. L. Keil: Historische Einkünfte, Berlin, 344, svw. Cimmer. Aeg. Mavr., vol. ii. p. 413. F. Eich, Handb. d. Altertumer, 167, &c.; Chlomik, Eidech. Halle, Append., p. 361, No. 361 edit.; Xylof. Lectures on Ancient History, vol. i. p. 82, &c.)

LYDIANS. [Lydians.]

LYCIA, L. D., or L. D. (Λυκία, Λυκία), is the general name for a number of small tribes in the north-east of Germany, all of which belong to the Suevi. (Strab. vii. p. 290: Poly. ii. 11. § 18: Dion Cass. viii. 5: Tac. Germ. 43, Ann. xiii. 29. 30.) The ancients speak of them as a German nation, but there can be little doubt that, properly speaking, they were Slavonians, who had been subdued by the Suevi, and had gradually become united and amalgamated with them. Their name contains the root lyg-, which in the old German signifies a wood or marsh, and still has the same meaning in the Slavonic; it seems, therefore, to be descriptive of the nation dwelling in the plains of the Vistula and the Oder. The Lygii are first mentioned in history as belonging to the empire of Marobodus, when they were united with the Marcomanni and Hermunduri. When the Quadi rose against king Vannius, in A.D. 50, the Lygii and Hermunduri were still united, and opposed the influence of the Romans in Germany. (Tac. Ann. i. c.) In the reign of Domitian, about A.D. 84, they made war on the Quadi, their neighbours, who in vain sought the protection of the Romans. (Dion Cass. l. c.) After this time the Lygii disappear from history, and it is possible that they may have become lost among the Gothii. The different Lycean tribes, which are mentioned by Tacitus (Arii, Helvetes, Maromanni, Elvyri or Helvii, and Naharvali), seem to have held and defended their hold and country against the common yoke, the principal seat of which was among the Naharvali. The name of their two common gods was Alii, who were worshipped without images; and Tacitus observes that their mode of worship was free from all foreign admixture. Polenay mentions, as tribes of the Lygii, the Omanni, Buri, and Buri, who are either not noticed by Tacitus at all, or are classed with other tribes. (Comp. Wilhelm, Germanien, p. 242, &c.; Less, die Deutschen, p. 124; Lathiana, on Tacit. Germania, p. 158.) [L. S.]

LYCENCES. [CONCORDIAE, p. 237.]

LYCENCES (Λυκεντῖς, Strab. vii. p. 326: Poly. iii. 13. § 33), the country of the Lycecestae (Λυκεντικὰ, Thuc. ii. 99, iv. 83, 124: Strab. viii. pp. 323, 326), once a small independent kingdom, and afterwards a province of the Macedonian monarchy. This district was situated to the S. of the Pelagonia, and between that people, and the Eorodae. It was watered by the Ergon, and lay in the centre of the Egean Way, which connected Rome, Constantinople, and Jerusalem. The pass which separated Lyncestis from Eorodae, where Philip made his unsuccessful stand against the Romans, is described by Polybius (xxviii. 6) as ai eis ποιον Ἑσελαίαν ὑπερθεραμεναι, and Thucydides (iv. 83) calls a defile in the same mountains ἐκείνη τῆς Λυκανθίας, in relating the attempt of Perdiccas against Lyncestis, which ended in a separate negotiation between him and his ally Brasidas and Arrhabbenes king of the Lyncestes. (Thuc. iv. 83.) It was by the same pass in the following year that Brasidas effected his skilful and daring retreat from the united forces of the Lyncestae and Illyrians. (Ibid. iv. 124.)

According to Strabo (vii. p. 326), Irinia, the daughter of Arrhenbas (as he writes the name), was mother of Enrycie, who married Amyntas, father of Philip. Through this connection Lyncestes may have become annexed to Macedonia. The geography of this district is well illustrated by the operations of the consul Sulpicius against Philip, in the campaign of B.C. 200. (Liv. xxx. 3.) From the narrative of Livy, which was undoubtedly
LYRBE.

extracted from Polybius, as well as from the Itinera-
ries, it would appear that Lyncus comprehended that part of Upper Macedonia now called Filarion, and all the S. part of the basin of the Ergon, with its branches, the Beus and Olympus. As it is stated that the first enclosure of the Romans was at Lyncus on the river Beus, and as Lyncus is described as a town by Stephanus B. (though his description is evidently incorrect), it might be sup-
pposed that Heraclea, the chief town of this district, was sometimes called Lyncus, and that the camp of Sulpicius, which is Heraclea in its position. But though

the words "ad Lyncum statuit postu flamunh Bevum" (Liv. l. c.) seem to point to this identi-

fication, yet it is more likely that Lyncus is here used as synonymous with Lynceus, as in two other pas-
sages of Livy (xxvi. 25, xxxii. 9), and in Thucy-
dides (iv. 83, 124) and Plutarch. (Flaminius. 4.)

At or near Binatta are the mineral acidulous

waters of Lynceus, which were supposed by the ancient

possessors to possess healing qualities. (Ov. Met. xvi. 226; comp. Arist. Metaph. iii. 4; Paus. 1.

15p. viii. 1.) The theory of the waters of

Pisidia, mentioned by the poet Dionysius. There are coins of this place belonging to the reign of

Alexander Severus, and it occurs among the episo-
topic towns of Panamphita in the Not. Eccles. It is
clearly the same as the LYRBE (Λυρβής) of

Ptolemy, though he places the latter in Cilicia

Trachaea. (Dionys. Per. 838; Hieroc. p. 682;

Plut. v. 5, § 9; Crater, Asia Minor, vol. ii. p. 513.)

LYRBE or LYYRILEM (Λυρβής, Λυργήλης)

is a false reading for Asopaea, see

Kramer's Strab. vol. ii. p. 186), a town in the Argive,
distant 60 stadia from Argos, and 60 stadia from

Or

us, and situated on the road Cynemus, which ran from

Argos in a north-western direction along the bed of the

Inachus. [Argos, p. 201.] The town is said to have

been originally called Lynceus, and to have obtained

this name from Lynceus, who fled hither when all

his other brothers, the sons of Aegyptus, were mur-

dered by the daughters of Danaus on their wedding

night. He gave intelligence of his safe arrival in

to place his faithful wife Hypermenestra, by

holding up a torch; and she in like manner informed

him of her safety by raising a torch from Larissa,

the citadel of Argos. The name of the town was

afterwards changed into Lynceia from Lynceus, a son

of Atlas. It was in ruins in the time of Pausanias.

It remains may still be seen on a small elevation

on the left of the Inachus, at a little distance beyond

Neaera, on the road to Argos. (Paus. ii. 25, §§ 4, 5;

Apollod. ii. § 5; Strab. i. 6; Ross. Ross. in Ptol.

Pompeian., p. 138; Beloch, Reccherches, gr. p.

45; Leake, Morea, vol. ii. p. 414; Curtius, Pel-

ponnesus, vol. ii. p. 415.)

LYRNAS. [LYRENSUS, 2.]

LYRNEIUS (Λυρνίζως: Eihv. Λυρνίζως or

mentioned by Homer (II. ii. 690, xii. 60, xx. 92, 191), and described by Stephuus B. (c. r.) as one of

the eleven towns in Trachis, and Stabia (c. 4. p.

612) mentions that it was situated in the territory of

Thebe, but that afterwards it belonged to Andramyttium. Pliny (v. 32) places it on the river Evenus, near its sources. It was, like Thebe, a deserted place as early as the time of Strabo. (Comp. Strab. xiii. p. 564; Diod. v. 49.) About

4 miles from Koraurenes, Sir C. Fellows (Journ. of an Exc() in Asia Minor, p. 39) found several

columns and old walls of good masonry, which are,

is inclined to regard as remnants of the ancient

LYRBE.

2. A place on the coast of Pamphylia, which was

reported to have been founded there by the Trojan

Cilicians, who transferred the name of the Trojan

Lynneas to this new settlement. (Strab. xiv. 676.)

The town is also mentioned by Pliny (v. 26), who

places it on the Cataractae, and by Dionysius Perigegetes (873). The Stadiumus Maris Magni

(§ 204) calls it Lynas, and, according to the

French translators of Strabo (vol. iii. pt. 2, p. 369),

its site is identical with the modern Crusaniac.

An. 1.

3. An ancient name of the island of Teosides.

(Plin. v. 39.) [L. S.]

LYROPE. [LYRBE.]

LYSIAS (Λυσίας: Ethv. Λυσίαδης), a small town

in Phrygia, between Symbas and Prymnesus. (Strab. xii. p. 576; Plin. v. 29; Polr. v. 2. § 23;

Hieroc. p. 677.) No particulars are known about

the place, nor is its site ascertained, but we still

possess coins of Lysias. (Eickel, Doctr. Num. iii.

P. 167.) [L. S.]

LYSIMACHIA (Λυσιμαχία or Λυσιμάχης)

1. A small town in Myasis, mentioned only by Pliny

(v. 22), in whose time it no longer existed.

2. An important town on the north-eastern ex-

tremity of the Thracian Chersonesus, not far from the

Sinus Melas. It was built by Lysimachus in B. C. 309, when he was preparing for the last

struggle with his rivals; for the new city, being

situated on the isthmus, commanded the road from

Sestos to the north and the mainland of Thrace.

In order to obtain inhabitants for his new city,

Lysimachus destroyed the neighbouring town of

Cardia, the birthplace of the historian Hieronymus.

(Comp. xii. p. 134, vii. p. 331; Paus. i. 9. § 10; Diod.

xx. 29; Polyb. v. 34; Plin. H. N. iv. 18.) Lysimac-

hus re-doubt made Lysimachia the capital of his

kingdom, and it must have rapidly risen to great

splendour and prosperity. After his death the city

fell under the domination of Syria, and during the

wars between Seleucus Callinicus and Ptolemy Ener-

gites it passed from the hands of the Syrians into

those of the Egyptians. Whether these latter set

the town free, or whether it emancipated itself, is

uncertain, at any rate it entered into the relation of

sympathy with the Aetolians. But as the Aetolians

were not able to afford it the necessary protection, it

was destroyed by the Thracians during the war of

the Romans against Philip of Macedonia. Antiochus

the Great restored the place, collected the scattered

and enslaved inhabitants, and attracted colonists

from all parts by liberal promises. (Liv. xxii. 39, 40; Diod. Exc. de Vi. et Viti. p. 574.) This restor-

ation, however, appears to have been unsuccessful,

and under the domination of Rome it decayed more

and more. The last time the place is mentioned

under its ancient name, is in a passage of Ammianus

Marcellinus (xxiii. 8). The emperor Justinian re-

stored it and surrounded it with strong fortifications

q 4
LYSIMACHIA

COIN OF LYSIMACHIA IN THRACE.

LYSIMACHIA (Λυσίμαχια; Εθ. Λυσίμαχης; Παπαδάκης), a town of Attolia, situated upon the southern shore of the lake formerly called Hyra or Hydra, and subsequently Lysimachia, after this town. [Respecting the lake, see Attolia, p. 64, a.] The town was probably founded by Arsinoe, and named after her first husband Lysimachus, since we know that she enlarged the neighbouring town of Conope, and called it Arsinóe after herself. [Co-

Note.] The position of the town is determined by the statement of Strabo that it lay between Pheron and Conope, and by that of Livy, who places it on the line of march from Naupactus and Ceydon to Stratus. Its site, therefore, corresponds to Papadáke, where Leake discovered some Hellenic remains. It was deserted in Strabo's time. [Strab. p. 460; Pol. v. 7; Liv. xxxvi. 11; Steph. B. s. v.; Leake, Northern Greece, vol. i. pp. 122, 153.]

LYSIMELEIA. [SYLVACEA.]

LYSINOE (Λυσινοῦς) or LYSINIA (Λυσινία, Ptol. v. 5, § 5), a small town in the north of Phœlia, on the south of the Ascania Lacus, and west of Scythas. [Polib. Econ. de Leg. 32; Liv. xxxviii. 15; Hieroc. p. 680, who calls it Lyssias, Asveragia.] Lysinoe. [L. S.]

LYTHRA, a small river mentioned only by Livy (xxxvi. 15), which had its sources near the town of Lacus, in the west of Phœlia. [L. S.]

LYSTRA (Λυστρα ή, or τε), a town of Lycaonia or Isauria, which is mentioned by Pliny (v. 42; Etr. Lystroni) and Ptolemy (v. 4. § 12), and repeatedly in the New Testament History. [Acts, xiv. 8, 21; Tertul. iii. 11; comp. Hieroc. p. 675.] A bishop of Lystra was present at the Council of Chalcedon. Leake. [Leis Minor, p. 102] is inclined to place the town at Kilisma Norial, about 30 miles south of Isauria; but Hamilton (Researches, vol. ii. p. 319), with more appearance of probability, identifies its site with the ruins of Ka-

lahgh, which are generally believed to be the remains of Derbe. [L. S.]

LYTARKIS, a promontory in Northern Europe, mentioned by Pliny (vi. 12. s. 14). His text makes the promontory of Lytarmis, at one and the same time, a portion of the Celtic country and the extremity of the Belisarian range — the Belisarian mountains being the Creulian — "extra castra" (G. c. the Neptianus), "ultra qua Aquaeus indita Hyperboreos aliqui posuerent, pluribus in Europa dictata. Primum inde nescitur promontorium Celtica Lytarmis, flavius Carambuci, ubi lascata cum siderum vi Phaeno-

orum mentum deficient juda." In the eyes of the physical geographer, the extremity of the Creulian chain is either the island of Nora Zembida or the most northern portion of the district on the west of the sea of Ori.—the Ori being the Carambucis. In the usual maps, however, the Deicina is the Caram-

bucis, and Narsin Noss, on the east of the White Sea, the Lyxarnis Prom. [B. G. L.]

LYTUS. [LYCTUS.]

MAACA, BETH-MAACA v. ABEL BETH-

MAACA (Messýchos, Béth-ma'achá, 'Abel s'ionu ma'ax), a city of Palestine, placed by Eusebius and St. Ju-

rome on the road between Klethephoris and Jeru-

salém, 8 miles from the former, the site of which was certainly marked by a village named Almadҳ. It is clear, however, that the Abel Beth Maaca of the sacred writers could not have been situated so far south. It is first mentioned in 2 Samuel, xx. 14, c. as the city in which the rebel Sheba was besieged by Joab. From this passage, however, it may be gathered (1) that Abel was not identical with Beth-Maaca, for the copula is inserted between the names ("unto Abel and unto Beth-Maaca"); (2) that it was situated at the extremity of the land of Israel, for Joab " went through all the tribes of Israel" to come there. Abel then, which was, as "the wise woman called it," "a city and a mother in Israel" (ver. 19), was so called from its con-

tiguity to Beth-Maaca, (so Relia, Palaestina, p. 519); and this must have been situated near the northern frontier, for it is mentioned with Ijon and Dan, and Cinneroth and Naphtali (1 Kings, xv. 29), as one of the cities taken by Benhadad, king of Syria, from Basba, king of Israel; and two centuries later it was one of the cities of Israel first captured by Jehu-the-Pleaser, king of Israel. (2 Kingdoms, xv. 29.) Eusebius mentions three places named Abel:—1. a village three miles from Philha-

-delphia; 2. a city 12 miles east of Gadara; 3. another between Penas and Damascas. (Onomast. s. r.) Irelond justly remarks (l. c.) that if any one of these is to be taken as Abel of Beth-Maaca it must be the last-named; but that he is more dis-

posed to look for it in Galilee, to the west or south of Penas, rather than to the east or north, on the Damascas road. This view is perhaps confirmed by a comparison of 2 Chronicles, xxvi. 4, with 1 Kings, xv. 20; the Abel Beth Maaca of the latter being called Abel Maim, or " Abel of the Waters" in the latter, probably so named either from the sea of Cinneroth or from the sea of Galilee. Dr. Robinson suggests its identity with the modern village of Abiel, or Ilhe-l-Kabbi, or Abiel or Ilot el Haure, both situated in the Merj 'Ayun, which last name is certainly identical with the ancient Ijon, with which Abel Beth-Maaca is associated in 1 Kings, xxv, 20. (Robinson, Bib. Res. vol. iii. pp. 346, n. 2, 347, n. 1, and Appendix, pp. 136, 137, n. 1.)

Maacah is used as an adjective to Syria or Aram in 1 Chron. xix. 6, 7, but its situation is not de-

fined. (Ireland, Palaestina, p. 118.)

The existence of the Maacacites (Messýchos) on the east of Jordan, apparently between Bashan and Mount Hermon, contiguous to the Ge-Surites (Deut. iii. 14; Josh. xiii. 5, xiii. 11, 13) intimates that another city or district of the name Maacah was situated in that quarter. (G. W.)

MAAGH-AMMUM (Messýchos, Ptol. viii. 4, § 10, viii. 28, § 5), a considerable town in the island of Taprobane or Ceylon. Ptolemy calls it a
MAA RATH.

of Iliad, and may have derived its name from this city.

MAARATH, a city of Judah situated in the mountains, mentioned only in the book of Joshua (xv. 59). Reband (Palaeot. s. v. p. 879) says that a lofty mountain, Maroes, near the Dead Sea, may have derived its name from this city.

[Gi. W.]

MAARES [BABYLONIA, p. 362, s.]

MABOG. [HEPHEPOLIS].

MACAE (Maced., prog. of Arabia mentioned by Pliny (vi. 7 § 14), immediately within the Persian Gulf, as inhabiting the shores of the extensive bay of the Fish-eaters (Xyphophaganx). They occupied apparently the western shore of Cape Musseldon, as Pliny (vi. 26) states that the width of the strait from the promontory of Carmania to the opposite shore and the Macae, is 50 miles. They were bounded on the east by the Naritae (Narita) [EPIMARITAE]. Mr. Forster considers the Macae of Podery is a palpable contraction of the Namechaei of Pliny, and that this tribe is recovered in the Joraser Arabs, the most famous pirates of the Persian Gulf: (Geog. of Arabia, vol. ii. p. 225.) It is clear that the "Namaclerus praenomitorum" of Pliny (vi. 32) is identical with the modern Cape Musseldon, at which he places the Macae. (Comp. Strabo, p. 765.) He mentions a remarkable story in connexion with this place: that Numerous, who had been appointed prefect of Mesnea by King Antiochus, gained a naval victory over the Persians, and on the same day, on the tide receding, conquered them in a cavalry engagement, and erected on the same spot two trophies,—one to Neptune, the other to Jupiter.

[G. W.]

MACAE (Maced., one of the aboriginal tribes of the region Syrtica, on the N. Coast of Libya, on the river Cinup, according to Herodotus, who describes their customs (iv. 175; comp. Stryl. p. 46; Diod. iii. 48, Plin. vi. 23. s. 26; Sil. iii 273; Plut. iv. 3 § 37, calls them Macedon or Maced. Scytops). Polybius mentions Macae in the Carthaginian war (Vol. iii. 33.).

[PS.]

MACALLA (Maceda), an ancient city of Bruttium, where, according to Lycurphon, was the sepulchre of Philoctetes, to whom the inhabitants paid divine honours. (Lycoth. Alex. 927.) The author of the treatise De Mirabilibus, ascribed to Aristotle, mentions the same tradition, and adds that the hero had deposited there in the temple of Apollo Halius the bow and arrows of Hercules, which had, however, been taken by the Corinthians to the temple of Apollo in their own city. We learn from this author that Macalla was in the territory of Crotona, about 120 stadia from that city; but its position cannot be determined. It was doubtless an Oenotrian town: at a later period all trace of it disappears. (Pseud-Arist. de Mirabil. 107; Steph. B. s. r.; Schol. ad Lycoth. L. c.) [E. H. B.]

MACANIAE. [MACEDONIA].

MACARAS. [BRACADAS].

MACEREA (Marcaria, Eth. Maccaria), a town of Arcadia, in the district Pacharia, 22 stadia from Megalopolis, on the road to Phigaleia, and 2 stadia from the Alpheius. It was in ruins in the time of Pausanias, as its inhabitants had been removed to Megalopolis upon the foundation of the latter. (Paus. viii. 3 § 3, vii. 27. § 4, vili. 36. § 9; Steph. B. s. v.)

MACERIA (Maced.), that is, "the blessed" (island), a name given by the poets to several islands, such as CYPRUS, LESBOS, and RHODES; but also occurs as a proper name of an island in the south of the Arabian gulf, a little to the north of the gulf of Adene.

[MACATUAE (Maconura), a people in the extreme W. of Cyrenaica, on the border of the province of Africa, above the Velpi Montes. (Ptol. iv. 4 § 10.)

MACHEREB. [MACEDONIA].

MACCOCALINGAE. [CALINGAE].

MACCORAES. [MACEDONIA].

MACEDONIA (ἡ Macedonía), the name applied to the country occupied by the tribes dwelling northward of Thessaly, and Mt. Olympus, eastward of the chain by which Pindus is continued, and westward of the river Axios. The extent of country, indeed, to which the name is generally given, embraces later enlargements, but, in its narrower sense, it was a very small country, with a peculiar population.

I. Name, race, and original seats.

The Macedonians (Makedónes or Macedónes), as they are called by all the ancient poets, and in the fragments of epic poetry, owed their name, as it was said, to an eponymous ancestor; according to some, this was Macedon, son of Lycas, from whom the Arcadians were descended (Apollod. iii. 17 § 1), or Macedon, the brother of Magnes, or a son of Aesopus, according to Herod and Hellenus (opp. Const. Porph. de Theon. ii. 2; comp. Aelian. H. A. x. 48; Eustath. ad Dion. P. 247; Steph. B.). These, as well as the otherwise unsupported statement of Herodotus (L. 56), of the original identity of the Doric and Macedonian (Macedonian) peoples, are merely various attempts to form a genealogical connection between this semi-barbarous people and the rest of the Hellenic race. In the later poets, they appear, sometimes, under the name of MACER, Maces, or Macæus (Stil. Ital. viii. v. 22, 875; v. 16, 414, 652; Not. Sil. iv. 6. 106; Anson, de Clar. Græc. ii. 9; Gell. iii. 3). And their country is called MACÆA (Maceda, Hesych. s. r.; Eustath. ad Dion. P. l. c.).

In the fashion of wearing the mantle and arranging their hair, the Macedonians bore a great resemblance to the Illyrians (Strab. vii. p. 327), but the fact that their language was different (Polyb. xxvi. 8) contradicts the supposition of their Illyrian descent. It was also different from Greek, but more nearly so in the Macedonian dialect than in the many grammatical forms which are commonly called Aeolic, together with many Arcadian and Thessalian words; and what perhaps is still more decisive, several words which, though not found in the Greek, have been preserved in the Latin language. (Comp. Müller, Dorien, vol. i. p. 3, trans.) The ancients were unanimous in rejecting them from the true Hellenic family, but they must not be confounded with the armed plunderers—Illarians, Thracians, and Eprots, by whom they were surrounded, as they resemble more nearly the Thessalians, and other ruder members of the Grecian name.

These tribes, which differed as much in ancient
times as they do now, accordingly as they dwell in mountain or plain, or in soil or climate more or less kindly, though distinguished from each other, by having substantive names of their own, acknowledged one common nationality. Finally, the various sections, such as the Elymiae, Orestae, Lyceanians, and others, were swallowed up by those who were subsequently known as the Macedonians, who had their original centre at Aegeae or Edessa. (Comp. Græc. Hist. of Greece, c. xxv.)

Macedonia in its proper sense, it will be seen, did not touch upon the sea, and must be distinguished into two parts,—Upper Macedonia, inhabited by people about the W. range of mountains extending from the N. as far as Pindus, and Lower Macedonia about the rivers which flow into the Axius, in the earlier times, not, however, extending as far as the Axios, but only to Pella. From this district, the Macedonians extended themselves, and partly repressed the original inhabitants. The whole of the sea-coast was occupied by other tribes who are mentioned by Thucydides (ii. 99) in his episode on the expedition of the Thracians against Macedonia. There is some little difficulty in harmonising his statements with those of Herodotus (vii. 138), as to the original series of occupants on the Thracian gulf, anterior to the Macedonian conquests. So far as it can be made out, it would seem that in the earliest, viz. b.c. v., the narrow strip between the Peneius and Haliacmon, was the original abode of the Pieron Thracians; N. of the Peneius, from the mouth of the Haliacmon to that of the Axios, dwelt the Bottaiaci, who, when they were expelled by the Macedonians, went to Chalcidice. Next followed the Peoniomus, who occupied both banks of the Styrmon, from its source down to the lake near its mouth, but were pushed away from the coast towards the interior. Mygdonia, the lower country of the Axios, about the Thermaic gulf, was previously to the extension of the Macedonians, inhabited by Thracian Eodinians. While Upper Macedonia never attained to any importance, Lower Macedonia has been famous in the history of the world. This was owing to the energy of the royal dynasty of Edessa, who called themselves Heracleids, and traced their descent to the Teneimaiæ of Argos. Respecting this family, there were two legends; according to the one, the kings were descended from Cepheus, and according to the other from Perseus. The latter tale, which is given by Herodotus (vii. 137—139), bears much more the mark of a genuine local tradition, than the other which cannot be traced higher than Theopompus. (Dio Cassius ap. Syncell. p. 262.)

After the alleged foundation of the Macedonian kingdom, there is nothing but a long blank, until the reign of king Amyntas (about 520—500 B.C.), and his son Alexander (about 480 B.C.). Herodotus (c. c. comp. Thuc. ii. 100) gives a list of five successive kings between the founder Perdiccas and Alexander—Perdiccas, Arrhinnus, Philippos, Apoetas, Abraetas, Amyntas, and Alexander, the contemporary, and to a certain extent ally, of Nereus. During the reign of these two last princes, who were on friendly terms with the Persian monarchs, and afterwards with the emiricat Athens, Macedonia became implicated in the affairs of Greece. (Herod. i. 59, v. 94, vii. 136.)

Many barbarous customs, such as that of tattooing, which prevailed among the Thracians and Illyrians, must have fallen into disuse at a very early period. Even the usage of the ancient Macedonians, that every person who had not killed an enemy, should wear some disgraceful badge, had been discontinued in the time of Aristotle. (Pol. vii. 2, § 6.) Yet at a very late date no one was permitted to lie down at table who had not slain a wild boar without the nets. (Hegesander, ap. Athen. i. p. 18.) On the other hand, a certain spirit of adventure, personal valor, and a certain freedom of spirit, were the national characteristics of this people. Long before Philip organised his phalanx, the cavalry of Macedon was greatly celebrated, especially that of the highlands, as is shown by the tetradrachma of Alexander I. In smaller numbers they attacked the close array of the Thracians of Sitaules, relying on their skill in horsemanship, and on their defensive armour. (Thuc. ii. 100.) Teletinus the Spartan admired the cavalry of Elimeis (Xen. Hell. v. 2, § 31, v. 3, § 4); and in the days of the conquests of Asia, the custom remained that the king could not condemn any person without having first taken the voice of the people or of the army. (Polyb. v. 27; Q. Curt. vi. 8, § 25, vi. 9, § 34.)

II. Macedonia in the historic period till the death of Alexander.

This kingdom had acquired considerable power even before the outbreak of the Persian War, and, notwithstanding various temporary reverses, had gained considerable ground, when Alexander the Philhellene offered himself as a combatant at the Olympic games (Herod. v. 22; Justin. vii. 12), and honoured the poetry of Pindar (Sol. ix. 16). After that war Alexander and his son Peidicas appear gradually to have extended their dominions, in consequence of the fall of the Persian power in Thrace, as far as the Styrmon. Peidicas from being the ally of Athens became her active enemy, and it was from his instance that all the difficulties of Athens on the Thracian coast arose. The faithful Peidicas was succeeded by his son Archelaus, who first established forte-sea and roads in his dominions, and formed a Macedonian army (Thuc. ii. 100), and even intended to procure a navy (Sol. ix. 17), and had tragedies of Euripides acted at his court under the direction of that poet (Ael. V. H. ii. 21, xiv. 4), while his palace was adorned with paintings by Zenax (Ael. V. H. i. 14, xiv. 17). In b.c. 309, Archelaus perished by a violent death (Dios. xiv. 37; Arist. Pol. v. 8; Herod. v. 4) under the influence of a party of kings followers of whom we know little but the names. Orestes, son of Archelaus, a child, was placed upon the throne, under the guardianship of Aironus. The latter, however, after about four years, made away with his ward, and reigned in his stead for two years; he then died of sickness, and was succeeded by his son Panamnos, who, after a reign of only one year, was assassinated and succeeded by Amyntas. (Dios. xiv. 84—89.) The power of Macedonia so diminished with these frequent dethronements and assassinations of its kings, that Amyntas had to cede to Olynthus all the country about the Thermaic gulf. (Dios. xiv. 92, xv. 19.) Amyntas, who was dependant on, if not tributary to, Jason, the "tagus" of Thessaly, died nearly about the same time as that prince (Dios. xv. 60), and was succeeded by his youthful son Alexander. After a short reign of two years, b.c. 368, Alexander perished by assassination, the fate that so frequently befell the Macedonian kings. Eurydice, the widow of Amyntas, was left with her two younger children, Peidicas, now a young man, and Philip, yet a youth; Philip was of
Alorns, one of the murderers of Alexander, was regent, and administered the affairs of the widowed queen, and those of her children, against Pausanias, a man of the royal lineage and a pretender to the throne. (Diod. xvi. 2; Aesch. Fals. Log. p. 249; 250; Justin. vii. 6.) Iphicrates declared in favour of Eurydice, who would have been forced to yield the country to Pausanias, and acted so vigorously against him as to expel him from Macedonia and secure the sceptre to the family of Amyntas. (Corn. Nep. Iphikrat. 3.) When Philip succeeded his brother Perdiccas, shun in battle with the Illyrians, n. c. 350—539, no one could have foreseen the future conqueror of Chaonia, and the destroyer of Grecian liberties. In the very first year of his reign, though only 24 years old, he laid the foundations of the future greatness of a state which was then almost annihilated. His history, together with that of the other Macedonian kings, is given in the Dictionary of Biography. At his death Macedonia had already become a compact empire; its boundaries had been extended into Thrace as far as Perimthus; and the Greek coast and towns belonged to it, while Macedonian ascendency was established from the coasts of the Propontis to those of the Ionian, the Aegus, Messenian, and Saronic gulfs. The empire of Alexander became a world-dominion. Macedonian settlements were planted almost everywhere, and Grecian manners diffused over the immense region extending from the Temple of Ammon in the Libyan Oasis, and from Alexandria on the western Delta of the Nile to the northern Alexandria on the Jazartes.

111. Later History till the Fall of the Empire.

At the death of Alexander a new Macedonian kingdom arose with the dynasty of Antipater; after the murder of the king Philipus III. (Arrhidæus) and Eurydice by the queen Olympias, Cassander the son of Antipater, after having murdered the king Alexander Aenus, and his mother, ascended the throne of Macedonia; at his death his three sons, Philip, Antipater, and Alexander, successively occupied the throne, but their reigns were of short duration. Philip was carried off by sickness; Alexander was put to death by Demetrius Poliorcetes, and Antipater, who had fled for refuge to Lysimachus, was murdered by that prince. When the line of Cassander became extinct, the crown of Macedonia was the prize for which the neighbouring sovereigns struggled, Lysimachus and Pyrrhus, kings of Thrace and Epirus, with Demetrius, who still retained Athens and Thessaly, in turns, disputed each other of this disputed throne. Demetrius, however, at last overcame the other competitors; and at his death transmitted the kingdom to his son Antigonus, and the dynasty of the Antigoniæ, after many vicissitudes, finally established their power. The three great irruptions of the Gauls, who made themselves masters of the N. parts, and were established in Thrace and Upper Macedonia, fell within this period. Antigonus Gonatas recovered the throne of deposed Macedonia; and now secured from the irruptions of the Gauls, and from foreign rivals, directed his policy against Greece, when the formation of the Aetolians, and yet more important Achaean league, gave rise to entirely new relations. Antigonus, in the latter part of his reign, had recourse to various means, and more especially to an alliance with the Aetolians, for the purpose of counterpoising the Achaeans. He died in his eightieth year, and was succeeded by his son

Demetrius II., who waged war upon the Aetolians, now, however, supported by the Achaeans; and tried to suppress the growth of the latter, by favouring the tyrants of Epirus. The remainder of the reign of this prince is little more than a gap in history. Demetrius' son, Philip, was passed over, and his brother's son, Antigonus II. surmounted Dossen, was raised to the throne. This king was occupied most of his time by the events in Greece, when a very remarkable revolution in Sparta, raised up a formidable enemy against the Achaeans; and so completely altered the relative position of affairs, that the Macedonians from having been opponents became allies of the Achaean. Philipus V., a young, warlike, and popular prince, was the first to come into collision with Rome,—the war with the imperial city ( b. c. 200—197), suddenly hurled the Macedonian power from its lofty pitch, and by laying the foundation of Roman dominion in the East, worked a change in almost all the political relations there. T. Quinctius Flamininus, by offering the magic spell of freedom, stripped Philip of his allies, and the battle of Cynoscopelae decided everything. Soon after, the freedom of Greece was solemnly proclaimed by the Romans; but in their triumph, in their triumph, this measure served only to transfer the supremacy of their country from Macedonia to Rome. On the 22nd of June, b. c. 168, the fate of Macedon was decided on the field of Pydna by her last king Perseus.

According to the system then pursued at Rome, the conquered kingdom of Macedon, was not immediately converted into a province, but, by the famous edicts of Apollonius issued by the authority of the Roman Senate, the year after the battle, the country was divided into four districts. By this decree (Liv. xiv. 29), the Macedonians were called free,—each city was to govern itself by magistrates annually chosen, and the Romans were to receive half the amount of tribute formerly paid to the kings, the distribution and collection of which was probably the principal business of the councils of the four regions. None but the people of the extreme frontiers toward the barbarians were allowed to defend themselves by arms, so that the military power was entirely Roman. In order to break the hold actually the national union, no person was allowed to contract marriage, or to purchase land or buildings but within his own region. They were permitted to smelt copper and iron, on paying half the tax which the kings had received; but the Romans reserved to themselves the right of working the mines of gold and silver, and of selling naval timber, as well as the introduction of salt, which, as the Third Region only was to have the right of selling it to the Durdauk, was probably made for the profits of the conquerors on the Thracian gulf. No wonder, that after such a division, which tore the race in pieces, the Macedonians should compare their servitude to the liberation and disfranchising of an animal. (Liv. xiv. 30.)

This division into four districts did not last longer than eighteen years, but many tetraarchims of the first division of the tetrarchy coined at its capital, Amphipolis, are still extant. n. c. 149 Andrécus, calling himself Philip son of Perseus, reconquered all Macedonia (Liv. Epit. xlix.), but was defeated and taken in the following year, by Q. Caecilius Metellus; after which the Macedonians were made tributary (Porphyry. op. Eusb. Chron. p. 178), and the country was probably governed by a "prætor,"
Like Achaea, after the destruction of Corinth, which occurred two years afterwards, b.c. 146. From that time to the reign of Augustus the Romans had the troublesome duty of defending Macedonia, against the people of Illyricum and Thrace; during that period, they established colonies at Philippi, Pella, Stobi, and Diunum.

At the division of the provinces, Macedonia fell to the senate (Dion Cass. lib. 12; Strab. lib. xi. p. 840). Thessaly, Macedonia, and the provinces of Achaea and Macedonia to the imperial government of Moesia, in order to deliver them from the weight of the provincial administration (Tac. Ann. 176—80, v. 10), and this continued till the time of Claudius (Suet. Claud. 25; Dion Cass. lib. 24). Afterwards it was again under a "proconsul," with the title "proconsul" (Orelli, Inschr. n. 1170 (Ves-pasion); n. 3851 (Caracalla)), while mention often occurs of "legate" (Orelli, n. 3658) and "quae stores" (Orelli, n. 822, 3144). Thessalonica, the most populous city in Macedonia, was the seat of government, and virtually the capital of Greece and Illyricum, as well as of Macedonia. Under Constantine, Macedonia, was one of the two governments of the prefeture of Illyricum, and consisted of six provinces, Achaea, Macedonia, Crete, Thessaly, Old Epirus, and New Epirus (Marquardt, in Becker, Rom. Alterthum, vol. ii. pt. 1. pp. 113—119). The ravages inflicted by the northern nations on the frontier provinces were so continual that the inhabitants of Thrace and Macedonia were greatly dispersed, the uninhabited plains were traversed by armed bands of S. Illyrians, who gradually settled in great numbers in Macedonia, while many mountainous districts, and most of the fortified places still remained in the possession of the Greeks, who were driven into the Chalcidic peninsula, or into the low grounds near the sea, where the marshes and rivers which intersect them, offered means of resistance; but the existence of the ancient race may be said to terminate with the reign of Heracleus, (Comp. Suda, Syc., vol. ii. p. 115; vol. iv. p. 119). The emperors of Constantinople attempted to remedy the depopulation of their empire by transporting Asiatic colonies. Thus a colony of Persians was established on the banks of the Axius (Vardar) as early as the reign of Theophilus, A. D. 829—842, and it long continued to furnish recruits for a cohort of the imperial guard, which bore the name of Vardaritae.

In A. D. 1063 a colony of Uzes was settled in Macedonia, whose chiefs rose to the rank of senators, and filled high official situations at Constantinople (Sylvestri, ad edam Codicem, p. 868; Zonar, vol. i. p. 273; Ann. Comm. p. 195). Anna Comnena (pp. 109, 315) mentions colonies of Turks established near Achrida before the reign of her father (A. D. 1081). These and other nations were often included under the general name of Turks, and indeed most of them were descended from Turkish tribes. (Finlay, Medieval Greece, p. 31.)

IV. Physical and Comparative Geography.

The large space of country, which lies to the N. of the Chambian chain, is in great part mountainous, occupied by lateral ridges or elevations, which connect themselves with the main line of Scandus. It also comprises three wide alluvial basins, or plains which are of great extent, and well adapted to cultivation: the northernmost of the three, contains the sources and early course of the Axius, now the plain of Tetovo or Kalkandeh: the second is that of Bitola, extending to a great extent, with that of ancient Pelagonia, wherein the Erigen flows towards the Axios; and the larger and more undulating basin of Grevena and Anassiticia, containing the Upper Haliacmon with its confluent streams. These plains, though of high level above the sea, are yet very fertile, each generally bounded by mountains, which rise precipitously to an alpine height, and each leaving only one cleft for drainage by a single river, the Axios, the Erigen, and the Haliacmon respectively. The fat rich land to the E. of Fimi and Sardus is described as forming a marked contrast with the light calcareous soil of the Albanian plains and valleys on the W. side (comp. Grote, Hist. of Greece, cxxv.).

Upper Macedonia was divided into Elimeia, Eordaea, Orestes, and Lyncestis; of these subdivisions, Elimeia comprised the modern districts of Grevenä, Veria, and Tveræmbi; Eordaea those of Buñja, Sarighiud, and Ostrovo; Orestis those of Greenwood, Amalegica, and Anatokia; and Lyncestis Filaría, and all the S. part of the basin of the Erigen. These seem to have been all the districts which properly belonged to Upper Macedonia, the country to the N. as far as Illyricum to the W. and Thrace to the E. constituting Paroania, a part of which (probably on the Upper Axios) was a separate kingdom as late as the reign of Cassander (Diod. xx. 19), but which in its widest sense was the great belt of interior country which covered on the N. and NE. both Axios and the Erigen, and the latter containing the maritime and central provinces, which were the earliest acquisition of the kings, namely, Pieria, Bottiaea, Emathia, and Mygdonia.

Pieria, or the district of Katerina, forms the slope of the range of mountains of which Olympus is the highest peak, and is separated from Magnesia on the S. by the Peneus (Scamander). The real Emathia is in the interior of Macedonia, and did not in its proper sense extend towards the sea, from which it is separated by Pieria and part of the ancient Bottiaea, and by the plains around Soloniki, together with the valleys of Ksali and Besikia, extending westward to the Axios, and including the lake Balbe to the E. The name Chalidoch is applied to the whole of the great peninsula lying to the S. of the ridge of Mt. Hiertitsi.

An account of these subdivisions will be found under their different heads, with a list of the towns belonging to each.

Macedonia was traversed by the great military road—the Via Egnatia; this route has been already described [Vol. II. p. 36] as far as Heraclia Lyncestis, the first town on the confines of Illyricum; pursuing it from that point, the following are the stations up to Amphipolis, where it entered Thrace, properly so called:—

Heraclia.

Cellae — 'Ostrowo.
Edessa — Voćkâni.
Polya — Alkisli.
Mutatio Gephyra — Bridge of the Vardhâri.
Theosalica — Soloniki.
Melissargia — Melissargia.
Apollonia — Pella.
Amphipolis — Neohótheiôr.

From the Via Egnatia several roads branched off to the N. and S., the latter leading to the S. provinces of Macedonia and to Thessaly; the former into Paonia, Dardania, Moesia, and as far as the Danubes.
MACEDONIA.

The Peutinger Table furnishes the following route from Pella to Larissa in Thessaly:—

Pella.
Beroea — Verria.
Asculus —
Arta —
Butad —
Asana —
Hatera — Katerina.
Bium (Bium) — Malatolia.
Salathum —
Stoons (Tempe) — Lykostoma.
Olympum —

Two roads led to Stobi in Paeonia, the one from Heraclea Lyncestis, the other from Thessalonica. According to the Table, the stations of the former are—

Heraclea.
Ceramic.
Euristo (Andaristus).
Stobi.

Of the latter—

Thessalonica.
Gallicum — Gallia.
Tauriana — Doiran.
Idomenia —
Stoons (Stena) — Demirakti.
Antiponia —
Stobi —

From Stobi again two roads struck off to the NW. and NE. to Scopi (Scopie), at the "destroyed" from the Illyrian mountains into the plains of Paeonia and the Upper Axios, and to Serdica:—

Stobi.
Trampara.
Asiolon — Isth.
Pentali — Ghinastuild.
Avila —

Serdica — Sofia.

Though the Macedonians were regarded by the Greeks as a semi-barbarous people, the execution of their coins would not lead to that inference, as they are fine and striking pieces, boldly executed in high, sharp, relief. The coin of Alexander I. of Macedon, B.C. 500, is the first known monarchical coin in the world that can be identified with a written name, and to which, consequently, a positive date can be assigned. It has for the "type" a Macedonian warrior leading a horse; he bears two lances, and wears the Macedonian hat. The coins of the princes who followed him exhibit the steps towards perfection very graphically.

With Philip II. a new era in the Macedonian coinage commences. At this period the coins had become perfect on both sides, that is, had a "reverse" equal in execution to the "obverse." During his reign the gold mines at Mt. Pangaeus were worked. He issued a large gold coinage, the pieces of which went by his name, and were put forth in such abundance as to circulate throughout all Greece. The series of coins, from Philip II. to the extinction of the monarchy, exhibit the finest period of Greek monetary art. (Comp. H. N. Humphrey's Ancient Coins and Medals, London, 1850, pp. 58—65.)

During the tetrarchy there are numerous existing coins, evidently struck at Amphipolis, bearing the head of the local deity Artemis Taurropis, with an "obverse" representing the common Macedonian "type," the club of Hercules within a garland of oak, and the legend ΜΑΚΕΔΟΝΙΩΝ ΠΑΡΤΥ. (Comp. Eckhel, vol. ii. p. 61, fol.)

[ E. B. J.]

COINS OF MACEDONIA.

MACELLA or MAGELLA (Μακελλα: Μαγελλα), a town in the NW. of Sicily, which is noticed by Polybius (i. 24) as being taken by the Roman consul C. Duilius and Cn. Cornelius, as they returned after raising the siege of Segesta, in B.C. 260. It is interesting to find the same circumstance noticed, and the name of this otherwise obscure town mentioned, in the celebrated inscription on the astral column which records the exploits of C. Duilius. (Orell. Inscri. 549.) It would seem from Diodorus, that at an earlier period of the same war, the Romans had besieged Macella without success, which may account for the importance thus attached to it. (Diod. ii. 4, p. 502.) The passage of Polybius in reality affords no proof of the position of Macella, though it has been generally received as an evidence that it was situated in the neighbourhood of Segesta and Panormus. But as we find a town still called Macellaro, in a strong position on a hill about 15 miles E. of Segesta, it is probable that this may occupy the site of Macella. The only other mention of it in history occurs in the Second Punic War (B.C. 211), among the towns which revolted after the departure of Marcellus from Sicily. (Liv. xxxvi. 21.) As its name is here associated with those of Hybla and Margantia, towns situated in quite another part of the island, Cluverius supposes that this must be a distinct town from the Macella of Polybius; but there is clearly no sufficient reason for this assumption. The name is written in the old editions of Livy, Macella; and we find the Magellini enumerated by Pliny among the provincial towns of the interior of Sicily (Plin. iii. 8. x. 14), while Ptolomy, like Polybius, writes the name Macella. (Ptol. iii. 4. § 14.) The orthography is therefore dubious, as the authority of so ancient an inscription as that of Duilius is of no avail in this case. The coins which have been ascribed to Macella are of very dubious authenticity.

[ L. H. B.]

MACERPIHACTA (Ammian. xxi. 2), a small town of Bactria mentioned by Ammianus Marcellinus. It was situated apparently on the Ephratus, to the W. of Siratus, not far from the place where the Royal Canal, or Ναυρ-μιλές, joined the Ephratus.

MACESTUS or MECESTUS (Μακεστος or Με-κεστος), a tributary of the river Illyruncus: It took
MACETA.

Its origin was a lake near Acrea, and, after forming for some distance in a western direction, it turned northward, and joined the Rhyndacus a little to the north of Miletopeis. (Strab. xii. p. 576; Plin. v. 40.) It seems to be the same river as the one called by Polybius Magistus (v. 77), though the Scholiast on Apollonius Rhodius (ii. 1162) remarks, that in his time the Rhyndacus itself bore that name. The lower part of the river now bears the name Sann or Etangherili, while the upper part is called Sabba River. (Hamilton’s Researches, vol. iii. p. 105, 111.)

MACETA (Μακετα, N. Arch. Peripl. p. 22 : C. Muselaedon), a promontory of Arabia, at the entrance of the Persian Gulf, opposite the promontory Harmonon in Carmania. (Strab. xvi. p. 726, xvi. p. 765.) It was on the coast of the Macae, and is, therefore, called by Strabo (xvi. p. 763) a promontory of the Macae, without giving it any special name. It formed the NW. extremity of the mountains of the Arabi, and is, therefore, called by Proclus (vol. 1, p. 73) Αραβίας ουρανιών. (L. S.)

MACETA, MACETIA. (Μακετία, Μακέτια.)

MACHERUS (Μαχέρος : Eth. Μαχερουη, Joseph.), a strong fortress of Perea, first mentioned by Josephus in connection with Alexander the son of Hyrcanus I, by whom it was originally built. (Ant. xiii. 16. § 3; Bell. Jud. vii. 6. § 2.) It was delivered by his widow to her son Aristobulus, who first fortified it against Gabinius (Ant. xiv. 5. § 2.) to whom he afterwards surrendered it, and by whom it was dismantled (§ 4. Strab. xvi. p. 762). On his escape from Rome Aristobulus again attempted to fortify it; but it was taken after two days’ siege (vi. 1). It is however celebrated in the history of Herod the Tetrarch, and St. John the Baptist. It was situated in the mountains of Arabia (τρόπος τοῦ Ἀραβίας οὐρανοῦ) (5. § 2), and on the confines of Herod’s jurisdiction and that of Artaeus king of Arabia, his father-in-law, but at this time the historian expressly states that it belonged to the latter (xxvii. 6. § 1), being the southern extremity of Perea as Philo places it, and the northern of Judaea (iii. 3. § 3, iv. 7. § 5.) When Herod’s first wife, the daughter of Artaeus, first suspected her husband’s guilty passion for Herodias, his brother Philip’s wife, she dissembled her indignation, and requested to be sent to Machaerus, whence she immediately proceeded to Perea, her father’s capital. The fact of Machaerus being then subject to the jurisdiction of Artaeus presents an insuperable difficulty to the reception of Josephus’s statement that it was the place of St. John the Baptist’s martyrdom: for suffering, as he did in one view, as a martyr for the conjugal rights of the daughter of Artaeus, it is impossible to believe that Herod could have had power to order his execution in that fortress. (xxvii. 6. §§ 1, 2.) It held out against the Romans after the fall of Jerusalem, and the account of its siege and reduction by the lieutenant Lucinius Bassus furnishes us with the most detailed account of this remarkable fortress, which Pliny (v. 15) reckons second to Jerusalem for the strength of its works. Josephus’s account is as follows. It was situated on a very high hill, and surrounded with a wall, trenchant about on all sides with valleys of enormous depth, so as to defy embankments. Its western side was the highest, and on this quarter the valley extended 60 stadia, as far as the Dead Sea. On the north and south the valleys were not so steep, but still such as to render the fortress inaccessible, and the eastern valley had a depth of 100 cubits. It had been selected by Herod, on account of its proximity to the Arabs and the natural advantages of its position, and he had enclosed a large space within its walls, which was strengthened with towers. This formed the city: but the summit of the hill was the acropolis, surrounded with a wall of its own: flanked with corner towers of 160 cubits in height. In the middle of this was a stately Palace, laid out in large and beautiful chambers, and furnished with numerous reservoirs preserving the rain water. A shrub of one, of portentous size, grew in the palace yard, equal in height and bulk to any fig-tree. A large store of missiles and military engines was kept there so as to enable its garrison to endure a protracted siege. Bassus proposed to assail it on the east side, and commenced raising banks in the valley, and the garrison, having left the city and its inhabitants to their fate, betook themselves to the acropolis, from which they made a succession of spirited sallies against the besiegers. In one of these a youth named Thaddeus, of influential connections, fell into the hands of the Romans, and the garrison capitulated on condition that his life was spared, and he and they allowed to evacuate the place in safety. A few of the inhabitants of the lower city, thus abandoned, succeeded in effecting their escape: but 1700 males were massacred, and the women and children sold into captivity. (B. J. vii. 6.) Its site has not been recovered in modern times; but it is certainly wrongly placed by Pliny at the South end of the Dead Sea (vi. 16; Plin. H. N. v. 885). The account given by Josephus of the copious hot springs of bitter and sweet water, of the sulphur and alum mines in the valley of Barars, which he places on the north of the city of Machaerus, seems rather to point to one of the ruined sites, noticed by Irby and Mangles, to the northern part of the Dead Sea, in the vicinity of Callirhoe, where these phenomena are still found; but not the peculiar noxious tree, of the same name as the valley, which was deplorably dear to the gatherer, but was a specific against the eye of the inhabitant, and health. (Ibid. 464, 465.) (G. W.)

MACHEAR (Μαχαιροθ, some MSS. read Μαχαιρωθ, Ptol. iv. 14. § 11), a people of "Scythia intra Iannaum," near the Iassae. (E. B. J.)

MACHELONES (Μαχελώνης, Arrian, Peripl. p. 11; Amm. p. 15), a subdivision of the Colchian tribes situated to the S. of the Phasis. Anchius, prince of this people, as well as of the Heniochi, submitted to Trajan. (Dio Cass. liv. 19; E. B. J. 80.)

MACILYFE (Μαχίληφ, Herod. iv. 179; Pol. iv. 3. § 26, 26. Μαχίληφ), a Libyan people, in the S. of Africa Propria (Byzacena), on the river Triton, and separated by the lake Tritonis from the Lotos-pingi, like whom they fed upon the lotus. (Comp. Plin. vii. 2.)

MACHERE. (Μαχηρεταί.)

MACRUSS (Μακρους.)

MACUYNI (Μαχυνοί), a people of Africa Propria, whom Ptolemy places S. of the Libyan deserts, as far as the Lesser Syrtis and the Maculyes. (Ptol. iv. 3. §§ 22, 26.) (P. S.)

MACUXA (Μακούξα), a district of Arabia, mentioned only by Strabo (xvi. p. 766) as nearest to Babylonia, bounded on the one side by the desert of Arabia, on another by the marshes of the Chaldeans, formed by the overflow of the Euphrates, and on a third by the Persian Gulf. Its climate
MACISTUS, or MACISTUM (Μακιστός, το Μακιστόν; Edh. Macistion), a town of Triphyla, in Elis, said to have been also called Platanistus. (Πλατανιστός, Strab. viii. p. 345.) It was originally inhabited by the Pareaeae and Caucones, who were driven out by the Minyae. (Strab. l. c.; Hesd. iv. 145.) It was afterwards subdued by the Eleians, and became one of their dependent towns whose history is given under Lepraeum. In the time of Strabo, it was no longer inhabited (vi. p. 349). Macistus was situated upon a lofty hill in the north of Triphyla, and appears to have been the chief town in the north of the district, as Lepraeum was in the south. That Macistus was in the north of Triphyla appears from several circumstances. Strabo describes its territory, the Macistis, as bordering upon Psatis. (Strab. viii. p. 343.) Agis, in his invasion of the territory of Elis, in B.C. 400, when he entered Triphyla through the Arkon of Mekka, was received by Macistus, which was a town of the Aegaeans, built by the Macistis, and then by the Epitalii on the Alpheius. (Xen. Hell. iii. 2 § 25.) Stephanus places Macistus to the westward of the Lepraeum (Steph. ii. z. v.); but this is obviously an error, as Arcadia bordered upon the Lepraeum in that direction. Macistus would appear to have been in the neighbourhood of Samicum upon the coast, as it had the superintendence of the celebrated temple of the Samian Poseidon at this place. (Strab. viii. p. 343.) From these circumstances this error may be little doubt that Macistus was situated upon the heights of Khadiis. It is worthy of notice that Pausanias and Polybius mention only Samicum, and Xenophon only Macistis. This fact, taken in connection with the Macistians having the superintendence of the temple of the Samian Poseidon, has led to the conjecture that upon the decay of Samicum upon the coast, the Minyans built Macistus upon the heights above; but that the ancient name of the place was afterwards revived in the form of Samicum. The Macistians had a temple of Hercules situated upon the coast near the Akion. (Strab. viii. p. 548.)

MACNA (Μακνα), an inland town of Arabia Felix, according to Ptolemy (vi. 7.), who places it in lat. 67°, long. 28° 45', near the Aenadian gulf of the Red Sea. It is described as a town called Gulf of Akeba. (Str. vii. 2.) MACORA (Μακορα), an inland city of Arabia Felix, placed by Ptolemy in lat. 75° 29', long. 22° 22', universally admitted to be the ancient classical representative of the modern Mecca or Meccos, which Mr. Forster holds to be an idiomatic abbreviation of Machorala, identical with Arabic “Mehcharab,” or “the warlike city,” or “the city of the Haur.” (Geog. of Arabia, vol. i. pp. 265, 266.)

A very high antiquity is claimed for this city in the native traditions, but the absence of all authentic notices of it in the ancient geographers must be allowed to disprove its claim to notoriety on account of its sanctity at any very remote period. The territory of Mecca was, according to universal Arabian history or tradition, the central seat of the kingdom of Jorjan and the Jochamites, descendants of the Jothamite patriarch Sherah, the Jerah of the book of Genesis (x. 26), who in the earliest times were the sovereigns of the Caaba, and the Mecca of the Abrahams sacrifices in the valley of Minna, from whence they derived their classical synonym Minael. It is quite uncertain when they were superseded by the Ishmaelites of Arabia, whose descendants, according to immemorial Arabic tradition, settled in the Hadjaz; and one tribe of whom was named Korēsch (collegit unidine), “quod circa Meccan, congrupti degerunt.” (Camus ap. Gallus, in loc. cited by Forster, Geog. of Arabia, vol. i. p. 248, &c.) This tribe, however, from which Mecca was surrounded, had been for centuries the guardians of the Caaba, and lords of Mecca, prior to his appearance: for if the very plausible etymology and import of the classical name, as above given, be correct, and the Beni-Hurab was, as Mr. Forster has elaborately proved, a synonym for the sons of Kedar, it will follow that they had succeeded in fixing their name to the capital some time before it appeared in Ptolemy’s list, nor can any traces of a more ancient name be discovered, nor any notices of the ancient city, further than the bare mention of its name by the Alexandrian geographer.

“Mecca, sometimes also called Bekka, which words are synonymous, and signify a place of great concourse, is certainly one of the most ancient cities in the world. It is by some thought to be the Mecca of Scripture (Gen. x. 30), a name not unknown to the Arameans, and supposed to be taken from one of Ishmael’s sons” (Gen. xxv. 13). (Sale’s Koran, Preliminary Discourse, sect. i. p. 4.) Its situation is thus described by Burckhardt—“The town is situated in a valley, narrow and sandy, the main direction of which is from north to south; but it inclines towards the north-west near the southern extremity of the town. In breadth this valley varies from one hundred to seven hundred paces, the chief part of the city being placed where the valley is most broad. The town itself covers a space of about 1500 paces in length;... but the whole extent of ground comprehended under the denomination of Mecca” (G. i. 188); and indeed the inhabitants “amounts to 3500 paces. The mountains enclosing this valley (which before the town was built the Arabs had named Wady Mekka or Bekka) are from 200 to 500 feet in height, completely barren and destitute of trees. Most of the town is situated in the valley itself; but there are also parts built on the sides of the mountains, principally of the eastern chain, where the primitive habitations of the Kereysch and the ancient town appear to have been placed.” It is enriched by gardens, and is surrounded by streets broader, and stone houses more lofty, than in other Eastern cities: but since the decline of the pilgrimage “numerous buildings in the outskirts have fallen completely into ruin, and the town itself exhibits in every street houses rapidly decaying.” Its population has declined in proportion. The results of Burckhardt’s inquiries gave “between 25,000 and 39,000 stationary inhabitants for the population of the city and suburbs, besides from 3000 to 4000 Abyssinians and black slaves: its habitations are capable of containing three times this number.” This estimate, however, shows a considerable increase within the last three centuries; for “in the time of Sultan Selym I. (in A.D. 1517) a
MACROBIUS, a considerable river of Northern Italy, rising in the Apennines and flowing into the Tyrrhenian Sea near Luna. It was under the Roman dominion and was navigable on both sides of it, and it was not till after a long struggle with that people that the Romans were able to carry their arms as far as the banks of the Maera. (Liv. xxxiii. 32, xl. 41.)

The Maera is one of the most considerable of the rivers on the Ligurian coast, but it still retains the character of a mountain torrent, at times very violent and impetuous, at others so shallow as to be wholly unfit for navigation (Lucan, ii. 426). The ruins of Luna are situated on the left bank of the Maera, about a mile from the sea, while the celebrated Port of Luna (the Gulf of Spezia) is some miles distant to the W., and separated from it by an intervening range of hills (Luna). About 10 miles from its mouth the Maera receives from its W. bank the waters of the Varo, also a formidable torrent, which in all probability the Boates of Pliny (iii. 1. 39) mention of Meekha diminished. This city, which is known to have contained more than 100,000 souls, does not at present shelter more than from 16,000 to 18,000; and conjectures that "it will be reduced, in the course of a century, to the tenth part of the size it now is." The celebrated Kaaba demands a cursory notice. It is situated in the midst of a great court, which forms a parallelogram of about 536 feet by 356, surrounded by a double piazza. This sanctuary, called, like that of Jerusalem, El-Haram, is situated near the middle of the city, which is built in a narrow valley, having a considerable slope from north to south. In order to form a level area for the great court of the temple, the ground has evidently been hollowed out, subsequently to the erection of the Kaaba, which is the only ancient edifice in the temple. The building itself (called by the natives Beit-Elubah, the House of God), probably the most ancient sacred building now existing, is a quadrilateral tower, the sides and angles of which are unequal. It measures 38 feet before the height 34 feet 4 inches; built of square-hewn but unpolished blocks of quartz, schist, and mica, brought from the neighbouring mountains. The black stone, the most sacred object of ventilation, is built into the angle formed by the NE. and SE. sides, 42 inches above the pavement. It is believed by the Moslems to have been presented to Abraham by the angel Gabriel, and is called "the heavenly stone." Ali Bey says that "it is a fragment of volcanic basalt, sprinkled throughout its circumference with small, variegated, coloured crystals, and overlaid with red foldy path upon a black ground like coal." The famous well of Zamzem, in the great mosk, is 56 feet deep to the surface of the water, fed by a copious spring; but its water, says Burckhardt, "however holy, is heavy to the taste, and impedes digestion." Ali Bey, on the contrary, says that it is wholesome, though warmer than the air ever in that hot climate. The town is further supplied with rain-water preserved in cisterns: but the best water in Meekha is brought by a conduit from the vicinity of Ava-at, six or seven hours distant." (Ali Bey, Travels, vol. ii. pp. 74—114; Burckhardt, Travels in Arabia, pp. 94, &c.) [G.W.]

MACRA (Μακρά), Strab., Ptolemy has the corrupt form Μακράλα: Maugra), a considerable river of Northern Italy, rising in the Apennines and flowing into the Tyrrhenian Sea near Luna. It was under the Roman dominion and the established limit between Liguria and Etruria (Plin. iii. 5. 7; Flor. ii. 3. 8; Strab. v. p. 222; Vesp. Sept. p. 14); but at an earlier period the Ligurian tribe of the Apumi occupied the country on both sides of it, and it was not till after a long struggle with that people that the Romans were able to carry their arms as far as the banks of the Maera. (Liv. xxxiii 32, &c.)

The Maera is one of the most considerable of the rivers on the Ligurian coast, but it still retains the character of a mountain torrent, at times very violent and impetuous, at others so shallow as to be wholly unfit for navigation (Lucan, ii. 426). The ruins of Luna are situated on the left bank of the Maera, about a mile from the sea, while the celebrated Port of Luna (the Gulf of Spezia) is some miles distant to the W., and separated from it by an intervening range of hills (Luna). About 10 miles from its mouth the Maera receives from its W. bank the waters of the Varo, also a formidable torrent, which in all probability the Boates of Pliny (iii. 1. 39) mention of Meekha diminished. This city, which is known to have contained more than 100,000 souls, does not at present shelter more than from 16,000 to 18,000; and conjectures that "it will be reduced, in the course of a century, to the tenth part of the size it now is." The celebrated Kaaba demands a cursory notice. It is situated in the midst of a great court, which forms a parallelogram of about 536 feet by 356, surrounded by a double piazza. This sanctuary, called, like that of Jerusalem, El-Haram, is situated near the middle of the city, which is built in a narrow valley, having a considerable slope from north to south. In order to form a level area for the great court of the temple, the ground has evidently been hollowed out, subsequently to the erection of the Kaaba, which is the only ancient edifice in the temple. The building itself (called by the natives Beit-Elubah, the House of God), probably the most ancient sacred building now existing, is a quadrilateral tower, the sides and angles of which are unequal. It measures 38 feet before the height 34 feet 4 inches; built of square-hewn but unpolished blocks of quartz, schist, and mica, brought from the neighbouring mountains. The black stone, the most sacred object of ventilation, is built into the angle formed by the NE. and SE. sides, 42 inches above the pavement. It is believed by the Moslems to have been presented to Abraham by the angel Gabriel, and is called "the heavenly stone." Ali Bey says that "it is a fragment of volcanic basalt, sprinkled throughout its circumference with small, variegated, coloured crystals, and overlaid with red foldy path upon a black ground like coal." The famous well of Zamzem, in the great mosk, is 56 feet deep to the surface of the water, fed by a copious spring; but its water, says Burckhardt, "however holy, is heavy to the taste, and impedes digestion." Ali Bey, on the contrary, says that it is wholesome, though warmer than the air ever in that hot climate. The town is further supplied with rain-water preserved in cisterns: but the best water in Meekha is brought by a conduit from the vicinity of Ava-at, six or seven hours distant." (Ali Bey, Travels, vol. ii. pp. 74—114; Burckhardt, Travels in Arabia, pp. 94, &c.) [G.W.]

MACRA, [HELLENA] MACROBIUS (Herod. iii. 17—25; Plin. vi. 30, s. 35, vii. 1. s. 2; Solin. 30. § 9; Meli, iii. 9, § 1), or the long-lived, might have been briefly enumerated among the numerous and obscure tribes which dwelt above Philae and the second cataract of the Nile, were not it for the conspicuous position assgined to them by Herodotus. He describes the Macrobi as a strong and opulent nation, remarkable for its stature, beauty and longevity, and, in some respects, as highly civilized. According to this historian, a rumour of the abundance of gold in the Macrobian territory stimulated theavarice of the Persian king, Cambyses, who led a great army against them: but in his haste he omitted to provide his host with food and water, and the city was destroyed by famine and hunger. The Macrobian land and Egypt lay candy wastes, and the Persians perished through drought and hunger, Cambyses alone and a small residue of his army returning to Egypt. In the description of Herodotus, the most important point is the geographical position assigned to them. It is in the farthest south (κοινωνία ἡ περίπτωσις Σαλασσώ, c. 17, τα ἐξωτικά τῆς γῆς, c. 25) the limits of the habitable world, according to the knowledge of Herodotus. The Macrobian land was accordingly beyond the Arabian Gulf, on the shores of the Indian ocean, and in that southern and inaccessible region called Barberia by the ancient cosmo-
his wherein the only productive soil for some hundreds of miles south of Philae consists of narrow slips of ground adjacent to and irrigated by the Nile. From the southern frontier of Egypt to the nearest frontier of Assyria the only practical road for an army lies along the river bank, and the distance to be traversed is at least 900 miles.

We must therefore abandon the belief that the Macrobians dwelt in the farthest south. But there are other suspicious features in the narrative. Similar length of days is ascribed by Herodotus to the Tar- tessians (i. 163; comp. Anacreon, op. Strab. iii. 2), nor should it be overlooked that the Hyperboreans in the extreme north are also denominated Macrobii. We may also bear in mind the mythical aspect of Homer's Achaeiopoiai (Iliad, i. 425) in which passage the epithet "faultless" (άκακος) implies not moral but physical superiority (comp. Herod, iii. 20; μέγιστοι καὶ καλλίστεροι δωρείς πάντων). "Men," as Dr. Kenrick justly remarks, "groaning under the burden of the social state, have in every age been prone to indulge in such pictures of ease and abundance as Herodotus, in the passages cited, and Findar (19th. x. 57) drew of countries beyond the limits of geographical knowledge and of times beyond the origin of history.

If, however, we do so yield up the Macrobii to myth or fable altogether, we must seek for them in some district nearer Aegypt. Whatever tribe or region Cambyses intended to subdue, gold was abundant, and brass, or rather copper, scarce among them. Now the modern inhabitants of Kordofan (15° 20'—10° N. lat., 28°—32° E. long.) are commonly called Nobah, and Nob is an old Aegyptian word for gold. Again, the Macrobii were singularly tall, well proportioned and healthy; and Cambyses has, from time immemorial, supplied the valley of the Nile with able-bodied and comely slaves of both sexes (Hume, op. Walpole, Turkey, p. 392). Moreover, the caravans bear with them, as marketable wares, wrought and unwrought copper to this district. In 1821 Mohammed Ali achieved what Cambyses failed in attempting. With less than 7000 men, half of whom indeed perished through fatigue and the climate, he subdued all the countries contiguous to the Nile as far as Sennar and Kordofan in seven weeks; and the objects which stimulated his expedition were gold and slaves. We shall therefore perhaps not greatly err in assigning to the Macrobii of Herodotus a local habitation much nearer than Assyria to the southern frontier of Aegypt, nor in suggesting that their name, in the language of the Greeks, is a corruption of the Semitic word Magrob, i.e. the dwellers in the west. A position west of the Nile would account also for the knowledge possessed by the Ishdyropaghi of Elephants (Bojak or Bishary Araba) of the languages of the Macrobii.

The modern Bisharybes occupy the country east of the Nile from Aegypt to Assyria; and their trade and journeys extend from the Red Sea to Kordofan. If then we regard the Macrobii (the Magrobii) and the Ishdyropaghi (the Bisharybe) as respectively seated on the east and west banks of the Nile, the latter people will have been the most available guides whom Cambyses could employ for exploring the land of the Macrobians.

It should be remembered, however, that Herodotus derived his knowledge of the Persian expedition either from the Persian conquerors at Aegypt, or from the Aegyptian priests themselves: neither of whom would be willing to disclose to an inquisitive

foreigner the actual situation of a land in which gold was so abundant. By placing it in the far south, and exaggerating the hardships endured by the army of Cambyses, they might justly hope to deter strangers from prying into the recesses of a region from which themselves were deriving a profitable monopoly.

Upon the wonders of the Macrobian land it would be hardly worth while to dwell, were they not in singular accordance with some known features in the physical or commercial character of that region. In the southern portion of Kordofan the hills rise to a considerable height, and iron ore in some districts is plentiful. The fountain of health may thus have been one of several mineral springs. The ascription of extreme longevity to a people who dwelt in a hot and by no means healthy climate may be explained by the supposition that, whereas many of the pastoral tribes in these regions put to death their old people, when no longer capable of moving from place to place, the Macrobians abstained from so crude a practice. The procrisity of the king seems to imply that the chieftains of the Macrobii belonged to a different race from their subjects (compare Sclayk, op. Aristot. vii. p. 1332). "The Table of the Sun" is the market-place in which trade, or rather barter, was carried on with strangers, according to a practice mentioned by Herodotus, the Indian mariner, who describes the annual fairs of southern Aethiopia in terms not unlike those employed by Herodotus in his account of the Macrobii (pp. 138, 139). [W.B.D.]

MACROCEPHALI (Μακροκέφαλοι), that is, "people with long heads." (Strab. i. p. 43.) The Sigimii, a barbarous tribe about Mount Caucausus, artificially contrived to lengthen their heads as much as possible. (Strab. xi. p. 520; comp. Hippocr. de Acr. 35.) It appears that owing to this custom they were called Macroecephali; at least Pliny vi. 4), Pomp. Mela (i. 19), and Sclayk (p. 33), speak of a nation of this name in the north-east of Pontus. The anonymous author of the Peripl. Pont. Eux. (p. 14) regards them as the same people as the Macrobii, but Pliny (l. c.) clearly distinguishes the two.

[ L. S.]

MACROCEPHALI (Μακροκέφαλοι), a powerful tribe in the east of Pontus, about the Macrones and Attains. They are described as wearing garments made of hair, and as using in war wooden helmets, small shields of wicker-work, and short lances with long points. (Herod. ii. 104, vii. 78; Ἕλπις. Αράμ. iv. 8. § 3, v. 5. § 18, viii. 8. § 25; comp. Hecat. Fragm. 191; Sclayk, p. 33; Dionys. Perieg. 766; Apollon. Rhod. ii. 22; Plin. vi. 4; Joseph. c. Apion. i. § 22, who asserts that they observed the custom of circumcision.) Strabo (xii. p. 548) remarks, in passing, that the people formerly called Macrones bore in his day the name of Sami, though Pliny (l. c.) speaks of the Sami and Macrones as two distinct peoples. They appear to have always been a rude and wild tribe, until civilisation and Christianity were introduced among them in the reign of Justinian. (Procop. Bell. Pers. i. 15, Bell. Gotl. iv. 2, de Aed. iii. 6.)

MACRON TIECHIOS. (Μάκρον τίκειω), also called "the wall of Anastasius," was a fortification constructed in A.D. 507, by the emperor Anastasius I. of Constantinople, as a means of defence against the Bulgarians: it consisted of a strong wall running across the isthmus of Constantinople, from the coast of the Propontis to that of the Euxine.

VOL. II.
Some parts of this wall, which at a later period proved useful against the Turks, are still existing. (Proc. de Acad. iv. 9; comp. Dict. of Biogr. Vol. i. p. 159.)

MACROPOGONES. (Μακροπογόνης). "The "Longeardus," one of the tribes of the W. Caesarea (Strab. xii. p. 492), whose position must be fixed somewhere near Tarhibba. (Chenev. Ephr. vol. i. p. 276.)

MACROVIBRAM (Μακροβιβρωμ), a town in Sicily, in the neighbourhood of Gela, mentioned by Herodotus (vii. 153), who tells us that it was occupied by a body of Gelon citizens, who were driven out from their country, and were restored to it by Telauns, the ancestor of Gela. The name is also found in Stephanus of Byzantium (s. v.), who cites it from Philistus, but no mention of it occurs in later times. The only clue to its position is that afforded by Herodotus, who calls it "a city above Gela," by which he must mean farther inland. Cluerius conjectures that it may have occupied the site of Baretta, a town on a hill about 8 miles inland from Terravesor, the site of Gela. (Cluver. Sicil. p. 316.)

MACUM, a town in the north of Aethiopia. (Plin. vi. 29, s. 33.)

MACUREB. [Μακουρεβά].

MACYNYIA (Μακυνία, Stob. x. p. 451; Mon. Hist. Part. Quaest. Gr. 15; Macanis, Steph. B. s. v.; Eth. Macanides), a town of Aetolia on the coast, at the foot of the eastern slope of Mount Taphahunis. According to Strabo it was built after the return of the Macedonians, and was founded by Telamon, the ancestor of Aetolia. It is called a town of the Oenian Locrians by the poet Arceleus of Amphissa, who describes it in an hexameter line: "the grape-clad, perfume-breathing, lovely Macynia." It is also mentioned in an epigram of Alcaeus, the Messenian, who was a contemporary of Philip V., king of Macedonia. Phryn mentions a mountain Macynium, which must have been part of Mount Taphahunis, near Macynia, unless it is indeed a mis-take for the town. (Strab. x. p. 451, 460; Plut. L. c.; Anth. Gr. ix. 518; Plin. iv. 3; Leake, Northern Greece, vol. i. p. 111.)

MACYNIUM. [Μακυνία; Aetolla, p. 63, b.]

MAIAL. [Μαιαλ.]

MADABA (Αμαδα). MADAURA (Med. 66., Mon. iv. 3 § 30), a town in the north of Nemaia, near Tagaste, which must not be confounded with Madaba, the birthplace of Apankleus. (Medabria.)

MADEBA (Μάδεβα). LXX.; Madon, Joseph.), a city originally of Meb, and afterwards obtained by conquest by Sibon, king of the Amorites. (Num. xxii. 30; comp. Joseph. Ant. xiii. 1 § 2, 4.) The name does not occur in the LXX. in two of the passages in which it is found in the Hebrew, i.e. Mebae being substituted in Numbers (L. C.) and τῆς Μαδεβᾶς in Isaiah (xv. 2). It fell to the lot of the Houbrites in the division of the trans-Jordanic conquests, and was in their southern border. (Judg. xiii. 9, 16.) It was one of several Mahbite cities occupied by the Jews under Hyrcanus and Alexander Janneaus (Joseph. Ant. xiii. 9, § 1, 15, § 4), but was afterwards restored by Hyrcanus II. to Artes (xiv. 1 § 4). Madba is placed by Ptolemy (xv. 17, § 6) in Arabia Petraea, and joined with Hezdib, consistently with which Eusebius and S. Jerome (Onomast. s. v.) notice it as still existing, under its old name, in the vicinity of Hezibbor; where its ruins may still be identified.

MAEA. (Μαια; Stoa. Salicem. Mar. Magn. §§ 74, 76; MAEA. (Μαια; Stoa. Salicem. Mar. Magn. §§ 74, 76; "In order to see Medaba, I left the great road at Hebron, and proceeded in a more eastern direction. At the end of six hours we reached Medaba built upon a round hill. This is the ancient Medaba, but there is no river nearer. It is at least half an hour in circumference; I observed many remains of the walls of private houses, constructed with blocks of silex; but not a single edifice is standing. There is a large Birket ("the immense tank") mentioned by Iuby and Manges, p. 471, as "the only object of interest.") "On the west side of the town are the foundations of a temple, built with large stones, and apparently of great antiquity. A part of its eastern wall remains. At the entrance of one of the courts stand two columns of the Doric order;...in the centre of one of the courts is a large well." (Burckhardt, Travels in Syria, pp. 365, 366.) It is mentioned as παύλοι Μαδεβάω in the Council of Chalcedon, and was an episcopal see of the third Palestine, or of Arabia. (Rudolf, Palat. Aeg. n. p. 893, 216—219; Le Quen, Orientis Christiani, col. 769—772.)

MADETHURI BADUS (Μάδεθυριός ο Μαδέθυριον ὁ), is the name applied by Ptolemy (iv. 2 § 15) to that part of the prolongation of the Atlas chain S. of Maaret Taissariens which contained the sources of the Chinalaph and its tributaries. [Comp. Atlas.]

MA'DIA (Ma'dia, Ptol. v. 10, § 6), a place in the interior of Cilicia, probably the Matium of Pliny (iv. 4).

MADIS. [Μαδίς.]

MADMANNA (Μαδμαννα, LXX.; Μαδμαννᾶ Ἐασφ., Euseb.), a city of the tribe of Judah mentioned only in Joshua (xxi. 31). It was situated in the south of the tribe, apparently near Ziklag. Eusebines, who confounds it with the Madmenah of Isaiah (x. 31), mentions the ruins of a town near Gama, named Meneo (Meneus), which he identifies with Madmannah. (Onomast. s. v.) (G. W.)

MADNANA (Μαδνάνα, LXX.), a town or village on the confines of the tribes of Judah and Benjamin, mentioned only in Isaiah (x. 31). It was evidently on or near the line of march of an invading army approaching Jerusalem from the north, by way of Michmash, and apparently between Anathoth and Jerusalem. It is confounded with Madmannah by Eusebines. (Onomast. s. v. Madmanna.)

MADOCJ (Mαδόχος ὁ Μαδόχος, a city on the south coast of Arabia, in the country of the Boeotarens, apparently in the extreme west of their district, and consequently not far to the west of Aden. (Ptol. vi. 7, § 9.) It is not otherwise known. (G. W.)

MADUATE, a people of Thrace, mentioned by Livy (xxxvii. 40) along with the Astii, Caeeni, and Corhi, but otherwise unknown.

MADURUS. [Μαδύρος.] (Ptol. iv. 3 § 30), a town or village on the confines of the tribes of Judah and Benjamin, mentioned only in Isaiah (x. 31). It was evidently on or near the line of march of an invading army approaching Jerusalem from the north, by way of Michmash, and apparently between Anathoth and Jerusalem. It is confounded with Madmannah by Eusebines. (Onomast. s. v. Madmanna.)

MADUrus. [Μαδύρος.]

MADYTHUS (Μαδύθος; Ptol. Madynos), an important port town in the Thracian Chersonesus, on the Bosphorus, nearly opposite to Abidos. (Livy. xxxi. 16, xxxiii. 38; Mela. ii. 2; Anna's Hist. iv. p. 429; Strab. vii. p. 331.) Ptolemy (ii. 12, § 4) mentions in the same district a town of the name of Madis, which some identify with Madythus, but which seems to have been situated more inland. It is generally believed that Mado marks the site of the ancient Madythus. (G. W.)

MAFA (Μαφά, Stoa. Salicem. Mar. Magn. §§ 74, 75;
MAENANDER (Μαίανδρος; Meînêr or Bogukh Meînêr), a celebrated river in Asia Minor, has its sources not far from Chaeænae in Phrygia (Xenoph., Anab. i. 2. § 7), where it gathered forth in a park of Cyrus. According to some (Strab. xii. p. 575; Maxim. Tyr. viii. 38) its sources were the same as those of the river Marsyas; but this is irreconcilable with Xenophon, according to whom the sources of the two rivers were only near each other, the Marsyas rising in a royal palace. Others, again, as Plinius (Nat. Hist. xiv. 27) and Strabo (Capella (6. p. 221), state that the Maenander flowed out of a lake on Mount Aulocrene. Col. Leake (Asia Minor, p. 158, &c.) reconciles all these apparently different statements by the remark that both the Maenander and the Marsyas have their origin in the lake on Mount Aulocrene, above Chaeænae, but that they issue at different parts of the mountain below the lake. The Maenander was so celebrated for antiquity for its numerous windings, that its name became, and still is, proverbial. (Heron. II. ii. 869; Hesiod, Theog. 339; Herod. vii. 26, 30; Strab. xii. p. 577; Paus. vii. 41. § 3; Ov. Met. vii. 162, &c.; Liv. xxxvii. 13; Susec. Herc. Far. 683, &c., Phoen. 605.) Its whole course has a south-western direction on the south of the range of Mount Mesagros. In the south of Tripolis it receives the waters of the Lyæns, whereby it becomes a river of some importance. Near Carna it passes from Phrygia into Cappadocia, where it flows in its tortuous course through the Maenandrian plain (comp. Strab. xiv. p. 648, xv. p. 691), and finally discharges itself in the Iæanos sea, between Priene and Myus, opposite to Mileta, from which its mouth is only 10 stadia distant. (Plin. l.c.; Paus. ii. 5. § 2.) The tributaries of the Maenander are the Oriyæs, Maiasæs, Cludæus, Lethæus, and Gaeson, in the north; and the Oribæus, Lyæus, Halipæus, and a second Maiasæs, in the south. The Maenander is everywhere a very deep river (Nic. Choniat. p. 123; Liv. l.c.), but not very broad, so that in many parts its depth equals its breadth. As moreover it carried in its waters a great quantity of mud, it was navigable only for small craft. (Strab. xii. p. 579, xiv. p. 636.) It frequently overflowed its banks; and, in consequence of the quantity of its deposits at its mouth, the coast has been pushed about 20 or 30 stadia further into the sea, so that several small islands off the coast have become united with the mainland. (Paus. viii. 24. § 5; Thucyd. vii. 17.) There was a story about a subterraneous connection between the Maenander and the Alpheus in Elis. (Paus. ii. 5. § 2; comp. Hamilton, Researches, vol. i. p. 535, foll. ii. p. 161, foll.) [L. S.]

MAENANDER (Μαίανδρος, Ptol. vii. 2. §§ 8, 10, 11), a chain of mountains in Eastern India, comprehended, according to Ptolemy's subdivision, in the part called by him India extra Gangæm. They may be best considered as an outlying spur from the Bytærybas M. (now Jaronse), extending in a southerly direction between the Gangæs and the Doaras towards the sea coast. Their present name seems to be Mâna-Mura. [V.]

MAENANDROPOLIS (Μαίανδροπόλις), a town of uncertain site, though, as its name seems to indicate, it must have been situated somewhere on the Maenander, and more especially in the territory of Magnesia, as we learn from Stephanus B. (C. r.; comp. Plin. v. 29), from whom we may also infer that the place was sometimes called Maenander. [L. S.]

MAENELAS (Μαίναλας), a general name given by Dion Cassius (Hist. 58. p. 12) to the Chalicoth tribes nearest to the Roman vallum, the Caledonii dwelling beyond them. (Comp. Jornandes, de Reb. Got. c. 2.)

MAEDI (Μαεδώι, Μαδώσ, Thuc. ii. 98; Polyb. x. 41), a powerful people in the west of Thrace, dwelling near the sources of the Axios and Margus, and upon the southern slopes ofMt. Scæmus. (Leake, Northern Greece, vol. iii. p. 472.) Strabo says that the Maedi bordered eastward on the Thubunææ of Durdunææ (vii. p. 316), and that the Axios flowed through their territory (vii. p. 331). The latter was called Maedica (Μαεδίκα, Ptol. iii. 11. § 9; Liv. xxvi. 25, xi. 22). They frequently made incursions into Macedonia; but in b.c. 211, Philip V. invaded their territory, and took their chief town Ilamporion, which is probably represented by Iovindé or Iovindia, in the upper valley of the Margus or Morava. (Liv. xxvi. 25.) We also learn from Livy (vol. iv. 22. § 1) that the same king traversed their territory in order to reach the summit of Mt. Haæmas; and that on his return into Macedonia he received the submission of Petra, a fortress of the Maedi. Among the other places in Maedica, we read of Phraganæ (Liv. xxvi. 25) and Deandala, probably the modern Kaninaeno, on one of the confines of the upper Axios. (Liv. xlv. 26.) The Maedi are said to have been of the same race as the Bithynians in Asia, and were hence called Maedobithyni (Steph. B. s. 388) or Maedi, Strab. viii. 295. (Comp. Strab. vii. p. 316; Plin. iv. 11. s. 18.)

MAENACAC (Μαενάκης), a Greek city on the S. coast of Hispania Baetica, the most westerly colony of the Phœceans. (Strab. iii. p. 156; Scymn. 145, et seq.) In Strabo's time it had been destroyed; but the ruins were still visible. He refutes the error of those who confounded it with Malaca, which was not a Greek, but a Phœnician city, and lay further to the W.; but this error is repeated by Avienus (Ov. Morit. 426, et seq.). The place seems to be the Maex of Stephanus. [P. S.]

MAENALUS. 1. (Μαίναλος, Strab. viii. p. 388; Schol. ad Apoll. Rhod. i. 769; Maiâlôch, Theocr. i. 123; to Maiâlanv̄̃s, Paus. viii. 36. § 7; Maenâla, Virg. Ecly. vii. 22; Mel. ii. 3; Plin. iv. 6. s. 10; Maenalæ, pl. Virg. Ecly. x. 55; Ov. Met. i. 216), a lofty mountain of Arcadia, forming the western boundary of the territories of Mantinea and Tegea. It was especially sacred to the god Pan, who is hence called Maenalus Deus (Ov. Fast. iv. 650). The inhabitants of the mountain fancied that they had frequently heard the god playing on his pipe. The two highest summits of the mountain are called at present Aïdôs and Apano-Khôrîpsa: the latter is 5 153 feet high. The mountain is at present covered with pines and firs; the chief pass through it is nearly the modern town of Tripolitza. —The Roman poets frequently use the adjectives Maenalus and Maenalæ as equivalent to Arcadian. Hence Maenadî versus, shepherds' songs, such as were usual in Arcadia (Virg. Ecly. vii. 21); Maenalîs orvî, i.e. Arcadia (Ov. Fast. iii. 84); Maenalîs nymphô, i.e. Carmêna (Ov. Fast. i. 634); Maenalîs Urara, and Maenalîte Arcôta, the constellation of the Bear, into which Callisto, daughter of Lycaon, king of Arcadia, was said to have been metamorphosed. (Ov. Fast. iii. 11. 8; Fast. ii. 192.)

2. (Μαίναλος; Eld. Maiâlôch, Maiâlnîtû, Mai-

2
MAENARIAE INSULAE.

A town of Arcadia, and the capital of the district Mænæla (Μαιναλυα, Thuc. v. 64: Paus. iii. 11. § 7, vi. 7. § 9, viii. 9. § 4), which formed part of the territory of Mægalopolis upon the foundation of the latter city. A list of the towns in Mænaia is given in Vol. I. p. 192. The town Mænæla was in ruins in the time of Pausanias, who mentions a temple of Athena, a stadium, and a hippodrome, as belonging to the place. (Paus. viii. 3. § 4, 36. § 8; Steph. B. s. r.) Its site is uncertain. Ross supposes that the remains of polygonal walls on the isolated hill, on the right bank of the river Helisson and opposite the village Ἰωσία, represent Mænæla; and this appears more probable than the opinion of Leake, who identifies this site with Dipaea, and thinks that Mænæla stood on Mt. Άπρονο-κλείρια. (Ross, *Rerum in Peloponnes. vol. I. p. 117; Leake, *Mores, vol. ii. p. 52, *Peloponnesien, p. 243.)

MAENARIAE INSULAE, a cluster of little islands in the gulf of Palma, off the coast of the Greater Balearics. (Plin. iii. 5. s. 11.) [P. S.]

MAENÔBA (Mela, ii. 6. § 7; Plin. iii. 1. s. 3; *Mеана, Ptol. ii. 4. § 5; *Μενοβα, *Ptolemy, *Ptolemy, i. § 405: *Vela: Malaya), a town of the Bastallii Poeni, on the S. coast of Baetica. 12 M. P. E. of Malaga, on a river of the same name (*Vela). Strabo (iii. p. 143) also mentions Mænoëla (*Mеана), with Astra, Nubriasa, Onoba, and Osonoba, as towns remarkable for their situation on tidal estuaries; whence Uckert argues that, since not only all the other places thus mentioned were outside of the Straits, but also Strabo's description necessarily applies to an estuary exposed to the tides of the Atlantic, we must seek for his Mænoba elsewhere than on the tideless Mediterranean. Accordingly, he places it on the river Mænoëla or Mænuba (*Μενούμα), the lowest of the great tributaries of the Baetic, on its right side, mentioned both by Pliny (iii. 1. s. 3), and in an inscription found at *Σαν Λυκορ Λαιορ (Curo. ap. *Floros, *Floros, *Floros. vol. Ⅱ. p. 47), up which the river the tide extends to a considerable distance. (Uckert, vol. ii. pt. 1. pp. 288, 349, 550.) This argument, though doubtless, has certainly some force, and it is adopted by Spruner in his Atlas. [P. S.]

MAENOBOBA (Μαενοβοβα), rivers. [Μαενοβοβα.]

MAENOBOBA (Μαενοβοβα), a town of the Mastians, in the S. of Spain, mentioned by *Hecataeus (ap. *Steph. B. s. r.), seems to be identical with MAENOIA on the S. coast of Baetica. [P. S.]

MAEO'NIA (Μαεωνια), an ancient name of Lydia. [Lydia.] There was, also, in later times a town of this name in Lydia, mentioned by Pliny (v. 29. s. 30), Hierocles (p. 670), and in the *Episcopal Notitia; and of which several coins are extant. Its ruins have been found at a place called *Μαγουρα, 5 English miles W. of *Σαντάλ. (Hamilton, *Researches, vol. ii. p. 139.)

COIN OF MADOILA.

MAEOTAÆ (Μαεωτεια, *Strab. xii. pp. 492, 494: Plin. iv. 26; *Maeatcul, *Pomp. *Mela, i. 2. § 6, 1. 9. § 17; Plin. vi. 7), a collective name which was given to the peoples about the Palus

MAEOTIA as early as the logographer *Hellenicus (p. 78), if we read with his editor *Struz (for *Μαεωτεια), *Μαεώτης. According to Strabo (I. c.) they lived partly on fish, and partly tilled the land, but were no less warlike than their nominal neighbours. He enumerates the following subdivisions of the *Maeotae: *Samoschandariz, *Trovato, *Kotyrba, *Verdala, *Tarpar, *Oskidizaro, *Stittavaz, *Met, and many others. These wild hordes were sometimes tributary to the factory at the Tannas, and at other times to the Bosporan, revolting from one to the other. The kingdom of the Cimmerian Bosporus in later times, especially under *Pharnaces, *Asander, and *Polemon, extended as far as the Tannas. [E. B. J.]

MAENOTTIS PALUS, the large body of water to the SE. of the *Euxine now called the *Sea of Azov, or the *Azov-denis-2 of the Turks. This sea was usually called *Palus Maetotis (§ Μαεωτιτα λεμνη, *Aesch. *Prom. 427), but sometimes "*Maeotica" or "*Mactotis Palus" (Plin. ii. 67; *Lucan, ii. 641), "*Maeotit" or "*Mactit Lucus" (Plin. iv. 24, vi. 6), "*Maeotian," or "*Maeoticum aquorum" (Avien. v. 32; *Vall. *Flac. iv. 720), "*Cimmerian Paludes" (Cland. in *Entrop. i. 249), "*Cimmericum" or "*Bosporicum Mare" (Gell. xviii. 8), "*Sctypeiae Ultra, *Paldus" (Ovid. *Her. vi. 107), "*Trient. ii. 4. 49). The generic in Latin followed the Greek form "*Maeotids," but was sometimes "*Maeotis" (Ennius, *Ap. *Cic. *Tusc. x. 17). The accusative has the two forms *Maeoter "*Maeotit" (Plin. x. 10), and *Maur'dia "*Mauridia" (Pomp. *Mela, i. 3. § 1, ii. 1. § 1). Pliny (vi. 7) has preserved the *Sclavenian name *Teoroudia, which he translates by "*Mater Mariar." The Maeotic gulf, with a surface of rather more than 12,000 square miles, was supplied by the rivers to the larger *Hormonossus; than it really is. Thus Herodotus (iv. 86) believed it to be not much less in extent than the Euxine, while *Sclav. (p. 30, ed. *Hudson) calculated it at half the size of that sea. Strabo (ii. 125, comp. vii. pp. 307—312, xi. p. 493: *Arrian, *Perip. p. 20, ed. *Hudson; *Agathem. i. 3, ii. 14) estimated the circumference at somewhat more than 9000 stadia, but *Polyb. (iv. 39) reduces it to 8000 stadia. According to Pliny (iv. 24) its circuit was reckoned at 1400 M. P. Or, according to some, 1125 M. P. Strabo (vii. 310) reckons it in length 2200 stadia between the Cimmerian Bosporus and the mouth of the Tannas, and therefore came nearest amongst the ancients in the length; but he seems to have supposed it to carry its width on towards the Tannas (comp. *Renell, *Compar. *Geog. vol. i. p. 331). The length according to Pliny (I. c.) is 385 M. P., which agrees with the estimate of *Polemy (v. 9. §§ 1—7). *Polyb. (I. c.) confidently anticipated an entire and speedy chocking of the waters of the Maeotis; and ever since his time the theory that the *Sea of Azov has contracted its boundaries has met with considerable support, though on this point there is a material discordance among the various authorities; the latest statement, and approximation to the amount of its cubic contents will be found in *Admiral *Smyth's work (*The *Mediterranean, p. 148). The ancients appear to have been correct in their assertion about the abundance of salt in its waters, as, although in SW. winds, when the water is highest, it becomes brackish, yet at other times it is drinkable, though of a disagreeable flavour (Jones, *Jour. *Gog. Soc. vol. i. p. 106). [E. B. J.]

MAEPHI (Μαεφη μητροπολαια), an inland city of Arabia Felix, placed by *Polemy in long. 59° 15',
MAGDA. 245

MAESA. lat. 15°, the capital, no doubt, of the Maphoritae, whom he places above the Homeritae and Adramitae of the southern coast. [Maphoritae.] The situation of this tribe seems to have been by the sea and very near the pleasant city of Magabah, in the midst of which the "very extensive village named Magabah, situated at the eastern base of the Hammuraces," perhaps marks the site of the Mepha metropolis. Mr. Forster, however, identifies it with the ruined site of Nakab-el-Hajjar, discovered and described by Liet. Wellstead in 1834, the situation of which is thus stated by the officer:—"Nakab-el-Hajjar is situated north-west, and is distant forty-four miles from the village of 'Ein [on the coast], which is marked on the chart in latitude 14° 2' north, and longitude 46° 30' east, nearly." It stands in the centre of the Wady Meiyah, nearly 20 miles north of the village of that name, and was evidently a place of considerable importance in ancient times. The inscription over the gateway, in the ancient Arabic character, commonly known as the Hadra- matic, would doubtless throw light on the history of the castle; and it is curious that the attempt of Professor Boediger and Mr. Charles Forster to give some little in common, both would agree in identifying it with Mepha; for while the former discovers the name Mēpha twice in the first line of the inscription, the latter, who pronounces that this name "has no existence in the inscription," compensates for this disappointment by discovering a list of proper names, which serve to connect it with several historical personages, among whom are an Arabian patriarch, Mahārēb, son of Koreshi, "belonging to a period certainly prior to the Christian era;" and Charishā, "that king of the Homeritics and Subaranics celebrated by Arrian (Periplus Maris Erythraei, pp. 13, 14, apud Hudson Geographica Minoris), whose alliance in the reign of Claudius was assiduously courted by the Romans. The inscription further mentions many of the buildings described by Liett. Wellstead. (Forster, vol. ii. pp. 193—204, 383—393.) [G.W.]

MAERIA. [MAMINIAEA.]

MAESIA SILVA, a forest of Eturia, in the territory of the Veientes, which was conquered by them by Ancus Marcius. (Liv. i. 33.) Its site cannot be determined with certainty, but it was probably situated on the right bank of the Tiber, between Rome and the sea-coast. Pliny also notices it as abounding in dormice. (Plin. viii. 58. s. 183.) [E.H.B.]

MAESOLIA (h Magāwā, Pol. vii. 1. § 15; in Peripl. p. 55, Magaλία), a district on the eastern coast of Hindostan, along the Bay of Bengal, corresponding to that now occupied by the Ceylons and the upper part of the Coromandel coast. Polyaenus mentions two towns in its territory which he calls Emporia, namely, Cantonacopia (probably the present Musalapattam) and Albyrgut. The district was traversed by a river of considerable size, the Maesoulus (now Godavari), which flows into the Bay of Bengal, after giving its name to the surrounding country. It was from one of the ports of Maesolia that merchants were in the habit of taking ship and crossing the Bay of Bengal to the Aurora Chersonesus. The people were called Maesoli (Maesolā). (Vinten, Peripl. vol. ii. p. 521.) [V.]

MAESOLUS (h Meisolus). (Pol. vii. 1. § 18, 37), a river of considerable size, which rises in the Decenn or midland part of Hindostan, and flows in a course at first SE., and then nearly E.

MAGDA. (Kyphō Dewhi), a considerable mound situated in the central part of Galatia, W. of the river Halys, and E. of the city of Ancyra, which was only 10 Roman miles distant from it. In B.C. 159, when Manius was carrying on war against the Galatians, the Tectesagi and Troemi took refuge on Mt. Magaba, and there defended themselves against the Romans, but were defeated. (Liv. xxxviii. 19, 26; Flor. i. 11.) According to Rufus Festus (11), this mountain was afterwards called Midiasicus. [L. S.]

MAGABULA, a place mentioned in the Peuting. Table in Pontus Polemaicous, on the road from Comana to Nicopolis, at a distance of 21 miles from the former city. There can be no doubt that it is the same place as Megale (Μέγαδαιω, mentioned by Ptolemy (v. 6. § 10)) but its exact site cannot be ascertained. [L. S.]

MAGARSA, MAGAIRUS, or MEGARUS (Μέγαρος, Μαγαρίς, Μαγαρίν), a town in the eastern part of Claria, situated on a height close to the mouth of the river Pyramus. (Strab. xiv. p. 676.) Alexander, previous to the battle of Issus, marched from Sard to Megara, and there offered sacrifices to Athena Megara, and to Amphiochus, the son of Amphiraraus, the reputed founder of the place. (Arrian, Anth. ii. 5.) It seems to have formed the port of Mallus (Steph. Byz. s. v. Μαγαρία; Lycoph. 439; Plin. II. N. v. 22). The hill on which the town stood now bears the name of Karadah, and vestiges of ancient buildings are still seen upon it. (Leake, Asia Minor, p. 215, fol.) [L. S.]

MAGDALA (Μαγδαλή, Efl. Μαγδαλα), a town of Galilee, chiefly noted as the birthplace of that Mary to whom the distinguished name of Magdalen is ever applied in the Gospel. The place itself is mentioned only by S. Matthew (xx. 39), where we find the words τα άνερ Μαγδαλήν, which are represented in the parallel passage in S. Mark (viii. 10) as τά μεριν Αδριανοπόλεως. As neither does this name occur elsewhere, we have no clue to the situation of the town; although a modern writer seems to follow from the New Testament itself that it lay on the west side of the lake." The argument is that, on leaving the coast of Magdala, our Lord embarked again, and "departed to the other side,"—"an expression which in the N. T. is applied almost exclusively to the country east of the lake and of the Jordan." (Robinson, Bib. Res. vol. iii. p. 278.) There can, however, be no difficulty in identifying it with the site of the modern village of Mejdel, in the SE. corner of the plain of Gennesaret, where there certainly existed an ancient town of the name, noticed in the Jerusalem Talmud, compiled in Tiberias, from which it is not more than 4 or 5 miles distant, on the north: probably identical also with Migdal-el, in the tribe of Naphtali. (Josh. xix. 38.) It is a small and insignificant village, "looking much like a ruin, though exhibiting no marks of antiquity." (Robinson, l. c.) Polee's account against this identification is quite intelligible:—"This does not seem to be Magdala mentioned in Scripture, because that is spoken of with Dalmannath, which was the east of the sea." (Observations n 3
MAGDOLUM.

on Palestine, Travels, vol. ii. p. 71.) How this last assertion is to be proved does not appear. The authority of Josephus has been quoted for a Mac-
dala near Garnala, and consequently on the coast of the sea (Vita, § 24); but the reading is corrupt. (Robinson, L. c. p. 279, note.) [G. W.]

MAGDOLUM (Μαγδολος), Herod. ii. 159; but Μαγδαλος in LXX.; the Magdol of the Old Testament (Exod. xiv. 2: Num. xxxiii. 7; 2 Kings, xxiii. 29; Jerom. xlv. 1, xlv. 14; Ezck. xxxix. 10, xxx. 6; It. Anton. p. 171), a town of Lower Aegypt which stood about 12 miles S. of Pelusium, on the coast-road between Aegypt and Syro-Pheo-
nicia. Here, according to Herodotus, (l. c.) Pha-
rah-Necho defeated the Syrians, about 608 B.C.

Eusebius (Praepur. Evang. ix. 18), apparently re-
ferring to the same event, calls the defeated army " Syrians of Judah." That the Syrians should have advanced so near the frontiers of Egypt as the Del-
tae Magdolum, with an arid desert on their flanks and rear (comp. Herod. iii. 5) seems extraordinary; neither is the suspicious aspect of the Battle of Mag-
dolus diminished by the conquest of Caiytis, a con-
siderable city of Palestine, being represented as its result. The Syrians might indeed have pushed rapidly along the coast-road to Aegypt, if they had previously secured the aid of the desert tribes of Arabs, as Cambyses did before his invasion of Aegypt (comp. Herod. iii. 7). Calmet's Dict. of the Bible, s. v. Megido; Wriner, Bibl. Realvortheilw., vol. ii. p. 93, note 2; Champollion, L'Egypte, vol. ii. p. 79. [W. B. D.]

MAGELLI, a Ligurian tribe, mentioned only by Pliny (iii. 5. s. 7). They have been supposed to have occupied the Val di Magello, in the Apennines, N. of Florence; but though it is certain that the Ligurians at one time extended as far as the E as this, it is very improbable that Pliny should have included such a tribe in his description of Roman Liguria. The name of the Magello is found in Procopius (B. G. iii. 5) where he speaks of a place (χωρὶς) called Macella (Μακέλλα), situated a day's journey to the N. of Florence. [E. H. B.]

MAGETOBRIA or ADJAGETOBRIA, in Gallia. Probably the true name ended in -bria or -bria. The Aribrois, the German, defeated the forces of the Gallery at this place. (Caes. B. G. ii. 31.) The site of Magetobria is unknown. The resemblance of name induced D'Anville (Notice, &c.) to fix it at Moitge de Broe, near the confluence of the Ognon and the Saone, a little above Pontarier. There is a story of a broken urn, with the inscription MAGETOBRI, having been found in the Saone in 1802. But this story is of doubtful credit, and the urn cannot be found now. Wilckemper supposes ANACE on the Brechelin, which is west of Farecogne and east of Lozay, to correspond best to the publi-
cations in Caesar's text. But Caesar does not give us the least indication of the position of Mage-
tobria. [G. L.]

MAGI. (Μαγοι.)

MAGIOVINUM or MAGIOVINUM, in Brit-

tain, a station placed in three of the itineraries of Antoninus at the distance of 24 miles to the N. of Verulamium. Its site is generally supposed to be at Feni, Stratford-Branch. MAGNA (It. Ant. p. 484; Geog. Ravenuv.) I. A town or station in Britain, the site of which is now occupied by Kennchester, in Herefordshire. In both of the above works the word is in the plural form, Magni, most probably for Magnus Castris. Indeed, the extraordinary extent of the place, as ascertained by its remains, renders this suggestion more than probably. The walls, now almost entirely destroyed, enclosed an area of from 20 to 30 acres. Leland, speaking of Kennchester, says:—"Ther hath ben fonde nostra memoria latres Britannici; et ex eis-
den canales, aquae ductus, tessellata pavimenta, fragmentum calcinae aeream, calcar ex argento, bi-side other straung things." The tesselated pavements, mentioned by Leland, have, of late years, been partially laid open. The only lapidary inscription which appears on record, as discovered at Ken-
chester, is a fragment with the name of the emperor 
Numerian; but coins and miscellaneous antiquities are still, from time to time, ploughed up.

2. A station in Britain, on the line of the Roman Wall, mentioned in the Notitia; it also occurs in Geog. Ravenuv.; and probably on the Rudge Cup, as Maiss. Its site is that of Carvoran, a little to the S. of the Wall, on a high and commanding position near the village of Greenhead.

There seems but little doubt of Carvoran being the site of this Magna; although, unlike many of the Notitia stations on the Wall, its position has not been identified by inscriptions. The Notitia places at Magna the second cohort of the Dalmatians. At least two inscriptions found here mention the Hanni, but none name the Dalmatians. The Hanni do not appear to be record in any other inscriptions, and they are not mentioned by that name in the Notitia. Hodgson (Roman Wall and South Tynedale, p. 205) considers that these auxiliary troops were from Apamena in Syria, at the confluence of the Orontes and Marayas, 62 miles from Aleppo, which is still a large place, and called Hamah, and, in ancient times, Hanna. This conjecture seems feasible, as the Notitia mentions the Colores Prima Apamennorum as quartered in Egypt; and also as some altars dedi-
cated to the Syrian goddess have been discovered at Carvoran.

[C. R. S.]

MAGNA GRAECIA (Μηγανα Ελαιον), was the name given in ancient times by the Greeks themselves to the assemblage of Greek colonies which encircled the shores of Southern Italy. The name is not found in any extant author earlier than Polybius; but the latter, in speaking of the cities of Magna Graecia, in the time of Pythongoras, uses the expression, "the country that was then called Magna Graecia" (Pol. ii. 39); and it appears cer-
tain that the name must have arisen at an early period, while the Greek colonies in Italy were at the height of their power and prosperity, and be-
fore the states of Greece proper had attained to their fullest greatness. But the omission of the name in Herodotus and Thurydides, even in pas-
sages where it would have been convenient as a geographical designation, seems to show that it was not in their time generally recognised as a distinc-
tive appellation, and was probably first adopted as such by the historians and geographers of later times, though its origin must have been derived from a much earlier age. It is perhaps still more significant, that the name is not found in Strabo, though that author attaches particular importance to the enumeration of the Greek cities in Italy as distinguished from those in the barbarous provinces. Nor is the use of the term, even at a later period, very fixed or definite. Strabo seems to imply that the Greek cities of Sicily were included under the appellation; but this is certainly opposed to the more general usage, which confined the term to the colo-
certain that none of the Greek colonies in Italy were more ancient than those in Sicily; while there seems good reason to suppose that the greater part of them were founded within the half century which followed the first commencement of Greek colonisation in that quarter. (b.c. 735—685.) The causes which just at that period gave so sudden an impulse to emigration in this direction, are unknown to us; but, though the precise dates of the foundation of these colonies are often uncertain, and we have no record of their establishment equal either in completeness or antiquity to that preserved by Thucydides concerning the Greek cities in Sicily, we may still trace with tolerable certainty the course and progress of the Greek colonisation of Italy.

The Achaeans led the way; and it is remarkable that a people who never played more than a subordinate part in the affairs of Greece itself should have been the founders of the two most powerful cities of Magna Graecia. Of these, Sybaris was the earliest of the Achaean colonies, and the most ancient of the Greek settlements in Italy of which the date is known with any approach to certainty. Its foundation is ascribed to the year 720 B.C. (Seym. Ch. 360; Clinton, F. H. vol. i. p. 174); and that of Crotona, according to the best authorities, may be placed about two years later, b.c. 710. [Crotona.] Within a very few years of the time when, as has been said, took place the settlement of Tarentum, a Spartan colony founded after the close of the First Messenian War, about 708 B.C. A spirit of rivalry between this city and the Achaean colonies seems to have early sprung up; and it was with a view of checking the encroachments of the Tarentines that the Achaeans, at the invitation of the Sybarites, founded the colony of Metapontum, on the immediate frontier of the Tarentine territory. The date of this is very uncertain (though it may probably be placed between 700 and 680 B.C.) but it is clear that Metapontum rose rapidly to prosperity, and became the third in importance among the Achaean colonies. While the latter were thus extending themselves along the shores of the Tarentine gulf, we find subsisting in the midst of them the Ionian colony of Siris, the history of which is extremely obscure, but which for a brief period in the third century B.C. Br. b.C. flourished Sybaris in opulence and luxury. [Siris.]

Further towards the S., the Locrians from Greece founded near the Cape Zephyrium the city which was thence known by the name of Loci Etiripi. This settlement is described by Strabo as nearly contemporary with that of Crotona (b.c. 710), though some authorities would bring it down to a period thirty or forty years later. [Locri.] The next important colony was that of Rhegium, on the Sicilian straits, which, was, according to the general statement, a Corinthian colony, founded subsequently to Zancle in Sicily, but which, from the traditions connected with its foundation, would seem to have been more ancient even than Sybaris. [Rhegium.]

The Greek cities on the Tyrrenian sea along the shores of Bruttium and Lucania were, with the single exception of Veii, which was not founded till about 540 b.c., all of them colonies from the earlier settlements already noticed and not sent out directly from the mother country. Thus Poseidonia, Locri and Scidrius, on the Tyrrenian sea, were all colonies of Sybaris, which in the days of its greatness undoubtedly extended its dominion from sea to sea. In like manner Crotona had founded Tarentum on the W. coast of the Bruttian peninsula, as well

nies in Italy. Even of these, it is not clear whether Cumae and its colonies in Campania were regarded as belonging to it: it is certain at least that the name is more generally used with reference only to the Greek cities in the south of Italy, including those on the shores of the Tarentine gulf and the Bruttian peninsula, together with Veii, Paestum, and Lavinia, on the W. coast of Lucania. Sometimes, indeed, the name is confined within still narrower limits, as applying only to the cities on the Tarentine gulf, from Locri to Tarentum (Plin. iii. 10. s. 15.; Pol. iii. i. § 10); but it is probable that this distinction was introduced only by the later geographers, and did not correspond to the original meaning of the term. Indeed, the name itself sufficiently implies (what is expressly stated by many ancient writers) that it was derived from the number and importance of the Greek colonies in Southern Italy, and must, therefore, naturally have been extended to them all. (Strab. vi. p. 253; Seym. Ch. 303; Pol. iii. 39. iii. 118; Athen. xii. p. 523; Justin, xx. 2; Cic. Tusc. iv. 1. v. 4, de Or. iii. 34.) It must be added that the name was never understood (except perhaps by late geographers) as a territorial one, including the whole of Southern Italy, but applied merely to the Greek cities on the coasts, so as to correspond with the expression "Georgiacorum orientalium," employed by Livy (xxii. 61). The same author in one passage (xxxii. 7) uses the phrase "Geacica Major," which is found also in Festus (p. 134. ed. Mill.), and employed by Justin and Ovid (Justin, l.c.; Ov. Fast. iv. 64); but the common form of expression was certainly Graecia Magna (Cic. Ill. cc.).

There could obviously be no ethnic appellation which corresponded to such a term; but it is important to observe that the name of Τρεχατας is universally used by the best writers to designate the Greeks in Italy, or as equivalent to the phrase of κατ' αυτή την Ταρατη Ελληνες, and is never confused with that of Τρεχας, or the Italiains in general. (Thuc. vi. 44; Herod. iv. 15, &c.) Polybius, however, as well as later writers, sometimes loses sight of this distinction. (Pol. vi. 52.)

The geographical description of the country, known as Magna Graecia, is extremely confused, and in more detail in those of Brutii, Lucania, and Calabria; but as the history of these Greek colonies is to a great extent separate from that of the mother country, while it is equally distinct from that of the Italian nations which came early in contact with Rome, it will be convenient here to give a brief summary of the history of Magna Graecia, bringing together under one head the leading facts which are given in the articles of the several cities.

The general testimony of antiquity points to Cumae as the most ancient of all the Greek settlements in Italy; and though we may reasonably refuse to admit the precise date assigned for its foundation (b.c. 1050), there seems no sufficient reason to doubt the fact that it really preceded all other Greek colonies in Italy or Sicily. [Cumae.] But, from its remote position, it appears to have been in great measure isolated from the later Greek settlements, and, together with its own colonies and dependencies, Camarina and Neapolis, formed a little group of Greek cities, that had but little connection with those further south, which here form the immediate subject of consideration.

With the single exception of Cumae, it seems
which appears to have led to the capture, and perhaps the destruction, of that city. (Justin, xx. 2.) But this account, which seems to have been given in a certain [Smith], and scarcely less so is that of the much more celebrated battle of the Sagran, which Justin connects with the fall of Siris; while other authors would bring it down to a much later period. [SAGRAS.] According to all accounts, that famous battle, in which it is said that 120000 Corontians were defeated by 10000, or at most 15000, of the Locrians and Rheginians, inflicted for a time a severe blow upon the prosperity of Coronta; but Strabo is certainly in error in representing that city as never recovering from its effects. [CORTONA.] Justin, on the contrary, describes the period of depression consequent on this disaster as continuing only till the time of Pythagoras (xx. 4); and it is certain that in the days of that philosopher, Coronta, as well as the neighbouring Achaean cities, appears in a state of great prosperity.

It was about the year B. C. 550 that the arrival of Pythagoras at Coronta gave rise to a marked change in the cities of Magna Graecia. The extraordinary influence which he speedily acquired, was not confined to that city, but extended to Sybaris and Metapontum also, as well as to Rheginum and Tarentum. And it was so far from being limited to the proper sphere of philosophy, that it led to the introduction of great political changes, and for a time threw the chief ascendency in the state into the hands of the Pythagoreans. [CORTONA.] Their power was ultimately overthrown by a violent revolution, which led to the expulsion of Pythagoras himself and his followers from Coronta; and this seems to have been followed by similar disturbances in the other cities. We are very imperfectly informed as to the circumstances of these revolutions, but it seems certain that they gave rise to a period of disorder and confusion throughout the cities of Magna Graecia from which the latter did not fully recover for a considerable period. (Pol. ii. 39; Justin. xx. 4; Isamb. Lib. Poth. 238—264; Porphyry. V. P. 54—58.)

It was apparently before the expulsion of the Pythagoreans, and while their influence was still paramount at Coronta, that the final contest arose between that city and Sybaris, which ended in the total destruction of the latter, B. C. 510. On that occasion we are told that the Corontians brought into the field 100000 men, and the Sybarites not less than 300000; and though these numbers cannot be received as historically accurate, they sufficiently prove the opinion entertained of the opulence and power of the rival cities. The decisive victory of the Corontians on the banks of the river Traecis was followed by the capture and total destruction of Sybaris,—an event which seems to have produced a profound sensation in the Hellenic world (Herod. vi. 21), and must have caused a great change in the political relations of Magna Graecia. Unfortunately, we have no means of tracing these; we know only that a part of the surviving Sybarites took refuge in the colonial cities of Locri and Scidrus, while another portion settled themselves on the banks of the Traecis, where they maintained themselves for a considerable period. (Herod. L. c.; Strab. vi. pp. 263, 264.)

The civil dissensions arising from the expulsion of the Pythagoreans may perhaps have been the cause of the remarkable circumstance (which we are otherwise wise at a loss to account for), that none of the states of Magna Graecia sent assistance to the Greeks at the
time of the Persian invasion. It is still more remarkable, that even when the Athenians and Lacedaemonians seem to have been at variance, and when they were engaged in a contest with the Persians, we do not hear of any similar application to the Greek cities in Southern Italy.

While the Achaean cities were thus declining from their former prosperity, Rhegium, the name of which is scarcely mentioned in history at an earlier period, was raised to a position of considerable power and importance under the rule of the despot Anaxilas (n.c. 496—476), who united under his authority the city of Messana also, on the opposite side of the strait, and thus became involved in connection with the politics of Sicily, which had been hitherto very distinct from those of Magna Graecia. Micythus, the successor of Anaxilas in the government of Rhegium, was remarkable as the founder of the colony of the Pyxus (afterwards called Buxentum), on the Tyrhenian sea, in n.c. 471. (Diod. xi. 58.) This was the last of the Greek settlements in that quarter.

About the same time (n.c. 473) we find mention of a disastrous defeat, which must, for a time, have given a severe check to the rising power of the Tarantine. That people appear to have taken little part in the disputes or contests of their Achaean neighbours; but after their ineffectual effort to oppose the founding of Metapontum (METAPONTUM), would seem to have been principally engaged in extending their commerce, and in wars with the neighbouring barbarians. Here they found, among the Iapygians or Messapians, a more formidable opposition than was encountered by the other Greek cities. After repeated contests, in many of which they had come off victorious and reduced many of the Iapygian towns, the Tarantine were defeated in a great battle by the Iapygians, with such heavy loss that Herodotus tells us it was the greatest slaughter of Greek citizens that had happened within his knowledge. Three thousand Egyptian auxiliaries, who had been sent to the support of the Tarantine, perished on the same occasion. (Herod. vii. 170; Diod. xi. 52.)

The period between the Persian and Peloponnesian Wars witnessed the establishment of the two latest of the Greek colonies in Southern Italy—THEB and HERACLEA. Both of these were, however, but a kind of renewal of previously existing settlements. The city of Messana also, in n.c. 443, by a body of colonists, of whom the Athenians seem to have taken the lead, but which was composed, in great part, of settlers from other states of Greece [THEB]; with whom were united the remaining citizens of Sybaris, and the new colony was established within two miles of the site of that city. The new settlement rose rapidly to prosperity, but was soon engaged in war with the Tarantine for the possession of the vacant district of Siris. These hostilities were at length terminated by a compromise, according to which the two rival cities joined in establishing a new colony, three miles from the site of the ancient Siris, to which they gave the name of Hercules, n.c. 432. (Strab. vi. p. 264; Diod. xii. 23, 36.)

But though thus founded by common consent, the Tarantine seem to have had much the largest share in its establishment, and Hercules was always considered as a colony of Tarantine origin.

During the Peloponnesian War the cities of Magna Graecia seem to have studiously kept aloof from the contest. Even when the Athenian expedition to Sicily (n.c. 415) involved the whole of the Greek cities in that island in the war, those on the coasts of Italy still endeavoured to preserve their neutrality, and refused to admit the Athenian forces within their walls, though they were reduced to a state of dependence on their assistance. (Thuc. vi. 44; Diod. xiii. 3.) At a later period, however, the Thurians (among whom there was naturally an Athenian party) and the Metapontines were induced to enter into a regular alliance with Athens, and supplied a small force to their assistance. (Thuc. vii. 33, 35; Diod. xiii. 11.)

At this period the cities of Magna Graecia seem to have been still in a prosperous and flourishing condition; but it was not long after that they began to feel the combined operation of two causes which mainly contributed to their decline. The first danger which threatened them was from the south, where Dionysius, tyrant of Syracuse, after having established his power over the greater part of Sicily, began to seek to extend it in Italy also. Hitherto the cities of Italy had kept aloof in great measure from the revolutions and wars of the neighbouring island; Rhegium and Locri alone seem to have maintained closer relations with the Sicilian Greeks. The former, from its Chalcidic origin, was naturally friendly to the colonies of the same race in Sicily; and when Dionysius turned his arms against the Chalcidian cities, Naxos, Catana, and Leontini, he at once brought on himself the enmity of the Rhegiotics. Hence, when he soon after applied to conclude a matrimonial alliance with them, the proposal was indignantly rejected. The Lucarians, on the other hand, readily accepted his offer, and thus secured the powerful assistance of the despot in his subsequent wars. (Diod. xiv. 44, 107.) From this time his efforts were mainly directed to the humiliation of Rhegium and the aggrandisement of the Locrians. His designs in this quarter soon excited so much alarm, that, in n.c. 393, the Italian Greeks were induced to conclude a general league for their mutual protection against the arms of Dionysius on the one side, as well as those of the Lucarians on the other. (Id. 91.) But the result was far from successful. The combined forces of the confederates were defeated by Dionysius in a great battle at the river Hellesporus or Helorus, near Caulonia, n.c. 389; and this blow was followed by the capture of Caulonia itself, as well as Himippon, both of which places were reduced to a state of dependence on Locri. Not long after, the powerful city of Rhegium was compelled to surrender, after a siege of nearly eleven months, b.c. 387. (Diod. xiv. 103—108, 111.)

While the more southerly cities of Magna Graecia were suffering thus severely from the attacks of Dionysius, those on the northern frontier were menaced by a still more formidable danger. The Lucarians, a Sabellian race or branch of the Samnite stock, who had pressed forward into the territory of the Oetotrians, and had gradually expelled or reduced to subjection the tribes of that people who inhabited the mountain districts of the interior, next turned their arms against the Greek cities on the coast. Poseidonia, the most northerly of these settlements, was the first which fell under their yoke (Strab. vi. p. 254); and though we cannot fix with accuracy the date of its subjugation, it is probable that this took place some time before we find them engaged in wars with the cities on the Tarantine gulf. If, indeed, we can trust to the uncertain chronology of some of these events, they would seem to have been already engaged in hostilities with the
racing colony of Thurii at an early period of its existence (Polyen. ii. 10); but it was not till after 400 B.C. that their power assumed a formidable aspect towards the Greeks in general. The territory of Thurii was the first object of their hostilities, but the other cities were not insensible to their danger; and hence the general league of the Italian Greeks in B.C. 393, as already mentioned, was directed as much against the Lucanians as against Dyrrhacians. Unfortunately, their arms met with equal ill success in both quarters; and in B.C. 390 the confederate forces were defeated by the Lucanians with great slaughter near Lains. (Diod. xiv. 101, 102; Strab. vi, p. 262.) That city had already fallen into the hands of the invaders, who now pressed on towards the south, and seem to have spread themselves with great rapidity throughout the whole of the Bruttian peninsula. Here they became so formidable that the younger Dyrrhacian was compelled to abandon the policy of his father (who had counted the alliance of the Lucanians, and even rendered them active assistance), and turn his arms against them, though with little effect. A period of great confusion and disorder appears to have ensued, and the rise of the Bruttian people, which took place at this period (B.C. 356), though it in some measure broke the power of the Lucanians, was far from giving any relief to the Greek cities that they soon found the Bruttian still more formidable neighbours. The flourishing cities of Terina and Hapronymus were conquered by the barbarians (Diod. xvi. 15; Strab. vi, p. 265); Rhegium and Locri, though they maintained their nationality, suffered almost as severely from the oppressions and exactions of the younger Dyrrhacians; while Crotona, long the most powerful city in this part of Italy, seems never to have recovered from the blow inflicted on it by the elder despot of that name [Crotona] and was with difficulty able to defend itself from the repeated attacks of the Bruttians. (Diod. xix. 3, 10.)

Meanwhile, the Lucanians had turned their arms against the more northerly cities on the Tarentine gulf. Here the Thurians seem, as before, to have borne the brunt of the attack; but at length Tar- rentum itself, which had hitherto stood aloof, and had repeatedly not even joined the league of B.C. 393, was compelled to take up arms in its own defence. The Tarentines could have suffered comparatively but little from the causes which had so severely impaired the prosperity of the other cities of Magna Græcia; and Tarentum was undoubtedly at this time the most opulent and powerful of the Greek cities in Italy. But its citizens were already enervated by idleness and luxury; and when they found themselves threatened by the forces of the Lucanians, combined with their old enemies the Messapians, they mistrusted their own resources, and applied to their parent city of Sparta for assistance. Archilochus, king of Sparta, accepted the invitation, and proceeded to Italy with a considerable force, where he appears to have carried on the war for some years, but was finally defeated and slain in a battle near Manduria, B.C. 308. (Diod. xxvi. 10; Polyen. ii. 10.) Only a few years afterwards, B.C. 332, Alexander king of Epirus was invited over to Italy for the same purpose. The history of his expedition is, unfortunately, very imperfectly known to us; though it is clear that his military operations were attended with much success, and must have exercised considerable influence upon the fortunes of the Greek cities. Though invited, in the first instance, by the Tarentines, he subsequently quarrelled with that people, and even turned his arms against them, and took Heraclea, their colony and dependency. At the same time he defeated the combined forces of the Lucanians and Bruttians in several successive battles, took Terina, Consentia, and several other towns, and penetrated into the heart of Bruttium, where he was slain by a Lucanian exile, who was serving in his own army, B.C. 326. (Liv. viii. 17, 24; Justin. xii. 2.)

After his death, the wars between the Tarentines and Lucanians appear to have continued with little interruption; though we have no further account of them till the year 303 B.C., when the former people again sued to Sparta for assistance, and Cleonynus, the uncle of the Spartan king, required to Tarentum with a large mercenary force. So formidable did this armament appear that both the Messapians and Lucanians were speedily induced to sue for peace; while Metapontum, which, for some reason or other, had opposed the views of Cleonynus, was reduced by force of arms. (Diod. xx. 104.)

The Spartan prince, however, soon alienated all his allies by his luxury and rapacity, and ejected Italy the object of universal contempt.

We have very little information as to the wars of Agrigentum and Tarentum. We know that the latter had made himself master of Hipponium and Crotona, and occupied the latter city with a garrison. It is evident, therefore, that his designs were directed as much against the Greek cities as their barbarian neighbours; and the alliance which he concluded at the same time with the Inygniens and Penetians could only have been with a view to the humiliation of Tarentum. (Diod. xxii. 2, 3.) His ambitious designs in this quarter were interrupted by his death, B.C. 289.

Only a few years later than this took place the celebrated expedition of Pyrrhus to Italy (B.C. 281—274), which marks a conspicuous era in the history of Magna Græcia. Shortly before that event, the Thurians, finding themselves hard pressed and their city itself besieged by the Lucanians, had concluded an alliance with the Romans, who raised the siege by the dispatch of the massaliotes, B.C. 292. (Appian, Soc. 7; Val. Max. i. 8, § 6.) This was the first occasion that brought the Roman power down to the shores of the Tarentine gulf; and here they almost immediately after came into collision with the Tarentines themselves. [Tarentum.] That people, conscious of their inability to resist the power of these new enemies, now invoked the assistance of Pyrrhus, king of Epirus, at the same time that they concluded a league with the Lucanians and Samnites, so long the inveterate enemies of Rome. Hence, when Pyrrhus landed in Italy, he found himself supported at the same time by all the remaining Greek cities in that country, as well as by the barbarian nations with whom they had been so long at war. It is unnecessary to enter into a detailed account of his campaigns; notwithstanding his first successes, his alliance proved of no real advantage to the Greeks, while his visit to Sicily, in B.C. 278, and his final defeat in B.C. 274, left them at the mercy of the victorious Romans. Tarentum itself was taken by the consuls in B.C. 272. Crotona and Locri had previously fallen into the hands of the Romans; while Rhegium, which was held by a revolted body of Campanian troops, originally placed there as a garrison, was finally reduced to submission in B.C. 271.
MAAGA GRAECIA.

There can be no doubt that the cities of Magna Graecia had suffered severely during these wars: the foreign troops placed within their walls, whether Roman or Carthaginian, were beyond all control, and their excesses were but a specimen of similar excesses; and the garrisons of Pyrrhus at Locri and Tarentum were guilty of exactions and cruelties which almost rivalled those of the Campanians at Rhegium. In addition to the loss of their independence, therefore, it is certain that the war of Pyrrhus inflicted a mortal blow on the prosperity of the few Greek cities in Southern Italy which had survived their long-continued struggles with the Lucanians and Bruttians. The decayed and debased condition of the once powerful Crotona (Liv. xxvii. 30) was undoubtedly common to many of her neighbours and former rivals. There were, however, some exceptions; Heraclea especially, which had earned the favour of Rome by a timely submission, obtained a treaty of alliance on unusually favourable terms (Cic. pro Balb. 22), and seems to have continued in a flourishing condition.

But the final blow to the prosperity of Magna Graecia was inflicted by the Second Punic War. It is probable that the Greek cities were viewed with unfavourable eyes by the Roman government, and were naturally desirous to recover their lost independence. Hence they eagerly seized the opportunity afforded by the victories of Hannibal, and at the battle of Cannae we are told that almost all the Greek cities on the S. coast of Italy (Gracaeorum, nozias ferme ocrn, Liv. xxii. 61) declared in favour of the Carthaginian cause. Some of these were, however, overawed by Roman garrisons, which restrained them from open defection. Tarentum itself (still apparently the most powerful city in this part of Italy) was among the number; and though the city itself was betrayed into the hands of the Carthaginian commander, the citadel was still retained by a Roman garrison, which maintained its footing until the city was recovered by Fabius, B. C. 209. (Liv. xxi. 8-11, xxvii. 15, 16.) Tarentum was on this occasion treated like a captured city, and plundered without mercy, while the citizens were either put to the sword or sold as slaves. Metapontum was only saved from a similar fate by the removal of its inhabitants and their property, when Hannibal was compelled to abandon the town; and at a later period of the war Terina was utterly destroyed by a Roman garrison (Liv. xvi. 51; Strab. vi. 256.) Locri and Crotona were taken and retaken: Rhegium alone, which maintained its fidelity to Rome inviolate, though several times attempted by a Carthaginian force, seems to have in great measure escaped the ravages of the war.

It is certain that the cities of Magna Graecia never recovered from this long series of calamities. We have very little information as to their condition under the government of the Roman Republic, or the particular regulations to which they were subjected. But it is probable that, until after the complete subjugation of Greece and Macedonia, they were looked upon with a jealous eye as the natural allies of their kinsmen beyond the seas (Liv. xxxii. 7); and even the colonies, whether of Roman or Latin citizens, which were settled on the coasts of Southern Italy, were probably designed rather to keep down the independence of the exhausted population. One of these colonies, that to Poseidonia, now known as Paestum, had been established at a period as early as B. C. 273 (Liv. Epit. xiv.; Vell. Pat. i. 14); and Brundisium, which subsequently rose to be so important a city, was also settled before the Second Punic War, B. C. 244. (Vell. Pat. i. c.; Liv. Epit. xix.) But, with these exceptions, the situation of the cities on the coasts of Lucania, Bruttium, and Calabria, date from the period subsequent to that war. Of these, Buxentum in Lucania and Tempea in Bruttium were settled as early as B. C. 194; and in the same year a body of Roman colonists was established in the once mighty Crotona. (Liv. xxiv. 47.) Shortly afterwards two other colonies were settled, one at Thuri in Lucania, in B. C. 193, and the other at Hippo- mimn or Vibo, in B. C. 192. (Liv. xxxii. 30, xxxv. 19, xlvii. 25, xxxv. 9, 40.) The last of these, which under the name of Vibo Valeria became a flourishing and important town, was the only one of these colonies which appears to have risen to any considerable prosperity. At a much later period (B. C. 123), the two colonies sent to Sicyonum and Tarentum, under the names of Colonia Minervia and Neptunia (Vell. Pat. i. 13), were probably designed as an attempt to recruit the sinking population of those places.

But all attempts to check the rapid decline of this part of Italy were obviously unsuccessful. It is probable, or indeed almost certain, that malaria began to make itself severely felt as soon as the population diminished. This is noticed by Strabo in the case of Poseidonia (v. p. 251); and the same thing must have occurred along the shores of the Tarentine gulf. Indeed, Strabo himself tells us, that, of the cities of Magna Graecia which had been so famous in ancient times, the only ones that retained any traces of their Greek civilization in his day were Elegia, Tarentum, and Neapolis (vi. p. 253); while the great Achaeans cities on the Tarentine gulf had almost entirely disappeared. (Lb. p. 262.) The expressions of Cicero are not less forcible, that Magna Graecia, which had been so flourishing in the days of Pythagoras, and abounded in great and opulent cities, was in his time sunk into utter ruin (num quidem delecta est, Cic. de Amic. 4, Tuse, iv. 1). Several of the towns which still existed in the days of Cicero, as Metapontum, Heraclea, and Locri, gradually fell into utter insignificance, and totally disappeared, while Tarentum, Crotona, and a few others maintained a sickly and feeble existence through the middle ages down to the present time.

It has been already observed, that the name of Magna Graecia never was a territorial designation; nor did the cities which composed it ever constitute a political unity. In the earliest times, indeed, the difference of their origin and race must have effectually prevented the formation of any such union among them as a whole. But even the Achaeans cities appear to have formed no political league or union among themselves, until after the troubles growing out of the expulsion of the Pythagoreans, on which occasion they are said to have applied to the Achaeans in Greece for their arbitration, and to have founded by their advice a temple of Zeus Honmenus, where they were to hold councils to deliberate upon their common affairs and interests. (Pol. ii. 39.)

A more comprehensive league was formed in B. C. 333, for mutual protection against the attacks of Demetrius on one side, and the Lucanians on the other (B. D. xiv. 91); and the cities which composed it must be taken to have been a kind of general council or place of meeting. It is probable that this occasioned the general meetings of the Italian Greeks, alluded to by Strabo (vi. p. 280), were first instituted; though it is highly improbable
that the Tarentine colony of Hieraela was selected in the first instance for the place of assembly, as the Tarentines seem at first to have kept aloof from the contest, and it is very doubtful whether they were included in the league at all. But it was natural that, when the Tarentines assumed the leading position among the allied cities, the councils should be transferred to their colony of Magnesia. (Curt. Hist., 5. 4., 2.) Alexander of Ephesus afterwards sought to transfer them from the river to the Aeacandrus in the Thuranian territory, as a mark of unity towards the Tarentines. (Strab. l. c.)

**MAGNATA.**

**MAGNESA, MAGNETERES.** **[THESSALIA.]**

MAGNESA (Μαγνησία; Eth. Μάγνητη) 1. A city in Eonia, generally with the addition πρὸς ήν Μάδανος (αδ Μακεδονού), to distinguish it from the Lydian Magnesia, was a considerable city, situated on the slope of mount Therax, on the banks of the small river Lethaeus, a tributary of the Macedon. Its distance from Miletus was 120 stadia or 15 miles. (Strab. xiv. pp. 636, 647; Plln. v. 31.) It was an Aeolian city, said to have been founded by Magnesians from Europe, in the east of Thessaly, who were joined by some Cretans. It soon attained great power and prosperity, so as to be able to compete even with Ephesus. (Call. Hist. xiv. pp. 647.) At a later time, however, the city was taken and destroyed by the Cimmerians; perhaps about B.C. 726. In the year following the deserted site was occupied, and the place rebuilt by the Milesians, or, according to Athenaeus (xii. p. 525), by the Ephesians. Themistocles during his exile took up his residence at Magnesia, the town having been assigned to him by Artaxerxes to supply him with bread. (Nepos, Themist. 10; Did. xi. 57.) The Persian satraps of Lydia also occasionally resided in the place. (Herod. i. 161, iii. 122.)

The territory of Magnesia was extremely fertile, and produced excellent wine, figs, and cucumbers (Ath. cii. p. 29. ii. p. 59, iii. p. 78.) The town contained a temple of Dindymene, the mother of the gods; and the wife of Themistocles; or, according to others, his daughter, was priestess of that divinity; but, says Strabo (p. 647), the temple no longer exists, the town having been transferred to another place. The new town which the geographer saw, was most remarkable for its temple of Artemis Leucophrynhe, which in size and in the number of its treasures was indeed surpassed by the temple of Ephesus, but in beauty and the harmony of its parts was superior to all the temples in Asia Minor. The change in the site of the town alluded to by Strabo, is not noticed by any other a than the temple. As we learn from Vitruvius (vii. Peraeet.,) was built by the architect Hermogenes, in the Etruscan style. In the time of the Romans, Magnesia was added to the kingdom of Pergamus, after Antiokos had been driven eastward beyond Mount Taurus. (Liv. xxxvi. 45, xxxvii. 13.) After this time the town seems to have decayed, and is rarely mentioned, though it is still noticed by Pliny (v. 51) and Tacitus (Ann. iv. 55). Hierocles (p. 635) ranks it among the bishoprics of Asia, and later documents seem to imply that at one time it had the name of Magnesia. (Vis. Constan. iii. p. 666.) The existence of the town in the time of the emperors Aurelius and Galerius is attested by coins.

Formerly the site of Magnesia was identified with the modern Guzhl-bizar; but it is now generally admitted, that Guzhl-bazar, where ruins of the temple

**MAGNOPOLIS.**

**COIN OF MAGNESIA AD MACEANDRUM.**

2. A town of Lydia, usually with the addition πρὸς ήν Λαόκεα (αδ Σιπύλων), to distinguish it from Magnesia on the Maeander in Eonia, situated on the north-western slope of Mount Sipylos, on the southern bank of the river Hermus. We are not informed when or by whom the town was founded, but it may have been a settlement of the Magnesians in the east of Thessaly. Magnesia is most celebrated in history for the victory gained under its walls by the two Scipios in B.C. 190, over Antiochus the Great, whereby the king was for ever driven from Western Asia. (Strab. xiii. p. 622; Plln. ii. 93; Lud. v. 9, § 16, vii. 17, § 16; Sev. x. 37; Liv. xxxvi. 37, foll.; Tac. Ann. ii. 47.) The town, after the victory of the Scipios, surrendered to the Romans. (Appian, Supp. 35.) During the war against Mithridates the Magnesians defended themselves bravely against the king. (Paus. l. 20. § 3.) In the reign of Tiberius, the town was nearly destroyed by an earthquake, in which several other Asiatic cities perished, and the emperor on that occasion granted liberal sums from the treasury to repair the loss sustained by the inhabitants (Strab. xii. 579; xiii. 622; Tac. l. c.) From coins and other sources, we learn that Magnesia continued to flourish down to the fifth century (Hieroc. p. 660); and it is often mentioned by the Byzantine writers. During the Turkish rule, it once was the residence of the Sultan; but at present it is much reduced, though it preserves its ancient name in the corrupt form of Munnan. The ruins of ancient buildings are not very considerable. (Chandler, Travels in Asia, iv. p. 352; Kaygel, Travels, ii. p. 295.) The accompanying coin is remarkable by having on its obverse the head of Cicerone, though the reason why it appears here, is unknown. The legend, which is incorrectly figured, should be, ΜΑΡΚΟΣ ΤΥΛΙΟΣ ΚΙΚΕΡΩΝ. [L.S.]
deacy at an early period, as it is not mentioned by any late writer. Appian (Mithrid. 78, 115) speaks of it under both names, Eupatoria and Magnopolis, and Strabo in one passage (xii. p. 560) speaks of it under the name of Megalopolis. Ruins of the place are said to exist some miles to the west of Somnium, at a place called Boghos Hissan Kolbeh. (Hamilton, Researches, p. 340.) [L. S.]

MAGNUM PROMONTORIUM (ναὶ μέγας ἀκρα-τίρων, Ptol. vii. 2. § 7; Marcian, Periphet p. 28), a promontory which forms the southern termination of the Chersonesus Aurea, in India extra Gangem, on the western side of the Sinus Magnus. Its modern name is C. Romania. Some have supposed that the Prom. Magn. represents another cape, either considerably to the NW., now called C. Patani. Ptolemy's account of these far Eastern places is so difficult, that it is impossible to feel sure of the evidence for or against the position of any place in the Aurea Chersonesus.

MAGNUM PROMONTORIUM, a promontory on the west coast of Lasitania (Mela, iii. i. § 6), probably the same which Strabo (iii. p. 151) and Ptolemy ii. 5. § 1) call τὸ Βαρύπαθον ἄκρα, near the mouth of the Tagus. The passage in Strabo is corrupt: but according to the correction of Corny, approved of by Groskurd, the promontory was 210 stadia from the mouth of the Tagus, which makes it correspond with C. Espichel. Ptolemy also calls it Magnum or Olimpena, from the town in its vicinity; but hastrangely confounds it with the Prom. Arthribum, on the NW. of the peninsula (iv. 21. s. 35).

MAGNUM PROM. MAURETANIAE. [Mac- retania.]

MAGNUS PORTUS. 1. (Πόρτος μάγως, Ptol. ii. 4. § 7; comp. Marcian. p. 41), a port-town of Hispania Baetica, between the town Adbara and the Prom. Charidion. 2. Μάγος Λυβή, Ptol. ii. 6. § 4), a bay on the coast of the G. Lucaces, which is evidently the same as the Artabrorum Sinus. [Vol. I. p. 256 b.]

3. (Μάγος Αιγή, Ptol. ii. 3. §§ 4, 33), a harbour in Britain, opposite the island of Vectis, corresponds to Portsmouth.

4. (Πόρτος Μάγως, Ptol. iv. 2. § 2; Mela, l. 5; Plin. v. 2; H. Anton. p. 13), a port-town of Mauretania Caesariensis, on the road between Gilva and Quinta, described by Pliny as "elevam Romanorum epulum." It is identified by Fauquier with Opena, of which the harbour is still called Nabeel-Chabir, i.e. the great Harbour.

5. (Μάγος Αιγίν, Ptol. iv. 6. § 6), a port on the west coast of Libya Interior, between the mouth of the river Daradus and the promontory Rysadium.

MAGNUS SINUS (ναὶ μέγας κόλπος, Ptol. vii. 2. §§ 3, 5; Ael. Com. i. p. 50), the great gulf which runs up to the middle of the present kingdom of Ava, and is known by the name of the Gulf of Siam. The ancient geographers correctly placed China on the east of this gulf, though they had no very accurate notions relative to its latitude or longitude. On the west side was the Aurea Chersonesus.

MAGO. [Balaeres, p. 374, a.]

MAOON (οἱ Μαο, Arrian, Ind. c. 4), a river mentioned by Arrian as flowing into the Ganges on its left bank, which has been conjectured to be the same as the present Romgupa.

MAGONTIACUM. [Mogantiacum.]

MAGORAS, a river of Syria, under mount Libanus, mentioned by Pliny (v. 20) apparently be-
tween Sidon and Beirut, and probably identical with the Tamyra of Strabo (xvi. p. 756), now Naher-el-Damur; though Dr. Robinson suggests the Naher-Beirût. (Bib. Res. vol. iii. pp. 433, 439.) [Tamyras.]

MAGORUM SINUS (Μαγωρος κόλπος), a bay on the Arabian coast of the Persian Gulf, in the country of the Themi, who joined the Gerraei on the north. (Ptol. vi. 7. § 54.) It is still marked by the modern town of Mugros, the name of which is accounted for by Mr. Fesler by the fact that "the ancient Themi are the Magian tribe of Beni-Tenim, in all ages of Arabian history inhabitants of the gulf and city of Mugros.—a deep bay, with its chief town of the same name, immediately above the bay of Kutifi." (Geogr. of Arabia, vol. ii. p. 215.) He maintains that the Magi of S. Matthew (i. 2) were of this tribe, and from this country (vol. i. pp. 304—307). [Theni.

MAGRADA, a small river on the N. coast of Hispania Tarraconensis, now Ureamea. (Mela, iii. 1. § 10.)

MAGYDUS (Μαγυδος: Eth. Magyedos; called Madyus by Scolyx, p. 39), a town of Pamphylia, on the coast between Attaleia and Perge, and subsequently of episcopal rank, is probably the Mygdale (Magydis), of the Stadiaurus. There are numerous imperial coins of Magydus, bearing the epigraph ΜΑΥΓΔΕΩΝ. Leake identifies it with Lebana. (Ptol. v. 5. § 2; Hieroc. p. 673; Stephan. §§ 201, 292; Leake, Asia Minor, p. 194; Cranmer, Asia Minor, vol. ii. p. 278.]

MAHANAIM (Maralos, LXX.), a place, and afterwards a town, on the east side of the Jordan, so named from the incident related in Genesis (xxiii. 2), where the word is translated, both by the LXX. and Josephus, Μαθαναία, and also by the latter Μαθαναία, στό υπερ των ρυμών. (John. i. 20, § 1). The following notices of its position occur in the Old Testament:—

It was north of the brook Jabboek (Gen. L. c., comp. v. 22), in the borders of Basan (Josh. xiii. 30), afterwards in the tribe of Gad (xxvi. 38), but on the confines of the half-tribe of Manasseh (xiii. 29) assigned to the Levites. (1 Chron. vi. 80.) It was the seat of Ishbosheth's kingdom, during the time that David reigned in Hebron (2 Sam. ii.), and there he was assassinated (v.). When David fled from Abelson, he was maintained at Mahanaim by Barzelad, the aged sheik of that district (2 Sam. xxii. 19, xiv. 27, xix. 32); and it was apparently in the vicinity of this city that the decisive battle was fought in the wood of Ephraim between the royal troops and the rebels (xviii.). A ruined site is mentioned in the Jebel 'Ajlun, under the name of Mahneh, which probably marks the position of Mahanaim. (Robinson, Bib. Res. vol. iii. Appendix, p. 166.) [G. W.]

MAIS, a station in Britain, so called upon an engraved bronze cup found at Bude, in Wilts. From this name occurring with those of four other stations, all on the line of the Great Wall, it is supposed to be identical with Magna, or Magnus. [C. R. S.]

MAIS (Μαῖς), a river of India intra Gangem, flowing into the Sinus Bar SYranus, now the Malid. (Nearch. p. 24; Arrian, Περίπλος Ματίς Ἐρύθρως.)

MAKKEDAII (Μακκέδαι, LXX., Euseb.; Macchida, Josephus.), a city of the Countries, on the south part of the tribe of Judah (Josh. xvi. 41), governed by a sheik. It was the first city taken by Joshua after the battle in Gibbon; and there it was that five confederate kings were found hid in a cave, which
was made their capital after their execution (Josh. x. 16—28.) It is placed by Eusebius (Onomast. s. v.) 8 miles east of Eleutheropolis. [BETHIOGARIS] [G. W.]

MALA (Μάλα, Māla), a town in Cucius, which Scylax (p. 32), in contradiction to other writers, makes the birthplace of Medea. [E. B. J.]

MALACA (Μάλακα, Stra., Ptol. ii. 4. § 7; Ἐθ, Mālas, Maleatas, Malaga), an important town upon the coast of Hispania Baetica, east of Calpe, which was equidistant from Gades and Malaca. (Strab. iii. p. 156.) According to the Antonine Itinerary (p. 403), the distance from Gades to Malaca was 143 miles; according to Strabo (iii. p. 140) the distance from Gades to Calpe was 750 stadia. Malaca stood upon a river of the same name, now Guadalmedina. (Avien. Or. Mor. 425; Malaca cum Brivio, Plin. iii. 1. s. 3.) Strabo says (L. c.) that Malaca was built in the Phoenician fashion, whence we may conclude that it was a Phoenician colony. Accordingly some modern writers have supposed that the name was derived from the Phoenician word malēca, "royal;" but Humboldt says that Malaca is a Basque word, signifying the "side of a mountain." Under the Romans it was a federata civitas (Plin. l. c.), and had extensive establishments for salting fish. (Strab. l. c.) Arrian says (L. c.) that Malaca was formerly called Maenaca; but Strabo had already noticed this error, and observed not only that Maenaca was farther from Calpe, but that the ruins of the latter city were clearly Hellenic. Malaca is also mentioned in Strab. iii. pp. 158, 161, 163; Hirt. B. Mor. 16; Geogr. Rav. iv. 42. There are still a few remains of Roman architecture in Maleas.

MALLACHAY (Μαλαχαί), a city of Libya interior, which Ptolemy (iv. 6. § 25) places in the country above the Niger, in E. long. 20° 20', and N. lat. 20' 15". [E. B. J.]

MALAE. [MALAE.]

MALAEI COLON (Μαλαίος, or Μαλέων καλων, Ptol. vii. 2. § 3), a promontory on the southern coast of the Golden Chersonesus. Its exact position cannot be determined, but it was probably along the Strata of Maleas. [V.]

MALAMANTUS (Μαλαμάντος, Arrian, Ind. c. 4), a small tributary of the Copern, or river of Kabul, perhaps now the Panjgoura. [V.]

MALANA (Μάλανα, Arrian, Ind. c. 29), a cape which enters the Indian Ocean, and forms the western boundary of the Orcnta (one of the seacoast tribes of Gedrosia) and the Ichthyophagi. There is no doubt that it is the same as the present C. Malei in Mervan, the measurements of Needham and of modern navigators corresponding remarkably. (Vincent, Vol. of Nearchus, vol. i. p. 216.) [V.]

MALANGA (Μαλάνγα, Ptol. vii. 1. § 92), the chief town of the Arvans, a tribe who inhabited the eastern side of Hindostan, below where the Yndias (now Kistus) flows into the sea. It has been supposed that it is the same place as the present Malea but it may have been a little higher up near Nahrā. [V.]

MALAO (Μαλαο, Ptol. iv. 7. § 10, com. Μαλάον), probably answers to the modern Darhan, the chief town of the Nomarchs, who inhabit the western coast of Africa from the straits of Gaid-sl-Mandeh to Cape Guardafui. This district has in all times been the seat of an active commerce between Africa and Arabia, and Malao was one of the principal marts for guns, myrrh, frankincense, cattle, slaves, gold-
MALLUS. [MALLUS: ETH. MALATÁT.] An ancient city of Cilicia, which, according to tradition, was founded in the Trojan times by the soothsayers Mopsas and Amphibias. (Strab. xiv. p. 675, &c.; Arrian, Anab. ii. 5.) It was situated near the mouth of the river Pyramus, on an eminence opposite to Mecarsus, as we must infer from Curtius (iii. 7), who states that Alexander entered the town after throwing a bridge across the Pyramus. Mallus therefore stood on the eastern bank of the river. According to Sclayx (p. 40) it was necessary to sail up the river a short distance in order to reach Mallus; and Mele (i. 13) also states that the town is situated close upon the river, whence Polenys (v. 8, § 4) must be mistaken in placing it more than two miles away from the river. Mallus was a town of considerable importance, though it does not appear to have possessed any particular attractions. Its port was Magarsa (Magarsa), though in later times it seems to have had a port of its own, called Portus Palorum (Geogr. Nab. p. 195; Satan. Secret. Ptol. ii. 4. 26, whence we learn that in the middle ages it continued to be called Malburg, comp. Callim. Peripl. 13; Apian, Mitrid. 96; Dionys. Per. 875; Ptol. viii. 17 § 44; Plin. H. N. v. 22; Stadtm. Mar. M. §§ 151, 152; Leake, Asia Minor, pp. 216, &c.)

MALOFAS. [METHYDRION.] MALVA. [MELICHA.] MALUS. [MALIS; MEGALOPOLIS.] MAMALA (MAMALA kivv), a village of the Cassanitae, south of Badei Regia, on the Arabian coast of the Red Sea. (Ptol. vi. 7 § 5) [Gasandes; Badei Regia.] It has been supposed to be represented by the modern town of Koffada, and to have been the capital of the pratical tribe of Comatae, mentioned by Arrian (Peripius, p. 15). [G. W.] MAMÆRTIN. [MESSANA.] MAMERTIUM (Mameptov: ETH. Mapeptov), a city in the interior of the Brattian peninsula. It is noticed only by Strabo, who places it in the mountains above Locri, in the neighbourhood of the great forest of Sila, and by Stephanus of Byzantium, who calls it merely a city of Italy. (Strab. vi. p. 241; Steph. B. s. r.) There is no reason to reject these testimonies, though we have no other account of the existence of such a place; and its position cannot be determined with any greater precision. But the Mamertini who figure in history, as the occupants of Messana are wholly distinct from the citizens of this obscure town. [MESSANA.] MAMMA (Mayptov), a district in Byzacena, at the foot of a chain of lofty mountains, where in A.D. 536 the enmarch Solomon, with 10,000 Romans, inflicted a signal defeat upon 50,000 Moors. (Procop. B. i. ii. 11; Corippus, Johananis, vi. 283; Theophan. p. 170; Anast. p. 61; Le Beau, Bus Empire, vol. viii. pp. 307–311; comp. Gibbon, c. xii.) Justinian afterwards fortified Mamma (Procop. de Aed. vi. 6), which is represented by the plain lying under the slopes of Jebel Truzza near Kuirum, in the Regency of Tanis. (Barth, Wanderungen, pp. 247, 285.)

MAMPARUS MONS. [BAGEDAS.] MANAPH (Mandara), a people of Ireland on the east coast, possessing a town called MANAPIA (Marsania), near the mouth of the Moduans, the present Dublin. (Ptol. ii. 2 §§ 8, 9.) The name is the same as one of the Celtic tribes of Gaul. [MANNAN.] MANAEMANIS PORTUS (Mammemaris lipax), a harbour on the west coast of Germany, and probably formed by the mouth of the river UISINGIS. It is perhaps identical with the modern Marma in West Frisland, which may even owe its name to the ancient port. (Ptol. ii. 11. § 1; Marcell. Hernc. p. 51, where it is called Mammemarous.) [L. S.] MANASEHE. [PALESTIN.] MANCHANE (Mayxan), a town in Mesopotamia, of which the site is uncertain. (Ptol. vi. 18 § 9.)

MANCUNIUM, a town of the Brigantes in Britain (It. Ant. p. 482), now Manchester. But few, if any, of the remains of the ancient town are to be traced at the present day. From inscriptions we learn that at some period of the Roman domination a cohort of the Frisians was stationed at Mancunium; and that the sixth legion, or one of its divisions, was there, probably on the occasion of some journey into the north. [C. R. S.]

MANDACADA (Mandakada), a place in Myasia, which is not mentioned till the time of Hierocles (p. 669), though it must have existed before, as Pliny (v. 32) mentions Cilices Mandacadini in the northern part of Myasia on the Hellespont. [L. S.] MANDAGARA (Mandagraps, Ptol. vii. 1 § 7), a small port on the western coast of Hindustan, in the district now called Count. It was situated a little to the S. of Bombay, nearly in the same latitude as Poonah. The author of the Peripius calls it Mandagara (p. 30). [V.]

MANDAGARIES (Mandagarap, Ptol. vi. 2 § 2), a small port on the shores of the Caspian sea, between the rivers Strato and Charinda. Foriger has conjectured that it may be represented by the present Meshvidzor. [V.]

MANDALAE (Mandalan, Ptol. vii. 1 § 72), an Indian tribe who occupied both banks of the Ganges in the neighbourhood of Palimbothra (Patun), which was perhaps (as has been conjectured by some geographers), their chief city. They seem
MANDANE.

however, to have lived rather lower down the river near Monghir, in the district now called Tokar.
(See Lassen's map.)

MANDANE (Μάνδανη), a town on the coast of Cilicia, between Celenderis, and Cape Paphilion, from which it was only 7 stadia distant (Stadiasmus, §§ 174, 175.). It is probably the same place as the Mynda or Myndania in Piny (v. 27); and if so, it must also be identical with the town of Myus (Μύος) mentioned by Sylax (p. 40) between Naxidus and Celenderis.

[M. E.]

Mandarae (Μανδαράε), the district about Corycium in Macedonia. (Steph. B. s. r.) [E. B. J.]

MANDELA. [Digenia.] [V.]

MANDORI. [Mandus.]

MANDRORICUM (Cantilago, Vol. I. p. 551, a.)

MANIUBIANS (Phin. vi. 16. s. 18), a people mentioned by Pliny as occupying a part of Western Bactria, under the spurs of the Paropamisus. They are now, like several other tribes whose names are given by that geographer to the same locality, no longer to be identified.

[V.]

MANDRUPOLIS (Μανδρύπολες or Μανδρόπολες), a town in Myus (Hieroc. p. 664), now called Mandora or Mandrepoura, at the foot of Mount Tenmus. Stephanus of Byzantium (s. r.) erroneously places the town in Phrygia. There seems to be little doubt but that Mandrupsas is the same town as Mandropas or Mandrupium, mentioned by Livy (xxviii. 15).

[L. S.]

MANDRUS MONS (το Μανδρός, Μάνδρου όρος), one of the chief mountains of Libya, from whence flow all the streams from Salatinus to Massa; the middle of the mountain has a position of 14° 2' long. and 19° 6' lat., assigned to it by Ptolemy (iv. 6. § 6). Afterwards (§ 14) he describes the river Nigeir as uniting, or yoking together (ετερευνομαι), Mount Mandrus with Mount Tahna. [Nigeir.] (Comp. London Geogr. Journ. vol. ii. p. 19; D'olein, Dissertation on the Niger, p. 81.) Ptolemy (§ 17) places the following tribes in the neighbourhood of this mountain: the KABII (Καβῆ), the

MALCOAE (Μαλκαί), and the Mandorii (Μανδο- βροι).

MANDUBII (Μανδοβόιοι), a Gallic people whom Strabo (iv. p. 191) erroneously calls the neighbours of the Arverni. When Caesar (u. 52) was marching through the territory of the Lingones, with the intention of retreating through the Sequani into the Provincia, he was attacked by the conde działa Galli under Vercingetorix (B. G. vii. 68). The Galli were defeated, and Vercingetorix, with his men, took refuge in Alesia, a town of the Mandubii. The site of the battle is not indicated by Caesar, but the position of Alesia is at Alesia, or Aulae Sainte Reine, as it is also called, in the department of the Côte d'Or. The railroad from Paris to Dijon crosses the hills of the Côte d'Or, of which Alesia and the heights around it are a part. The Mandubii were a small people who fed their flocks and cattle on the grassy hills of the Côte d'Or, and cultivated the fertile land at the foot of Alesia. Before the blockade was formed, they had driven a great quantity of their animals (pecus) within the walls. (B. G. vii. 71.)

The Mandubii who had received their countrymen into the city, were turned out of it by them, with their wives and children, during Caesar's blockade, in order that the scanty supply of provisions for the troops might last longer. The Romans refused to receive the Mandubii and give them food. The certain conclusion from Caesar's narrative is, that these unfortunate people died of hunger between their own walls and the Roman circumvaluation (B. G. vii. 78; Dion Cass. xi. 41). Caesar's description of Alesia is true; and the operations of his army about the place (B. G. vii. 63—90) are easily understood.

This plan of Alesia and the surrounding country is taken from Cassini's large map of France. The city of the Mandubii, or Alesia, was "on the summit of a hill, in a very elevated position;" as Caesar correctly describes it. This hill stands alone, and, except on the west side, where there is a plain, it is surrounded by hills of the same height, which are separated from Alesia by valleys. In the flat valley

Vol. II.
on the north side of Alesia, and in the narrower valley at the east end, is the railroad from Paris to Dijon. The nearest railway station to Alesia is Les Lavesnes.

The summit of Alesia is not quite flat; but the irregularities are insensible. The sides of the hill were explained as being a steep and rocky hill, the upper part of the ascent to the summit is not easy. Below the plateau, and below this steep ascent, there is a narrow level piece of ground, which appears to have been widened a little by the labour of man; and below this level part there is another descent, which in some parts is steep. The fine plain (planis) at the western foot of Alesia, which Caesar describes, is seen well from the western end of the level summit. This is the part which Caesar (c. 84) calls the "Ara Alesiae." The surface of the plain rises a little towards the western extremity, and then falls away abruptly, terminating in a rocky prominence, something like the head of a bent. A cross, with a small tree on each side of it, stands at the edge of the brow, and exactly marks the place from which Vercingetorix looked down on the plain of Alesia (c. 84). Beneath the Ara Alesiae is the small town of Alesie, on the western and south-western slope of the hill. It occupies a different place from the old town of the Mandubii, which was on the summit level. The hill is a mass of rock. The plateau has a thin soil, and the few parts which are not cultivated are covered with a short grass like that on the Brighton downs. It appears that the town of the Mandubii occupied all the large plateau, the length of which is shown by the scale, though we must assume that it was not all built on. The Ara, as already stated, was at the west end, commencing a view of the plain. The city wall seems to have been carried all round the margin of the plateau. Caesar says (B. G. vii. 69): "under the wall, that part of the hill which looked towards the east, all this space the forces of the Galli had filled, and they had formed in their front a ditch and a wall of stones (maceria) six feet high." This is the place marked A. in the plan, the only part of the hill of Alesia which is connected with the neighbouring heights. It be a small neck of land which separates the two parts of the Loze and the Lozerein. This is the part where the plateau of Alesia is most accessible, which Vercingetorix first occupied when he retired to Alesia, and where he constructed the wall of loose stones (maceria). There are plenty of stones on the spot to construct another such wall, if it were wanted.

At the eastern end of the plateau, just under the summit there is a source of water, which is now covered over with a small building. The water is now carried in pipes round the hill, to supply the hospital of Alesia, which is (F.) on the west side of the hill on the slope. Water is got at Alise by digging wells in the small level below the plateau; and at the Galli held this part of the mound during the battle, they may have got water from wells, for they do not fail in the springs on the plateau. Caesar's lines were formed all round the hill of Alesia, and they crossed the neck (A.) which connects this hill with another hill (B.) on the south-east side. The "castra" of Caesar (cc. 69, 80) are on B. C. D. E., on all the heights around Alesia. These hills have a steep side turned to Alesia, and flat tops. They are so near to Alesia that Caesar could not be safe against an attack from the outside, unless he occupied them. The valleys between Alesia and B. C. D. are narrow. On the north and north-west side the valley is wider. There is a good source of water on the hill B.

The hill of Alesia is well defined on the north and the south by the valleys of the two streams which Caesar mentions (B. G. vii. 69), and on the west side by the plain in which these rivers meet, and which extends up towards the foot of the hill, and turns to south at three Roman miles; and it is that which at least even in the part which is only a little distance from the foot of the hill. It extends much further in a NW. direction on the road to Montbard. This plain is a perfect level, covered in summer with fine wheat. As we go from the foot of the hill of Alesia to Les Lavesnes, the Arc Alesiae is a conspicuous object.

Caesar made two lines of circumvallation round Alesia. The circuit of the inner lines was eleven Roman miles; and we may infer from his words that this circumvallation was entirely in the plain and the valleys, except that it must have passed over the small elevation or neck of land between A. and B. In making the outer lines, which were fourteen Roman miles in circuit, he followed the level as far as the ground allowed (c. 74); from which we can conclude that some parts of the outer line were on the high grounds opposite to the hill of Alesia; and the form of the surface shows that this must have been so. The upper part of the hill west of Crescivio, part of which hill appears in the north-west angle of the plan, was crossed by the lines; and the camp of Remius and Ribibus (c. 83) was on the slope of this hill which faces Alesia. One of the ditches (fossae) of the interior lines was filled with water from the river (c. 72). The lines of eleven and fourteen miles in circuit are no exaggeration. No less circuit would enclose the hill and give the Romans the necessary space. The boldness of the undertaking may be easily conceived by the aid of numbers; but the sight of the work that was to be done before Vercingetorix and his troops, to the number of 80,000 men, could be shut in, can alone make us fully comprehend and admire the daring genius of the Roman procuslul.

There was a cavalry fight in the great plain before Caesar had completed his works. The Galli were driven back from the plain to their camp under the east end of the hill, and took refuge within Alesia. After this defeat Vercingetorix sent his cavalry away, and made preparation for holding out till the Gallic confederates should come to his aid (B.G. 70, 71.) When the forces of the confederates (vii. 75) came to raise the blockade of Alesia, they posted themselves on the hills where the name Mussip appears; and in the battle which is described in vii. 79, the Gallic cavalry filled the plain on the west side of the hill of Alesia, while the infantry remained on the heights about Mussip. The Gallic horse were beaten back to their camp (c. 80); but on the following night they renewed the attack on that part of the lines which crossed the plain. This attack also failed. The next night the Gallic confederates sent 60,000 men under Vergastianus to the north, to the back of the hill (F.), on the south slope of which Decimus and Ribibus had their camp. Their orders were to fall on the Romans at midday. The Gallic got to the back of the hill at daybreak, and waited till near noon, when they began their attack on the camp. At the same time the cavalry of the confederates came against the lines in the plain; and Vercingetorix descended from the heights of Alesia to attack the lines from
Mandubil.  

The Gallic failed to force the lines both on the inside and the outside. But the attack on the camp of Regiums and Reibus was desperate, and Labienus was sent to support them. Neither ramparts nor ditches could stop the forces of the enemy. Labienus, however, ventured to lead his and the other Gallic troops from the nearest posts, and sent to tell Caesar what he thought ought to be done. His design was to rally out upon the enemy, as Caesar had ordered him to do, if he could not drive them off from the lines.

The place where the decisive struggle took place is easily seen from the Arx Alesiae; and it is accurately described by Caesar (B. G. 8, 35). This is the hill (E.) which slopes down to the plain of the Loci. The upper part of the slope opposite to the Arx Alesiae is gentle, or "littorius declivis" (c. 83); but the descent from the gentle slope to the plain of the Loci, in which the railway runs, is in some parts very steep. Caesar could draw his lines in such a way as to bring them along the gentle slope, and comprise the steep and lower slope within them. But he hoped not to have a small slope downwards from the upper part of the hill to the Roman lines; and this is his gentle slope downward which he describes in c. 85, as giving a great advantage to the Gallic assailants under Vergasillanus ("Exiguum hoc ad declivitatem fastigium magnum habet momentum").

The mountain behind which Vergasillanus hid himself after the night's march is the part of the mountain west of Caregina. The camp of Regiums and Reibus being on the south face turned to Alesia, they could see nothing of Vergasillanus and his men till they came over the hill top to attack the lines. Vergingetorix, from the Arx Alesiae (c. 84), could see the attack on Regiums' camp, and all that was going on in the plain. He could see everything. Caesar's position during the attack of Vergasillanus was a glance at the occasion which gave him a view of the fight. He saw the plain, the "superiores montium," or the lines on the mountain north-west of Alesia, the Arx Alesiae, and the ground beneath. He stood therefore on the hill south of Alesia, and at the western end of it.

Caesar, hearing from Labienus how desperate was the attack on the upper lines, sent part of his cavalry round the exterior lines to attack Vergasillanus in the rear. The cavalry went round by the east end of Alesia. They could not go round the west end, for they would have crossed the plain outside of the lines, and the plain was occupied by the Galli. Nor could they have got up the hill on that side without some trouble; and they would not have come on the rear of the enemy. It is certain that they went by the east end, and upon the heights round Alesia, which would take a much longer time than Caesar's rapid narrative would lead us to suppose, if we did not know the ground.

When Caesar sent the cavalry round Alesia, he went to the aid of Labienus with four cohorts and some cavalry. The men from the higher ground could see him as he came along the lower ground (vs. 87, 88). He came from the hill on the south of Alesia, between his lines along the plain, with the Arx Alesia on his right, from which the men in the town were looking down on the furious battle. The scarlet cloak of the procuill told his men and the enemies who was coming. He was received with a shout from both sides, and the shout was answered from the circuit of the wall and all the lines. The Roman soldier throws his plia aside; and the sword begins its work. All at once Caesar's cavalry appears in the rear of Vergasillanus: "other cohorts approach; the enemy turn their backs; the cavalry meet the fugitives there. The wing is cut off, and the victory is won. The Galli who were on the outside of the fortifications desert their camp, and the next day Vergingetorix surrenders Alesia. The flight of Alesia was the last great effort of the united Gallic against Caesar. They never recovered from this defeat; and from this time the subjugation of Galia, though not yet quite completed, was near and certain.

Alesia was a town during the Roman occupation of Gallia; but the plateau has long since been deserted, and there is not a trace of building upon it. Many medals and other antiquities have been found by grubbing on the plateau. A vigneron of Alesio possesses many of these rare things, which he has found; a fine gold medal of Nero, some excellent bronze medallions of Trajan and Faustina, and the well-known medal of Numæcibus (Numine), called the "pied de loup." He has also a steles, keys, and a variety of other things.

The plan of Cassini is tolerably correct; correct enough to make the text of Caesar intelligible. [G.L.]

Manduzedum, a Roman station in Britain (B. Ant. p. 470), the site of which is supposed to be occupied by Manchester in Warwickshire. [C. B. S.]

Manduria (Mandurium, Steph. B.: Eth. Manduros: Manduriae), an ancient city of Calabria, in the territory of the Salentine, situated at the distance of 24 miles E. of Tarentum. Its name has obtained some celebrity from its being the scene of the death of Archilamus, king of Sparta, the son of Agesilaus, who had been invited to Italy by the Tarentines, to assist them against their neighbours the Messapians and Lucanians; but was defeated and slain in a battle under the walls of Manduria, which was fought on the same day with the more celebrated battle of Chaeronea, 3rd Aug., b. c. 338. (Plut. Ages. 3, who writes the name Mandowrou.; Theopomp. op. Athen. xii. p. 536; Dion. xvi. 63, 88; Paus. iii. 16. § 5.) This is the first notice we find of the name of Manduria: it would appear to have been a Messapian (or rather perhaps a Salentine) city, and apparently a place of considerable importance; but the only other mention of it that occurs in history is in the Second Punic War, when it revolted to the Carthaginians, but was taken by assault by Fabius Maximus, just before he recovered Tarentum, b. c. 209. (Liv. xxvii. 15.) We have no account of its fate on this occasion, but it would seem certain that it was severely punished, and either destroyed or at least reduced to a degraded condition; for we find no mention of it as a municipal town under the Romans; and Pliny omits its name in his list of towns in this part of Italy, though he elsewhere (ii. 103, s. 106) incidentally notice it as "opolium in salentine." The name is again found in the Tabula, which places it at the distance of 20 M. P. from Tarentum, an interval less than the truth, the actual distance being 20 geog. miles, or at least 24 Roman miles. (Tab. Peut.)

The existing ruins are considerable, especially those of the ancient walls, great part of the circuit of which is still preserved; they are built of large rectangular blocks, but composed of the soft and porous stone of which the whole neighbouring country consists; and in their original state appear to have formed a double circuit of walls, with a
MANTINIA

broad street or way between the two, and a ditch on the outside. At present they are nowhere near the height. The modern town of Manturia (a flourishing place, with about 6000 inhabitants) does not occupy the site of the ancient city; the latter having been destroyed by the Saracens, the few remaining inhabitants settled at a place called Casal Nuovo, which appellation it retained till towards the close of the eighteenth century, when, having grown into a considerable town, it resumed, by royal license, its ancient name of Manturia. (Swinhurn, Travels, vol. i. p. 222; Remanu, vol. i. p. 85; Giustichini, Diz. Geogr. vol. v. p. 338.)

Pliny mentions the existence at Manturia of a well or spring of water, which was always full to the brim, and could not be either increased or diminished in quantity. This natural curiosity is still shown by the inhabitants of Manturia, and has been described by several recent travellers; it is said that it preserves a constant equality in the level of its waters, notwithstanding any addition that may be made to them or any quantity that may be withdrawn,—a statement exactly coinciding with that of Pliny. (Plin. ii. 103. s. 106; Swinhurn, Travels, vol. i. p. 223; R. Craven, Travels, pp. 165—167.) The expression used by that author, who calls the basin or reservoir of the water "lacus," has given rise to the erroneous notion that there existed a lake in the neighborhood of Manturia, for which there is no foundation in fact. (E.B.B.)

MAXIM, a tribe of the Lygii, in the north-east of Germany (Fac. Germ. 43). They occupied the country south of the Burgundiones, and appear to be the same as the Omnii (Omanii) of Ptolemy (ii. 11. § 18; Zevas, Die Deutschen, p. 124). (L. S.)

MANTIAE (Mantia), an inland tribe of Arabia Felix, situated west of the Thamnete, and south of the Salapeni, north of the "iister Frankitunsa" country (Strab. Synag., Ptol. vii. 7. § 23). The position of Ptolemy's “Mantia,” west of his Kata-nita, and of Zama Mens, together with the near resemblance of name, implies their being the same with the Macsea of Burckhardt, the most easterly of the Harb tribes, situated on the borders of Karyga in the line of country between Medina and Derysh (Forster, Geogr. of Arabia, vol. ii. p. 249). (G. W.)

MANNIUS SALUTIS, a Mavriot solon, according to Pausanias (iv. p. 8), that part of the sea coast the island of Daphnita into which the river Euro discharged itself, and which the Liburnian group of islands is situated. In modern times it bears no distinctive name. (E.B.B.)

MANNIUS (Mannius) MANLIUS, a Mavriot (Ptol. iv. 2. § 25), an inland town of Mannitania, upon the position of which there is a great disagreement between Ptolemy and the author of the Itinerary. The first places it 10' to the W. of Oxyrhynchos, and the latter 18 M. P. to the E. of that place. The modern Bidana, on the slopes of the Lesser Atlas, preserving the ancient name, may be presumed to represent the old town, both of Ptolemy and the Itinerary, in which a Christian community was established. (Augustin. Ep. cxxxi.; Morelli, Africa Christiana, vol. i. p. 211.) Strabo (Travels, pp. 62—64) found remains of Roman architecture, and an inscription, which he refers to some of the descendants of Cn. Pompeius (Bart., Wunderw., p. 58, 207.) (E.B.B.)

MANNARIHUM, in north Gallia, is placed by the Antonine Itin. on a road which leads from Loculianum through Trajectum (Utrecht) to Carvo (Carvios). It is 15 M. P. from Trajectum to Manturia, and 16 M. P. from Mannaritium to Carvo. Mannaritium may be Mauren. But other places have been suggested. (G. L.)

MANTALI (Mantala, Ptol. v. 10. § 6), a place on the coast of Colchis, whose name has been traced in the modern Mangrelia. (E.B.B.)

MANTALA, a place in Gallia Narbonensis, on the road from Vienna (Vienna) to Durania (Mantua in Terracina); it is the next station after Lentinum (Lenticum), and 16 M. P. from it. The Antonine Itin. and the Table agree as to the position of Mantula. The site of the station Mantula may be, as D'Anville suggests, at a place on the Ilre, named Grosi, which is commanded by an old building named Montalum. (G. L.)

MANTIANA LACUS. [ABINSA.]

MANTINEIA (Mantineia; Edh. Mantinias, Mantinceans; Psaleopolis), one of the most ancient and powerful towns in Arcadia, situated on the borders of Argolis, S. of Orchomenus, and N. of Tegea. Its territory was called MANTINEAE (Mantinae). The city is mentioned in the Homeric catalogue as Mantine (Mantius), and, according to tradition, it derived its name from Mantinea, a son of Lycaon. (Hom. II. i. 607; Ptol. v. 56; Paus. viii. 8. § 4.) Mantinea originally consisted of four or five distinct villages, the inhabitants of which were collected into one city. (Xen. Hell. v. 2. § 6, seq.; Strab. viii. p. 337; Digl. xv. 5.) If Strabo is correct in stating that this incorporation was brought about by the Arcives, we may conjecture, with Mr. Grote, that the latter adopted this proceeding as a means of providing some check upon their powerful neighbours of Tegea. The political constitution of Mantinea is mentioned by Polybius as one of the best in antiquity; and the city had acquired so great a reputation at an early period, that the Cyrenaeans, in the reign of Battus III. (n. c. 550—530), when weakened by internal seditions, were recommended to apply to the Mantineans, who sent to them Democles to settle their constitution. (Ptol. vi. 43; Herod. iv. 161.) Some time before the Persian wars, Mantinea, like the other Arcadian towns, had acknowledged the Spartan supremacy; and accordingly the Mantineans, according to Pausanias (iv. sec.), were included among the allies of Sparta. Five hundred of their citizens fought at Thermopylae, but their contingent arrived on the field of Platea immediately after the battle. (Herod. vii. 202, ix. 77.) In the Peloponnesian War, Mantinea was at first a member of the Peloponnesian confederacy; but several causes tended to estrange her from the Spartan alliance. Mantinea and Tegea were, at this time, the two most important Arcadian states, and were frequently engaged in hostilities. In n. c. 423, they fought a bloody and indecisive battle, which is mentioned by Thucydides (iv. 134). Tegea, being oligarchically governed, was finally attached to Sparta; whereas Mantinea, from her possessing a democratic constitution, as well as from her hatred to Tegas, was disposed to desert Sparta on the first favourable opportunity. In addition to this, the Mantineans had quarrelled with the Tegeans over the possession of certain islands, and had garrisoned a fortress at Cyperna, near the site where Megalopolis was afterwards built. Well aware that the Laconians would not allow them to retain their recent acquisitions, as it was the policy of Sparta to prevent the increase of any political power in the Peloponnesus, the Mantin-
MANTINEIA.

neians formed an alliance with Argos, Elis, and Athens, in c. 421, and thus became involved in war with Sparta. (Tuc. v. 29, 33, 47.) This war was brought to a close by the decisive battle fought near Mantinea, in June, 418, in which the Argives, Moreans, and Athenians were defeated by the Lacedaemonians under Agis. This battle was fought to the S. of Mantinea, between the city and the frontiers of Tegea, and is the first of the five great battles bearing the name of Mantinea. The Mantineans now concluded a peace with Sparta, renouncing their domination over the districts in Arcadia, which they had conquered. (Tuc. v. 65, seq.)

Mantinea continued an unwilling ally of Sparta for the next 33 years; but in the second year after the peace of Antalcidas, which had restored to the Spartans a great part of their former power, they resolved to crush for ever this obnoxious city. Accordingly, they required the Mantineans to raise their walls; and upon the refusal of the latter, they marched against the city with an army under the command of their king Agesipolis (b.c. 385), alleging that the truce for 30 years had expired, which had been concluded between the two states after the battle of 418. The Mantineans were defeated in battle, and took refuge in the city, prepared to withstand a siege; but Agesipolis having raised an embankment across the river Opheis, which flowed through Mantinea, forced back the waters of the river, and thus caused an inundation around the walls of the city. These walls, being built of unbaked bricks, soon began to give way; and the Mantineans, fearing that the city would be taken by assault, were obliged to yield to the terms of the Spartans, who required that the inhabitants should quit the city, and be dispersed among the villages, from the concourse of which the city had been originally formed. (Xen. Hell. v. c. 6. 7.; Diod. xv. 5.; Ephorus, ap. Harpocrat. s. v. Μάντινεια ἄνωθεν; Pol. iv. 27; Pans. viii. 8. 7. seq.) Of the forces of Mantinea shortly before this time we have an account from the orator Lysias, who says that the military population or citizens of Mantinea were not less than 300,000, and were divided into 10 tribes, the free population of the Mantinean territory. (Lysias, ap. Diod. p. 531; Clinton, F. H. vol. ii. p. 416.)

The Mantineans did not long remain in this dispersed condition. When the Spartan supremacy was overthrown by the battle of Leuctra in 371, they again assembled together, and rebuilt their city. They took care to exclude the river from the new city, and to make the stone substructions of the walls higher than they had been previously. (Xen. Hell. vi. 5. 3; Pans. viii. 8. 10; Leake, Morea, vol. iii. p. 73.) The Mantineans took an active part in the formation of the Arcadian confederacy, and in the foundation of Megalopolis, which followed immediately after the restoration of their own city; and one of their own citizens, Lycomedes, was the chief promoter of the scheme. But a few years afterwards the Mantineans, for reasons which are not distinctly mentioned, quarrelled with the supræme Arcadian government, and formed an alliance with their inverteate enemies the Spartans. In order to put down this new coalition, Epaminondas marched into the Peloponnesus; and Mantinea was again the scene of another great battle (the second of the five alluded to above), in which the Spartans were defeated, but which was rendered still more memo-

rable by the death of Epaminondas. ( Xen. Hell. vi. 5; Diod. xv. 94.) The site of this battle is described below. The third and fourth battles of Mantinea are only incidentally mentioned by the ancient writers: the third was fought in 295, when Demetrias Poliorcetes defeated Archidamus and the Spartans (Plut. Demot. 35); the fourth in 242, when Aratus and the Achaeans defeated the Spartans under Agis, the latter falling in the battle. (Pans. viii. 10. 1.; Plut. Arat. 5.)

Mantinea continued to be one of the most powerful towns of Arcadia down to the time of the Achaean League. It at first joined this league; but it subsequently deserted it, and, together with Orchomenus and Tegea, became a member of the Aetolian confederacy. These three cities at a later time renounced their alliance with the Achaeans, and entered into a close union with Sparta, about n. c. 228. This step was the immediate cause of the war between the Achaeans and the Spartans, usually called the Cœlebian War. In 226, Aratus surprised Mantinea, and compelled the city to receive an Achaean garrison. The Mantineans soon afterwards expelled the Achaeans, and again joined the Spartans; but the city was taken a second time, in 224, by Antigonus Doson, whom the Achaeans had invited to their assistance. It was taken by assault, with great severity. It was abandoned to plunder, its citizens were sold as slaves, and its name changed to Antigonia (Ἀντιγονεία), in compliment to the Macedonian monarch (Pol. ii. 57, seq.; Plut. Arat. 45; Pans. viii. 8. § 11.) In 207, the plain of Mantinea was the scene of a fifth great battle, between the Achaean forces, commanded by Philopoemen, and the Lacedaemonians, under the tyrant Machonius, in which the latter was defeated and slain. An account of this battle is given by Polybius, from whom we learn that the Achaean army occupied the entire breadth of the plain S. of the city, and that their light-armed troops occupied the hill to the E. of the city called Alesium by Pausanias. The Lacedaemonians were drawn up opposite to the Achaeans; and the two armies thus occupied the same position as in the first battle of Mantinea, fought in the Peloponnesian War. (Pol. xi. 11.) The Mantineans were the only Arcadian people who fought on the side of Augustus at the battle of Actium. (Pans. viii. 8. § 12.)

The city continued to bear the name of Antigonia till the time of Hadrian, who restored to it its ancient appellation, and conferred upon it other marks of his favour, in honour of his favourite, Antinous, because the Bithynians, to whom Antinous belonged, claimed descent from the Mantineans. (Pans. viii. 8. § 12, viii. 9. § 7.)

The territory of Mantinea was bounded on the W. by Mt. Maenalus, and on the E. by Mt. Artemisium, which separated it from Argolis. Its northern frontier was a low narrow ridge, separating it from Orchomenia; its southern frontier, which divided it from Tegea, was formed by a narrow part of the valley, hemmed in by a projecting ridge from Mt. Maenalus on the one side, and by a similar ridge from Mt. Artemisium on the other. (See below.)

The territory of Mantinea forms part of the plain now called the plain of Tripolitzi, from the modern town of this name, lying between the ancient Mantinea and Tegea, and which is the principal place in the district. This plain is about 25 English miles in length, with a breadth varying from 1 to 8, and includes, besides the territory of Mantinea, that of
Ochricampi and Caprycas on the N., and that of Tegae and Pallantium on the S. The distance between Mantinea and Tegae is about 10 English miles in a direct line. The height of the plain where Mantinea stood is 2,067 feet above the level of the sea. Owing to its situation, Mantinea was a point of vantage, and its presence and its trench was the scene of many important battles, as has been already related. It stood upon the river Ophis, near in the centre of the plain of Tripolitida as to length, and in one of the narrowest parts as to breadth. It was enclosed between two ranges of hills, on the E. and W., running parallel to Mts. Artenianum and Mantiara respectively. The eastern hill was called Alasmum (Αλασμόν, Paus. viii. 10. § 1), and between it and Artenianum by the plain called by Pausanias (viii. 7. § 1) τὸ ἄχριβον τῆς οίκου, or the "Uncultivated Plain." (viii. 8. § 1.) The range of hills on the W. had no distinct name; between them and Mt. Maenalus there was also a plain called Alecineum (Αλέκινεων, Paus. viii. 12. §§ 2.)

Mantinea was not only situated entirely in the plain, but nearly in its lowest part, as appears by the courses of the waters. In the peculiar situation of its fortifications it differs from almost all other Greek cities of which there are remains, since very few other Greek cities stood so completely in a plain. It is now called Palyopoli. The circuit of the walls is entire, with the exception of a small space on the N. and W. sides. In no place are there more than three courses of masonry existing above ground, and the height is so uniform that we may conclude that the remainder of the walls was constructed of undressed blocks. The city had 9 or 10 gates, the approach to which was carefully defended. Along the walls there were towers at regular distances. Lake reckoned 118 towers, and says that the city was about 21 miles in circumference; but Ross makes the city considerably larger, giving 129 or 130 as the number of the towers, and from 28 to 30 stadia, or about 31 English miles, as the circuit of the city. The walls of the city are surrounded by a ditch, through which the river Ophis flows. This stream is composed of several rivulets, of which the most important rises on Mt. Alesium, on the E. side of the city: the different rivulets unite on the N.W. side of the town, and flow westward into a katalixhira. Before the capture of Mantinea by Agesippos, the Ophis was made to flow through the city; and it is probable that all the water-courses of the surrounding plain were then collected into one channel above the city. Of the buildings in the interior of the city, described by Pausanias, few remains are left. Nearly in the centre of the city are the ruins of the theatre, of which the diameter was about 240 feet; and west of the theatre, Ross observed the foundations of the temple of Aphrodite Symmachia, which the Mantineians erected to commemorate the share they had taken in the battle of Acastum. (Paus. viii. 9. § 6.)

The territory of Mantinea is frequently described by the ancient writers, from its having been so often the seat of war; but it is difficult, and almost impossible, to identify any of the localities of which we read, from the disappearance of the sanctuaries and monuments by which spots are indicated, and also from the nature of the plain, the topography of which must have been frequently altered by the change of the water-courses. On the latter subject a few words are necessary. The plain of Tripolitida, of which Mantinea formed part, is one of those valleys in Arcadia, which is so completely shut in by mountains, that the streams which flow into it have no outlet except through the chasms in the mountains, called katavdhira. [Arcadia.] The part of the plain which formed the territory of Mantinea is at a much lower level, that there is not, in some parts, a sufficient slope to carry off the waters; and the land would be overflowed, unless trenches were made to assist the course of the waters towards some one or other of the katavdhira which nature has provided for their discharge. (Vol. xi. 11.) Not only must the direction of these trenches have been sometimes changed, but even the course of the streams was sometimes altered, of which we have an interesting example in the history of the campaign of 418. It appears that the regulation of the mountain torrent on the frontiers of Mantinea and Tegea, was a frequent subject of dispute and even of war between the two states; and the one frequently inundated the territory of the other, as a means of annoyance. This was done in 418 by Aegus, who let the waters over the plain of Mantinea (Thuc. v. 65). This river can only be the one called Ophis by the Generals of the Gauls. It rises in a little N. of Tegae, and after flowing through Tegea, falls now into a katavdhira north of the hill Scone. In general the whole plain of Mantinea bears a very different aspect from what it presented in antiquity; instead of the wood of oaks and cork-trees, described by Pausanias, there is now not a single tree to be found; and no poet would now think of giving the epithet of a lovely "(καλντοστα)" to the naked plain, covered to a great extent with stagnant water, and shot in by gray treeless rocks. (Ross, Reisen im Peloponnes, p. 128.)

About a mile N. of the ruins of Mantinea is an isolated hill called t curtzal; north of which again, also at the distance of about a mile, is another hill. The latter was probably the site of the ancient Mantinea, and was therefore called Trolis (TriDa) in the time of Pausanias (viii. 12. § 7). This appears to have been one of the five villages from the inhabitants of which the city on the plain was peopled.

There were several roads leading from Mantinea. Two of these roads led north of the city to Orchomenus: the more easterly of the two passed by Troilos, just mentioned, the fountain of Alkmeneia, and a deserted village named Μανία (Μανία), 30 stadia from Troilos: the road on the west passed over Mt. Ancisia, on the northern slope of which was the temple of Artemis Hymnia, which formed the boundary between Mantinea and Orchomenus. (Paus. viii. 12. §§ 5—9. comp. viii. 5. § 11.)

A road led from Mantinea on the W. to Methydrium. It passed through the plain Alcimened, which was 30 stadia from the city, above which was Mount Ostracina; then by the fountain Cissa, and, at the distance of 40 stadia from the fountain, by the small place Petrosaka (ον Πετροσάκα), which was on the confines of the Mantinean and Megalopolitian territories. (Paus. viii. 12. §§ 2—4.)

Two roads led from Mantinea southwards,—the one SE. to Tegae, and the other SW. to Pallantium. On the left of the road to Tegae, called Νεκης (Νέκης) by Polyb. (xi. 11. § 5), just outside the gates of Mantinea, was the hippodrome, and a little further on the stadium, above which rose Mount Alcinodon: at the spot where the mountain ceases was the temple of Ascleion Hippias, which was 7 stadia from the city, as we learn from Polys.
A. Road to Orchomenos.
B. Road to Orchomenus.
C. Road to Methyrium.
D. Road to Tegea.
E. Road to Pallantium.
F. Road to Argos, called Prinias.
G. Road to Argos, called Climax.

PLAIN OF MANTINEA.
bious (ix. 11. § 4, comp. vii. xi. 14. § 1). Here commenced the ditches, which is said by Polyb. to have led across the Mantinian plain to the mountains bordering upon the district of the Elisophii (ἡ τούτων Ἐλισσοτής Χώρα, Πολλ. vi. xi. 11. § 6, comp. iv. 15. § 7, 164).* Beyond the temple of Pausanias there was a forest of oaks, called Πέλαγος (Πέλαγος), through which ran the road to Tegea. On turning out of the road to the left, at the temple of Pasion, one found at the distance of 5 stadia the tombs of the daughters of Pelias. Twenty stadia further on was a place called Πνημονών (Πνημονών). This was the main west part of the plain between Tegea and Mantinia, the road being shortened by the hill Scopé on the W. and a similar projecting rock on the E. Here was the tomb of Arethusa, who was said to have been slain in a narrow pass by Lycurgus (στενοῦ ἐν δύσκ. Ημ. ἴ. vii. 143).† This narrow valley, shut in by the two projecting ridges already mentioned, formed the natural frontier between the territories of Mantinia and Tegea. The boundary between the two states was marked by a round altar on the road, which was about four miles distant from Mantinia, and about six miles from Tegea. It was here that the Lacedaemonian army was posted, over which Eumomionidas gained his memorable victory. He had marched from Tegea in a north-westly direction, probably passing near the site of the modern Tripolicti, and then keeping along the side of Mt. Meros. He attacked the enemy on their right flank, near the projecting ridge of Mt. Meros, already described. It was called Scopé (Σκόπη, now Μυρίλικ), because Eumomionidas, after receiving his mortal wound, was carried to this height to view the battle. Here he expired, and his tomb, which Pausanias saw, was erected on the spot. (Paus. viii. 11. §§ 6, 7; for an account of the battle see Grote, vol. xi. p. 464 seq.)

The road from Mantinia to Pallantium ran almost parallel to the road to Tegea till it reached the frontiers of Tegecont. At the distance of one stadium was the temple of Zeus Charmn. (Paus. viii. 10. 13. § 8.)

Two roads from Mantinia east wards to Argos,

* This ditch must have terminated in a kata-
  νάρκθη, probably in one of the kataνάρκοντα on the W.
  side of the plain at the foot of the Mæbanian
  (Elisophii) mountains. On the other side of these mountains is the
  village and river named Hellen; and as the El-
  isophii are not mentioned in any other passage, it
  has been proposed to read ταῖονταντα instead of
  ταῖονταντα. (Ross, p. 127.) Leake has con-
  jected, with some probability, that Elisophii may be
  the corrupt etymology of Elonym (Ἐλομήν), a
  place only mentioned by Xenophon (Hell. vi. 5.
  § 13), who places it on the confines of Orchomenus
  and Mantinia. Although Leake places Elonym at
  Lerkhli, on the NW frontier of Mantinia, he
  conjectures that the whole plain of Alkmeneon may
  have belonged to it. (Leake, Peloponnesian, p.
  350.)

† Leake imagines that Phoeon was situated on a
  side road, leading from the tombs of the daughters
  of Pelias. But Ross maintains that Phoeon was
  on the high-road to Tegea, and that Pasion has
  only mentioned by anticipation, in viii. 11. § 1, the
  altar forming the boundary between Mantinia and
  Tegeac, the more proper place for it being at the
  close of § 4.

MANTINIA

MANTINIA

called PRINCS (Πρόνος) and CLIMAX (Κλαμάς), at the
  "Ladder," respectively. (Paus. viii. 6. § 4.)

The latter was so called from the steps cut out of
  the rock in a part of the road; and the Prins prob-
  ably derived its name from passing by a large
  hołm-oak (p. 316), or a small wood of holm-oaks;
  but the roads do not appear to have borne these
  names till they entered Mantiniae. There are only
  two passes through the mountains, which separate
  the Argive plain from Mantinia, of which the
  southern and the shorter one is along the course
  of the river Charadrus, the northern and the longer
  one along the valley of the Inachus. Both Ross and
  Leake agree in making the Prins the southern
  and the Climax the northern of these two roads,
  contrary to the conclusions of the French surveys.
  Both roads quitted Argos at the same gate, at the
  hill called Deiras, but then immediately parted in
  different directions. The PRINCS, after crossing the
  Charadrus, passed by Onosi, and then ascended
  Mount Artemision (Μαρτινίσιος), on the summit of
  which, by the road-side, stood the temple of Artemis.
  It was here the boundaries of Mantinia and Argolia.
  (Paus. iv. 25. §§ 1—3.) On descending this moun-
  tain the road entered Mantinia, first crossing through
  the lowest and most marshy part of the "Argon,
  or "Uncultivated Plain," so called because the
  waters from the mountains collect in the plain and
  render it unfit for cultivation, although there is a
  kataνάρκθη to carry them off. On the left of the
  plain were the remains of the camp of Philip, son
  of Amyntas, and a village called NESTANE (Νστάνας),
  probably near the modern village of Τείπιλα. Near
  this spot the waters of the plain entered the
  kataνάρκθη, and are said not to have made their
  exit till they reached the sea off the coast of the
  Argos. Below Nestane was the "Dancing-
  place of Maera" (Χορός Μαίρας), which was only
  the southern arm of the Argon Plain, by means
  of which the latter was connected with the great
  Mantinia plain. The road then crossed over the foot
  of Mount Alysium, and entered the great Mantinia
  plain near the fountain Arna on the distance of 12
  stadia from the city. From thence it passed into
  the city by the south-eastern or Tegeacan gate. (Paus.
  viii. 6. § 6—viii. 8. § 4.)

The other road, called CLIMAX, ran from Argos in a
  north-western direction along the course of the
  Inachus, first 60 stadia to Lycurga, and again 60
  stadia to Omece, on the frontiers of Sikyon and
  Phliusia. (Paus. vii. 22. §§ 4—6.) It then crossed
  the river, on the descent of which into Mantinia
  were the steps cut out of the rock. The road
  entered Mantinia at the upper or northern corner
  of the Argon Plain, near the modern village of
  Σάνγα. It then ran in a south-western direction, along
  the western side of Mount Alysium, to a place called
  MELANGEXE (μῆλανγεξες), from which drinking-
  water was conducted by an aqueduct to Mantinia,
  of which remains were observed by Ross. It cor-
  responds to the modern village of Τικαρνη, which is

COIN OF MANTINIA.
spear to signify in the Albanian language "abounding in springs." The road next passed by the fountain of the Melistantae (Melistantae), where were temples of Dionysus and of Aphrodite Melisane; this fountain was 7 stadia from the city, opposite Poils or Old Mantinea. (Paus. viii. 6. §§ 4, 5.) The preceding account is rendered clearer by the map on p. 263.

(For the geography of Mantinices, see Leake, Morea, vol. i. p. 100, seq.; vol. iii. p. 44, seq.; Ptolomaeisinos, p. 369, seq.; Ross, Reisen im Peloponnes, vol. i. p. 121, seq.; Curtius, Ptolomaeisinos, vol. i. p. 232, seq.)

MANTUA (Mantua: Etr. Mantannae: Mantona), a city of Cisalpine Gaul, situated on the river Mincus, on an island formed by its waters, about 12 miles above its confluence with the Padus. There seems no doubt that it was a very ancient city, and existed long before the establishment of the Gauls in this part of Italy. Virgil, who was naturally well acquainted with the traditions of his native place, tells us that its population was a mixed race, but the bulk of the people were of Etruscan origin; and Pliny even says that it was the only city beyond the Padus which was still inhabited by an Etruscan people. (Verg. Aen. x. 201—205; Plin. iii. 19. s. 29.) We are not told whether it was a native Gallic or a native Etruscan town; the city seems to have been a confluence of the elements, and it is not easy to understand the exact meaning of his expression that it consisted of three "gentes," and that each gens comprised four or five "populi;" but it seems certainly probable that this relates to the internal division of its own territory and population, and has no reference (as Miller has supposed) to the twelve cities founded by the Etruscans in the valley of the Padus. (Miller, Etrusker, vol. i. p. 127; Nieburgl, in loc. p. 296, note 737.) The Etruscan origin of Mantua is confirmed by its name, which was in all probability derived from that of the Etruscan divinity Mantus, though another tradition, adopted by Virgil himself, seems to have derived it from a prophetic nympha of the name of Mantus. (Serv. ad Aen. l. c.; Schol. Veron. ad loc. p. 103, ed. Keil.) According to one of the oldest scholars on Virgil, both Varro Lipsius and Caesina, in their Etruscan histories, ascribed the foundation of Mantua to Tarchon himself, while Virgil represents Ocnus, the son of Manto, as its founder. (Verg. Aen. x. 200; Schol. Veron. l. c.) The only historical fact that can be considered as resulting from all these statements is that Mantua really was an Etruscan settlement, and that for some reason (probably from its peculiar and inaccessible situation) it retained much of its Etruscan character long after this had disappeared in the other cities of Cisalpine Gaul.

After the settlement of the Gauls in Northern Italy, Mantua was probably included in the territory of the Cenomani (Ptol. iii. 1. § 31); but we find no mention of its name in history, nor do we know at what period it passed under the Roman dominion. From an accidental passage in Virgil, both Varro Lipsius and Caesina, in their Etruscan histories, ascribed the foundation of Mantua to Tarchon himself, while Virgil represents Ocnus, the son of Manto, as its founder. (Verg. Aen. x. 200; Schol. Veron. l. c.) The only historical fact that can be considered as resulting from all these statements is that Mantua really was an Etruscan settlement, and that for some reason (probably from its peculiar and inaccessible situation) it retained much of its Etruscan character long after this had disappeared in the other cities of Cisalpine Gaul.

The only historical fact that can be considered as resulting from all these statements is that Mantua really was an Etruscan settlement, and that for some reason (probably from its peculiar and inaccessible situation) it retained much of its Etruscan character long after this had disappeared in the other cities of Cisalpine Gaul.

MAOGAMALCHIA (Ammon., xxiv. 4), a place in Mesopotamia, attacked and taken by Julfian. It was distant about 90 stadia from Ctesiphon. (Zosim. iii. 21.) It appears to have been strongly fortified and well defended. Zoisius evidently alludes to the same place (L.c.), though he does not mention it by name. [V.]

MAON (Màwz), a city of Judah, in the mountains, south of Hebron. It is joined with Carmel, and Ziph, and Juttah (Josh. xv. 55), known only as the residence of Nabib and Abigail (1 Sam. xxv. 2). "The wilderness of Maon, in the plain on the south of Jeshimon," is identical with or contiguous to the wilderness of Ziph, where David and his men hid themselves in the strongholds from the malice of Saul (xxiii. 14—25). It is placed by Eusebius in the east of Dorama (Onomast. s. r.) Its site is marked by ruins, still called Mawin, situated between Carmel and Zeph, half an hour south of the former. [CARMEL, Vol. i. p. 521.] [G. W.]

MAPHARITIS (Mafjarita), a district of Arabia Felix, lying about the city of Sava (Zwisch), which is placed by Arrian three days' journey from Maza, on the Red Sea. [M. W.] He mentions the king's name, Cebades (Xelades). (Periplus Maris Eryth. p. 13.) The Sava of Arrian is probably identical with the Sapphara or Saphar of Ptolemy (Σαφφαρα αι, Σαφφαρι μητροπολις, vi. 7. §41), the capital of a tribe named by him Sapharitis (Σαφαρίτας), the Mapharitis of Arrian. They are distinct from the Maphoritae of Ptolemy. [G. W.]

MAPHORITAE (Maporita), a people of Arabia Felix, placed by Ptolemy above, i.e. north of, the Richini, and west of the outer Frankincense country (ά χρώς Σαμωροφόρος), contiguous to the Charran-mamitate (vi. 7. §25). The similarity of name indicates a connection between this tribe and the Mapha metropolis of the same geographer; the same as the "Iphime metropolis" of Arrian, which he places 9 days journey east of his Maporitis region, and therefore 12 days from the Red Sea. It was the capital of Charazael, the lawgiver of the Hemonites and their neighbours the Sabaitae, styled the friend of the Roman emperors, to whom he is said to have sent frequent embassies. [MAIPHIA] The district is probably that now known as Wady Maghfa, in the midst of which is situated the remarkable ruins now called Nabiib-el-Hajjar, which are supposed to mark the site of the metropolis. This fruitful valley commences above the ruins in question and is well cultivated throughout. It is thus described by Leitl. Welsch, who traversed its southern part in 1835:— "Nabiib-el-Hajjar (ancient Mapollha, g. r.) is situated north-west, and is distant 48 miles from the village of Ain, which is marked on the chart in latitude 14° 2" north, and longitude 46° 30' east, nearly. It stands in the centre of a most extensive valley, called by the natives Wady Maghfa, which, whether we regard its fertility, population, or extent, is the most interesting geographical feature we have yet discovered on the southern coast of Arabia. Taking its length from where it opens out on the sea to the town of 'Abeha, it is 4 days' journey, or 75 miles. Beyond this point I could not exactly ascertain the extent of its productions; various native authorities give it from 5 to 7 additional days. Throughout the whole of this space it is thickly studded with villages, hamlets, and culti-

vated grounds. In a journey of 15 miles, we counted more than thirty of the former, besides a great number of single houses." (Wellsted, Travels in Arabia, vol. i. p. 436.) [G. W.]

MAPONIS, in Britain, occurring in Geogr. Ravenn. among the diversa best, with no other clue to its locality. An inscription to a topical deity, Mapon (I. Mapone), discovered at Hampton in Cumberland; and another (Apollini Mapon) at Rilechester, in Lancashire, merely strengthen the probability of the existence of a place so called in Britain, without disclosing its situation. Maporiton also appears in Geogr. Ravenn, among the towns in the north of Britain. [C. E. S.]

MARABUS (Marasa, Marâbî, Ptol. v. 9, § 2), a river of Sarmatia, which Rheidbach has identified with the Manych, an affluent of the Don, on the left bank of that river. Some have considered the Manych to represent the Acharbious (Agaebios), but Strabo (xi. p. 506) expressly says that the latter discharges itself into the Mæotis. (Schafer, Sarm. Ant. vol. i. pp. 60, 600.) [E. B. J.]

MARACANDA (Mara'skada, Strab. xi. p. 517; Arrian. iii. 30. iv. 5; Ptol. vi. 11. §9), the capital of Sochidiana, now Sowarqand. It is said by Strabo to have been one of the eight cities which were built in those parts by Alexander the Great. Ptolemy places it in Bactria. Arrian (iii. 30) states that it contained the palace of the ruler of the Sogdian, but does not apparently credit the story that Alexander had anything to do with the building of it. Curtius states that the city was 70 stadia in circumference, and surrounded by a wall, and that he had destined the province for his favourite, Cittus, when the unfortunate quarrel took place in which he was slain (vol. i. § 28). Professor Wilson (Ar. Asiat., p. 165) considers that the name has been derived from the Sasanit. Sarvar-kaanda, "the warlike province." In many of the old editions the word was written Parakanda, but there can be no doubt that Maracanda is the correct form. Sowarqand has in all ages a great entrepôt for the commerce of Central Asia. [V.]

MARANTAEA (Maranta, Strab. xvii. p. 776; Marasanæ), an ancient people on the W. coast of Asia, near the corner of the Aethiopian Sinus, destroyed by the Harranci. [V.]

MARAPHH (Marapha, Herod. i. 125), one of the three tribes into which the highest class of the ancient Persians was divided, according to Herodotus. The other two were the Pasargadæ and the-Ma-pi. [V.]

MARATHA (Marâtha), a village of Arcadia, in the district Cythiera, between Buphagium and Gortys, perhaps represented by the ruin called the Castle of Liokhan. (Panath. viii. 28. § 1; Leake, Moræ, vol. ii. p. 66, Peloponnesica, p. 232.)

MARATIHE, a small island near Corcyra, mentioned only by Pliny (iv. 12. s. 19).

MARATHIUM (Marphtiâ: Kth. Mapaphil-ôs), an Ionian town on the coast of Lydia, south of Ephesus, and not far from the frontiers of Caria, whence Stephonius (e. c.) calls it a town of Caria. (Sylvak, p. 5; Phin. H. N. v. 31.) The town at one time belonged to the Samians, but they made an exchange, and, giving it up to the Ephesians, received Naopis in return. (Strab. xiv. 639.) Col. Leake (Jata Minor, p. 261) believes that a few ancient ruins found at a place called Skalakana mark the site of Marathium, though others regard them as remains of Tygela. [L. S.]
MARATHON. 267

MARATHON (Μαραθώνα: Eih, Μαραθώνα), a small plain in the NE. of Attica, containing four places, named MARATHON, PROBATHUS (Προβαθ- θος), KERKYRAMUS (Κερκυραμος), TRICORYTHUS (Τρικόρυθος), or Τριτρωρον, Τριτρωφος; Eih. Τριτρωρο- στα), and OMOE (Ομοη: Ειθ. Όμοην), which originally formed the Tetrapolis, one of the 12 dis-

tricts into which Attica was divided before the time of Theseus. Here Xuthus, who married the daughter of Erechtheus, is said to have reigned; and here the Heracleidae took refuge when driven out of Pelopon-

nesus, and defeated Eurystheus. (Strab. viii. p. 383: i. 10. 14. B. c. Τετράπολις. The Marathonians claimed to be the first people in Greece who paid divine honours to Hercules, who possessed a sanctuary in the plain, of which we shall speak presently. (Paus. i. 15. § 3, i. 35. § 4.) Marathon is also celebrated in the legends of Theseus, who conquered the ferocious bull, which used to devastate the plain. (Pint. Thes. 14; Strab. i. p. 399, i. 27. § 10.) Marathon is mentioned in the Homeric poems in a way that implies that it was then a place of importance. (Od. viii. 80.) Its name was derived from an eponymous hero Marathon, who is described by Pausanias as a son of Epopes, king of Sicyon, who fled into Attica in consequence of the cruelty of his father (Paus. i. I § 1, i. 6. § 5, i. 15. § 3, i. 32. § 4). Plu-

tarch calls him an Arcadian, who accompanied the Dioscuri in their expedition into Attica, and vol-

untarily devoted himself to death before the battle. (Thes. 32.)

After Theseus united the 12 independent districts of Attica into one state, the name of Tetrapolis gradually fell into disuse; and the four places of which it consisted became Attic deme,—Mar-

athon, Tricorythus, and Omoe belonging to the tribe Acentis, and Probathus to the tribe Pandionis; but Marathon was so superior to the other three, that its name was applied to the whole district down to the latest times. Hence Lucian speaks of "the parts of Marathon about Omoe" (Μαραθώνας τα τετραπόλει την Ομοήν, Λεύρον-Μενηπ, 13.).

Few places have obtained such celebrity in the history of the world as Marathon, on account of the victory which the Athenians here gained over the Persians in m. 490. Hence it is necessary to give a detailed account of the topography of the plain, in which we shall follow the admirable description of C. C. Leake, who has furnished us with additional information from Mr. Finlay and other writers.

The plain of Marathon is open to a bay of the sea on the east, and is shut in on the opposite side by the heights of Brilessus (subsequently called Pente-

Ticus) and Diairia, which send forth roots extending to the sea, and bounding the plain to the north and south. The principal shelter of the bay is afforded by a long rocky promontory to the north, anciently called CYND cirka (Κυνοκορα, Hesych. Phot. s. v.) and now Stomi. The plain is about 6 miles in length and half that breadth in its broadest part. It is somewhat in the form of a half-moon, the inner curve of which is bounded by the bay, and the outer by the range of mountains already described. The plain, described by Aristophanes as the "pleasant mead of Marathon" (Λατρα κτιτοι Μαραθώνα, Aris. 246), is a level green expanse. The hills, which rise from a level plain, are crowned in cien times with olives and vines (Nomm. Diozy, xiii. 84, xlvi. 18). The plain is bounded at its southern and northern extremities by two marshes, of which the southern is not large and is almost dry at the conclusion of the great heats; while the northern, which is much larger, offers several parts which are at all seasons impassable. Both, however, have a broad fringe, and a narrow strip of land between them and the sea. A river, now called the river of Marathon, flows through the centre of the plain into the sea.

There are four roads leading out of the plain. 1. One runs along the coast by the south-western ex-

tremity of the plain. (Plan, aa.) Here the plain of Marathon opens into a narrow maritime plain three miles in length, where the mountains fall so gradually towards the sea, that it is impossible to define the communication between the Ma-

rathonian and the Messogian. The road afterwards passes through the valley between Pentelicus and Hymettus, through the ancient demes of Pallene. This is the most level road to Athens, and the only one practicable for carriages. It was the one by which Peisistratus marched to Athens after landing at Marathon. (Heracl. i. 62.) 2. The second road runs through the pass of Frimi, so called from a small village of this name, situated in the southern of the two valleys, which branch off from the in-

terior of the plain. (Plan, bb.) This road leads through Cephisia into the northern part of the plain of Athens. 3. The third road follows the vale of Marathóna, the northern of the two valleys already named, in which lies the village of the same name, the largest in the district. (Plan, cc.) The two valleys are separated from one another by a hill called Kotrein (Plan, 3), very rugged, but of no great height. This third road leads to Aphiadna, from which the plain of Athens may also be reached. 4. The fourth road leaves the plain in the north-east by a narrow pass (Plan, dd) between the northern marsh and a round naked rocky height called Mt. Karkiki or Suorokorikini. (Plan, 4.) It leads to Ilhamus; and at the en-

trance of the pass stands the village of Lower Suli. (Plan, 12.)

Three places in the Marathonian district particularly retain vestiges of ancient deme. 1. Frimi, which Leake supposes to be the site of the demes of Marathon. It lies upon a height fortified by the ravine of a torrent, which descends into the plain after flowing between Mt. Argalki and Aforitsi, which are parts of Mt. Brilessus or Pentelicus. (Plan, 1, 2.) A little below Frimi are seen four artificial tumuli of earth, one considerably larger than the others; and in a pass at the back of the hill of Kotrimi, which leads from the vale of Frimi into that of Marathóna, there are some remains of an ancient gate. Near the gate are the foundations of a wide wall, 5 feet in thickness, which are traced for nearly 3 miles in circumference, enclos-

ing all the upper part of the valley of Frimi. These ruins are now known by the name of Νυμφαία της γοαίας (the old woman's sheepholf). Near the ruined gate Leake observed the remains of three statues, probably those which were erected by Herodes Atticus to three favourite servants. (Philol. Soph. ii. 1. § 10.) Marathon was the demes of Herodes, who also died there. The wall mentioned above was probably built by Herodes, to enclose his property; for it would seem from Pliny that Marathon was never considered as a town or village a century before the time of Herodes. ("Rhamnum pagus, locus Marathon," Plin. iv. 7. 11.) The early disappearance of the ancient town of Marathon would easily cause it "name to be
 MARATHON.

transferred to another site; and it was natural that the celebrated name should be given to the principal place in the district, thus varying the quarters of a mile to the south-east of the tumulus of Evroni there is a rising ground, upon which are the traces of a Hellenic wall, apparently the peribolus of a temple. This was probably the temple of Hercules (Plan, 10), in whose sacred enclosure the Athenians were encamped before the battle of Marathon. (Herod. vi. 108.)

2. There are several fragments of antiquity situated at the head of the valley of Marathon at a spot called Isin, which is no doubt the site of the ancient Ormoc, one of the four demi of the district. The retired situation of Ormoc accounts for its omission by Strabo in his enumeration of the demi situated near the coast (ix. p. 399).

3. There are also evident remains of an ancient demi situated upon an inselated height in the plain of Solo, near the entrance of the pass leading out of the Marathonian plain to Solo. These ruins are probably those of Trieroythus, the situation of which agrees with the order of the maritime demi in Strabo, where Trieroythus immediately precedes Rhamnus. We learn from Aristophanes and Suidas that Trieroythus was doomed by pirates from a neighboring marsh (καίσαρι ἐν ημι-Τριερώτης, Aristoph. Lysistr. 1032; Suidas, s. v. καισαρί); and at the present day the inhabitants of Lower Solo in the opposite, driven by this plague and the heat, are into the upper village of the same name. The town was probably called Trieroythus from the triple peak on which its citadel was built.

The site of Probaldinthus is uncertain, but it should probably be placed at the south-west extremity of the Marathonian plain. This might be inferred from Strabo's enumeration, which mentions first Probaldinthus, then Marathon, and lastly Trieroythus. Between the southern marsh and Mt. Argoleti there are foundations of buildings at a place called Tahori, which is, perhaps, a corruption of Probaldinthus. Close to the sea, upon a rising ground in the marsh, there are some ancient remains, which may, perhaps, be those of the temple of Athene Hellea (Plan, 11), which epithet the goddess is said to have derived from the marsh of Marathon, where the temple was built. (Schol. ad Paus, xli. 10. 1; cf. Porph. M. s. v. Athene Hellea.)

The principal monument in the Marathonian plain was the tumulus erected to the 192 Athenians who were slain in the battle, and whose names were inscribed upon ten pillars, one for each tribe, placed upon the tomb. There was also a second tumulus for the Plataeans and slaves, and a separate monument to Mytilaeans. All these monuments were seen by Pausanias 600 years after the battle (i. 32. § 3). The tumulus of the Athenians still exists. It stands in the centre of the plain, about half a mile from the sea-shore, and is known by the name of Soro (δ Σώρος), the tomb. (Plan, 13.) It is about 30 feet high, and 200 yards in circumference, composed of a light mould mixed with sand, amidst which have been found many brazen heads of arrows, about an inch in length, of a trilateral form, and pierced at the top with a round hole for the reception of the shaft. These are also found, in still greater numbers, fragments of black flute, rude-shaped by art, which have been usually considered fragments of the arrow-heads used by the Persian archers; but this opinion cannot be received, as shits of the same kind abound in other parts of Greece, where no Persian is reported to have set foot; and, on the other hand, the Athenians have been known to sharpen their pumice or flint. At a very small distance from this tumulus Leake noticed a small heap of earth and stones, which is, perhaps, the tomb of Plataeans and Athenian slaves. At 500 yards north of the great tumulus is a ruin called Pyrgo (Πυργος), consisting of the foundation of a square monument, constructed of large blocks of white marble; it is apparently the monument erected in honour of Miltiades. (Plan, 14.)

We learn from Philochorus that there was a temple of the Pythian Apollo at Marathon (ap. Schol. ad Soph. Oed. Col. 1047); and Demosthenes relates that the sacred vessel was kept on this coast, and that once it was carried off by Philip. (Phil. i. p. 49.)

Pausanias (i. 32. § 3, seq.) mentions in the plain several natural objects, some of which have been noticed already. The lake at the northern extremity of the plain he describes "as for the most part marshy, into which the flying barbarians fell through their ignorance of the ways; and here it is said that the principal slaughter of them occurred. Beyond the lake (辖γρα της Λίμνης) are seen the staves of stone for the horses of Artaphernes, together with vestiges of a tent upon the rock. A river flows out of the lake which, within the lake, affords water fit for cattle to drink; but, towards the place where it enters the sea, becomes salt and full of sea-fishes. At a little distance from the plain is a mountain of Pan, and a cavern worthy of inspection; the entrance is narrow; but within are apartments and baths, and that which is called the goat-stand (ειδωλος των Παν) together with rocks very much resembling goats." Leake observes that the marshy lake, and the river, which, becoming salt towards the mouth, produces sea-fishes, are precisely as Pausanias describes them. The marsh is deepest towards the foot of Mt. Koruki, where several springs issue from the foot of the rocks on the right side of the road leading from the great plain to Lower Solo. These springs are apparently the fountain Macaria (Plan, 5), which Pausanias mentions just before his description of the marsh. It derived its name from Macaria, a daughter of Hercules, who devoted herself to death in behalf of her sons, and lived 'under a rock' (περατών τον Μακαραν, περατωτον Μακαριν). The spring, which has its origin in these springs, is traced through the marsh into a small salt lake (Plan, 9), supplied by subterraneous sources, and situated on the south-eastern extremity of the marsh, under a rocky ridge, the continuation of C. Stomi. Both the ridge and salt lake are known by the name of Dhrakoniria (δ Πρακσιονείρια, i. e. the monster-waters, so called from its size, since Πρακσιονείρια is a common expression among the modern Greeks for any marvellous object). On the eastern side of the great marsh Leake noticed a small cavern in the side of Mt. Dhrakoniria, which is perhaps the place called by Pausanias "the stables of Artaphernes." Leake supposes that the Persian commanders were encamped in the adjoining plain of Trieroythus. The mountain and cavern of Pan, above described, would appear, from the description of Pausanias, to have been a little further removed from the plain than the marsh and salt lake. Hence they may be placed in Mt. Koruki.
The exact ground occupied by the Greek and Persian armies at the battle of Marathon can only be a matter of conjecture. Col. Leake, whose account is both probable and consistent, though Mr. Fichy differs from him, supposes that the Athenian camp was in the valley of Triand near its opening into the plain; that on the day of battle the Athenian line extended from a little in front of the Heraclium, at the foot of Mt. Argali, to the bend of the river of Marathon, below the village of Sefi; and that the Persians, who were 8 stadia in front of them, had their right resting on Mt. Korski and their left extending to the southern marsh, which prevented them from having a front much greater than that of the Athenians. (See Plan, AA, BB.) When the Persians defeated the Athenian centre, they pursued the latter up one or both of the two valleys on either side of Mt. Kotrón, since Herodotus says that the pursuit continued quite into the interior (καὶ ἐν τῷ πεδίῳ). Nearly at the same time the Persian left and right were defeated; but instead of pursuing them, the Athenians returned towards the field to the aid of their own centre. The Persian right fled towards the narrow pass leading into the plain of Trἰcorυθνος; and here numbers were forced into the marsh, as Pausanias relates.

---

**PLAN OF THE PLAIN OF MARATHON.**

A A. Position of the Greeks on the day of the battle.
B B. Position of the Persians on the day of the battle.
1. Mt. Argali.
5. Mt. Dhrakonéra.
7. Great Marsh.
8. Fountain Kezaria.
9. Salt lake of Dhrakonéra
10. Heraclium
11. Temple of Athena Heliotri.

**Reads:**

a a. To Athens, between Mt. Pentelicus and Hy-mettus through Pallene.
b b. To Athens, through Cephisia.
c c. To Athens, through Aphidna.
d d. To Marathon.

MARATHUS (Μαραθοῦς: *Eh. Μαραθηναῖς al. Μαραθίαν*), a city on the coast of Syria, north of Arabia, placed by Ptolemy in the district of Cassiotes, which extended as far north as Antioch. It is joined with Envydra, and was a ruin in Strabo’s time. It was on the confines of Phoenice, and the district was then under the dominion of the Aradians (Strab. xvi. p. 753; comp. Plin. v. 20), who had been foiled in a former attempt to reduce it to their power. The story, as given in a fragment of Diodorus (lib. xxxii. vol. x. p. 76—78, ed. Bépont; vol. ii. p. 593, ed. We s.), is as follows. The people of Arades having
seized what they considered a favourable opportunity for the destruction of the people of Marathus; set upon the city, and burned it, on the advice of Alexander the Great, whose minister, Tyre, captured the city and killed many of its inhabitants. By the treaty of Sestos, which followed, Marathus was granted the name of "Tartus," and a part of its territory was ceded to Syria.

In the time of Pliny, the city was considered to be the home of one of the Twelve Gods, and was visited by Tiberius and Caligula. It was noted for its mineral springs, which were believed to have healing properties. The city was also famous for its port, which was used by the Romans as a naval base.

In the Middle Ages, Marathus was a centre of trade and commerce, and was noted for its wool and woolen goods. It was also a centre of learning, and was home to a number of schools and universities.

Marathus was conquered by the Turks in the 14th century, and was later occupied by the Greeks. It was finally abandoned in the 18th century, and is now a ruin.

The site of Marathus is located on the coast of the modern Lebanon, about 30 miles south of Beirut. It is marked by a small ruin, which is located on the site of a modern town called Maratet.

The ruins of Marathus are located on a hillside, and are surrounded by a number of modern buildings. The ruins include a number of temples, a theatre, and a stadium.

The city was noted for its mineral springs, which were believed to have healing properties. The city was also famous for its port, which was used by the Romans as a naval base.

MARCILIANA. Fritigern and the Roman governor of Marcianopolis, Lajacius,—which became the signal of a long and destructive war. (Annu. Marc. xxxxi. 5, § 4, Zosim. iv. 10, 11.) Marcianopolis afterwards became Peristhilia or Pressthlava (Пеpисθλαβα), the capital of the Bulgarian kingdom, which was taken A. D. 971 by Sviatoslaff the Russian, and again by John III Komnenus, when 5,000 Russians were put to the sword, and the sons of the Bulgarian king resented from an ignominious prison, and invested with a nominal diadem. (Gibbon, c. iv.; Schafarik, Stan. Alt. vol. ii. pp. 187, foll. 216; Finlay, Byzantium Empire, pp. 408—413.) The site of the ancient town must be sought for in the neighbourhood of Pravdi. For coins of Marcianopolis, both autonomous and imperial, see Eckhel, vol. ii. p. 15. [E. B. J.]

MARCILIANA, a station on the Via Popilia, in Lucania, where, according to the Tabula, that road (which led directly S. from Campania into Brutium) was joined by a branch from Potentia. The name is corrupted both in the Tabula and in the Antonine Itinerary; but there can be no doubt that the place meant is the same called by Cassiodorus "Marciiamum," which was a kind of suburb of the town of Consilinium, where a great fair was held. (Itin. p. 110; Telec. Pont.; Cassid. Farr. viii. 33.) The site is still called Marciliana, in the valley of the Tanager, between La Sula and Padula. (Roncalli, vol. i. p. 405.) [E. B. J.]

MARCIANA (Μαρκιανα), a town of Campania, in the district of the Picentini, situated on the N. shore of the gulf of Pozzuoli, between the Sirenum Insulae and the mouth of the Isarus. (Strab. v. p. 251.) It is mentioned by no writer except Strabo, who tells us that it was a colony founded by the Tyrrenians, but subsequently occupied, and in his day still inhabited, by the Samnites. As he adds that the distance from thence through Nuceria to Pompeii was not more than 120 stadia (15 Roman miles), he appears to have regarded this as the point from whence the passage of the instumus (as he calls it) between the two bays began; and it may therefore be placed with some plausibility at Vetrici. (Cluver, Itel. p. 1190; Roncalli, vol. iii.) Some an- cient maps have discovered it there; though these may seem to indicate the site of Roman villas rather than of a town. [E. H. B.]

MARCUS MONS (τὸ Μάρκους ὄρος) was, according to Plibarch, the name of the place which was the scene of a great defeat of the Volscians and Latins by Camillus in the year after the taking of Rome by the Gauls n. c. 389. (Plut. Camill. 39, 34.) Diodorus, who calls it simply Marcus or Marcium (τὸ κάλυμμου Μάρκους, xiv. 107), tells us it was 200 stadia from Rome; and Livy, who writes the name "א מוקוים", says it was near Lanuvium. (Liv. vi. 2.) The exact site cannot be determined. Some of the older topographers speak of a hill called Colte Marzo, but no such place is found on modern maps; and Gell suggests the Colle di Due Torri as the most probable locality. (Gell, Top. of Rome p. 311.) [E. B. H.]

MARCODAVA (Μαρκοδάβα), Ptol. iii. 8, § 7), a town of Dacia, the remains of which have been found near Tharda. (Sestini, Viaggio, p. 105.) [E. B. J.]

MARCODURUM, in North Gallia. Some of the cohorts of the Ubii were cut to pieces by the troops of Civils at Marcodurum, which as Tacitus observes (Hist. iv. 28) is a long way from the bank of the Rhine. The termination durae indicates a place on a river; and Marcodurum seems to be Duroc on the Rhine. The Frank kings are said to have had a palace there, named Duris Villa or Dura. [G. L.]

MARCOMAGUS, a place in North Gallia on a road from Augusta Trevirorum (Triéres) to Agrippina Civitas (Colgone). It appears both in the Antonine Itin. and in the Table. Marcemagus is Mar- corum. It is either or M. P. from Colgone; the numbers are not certain. [G. L.]

MARCOMANNI (Μαρκομάνοι, Μαρχομάνοι, or Μαρκομανοί), a name frequently occurring in the ancient history of Germany, sometimes as a mere appellative, and sometimes as a proper name of a distinct nation. Its meaning is border-men or march-men, and as such it might be applied to any tribe or tribes inhabiting and defending a border country. Hence we must be prepared to find Marcocmanni both on the western and southern frontiers of Germany; and they might also have existed in the east, or on any other frontier. Marcocmanni are first mentioned in history among the tribes with which Arvistinus had invaded Gaul, and which were defeated and driven back across the Rhine by J. Caesar, n. c. 58 (Cass. Bell. Gall. i. 51). These Marcocmanni, therefore, appear to have been the marchmen on the Ilaecian frontier, perhaps only the lower part of the Main. They are again mentioned during the campaigns of Drusus in Germany, from n. c. 12 to 9, by Florus (iv. 12), who seems to place them somewhat farther in the interior. Only a few years later, we hear of a powerful Marcocmannian kingdom in Boiorum or Bohemia, governed by Maroboduus; and we might be inclined to regard these Marcocmanni as quite a different people from those on the Rhine and Main, that is, as the marchmen on the southern frontier,—were it not that we are expressly told by Tacitus (Germ. 42), Paterculus (ii. 105), and Strabo (vii. p. 290), that their king Maroboduus had emigrated with them from the west, and that, after expelling the Celtic Boii from Bohemia, he established himself and his Marcocmanni in that country. (Comp. Ptol. ii. 11, § 25.) If we remember that the kingdom of the Marcocmanni in Bohemia was fully organised as early as A. D. 80, when Tiberius was preparing for an expedition against it, it must be owned that Maroboduus, whose work it must, have been a man of unusual ability and energy. Henceforth the name of the Marcocmanni appears in history as a national name, though ethnologically it was not peculiar to any particular tribe, but was given to all the different tribes which the Marcocmannian conqueror had united under his rule. The neighbouring nations whom it was impossible to subdue were secured by treaties, and thus was formed what may be termed the great Marcocmannian confederacy, the object of which was to defend Germany against the Romans in Pannonia. But the Marcocmanni soon came also into collision with another German confederation, that of the Cherusci, who regarded the powerful empire of Maroboduus as not less dangerous to the liberty of the German tribes than the aggressive policy of the Romans. In the ensuing contest, A. D. 17, the Marcocmanni were humbled by the Cherusci and their allies, and Maroboduus implored the assistance of the emperor Tiberius. The aid was refused, but Drusus was sent to mediate peace between the hostile powers. (Tac. Ann. ii. 45, 46.) During this mediation, however, the Romans seem to have stirred up other enemies against the Marcocmanni; for two years later, A. D. 19, Cataulica, a young chief of the Gotthones,
invaded and conquered their country. Marcomanni fled, and demanded the protection of Titius, who offered to give a safe retreat in Italy. He there spent the remaining eighteen years of his life, while the throne of the Marcomanni was left to Cataulus. [Dict. of Biogr. art. Marcomannus.] But the latter, too, was soon expelled by the Hermunduri, and ended his life in Gaul. (Tac. Ann. ii. 62, 63.) The Marcomanni, however, like the Quadi continued to be governed by kings of their own, though they were not quite independent of the Romans, who often supported them with money and more rarely with troops. (Tac. Germ. 42.) They appear to have gradually extended their dominion to the banks of the Danube, where they came into hostile collision with the Romans. The emperor Domitian demanded their assistance against the Danubians, and this being refused, he made war against them. But he was defeated A. D. 90, and obliged to make peace with the Dacians. (Dion Cass. livii. 7.) Trajan and Hadrian kept them in check; but in the reign of M. Aurelius hostilities were recommenced with fresh energy. The Marcomanni, allied with the Quadi and others, partly from hatred of the Romans, and partly urged on by other tribes pressing upon them in the north, in 114, invaded the Roman province A. D. 166; and thus commenced the protracted war commonly called the Marcomannic or German War, which lasted until the accession of Commodus, A. D. 180, who purchased peace of them. During this war, the Marcomanni and their confederates advanced into Rhaetia, and even penetrated as far as Aquileia. The war was not carried on uninterruptedly, but was divided into two distinct contests, having been interrupted by a peace or truce, in which the places conquered on both sides were restored. The second war broke out towards the end of the reign of M. Aurelius, about A. D. 178. (Dion Cass. Fragm. lib. lixii. ii.) In consequence of the pusillanimity of Commodus the Marcomannians were so much emboldened by this, that after and through the third century, they continued their incursions into the Roman provinces, especially Rhaetia and Noricum. In the reign of Aurelian, they penetrated into Italy, even as far as Ancona, and excited great alarm at Rome. (Vopisc. Aedul. 18, 21.) But afterwards they ceased to act a prominent part in history. Their name, however, is still mentioned occasionally, as in Jornandes (22), who speaks of them as dwelling on the west of Transylvania. (Comp. Amm. Marc. xxviii. 5, xxxix. 6, xxxvi. 4.) In the Notitia Imperii, we have mention of "Horioriani Marcomannorum seniores" and "juniores" among the Roman auxiliaries. The last occasion on which their name occurs is in the history of Attila, among whose hosts Marcomanni are mentioned. (Comp. Wilhem, Germanica, p. 212, foll.; Zies, Die Deutsch. p. 114, foll.; Latham, Tacit. Germ. Prolog. p. 53, Ed.) If we [MARCIAN.]

[MARCIAN.] MALDIE (Malde, Plut. vi. 4, § 3), a district of ancient Persis, which, according to Psalter, extended to the sea-coast. The name is probably derived from some of the far extended mound-tracks of the Mardi or Avari. (Herod. i. 125; Strab. v. p. 524.)

MARDYNE (Mardanpol, Plut. vi. 12 § 4), a tribe who occupied the lower part of the Sogdian mountains in Sogdiana. There can be no doubt that these people are the remains of a once very numerous race, whose traces we find spread over a vast extent of country from the Caspian Sea to the Persian Gulf, and from the Oxus to the Caspian. We find the names of these tribes preserved in different authors, and attributed to very different places. Hence the presumption that they were to a great extent a nomadic tribe, who pressed onward from the X. to the S. Thus we find them under the form of Mardi in Hyrcania (Diod. xvii. 76; Arrian, Anab. iii. 24, iv. 18; Dionys. Perige. v. 732; Curt. vi. 5.), in Mardana according to Pliny (vi. 15. s. 13), in Persia (Herod. i. 125; Strab. vi. p. 524; Plut. vi. 4 § 3; Curt. vi. 6.), in Armenia (Plut. vi. 13; Tacit. Ann. xiv. 23.), on the eastern side of the Pontus Euxinus (Plin. vi. 5.), under the form Anardi in Sythia intra Imaun (Hdt. iii. 5, iv. 6; Plut. vi. 17. s. 19), and lastly in Bactria. (Plut. vi. 16. s. 18.) Marocchini (Malchesin) (Herod. ii. 30; Arrian, Anab. iii. 24; Mardana, Thucyd. i. 104; Mardana, Steph. Byz. s. r.; Mardana, Diod. ii. 68; Μαριανα Μαρανά, Plut. iv. 5 § 34), the modern Mervouth, and the chief town of the Marmotic Nome, stood on a peninsula in the south of the lake Mardas, near due south of Alexandria, and adjacent to the mouth of the canal which connected the lake with the Canopic arm of the Nile. Under the Pharaohs Mereia was one of the principal frontier garrisons of Egypt on the side of Libya; but from the silence of Herodotus (ii. 30) we may infer that the Persians did not station troops there. In all ages, however, until it was eclipsed by the neighbouring greatness of Alexandria, Mereia, as the nearest place of strength to the Libyan desert, must have been a town of great importance to the Delta. At Mereia, according to Diodorus (ii. 68.), Anaximenes defeated the Pharaoh, Agis, Hydra, or Psammetichus; and the name of Pharaoh on the obelisk at the temple of Ammon seems to be Mereia. (Herod. ii. 169.) At Mereia also, according to Thucydides (i. 104; comp. Herod. iii. 12), Iamnas, the son of Psammetichus, reinstate, and organised the revolt of Lower Egypt against the Persians. Under the Ptolemies, Mereia continued to flourish as a harbour; but it declined under the Romans, and in the age of the Antonines—the second century A.D.—it had dwindled into a village. (Comp. Athen. i. 25, p. 85, with Eustath. ad Homer. Odys. i. 197.)

Mereia was the principal depot of the trade of the Marmotic Lake and Nome. The vineyards in its vicinity produced a celebrated wine, which Athenaeus (i. c.) describes as "remarkable for its sweetness, white in colour, in quality excellent, light, with a fragrant bouquet; it was by no means astrigent, and did not affect the head." (Comp. Plin. xiv. 3; Strab. xvii. p. 796.) Some, however, deemed the Marmotic wine inferior to that of Antylla and Tyre; and Columella (R. R. iii. 2) says that it was too thin for Italian palates, accustomed to the fuller-bodied Fabrianum. Virgil (georg. i. 91) describes the Marmotic grape as white, and growing in a rich soil; yet the soil of the vineyards around the Marmotic Lake was principally composed of gravel, and lay beyond the reach of the alluvial deposit of the Nile, which is ill suited to viticulture. Strabo (xvii. p. 789) describes the wine of Mereia the additional
MAREOTIS.

merit of keeping well to a great age; and Horace (Od. b. 37) mentions it as a favourite beverage of Cleopatra.

Mareia, from its neighbourhood to Alexandria, was so generally known to Roman travellers, that among the Latin poets, the words Mareia and Mareotic became synonymous with Aegypt and Aegyptian. Thus Martial (Ep. xiv. 209) calls the papyrus, "cortex Mareotica" (comp. id. Ep. iv. 42); and Gratius (Cynegotic, v. 215) designates Aegyptian luxury as Mareotic; and Ovid (Met. x. 73) employs "ara Mareotica" for Lower Aegypt. [W. B. D.]

MAREOTIS or MAREIA (Μαρεωτις or Μαρεια) (Strab. xvii. pp. 789—799; Mupia, Steph. B. s. v.); Mareotis Libya, Plin. v. 10. s. 11; Justin xi. 1), the modern Birket-el-Merouf, was a considerable lake in the north of the Delta, extending south-westward of the Canopic arm of the Nile, and running parallel to the Mediterranean, from which it was separated by a long and narrow ridge of sand, as far as the tower of Perseus on the Phintanitic bay. The extreme western point of the lake was about 26 miles distant from Alexandria; and on that side it closely bordered upon the Libyan desert. At its northern extremity its waters at one time washed the walls of Alexandria on its southern side, and before the foundation of that city Mareotis was the Lake of Aegypt. In breadth its surface was rather more than 150 stadia, or about 22 English miles, and in length nearly 300 stadia, or about 42 English miles. One canal connected the lake with the Canopic arm of the Nile, and another with the old harbour of Alexandria, the Portus Eunomus. [ALEXANDRIEL] The shores of the Mareotis were planted with olives and vineyards; the papyrus which lined its banks and those of the eight islets which studded its waters was celebrated for its fine quality; and around its margin stood the country-houses and gardens of the opulent Alexandria merchants. Its creeks and quays were filled with Nile boats, and its export and import trade in the age of Strabo surpassed that of the most flourishing havens of Italy.

Under the later Caesars, and after Alexandria was occupied by the Arabs, the canals which fed the lake were neglected, and its depth and compass was materially reduced. In the 6th century d. its waters had retired about 2 miles from the city walls; yet it still presented an ample sheet of water, and its banks were adorned with thriving date-plantations. The lake, however, continued to recede and to grow shallower; and, according to the French traveller Savary, who visited this district in 1777, its bed was then, for the most part, a sandy waste. In 1801 the English army in Aegypt, in order to annoy the French garrison in Alexandria, bored the narrow isthmus which separates the Birket-el-Merouf from the Lake of Medich or Aoukówir, and re-admitted the sea-water. About 450 square miles were thus converted into a salt-marsh. But subsequently Mehemet Ali repaired the isthmus, and again diverted the sea from the lake. It is now of very unequal depth. At its northern end, near Alexandria, it is about 14 feet deep, at its opposite extremity not more than 3 or 4. Westward it forms a long and shallow lagoon, separated from the sea by a bar of sand, and running towards Libya nearly as far as the Tower of the Arabs. The lands surrounding the ancient Mareotis were designated as the Mareotic Nome (Μαρεωτικος Νομος; Strab. iv. §§ 8, 34); but this was probably not one of the established Names of Pharaonic Aegypt. [W. B. D.]

MARES (Μαρες), a tribe on the coast of Pontus, in the neighbourhood of the Mysopoei. (Herat. Fragm. 192; Herod. iii. 94.) Their armour, when serving in the army of Xerxes, is described by Herodotus (vii. 79) as having consisted of helmets of wicker-work, leather shields, and javelins. Later writers do not mention this tribe. [L. S.]

MARESHAH (Μαρεσά, LXX., Euseb.; Μαρησα, Joseph., p. 799), a city of Judaea, inhabited from the time of Rehoboam with Brithiah and Achshib in Josha (xxv. 44). In Micah (i. 15), where it is again joined with Achshib, the LXXX. have substituted Αρχαία. Lachish, however, is found in the list of Josha, independent of Maresha (xxv. 39), so it could not be a synonym for Mareshah. It was one of the cities fortified by Rehoboam against the Philistines and Egyptians (2 Chron. xi. 8); and there it was that Azet encountered Zerah the Ethiopian, "in the valley of Zephal- thah at Mareshah" (xix. 9), and gained a signal victory over him. In the time of Judas Maccabees it was occupied by the Idumaeans (2 Maccob. xii. 35), but Judas took and destroyed it. (Joseph. Ant. xii. 8 § 6.) Only a few years later it is again reckoned to Idumaea; and Hyrcanus I. took it, and compelled its inhabitants, in common with the other Idumaeans, to practice circumcision, and conform to the law, as a condition of remaining in that country (xii. 9 § 1, 15 § 4). It was one of the cities restored to Aetas king of Arabia by Hyrcanus II., as the price of his services (xiv. 1 § 4); soon after which it was rebuilt by Gabinius (5 § 3); shortly after sacked and destroyed by the Parthians in their invasion of the country, in the time of Herod the Great (xiv. 13 § 9); and probably never recovered its former importance, as this is the latest historical notice. It is placed by Eusebius and St. Jerome 2 miles from Eleutheropolis; it was then a ruin.

Dr. Robinson conjectures that "Eleutheropolis (at first Betogabra) had sprung up after the destruction of Maresa, and had been built with its materials," and that "the foundations which he discovered on the south-eastern part of the remarkable tell, south of the place, were remains of Maresa. The spot is admirably adapted for a fortress; it lies about a Roman mile and a half from the ruins of the "Jebelin." There are no other ruins in the vicinity. (Bib. Res. vol. ii. pp. 422, 423.) [G. W.]

MAREUTA or MALTHERA (Μαρεουτα or Μαλθθυρα, Μαλθθουα καλυμμένη, Pol. vii. 2 § 24), a place of some importance in the upper part of the Aurea Cersonesus in India extra Gangem. It is not now possible to identify it with any existing place.

MARGANA or MARGALAE (Μαργάνα, Dios.; Μαργάνωτα, Xen.; Μαργάνια, Strab.; Μαργάνια, Steph. B. s. v.); a town in the Pisatis, in the district Amphidolia, was supposed by some to be the Homeric Aegyp. (Strab. viii. p. 349.) The Eleians were obliged to renounce their supremacy over it by the treaty which they made with Sparta in n. c. 400 (Xen. Hell. iii. 2 § 90), on which occasion it is called one of the Triphylian towns: as to this statement, see LETHEN.

It is mentioned as one of the towns taken by the Arcadians in their war with the Eleians in n. c. 366. (Xen. Hell. viii. 4 § 14; Dios. xv. 77.) Its site is uncertain, but it was probably east of Lœtrini. Leake places it too far north, at the junction of the Lalon and the Peneus, which is in all probability the site of the Eleian Pylos. (Leake, Peloponnesiacæ, p. 219; Bobhaye, Récherches, s. c. p. 130; Curtius, Peloponnesacœ, vol. i. p. 73.) T
MARGIANA is a district of considerable extent in the western part of Central Asia, which was bounded on the W. by Hyrcania, on the N. by Seythian and the Oxus as far as Bactriana, on the E. by Bactriana, and on the S. by Ariana. At present the country is called Khurasan, and comprises the remains of the territory occupied by the Turcoman tribes. Like most of the districts at a great distance from Greece or Rome, it was but partially known to the ancients; hence its limits are variously stated by ancient authors. Thus Strabo makes it the province next to Parthia, to the N. of the Sarpihi mountains, and gives the same boundaries to the W., N., and E. as the other geographers (xi. p. 516). Pliny places it in the same direction, but adds that a desert of 120 M. P. must be crossed before it could be reached (vi. 16. s. 18).

Both Strabo and Pliny speak of the great fertility of its land, and the fineness of its climate; the former stating that the vines were often so large that a man could not embrace their stems in his arms; the latter, that it was the only district in that part of the world which produced grapes. The accounts of the ancients are in this particular confirmed by modern and by Muhammadan writers.

According to the latter, it would seem to have comprehended the territory from Bonjurd on the west, to Merus and the Murghāb in the east, a tract remarkable for its beauty and fertility. (Wilson, Ariana, p. 149.) The principal river of Margiana, from which, too, it probably derived its name, was the Margus (now Marghāb). Various races and tribes are noticed in different authors as occupying parts of Margiana. All of them may be considered as of Scythian or Tataz origin. — Failed, in this part of Asia, the population has remained nearly the same to the present day which it was in the classical times. The principal of these were the Derbicca or Derbicke (Steph. p. 23; Strab. xi. p. 508; Dionys. v. 734), who lived to the N. near the mouth of the Oxus; the Massagetea, the Paraei, and the Daeae, who lived to the S. of the former along the Caspian and the termination of the Margus, which united itself in the sands before it reaches the Caspian; and the Taphri and Mardis. The chief towns were, Antiocheia Margiana (certainly the present Mero), Nisaia of Niasa, Ariaca, and Jaxamia. [See these places under their respective names.] [V.]

MARGIDUNUM, in Britain (Itin. Anton. pp. 477, 479). It is supposed by Camden, Stukeley, Horsey, and others, to have been situated at or near East Bridgford, about eight miles from B. F. (C. B. S.)

MARGUM or MARGUS (Μαργος, مارجوس), also called MURGUM, a city of Mesias, at the confluence of the Margus and Danube. It was termed "Murgum planum" on account of the level character of the surrounding country. (Jornand, de Rob. Get. c. 58.) It was here that the emperor Carinus was totally defeated by Diodritian. (Entrop. ix. 13, x. 29; It. Ant. p. 132; It. Hieros. p. 564.) [A. L.]

MARGUS (Μαργος, Strab. vii. p. 318; Margis, Plin. iii. 26. s. 29), an important river of Mesoia, which flows into the Danube, near the town of Margus, now the Marova. Strabo says (l. c.) that it was also called Bargus, and the same appears in Hierotodus (iv. 44) under the form of Bradgus (βραδγος). The same river is the Masoeus (Μασαεος) of Tolemy (iii. 9. § 3). [A. L.]

MARGUS (Μαργος, Strab. x. p. 516; Tolev. 10. §§ 1, 4), the chief river of the province of Margiana, which in all probability derives its name from it, —now the Murghāb or Mero Rih. It is said by Ptolemy to have taken its rise in the Sarpihi mountains (now Hazarot), a western spur of the great range of the Margiana, and, after passing through a perilous and a junction with another small stream, to have flowed into the Oxus. The travels of Sir Alexander Burnes have demonstrated that the Murghāb no longer reaches the Oxus, but is lost in the sands about 50 miles SW. of Mero (Burnes, vol. ii. p. 355); but it is probable that as late as the time of Ibn Hautil (about A. D. 950) it still flowed into the Jihon (De Seri, Mem. sur deu Proc. de la Perse, p. 24). The Margus passed by and watered Antiocheia Margiana, the capital of the province. [V.]

MARIABA (Μαριαβα). There seem to have been several cities of this name in Arabia, as there are still several towns or sites of the name, scarcely modified. How many distinct cities are mentioned by the classical geographers, antiquarians are not agreed, and the various readings have involved the question in great perplexity. It will be well to enumerate first those of which the notices are most distinct.

1. The celebrated capital of the Sabæi in Yemen, is known both in the native and classical writers. It is called the metropolis of the Sabæi by Strabo (xvi. 4. § 2), which tribe was contiguous to that of the Minaei, who bordered on the Red Sea on one side, and to the Catabæans, who reached to the straits of Bab-el-Mundub. [Sabæi; Minaei, Cata-baeans; Bab-el-Mundub, the strait of the Red Sea.] It was situated on a well-watered mountain, and was the royal residence. It seems difficult to imagine that this was distinct from the Mariaba of Pliny, who, however, assigns it to the Atrarimata, a branch of the Sabæi, and places it on a bay 94 M. P. in circuit, filled with sparsely-bearing islands; while it is certain that the Mariaba of the Sabæans was an inland city. It is beyond all doubt the Maarib of the Arabian historians, built according to their traditions, by Abi-sheba, third only in succession from the patriarch Koktan or Joktan, son of Eber. Abulfeda says that this city was also called Saba; and that, in the opinion of some, Maarib was the name of the royal residence, while the city itself was called Saba. Its founder also constructed the stupendous embankment so renowned in history, forming a dam for confining the water of seventy rivers and torrents, which he conducted into it from a distance. (Abulfeda, Historia Auto-Islamica, lib. iv. ap. init.) The object of this was not only to supply the city with water, but also to irrigate the lands, and to keep the subjacent country in awe, by being masters of the water. The water rose to the height of almost 20 fathoms, and was kept in on every side by a work so solid, that many of the inhabitants had their houses built upon it. It stood like a mountain above the city, and no danger was apprehended of its ever failing. The inundation of El-Arem (the mound) is an ara in Arabic history, and is mentioned in the Koran as a signal instance of divine judgment on the inhabitants of this city for their pride and insolence. A mighty flood broke down the mound by night, while the inhabitants were asleep, and carried away the whole city, with the neighboring towns and people. (Sale, Koran, cap. 34. vol. ii. p. 289, notes, and Preliminary Discourse, sect. 1. vol. i. p. 13;
The catastrophe seems to have happened about the time of Alexander the Great, though some chronologies place it subsequently to the Christian era. Sale places the city three days' journey from Sanaa (note, in loc. cit.). The notion of the identity of Marib with Sheba, mentioned by Abulfeda, is still maintained by some natives; and Niebuhr quotes for this opinion a native of the town itself (Description de l'Arabie, p. 252), and justly remarks that the existence of the remains of the famous reservoir of the Sabaeans in the vicinity of Marib serves to identify it with the capital of the Sabaeans. To account for the capital not bearing the name of the tribe, as was usual, he suggests that the Sabaeans may have derived their name from another town, and then have built this stupendous reservoir near Marib, and have there fixed the residence of their kings. But a fact elsewhere mentioned by him, will perhaps lead to a more satisfactory solution. It seems that the great reservoir is not situated before Marib, nor close to it, but at the distance of an hour, and on the side of it. It may account for its preservation on the burning of the embankment. May not the inundation have occasioned the utter destruction of the neighboring city of Sheba, as the traditions relate, while the royal residence at Marib escaped, and formed the nucleus of the modern town? We have seen from Abulfeda that some native authorities maintain that Marib was the royal residence, while the capital itself was called Saba. The name Maribah (al-Mariba) signifying, according to the etymology of Pliny, "dominos omnium," would well suit the residence of the dominant family (vi. 28. § 32). Marib is now the principal town of the district of Dioref, 16 German leagues ENE. of Sanaa, containing only 300 houses, with a wall and three gates; and the ruins of a palace of Queen Balakis are there shown. The reservoir is still much celebrated. It is described by a native as a valley between two chains of mountains, nearly a day's journey in length (=5 German leagues). Six or seven small streams, flowing from the west and south, are united in this valley, which contracts so much at its east end, by the confluence of the mountains, that it is not more than 5 or 6 minutes wide. This space was closed by a thick wall, to retain the superfusive water during and after the rains, and to distribute it over the fields and gardens on the east and north by three sluice-gates, one over the other. The wall was 40 or 50 feet high, built of enormous blocks of hewn stone, and the ruins of its two sides still remain. It precisely resembles in its construction the Beneds, as they are called, in the woods of Belgrave, near Biskiere, on the Boeophorus, which supply Constantinople with water, only that the work at Marib is on a much larger scale. (Niebuhr, L. c. p. 249, 241.)

2. Maribah Balamalacum. A city of this name in the interior of Arabia is mentioned with this distinguishing appellation by Pliny (vi. 32) as a considerable town of the Chermaei, which was one division of the Minah; he calls it "oppidum xvi. mill. pass. . . . et ipsum non spermiendum." It is supposed by some to be identical with the Baraba metropolis (Bâbâpha al-Mihmâra na'salâm) of Ptolemy (vi. 15, p. 155), which he places in long. 76°, lat. 18° 20'. Forster has found its representative in the modern Taraba, whose situation corresponds sufficiently well with the Baraba metropolis of Ptolemy (Geog. of Ararb., vol. i. p. 135, ii. p. 256); but his account of the designation Bararahum (quasi Bar-Abamalacum, equivalent to "Merab of the sons of Amelk") is inadmissible according to all rules of etymology (vol. ii. pp. 43, 47). Taraba, pronounced by the Beduins Taraba, is 30 hours (about 80 miles) distant from Taqif in the Hejaz, so considerable a town, "as large as Taqif, remarkable for its plantations, which furnish all the surrounding country with dates; and famous for its resistance against the Turkish forces of Mohammed Ali, until January, 1815, when its inhabitants were compelled to submit. Taraba is environed with palm-groves and gardens, watered by numerous rivulets." (Burchhardt, Travels in Arabia, Appendix, No. iv. p. 451.) A more probable derivation of Baramalacum from Bah-ara-malik = the Royal Lake, would identify it with the preceding, No. 1. (Vincent, Periplus, p. 307.)

3. Maribah, another inland city of Arabia, is mentioned also by Pliny (L. c.) as the capital of the Calingi, 6 M.P. in circumference, which was, according to him, one of the eight towns taken and destroyed by Adelus Gallus. He has perhaps confounded it with the Masryahah which Strabo fixes as within the limit of his expedition, and the siege of which he was forced to abandon; but it was remarked before that this name was according to Pliny equivalent to metropolis,—though the etymology of the name is hopelessly obscure;—so that it is very possible that, besides the Masryahah mentioned by Strabo, a Maribah may have fallen in with the line of that general's march, either identical with one of those above named, or distinct from both; possibly still marked by a modern site of one of these towns still preserving a modification of the name, as El-Marabba, marked in Kiepert's map in the very heart of the country of the Wahibites; and a Merab marked by Arrowsmith, in the NE. of the Najd country. [Marsyabah.] [G. W.]

MARIANA (Mârâjan), an inland city of Arabia, mentioned only by Ptolemy (vi. 15), who places it in long. 78° 10' and lat. 17° 10', and therefore not far from his Barabah, or Maribah of Niebuhr. [Maribah, 2.] Munro (Geographie, pt. vi. vol. i. p. 66) suggests its identity with Mârûbah, marked in Niebuhr's map towards the north-east of Yemen, which is, however, the name of a district, not of a town; its capital being named Arim (Description de l'Arabie, p. 228); but this would not agree with the position above assigned to Maribah Balamalacum. (Utter, Erdkunde von Arabien, vol. i. p. 253.) [Marbârah.] [G. W.]

MARIAME (Mârâma), a city of Syria, subject to Arados, and surrendered with Arados and its other dependencies, Marathus and Sigion, to Alexander the Great by Straton, son of Gerastrus, king of Arados. (Arrian, ii. 14, § 8.) It is placed by Ptolemy in the district of Cossiodus (v. 15), and by Hierocles in the second epochy of Syria (apud Wessect, Itineraria, p. 712). [G. W.]

MARIANA (Marânh), a city on the E. coast of Corsica, which, as its name imports, was a Roman colony, founded by the celebrated C. Marius. (Ptol. ii. 6. s. 12; Ptol. iii. 2. § 5; Mel. ii. 7. § 19; Senec. Cons. ad Helv. 8.) Nothing more is known of its history, but it is recognised as holding colonial rank by Pliny and Mela, and appears to have been one of the two principal cities in the island. It is a plausible conjecture of Chucerius that it was founded T 2
on the site previously occupied by the Greek city of Nicaea mentioned by Diodorus (Died. v. 13; Clever. Sicel. p. 508). Its name is mentioned in the Antonine Itinerary (p. 85), which erroneously reckons it 40 miles from Aleria; the ruins of Mariana, which are still extant under their ancient name at the mouth of the river Goldon, being only about 30 miles N. of those of Aleria. They are 15 miles S. of the modern city of Bastia. The ancient remains are inconspicuous, but a ruined cathedral still marks the site, and gives title to the bishop who now resides at Bastia. (Rampoldi, Dic. Geogr. vol. ii. p. 589.)

MARINA FOSSA. [Fossa Mariana.]

MARANDUNI (Μαρανδούνι, Marandou-soi, or Μαρανδούνι), an ancient and celebrated tribe in the north-east of Bithynia, between the rivers Sangarius and Billaucus, on the east of the tribe called Thyini or Bithyini. (Seylax, p. 34; Plin. vi. 1.) According to Seylax, they did not extend as far west as the Sangarius, for according to him the river Hypius formed the boundary between the Bithyini and Mariandyuni. Strabo (vii. p. 295) expresses a belief that the Mariandyuni were a branch of the Bithynians, a belief to which he was probably led by the resemblance between their names, and which cannot be well reconciled with the statement of Herodotus (iii. 90), who clearly distinguishes the Mariandyuni from the Thracians or Thyini in Asia. In the Persian army, also, they appear quite separated from the Bithyini, and their armour resembles that of the Paphlagonians, which was quite different from that of the Bithyni. (Herod. vii. 72, 75; comp. Strab. vii. p. 634, xii. p. 542.) The chief city in their territory was Heraclea Pontica, the in-habits of which reduced the Mariandyuni, for a time, to a state of servitude resembling that of the Cretan Moenae, or the Thessalian Penestae. To what race they belonged is uncertain, though if their Thracian origin be given up, it must probably be admitted that they were akin to the Paphlagonians.

In the division of the Persian empire they formed part of the third Persian satrapy. Their country was called Mariandyuni (Μαρανδούνια, Steph. B. s. c.) and Paping a part of a Suevic Mariandyuni on their coast. (Comp. Herod. Fragm. 291; Aschyl. Pers. 932; Xen. Anab. vi. 4. § 4; Cyprius, i. § 4; Polyb. v. 1. § 11; Scymn. Fragm. 199; Dionys. Periegei. 785; Mel. i. 19; Athen. xiv. p. 629; Apoll. Argum. ii. 724; Constant. Forp. Them. i. 7.)

MARAVUS MONS (Μαραβαύων οὖς), Ptol. iv. 4. § 15; Mons Maravenum, H. Auton. p. 432; Sever. Mor. recto), a mountain in Hispania Bética, properly only a western offshoot of the Orospea, and probably the mountain which Strabo describes (vii. p. 142), without mentioning its name, as standing parallel to the river Bactus, and full of mines. Hence Pliny (xxxiv. 2) speaks of "aes Maravenum, quod et Cordubense diecutur." The eastern part of this mountain was called Saltus Castiloebenos. (Cantilo.)

MARTICA. [L. Martius.]

MARTICAE LUCIUS. [Lucca.]

MARDIDE (Omanian, xvi. 6), a castle or fortified town in Mesopotamia, mentioned by Anonymus Marcellinus in his account of Constantius. There can be no doubt that it is the same as the present Mardin, which is seated on a considerable eminence looking southward over the plains of Mesopotamia. (V.)

MARDINUM (Mapl. atti. Ptol. ii. 3. § 29), in

BRITAIN, a town in the country of the Demetæ, now Carnarvon. In the time of Giraldus Cambrensis the Roman walls were in part standing ("est ignitar hac urbe antiqua coculiae murm sus partem adhibere extantibus egregie clausa," Itin. Camb. lib. i. c. 10). (C. R. S.)

MARINIA.XA also called MARINIA (It. Hiernos. p. 562), a town in Pannonia, on the frontiers between Upper and Lower Pannonia, on the road from Mursa to Maruia. (It. Ant. p. 130.) It is possible that the place may have been the same as the one called by Ptolemy (ii. 14. § 6) Mariavira. (Comp. Geogr. Rav. iv. 19, and Tab. West.)

MARINUS. [Marianus.]

MARIUS (Μαρίων). Two towns of this name are mentioned by Ptolemy (ii. 11. § 27) in the north-west of Germany. As the name seems to indicate a maritime town, it has been inferred that one of them was the modern Hamburg, or Marne at the mouth of the Elbe, and the other Lubeck or Wismar. But nothing certain can be said about the matter. (L. S.)

MARIS. [Maries.]

MARIUS (Μαρίων). Strab. vi. 304; Maxeps. Herod. iv. 49; Marisia, Jovand. De Reb. Got. 5; Geogr. Rav.), a river of Dacia, which both Herodotus (L.c.) and Strabo (L.c.) describe as flowing into the Danube; it is the same as the Marosas, which falls into the Tisza. (Herenn. Jov. Antiq. Nations, vol. ii. p. 10, trans.; Schafarik, Slav. All. vol. i. p. 507.)

[E. B. J.]

MARITHON MONTES (μαριθονία μοντεσ), a mountain chain in the interior of Arabia, the middle of which is placed by Ptolemy, who alone mentions them, in long. 30° 30', lat. 21° 30', and round which he groups the various tribes of this part of the peninsula, viz. the Melangates (Melang-"tis) and Dachurians, or Dacharemognia (Dacharemognia), on the north; the Zetantes (Zetanes), Babilinae (Babilinae), and Ovarita (Ovarita), on the south; to the east of the last were the Cattabeni, extending to the Monte Assoborum. (MELANES MONTES.) (Ptol. vi. 7. § 20.) They appear to correspond in situation with the Jebel Athal, on the shore of the Wady-el-Aflan, in Kitterer's map. (Forser, Geogr. of Arabia, vol. ii. p. 266.) (G. W.)

MARTIMA, a town of Gallia Narbonensis on the coast. Mela (ii. 55) says, that "between Messilla and the Rhodians Maritia was close to the Avatierum stagnum;" and he adds that a "fossa" discharges a part of the lake's water by a navigable mouth. Pliny in a passage before quoted (Tossa MARIANA, Vol. i. p. 912), also calls "Maritima a town of the Avatii, above which are the Campi Lapidei." Ptolemy (ii. 18. § 8) places Maritima of the Avatii east of the eastern branch of the Rhone, and he calls it Colonia. The name of Avatia is Avatia in the Greek texts of Ptolemy that are now printed, but it is Antalii in the Latin text of Dürckheim, and perhaps in other Latin texts. It does not seem certain which is the true reading. Wackeneyer (Geogr. J. vol. i. p. 108) assumes that Antalii is the true reading in Ptolemy.

D'Anville concludes that Maritima was between Marseille and the canal of Maris, and that Marti-ques is the site; but there is no reason for fixing Martiques except that it is between these two names and Marseille, and that there is some little resemblance between the two names. It is said that no traces of remains have been found at Martiques, which, however, is not decisive against it, if it is true; and it is not true. Martiques is near the outlet of the E70- of Béziers. Wackeneyer observes, that
there has been found at Citis or Saint-Blaise, on the borders of the same lake, an inscription which mentions "Curator Martimia, Sextus Vicius Aunici," as one of the principal indigenous tribes to the W. of Aegypt, belonging to the age of Philip of Macedon, and the third century of the Christian era (Seylac, c. 107, ed. Klausen; Strab. ii. p. 131, xvii. pp. 798, 825, 838; Plin. v. 5; Joseph. B. J. ii. 16. § 4; Vopisc. Vit. Prob. c. 9), but are not mentioned by Herodotus; it is probable that they were pushed into the interior of the country, by the Greek colonists of Cyrene, and afterwards recovered their ancient seats. In the reign of Megas of Cyrene, the Marmaridae revolted, and compelled that prince to give up his intention of attacking Ptolemy Philadephus, and the Egyptian frontier. (Paus. i. 7. §§ 1, 2.) The ancients differed considerably in the limits they assigned to the Marmaridae; Seylac (l. c.) places them between Apis, and the Gardens of the Hes-perides; Pliny (l. c.) between Parataetum, and the Greater Syrtis; while Strabo (xvii. p. 589) extends their frontier to the S. as far as the Oasis of Ammonium (Strab. i. 5, §§ 1—10) bounds the district Marmara, on the E. by the P听话ngetic Gulf, and on the W. by a line which is drawn through the town of Darrin (Duma); he divides this region—according to the arrangement made by the Ptolemies when Cyreneica became a dependency of Aegypt—into two parts, the E. of which was called Libyces Nomos (Aebyes rTvou, § 4) and the W. Marmaric Nomos (Myvapapanv rTvou, § 2); the line of separation was made by the Catarathimes Magnus (Karladobus wypas, Polyb. xxxi. 26; Strab. pp. 791, 798, 825, 838; Stadiasmus. p. 440; Sall. Jug. 19; Mela. i. 8. § 2; Plin. v. 5; Oros. i. 2; Steph. B.) This elevation, which rises to the height of 900 feet, according to some authors separated Aegypt from Cyreneica, and extends from the coast in a S.E. direction towards the Oasis of Alexandrium. Edris (vol. i. p. 125, ed. Jahnert) calls it "Aiskabal el Salim, or staircase descent, whence the port Solom and Soloum of one of the earlier "Portulani;" the modern name is "Aiskabal el Khibir. Further to the E., near Parataetum, was the smaller inclination Catarathimus Minor (Strab. p. 883; Solin. 30), now called "Aiskabal el Syir, the height of which is 500 feet. Shooting out into the sea, in the headland Ras el Komai, it takes a direction from N. to S. to the Oasis of Ghata. In the sea-beard of this arid space, following the coast from E. to W., were the promontories of Deris (el Heify); Hermaeus (Ras el Komai); the harbour of Gyziis or Zygiis (Mahadah); Parataetum (Ras el Harzeit); Apis (Boum Ajonbah); the little rocks called Scopuli Tyrndarei (el Chatiry); Pliny Ps. (Ras Halom); Panemus (Marsoh Solomun); Aedonia Prom. (Ras el Meluh), with the adjoining harbour Menelai Ps.; Anthygoos (Tophiques); Petras Parvus (Mugherat el Hebe); with its harbour Ratracchus; Aedonia Ps. (Aim el Ghabzah); with the islands Aedonia and Platea (Bomba), and Chersonesus (Ras el Tita). Along the whole of this coast a road ran, the stations on which are given in the Peutinger Table. (Segm. viii.) One river, the Palirius (Psaliroup), Pol. iv. 5. § 2; el Zamnitch), watering the district of Aziris, discharges itself into the sea at the Gulf of Bomba. The coast which was occupied by the tribes of the Adymachidiae and Gly- gammiae, is described under Oasis, Tapetides, Apis, and Parataetum were the chief towns, of
which the ruins still remain. Throughout the whole of Marmaria no vestiges of Egyptian architecture before the time it has been found. The sand-onion, "scilla maritima," and madder, "rubia," which cover the plains, remind the traveller of what Herodotus (iv. 189, 190) says about the practice of the Libyan women dying their goat-skins with red, and of the portable houses constructed of stalls of asphodel, intertwined with rushes. Now, as then, the "jerboa" (δίνωρ, Herod. iv. 192) is common. The few coins of Marmarian towns, such as those of Apis and Buttracum, are of the same workmanship as the Egyptian mints. (Eckhel, vol. iv. p. 116.)

Polenery (iv. 5. § 22) enumerates the following tribes in Marmaria:—In the Libyan name, along the coast, the Zygoptae (Ζυγοπταί), Chatti (Χατταί), and Zygienses (Ζυγίσες); further to the S., in the interior, the Buzenses (Βούζης) and Od- 

DAEMI. In the district of Ammonium (§ 23), the Anagomari (Ἀναγομαρί), Ionacchi (Ἰονάκχι), and Rodatiae (Ρωδαταί). In the Maroneo name, to the N. on the coast, the Liby- 

Arciae (Λιβυάρχια), the Anephtae (Ἀνέφτα), and Bassachiae (Βασαχάρια); to the S. of these, the Augilae (Οὐγίλαι), Nasamonos (Νασαμώνος), and Bassatiae (Βασαταία): then the Aulish- 

iae (Αουλισχία), who belong more properly to Cy- 

tenacá; Tapanitae (Ταπανίται); and further to the S. the Sinites (Σινίτες), Ophialae (Οφίαλαι), and Aezacá (Αἰζακά).

(Pachia, Παχεία, Πάχεια, la Marmaigne, pp. 1.—81; Burch, Wandersagen, pp. 499—546.) [F. E. J.]

MARMARIUM. [CARYSTUS.]

MARMOLITIS. [PAPHLAGONIA.]

MARBODUUM (Μαρμόδουμ), a town of the Marcomanni in Bohemia (Ptol. ii. 11, § 29), and undoubtedly identical with the royal residence of Marobodus, with a fortress attached to it, mentioned by Tacitus. (Ann. ii. 62.) The same place, or rather the fortress, is called by Strabo (vii. p. 290) Brucenw, and is identified with the modern Strudweis, in Bohemia. [L. S.]

MARONEA (Μαρωνεά; Etr. Μαρόνείτη), a rich and powerful city of the Cicones, in Thrace, situated on the Aegean sea, not far from the lake Issius. (Herod. vii. 109.) It is said to have been founded by Maron, a son of Dionysus (Eurip. Cycel. v. 100, 141), or, according to some, a companion of Odis (Psel. N. i. 20); but Schyrmanus (672) relates that it was built by a colony from Chios in the fourth year of the fifty-ninth Olympiad (p. c. 540). Pliny (iv. 11, s. 18) tells us that the ancient name was Ortocarea. The people of Marmara venerated Dionysus in an especial manner, as we learn from their coins, probably on account of the superior character of their wine, which was cele- brated as early as the days of Homer (Οδ. i. 40). This wine was universally esteemed all over the ancient world; it was said to possess the odour of Nectar (Xenophon, i. 12, xvi. 6, xiii. 11), and to be capable of mixture with twenty times its quantity of water (Hom. Οδ. ix. 197); and, according to Pliny, on an experiment being made by Maccianus, who doubted the truth of Homer's statement, it was found to bear even a larger proportion of water. (Plin. xiv. 4. s. 6; comp. "Vicia Maronea fideius Luna Baccus," Tibull. iv. 57.)

Marmara was taken by Philip V. of Macedon in 167 B.C., and when he was ordered by the Romans to evacuate the towns of Thrace, he vented his rage by slaughtering a great number of the inhabitants of the city. (Liv. xxxi. 16, xxxix. 24; Polyb. xxii. 6, 13, xiii. 11, 12.) The Romans subsequently granted Marmara to Attalus; but the latter immediately afterwards revoked their gift, and declared it a free city. (Polyb. xxx. 3.) By Constantine Porphyrogenitus (Theen, ii. 2), Marmaria is reckoned among the towns of Macedon. The modern name is Marogna, and it has been the seat of an arch- 

bishops. (Comp. Ptol. iii. 11, § 2; Sclays, p. 27; Strab. vii. 361; Ann. Marc. xxii. 8, xxvii. 4; Hercoul. p. 643; Tacta, ad Lycophr. p. 818; Theophil. ad Antol. xi. p. 86.) [A. E.]

COIN OF MARONEA.

MARONSA (Μαρονσα, Zosim. iii. 28), a small village in Messopotamia, at which the army of Julian arrived, just before the combat in which he fell. It is probably the same which Ammianus calls Mar- 

araga (xxv. 1), but its exact locality cannot now be determined. [V.]

MARPESSA (Μαρπεσσα), a mountain in the island of Paros, from which the celebrated Parian marble was obtained. (Steph. B. s. v. Μαρπεσσα.) [Paros.] Hence Virgil (vi. 471) speaks of "Marpeia cantus."

MARPESSUS. [ΜΑΡΠΕΣΣΥΣ.

MARRUBIUM. [ΜΑΡΡΟΒΙΥΜ.]
MARRUCINI.

(Liv. viii. 29; Niebuhr, vol. i. p. 101); and hence we find the Marrucini generally following the lead and sharing the fortunes of the Marsi and Peligni. But in b. c. 311 they appear to have taken part with the Samnites, though the other confederates remained neutral; as in that year, according to Dio, they were engaged in open hostilities with Rome. (Diod. xix. 165.) No mention of this is found in Livy, nor is their name noticed in b. c. 308, when the Marsi and Peligni appear in hostility to Rome; but a few years after, in c. 304, all three nations, together with the Frontani, united in sending ambassadors to sue for peace, and obtained a treaty of alliance on favourable terms. (Liv. ix. 41, 43; Diod. xx. 101.) From this time the Marrucini became the firm and faithful allies of Rome; and are repeatedly mentioned among the auxiliaries serving in the Roman armies. (Dionys. xx. Fr. Diod.; Pok. ii. 24; Liv. xlix. 40; Str. liv. viii. 219.) During the Second Panic War their fidelity was unshaken, though their territory was repeatedly traversed and ravaged by Hannibal (Liv. xxii. 9, xxvi. 11; Pol. iii. 88); and we find them, besides furnishing their usual contingent to the Roman armies, providing supplies for Claudius Nero on his march to the Metaurus, and raising a force of volunteers to assist Scipio in his expedition to Africa. (Liv. xxvii. 49, xxviii. 45.) In the Social War, however, they followed the example of the Marsi and Peligni, and, though their name is less often mentioned than that of their more powerful neighbours, they appear to have borne an important part in that momentous contest. (Appian, B. C. i. 39, 46; Liv. Epit. lxiii.; Oros. v. 18.) Thus Herius Asinius, who is called by Livy "praetor Marrinorum," and was slain in one of the battles between Marcius and the Marsi, is particularly noticed as one of the chief leaders of the Italian allies. (Liv. Epit. lxiii.; Vell. Pat. ii. 16; Appian, B. C. i. 40.) But before the close of the year 89 b. c. they were defeated, and their territory ravaged by Sulpicius, the lieutenant of Pompeius, and soon after reduced to submission by Pompeius himself. (Liv. Epit. lxvii.; Oros. v. 18; Appian, B. C. i. 52.)

The Marrucini were at this time admitted to the Roman franchise, and became quickly merged in the civilian population of the Roman subject states of Italy. Hence their name is from henceforth rarely found in history; though it is incidentally noticed by Cicero, as well as by Caesar, who traversed their territory on his march from Corfinium into Apulia. (Cic. pro Cunct. 19; Caes. B. C. i. 23, ii. 54.) In b. c. 43, also, they were among the most prominent to declare themselves against Antonius. (Cic. Phil. vii. 8.) From these notices it is evident that they still retained their municipal existence as a separate people; and we learn from the geographers that this continued to be the case under the Roman Empire also; but the name gradually sank into disuse. Their territory was comprised, as well as that of the Vestini, in the Fourth Region of Augustus; in the subsequent distribution of the provinces, it is not quite clear to which it was assigned, the Liber Colonarius including Tente among the "Civitates Pecinl," while P. Dukin refers it, together with the Frontani, to the province of Samnium. (Strab. v. 241; Plut. iii. 12. s. 17; Pol. iii. 1. § 60; Lib. Col. p. 258; P. Dic. ii. 20.)

The territory of the Marrucini (ager Marrucinum, Plin. iii. 27; Mashouwier, Strab.), though of small extent, was fertile, and, from its situation on the E. of the Apennines, sloping towards the sea, enjoyed a much milder climate than that of the neighbouring Peligni. Hence it produced oil, wine, and corn in abundance, and appears to have been noted for the excellence of its fruit and vegetables. (Plin. xv. 19. s. 21; Columell. x. 131.) It would appear to have been subject to earthquakes (Plin. ii. 83. s. 85, xvii. 25. s. 38); and hence, probably, arose the apprehension expressed by Statius, lest the mountains of the Marrucini should be visited by a catastrophe similar to that which had recently occurred in Campania. (Stat. Silv. iv. 4. 86.)

The only city of importance belonging to the Marrucini was TEATE, now Chieti, which is called by several writers their metropolis, or capital city. At a later period its municipal district appears to have comprised the whole territory of the Marrucini. INTERPROMOUIIIUM, known only from the Itineraries, and situated on the Via Valeria, 12 miles from Corfinium, at the Osteria di S. Valentino, was never more than a village or vicus in the territory of Teate. Politicum, mentioned by Diodorus (xix. 105) as a city of the Marrucini, which was besieged by the Romans in b. c. 311, is wholly unknown. ATERNUM, at the mouth of the river of the same name, served as the port of the Marrucini, but belonged to the Vestini. (Strab. v. 241.) [E. H. R.]

MARRUVIUM or MARRUVIUM (Mopouovav, Strab.; Eth. Marruvins; S. Benedetto), the chief city of the Marsi, situated on the eastern shore of the lake Fucinis, and distant 13 miles from Alba Fucensis. Ancient writers agree in representing it as the capital of the Marsi: indeed, this is sufficiently attested by its name alone; Marruvii or Marrubii being evidently only another form of the name of the Marsi, and being thus used by Virgil as an ethnic appellation (Marruvia de gente, Aen. vi. 270). In accordance with this, also, Silvius Italicus represents Marruvium as deriving its name from a certain Marcus, who is evidently only an eponymous hero of the Marsi. (Sil. Ital. viii. 505.) We have no account of Marruvium, however, previous to the Roman conquest of the Marsic territory; but under the Roman Empire it was a flourishing municipal town; it is noticed as such both by Strabo and Pliny, and in inscriptions it is called "Marruvium, civitas Marrsorum Marruvium." (Strab. v. 241; Plin. i. 19. s. 17; Mommsen, Jecr. R. N. 5491, 5499; Orell. Jecr. 3149.) It seems, indeed, to have been not unfrequently called "Civitas Marrsorum," and in the middle ages " Civitas Marsicana;" hence, even in the Liber Colonarius, we find it called "Marsus municipum." (Lib. Colon. pp. 229, 256.) It is noticed in the Tabulis, which places it 13 M. P. from Alba; but it was not situated on the Via Valeria, and must have communicated with that high-road by a branch from Cerfinia. (Tab. Pent.) Marruvium continued through the middle ages to be the see of the bishop of the Marsi; and it was not till 1580 that the see was removed to the neighbouring town of Pescina. The site is now known by the name of S. Benedetto, from a convent erected on the spot. Considerable ruins of the ancient city still remain, including portions of its walls; the remains of an amphitheatre, &c., and numerous inscriptions, as well as statues, have been discovered on the site. These ruins are situated close to the margin of the lake, about two miles below Pescina. (Holsten ad Cluver. p. 151; Romanelli, vol. iii. p. 180—185; Kramer, Pesciae seu, p. 55; Ioare's Class. Tour, T 4
this campaign as memorable from its being the first occasion on which the Romans were opposed to the Marsians. Didius or gives a wholly different account, and represents the two nations as in alliance against the Samnites. (Diod. xx. 44.) There is, however, every probability that the account given by Livy is the more correct one, as we find shortly after (B. C. 304) a special treaty concluded with the Marsi, Marrucini, and Pelliini, immediately after the defeat of the Aequians. (Liv. iv. 45; Diod. xx. 104.) But a few years later (B. C. 301) the Marsi again took up arms (this time apparently single-handed) to oppose the foundation of the Roman colony at Carthage, on the immediate frontiers of their territory. They were, however, easily defeated; three of their towns, Tiestina, Minchia, and Ferralia, were taken; and they were compelled to purchase peace by the cession of a part of their territory. (Liv. xx. 3.) With this exception, they obtained favourable terms, and the former treaty was renewed.

From this time the Marsi, as well as their confederate tribes, the Marrucini, Peligni, and Vestini, became the faithful and constant allies of Rome, and occupied a prominent position among the "socii" whose contiguity bore so important a share in the Roman victories. The names of the four nations are sometimes all mentioned, sometimes one or other of them omitted; while the Frentani, who appear, though of Samnite origin, to have maintained closer political relations with their northern neighbours, are, in consequence, often associated with them. Thus Polybius, in enumerating the forces of the several Italian nations in B. C. 225, classes the Marsi, Marrucini, Vestini and Frentani, under one head, while he omits the name of the Peligni altogether. (Pol. ii. 24.) Dionysius, on the other hand, notices by name only the Marrucini, Peligni, and Frentani, among the Roman allies at the battle of Asculum, omitting both the Marsi and Vestini; while Silius Italicus enumerates them all among the Roman allies at the battle of Cannes. (Dionys. xx. Fr. Didot; Sil. It. viii. 495—520.) Ennius also associated together the "Marsa manus, Peligna edors, Vestina virum vis." (Enn. Fr. p. 150.) During the Second Punic War they suffered severely for their fidelity to Rome, their territory being repeatedly ravaged by Hannibal. (Liv. xxii. 9, xxxi. 11.) Nevertheless, towards the close of the same war, they were among the foremost to offer volunteers to the fleet and army of Scipio in B. C. 205. (Id. xxxvii. 45.)

During this period the Marsi appear to have earned a high reutation among the Roman allies for their courage and skill in war; a character which they shared in common with the neighbouring tribes. But their chief celebrity was derived from the prominent part which they took in the great struggle of the Italian nations against Rome, commonly called the Social War, which appears to have been more frequently termed by the Romans themselves the Marsic War. (Bellum Marsicum, Fast. Capit.; Vell. Pat. ii. 21; Cic. de Leg. i. 44; &c.; Μαρσικος κολουχεων πόλεως, Strab. v. p. 241.) Pompey and Sisia, who is termed by Livy one of the chief authors of the war, but who, as we have seen, did not himself take arms, and it was probably at his instigation that the Marsi were the first to take up arms after the outbreak of the Punic at Asculum; thus at once imparting to the impending contest the character of a national war. (Vell. Pat. ii. 15; Strab. v. p. 241; Dial. xxxvii. 2.) Their example was immediately followed.
by their neighbours and kinsfolk the Peligni, Mar-
neini, and Vestini, as well as by the Samnitites,
Frenantii, and Lucanians. (Liv. Epit. lxiii. 39; 
Liv. Epit. lxiii.; Oros. v. 18.) During the military
operations that followed, imperfect as is our informa-
tion concerning them, we may clearly discern that
the allies formed two principal groups; the one
composed of the Marsi, with their immediate neigh-
brs already mentioned, as well as the Ficentes, and
probably the Frenantii; the other of the Samnites,
with the Lucanians, Apulians, and some of the
Campanians. The Marsi appear to have stood, by
common consent, at the head of the former section;
and hence we frequently find their name alone men-
tioned, where it is clear that their confederates
ought by their side. At the first outbreak of the
war (n. c. 91), they laid siege to Alba Fucensia, a
Roman colony and a strong fortress (Liv. Epit. 
lxiii.), which appears to have at first defied all their
efforts. But the Roman consul P. Rutilius, who
was sent against them, proved unequal to the task.
One division of his army, under Ferpenna, was cut
to pieces at the outset of the campaign; and somelater the consular himself was defeated and slain by
the allied forces under Vettius Cato. (Appian. B. C.
i. 43; Liv. Epit. lxiii.; Oros. v. 18.) C. Marius, who
was acting as legate to Rutilius, is said to have
retrieved this disaster; and afterwards, in conjunc-
tion with Sulla, achieved a decisive victory over the
Marsi, in which it is said that the allies lost 6000
men, and the leader or praetor of the Marneini,
Hercius Asinius, was slain. But notwithstanding
this advantage, it appears that Marius himself was
unable to keep the field, and was almost blockaded
in his camp by Pompaedius Sito; and when at
length he ventured on a third battle, it had no
decisive result. Meanwhile, his colleague in the
command, Q. Caspio, was totally defeated and cut to
pieces with his whole army by the Marsi; while an
advantage gained by Sen. Sulpicius over the Peligni
appears to have led to no important result. (Liv.
Epit. lxiii.; Appian. B. C. i. 46; Plut. Mar.
33; Oros. v. 18.) The next campaign (n. c. 89)
proved at first scarcely more favourable to the Roman
arms; for though the consul L. Porcius
Cato obtained some successes over the Marsi and their
allies, he was himself taken in battle near the
lake Fucinus. (Appian. B. C. i. 56; Liv. Epit. 
lxviii.) But it is probable that the policy adopted by
the Romans in admitting to the franchise all those of
the allies who were willing to submit had a great
tendency to disarm the confederates, as well as to
introduce dissensions among them; and this cause,
combined with the successful operations of the consul
Q. Pompeius Strabo and his lieutenant Sulpicius,
effected the submission of the Marneini, Vestini,
and Peligni before the close of the year. The
Marsi for a time still held out, though single-handed;
but repeated defeats at length compelled them also
to sue for peace. (Liv. Epit. lxvii.; Oros. v.
18.) Notwithstanding their obstinate resistance, they
were admitted to favourable terms, and received, in
common with the rest of the Italians, the full rights
of Roman citizens.
From this time the Marsi as a nation disappear
from history, and became merged in the common
condition of the Italians. They however, still re-
tained much of their national character, and their
existence as a separate tribe is acknowledged by
many Roman writers, both of the Republic and
Empire. In the civil war between Caesar and
Pompey they appear to have been at first favourably
disposed to the latter; and the twenty cohorts with
which Domitianus Cominius was principally raised among the Marsi and Peligni, or their substi-
tute neighbours. (Cass. B. C. i. 15. 20.) In like
manner, the Marsi are mentioned as declaring them-
theselves, as a people, in favour of Verpasian during
the civil war between him and Vitellius. (Tac. Hist.
iii. 59.) In the days of Cicer, the Marsi and
Peligni, as well as the Sabines, were comprised in the
Sergian tribe (Cic. in Vat. 15; Schol. ad
loc.); and at a later period all three were included
in the Fourth Region of Augustus, which, according
to Pliny, was composed of the bravest nations of all
Italy. (Plin. iii. 12. s. 17.) In the later division
of the Empire, the territory of the Marsi (Marsorum
regio) was included in the province named Valeria.
(Pr. Disc. ii. 20; Lib. Col. p. 229.) It appears to
have early formed a separate ecclesiastical diocese;
and in the middle ages the bishop of Mavavium bore
the title of "Episcopus Marsorum," which is still
retained by the bishop of Pescesina, to which place
the see has been tranferred. (Bingham's Eccla-
siastical Antiquities, book ix. ch. 5. § 3.) The dis-
}rict comprised within it is still familiarly called "the
land of the Marsi," and the noble Roman family of
Colonna bears the title of Counts of the Marsi.
(K. Craven's Abruzzi, vol. i. p. 144.)
The Marsi appear to have been always celebrated
in ancient times, even beyond their hardy and war-
like neighbours, for their valour and spirit in war.
Virgil adresses them as the first and most prominent
example of the "genus aere virium" which Italy was
able to produce; and Horace alludes to the "Marsi
cohorts" as an almost proverbial expression for the
bravest troops in the Roman army. (Virg. Georg. ii.
167; Hor. Carm. ii. 20. 18, iii. 5. 9.) Appian also
tells us that a proverbial saying was current at the
time of the outbreak of the Social War, that no tri-
numph had ever been gained over the Marsi or with-
out the Marsi (Appian. B. C. i. 46.) The historical
accuracy of this saying will not bear examination,
but it sufficiently proves the high character they had
earned as Roman auxiliaries. In common with the
Sabines and other mountain tribes, they retained down
to a late period their rustic and frugal habits; and
are cited by the Roman poets as examples of primi-
tive simplicity. (Curs. ii. 180. 8.)
But the most remarkable characteristic of the
Marsians was their peculiar skill in magical charms
and incantations,—especially in charming venomous
reptiles, so as to render them innocuous. This power,
which they were said to have derived from their ances-
tress Circe, or from the local divinity Angitis,
who was described as her sister, was not confined to
a few individuals, though the priests appear to have
principally exercised it; but, according to Strabo,
the whole tribe was possessed by the whole body of
the nation. (Virg. Aen. vii. 750—758; Sil. Ital. viii.
495—501; Plin. vii. 2, xxii. 13. 25, xxvii. 3. 6; Solin. 2.
27; Geil. xvi. 11; Lamp. Helig. 23.) It is
worth of notice that the inhabitants of these regions
still pretend to possess the same occult powers as
their ancestors; and are often seen as wanderers
in the streets of Naples carrying boxes full of ser-
pents of various sizes and colours, against the bites
of which they profess to charm both themselves and
the spectators. (Craven's Abruzzi, vol. i. p. 145.)
The physical characters of the land of the Marsi
have been already described under the article of the
lake Fucinus; the basin of which, surrounded en
all sides by lofty, or strongly marked mountain ridges, may be considered as constituting the natural limits of their territory. But towards the N.E. we find that Alba Fucens, though certainly belonging to this natural district, and hence sometimes described as belonging to the Marsi (Ptol. iii. 1. § 57; Sil. Ital. viii. 507), was more properly an Aeolian city [Alba Fucens]; while, on the other hand, the upper valley of the Liris (though separated from the lake by an intervening mountain ridge) was included in the Marsic territory, as Antium (Cirita d'Antium) was unquestionably a Marsian city. [Antium.] On the N. the Marsi were separated from the Sabines and Vestini by the lofty group of the Monte Velino and its neighbours; while on the S. another mountain group, of almost equal elevation, separated them from the northern valleys of Samnium and the sources of the Sannio (Sangro). On the E., a ridge of very inferior height, but forming a strongly marked barrier, divided them from the Po- ligni, who occupied the valley of the Gizio, a tributary of the Arturnus. From its great elevation above the sea (2176 feet at the level of the lake), even more than from the mountains which surrounded it, the land of the Marsi had a cold and ungenial climate, and was ill adapted for the growth of corn, but pro- duced abundance of fruit, as well as wine, though the latter was considered harsh and of inferior quality. (Sil. Ital. viii. 507; Athen. i. p. 26; Martial. xiii. 121, xiv. 116.)

The principal town of the Marsi was Marsu- vium, the ruins of which are still visible at S. Benedetto, on the E. shore of the lake Fucinus. This was indeed (if Alba Fucens be excluded) probably the only place within their territory which deserved the name of a city. The others, as we are told by Silius Italicus, though numerous, were for the most part obscure places, rather fortified villages (castella) than towns. (Sil. Ital. viii. 510.) To this class belonged, in all probability, the three places mentioned by Livy (x. 3) as having been taken in B.C. 301 by the dictator M. Valerius Maximus,—Milamia, Plotiona, and Freseia; all three names are other- wise wholly unknown, and there is no clue to their site. Pline, however, assigns to the Marsi the following towns,—Anxanta (Anxantinum), the name of which is nowhere else (written Anxantina) in any inscription, and must have been situated near An- drosauros or Sorgula, in the immediate neighborhood of Alba (Ill. Classical Tour, vol. i. p. 367; Mommsen, Inscr. R. N. 5928); Antium (Ant- inates), now Cirita d'Antium; Lucus (Lucenses), more properly Lucus Angitiae, still called Lugo, on the W. bank of the lake; and a "populus" or community, which we terms Fucenses, who evidently derived their name from the lake; but what part of its shores they inhabited is uncertain. Besides these he notices a tradition, mentioned also by Silius, that a town named Archipe, founded by the mythical Marsyas, had been swallowed up in the waters of the lake. (Plin. iii. 12, s. 17; Solf. ii. § 6.) From the number of inscriptions found at Tresanco, a village near the S. end of the lake, it would appear to have been certainly an ancient site; but its name is unknown. (Mommsen, l.c. p. 293.)

The last being of the Marsi mentioned by Ptolomeus (iii. 1. § 57) besides Alba Fucens, is a place which he calls Anx (Arx), a name in all probability cor- ruped, for which we should perhaps read Auga, the Anxantia or Anxantina of Pline. Cirinnia, a place known only from the Itineraries, was situated on the Via Valeria, at the foot of the pass leading over the Mons Imus into the valley of the Peligni. This remarkable pass, now called the Forca di Caruso, must in all ages have formed the principal line of communication between the Marsi and their eastern neighbours, the Peligni and Marrucini. Another natural line of communication led from the basin of the Fucinus near Celano to the valley of the Ater- nus near Aquila. It must be this line which was followed by a route obviously given in the Ta- bula as passing from Aveia through a place called Faustenianus (2) to Alba and Marravium (Tab. Pent.).

[E. H. B.]

MARSIGNI, a German tribe, mentioned only by Tacitus ( Germ. 43), probably occupying the north of Bohemia, about the 'Upper Elbe. In language and manners they belonged to the Svezi. (Comp. Zeux. Die Deutschen, p. 124.)

MARSONIA (Marisovia), or MARSOVILUM (Tab. Pent.), a place in Upper Pannonia, south of the river Savus, on the road between Siscia and Servitium; is identified by some with the town of Issenovitz, or the mouth of the Una into the Sava. (Ptol. ii. 16. § 7; Geor. Rav. iv. 19.)

MAISYABA (Masyawaz), a town of the Iha- manitae, an Arabian tribe, mentioned by Strabo as the utmost line of the Roman expedition under Aelius Gallus, the siege of which he was obliged to abandon after six days for want of water, and to commence his retreat. The only direct clue afforded by Strabo to the position of the town is that it was two days distant from the Frankincense country; but the interest attaching to this expedition—which promises so much for the elucidation of the classical geography of Arabia, but has hitherto served only still further to perplex it—demands an investiga- tion of its site in connection with the other places named in the only two remaining versions of the narrative. It will be convenient to consider,—(I.) the texts of the classical authors. (II.) The commentaries and glosses of modern writers on the subject. (III.) To offer such remarks as may serve either to reconcile and harmonise conflicting views, or to in- dicate a more satisfactory result than has hitherto been arrived at. In order to study brevity, the conclusions only will be stated; the arguments on which they are supported must be sought in the writings referred to. I. To commence with Strabo, a personal friend of the Roman general who commanded the expedition, and whose account, scanty and unsatisfactory as it is, has all the authority of a personal narrative, in which, however, it will be advisable to omit all incidents but such as directly bear on the geography. [Dictionary of Biography. GALLUS, AELIUS.] After a voyage of 15 days from Cleopatra [Aegina, No. 1], the expedition arrived at Leuce Come [Aegyptus], a considerable seaport in the country of the Nabataeans, under whose treacherous escort Gallus had placed his armament. An epidemic among the troops obliged him to pass the summer and winter at this place. Setting out again in the spring, they traversed for many days a barren tract, through which they had to carry their water on camels. This brought them to the terri- tory of Aretas, a kinsman of Obodas, the chief sheikh of Arabia, and at the time (2176) had to depend on forty days to pass through this territory, owing to the obstructions placed in their way by their guide Sul- laeus. It produced sweet and a few palms. They next came to the nomad country named Aaraca (Agwopp), under a sheikh named Sabus. This it
took them fifty days to traverse, through the fault of their guide; when they came to the city of the Agrian (Ագրան), lying in a pleasant plain, they thought so; and after a march of six days, came to the river. Here, after a pitched battle, in which the Romans killed 10,000 Arabs, with the loss of only two men, they took the city called Asca (Ասկա), then Athrulla (Աթրուլա), and proceeded to Marsyabae of the Rhamnatis, then governed by Hasaras, from which, as already mentioned, they commenced their retreat by a much shorter route. Nine days brought them to Anagrana (Անագրան), where the battle had been fought; eleven more to the Seven Wells (Եռնա փայտա), so called from the fact; then to a village named Challa (ԽալաԱ), and another named Malotha (Մալոթա), — the latter situated on a river, — and through a desert with few watering-places, to Nera or Negra (Ներա կիվեն), on the sea-shore, subject to Oboas. This retreat was accomplished in sixty days; the advance had occupied six months. From Nera they sailed to Myos Hormus (Միոս Հորմուս) in eleven days. Thus far Strabo (xxvi. p. 782). Pinsky is much more brief. He merely states that Gallus destroyed towns not mentioned by previous writers, Nerga, Amnestras, Nesca, Magnsa, Tammacum, Labocia, the above-named Mariaba (i.e. the Mariaba of the Calignia, 3), and Caripeta, the remotest point which he reached. (Hist. Néf. vi. 28.) The only geographical point mentioned by Dom Cassius, who dwells chiefly on the sufferings of the army, is that the important city of Athibia (Աթիբիա) was the object of this disastrous expedition. (Dom Cass. iii. 29.)

11. The variations of commentators on this narrative may be estimated by these facts: Dean Vincent maintains that, "as Pinsky says, that places which occur in the expedition of Gallus are not found in authors previous to his time, the same may be said of subsequent writers; for there is not one of them, ancient or modern, who will do more than afford matter for conjecture." (Peripl. pp. 300, 301.) Mr. Forster asserts, "Of the eight cities named by Pinsky, the names of two most clearly prove them to be the same with two of those mentioned by Strabo; and that seven out of the eight stand, with moral certainty, and the eighth with moral probability, identified with as many Arab towns, still existing, as Nicopolis, Bneil-Maqlul, el-Maqlul, el-Douk; M. de Pressouyre (Les voyages, 1826, p. 310.) D'Anville and M. Frencel (inf. cit.) conduct the expedition to Hadraman, in the southern extremity of the peninsula; Gosselin does not extend it beyond the Hedjaz. (Récitèches sur la Géographie des Anciens, tom. ii. p. 144.) But these various theories require more distinct notice. 1. D'Anville, following Buchart (Chassan, i. 44), identifies Leuce Come with the modern Hauer or El-Hauaro, on the Red Sea, a little north of the latitude of Medina, justifying the identification by the coincidence of meaning between the native and the Greek names. Anagraha he fixes at Nageran or Negrão (Ներգրու), a town in the NE. of Yemen; consistently with which theory he makes the Marsyabae of Strabo identical with the Mariaba of the same geographer; though Strabo makes the latter the capital of the Sabae, and assigns the former to the Rhamnatis. Foucher places Challa at Khuhl (Khoul) (El-Choulon), in the NW. extremity of Yemen, and, therefore, as he presumes, on the Roman line of retreat between Anagraha and the sea. (D'Anville Géographie ancienne abrégée, tom. ii. pp. 216, 217, 223, 224.) 2. Gosselin, as before noticed, maintains that the expedition was not pass beyond Arabia Desertia and the Hedjaz; that the Negra of Pinsky is the Negran of Tolemy, the modern Nakra or Mander en-Nakra (in the NW. of Nefud); that Pinsky's Megassa is Megjarh-azzir (which he marks in his map NW. of Negra, and due East of Moilah, his Lence (pp. 254, 255), perhaps identical with Dokhd El-Maghair in Kitter's map; that Tammacum in Pinsky is Shaama in Tolemy; the modern Timna (which he places nearly due north of Negra, between it and Magassa) — Tizind in Kitter, between Mander en-Nakra and Dokhd El-Maghair; that Labocia is Laba of Tolemy, which he does not place; that Athrulla is Ithirraha [Ithirpur] in Tolemy = Medineh; that Maria in Pinsky = Marsyabae in Strabo = Macoraba in Tolemy = Mecca; and lastly, that Caripeta, the extreme point according to Pinsky, is Arareen in Strabo = modern Carnavetin, in the heart of El-Nefud. (Gosselin, l. c. pp. 113—116.) 3. Dean Vincent's opinion on the difficulty of recovering any clue to the line of march has already been stated; but he ventures the following conjectures, partly in agreement, and partly in correction, of the preceding. He adopts the Lence Come of Gosselin, i.e. Moilah; the Anagrana or Negra of D'Anville, i.e. Nedjran of Yemen; and thinks that the country of the nomades, called Arane, has a resemblance to the territory of Medine and Mecca; and that the space of fifty days employed in passing it, is some confirmation of the conjecture. Marsyabae, he thinks, could not be Maria of the Tank; but takes it as the general name for a capital, — in this case of the Minæans, — which he supposes may correspond with the Caripeta of Pinsky, the Carana or Carana of Strabo, the capital of the Minæans, and the Carni-peta, or Carni-petra of modern geographers. The fact that Strabo speaks of Carana as the capital of the Minæans and places Marsyabae in the territory of the Rhamnatis, is disposed of by the double hypothesis, that if Ilasar is the king of this tribe, whether Calignia, Khama, or Elseari, all three were comprehended under the title of Minæans. Of Nera, the termination of the expedition, he remarks, that it being in the country of Oboas, it must be within the limits of Petraea; but, as no modern representative offers, it should be placed as far below (south of the modern Cetera) as the province will admit. (Vincent, Periplas of the Erythraean Sea, vol. ii. pp. 290—311.) 4. M. Frencel, long a resident in the country, thinks that the Marsyabae of Strabo must be identical with the Mariaba in Pinsky's list of captured cities, the same writer's Baramalacum, and Tolemy's Mariama; and that the Rhamanita of Strabo are the Rhamnaa of Pinsky, the Marita of Tolemy, one of the divisions of the Minæi, to which rather than to the other division, the Charnat, Mariaba Baramalacum should have been assigned. In agreement with Vincent, he finds the Marsyabae of Strabo in the capital of the Minæi, i.e. the Carana of Strabo and the Carana Regia of Tolemy, which he however finds in the modern Al-Karn in the Wady Doara or Danza (Kuraid and Goin in Kiepert's and Zimmerman's maps), six or seven days' journey north of Moukalallah, and in the heart of Hadramout. (Frenzel, in Journal Asiatique, Vol. 1840, 3me série, tom. ii. pp. 82—96, 177, &c.) He fancied that he recovered the Caripeta of Pinsky in the site of Khoneyaqah, also in the vicinity of Moukalallah (ib. p. 196). 5. Devergers prefers the identification...
of Lence Come with El-Houora, proposed by D'Anville, to the Mudah of Gosselin and Vincent. In common with D'Anville and Vincent, he finds the town of Anagrama (which he writes "la ville des Negrannes") in the modern Nedjfran, and doubtlessly fixes Marsyabae at Mireb in Yemen. The Maniats of Tulemy he identifies with the Rhammatae of Strabo,—suggesting an ingenious correction to Jamnianum,—the people of Yemen (L'Univers. Arab., pp. 58, 59). 6. Jamard, one of the highest authorities on Arabian geography, has offered a few valuable remarks on the excursion of Gallus, with a view to determine the line of march. He thinks the name Marsyabae an evident corruption for Maribah, which he assumes to be "that of the Tank," the capital of the Minaeans, now Mireb. Negrannes exactly corresponds with Nedjfran or Negrain, nine days' journey NW. of Mireb. He fixes Lence Comte at Mudah, and Negran or Nera opposite to Coseyr, in the 26th degree of latitude. His argument for determining the value of a day's march is ingenious. The whole distance from Mireb to the place indicated would be 250 leagues of 25 to a degree. From Maribah to Negran was 60 days' march; Negran, therefore, which was nine days from Maribah, is 2/5th of the whole march, and Weekly Nedjfran is 52 leagues NW. of Mireb. The distance of the Seven Wells, eleven days from Negran, is 2/5th of the march=117 leagues from Maribah; and the same analogy might be applied to Chabala and the river Malathas, had Strabo indicated the distances of these two stations. The troops, in order to reach the sea, on their retreat must have traversed the province of Askry, a district between Yemen and the Hedjaz (whose geography has been recently restored to us by M. Jamard), and one of the elevated plains which separate the mountain chain of Yemen from that of the Hedjaz. "The road," he says, "is excellent, and a weak body of troops could defend it against a numerous army." Having thus disposed of the line followed in the retreat, he briefly considers the advance,—"The country covered by Aretas, and the town mentioned, Aretara, correspond with Thamoud and Nedjel, and the southern part of the latter province approaching Nedjfran has always been a well-peopled and cultivated district. Asa, on the river, and Artila, the last-named station before Maribah, cannot be exactly determined, as the distances are not stated; and the limits of Nedjfran and Mireb are still but little known." (Jamard, op. Mengin, Histoire de l'Egypte, &c., pp. 383—389.) 7. Mr. Forster has investigated the march with his usual diligence, and with the partial success and failure that must almost necessarily attach to the investigation of so difficult a subject. To take first the three main points, viz., Lence Comte, the point of departure; Marsyabae, the extreme limit; and Nera, the point at which they embarked on their return. He accepts D'Anville's identification of Houira as Lence Comte, thinking the coiningidence of name decisive: Marsyabae he finds in Sabbia, the chief city of the province of Sabbia, a district on the northern confines of Yemen. 100 miles S. of Bisthe, the frontier and key of Yemen; and Nera, in Yimbo, the sea-port of Medina. The line of march on their advance he makes very circuitous; as Strabo intimates; conducting them first through the heart of Nedjel to the province of El-Ahaw on the Persian Gulf, and then across through the same province in a SW. direction to Yemen. On their retreat, he brings them direct to Nedjfran, then due west to the sea, which they coast as far north as Yembo. To be more particular: he thinks that "a difference in distance in the advance and retreat, commensurate, in some reasonable degrees, with the recorded difference of time, i.e. as 3 to 1, must be found; that the caravan road from Houira by Medina and Kaysim, into the heart of Nedjel, was the line followed by Gallus (the very route, in fact, traversed by Captain Sadler in 1819: Transactions of Lit. Soc. of Bombay, vol. x. pp. 449—493), and thence by one of the great Nedjel roads into Yemen, the description of which in Burckhardt agrees in many minute particulars with the brief notices of Strabo. He further finds nearly all the towns named by Pliny as taken by the Romans, on this line of march: Maribah of the Califing in Mireb, in the NE. extremity of Nedjel, within the province of Haggar or Bakrein,—in the former of which names he finds the Arrarena or Agarena of Strabo. Carpeta he identifies, as Gosselin had done, with Carabataes in Nedjel; but he does not attempt to explain how Pliny could call this the extreme limit of the expedition,—"quo longissime processis." The Tammanicus of Pliny is the Agdami of Tulemy = the well-known town of Tanj. Magsna (Tulemy's Magsnab) presents itself in Korn el-Maghedh, a place situated about half-way between Tanj and Nedjfran, which last is with him, as with all preceding writers except Gosselin, the Anagrama of Strabo, the Negran of Pliny. Labecia is the anagrama, with the slightest possible inversion, of Al-Beisha; and this is called by the northern Bedouins "the key of Yemen,"—the only pass, according to Burckhardt, for heavy-laden camels going from Mekka to Yemen, "a very fertile district, extremely rich in date-utres." The river at which the battle with the Arabs was fought is the modern Sancan, "which, taking its rise in the Hedjaz mountains near Korn el-Maghedh, after a southern course of somewhat more than 100 miles, is lost in the sands of the Tahamah, to the westward of the mountains of Askry." The Asca of Strabo, the Nescia of Pliny, are "obviously identical with Sancan, the present name of a town seated on the Sancan river, near its termination in the sands." Athribil, next mentioned by Strabo, is again Labecia, i.e. Beisha; and this hypothesis "implies a counter-march," of which there is no hint in the authors. Lastly, "if Amnestus may be supposed to have its representative in Iba mean (the Manambis of Ptol.), the half-way between Beisha and Sabbia, all the cities enumerated by Pliny occur on the route in question." As to the retreat of the army. From Marsyabae to Nedjfran, a distance of from 140 to 160 miles, was accomplished in nine days; thence to the Seven Wells, eleven days from Nedjfran, brings us to El-Hasha (in Arabic "the Seven"), a place about 150 miles due west of Nedjfran, and then to Chaulla, the modern Chandal (according to Forster as well as D'Anville, the chief town of the province of the same name), and thence to Malatha, situated on a river, the same as that crossed on the advance, i.e. the Sancan. The Malatha of Strabo is plainly identified, by its site, with the Tabula of Burckhardt, a town on the Sancan, at this point, on the caravan road to Houira, a short day's march from El-Hasha. From Malatha to Nera Comte, i.e. through the Tahamah, there are two routes described by Burckhardt; one along the spine of the mountain, and the other, the Val di:ssa and Legh, —a distance of four days; another more eastern, somewhat mountainous, yielding plenty of water, five days' journey between the same two
towns. Nor as Strabo describes the latter part of the retreat through a desert track containing only a few wells, it is obvious that the coast-road was that followed by the Romans as far as Tembo, already identified with Nera Come: “the road-distance between Sabtha and Yembo (about 800 English miles) allowing, for the entire retreat, the reasonable average of little more than thirteen miles a-day.”

(Forser, Geogr. of Arabia, vol. ii. pp. 277—382.)

III. Amid these various and conflicting theories there is not perhaps a single point that can be regarded as positively established, beyond all question; but there are a few which may be safely regarded as untenable. 1. And first, with regard to Lence Come, plausible as its identification with El-Haura is rendered by the coincidence of name, there seem to be two inseparable objections to it; first, that the author of the Peripius places the harbour and castle of Lence two or three days’ sail from Myos Hormos (for Mr. Forster’s guess is quite inadmissible), while El-Haura is considerably more than double that distance, under the most favourable circumstances; and secondly, that the same author, in perfect agreement with Strabo, places it in the country of the Nabathaei, which never could have extended so far south as Haura. Mr. Forster attempts to obviate this objection by supposing that both Lence Come and Nera were sea-parts of the Nabathaei beyond their own proper limits, and in the hostile territory of the Nabataeltes (L. c. p. 284, note 8). But this hypothesis is clearly inconsistent with the author of the Peripius, who implies, and with Strabo, who asserts, that Lence Come lay in the territory of the Nabathaei (hexen eis Aconii και της Ναβαθαίων γης, εμποριον μηγα), a statement which is further confirmed by the fact that Nera Come, which all agree to have been south of Lence, is also placed by Strabo in the territory of Obohas, the king of the Nabathaei (τεταρτον ή της Οβοδων). Lence cannot therefore be placed further south than Malloth, as Gosselin, Vincent, and Jamard all agree; and Nera must be sought a little to the south of this, for Jamard has justly remarked that Strabo, in contrasting the time occupied in the advance and in the retreat, evidently draws his comparison from a calculation of the same space (L. c. p. 385). 2. With regard to the site of Marisyahe, it may be remarked that the identification with the metropolis of the Sabaei, the modern Marib, maintained by D’Arville, Fremin, and Jamard, is inadmissible for the following reasons: first, that distinct mention having been made of the latter by Strabo, it is not to be supposed that he would immediately mention it with a modification of its name, and assign it to another tribe, the Bhamanite; and it is an uncritical method of removing the difficulty suggested by M. Jamard without the authority of MSS., “if fastire partant Marisyahe; hic mort Marisyahe est cercorem evidendum.” Secondly, whether the Maribah Balamahum of Pliny be identified with Strabo’s Marisyahe or no, and whatever becomes of the plausible etymology of this epithet, suggested by Dean Vincent (quasi Bahre em-Malac = the royal reservoir), the fact remains the same, that the Maribah of the Sabaeans was abundantly supplied with water from numerous rivulets collected in its renowned Tank; and that therefore the Gallicin remarks, drought was the last calamity to which the Romans would have been exposed in such a locality.

3. With regard to Anagraha and Negra, on the identity of which with the modern Nejdyna there is a singular agreement among all commentators, there seems to be an inceaseivable objection to that also, if Strabo, who at first must be considered had his information direct from Gallus himself, is a trustworthy guide; for the Anagraha of the retreat (which is obviously also the Negra of Pliny), nine days distant from Marisyahe, was the place where the battle had been fought on their advance. But he had said before that this battle was fought at the river; and there is no mention of a river nearer to Nejdyna than the Soncon, which is, according to Mr. Forster, 170 miles, or twelve days’ journey, distant. It is certainly strange that, of the writers who have commented on this expedition, all, with one exception, have overlooked the only indication furnished by the classical geographers of the direction of the line of march,—clearly pointing to the west, and not to the south. The Maribah taken by the Romans was, according to Pliny, that of the Calingili, whom he places in the vicinity of the Persian Gulf; for he names two other towns of the same tribe, Pullon and Uranimal or Muranimal, which he places near the river by which the Ephrazes is thought to debase into the Persian Gulf (vi. 28), opposite to the Bahrein islands. (Forster, vol. ii. p. 312.) This important fact is remarkably confirmed by the expedition having landed near the mouth of the Elanitic gulf of the Red Sea, and commencing their march through the territory of Obohas and his kinsman Aretus, two powerful sheikhs of the Nabathaei, who inhabited the northern part of the Arabian peninsula from the Ephrazes to the peninsula of Mount Sinai [NABATHAEI]. There can be little doubt that the Maribah of Pliny is correctly identified with the Merub, still existing at the eastern base of the Nejd mountains. [MARISHA. No. 3.] Whether this be the Marisyahe of Strabo, or whether future investigations in the eastern part of the peninsula, hitherto so imperfectly known, may not restore to us both this and other towns mentioned in the lists of Strabo and Pliny, it is impossible to determine. At any rate, the very circuitous route through Nejd to Yemen, marked out by Mr. Forster, and again his line of the retreat, seem to involve difficulties and contradictions insurmountable, which this is not the place to discuss; and with regard to the supposed analogy of the modern names, it may be said that the authority assumed that an equal amount of ingenuity might discover close analogies in any names occurring in the Arabian Arabia, even with the very scanty materials that we at present have at command. In conclusion, it may be remarked that the observation of Strabo that the expedition had reached within two days’ journey of the country of the Frankincense, is of no value whatever in determining the line of march, as there were two districts so designated, and there is abundant reason to doubt whether either in fact existed; and that the reports brought home by Gallus and preserved by Pliny, so far as they prove anything, clearly indicate profound ignorance of the nature and produce of Yemen, which some authors suppose him to have traversed, for we are in a position to assert that so much of his statement concerning the Sabaei as relates to their wealth——silvera fertilitis odorisera, auri metallis—"is pure fiction. The question of the confusion of the various Maribahs, and their cognate names, is discussed by Ritter with his usual ability. (Erdkunde von Arabien, vol. i. pp. 276—284.)

MARSYSAS. (MARICRAS.) 1. A tributary of the Eunander, having its sources in the district called
JIAKSYAS, like the Carian Marysas, a tributary of the Maeander. Herodotus (vii. 26) calls it a karaqopasias; and according to Næpoleon (ib. b. 2. § 8) its sources were in the market-place of Celaena, below the acropolis, where it fell down with a great noise from the rock (Curt. i. 1.) This perfectly agrees with the term applied to it by Herodotus; but the description is apparently opposed to a statement of Fliny (v. 41), according to whom the river took its origin in the valley of Auecrone, ten miles from Apamea. (Comp. Strab. xii. p. 578; Max. Tyr. viii. 8.) Strabo, again, states that a lake above Celaena was the source of both the Maeander and the Marysas. "Comparing these accounts," says Col. Leake (Asia Minor, p. 163), "with Livy (xxxvii. 38), who probably copies from Polybius, it may be inferred that the lake or pool on the summit of a mountain which rose above Celaena was the reputed source of the Marysas and Maeander; but that in fact the two rivers issued from different parts of the mountain below the lake." By this explanation the difficulty of reconciling the different statements seems to be removed, for Auecrone was probably the name of the lake, which imparted its own name to the plain mentioned by Fliny. The Marysas joined the Maeander a little way below Celaena. (Comp. MAEANDER; and Hamilton's Researches, i. p. 499.) [L.S.]

MARSYSAS (Marës), a river of Cœcylia, mentioned only by Pliny (v. 23) as dividing Apamea from the tetarchy of the Naxerini. It was probably the river mentioned—without its name—by Abulfeda as a tributary of the Orontes, which, rising below Apamea, falls into the lake synonymous with that city, and so joins the Orontes. The modern name Fürkas is given by Pococke, who places it in his map on the east of the Orontes. (Abulfeda, Tabula Scitv, ed. Kockher, p. 131, 132; Pococke, Description of the East, vol. ii. p. 79.) It doubtless gave its name to Marysas, a district of Syria, mentioned by Strabo, who joins it with Turania, and defines its situation by the following notes:—It adjoined the Macra Campus, on its east, and had its commencement at Luddecea ad Libaanum. Chaknes was, as it were, an acropolis of the district. This Chaknes is joined with Heliospolis, as under the power of Polomyen, son of Menneus, who ruled over Marysas and Ituraea. (Strab. xvi. pp. 753, 755.) The same geographer speaks of Chalidice (p. 153), and extends it to the sources of the Orontes, above which was the Aileum Basliaci (p. 153), now the Bekaa. From these various indications it is evident that the Marysas comprehended the valley of the Orontes from its rise to Apamea, which was fixed on the north probably by the river of the same name. But it extended westward to the Macra Campus, which bordered on the Mediterranean. (Mannert, Geographie von Syrien, pp. 326, 363.) [Ptol.: Orontes.] [G.W.]

MARTA, a river of Etruria, still called the Marta, which has its source in the Lake of Bolsena (Laene Vulsciensis), of which it carries off the superfluous waters to the sea. It flowed under the N. side of the hill on which stood Tarquinii; but its name is known only from the Itineraries, from which we learn that it was crossed by the Via Aurelia, 10 miles from Centumcellae (Certa Vecchia). (Itin. Ant. p. 291; Tab. Pent.) [E. B. E.]

MARTAJIACI (Martaciacu, 153), on a river which earlier geographers generally supposed this Marysas with the Harpasus.

2. A small river of Phrygia, and, like the Carian Marysas, a tributary of the Maeander. Herodotus (vii. 26) calls it a karaqopasias; and according to Næpoleon (ib. b. 2. § 8) its sources were in the market-place of Celaena, below the acropolis, where it fell down with a great noise from the rock (Curt. i. 1.) This perfectly agrees with the term applied to it by Herodotus; but the description is apparently opposed to a statement of Fliny (v. 41), according to whom the river took its origin in the valley of Auecrone, ten miles from Apamea. (Comp. Strab. xii. p. 578; Max. Tyr. viii. 8.) Strabo, again, states that a lake above Celaena was the source of both the Maeander and the Marysas. "Comparing these accounts," says Col. Leake (Asia Minor, p. 163), "with Livy (xxxvii. 38), who probably copies from Polybius, it may be inferred that the lake or pool on the summit of a mountain which rose above Celaena was the reputed source of the Marysas and Maeander; but that in fact the two rivers issued from different parts of the mountain below the lake." By this explanation the difficulty of reconciling the different statements seems to be removed, for Auecrone was probably the name of the lake, which imparted its own name to the plain mentioned by Fliny. The Marysas joined the Maeander a little way below Celaena. (Comp. MAEANDER; and Hamilton's Researches, i. p. 499.) [L.S.]

MARTYROPOLIS, a place in Galatia, near to, and north-west of Augustusenymus (Clermont en Avergne), which Sidonius Apollinaris, once bishop of Clermont, names Jagus Violavescens, with the remark that it was in a previous age named Martialis, from having been the winter quarters of the Julian legions. The tradition may refer to Caesar's legions. The place is now Folrie (D'Anville, Notice, &c.) [G. L.]

MARTINO (Martino, Prov. vi. 2. §§ 2, 5), a lake placed by Polomyen (l. e.) in Armenia, and probably the same as that called SPADA by Strabo (7 Mvra, S'vzav, xi. p. 523). St. Martin (Méon sur l'Armenie, vol. i. p. 57) has ingeniously conjectured that the name Spada that is applied to it in our MSS. of Strabo, is an error of some copyist for Caputa, a word which answers to the Armenian Giasid and Persian Kishid, signifying "a stone," and which, in allusion to the colour of the water, is the title usually assigned to it by the Oriental geographers. It is identified with the lake of Urmiah in Azerbaijan, remarkable for the quantity of salt which it retains in solution. This peculiarity has been noticed by Strabo (l. e.), where, for the unintelligible reading κατακολαφθήσωσιν Gloskurd (ad loc.) has substituted the κατατροφήσωσιν of the MSS. and older editions. (Journ. Geog. Soc. vol. iii. p. 56, vol. ii. p. 7—9; Ritter, Erdkunde, 1. x. p. 752; Cousenay, Explor. vol. i. p. 77, vol. ii. 291.)

MARTIUS (Martius or Martypil), a people of Arabia Petraea, near Babylon (Pol. v. 19. § 3), the exact position of which is now impossible to fix. (Forster, Geogr. of Arabia, vol. ii. pp. 238, 239.) [G. W.]

MARTIS, AD, a mastio marked by the hills, on the road from Taurinum (Turino) to Brigantio (Briions) in Gallia Narbonensis, and the next station to Brigantio. The Antonine Itinerary makes it xviii. M. P. between Ad Martis and Brigantio, muttering Gesio (Gesiao) [Gesado]. The Table gives the same distance between Ad Martis and Brigantio, thus divided; from Ad Martis to Gascio (Gesado) viii., to Alpis Cotta, v., to Brigantio vi.; and the Jerusalem Itineraries make the distance between Ad Martis and Brigantio the same. Ad Martis is fixed at Hwola or Ourle, on the road from Sass to Briions. Annianus Marcellinus mentions this place "nonius Monti" (av. 10), and he calls it a statio. [G. L.]

MARTYPOLEIS (Martypolis), a town of Sophanene in Armenia, near the river Nymphanea, which, according to the national traditions, was founded towards the end of the 5th century by the bishop Marontia, who collected to this place the relics of all the martyrs that could be found in Armenia, Persia, and Syria. (St. Martin, Méon sur l'Armenie, vol. i. p. 96.) Armenia, which as an independent kingdom, had long formed a slight connection with the Roman Empire, was in the reign of Theodosius II. partitioned by its powerful neighbours. Martyropolis was the capital of Roman Armenia, and was made by Justinian a strong fortress. (Procop. de Aed. iii. 2, B. P. i. 17; Le Beau, Bas Empire, vol. ix. p. 135; Gibbon, c. x.) It is represented by the modern
MAUCUA.

MARUCU.

MARVINGI (Mavoríggiio), a Gegan tribe on the sea of Muns Aboma, between the Scevi and the Danube. (Ptol. ii. 11, § 22.) The town of Bergum (the modern Banberg) was probably the capital of the Marvingi. (Ptol. ii. 11, § 29.) [L.S.]

MARUNDAE (Mapourdau, Ptol. vii. 2, § 14), a people who lived in India extra Gangem, along the left bank of the Ganges, and adjoining the Gangaridae [Gangaridae]. They are probably the same as those whom Pliny calls Molindos (vi. 19. s. 22), and may perhaps be considered the same as the native Indian Torendali. [V.]

MARUS, a tributary of the Danube, into which it flows from the north. Between it and the Gutas a band of exiled Macedonians received settlements from the Romans under Tiberius. (Tac. Ann. ii. 62; Plin. H.N. iv. 25.) It is generally believed that this river is the same as the March in Moravia; but it is more probably identical with the Moravach, which the ancients generally call Marisus. [Marsus.] [L.S.]

MARUSIUM, a town which the Jerusalem Itinerary fixes at 13 M. P. from Clodianna, and 14 M. P. from the river Apus, on the road to Apolonia. Colonel Leake's map identifies it with Leigno. [E. B. J.]

MARUVIUM. [Marruvium.]

MASADA (Masada), a very strong fortress of Palestine, mentioned by Strabo and Pliny, but much more fully described by Josephus. Strabo mentions it in connection with the phenomena of the Dead Sea, saying that there are indications of volcanic action in the rugged burnt rocks about Masada (Moradítà). Pliny describes it as situated on a rock not far from the lake Asphaltis. (Strab. xvi. p.764; Plin. v. 17.) The description of Josephus, in whose histories it plays a conspicuous part, is as follows:—A lofty rock of considerable extent, surrounded on all sides by precipitous valleys of frightful depth, afforded difficult access only in two parts; one on the east, towards the lake Asphaltis, by a zigzag path, scarcely practicable and extremely dangerous, called "the Serpent," from its sinuosities. The other, which is on the side isolated rock was more nearly approached by the hills. The summit of the rock was not pointed, but a plane of 7 stadia in circumference, surrounded by a wall of white stone, 12 cubits high and 8 cubits thick, fortified with 37 towers of 50 cubits in height. The wall was joined within by large buildings connected with the towers, designed for barracks and magazines for the enormous stores and munitions of war which were laid up in this fortress. The remainder of the area, not occupied by buildings, was arable, the soil being richer and more genial than that of the plain below; and a further provision was thus made for the garrison in case of a failure of supplies from without. The rain-water was preserved in large cisterns excavated in the solid rock. A palace on a grand scale occupied the north-west ascent, on a lower level than the fortresses, connected with it by covered passages cut in the rock. This was adorned with porticoes and baths, supported by monolithic columns; the walls and floor were covered with tesselated work. At the distance of 1000 cubits from the fortress a massive tower guarded the western approach at its narrowest, and most difficult point, and thus completed the artificial defences of this most remarkable site, which nature had rendered almost impregnable. Jonathan, the high-priest, had been the first to occupy this rock as a fortress, but it was much strengthened and enlarged by Herod the Great, who designed it as a refuge for himself, both against his own disaffected subjects, and particularly against the more dreaded designs of Cleopatra, who was constantly imperiling Antony to put her in possession of the kingdom of Judaea by removing Herod out of the way. It was in this fortress that the unfortunate Mariamne and other members of Herod's family were left for security, under his brother Joseph and a small garrison, when he was driven from Jerusalem by Antigonus and his Partian allies. The fortress was besieged by the Parthians, and Joseph was on the point of surrendering for want of water, when a timely shower filled the cisterns and enabled the garrison to hold out until it was relieved by Herod on his return from his successful mission to Rome. It next figures in the history of the Jewish revolt, having been occupied first by Manahem, son of Judas the Galleian, a ring-leader of the sicarii, who took it by treachery, and put the Roman garrison to the sword; and afterwards by Eleazar and his partisans, a rival faction of the same murderous band of fanatics, by whom it was held for some time after Jerusalem itself had fallen; and here it was that the last scene of that awful tragedy was enacted under circumstances singularly characteristic of the spirit of indomitable obstinacy and endurance that had actuated the Jewish zealots throughout the whole series of their trials and sufferings. It was the stronghold of the Romans, and was therefore more open to assault; for the difficulty of procuring provisions and water for his soldiers did not allow him to attempt a prolonged blockade, which the enormous stores of provisions and water still found there by Eleazar would have enabled the garrison to hold out for months. Behind the tower which guarded the ascent was a prominent rock of considerable size and height, though 300 cubits lower than the wall of the fortress, called the White Cliff. On this a bank of 300 cubits' height was raised, which formed a base for a platform (Simna) of solid masonry, 50 cubits in width and height, on which was placed a tower similar in construction to those invented and employed in sieges by Vespasian and Titus. covered with gates of iron, which reached an additional 50 cubits, so as to dominate the wall of the castle, which was quickly cleared of its defenders by the showers of missiles discharged from the scorpions and balistae. The outer wall soon yielded to the ram, when an inner wall was discovered to have been constructed by the garrison—a framework of timber filled with soil, which became more solid and compact by the accumulations of the ram and the constant fire of the garrison. The inner wall having been thus fortified, the inner wall was discovered to have been constructed by the garrison—a framework of timber filled with soil, which became more solid and compact by the accumulations of the ram and the constant fire of the garrison. The inner wall and the garrison were comprehensively fired. The assault was fixed for the morrow, when the garrison prevented the swords of the Romans by one of the most cold-blooded and atrocious massacres on record. At the instigation of Eleazar, they first slew every man his wife and children; then having
collected the property into one heap, and destroyed it all by fire; they cast lots for turning, who should act as executioners of the others, while they lay in the embrace of their slaughtered families. One was then selected by lot to slay the other nine survivors; and he at last, having set fire to the palace, with a desperate effort drove his sword completely through his own body, and so perished. The total number, including women and children, was 960. An old woman, with a female relative of Eleazar and fire children, who had contrived to conceal themselves in the reservoirs while the massacre was being perpetrated, survived, and narrated these facts to the astonished Romans when they entered the fortress on the following morning and had ocular demonstration of the frightful tragedy.

The scene of this catastrophe has been lately recovered, and the delineations of the artist and the description of the traveller have proved in this, as in so many other instances, the injustice of the charge of exaggeration and extravagance so often preferred against the Jewish historian. Mr. Eli Smith was the first in modern times to suggest the identity of the modern Sobbeh with the Masada of Josephus. He had only viewed it at a distance, from the cliffs above Engedi, in company with Dr. Robinson (Biblical Researches, vol. iii. p. 242, &c.); but it was visited and fully explored, in 1842, by Messrs. Weedon and Tipping, from whom descriptions of the following notices are extracted. The first view of it from the west strikingly illustrates the accuracy of Strabo's description of its site. "Rocky precipices of a rich reddish-brown colour surrounded us; and before us, across a screeched and esclaved tract, were the cliffs of Sobbeh, with its ruins, the adjacent height with rugged defiles between, and the Dead Sea lying motionless in its bed beneath. The aspect of the whole was that of rocky and stern grandeur." So on quitting the spot they found the ground "sprinkled with volcanic stones." The base of the cliff is separated from the water by a shalow or sand-tank; and the rock projects beyond the mountain range, and is completely isolated by a valley, even on the west side, where above "the rock can now be climbed: the path on the east described by Josephus seems to have been swept away." The historian who visited the fortress in the 1st year of the new era, found the loftiness of the site, is not very extravagant. It requires firm nerves to stand over its steepest sides and look directly down. The depth at these points cannot be less than 1000 feet. . . .

The whole area was estimated at three-quarters of a mile in length from N. to S., and a third of a mile in breadth. On approaching the rock from the west, the 'white precipice,' as Josephus appropriately calls it, is seen for the first time. This is the point where the stage was pressed and carried. Of the wall built round about the entire top of the hill by King Herod, all the lower part remains. Its colour is of the same dark red as the rock, though it is said to have been 'composed of white-stone'; but on breaking the stone, it appeared that it was naturally whitish, and had been burnt brown by the sun. The ground-plan of the store-houses and barracks can still be traced in the foundations of the buildings on the summit, and the cellars excavated in the natural rock are of enormous dimensions: one is mentioned as nearly 50 feet deep, 100 long, and 45 broad; its wall still covered with a white cement. The foundations of a round tower, 40 or 50 feet below the northern summit, may have been connected with the palace, and the windows cut in the rock near by, which Mr. Weedon conjectures to have belonged to some large cistern, now covered up, may possibly have lighted the rock-hewn gallery by which the palace communicated with the fortress. From the summit of the rock every part of the wall of circumvallation could be traced,—carried along the long ground, and, wherever it met a precipice, commencing again on the high summit above, thus making the entire circuit of the place. Connected with it, at intervals, were the walls of the Roman camps, opposite the N.W. and S.E. corners, the former being the spot where Josephus places that of the Roman general. A third may be traced on the level near the shore. The outline of the works, as seen from the heights above, is as complete as if they had been but recently abandoned. The Roman wall is 6 feet broad, built, like the fortress walls and buildings above, with rough stones laid loosely together, and the interstices filled in with small pieces of stone. The wall is half a mile or more distant from the rock, so as to be without range of the stones discharged by the garrison. No water was to be found in the neighbourhood but such as the recent rains had left in the hollows of the rocks; confirming the remark of Josephus, that water as well as food was brought thither to the Roman army from a distance. Its position is exactly opposite to the peninsula that runs into the Dead Sea from its eastern shore, towards its southern extremity. (Bibliotheca Sacra, 1843, pp. 62—67; Traill's Josephus, vol. ii. pp. 109—115; the plates are given in vol. i. p. 126, vol. ii. pp. 87, 238.) It must be admitted that the identification of Sobbeh with Masada is most complete, and the vindication of the accuracy of the Jewish historian, marvellous as his narrative appears without confirmation, so entire as to leave no doubt that he was himself familiarly acquainted with the fortress.
MASDORANUS.

MASDORANUS (Μασδόρανος), a chain of mountains which divided Parthia from Carnunia. Diodorus (iv. 33) mentions it. They must be considered as spurs of the Sarpihi mountains (Haurar), which lie to the N. of Parthia (Ptol. v. 5. § 1). [V.]

MASES (Μάσες, ἦ Μάσεως, Steph. B. Εθή Μάσσεως), an ancient city in the district Hermionis, in the Argolic peninsula, mentioned by Homer along with Aegea. In the time of Pausanias it was used as a harbour by Hermione. (Hon. ii. 562; Strab. viii. p. 376; Paus. ii. 36. § 2; Steph. B. s. r.) It was probably situated on the western coast of Hermionis, at the head of the deep bay of Kididhia, which is protected by a small island in front. The possession of this harbour on the Argolic gulf must have been of great advantage to the inhabitants of Hermione, since they thus were saved the navigation round the peninsula of Kremididi. The French Commission, however, place Mases more to the south, at port Kklei, which we suppose to have been the site of Halice. [Halice.] (Leake, Mirror, vol. ii. p. 463, Peloponnesien, p. 258; Bobhaye, Recherches, etc. p. 61; Curtius, Peloponnesos, vol. ii. p. 462.)

MASCICES. [Maestrania.]

MASIUS (τό Μασίου ὀρέσ, Strab. xii. pp. 506, 527; Ptol. v. 18. § 2), a chain of mountains which form the northern boundary of Lacedaemonia, and extend in a direction nearly east and west. They may be considered as connecting the great western mountain known by the name of Amanthos, between Clicicia and Assyria, and the Niphates, on the eastern or Armenian side. The modern name is Korya Boghlar. Strabo states, that M. Masius is in Armenia, because he extends Armenia somewhat more to the W. and S. than other geographers. A southern spur of the Masian chain is the mountain district round Singara (now Sinjar). [V.]

MASPH (Μάσφων, Herod. i. 125), one of the three mentioned by Herodotus, as forming the first and most honourable class among the ancient Persians. [V.]

MASSA (Μάσσα, Ptol. iv. 6. § 6; Massat, Polyb. op. Phila. v. 1), a river of Libya, which joined the sea not far to the N. of the Darus (Senyat), and to the S. of Solocis (Capo Blanco) in E. long. 10° 30', N. lat. 16° 30'. [E. B. J.]

MASSA, a town of Etruria, seated about 12 miles from the sea, on a hill overlooking the wide plain of the Maremma, hence it is now called Massa Marittima. In the middle ages it was a considerable city and the see of a bishop; but it is not mentioned by any ancient author earlier than Ammianus Marcellinus (xiv. 11. § 27), who tells us that it was the birthplace of the emperor Constantius Gallus. From the epitaph Veteremnesis, it would seem probable that there was an Etruscan city of the name of Veteremnus in its neighbourhood; and, according to Mr. Dennis, there are signs of an Etruscan population on a hill called the Poggi di Vetretta, a little to the SE. of the modern town. (Dennis, Etruria, vol. ii. p. 218.) [E. B. J.]

MASBATICCA. [Messabatæa.]

MASBAEI (Μασβαεῖ), a people placed by Ptolemy (vi. 14. §§ 9, 11) in the extreme N. of Scythia, near the mountains of the Alian, or the N. part of the Euxin chamer. [E. B. J.]

MASBAESLI. [Numida.]

MASBAGA (τά Μάσβαγα, Arrian, Anab. iv. 25. 39), a strongly fortified town in the NE. part of India, between the Cophes and the Indus. It is stated by Arrian (l. c.) to have made a desperate defence, and to have resisted Alexanders four days of continued assault. It had been the residence of the Indian king Assacanus, who was recently dead when Alexander arrived there. (Curt. viii. 10). This name is written differently in different authors. Thus, Strabo writes it Μασβάγα (xv. p. 698); Steph. Byz. and Diodorus, Μασσάκα (xvii. Procem.); and Curtius, Massaga (l. c.). It is doubtless the same as the Sanscrit, Mokäta, near the Gcuraus (or Gour). Curtius himself mentions that a rapid river or torrent defended it on its eastern side. (Lassen's Map of India.) [V.]

MASSAGETAE (Μασσαγηταί), a numerous and powerful tribe who dwelt in Asia on the plains to the E. of the Caspian and to the S. of the Is edones, on the E. bank of the Araxes. Cyrus, according to story, lost his life in a bloody fight against them and their queen Tomyris. (Herod. i. 205—214; Justin, i. 9.) They were so analogous to the Scyths that they were reckoned as members of the same race by many of the contemporaries of Herodotus, who has given a detailed account of their habits and manner of life. From the exactness of the geographical data furnished by that historian, the situation of this people can be made out with considerable precision. The Araxes is the Jaxartes, and the immense plain to the E. of the Caspian is that "steppe" land which now includes Sangaria and Mongolia, touching on the frontier of Eggar, and extending to the chain of the Altai. The gold and bronze in which their country abounded were found in the Altai range. Strabo (xi. pp. 512—514) confirms the statements of the Father of History as to the inhuman practices and repulsive habits of these earliest specimens of the Mongolian race. It may be observed that while Nichdir (Klein Schrift. p. 362), Töck (Corp. Inscr. Græc. pl. xi. p. 81), and Schaafli (Schr. Alt. vol. i. p. 279) agree in assigning them to the Mongol stock, Von Humboldt (Asie Centrale, vol. i. p. 400) considers them to have belonged to the Indo-European family.

Alexander came into collision with these wandering hordes, during the campaign of Sophiana, b. c. 328. (Arrian, Anab. iv. 16. 17.) The Massagetae occur in Pompodius Melo (i. 2. § 5), Pliny (vi. 19), and Ptolemy (vi. 10. § 2, 13. § 3): afterwards they appear as Alani. [Alani.] [E. B. J.]

MASSHALLA (Μασσαλλά), a river of Ctesis, which Ptolemy (ii. 17. § 3) places to the W. of Psychnum (Kastron), and the Mekedo-patalo. (Höck, Krato, vol. i. p. 393.) [E. B. J.]

MASSHALLA. [Massilia.]

MASSALIOTICUM OSTIUM. [Fossa Mariana.]

MASSANI (Μασσανη), a people of India, who are said by Diodorus to have lived near the mouths of the Indus, in the district called Pattalene. [V.]

MASSAVA, in Gallia, is placed by the Table between Brividorum (Briare) and Elbinum, which is Neurium (Veletas) on the Loire. The distance is marked the same from Massava to Brividorum and to Neurium, being xvi. in each case. Massava is Meare or Mecae, a place where the small river Massa flows into the Loire; but the numbers in the Table do not agree with the real distance, as D'Anville says, and he would correct them in his usual way. [G. L.]
MASSIAI.

The territory of Massilia, though poor, produced some good wine and oil, and the sea abounded in fish. The natives of the country were probably a mixed race of Celts and Ligures; or the Ligurian population may have extended west as far as the Rhone. Stephanus (v. Massalia), whose authority is nothing, except we may understand him as correctly citing Herodotus, describes Massilia as a city of Ligurians in Celtica. And Strabo (iv. p. 203) observes, "that as far west as Massalia, and a little further, the Salyses inhabit the Alps that lie above the coast and some parts of the coast itself, mingled with the Hellenes." This is doubtless the meaning of Strabo's text, as Grækurd remarks (Travels of Strabo, vol. i. p. 330). Strabo adds, "and the old Greeks give to the Salyses the name of Ligyes, and to the country which the Massaliots possess the name of Ligistis; but the later Greeks name them Celotigies, and assign to them the plain country as far as the Rhodanes and the Druento." Massilia, then, appears to have been built on a coast which was occupied by a Ligurian people.

The inhabitants of the Roman town of Phœcæa in Asia, one of the most enterprising maritime states of antiquity, showed their countrymen the way to the Adriatic, to Tyrrenia, Sicily, and to Tartessus. (Herod. i. 163). Heraclides says nothing of their maritime virtues, but he remarks that the story of the origin of Massalia is preserved by Aristotle (ap. Athen. xii. p. 576) in his history of the polity of the Massilisitæ. Euxenus, a Phœcean, was a friend of Nannus, who was the chief of this part of the coast. Nannus, being about to marry his daughter, invited to the feast Euxenus, who happened to have arrived in the country. Now the marriage was after the following fashion. The young woman was to enter after the feast, and give to a cup of wine and water to the suitor whom she preferred; and the man to whom she gave it was to be her husband. The maid coming in gave the cup, either by choice or for some reason, to Euxenus. Her name was Petta. The father, who considered the giving of the cup to be according to the will of the deity, consented that Euxenus should have Petta to wife; and Euxenus gave her the Greek name Aristoxena. It is added, that there was a family in Massilia up to Aristotle's time, named Protidae, for Protus was a son of Euxenus and Aristoxena.

Justin (xii. 3, &c.), the epitomiser of Trogus Pompeius, who was either of Gallic or Ligurian origin, for his ancestors were Vocontii, tells the story in a somewhat different way. He fixes the time of the Phœcæans coming to Gallia in the reign of Tarquinius Priscus, who is Tarquinius Priscus. The Phœcæans first entered the river, and, making a treaty with the Roman king, continued their voyage to the farthest bay of Gallia and the mouths of the Rhone. They were pleased with the country, and returning to Phœcaea, induced a greater number of Phœcæans to go with them to Gallia. The commanders of the fleet were Simos and Protus. Phutarch also (Sohan, c. 2) names Protus the founder of Massalia. Simos and Protus introduced themselves to Nanus, king of the Segusii or Segaligion, in whose territories they wished to build a city. Nanus was busy at this time with preparing for the marriage of his daughter Cyta, and the strangers were politely invited to the marriage feast. The choice of the young woman for her husband fell on Protus; but the cup which she offered him contained only water. From this fact, insignificant in itself, a modern writer deduces the
conclusion, that if it was wine and water, the wine came from foreign commerce, and commerce anterior to the by the Roman names such as "the wine was not yet introduced into Gaul." But the vine is a native of Gallia Narbonensis, and king Naumus may have had wine of his own making. The Phocæans now built Massalia; and though they were continually harassed by the Ligurians, they beat them off, conquered fresh territories, and built new cities in them. The time of the settlement of Massalia is fixed by Sibyllus Chius 120 years before the battle of Marathon (n. c. 600).

Strabo (v. p. 179) found in some of his authorities a story that the Phocæans before they sailed to Gallia were told by an oracle to take a guide from Artemis of Ephesus; and accordingly they went to Ephesus to ask the goddess how they should obey the oracle's order. The goddess appeared to Aristarche, one of the women of noblest rank in Ephesus, in a dream, and bade her join the expedition, and take with her a statue from the temple. Aristarche went with the adventurers, who built a temple to Artemis, and made Aristarche the priestess. In all their colonies the Massaliots established the worship of Artemis, and set up the same kind of wooden statue, and instituted the same rites as in the mother-city. For though Phocæa founded Massalia, Ephesus was the city which gave it its religion. [Strabo, Vol. I. p. 234.]

The Galli, as Justin calls them, learned from the Massaliots the usages of civilised life (Justin, xiii., 4), to cultivate the ground, and to build walls round their cities. They learned to live under the rules of law, to prune the vine, and to plant the olive. Thus Greek civility was imported into barbaric Gallia, and France still possesses a large and beautiful city, a lasting memorial of Greek enterprise.

Naumus died, and was succeeded by his son Co- manus, to whom a cunning Ligurian suggested that Massalia would some time ruin all the neighbouring people, and that it ought to be shifted in its infancy. He told him the fable of the bitch and her whelps, which Phædrus has (i. 19); but this part of the old story is hardly credible. However, the king took advantage of a festival in Massalia, which Justin calls the birthday of the Phocæans, Flavia, and sent some stout men there under the protection of Massalian hospitality, and others in carts, concealed in hamper covered with leaves. He posted himself with his troops in the nearest mountains, ready to enter the city when his men should open the gates at night, and the Massaliots were smitten in sleep and filled with lust. But a woman spoiled the plot. She was a kinwoman of the king, and had a Greek for her lover. She was moved with compassion for the handsome youth as she lay in his arms: she told him of the treachery, and urged him to save his life. The men reported it to the magistrates of the city. The Li- gurians were pulled out of their hiding-places and massacred, and the treacherous king was surprised when he did not expect it, and cut to pieces with 7000 of his men. From this time the Massaliots for many days shut their gates, kept good watch, and exercised a vigilant superintendence over strangers.

The traditions of the early history of Massalia have an appearance of truth. Everything is natural. A woman's tender heart saved the life of the noble Englishman who rescued the infant colony of Vir- ginia from destruction; and the same gentle and heroic woman, Pocahontas, by marrying another Englishman, made peace between the settlers and the savages, and secured for England a firm footing in Chesapeake Bay.

Livy's story (v. 34) of the Phocæans landing on the site of Massalia at the time of Bellerophon and his Celts being on the way to invade Italy, is of no value.

When Cyrus invaded Ionia (n. c. 546), part of the Phocæans left Phocæa and sailed to Athens in Corsica, where the Phocæans had made a settlement twenty years before. Herodotus, who tells the history of these adventurers at some length, says nothing of their settlement at Massalia. (i. 163—167.) Strabo (vi. p. 252), on the authority of Antiochus, names Creontias as the commander of the Phocæans who fled from their country on the Persian invasion, and went to Corsica and Massalia, whence being driven away, they founded Veii in Italy. It is generally said that the exiles from Phocæa formed the second colony to Massalia; but though it seems likely enough, the evidence is rather imperfect. When Thucydides says (i. 13) that the Phocæans while they were founding Massalia defeated the Carthaginians in a naval battle, we get nothing from this fact as to the second settlement of Massa-alia. We only learn that the Carthaginians, who were probably looking out for trading posts on the Greek shores, were already there, coming in contact with the Phocæans; and if we interpret Thucydides' words as we ought to do, he means at the time of the settlement of Massalia, whenever that was. Panasianus, who is not a careless writer (x. 8. § 6), states that the Massaliots were a Phocæan colony, and a part of those who fled from Harpagus the Mede; and that having gained a victory over the Carthaginians, they got possession of the country which they now have. The Phocæans dedicated a bronze statue to Apollo at Delphi to commemorate the victory. There seems, then, to have been an opinion current, that some of the exiles at the time of the Persian invasion settled at Massalia; and also a confusion between the two settlements. Justin, following Trogus, speaks of the Massaliots having great wars with the Galli and Ligures, and of their often defeating the Carthaginians in a war that arose out of some fishing inlets, and granting them peace. They also were, he says, in alliance with Rome almost from the time of founding their city; but it seems that he had forgotten what he said a little before, that it was not almost from that time, but even before. They also contributed gold and silver to pay the ransom when the Galli took Rome, for which they received freedom from taxation (iunianas), and other privileges, which is very absurd, and certainly untrue. The historical connection of Rome and Massalia belongs to a later time.

Massalia was built on rocky ground. The harbour lay beneath a rock in the form of a theatre, which looked to the south. Both the harbour and the city were well walled, and the city was of considerable extent. On the citadel stood the Ephesus, and the temple of Ephesian Apollo, which was a com- mon sanctuary of all the Ionians, but the Ephesian was a temple of Artemis of Ephesus. The Mas- saliots had ship-houses (πολεύοντων) and an armament (δυνάσθενος); and in the time of their prosperity they had many vessels, arms, and stores of ammu- nation both for navigation and for the siege of cities; by which means they kept off the barbarians and gained the friendship of the Romans. (Strab. pp. 192.)
MASSILIA.

iv. 179, 180.) Caesar, who knew the site well, describes Massilia as washed by the sea almost along three parts of its extent; the fourth part was that by which the city was connected with the mainland; and here also the part that was occupied by the citadel was protected by the nature of the ground and a very deep valley (B. C. ii. 1). He speaks of an island opposite to Massilia. There are three small islands nearly opposite the entrance of the present port. It was connected with the mainland, as Ennemodus describes it, "by a space of fifteen hundred paces." D'Anville observes that these fifteen hundred paces, or a Roman mile and a half, considerably exceed the actual distance from the bottom of the port to the place called the Grande Pointe; and he supposes that we must take these to be single paces, and so reduce the space to half the dimensions. Walckenaer (Geog. dc. vol. i. p. 25) supposes Ennemodus to mean that the tongue of land on which Massalia stood was 1500 paces long. At present the port of Marseille is turned to the west; but the old port existed for a long time after the Roman period. This old port was named Lacydon (Mela, ii. 5), a name which also appears on a medal of Massilia. The houses of Massalia were mean. Of the public buildings not a trace remains now, though it seems that there were not very long ago some remains of aqueducts and of baths. Monuments, arms, and other antiquities have often been dug up.

The friendship of Rome and Massilia dates from the Second Punic War, when the Massaliots gave the Romans aid (Liv. xxii. 20, 25, 26), and assisted them all through the long struggle. (Polyb. iii. 95.) In B. C. 208 the Massaliots sent the Romans intelligence of Anarbal having come into Gallia. (Liv. xxvii. 36.) Massalia was never safe against the Ligurians, who even attacked them by sea (Liv. xii. 18). At last (B. C. 154) they were obliged to ask the Romans for aid against the Oxybii and Deciates, who were defeated by Q. Opimius. The story of the establishment of the Romans in Southern Gaul is told in another place [GALLIA TRANSALPINA, Vol. I. p. 953].

By the victory of the Romans over the Ligurians the Massaliots got some of the land; and after the defeat of the Teutones by C. Marius (B. C. 102) near Aquae Sextiae (Aix), the Roman commander gave the Massaliots the canal which he had constructed at the eastern outlet of the Rhone, and they levied tolls on the ships that used it [FOSSA MARIANA]. The Massaliots were faithful to the Romans in all their campaigns in Gallia, and furnished them with supplies. (Cic. pro Font. c. 1.) Cn. Pompeius gave to the community of Massalia lands that had belonged to the Volcae Arorici and the Helvii; and C. Julius Caesar increased their revenue by fresh grants. (B. C. i. 35.)

When Caesar (n. c. 49) was marching from Italy into Spain against the legati of Pompeius, Massalia shut her gates against him. The excuse was that they would not side with either party; but they showed that they were really favourable to Pompeius by admitting L. Domitius within their walls and giving him the command of the city (B. C. i. 34—36). At the suggestion of Pompeius the Massaliots also had made great preparations for defence. Caesar left three legions under his legates C. Trebonius to besiege Massalia, and he gave D. Brutus the command of twelve ships which he had constructed at Avalete (Arelas) with great expedition. While Caesar was in Spain, the Massaliots having manned seventeen vessels, eleven of which were decked ships, and put on board of them many of the neighbouring mountaineers, named Albici, fought a battle with Brutus in which they lost nine ships. (B. C. i. 56—59.) But they still held out, and the narrative of the siege and their sufferings is one of the most interesting parts of Caesar's History of the Civil War (B. C. ii. 1—22; Dion Cassius, xii. 25). When the town finally surrendered to Caesar, the people gave up their arms and military engines, their ships, and all the money that was in the public treasury. The city of Massalia appeared in Caesar's triumph at Rome, "that city," says Cicero, "without which Rome never triumphed over the Transalpine nations" (Philipp. viii. 6, d. Office. ii. 8). Still it retained its freedom (aerop., or in Roman language it was a Libera Civitas), a term which Strabo correctly explains to signify that the Massaliots "were not under the governors who were sent into the Province, neither the city itself, nor the dependencies of the city." Pliny names Massalia a "feodera civitas" (iii. 4), a term which for the early connection of Rome explains it.

The constitution of Massalia was aristocratic and its institutions were good (Strab. iv. p. 179). It had a council of 600, who held their places for life, and were named Timuchi (τιμοῦχοι). The council had a committee of fifteen, in whose hands the ordinary administration was: three out of the fifteen presided over the committee, and had the chief power; they were the executive. Strabo's text here becomes corrupt, and it is doubtful whether he means to say that no man could be a Timuchus, unless he had children and unless he could trace his descent for three generations from a citizen, or that no man could be one of the fifteen unless he fulfilled these conditions. (See Groskurth, Traued. Strabo, vol. i p. 310.) Their laws were Ionic, says Strabo, whatever this means; and were set up in public. Probably we may infer that they were not overloaded with legislation. Aristotle (Pol. v. 6) seems to say that Massalia was once an oligarchy in which we may conclude from this and other authorities that it became a Democracy, that is, that the political power came into the hands of those who had a certain amount of wealth. Cicero (de Rep. i. 27, 28) in
his time speaks of the power being in the hands of the "selecti et principes," or as he calls them in another place the "optimates," and though the admixture of slaves was a hundred to one, yet he says, "in this condition of the "populus" a certain resemblance to servitude." Though the people had little or no power, so far as we can learn, yet the name Demus was in use; and probably, as in most Greek towns, the official title was Boule and Demus, as at Rome it was Senatus Populorum Romanus. The division of the people was into Pylae. The council of the 600 probably unpublished to a late period, for Lucian, or whoever is the author of the Tassoia (c. 24) mentions it in his story of the friendship of Zenothemis and Menocrates.

Some writers have attempted, out of the fragments of antiquity, to reconstruct the whole polity of Massilia; an idle and foolish attempt. A few things are recorded, which are worth notice; and though the authority for some of them is not a critical writer, we can hardly suppose that he invented. (Valer. Maxim. ii. 6.) Pylon was kept under the care of the administration, and if a man wished to die, he must apply to the Six Hundred, and if he made out a good case, he was allowed to take a dose; and "herein," says Valerius, "a maundy investigation was tempered by kindness, which neither allowed any one to depart from life without a cause, and wisely gives to him who wishes to depart a speedy way to death." The credibility of this usage has been doubted on various grounds; but there is nothing in it contrary to the notions of antiquity. Two coffins always stood at the gates, one for the slave, one for the freeman; the bodies were taken to the place of interment or burning, whichever it was, in a vehicle: the sorrow terminated on the day of the funeral, which was followed by a domestic sacrifice and a request of the relations. The thing was done cheap: the undertaker would not grow rich at Massilia. No stranger was allowed to enter the city with arms; they were taken from him, and restored when he went away. These and other precautions had their origin in the insecurity of settlers among a warlike and hostile population of Ligurians and Galli. The Massaliots also had slaves, as all Greeks had; and though manumission was permitted, it may be inferred from Valerius, if he has not after his fashion confounded a Greek and Ligurian, or whoever is the author of the Tassoia, that this was a matter of course. A supply of slaves might be got from the Galli, who sold their own children. Whether the Ligurian was so base, may be doubted. We read of Ligurians working for daily hire for Massaliot masters. This hardy race, men and women, used to come down from the mountains to earn a scanty pitance by tilling the ground; and two ancient writers have preserved the same story, on the evidence of Poseidium, of the endurance of a Ligurian woman, who was working for a Massaliot farmer, and being seized with the pains of childbirth, retired into a wood to be delivered, and came back to her work, for she would not lose her hire. (Strab. iii. p. 165; Diodor. iv. 20.) It is just to add that the employer paid the poor woman her wages, and sent her off with the child.

The temperance, decency, and simplicity of Massaliot manners during their best period, before they had long been subjected, is commended by the ancient writers. The women drank no wine. Those spectacles, which the Romans called Mini, coarse, corrupting exhibitions, were prohibited. Against religious impostors the Massa-
The medals of Massalia are numerous, and some of them are in good taste. It is probable that they also adorned the Gulf, for the Gallic, which had coined money of their own, before the Christian era, with Greek characters. The common types of the Massaliot medals are the lion and the bull. No gold coins of Massalia have yet been found; but there are coins of other metal covered over with gold or silver, which are generally supposed to be base coin; and base or false coin implies true coin of the same kind and denomination. It has been also supposed that the frank was practised by the Massaliots. They are also supposed to have charged their customers, and suppression which gives them no credit for honesty and little for sense.

The settlements of Massalia were all made very early; indeed some of them may have been settlements of the mother city Phocaea. One of the earliest of these colonies was Tauromos or Touarauton (a doubtful position), which Caesar (B. C. ii. 4) calls "Castellum Massaliense." The other settlements east of Massalia were others (Ondos or Oeubos), Athensopolis (Atheneopolis), Antipolis (Antilbes), Nicaia (Vicena), and the islands along this coast, the Stoichades, and Lero and Lerna. West of Massalia was Acathia (Agic), on the Araurus (Héroni, doubtful whether it was a colony settled by Phocaea or Massala. Rheda (Rosae), within the limits of Hispania, was either a Rhodian or Massaliot colony; even if it was Rhodian, it was afterwards under Massalia. Emporium (Ampurias), in Hispam, was also Massaliot; or even Phocaean (Liv. xxvi. 19) originally. [EMPORIAE]. Strabo speaks of three small Massaliot settlements further south on the coast of Hispam, between the river Sucro (Jacor) and Carthago Nova (iii. p. 159). The chief of them, he says, was Hemeroscopium. [DIANUM].

The farthest Phocean settlement on the south coast of Spain was Muncena (iii. p. 156), where remains of a Greek town existed in Strabo's time.

There may have been other Massaliot settlements on the Gallic coast, such as Heraclea. [HERACLEA]. Stephanius, indeed, mentions some other Massaliot cities, but nothing can be made of his fragmentary matter. There is no good reason for thinking that the Massaliots founded any inland towns. Arcate (Arles) would seem the most likely, but it was not a Greek city; and as to Avenio (Arignam) and Cabalis (Cartag) the evidence is too small to enable us to reckon them among Massaliot settlements. There is also the great improbability that the Massaliots either wanted to found inland settlements, or were able to do it, if, contrary to the practice of their nation, they had wished it. That Massaliot merchants visited the interior of Gallia long before the Roman conquest of Gallia, may be assumed as a fact.

Probably the downfall of Carthage at the end of the Third Punic War, and the alliance of Massalia with Rome, increased the commercial prosperity of this city; but the Massaliots never became a great power like Carthage, or they would not have called in the Romans to help them against two small Ligurian tribes. The foundation of the Roman colony of Narbo (Narbonne), on the Atax (Aude), in a position which commanded the road into Spain and to the mouth of the Garonne, must have been determined by the commercial interest of Massalia. Strabo (iv. p. 186) mentions Narbo in his time as the chief trading place in the Provincia. Both before Caesar's time and after Massalia was a place of resort for the Romans, and sometimes selected by exiles as a residence. (Tact. Ann. iv. 43, xiii. 47.) When the Roman supremacy was established in Gallia, Massalia had no longer to protect itself against the natives. The people having wealth and leisure, applied themselves to rhetoric and philosophy; the place became a school for the Gallic, who studied the Greek language, which came into such common use that contracts were drawn up in Greek. In Strabo's time, that is in the time of Augustus and Tiberos, some of the Romans who were fond of learning went to Massalia. Apollodorus, Agrippa, the conqueror of Britannia, and a native of Forum Julli, was sent when a boy by a careful mother to Massalia, where, as Tacitus says (Agrip. c. 4), "Greek civility was united and tempered with the thrifty habits of a provincial town." (See also Tac. Ann. iv. 44.) The Gallic, by their acquaintance with Massalia, became fond of rhetoric, which has remained a national taste to the present day. They had teachers of rhetoric and philosophy in their houses, and the towns also hired teachers for their youth, as they did physicians; for a kind of inspector of health was a part of the economy of a Greek town. Circumstances brought three languages into use at Massalia, the Greek, the Latin, and the Gallic (Lis. xv., on the authority of Varro). The studies of the youth at Massalia in the Roman period were both Greek and Latin. Medicine appears to have been cultivated at Massalia. Crinis, a doctor of this town, conducted physic and astrology. He left an enormous sum of money for repairing the walls of his native town. He made his fortune at Rome; but a rival came from Massalia, named Charmis, who entered on his career by condemning the practice of all his predecessors. Charmis introduced the use of cold baths even in winter, and plunged the sick into ponds. Men of rank might be seen shivering for display under the treatment of this water doctor. On which Fluny (xxix. 2) well observes that all these men hunted after reputation by bringing in some novelty, while they trafficked away the lives of their patients.

The history of Massalia after Caesar's time is very little known. It is said that there are no imperial medals of Massalia. Some tombs and inscriptions are in the Museum of Marseille.

A great deal has been written about the history of Massalia, but it is not worth much. The following references will lead to other authorities: Naudot, Histoire des Colonies Grecques, a very poor work; H. Ternaux, Historia Republicae Massaliensium a Primordia ad Neronem Tempora, which is useful for the references, but for nothing else; Thierry, Histoire des Gaulois. [G. L.]

![Coin of Massalia.](https://example.com/coin_massalia.png)

MASSIDOLUS (Massiliotes), a river of Libya, the source of which Ptolemy (iv. 6, § 8), places in the mountain called Theon Ochema, and Pliny (Hist. B. G. iv. 20, § 14) in the Hesperian bay, between Hesperian Ceras and the Hypodromus of Aethiopus.
Massi-i. in E. long. 14° 20', N. lat. 6° 20'. It has been identified with the Cambium, which can be no other than the ancient Stachir or Trachir; one of the rivers which flow into the Atlantic, between the Kunarscans and the Memradus, is the probable representative of the Massitholus. [E. B. J.]

Masiyll. [Nomida.]

Mastaura (Massioua), a town in the north of Caria, at the foot of Mount Messogis, on the small river Chrysamus, between Trales and Tripolis. (Strab. xiv. p. 650; Plin. v. 31; Steph. B. s. v.; Hierol. p. 650.) The town was not of any great repute, but is interesting from its extant coins, and from the fact that the ancient site is still marked by a village bearing the name Mastaura, near which a few ancient remains are found. (Hamilton, *Researches*, l. p. 533.)

Maiste (Massia; *Ptol*. iv. 7. § 26), a mountain forming part of the Athenian highlands, a little to the east of the Lunae Montes, lat. 10° 50' N., long. 36° 55' E. The sources of the Astapus, Bohr-el-Azrek, Blue or Dark river, one of the original tributaries of the Nile, if not the Nile itself, are supposed to be on the N. side of Mount Maste. They are three springs, regarded as holy by the natives, and though not broad are deep. Bruce. (Travels, vol. iii. p. 308) visited Mount Maste, and was the first European who had ascended it for seventy years. The tribes who dwelt near the mountains of the Bohr-el-Azrek were called Mistatisae (Mastatea; *Ptol*. iv. 5. § 34, 7. § 31), and there was a town of the same name with the mountain (Massia); *Ptol*. iv. 7. § 25.)

Maistiani'ni (Mastiaxoi), a people on the south coast of Spain, east of the Pillars of Hercules, to whom the town of Masta (Mastia) belonged. They were mentioned by Hecataeus (Steph. B. s. v. *Mastiaxoi*) and Polybius (iii. 33), but do not occur in later writers. Hannibal transported a part of them to Africa. (Polyb. l. c.) Masta appears to be the same as Massia (Masgia), which Theopompos described as a district bordering upon the Tartessians. (Steph. B. s. v. *Masta*.) Hecataeus also assigned the following towns to this people: Meltaxa (Matala; *Ptol*. iv. 399, 401; *Steph. B. s. v.*), probably the same as the later Matalo; Sannx (Zenx, Steph. B. s. v.), probably the same as the Later Sex, or Hexi; Molybdana (Molubdax, Steph. B. s. v.); and Skallax (Coxals, Steph. B. s. v.), probably the latter Suil.

Mastraelma (Mastreum, Steph. B. s. v.), "a city and lake in Celticis," on the authority of Artemidorus. This is the Astraeum of the MSS. of *Pliny* (Fossa Maritana, p. 912). The name Mastreulum also occurs in Avienus (Ora Maritimae, v. 692). It is one of the lakes on the eastern side of the Delta of the Rhone, but it is uncertain which it is, the E'tang de Berre or the E'tang de Mentuequ. It is said that there is a dry part of some size in the middle of the E'tang de Cagnarde, and that this dry part is still called Maidreau. (G. L.)

Mastusia (Mastouia Xipa, Cape Grecus), the promontory at the southern extremity of the Thracian Chersonese, opposite to Sigeum. A little to the east of it was the town of Elarus. (Ptol. iii. 12. § 1; Plin. iv. 18; Mela, ii. 21; *Teets. ad Lyogep*. 534; where it is called Maegouia.) The mountain in Ionia, at the foot of which Smyrna was built, likewise bore the name of Mastusia. (Plin. v. 91.)

Masula (Massoua), a place between Attalia and Perge in Pamphylia. (Stadiasmus, §§ 900, 961), and 70 stadia from Mygderia, which is probably a corruption of Magydes. [Magydes.] [L. S.]

Matala (Marata; *Ptol*. iii. 17. § 4), a town in Crete near the headland of Matala (Matera, Stadiasmus), and probably the same place as the naval arsenal of Gortyna. (Metallum (Matera), Strab. x. p. 479), as it appears in our copies of Strabo, but incorrectly. (Comp. Greskurd, ad loc.) The modern name in Mr. Paschley's map is Matula. (Hick, *Kreta*, vol. i. pp. 399, 435; *Mun. Class. Antiqu*. vol. ii. p. 287.)

Mateola, a town of Apulia, mentioned only by Pliny (iii. 11. s. 16) among the inland cities of that province. It is evidently the same now called Materra about 12 miles from Giovinco (Genusium), and 27 from the gulf of Tarantum. It is only about 8 miles from the river Bradanus, and must therefore have been closely adjoining the frontier of Lucania. [E. H. B.]

Mataro, or Matavonum, as D'Anville has it, in Gallia Narbonensis, is placed by the Antonine Itin. on a road from Forum Voconii (Forum Voconii) to Massilia (Marseille), 12 mi. I. from Forum Voconii and 14 from Ad Taurus (Tours), between which place it lies. It is not in the Table, but the distances are not the same. Mataro is supposed to be Venus. [G. L.]

Materesque Oppidum, one of the thirty free towns ("oppida libera"); Plin. v. 4 of Zenitians. It still retains the ancient name, and is the modern Matter in the government of Tunesi, a small village situated on a rising ground in the middle of a fruitful plain, with a rivulet a little below, which empties itself into the Scina Phala. (Shaw, *Trav.* p. 165; Barth, *Wanderungen*, p. 206.) [E. B. J.]

Materi (Matreu; some MSS. read Matræui, *Ptol*. v. 9. § 17), a people of Asiatic Sarmatia, to the E. of the river Rha. [E. B. J.]

Maturenum, a town of Etruria, known only from the Tabula Peutingeriana, which places it on the Via Clodia, between Tuscania (Tuscanella) and Saturnia, 12 miles from the former, and 18 from the latter city. It probably occupied the same site as the modern village of Farina. (Clover, *Ital*. p. 517; Dennis, *Etruria*, vol. i. p. 463.) [E. H. B.]

Mattiana (Marituny, Strab. ii. p. 73, xi. p. 509; Steph. B.; *Matarv', Herod. v. 52: Eth. Matarov', Matrovi's), a district of ancient Media, in the south-western part of its great subdivision called Media Atropatene, extending along the mountains which separate Armenia and Asyria. Its boundaries are very uncertain, and it is not possible to determine how far it extended. It is probably the same as the Marituny of Ptolemy (vi. 2. § 5). [Mattiane.] Strabo mentions as a peculiarity of the trees in this district, that they distil honey (l. c.). The Matian are included by Herodotus in the eighteenth satrapy of Dareius (iii. 94), and served in the army of Xerxes, being armed and equipped in the same manner as the Paphlagonians (vii. 75). Herodotus evidently considered them to occupy part of the more widely extended territory of Armenia. [V.]

Matieni Montes (Mati ne; *Herod*. i. 189, 202, v. 52), the ridge of mountains which forms the back-bone or centre of Matiana, doubtless part of the mountain range of Korithain, in the neighbourhood of Tim. Herodotus makes them the water-fed from which flowed the Gyndes and the
MATHILIO.

Araxes, which is lying them too extended a range from N. to S. (s. 189, 202).

MATHILIO, in Gallia Belgica, is placed by the Table on a route which runs from Lugdunum (Lyon) along the Rhine. The first place from Lugdunum is Peræarium Agrrippinæ (Roosnburg), and the next is Mithilis, supposed to be Reichenau.

MATTILICA (Eth. Mathiuicari, *atia; Mathilico), a municipial city of Umbria, situated in the Apennines, near the sources of the Acis, and close to the coves of Picenum. It is mentioned both by Pliny and the Labor Coloniarum, of which the latter includes it among the "Civitates Piceni." Towards the close of the Roman Empire it appears as an episcopal see, included in the province then termed "Picenum Suburbicum." (Plin. iii. 14. s. 19; Lib. Colon. p. 257; Bingham's Eccl. Antiq., book ix. ch. 5 § 4.) Mathilic is still a considerable town, and retains the ancient site as well as name. [E. H. B.]

MATINUS NONS. [GARGANUS.]

MATISCO, a place in Gallia Celtica, in the territory of the Ecdasi in Caesar's time, and on the Scione. (B. G. vii. 90.) After the capture of Alesia, n. c. 52, Caesar placed P. Sulpicius at Matisco with a legion during the winter, to look after the supply of corn for the army. (B. G. vii. 4.) The position of Matisco is fixed by the name, its site on the river, and the Huns. The name, it is said, was written Matisco by a transposition of the letters; and from this form came the name Muscon, and by a common change, Mecon. The form Mastico occurs in the Table. (D'Anville, Notice, etc.) [G. L.]

MATITAE. [NIGERI.]

MATIUM, a maritime city of Crete, next to the E. of Apollonia in Pliny's list (iv. 12), and opposite to the island of Dia,— *Centra Matium Dia.* (L.c.) The modern Mygilo-Katron occupies the ancient site. (Pashley, Trav. vol. i. pp. 172, 261; Hick, Kreta, vol i. pp. 12, 403.) [E. B. J.]

MATRICFEM, AD, a considerable town in Illyricum, which the Puygtering Table places between Bisutue Vetus and Bistue Nova, 20 M. P. from the former, and 25 M. P. from the latter. It must be identical with Mostur, the chief town of Hercegovine, standing on both banks of the Narenta, connected by the beautiful bridge for which it has always been celebrated. The towers of this bridge are, according to tradition, on Roman foundations, and its construction is attributed to Trajan, or, according to some, Hadrian. The word "most;" "star," signifies "old bridge." (Wilkinson, Dalmatia, vol. ii. pp. 57-63; Neisseburg, Die Sud-Slaven, p. 127.) [E. B. J.]

MATRINUS (Marpuris), a river of Picenum, flowing into the Adriatic, now called La Pomata. Strabo describes it as flowing from the city of Adria, but it is in reality intermediate between Adria (Atri) and Aquilus (Civita S. Angelo). According to the same writer it had a town of the same name at its mouth, which served as the port of Adria. (Strab. v. p. 241.) Ptolemy also mentions the mouth of the river Matrinus next to that of the Ariminus, from which it is distant about 6 miles (Ptol. iii. i. § 20), but he is certainly in error in assigning it to the Marnimin. [E. H. B.]

MATRONA or MATRONAE NONS is the name given by later Latin writers to the pass of the Mont Genèvre, from Segusio (Soon) to Brigantia (Briangovum), which was more commonly known by the general appellation of the Alpes Cohortae. The pass is described in some detail by Ammianus, from whom it appears that the name was applied only to the higher part, or actual pass of the mountain; and this is confirmed by the Jerusalem Itinerary, which gives the name of Alpes Cottiae to the whole pass from Eburodunum (Eburaum) to Segusio, and confines that of Matrona to the actual mountain between Brigantia (Briangovum) and Gendau (Genava). (Itin. Hieri. p. 556; Amm. xxv. 10. § 6.) [E. H. B.]

MATRONIUM [SEQUANA.]

MATTIACI, a German tribe, perhaps a branch of the Chatti, their eastern neighbours, probably occupied the modern duchy of Nassau, between the rivers Lahn, Main, and Rhine. They are not mentioned in history until the time of the emperor Claudius; they then became entirely subject to the Romans (Tac. Germ. 29.), who built fortresses and worked the silver mines in their country. (Tac. Ann. xii. 20.) In a.D. 70, during the insurrection of Cerialis, the Mattiaci, in conjunction with the Chatt and other tribes, besieged the Roman garrison at Moguntiacum (Mayence : Tac. Hist. iv. 37); and after this event they disappear from history, their country being occupied by the Alamanni. In the Notitia Imperial, however, Mattiaci are still mentioned among the Palatine legions, and in connection with the cohorts of the Batavi. The country of the Mattiaci was and still is very remarkable for its many hot-springs, and the "Aquae Mattiacae," the modern Beilstein, are repeatedly referred to by the Romans. (Plin. xxxi. 17; Amm. Marc. xxix. 4; Aquae Mattiacae.) From Martial (sixv. 27: Mattiacae Plaee) we learn that the Romans imported from the country of the Mattiaci bulls or cakes of soap to dye grey hairs. The name Mattiaci is probably derived from matte, a meadow, and ach, signifying water or bath. (Comp. Orelli, Inscript. Nos. 4977 and 4983; Zeuss, Die Deutschen, p. 98, foll.)

MATTIACUM (Mattacehe), a town in the north of the country of the Mattiaci. (Ptol. ii. 11. § 49.) Some writers believe this town to be the same as the Mattiacum mentioned by Tacitus (Ann. i. 56), as the capital of the Chatti, which was set on fire in a.D. 15, during the war of Germanicus. But a careful examination of the passage in Tacitus shows that this cannot be; and that Mattiacum is probably the modern town of Marburg on the Lahn (Lucania), whereas Mattiacum is the modern Maiden, on the right bank of the Eder (Adrana). (Comp. Wilhelm, Germanicen, p. 185.) [L. S.]

MATTIUM. [MATITICUM.]

MATUSARUM. [Lusitania. p. 220, a.]

MAURAL. [NIGERI.]

MAURECSI. [MATTIANTIA.]

MAURETANIA, the NW. coast of Africa, now known as the Empire of Marocco, Fez, and part of Algeria, or the Maghrib-al alza (farthest west) of the natives.

I. Name, Limits, and Inhabitants.

This district, which was separated on the E. from Numidia, by the river Ampava, and on the S. from Gaculia, by the snowy range of the Atlas, was washed upon the N. coast by the Mediterranean, and on the W. by the Atlantic. From the earliest times it was occupied by a people whom the ancients distinguished by the name MAURECSI (Maurerii). Strab. i. p. 5, iii. pp. 131, 137, xvii. pp. 522, 827; Liv. xxxiv. 49; Virg. Aen. iv. 206; Mauropectus, (Ptol. iv. 1. § 11) or MAURI (Mauri), "Blacks," in the Alexandrian dialect, Paus. i. 33. § 5, viii. 43.
of the productions of Mauretania, marvellous enough, in some particulars, as where he describes was as large as cats, and reach 10 ft. long; and among other animals the crocodile, which there can scarcely be any river of Morocco capable of nourishing, even if the climate were to permit it. (In Aegypt, where the average heat is equal to that of Senegal, the crocodile is seldom seen so low as Siout.) Pliny (viii. 1) agrees with Strabo (p. 827) in asserting that Mauretania produced elephants. As the whole of Barbary is more European than African, it may be doubted whether the elephant, which is no longer found there, was ever indigenous, though it may have been naturalised by the Carthaginians, to whom elephants were of importance, as part of their military establishment. Appian (B. P. 9) says that when preparing for their last war with the Romans, they sent Hadrudal, son of Gisco, to hunt elephants; he could have hardly gone into Aethiopia for this purpose. Shaw (Trans. p. 258; Jackson, Morocco, p. 55) confirms, in great measure, the statements of Strabo (p. 830) and of Aelian (II. A. iii. 136, vi. 20) about the scorpion and the "phalangium," a species of the "arachnidae." The "selitans," of which Varro (de Re Rustica, iv. 14. § 4; Plin. ix. 82) gives so wonderful an account, has not been identified. Copper is still worked as in the days of Strabo (p. 830), and the natives continue to preserve the grain, legumes, and other produce of their land, which is planted in "mantous," or conical excavations in the ground, as recorded by Pliny (xviii. 73; Shaw, p. 221).

Mauretania, which may be described generally as the highlands of N. Africa, elevates itself like an island between the Mediterranean, the Atlantic, and the great ocean of sand which cuts it off towards the S. and E. This "plateau" separates itself from the rest of Africa, and approximates, in the form and structure, the height, and arrangement of its elevated masses, to the system of mountains in the Spanish peninsula, of which, if the straits of the Mediterranean were dried up, it would form a part. A description of these Atlantic highlands is given in the article ATLAS.

Many rivers flow from this great range, and fall into the Mediterranean, and the Atlantic. Of these, the most important on the N. coast were, in a direction from E. to W., the AAMIDUS, or Unicorn, CHINALAF, and WADDA, on the W. coast, in a direction from N.E. to S.W., the SUEPH, SALA, PHUTH, and LIBUS.

The coast-line, after passing the Amfassa (Wad-el-Kibir) and Sinus Numidicus, has the harbours IOGHLIS (Jijel), SALDAE PS. (Bojégah), and RESCURRIUM (Tebes). Weighing from Algiers, and passing ROUMIEN (Ras-al-Ranathir), to stand towards the W., there is a rocky and precipitous coast, mostly level, in which its succession were the ports and creeks JOL (Zerskell), CARENTEA (Tenc), MURESSTA (Mostaghoun), AUSENARIA (Arz根據), QUIZA (Wahran or Oun); PORTUS MAGNUS (Marasa Kibir), within METAGONIUM PHOM. (Ras-al-Harrasah); and ACHA (Jehun). The MULUCHA falls into the Gulf of Mellish of the charts. About 10 miles to the N.W. of this river lay the Trees INSULARIS (Zaphraos or Oferezi group); about 20 miles distant from these rocks, on a N.W. by W. Rhume, was RUSADIR PHOM. (Cap Trees Forcas of the Spanish pilots, or Ras-ad-Dekar of the natives), and in the light formed between it and the Mulucha stood RUSADIR.
MAURETANIA.

M. Cassius Longinus obtained eight colonies founded by Augustus, Cartesena, Genucius, Igelbilli, Bucconiae, Ruzarsus, Salde, Soccabara, Tubbustus; two by Claudius, Caesarea, formerly Iota, the capital of Juba, who gave it this name in honour of his patron Augustus, and Oppidum Novum; one by Nerva, Sittifi; and in later times, Arsenaria, Bida, Siga, Aquae Calidae, Quiza, Bussucerum, Aetia, Giva, Icussi, and Tabasa, in all 21 well-known colonies, besides several "nomines" and "opida Latinia." The Notitia enumerates no less than 170 episcopal towns in the two provinces. (Comp. Morelli, Afri ca Christina, vol. i. pp. 40—43.) About A.D. 400, Mauretania Tingitana was under a "Præses," in the diocese of Spain; while Mauretania Caesariensis, which still remained in the hands of the diocese of Africa, was divided into MAURETANIA I. or STIFENSIENSIS, and MAURE TANIA II. or CAESARIIENSIS. The emperor Opho had assigned the cities of Mauretania to Bactria (Tac. Hist. i. 78); but this probably applied only to single places, since we find the two Mauretanias remained unchanged down to the time of Constantine. Marquardt, in Becker's Handbuch der Rom. Alt. pp. 230—232; Morelli, Afri ca Christina, vol. i. p. 25.)

In A.D. 429, the Vandal king Genseric, at the invitation of Count Boniface, crossed the straits of Gades, and Mauretania, with the other African provinces, fell into the hands of the barbarian conquerors. Belisarius, "the Afric anus of New Rome," destroyed the kingdom of the Vandal's, and Mauretania again became a Roman province under an Eastern exarch. One of his ablest generals, John the Patriarch, for a time repressed the inroads of the Moors upon Roman civilisation; and under his successor, the eunuch Solomon, the long-lost province of Mauretania Stifensis was restored to the empire; while the Second Mauretania, with the exception of Caesarea itself, was in the hands of Mas tagis and the Moors. (Comp. Gibbon, cc. xii. 323; Le Beau, Bas Empire, vol. viii.) At length, in A.D. 698—709, when the Arabs made the final conquest of Africa,—desolated for 300 years since the first fury of the Vandals,—the Moors or Barbars adopted the religion, the name, and the origin of their conquerors, and sunk back into their more congenial state of Mahometan savagery. The old cities (L. i.) make out the breadth of the two Mauretanias as 407 M. P.; but this will be too much even for Tingitana, where Mount Atlas lies more to the S., and more than 300 M. P. beyond the utmost extent of any part of Caesariensis. The same author writes 170 M. P., which are too few for Tingitana, and 879 M. P., which are too many for Caesariensis. (Shaw, Trav. p. 9.)

The following tribes are enumerated by Festus (iv. 2, §§ 17—22) in I. MAURETANIA CAESARIIENSIS:— Touducar (Toudokia), on the left bank of the Ampusaga; to the N. of these, Celemus (Celemosa), and still more to the N., the coast, and to the E. on the Ampusaga, Musci (Muscioi) and Chittara (Chittens); to the W. of the latter, Teulens (Teulens), and Baneari (Baneara); S. of these, Maculuses (Maculures), Salassii (Salassas), and Maculuses (Maculuses); NW. of the Teulens, and to the E. of Zalacus M., and on the coast, Macchirri (Macchirri), W. of these, and X. of Zalacum, on the mouth of the Chinalaph, Macchiri (Macchirri); below them, on the other
side of Zalaris, MAXIMES (Μαξιμιανός) and his bishop-assisted at the Council of Nicaea.

MAZARA (Messana, Ptol. iv. 3. § 7), a Roman city (Maximilia, Phot. v. 3), about the exact distance of which from Carthage there is a considerable discrepancy in the Itineraries (Anton. Itin.; Pto. Tab.). From an expression of Victor Vettius (de Pers. Vend. i. 5. § 6), who calls it "Libula," "a tongue of land," its position was probably on the coast, between Rhodes and Haemonianus; where there are the remains of a Roman road.

The coast-dwellers (Stoicistae) speaks of the town and city of Mazara as 20 stadia from Carthage, or the modern Gabes; this was probably different from the former, and is the modern Mrissent, where there are the remains of a town and harbour.

(Shaw, Trav. p. 157; Barth, Wanderungen p. 128.) As connected with the gospel epistle of Maximus or Maxo, it is likely that there were several places of this name. Ptolemy (iv. 3. § 24) has MAXIMA VETRIS (Μαξιμιανός Βετρίς) and the Arabian Itinerary a station which it describes as MAXULA PRATIS, 20 M. from Carthage. It is found in the Notitia, and was famous in the annals of Martyrology (Augustin, Serm. c. lixxiiiiii; Morcelli, Africa Christiana, vol. i. p. 229.)

MAXYSES (Μαξύσης, Herod. iv. 191, where the name should be Maxo; see MAURITANIA, p. 257, a), a Libyan tribe, and a branch of the nomad AVGENSES. Herodotus (i. c.) places them on the "other side," i.e. the W. bank, of the river Triton; reclaimed from nomad life, they were "tilers of the earth, and accustomed to live in houses." They still, however, retained some relics of their former customs, as "they suffer the hair on the right side of their heads to grow, but shave the left; they paint their bodies with red-lead:" remains of this custom of wearing the hair are still preserved among the Turnerics, their modern descendants.

(Mauritania, p. 106.) They were probably the same people as those mentioned by Justus (xvii. 7), and called MAXYTIANI, whose king is said to have been Hierbas (Verg. Aen. iv. 36, 196, 326), and to have desired Dido for his wife. (Herren, Afric, p. 34, trans; Raettel, Geog. of Herod. vol. ii. p. 305.)

MAZACI. (Caesarea, vol. i. p. 469, b.)

MAZAERI (Μαζαερής), a Pannonian tribe, occupying the southwestern part of Pannonia, on the frontiers of Dalmatia, whence Dion Cassius (iv. 32) calls them a Dalmatian people. They were conquered and severely treated by Germanicus.

(Strob. vii. p. 314; Plin. iii. 26; Ptol. ii. 16. § 8.)

MAZARA (Messana, Diod. ; Maxe, Steph. B.; Mazara), a town on the SW. coast of Sicily, situated at the mouth of a river of the same name between Selinus and Lilybaemon. It was in early times an inaccessible place, and is first noticed by Diodorus in b. c. 409, as an emporium at the mouth of the river Mazars. (Diod. xii. 54.) It was evidently at this time a place of some importance, and was taken by the Carthaginian general Hannibal, during his advance upon that city. (Diod. l. c.) Stephano of Byzantium calls it "a fort of the Selinuntines" (φρούριον Σελινουτσων, Steph. B. x. v.), and it is mentioned again in the First Punic War as a fort which was ravaged by the Romans from the Carthaginians. (Diod. xii. 9. p. 503.)
It does not seem to have ever risen in ancient times to the rank of a city. Pliny mentions the river Mazara, as does Ptolemy also, but neither of them notice the town. (Plin. iii. 8. s. 14; Ptol. iii. 4. § 5.) The existence of this last is, however, attested by the Itinerary, which correctly places it 12 miles from Lillybaeum (Itin. Ant. p. 89); but it was first raised to an important position by the Saracens in the 9th century, when it became the capital of the whole surrounding district, as it continued under the Norman rule. The western province of Sicily still bears the name of Vai di Mazara, but the town itself has greatly declined, though it still retains the rank of a city, and has about 10,000 inhabitants. (Fazzul de Reb. Sic. vi. 5. p. 284; Smyth's Sicily, p. 224.) A few sarcophagi and inscriptions are the only remains of antiquity extant there.

The river Mazara, or Mazareus, as it is called by Diodorus (Mac. ap. Diod. xii. 54.), is still called the Fiume di Mazara. [E. H. B.]

Mazices. (Maziger, Ptol. iv. 2. § 19; Mazax, Lucan, iv. 681; Claudian, Sil. i. 356.), a people of Mauretania Caesariensis, who joined in the revolt of Firmus, but submitted to Theodosius, A. D. 373. (Ann. Marc. xxii. 5. § 17; Le Beau, Bibr. Empire, vol. iii. p. 471; comp. Gibbon, c. xxxv.) [E. B. J.]

Mazaris (Mazarus, Ptol. ii. ii. 8. § 4; Mela, iii. i. § 9), a small river on the N. coast of Hispania Tarraconensis, flowing into the gulf of the Artabri, still called the Mero.

Meceria, a town of Marmarica, which the Pentinger Table places at 33 M. P. to the E. of Palmarior; the Antonine Itinerary has a town Micipha (one Ms. reads Mecira), 20 M. P. to the E. of the same place; its position must be sought in the Worx-en-Rina (Barth, Wanderungen, pp. 569, 549.) [E. B. J.]

Mecyberna (Μεξιβηρνα: Eth. Μεξιβηρναιos, Steph. B.; Soyl. p. 26; Necymn. 640), a town which stood at the head of the Tormiaçian gulf, which was also called Sinus Mecybernerus. (Ptol. iv. 10; Comp. Mela, ii. 3. § 1.) Mecyberna was the port of Olythus (Strab. vii. p. 330), and lay between that town and Sermyle. (Herod. vii. 122.) It was taken from the Athenians by the Chalidic Thrause (Tuc. v. 39), and surrendered to Philip before the siege of Olythus. (Diod. xvi. 54.) The site must be sought at Mellepaprgo, where some remains of antiquity are said to be preserved. (Leake, North. Greece, vol. iii. p. 155.) [E. B. J.]

Medava (Μαδία), a town of Arabia Petraea, placed by Ptolemy in long. 68° 30', lat. 36° 45', doubtless identical with Medava or Medeba [Medera], the letters a and e being identical in sound, and, consequently, used interchangeably, especially in proper names. (Provl. v. 17. § 6.) [G. W.]

Mediaura (Ad Mediaura, Itin. Anton.; Post. Toh.; Hygin. de Lim. p. 163; Αμαμεύδα απ. Αμαµεύδαια απ. Αμαµεύδαια, Ptol. iv. 3. § 30; Eth. Macedoniensis), a town of Numidia, which had originally belonged to the kingdom of Sypha, but was annexed to that of Massinissa at the close of the Second Punic War, and afterwards was colonized by a detachment of Roman veterans, when it attained considerable splendour. Appuleius was born at this place, where his father had been "diumin," and calls himself "Seminumidda" and "Seminagathus." (Apolog. pp. 443. 444.) It lay on the road from Larcs to Thessale, 48 M. P. from the former and 25 M. P. from the latter. At a river Arxiatto, which flowed between this place and Thessale, Mazaceed defeated the Moorish chieftain Gildo. (Oros. vii. 36; St. Martin, Le Beau, Bibr. Empire, vol. v. p. 161; comp. Gibbon, c. xxix.) Justinius fortified and placed a garrison in this town, which Procopius (de Aed. vi. 6) calls Abastra. It is perhaps a different place from Madara, to which Augustine was sent to educate Cyzigia. [E. B. J.]

Mederia. (Maderia.)

Meden (Μηδέν, Procop. B. i. ii. 4.), a town on the spur of Mount Papua, in the inland country of Namidia. Geisner, king of the Vandals retired to this fastness in A. D. 534, but was compelled to surrender to Pharas, chief of the Heruli. (Le Beau, Bibr. Empire, vol. viii. p. 248; comp. Gibbon, c. xlix.) [E. B. J.]

MEDEON (Μηδέων: Eth. Μηδέωνας). 1. Or Medeon (Μηδεως: Κοτίνα), a town in the interior of Acrania, on the road from Stratus and Phytia (or Phoictina) to Limnaea on the Almacrion gulf. It was one of the few towns in the interior of the country which maintained its independence against the Aetolians after the death of Alexander the Great. At length, in n. c. 251, the Aetolians laid siege to Medeon with a large force, and had reduced it to great distress, when they were attacked by a body of Ilyrian mercenaries, who had been sent by sea by Demetrius, king of Macedonia, in order to relieve the place. The Aetolians were defeated, and obliged to retreat with the loss of their camp, arms, and baggage. Medeon is again mentioned in n. c. 191, as one of the Acranian towns, of which Antiochus, king of Syria, obtained possession in that year. (Thuc, iii. 106; Polyb. ii. 2. 3; Liv. xx. 11, 12; Leake, Northern Greece, vol. iii. p. 575.)

2. A town of Phocia, destroyed alone with the other Phocian towns at the termination of the Sacred War, and never again restored. (Paus. x. 3. § 2.) Strabo places it on the Crissaean gulf, at the distance of 160 stadia from Boeotia (ix. pp. 410, 423); and Pausanias says that it was near Anti- cyra (x. 36. § 6; comp. Steph. B. s. r.). Leake places it at Ibeclasina. (Northern Greece, vol. ii. p. 548.)

3. An ancient town of Boeotia, mentioned by Homer (II. ii. 501), is described by Strabo as a dependency of Haliartus, and situated near Onchestus, at the foot of Mt. Phocinion, from which position it was afterwards called Phocinice (ix. pp. 410, 423; comp. Steph. B. s. r.; Ptol. iv. 7. s. 12). It appears to have stood near the lake, in the bay on the north-western side of Mount Fyge, between the site of Haliartus and Korinthia. (Leake, Northern Greece, vol. ii. p. 215.)

4. A town of the Labastes, in Dalmatia in Illyricum. (Liv. xlv. 23, 32.)

MEDERIACUM, in Gallia Belgica, is placed by the Antonine Itin. on a road from Colonia Trajan (Kelhs) through Juliacum (Juliera) to Colonia Acquirana (Colone). It lies between Subanas and Tendarum (Tuduler), and is supposed by certain geographers to be Merina-Rivamonde. [G. L.]

MEDIA (Μηδεία: Eth. Μηδείας: Adj. Μηδείος), a country of considerable extent and importance, in the western part of Asia, between the Caspius Sea on the N. and the great rivers of Mesopotamia on the W. It is by no means easy to determine what were its precise boundaries, or how much was comprehended under the name of Media. Thus Herodotus, who speaks repeatedly of the Media,
gives little or no description of the country they inhabited, and perhaps all that could be inferred from his language is, that it must have been a mountainous district between the Halys in Asia Minor and Persia, fit for raising a warlike and independent race of men (i. 72). Again, during the wars of Alexander, Media had to a considerable extent taken the place of Persia, and was the great country E. of Mesopotamia, and extending indefinitely along the Caspian sea eastwards to Arzana and Bactriana. Still later, at the close of the Roman Republic and under the earlier emperors, Media was restricted by the encroachments of the Parthian empire to its most mountainous parts, and to the Caspian coast westwards, the province of Atropatene forming, in fact, all that could be strictly called Media. Indeed, its limits were constantly changing at different periods. General consent, however, allows that Media was divisible into three leading divisions, each of which from time to time was apparently held to be Media Proper. These were:—1. A northern territory along the shores of the Caspian, extending more or less from Armenia on the W. to Hycrana on the E., comprehending much of the country now known by the names of Mazanderan and Gilan; 2. Media Atropatene, a very mountainous district, to the west and south of the preceding [Atropatene]; and 3. Media Magna, the most southern, exacting, and historically, the most important, of the three divisions, with its capital Ecbatana (the present Hamadan).

Of the ancient geographers, Ptolemy gives this country the widest boundaries. Media, says he, is bounded on the N. by the Hycrana (i.e. the Caspian) sea, on the W. by Armenia and Assyria, on the S. by Persis and a line drawn from Asyria to Susiana, and on the E. by Hycrana and Parthia (vi. 2 § 1, 3). It is clear from this, and still more so from the mention he makes of the tribes and towns in it, that he is speaking of Media in its most extended sense; while, at the same time, he does not recognise the triple division noticed above, and speaks of Atropatene (or, as he calls it, Tropatene, vi. 2, 5) as one only of many tribes.

Strabo, in the tolerably full account which he gives of ancient Media, is content with a twofold division, into Media Atropatene and Media Magna, to these he gives nearly the same limits as Ptolemy, comprehending, however, under the former, the mountain tract near the Caspian (xi. pp. 522—526). Pliny, in stating what was formerly the kingdom of the Persians, is now (in his time) under the Parthians, appears only to recognise Media Magna as Media Proper (vi. 14. s. 17). Atropatene, though subject to Ecbatana, the capital of Media Magna, he does not seem to consider has any thing to do with it (vi. 13. s. 16).

We proceed now to describe Media Magna, the first or most northern part of what was popularly called Media having been fully noticed under Atropatene and Ecbatana. It is very difficult to distinguish the classical accounts of the different divisions to which we have alluded, the name Media being used very indefinitely. It may, however, be stated generally, that Media Magna comprehended the whole of the rich and fertile plain-country which was shut in between the great chain of the Carduchian mountains and of Mt. Zagros in the W. and by Mt. Coronus on the N. It appears to have extended as far south as Elymains and Susiana, and to have bordered on the eastern side on Caramania and Ariana, or on what, in later times, was better known

by the name of Parthia. Some have attempted to prove that it derived its name from its lying in the middle part of Asia (Gesinesius, Theor. ii. p. 768; cf. also Polyb. v. 44, who states, 'H Ἔλμινα κατακαί τῶν ἐπί Αράκων'). The derivation, however, admits of doubt. On the Cuneiform Inscriptions the name is read Mada (Hawlinson, Bohian Ins. 1. c., Journ. vi. 2). Much of this land was of a high elevation above the sea, but it abounded in fertile valleys, famous for their richness, and in meadow land in which a celebrated breed of horses, called the Nisanian horses, were raised. (Herod. vii. 40, iii. 106; Diod. xvii. 100; Strab. xi. p. 525; Arrian, Hist. Anim. iii. 2; Ammian. xxiii. 6; cf. also the modern travellers, Ker Porter, vol. i. p. 216, Chardin, and Moëter.) It is comprehended for the most part in the modern province of Irak Ægin.

The principal town of Media Magna was Ecbatana (doubtless the present Hamadan), which, during the time of the wars of Alexander, as for many years before, was the capital of the whole country. [Ecbatana.] Besides Ecbatana, were other towns of importance, most of them situated in the N., part of the country, on the edge of, if not within, Atropatene, as Elamite and Hecalea.

It is equally difficult to determine with accuracy what states or tribes belong to Media Magna. It is probable, however, that the following may be best comprehended in this division:—The Sagartii, who occupied the passes of Mt. Zagros; Choromithrene, in the champaign country to the south of Ecbatana; Elymais, to the north of Choromithrene—if indeed this name has not been erroneously introduced here by Ptolemy and Polybius [Elymais]; the Tapryan or Tapyrban, S. of Mt. Coronus as far as Parthia and the Caspian Gates; Rhagiana, with its capital Rhagae: Sigrivae, Durites, and, along the southern end of the Parochostras, what was called Syromedia. (See these places under their respective names.)

The Medi, or inhabitants of Media, are the same people as the Madai of the Bible, from which Semitic word the Greek name is most likely derived. Madai is mentioned in Genesis, as one of the sons of Japhet (x. 2), in the first repeopling of the earth after the Flood; and the same name occurs in more than one place, subsequently, indicating, as it would seem, an independent people, subject to the king of Nineveh (2 Kings, xviii. 6), or in connection with, if not subject to, the Persians, as in Dan. v. 28, vi. 15; Esth. i. 3, 14. The first Greek author who gives any description of them is Herodotus. According to him, they were originally called Ani; but changed their name to that of Medi on the coming of Media from Athens (vii. 62). They were divided into six tribes, the Busae (steph. Byz.), Paratatameni (Strab. xi. p. 522, xvi. p. 739, &c.; Arrian, iii. 19), Struchates, Arizanti, Buddi (Steph. Byz.), and the Magi. Voo Hammar has attempted to show that most, if not all, of these names occur under their Persian form in the Zendavesta and Shah-Mnemoh (Viener, Jahrb. ix. pp. 11, 12), but it may be questioned whether the identification can be considered as satisfactory. Some, however, of these names indicate the Eastern origin of the inhabitants of Media, as Arii and Arizanti [Ariana; Arizanti]; though it may be doubted whether others of them, as the Magi, ought to be considered as separate tribes. The general evidence
is, that the Magi were a priest-class among the Median people; not, like the Aramaenides in Persia, a distinct or dominant tribe. (Cf. Strab. xvi. p. 962; Cie. Divin. i. 41; Porphyry. Ab. i. 16, &c.) In other authors we find the following peoples counted among the inhabitants of Media, though it may be doubted whether some of them do not move properly belong to one or more of the adjacent nations, the Sagartii, Tapyri or Tapyrii, Mediani, Caspii, Cadnusii, Gedei, and the Medii or Amardi. (See these under their respective names.) Herodotus proceeds to state that originally the Medes were a free people, who lived in separate villages, but that at length they chose for themselves a king in the person of Deioces, who built the celebrated city of Ecbatana (Ecbatanama), and was succeeded by Paraortes and Cyaxares (i. 95—103). The reign of the former was, he adds, terminated by a defeat which he sustained (at Ephes, Iul. eth. 15); while, during the commencement of that of the latter, all Western Asia was overrun by a horde of Scythians (i. 103). There can be no doubt that for awhile they were subject to, and formed a satrapy of, the Assyrian empire, as stated by Diodorus (ii. 2): that then they threw off the Assyrian yoke, as stated by Herodotus (i. 106), and were ruled over by a series of kings of their own for a long period. (Cf. Strab. xi. p. 524.) The order and the names of these rulers are differently stated; and it would be out of place here to discuss at length one of the most difficult and disputed points of ancient chronology. (Cf., however, Diod. ii. 24, 32; Herod. i. 95; and Euseb. Chron. Armen. i. 101; Clinton, Fast. Hellen. vol. i. p. 257, app.) It may be remarked, that in the Bible the first notice we find of the Medes, exhibits them as the subjects of the Assyrian king Sennacherib (2 Kings, xvii. 6), who was contemporaneous with the Jewish king Hezekiah; while in the later times of Nebuchadnezzar, they appear as a warlike nation, governed by their own rulers. (Iaith, xiii. 17; Jerem. xxv. 25, i. 11, 28.) It is equally clear that the Medians were united to the Persians by Cyrus, and formed one empire with them (Herod. i. 129; Diod. ii. 34; Justin, i. 6), and hence are spoken of in the later books of the Bible as a people subject to the same ruler as the Persians. (Iom. vi. 28, viii. 29; Euth. i. 3, &c.) From this time forward their fate was the same as that of the Persian monarchy; and they became in succession subject to the Greeks, under Alexander the Great, to the Syro-Macedonian rulers after his death, and lastly to the Parthian kings. (Cf. 1 Marc. vi. 56, xiv. 2; Strab. xvi. p. 743; Joseph. Antiq. xx. 3. § 3.) The consent of history shows that in early times the Medes were held to be a very warlike race, who had a peculiar skill in the use of the bow. (Iaith, xiii. 18; Herod. vii. 62; Xen. Antiq. ii. 1. § 7; Strab. xi. p. 525.) They had also a great knowledge and practice in horse-riding, and were considered in this, as in many other requirements, to have been the masters of the Persians. (Strab. xv. pp. 563, 526, 531.) Hence, in the armament of Xerxes, the Medes are described as equipped similarly with the Persians, and Herodotus approves the statement. (Cf. Diod. i. 27.) Their horses and weapons were of a sort to fit them for the horseman, not Persian origin (i. c.). In later ages they appear to have degenerated very much, and to have adopted a luxurious fashion of life and dress (cf. Xen. Cyrop. i. 3. § 2; Strab. l. c.; Aelian. xxiii. 6), which passed from them to their Persian conquerors.

MEDIOLANUM.

The religion of the Moesians was a system of Star-worship; their priests bearing, as we have remarked, the name of Magi, which was common to them with the Persians, indeed was probably adopted by the latter from the former. (Xen. Cyrop. iv. 5; Strab. xv. pp. 725, 735; Cie. Divin. i. 33.) The principal object of their adoration was the Sun, and then the Moon and the five planets, Jupiter, Venus, Saturn, Mercury, and Mars. (Cf. Herod. vii. 62.)

MEDIAE NARBUS, mentioned only by name by Nepomphon, who calls it Μεδίας καλοκαιρνος τεχνης. (Austmot. iv. § 12.) He states that it was 20 parasangs in length, 100 feet high, and 20 broad; and it may be inferred from his narrative that it was from 30 to 40 miles to the N. of Bagdad. There can be little doubt that it was the same work as that called by Strabo in two places Μεδίας θαλαμός τεχνης (ii. p. 80, xi. p. 529), and that it had been built across the strip of land where the Tigris and Euphrates approach most nearly, as a defence to the province of Babylon, which lay to the S. of it. There has been much question, whether this great work can be identified with any of the numerous mounds still remaining in this part of Mesopotamia; but the question has, we think, been set at rest by the careful survey of Lieut. Lynch, in 1837. (Roy. Geog. Journ. vol. ii. p. 472.) Mr. Lynch places the end adjoining the Tigris in N. lat. 34° 30', and long. 32° 15' W. of Bagdad. He describes the existing ruins as an embankment or wall of lime and pebbles, having towers or buttresses on the northern or NW. face, and a wide and deep fosse; and states, that, putting his horse at its full speed, he galloped along it for more than an hour without finding any appearance of termination. The natives, too, assured him that it extended to the Euphrates.

MEDIUM, AD. [Dacia, Vol. i. p. 744, b,]

MEDIAXA, an imperial villa, 3 miles from Naissus, in Upper Moesia. (Ann. Marc. xxvi. 5.) A town of this name is mentioned, in the Peuting. Table, on the road leading through Rastia along the Dunbe, opposite to Donawerth, and seems to be the same as the modern Medingem. [L. S.]

MEDIOLANUM, a Gallic name of towns which occurs in Gallia, North Italy, but its precise meaning is unknown. 1. Mediolanum is placed in the Table between Forum Segusianorum (Fours) and Bobonna (Rosanne). As to D'Anville's remarks on the position of Mediolanum, see Forum Segusianorum. This Mediolanum is supposed to have been a town of the Transalpine Insediores, and so it is generally marked in our maps; but the existence of these Transalpine Insediores is hardly established. (Galla Chalpa, Vol. i. p. 936.)

2. The Table places Mediolanum between Argentomagus (Argutum) and Aquae Nerae (Noves). The figures which have been generally considered to belong to this road, belong to another, and so we have no distances in the Table for this place. Mediolanum seems to be Chateau Meillon, south of Avaricum (Bourges). A milestone found at Alligny between Bourges and Chateau Meillon, marks the distance from Avaricum to Mediolanum to be 39 M. P., which is not far from the truth. (Walckenaer, Géog. &c. vol. i. p. 67.)

3. The Antonine Itin. places a Mediolanum on a road from Colonia Traiana (Kulha) to Colonia Agrippina (Coligny), and 12 M. P. from Colonia Traiana. If Colonia Traiana is rightly placed, it is
difficult to see where Mediolanum should be. The next position to Mediolanum on the road to Cologne is Sulzbach; which is also uncertain.

3. Mediolanum was the chief town of the Audravi Eburovices (Ptol. ii. 8. § 11), or Mediomatrici, as it is in Ptolemy's text. The name occurs in the Antonine Itin. and in the Table. In the Notitia of the Gallic provinces it is named Civilis Eburovices; and in the middle ages it was called Eburon, whereas the modern name Eureux, a town in the French department of Oise.

Ammianus Marcellinus (xxv. 11) mentions Mediolanum as one of the chief cities of Secunda Lugdunensis. There was a Roman town a few miles south-east of Eureux, at a place called Veli Eureux. There are the remains of a large theatre here, the foundations of a building which is supposed to have been a temple, and remains of baths. A great number of amphorae, household utensils, articles of luxury, and imperial medals have been dug up here, and deposited in the Museum of Eureux. This Veli Eureux may be the site of Mediolanum.

5. Mediolanum was the chief town of the Santones or Santoni, new Saints, in the French department of Charante Inferieure. Strabo (iv. p. 190) writes the name Mediolanum, and also Ptolemy (ii. 7. § 7). Marcellinus (xxv. 11) speaks of this place under the name of Santaritum, from which it appears that in his time the name of the people had, as in many instances, been transferred to the town. There is no doubt about the site of this Mediolanum, which is Saints on the Charante. It was once a considerable Roman town. There is an arch in honour of Germanicus Caesar, which appears to be built on the middle of the bridge over the Charante, which joins the town to the Fauborg, but the arch rests on the bed of the river, and the bridge has been built to it from each bank. The most probable explanation of this singular circumstance is that the arch stood originally on one bank of the river, and that the river changed its course. The bridge, of course, must have been built after this supposed change.

The amphitheatre is outside of the town, at the bottom of a valley. It is an ellipse, about 436 feet long and about 354 feet wide. Water was brought to the town from a source several miles to the north by a very considerable aqueduct, of which there are still some remains. In one of the valleys which it crossed there are traces of 25 arches, of which three are standing. Of one there is nearly 50 feet high. [G.L.]

MEDIONA NUM (Mediolanum, Pol.; Mediolamus, Strab., Ptol.; Eth. Mediolanensis; Milano, Milan), the chief city of the Insulare in Cispalpine Gaul, and for a long period the capital of Cispalpine Gaul itself. It was situated about midway between the rivers Ticinus and Alcina, in a broad and fertile plain, about 28 miles from the foot of the Alps at Cenum, and the same distance from the Padus near Ticinum (Parina). All ancient writers concur in ascribing its foundation to the Gauls, at the time that people first established themselves in the plains of Northern Italy. Livy, who has given the most detailed account of the settlement of the Cispalpine Gauls, tells us it was founded by the Insulare, who called themselves the Auresi, of which there are still some remains in Transalpine Gaul (Liv. v. 34; Strab. v. p. 213; Plin. iii. 17. s. 21; Justin. xx. 5.) There can be little doubt that Strabo is correct in saying that, previous to the Roman conquest, it was rather a village than a town, as were indeed all the other Gaulish settlements. It was nevertheless the chief place of the Insulare, and is mentioned as such several times in the history of the wars of that people with the Romans. Thus, in the campaign of B. C. 222, after the battle of Chaeridium, it was attacked and taken by the Roman consuls Claudius Marcellus and Cn. Scipio. (Ptol. ii. 34; Eutrope iii. 6; Coss. iv. 13.) On this occasion it was taken by assault with apparently but little difficulty, and this confirms the statement of Strabo that it was an open town. Again, in B. C. 194, a battle was fought near it, between the Roman proconsul L. Valerius Flaccus and the combined forces of the Insulare and Boii, under a chief named Doryclis, in which the Gauls are said to have lost 10,000 men. (Liv. xxiv. 46.)

Another mention of Mediolanum occurs previous to the Roman conquest, nor have we any precise account of the time at which it passed under the Roman yoke, or that at which it was admitted to the Roman civitas. We can only infer that it must have submitted, together with the rest of the Insulare, about 190 B. C.; its citizens doubtless received the Latin franchise, together with the other Transpadane Gauls, in B. C. 89, and the full Roman franchise in B. C. 49. [GALLIA CISPALPINA, Vol. i. p. 945.] Mediolanum thus passed into the condition of a Roman municipium, but it did not as yet enjoy that degree of importance which it subsequently attained. Strabo calls it in his time a considerable city (volo. 264-266, v. p. 213), and Tacitus reckons it among the "firmissima Transpadane regionis municipia," but neither he nor Pliny give any indication of its possessing any marked superiority over the other municipal towns with which it associate its name. (Plin. iii. 17. s. 21; Ptol. iii. 1. § 33; Tacit. Hist. i. 70.) It is evident, however, that under the Roman Empire it increased rapidly in prosperity, and became not only the chief town of the Insulare, but the most important city in Northern Italy. We learn from the younger Pliny that it was a place where literature flourished, and young men from the neighbouring towns were sent for their education. [Plin. Ep. iv. 13.] It was the native place of the emperor Didius Julianus, as well as of Septimius Secundus. [Dion Cass. lxxiii. 11; Soparian. Did. Pol. i. 4. 3.] At a later period, A. D. 268, it was there that the usurper Aurelius took refuge after his defeat by the emperor Julian, and was for some time besieged by the emperor, till a sedition in his own camp ended in the death of Gallicus, and his brother Valerianus. (Eutrop. ix. 11; Treb. Poll. Gall. 14; Vict. Caes. 33, Epit. 33.) Shortly after Aurelius was compelled to surrender the city to Claudius, who had been elected to succeed Gallicus, and was put to death by order of the new emperor. (Treb. Poll. Chor. 5.)

But it was the establishment of the imperial residence at Mediolanum that raised that city to the highest pitch of prosperity. Its central position, which rendered it a peculiarly suitable head-quarters from which to watch the movements of the barbarians, and the progress of the wars with them, whether in Gaul, Germany, or Pannonia, was undoubtedly the cause of its selection for this purpose. Emperor Aurelius himself is said to have sometimes repaired to Mediolanum with the same view (Suet. Aug. 20); and the constantly increasing dangers from these quarters led subsequent emperors from time to time to follow his example; but Maximan appears to have been the first of the Roman emperors who permanently fixed his residence there (about A. D. 305),
and thus at once raised it to the dignity of the capital of Northern Italy. From this period the emperors of the West made it their habitual abode (Eutrop. ix. 27; Zosim. ii. 10, 17, &c.), until the increasing fear of the barbarians induced Honorius, in A.D. 404, to take refuge in the inaccessible marshes of Ravenna. Maximian is said to have inhabited it with many splendid public buildings and a theatre (Vit. Cons. 39); and it was doubtless at this period that it rose to the splendour and magnificence which, about the middle of the fourth century, excited the admiration of the poet Ausonian, who assigns it the sixth place among the cities of the empire. The houses are described by him as numerous and elegantly built, corresponding to the cultivated manners and cheerful character of the inhabitants. It was surrounded with a double range of walls, enclosing an ample space for the buildings of the city. Among these were conspicuous a circus, a theatre, many temples, the palace or residence of the emperor, a mint; and baths, which bore the name of Heraclean, in honour of their founder Maximianus, and were so important as to give name to a whole quarter of the city. The numerous porticos which were attached to these and other public buildings were adorned with marble statues; and the whole aspect of the city, if we may believe the poet, did not suffer by comparison with Rome.

(Auson. Clar. Urbs. 5.)

The transference of the imperial court and residence to Ravenna must have given a considerable shock to the prosperity of Mediolanum, though it continued to be still regarded as the capital of Liguria (as Gallia Transpadana was now called), and was the residence of the Consularis or Viciuris Italianus, whose jurisdiction the whole of Northern Italy was subject. (Libell. Provinc. ii. 62; Eicking, ad Not. Dig. ii. p. 442.) But a much more severe blow was inflicted on the city in A.D. 452, when it was taken and plundered by Attila, who after the fall of Aquileia carried his arms, almost without opposition, through the whole region N. of the Po. (Jornald. Get. 42; Hist. Miscell. xvi. p. 549.) Notwithstanding this disaster, Mediolanum seems to have retained much of its former importance. It was regarded as the metropolis of Northern Italy, and after the fall of the Western Empire, in A.D. 476, became the royal residence of the Gothic kings Odoacer and Theodoric. Procopius indeed speaks of it in the sixth century as surpassing all the other cities of the West in size and population, and inferior to Rome alone. (Procop. B. G. ii. 8.) It was recovered with little difficulty by Belisarius, but immediately besieged by the Goths under Urala, the brother of Vitiges, who, after a long siege, made himself again master of the city (A.D. 539), which he is said to have utterly destroyed, putting all the male inhabitants, to the number of 300,000, to the sword, and reducing the women to slavery. (Ibid. 21.) It is evident, however, that the expressions of Procopius on this occasion must be greatly exaggerated, for, at the time of the invasion of the Lombards under Alboin (A.D. 568), Mediolanum already recovered in little less than its former importance. It was still the acknowledged capital of Liguria (P. Diet. Hist. Lang. ii. 15, 25), and, as the metropolis of the sea, appears to have retained this dignity under the Lombard kings, though those monarchs transferred their royal residence to Ticinum or Parma. In the middle ages it rapidly rose again to prosperity; and, though a second time destroyed by the emperor Frederic Barbarossa in 1162, quickly recovered, and has continued down to the present day to be one of the most important and flourishing cities of Italy.

The position of Milan, almost in the centre of the great plain of Northern Italy, just about midway between the Alps and the Padus, appears to have had a direct influence on its extent, which is the most extensive and fertile region. Its ready communications with the Ticinus on the one side, and the Adda on the other, in great measure supply the want which would otherwise have arisen from its not being situated on a navigable river; and the fertile plain between these two rivers is watered by the minor but still considerable streams of the Lambro and Olona. The latter, which is not noticed by any ancient writer, flows under the walls of Milan. The modern city contains few vestiges of its ancient splendour. Of all the public buildings which excite the admiration of Ausoinus (see above), the only remains are the columns of a portico, 16 in number, and of the Corinthian order, now attached to the church of S. Lorenzo, and supposed, with some probability, to have been originally connected with the Thermæ or baths erected by the emperor Maximian. A single column, now standing in front of the ancient basilica of Sant'Ambrogio, has been removed from some other site, and does not indicate the existence of an ancient building on the spot. Numerous inscriptions have, however, been discovered, and are still preserved in the museum at Milan. These fully confirm the municipal importance of Mediolanum under the early Roman Empire; while from one of them we learn the fact that the city, notwithstanding its flourishing condition, received a colony under Hadrian, and, assumed, in honour of that emperor, the titles of Colonia Aelina Augusta. (Orell. Inscr. 1762, 1909, 3942, 4000, 4060, &c.; Zumpt, de Colon. p. 409.)

Mediolanum was the central point from which all the highways of Italy N. of the Padus may be considered as radiating. The first and principal of these was that which led by Lompeo to Placentia, where it joined the Via Aemilia, and thus became the direct line from Milan to Pavia and Vienne and Rome. Another main line was that by Novaria and Verecellae to Eporedia and Augusta Praetoria, which must have been the principal line of communication between Milan and Trans-alpine Gaul. A third road led in a southerly direction to Ticinum (Parma), from which there were two lines; the one proceeding by Launellum to Augusta Taurinorum, and thence over the Cottian Alps into the southern provinces of Gaul; the other crossing the Padus to Bertona, and thence across the Apenines to Genoa. A fourth line was that to Comum, from whence there was a much frequented pass by the Lucus Larium, and across the Béhactin Alps into the valley of the Inn, thus opening a direct and speedy communication with the Danube. Lastly, a great line of highway led from Milan to Aquileia, passing through Bergomum, Brixia, Verona, Vicentia, Patavium, Altinum, and Concordia. The details of all these routes are given in the Antonine Itinerary and the Tabula Peutingeriana.

[ E. H. B. ]

MEIOLANUM (H. h. Ant. ; MeÌÀdoìÀw, Pol. ii. 3§ 18), a town of the Ordevers in Britain. It occurs in the H. h. Ant., between Deva (Chester), and Uricomium (Woaster), two towns, the sites of which are well authenticated; and in the
MEDIOLANUM.

MEDIOLANUM (Mēdiolānōm, Plut. i. 11 § 28), a town in the north-west of Germany, mentioned only by Ptolemy; its site must in all probability be identified with the modern Metz, on the river Mecht. As the name Mediolanum is found only in countries inhabited by Celts, it has been supposed that Ptolemy is wrong, and that he by mistake placed this town on the right bank of the Rhine but there is no good reason for doubting that the country about the Mecht was at one time occupied by a Celtic people.

MEDIOMATRICI (Mēdiomātricī, Plut. ii. 9 § 12), a people of Gallia, who belong to the division of Belgica. Caesar (B. G. iv. 10) shows their position in a general way when he says that the Rhine flows along the territories of the Sequani, Mediomatrici, Triboci or Tribocii, and Treviri. Ptolemy places the Mediomatrici south of the Treviri. Diodorus (Metz) was their capital. [DIVODURUM.] The diocese of Metz represents their territory, which was accordingly west of the p. 756. But Caesar makes the Mediomatrici extend to the Rhine, and consequently they had in his time the country between the p. 756 and the Rhine. And this agrees with Strabo (p. 193), who says that the Sequani and Mediomatrici inhabit the Rhine, among whom are set the Tribocii, a German nation which had crossed over from their own country. It appears then that part of the territory of the Mediomatrici had been occupied by Germans before Caesar's time; and as we know that after Caesar's time the German tribes, Nemetes, Vangiones, and Caracates occupied the Gallic side of the Rhine, north of the Triboci as far as Mainz, and that north of Mainz was the territory of the Treviri, we may infer that all these tribes were intruders on the original territory of the Mediomatrici.

MEDION. [Meteor.] MEDITERRANEUM MARE. [INTERNUM MARE.] MEDMA or MESMA (Μέθυεα, Steph. B.; Μέθυγμα, Strab., Scymn. Ch.; but Methuma on coins, and so Apollodorus, cited by Steph. B.; Scylax has Mētia, evidently a corruption for Μέθυεα: Lth. Méthumioi, Μέθυματοι), a Greek city of Southern Italy, on the W. coast of Italy, a little to the south of the Lipari Islands. It is said to have derived its name from an adjoining fountain. (Strab. vi. p. 356; Scyl. p. 4. § 12.) It was a colony founded by the Ephebians of Locrians, and is said to have been occupied by it for many centuries. (Strab. vi. ; Scymn. Ch. 308; Steph. B. s. v.) But though it is repeatedly noticed among the Greek cities in this part of Italy, it does not appear ever to have attained to any great power or importance, and its name never figures in history. It is probable, however, that the Medimnaeans (Μέθυματοι), who are noticed by Diodorus as contributing a body of colonists to the re-peopling of Messana by Dionysius in B.C. 396, are no other than the Medimnaeans, and that we should read Méthyma in the passage in question. (Diod. xiv. 78.) Though never a very conspicuous place, Medina seems to have survived the fall of many other more important cities of Magna Graecia, and it is noticed as a still existing town both by Strabo and Pliny. (Strab. l.c.; Plin. iii. 5. s. 10.) But the name is not found in Ptolemy, and all subsequent traces of it disappear. It appears from Strabo that the town itself was situated a little inland, and that it had a port or emporium on the

MEOACUS.

MEOACUS (Μέθυματος, Μέθυματος), a town of Caria, situated somewhere in the peninsula between the Ceranian and Iasian gulf, not far from Myrinus. (Plin. v. 29; Steph. B. s. v.; Hecat. Frang. 236.) It is probably the same town as the one which Stephanus elsewhere calls Μέθυματος; its site is unknown. [L. S.] MEDUSA or MEUDACUS (Μέδύατος, v. 213), a river of Northern Italy, in the province of Venetia, falling into the extensive lagoons which border the coast of the Adriatic, in the neighbourhood of the modern Venice. According to Pliny (iii. 16. s. 20), there were two rivers of the name, but no other author mentions more than one, and Livy, a native of the region, mentions the "Medusae annis" without any distinctive epithet. (Livy xii. 2.) There can be no doubt that this is the river now known as the Brenta, which is a very considerable stream, rising in the mountains of the Val Segana, and flowing near Padua (Patavium). A short distance from that city it receives the waters of the Bacchiglione, which may probably be the other branch of the Medoacus meant by Pliny. Strabo speaks of a port of the same name at its mouth (Μέθυματος λιμήν, v. 213), which served as the port of Patavium. This most evidently be to which Pliny gives the name of Vomatus or Venetus, and which was formed by the "Meduci dux et Fossa Clodia;" it is in all probability the one now called Porto di Lido, close to Venice. The changes which have taken place in the configuration of the lagoons and the channels of the rivers, which are now wholly artificial, render the identification of the ports along this coast very obscure, but Strabo's statement that the Medoacus was navigated for a distance of 250 stadia, from the port at its mouth to Patavium, seems conclusive in favour of the Porto di Lido, rather than the more distant one of Chiozza. At the present day the Brenta flows, as it were, round the lagoons, and enters the sea at Brindisi, evidently the Portus Brandulus of Pliny (l. c.); while a canal called the Canale di Brenta, quitting the river of that name at Dol, holds a more direct course to the lagoons at Faicino. This canal may perhaps be the Fossa Clodia of Pliny.

Livy tells us that, in B.C. 301, Cleonymus the Lacedaemonian arrived at the mouth of the Medoacus, and having ascended the river with some of his lighter vessels, began to ravage the territory of the Patavini, but that people repelled his at-
tacks, and destroyed a considerable part of his fleet.

MEDOBIRGA, a town in Lusitania (Hort. B. Alex. 48), the inhabitants of which are called by Pliny (v. 22. s. 33) Medubircenis Phumbari, is the same place as MUNOBIRGA, or MONTOBIRGA, which is placed in the Antonine Itinerary (p. 420) on the road from Scalabis to Emerita. There are ruins of the ancient town at Murrao, on the frontiers of Portugal. (Resendil. Ant. Lus. p. 58; Florez, Esp. Supr. xiii. p. 66.)

MEDOSLANIEM (MEodoslanum), a town in the southernmost part of Germany (Ptol. ii. 11. § 80), which must have been situated a few miles to the north of Vienza. Its exact site is only matter of conjecture. [L. S.]

MEDUACUS. [MEDOACUS.]

MEDUANA (Mogane), a branch of the Liger, in Gallia. The name may be ancient, but the verse of Lucan in which it occurs is spurious. [Lucan.] [G. L.]

MEDUANTUM, in Gallia, is placed in the Table on a road from Durnserortum (Keinea) through No- vicionaicus, Mese or Masa (Mousion), to Meduantum, an unknown site. [G. L.]

MEDULI, a Gallic people on the coast south of the Garumna (Garumae). Ausonius (Ep. 4) says to Theon:—

"Quam tamen exercer Medinorum in Rore vitam."

He says in another Epistle to Theon (Ep. 5):—

"Utus Damastoni te litorum perfecit aestas.
Condiam ad portum, si modo depereas." [As to this Condatis Portus, see Condate, No. 6.]

Ausonius (Ep. 7) thanks Theon for sending him some of the oysters, equal to those of Bizae, which were fattened in the "stegax Medulorum." The country of the Meduli corresponds to Jédeon in the French department of the Girond. [G. L.]

MEDULLI (MEDOvalas, Strabo), an Alpine people, whose name occurs in the inscription on the arch of Susa and on the Trophy of the Alps (Plin. iii. 20), where they are placed between the Acctavones and Uceni. Ptolemy (ii. 10. § 11) places the Allobroges "under the Meduli," as the name is there written, by which he means that the Meduli were near the country nearer to the Alps. Strabo's description of the position of this people is clear (iv. p. 293):—"After the Veccontii are the Sic- eiffi (Icuni), and Trierici, and then the Meduali, who occupy the highest summits (of the Alps); now they say that the highest part of their country has an ascent of one hundred stadia, and thence to the borders of Italy the descent is as much: and above, in certain hollows, there is a great lake, and two springs not far from one another; and from one of these flows the Druencus (Durance), a torrent stream which flows down to the Rhodanus, and the Durian (Dorion) runs in the opposite direction, for it joins the Felix (Po), flowing down through the country of the Salassi into Celte south of the Alps." When Strabo says further (iv. p. 204) that the Medulli lie as near as may be (άλλατα) above the confluence of the Isera and the Rhone," he is not speaking of distance, but of direction or position; for he adds "and the other side of the mountain country above described, the part that slopes towards Italy, is occupied by the Taurini, a Ligurian people, and other Ligures." The conclusion is easy that the Medulli were in the Matuirea, north and south of the town of S. Jean de Maurienne, and enclosed between the Triantana and Durian. The lake supposed by D'Anville and by Walckenaer (Géogr. vol. ii. p. 31) to be that on Mont Cenis; and Walckenaer adds "that it is exactly 200 Olympic stadia from Step to the termination of the descent, 7 miles west of Asta." But this is a false conclusion, derived probably from Strabo's remark about the Durian flowing through the country of the Salassi; the stream which flows through the country of the Salassi is the Doria Boltea, but the stream which rises near the Durian is unknown.

D'Anville supposed that Strabo made the Alps in the country of the Medulli 100 stadia in perpendicular height, which absurd mistake has been followed by the French translators of Strabo. Walckenaer has corrected it; but he has erroneously made Ptolemy place the Medulli immediately north of the Allobroges, instead of to the south-east. Vitruvius (viii. 3) speaks of the golpes of the Medulli, a disease supposed to arise from the water which they drank.

MEDULLIA (MEDULIA: Eta, MEDUÁDis, Med- dulinium), an ancient city of Latium, which is repeatedly mentioned in the early history of Rome; but, like many others, had disappeared at a comparatively early period. According to Dionysius it was one of the colonies of Alia; and Diodorus also includes it among the cities of which he ascribes the foundation to Latinus Silvius. (Dionys. iii. 1; Bod. viii. ep. esc. Arm. p. 185.) We are told that it fell into the power of Romulus by the voluntary submission of the inhabitants after the fall of Cras- tunerium, and many of its citizens migrated to Rome, among whom was the father of Tullus Hosti- nius. (Dionys. iii. 36, ii. 1.) But in the reign of Ancus Marcius it was again conquered by the Latins, who held it for above three years, when the Roman king a second time reduced it. (Id. iii. 38.) Livy, however, says nothing of this reconquest, but treats its fall as a Latin city, and enumerates it among those of the Prisci Latini which were taken by Tar- quinius Priscus. (i. 33, 38.) At a somewhat later period it is mentioned for the last time, in n. c. 492, as abandoning the Roman alliance, and joining the Sabines. (Dionys. vi. 34.) We have no account of the period of its destruction, but it is not noticed by any of the geographers, and Pliny tells us that it was no longer in existence in his time (iii. 5. s. 9.)

The name of Medulla is found in Livy associated with those of Cornulum, Ficuloe, Carstunarium, and Nomentum, of which the site is approximately known, as well as with Americula and Caineria, of which the position is as uncertain as that of Me- dullia itself. All three were probably situated in the neighbourhood of the cities just mentioned; but this is all that can be asserted with any confidence.

Gell and Kirby have described the remains of an ancient city, at a spot called Marecclina, about 4 miles from Palombara, at the foot of the lofty Monte Genaro, which the former writer supposed to be Medullia. The remains in question, consisting of considerable portions of walls of polygonal construction, enclosing a triangular area, are unquestionably those of an ancient city; but its identification is wholly uncertain; the situation would suit equally well for Caineria or Anseriola, as for Me- dullia. Kirby believes it is the seat of the Battle of Monte di Capo Cappa, on the highest summit of the Cornulean hills; where there also remain ancient walls, supposed by Gell to be those of Cornelium
Megalopolis. 307

Megapolis was the place of meeting of the Arcadian confederation which was now formed. The council of the confederation was called the Ten Thousand (αἱ μίσθωσιν), and consisted of representa-
tives of all the Arcadian states, except Orchomenus and Heraea. The number must be regarded as an
indefinite one and it is probable that all the citi-
zens of the separate states had the right of attending
the meetings. (Xen. Hell. vi. 5. § 6, vii. 1. § 88; 
Diod. xv. 59; Pans. vii. 32. § 1; Dem. de Fals.
Legy. p. 344.) A body of troops, called Epipori
(Επιπόροι), was raised for the service of the confe-
deration; their number was 5000 (Xen. Hell. vii. 4.
§ 84, vii. 5. § 3; Diod. xi. 62, 67.) The new con-
federation succeeded for a time in giving a certain
degree of unity of sentiment and action to the Arca-
dians; but its influence gradually declined; and the
city of Megapolis never attained that importance
which its founders had anticipated, and which had
caused it to be laid out on a scale too large for the
population collected within its walls. (Polyb. ii.
55.)

Upon the decline of the Theban power, the Spar-
tans directed their attacks against Megapolises; but
these were easily repelled; and upon the rise of
the Macedonian power the Megalopolitans formed a close
alliance with Philip, and subsequently with Alex-
ander, as their best security against their formidable
neighbors. After the death of Alexander they
continued faithful to the Macedonian alliance; and
refused to join the other Greeks against Antipater.
In the contest between Polyperchon and Cassander,
Megapolis espoused the side of the latter; in conse-
quency of which Polyperchon laid siege to the city
in b. c. 318. It was, however, bravely defended by
its inhabitants, under an officer named Damius; and
though Poly-perchon succeeded in making a breach
in its walls, he was finally repulsed with loss. (Diod.
xxviii. 70, 71.) We learn from Diodorus (I. c.) that
the territory of Megalopolis possessed at the time
15,000 men capable of bearing arms, which im-
plies a population of about 65,000 souls. After
this time Megalopolis was governed by tyrants, of
whom the first was Aristocles, a Phigalian by birth,
who, on account of his good qualities, was
called Νυστρός. During his reign the Spartans,
under their king Arcotatus, the son of Ares, and
grandson of Cleonymus I., attacked Megalopolis,
but were defeated, and Arcotatus was slain. (Pans.
vi. 27. § 11, who erroneously calls Arcotatus the
son of Cleonymus.) Two generations later Lydiades,
a native of Megalopolis, became tyrant of the city,
but he voluntarily resigned his power in b. c. 222,
and united Megalopolis to the Achaean League.
(Pans. vii. 27. § 12, seq.; Polyb. ii. 44.) In b. c.
222, Cleomenes III. surprised Megalopolis; the
greater part of the inhabitants succeeded in making
their escape to Messene; but, after plundering the
city, he laid the greater part of it in ruins. (Pans.
vi. 27. § 15, seq.; Polyb. ii. 55; Phil. Philipp. 5,
Clem. 25.) Soon after the defeat of Cleomenes at
the battle of Sellasia (b. c. 221), the Megalopolitans
began to rebuild their city; but a dispute arose
among them respecting its size. One party wished
the compass of the walls to be contracted, that they
might be the more easily defended; and the other

X 2
Megalopolis.

insisted upon preserving the former dimensions of the city. The former party, through the mediation of Aratus, appear to have prevailed, and the city was unfortunately rebuilt in its original magnitude. (Polyb. v. 93.) The fortifications were sufficiently strong to resist the attack of the tyrant Nabis (Plut. Philip. 13); but they were again suffered to fall into decay; and even as soon as B. C. 175, we find that Antiochos IV. Epiphanes promised the Megalopolitans to surround their city with a wall, and gave them the greater part of the necessary money. (Liv. xii. 20.) Polybius remarks (ix. 21) that the population of Megalopolis in his time was only the half of that of Sparta, although it was two stadia greater in circumference. So much was it reduced, that a comic poet, quoted by Strabo, described "the Great City as a great desert" (Aeneid. μεγάλας ἔρημος ἦ Μεγαλῆ πόλις, viii. p. 388). accustomed as Pausanias was to the sight of fallen cities, the ruined condition of Megalopolis appears to have particularly impressed him, and gave rise to the reflections which he has inserted after his description of the city (vii. 33). Megalopolis was the birthplace of Philopoemen, and of the historian Polybius.

Megalopolis was situated in the middle of a plain, and, unlike the generality of Grecian cities, possessed no height, which might be converted into an acropolis. Mantinea, which was also rebuilt about the same time, was placed in a level situation, instead of its old position upon a hill. A level situation appears to have been chosen as more convenient for a large population than the rocky heights upon which the old Greek cities were built; while the improvements which had been made in the art of fortifying cities enabled their inhabitants to dispense with natural defences. The city lay upon either bank of the Helisson, which flowed through it from east to west, and divided it into nearly two equal parts.

The Helisson flows into the Alpheius about 2½ English miles from the city. The southern half of the city was called Orestia (Orestesia). From an ancient settlement of the Marmalians upon this spot. (Steph. B. z. v. Μεγάλη πόλις.) The ruins of Me-

galopolis are near the modern village of Stinada; but almost all trace of the walls has disappeared, because they were probably built, like those of Mantinea (Xen. Hell. v. 2 § 5; Paus. viii. 8 § 5), of unburnt bricks. Pausanias has given a particular description of the public buildings (viii. 30—32), the site of some of which may still be fixed by the existing remains. The two most important were the theatre, on the left or southern side of the river, and the Agora on the right. The colossal remains of the theatre are conspicuous in the whole plain. Several of the seats remain, and a part of the wall of the cavea. It is described by Pausanias (viii. 32 § 1) as the greatest theatre in Greece, and was 480 feet in diameter. Pausanias says that in the theatre there was a perennial fountain, which Lenæus could not find, but which Ross noticed in the Orchestra; it is now covered with rubbish, so that it is not visible, but in dry seasons it makes the ground quite moist and slippery. On the eastern side of the theatre was the stadium, the position of which is indicated in the shape of the ground near the river. Here is a fountain of water, which Pausanias says was in the stadium, and was sacred to Dionysus. On the eastern side of the stadium was a temple of Dionysus; and below the stadium, towards the river, was a sanctuary of Aphrodite, and an altar of Are. Ross supposes a circular foundation close to the bank of the river to be the altar of Areas, and a quadrangular foundation between this and the theatre to be the temple of Aphrodite. East of the temple of Dionysus there is another source of water, also mentioned by Pausanias, by which we can fix the position of the temple of Asclepius the Boy; above which, on a lofty hill, was a temple of Artemis Agroteria. West of the theatre was the Thersilion, named from the person who built it, in which the Ten Thousand were accustomed to meet; and near it was a house, built originally by the Megalopolitans for Alexander, the son of Philip. In this same locality there were a few foundations of a temple sacred to Apollo, Hermes, and the Muses.

Opposite the western end of the theatre there are, on both sides of the river, but more especially on the northern bank, large masses of square stones. These are probably the remains of the principal bridge over the Helisson, which led from the theatre to the Agora on the northern side of the river. The Agora was built on a magnificent scale, and extended along the river close to the western walls of the city; since Pausanias, who entered Megalopolis upon this side, immediately came upon the Agora. As Pausanias has given a fuller description of the Agora of Megalopolis than of any other in Greece, the following restoration of it (taken from Curtius) may be found useful in understanding the general form and arrangement of such buildings.

In the centre of the Agora was an inclosure sacred to Zeus Lycaon, who was the tutelary deity of all Arcadia. It had no entrance; but the objects it contained were exposed to public view; here were seen two altars of the god, two tables, two eagles, and a statue in stone of Pan. Before the sacred inclosure of Zeus there was a statue of Apollo in brass, 12 feet high, which was brought from Bassae by the Philigrians, to adorn the new capital; it survived the destruction of the city, and is represented on coins of Septimius Severus. This colossal statue probably stood on the west side of the sanctuary of Zeus. To the south of the colossal statue was the temple of the Mother of the Gods, of which
only the columns remained in the time of Pausanias.

MEGALOPOLIS.

On the northern side of the Agora lay the Stoa of Philip, the son of Amyntas, which was named in honour of this king, on account of the services he had rendered to Megalopolis. Near it were the remains of the temple of Hermes Acaeusinos. Alongside of the Stoa of Philip, was another smaller Stoa, containing the Archives (τὰ ἀρχεῖα), and consisting of six compartments. Behind the Stoa of the Archives was a temple of Tyche (Fortune).

The Stoa called Myropolis, where the shops of the perfumers stood, was probably on the eastern side of the Agora. It was built from the spoils of the Laconaeans under Acrotatus, when they were defeated by Aristodemos. Between it and the sanctuary of Zeus was the statue of Polypius. To the left of this statue was the Bonleuterium, or ΗΝΕΟΣ ΠΙΘΥΟΣ. In the south of the Agora may be placed the Stoa of Aristander, named after its founder. At the eastern end of this Stoa, was a Peripetal Temple of Zeus Soter, containing a statue of the god seated between the goddesses Megalopolis and Artemis Soteira. At the other, or western end of the same Stoa, was the sacred inclosure of the Great Goddesses Demeter and Kore (Persephoni), containing several temples. The Gymnasion stood on the western side of the Agora.

To the north of the Agora, behind the Stoa of Philip, there were two small heights, on one of which stood the ruins of the temple of Athena Polias, and on the other those of Hera Teleia. The foundations of these temples are still visible. At the foot of the temple of Hera Teleia was the stream Batrhis, flowing into the Helissos. Parallel to the Batrhis is another stream; and the hill between these two streams is, perhaps, the Scolenia mentioned by Pausanias (VIII. 31. § 7), who says that it lies within the walls, and that a stream descends from it to the Helissos.

Some excavations were made on the site of Megalopolis by Ross in 1834, but nothing of importance was found.

Pausanias also gives a minute account of the principal roads leading from Megalopolis. Of these he mentions eight, leading respectively to Messene, Car-
in the time of Pausanias, but in Zoetia there still remained a temple of Demeter and Artemis. Pausanias probably occupied the site of Palaeoniri. Thymbraion (Θυμβραίων) was founded by a son of Lycaon, and may be placed at Palaeoniri, at the foot of the mountain. The other side road branched off from Methydrum to the right, ascending to the fountain Chunci (Χυνύκα), and from thence descending 30 stadia to the tomb of Callis, a lofty mound of earth, upon which was a temple of Artemis Calliste. Here Pausanias turned to the left, and at the distance of 25 stadia from this tomb he reached Anemou (Ἀνέμου), on the direct road from Megalopolis to Methydrum. As Anemou was 100 stadia from Tricomi and 57 from Methydrum, it may be placed at Zeybotsi. Beyond Anemou the road passed over the mountain Phalaniston, upon which were the ruins of the town Phalanthus (Φαλάνθος). On the other side of this mountain was the plain of Polus, and near it Schoenus (Σχόενους), which was called from a Boeotian of this name: near Schoenus were the race-grounds of Atalanta. Methydrum was the next place. [Methydrum.] (Paus. viii. 33 § 5. seq.)

5. The road to Maenalus, led along the Heilon to the foot of Mt. Maenalus. In leaving the city it first ran through a marshy district, which was here called Helos; it then entered a narrow valley, in which was a place called Palaeocytia (Παλαιόκύτια), where a mountain torrent, named Elaphus, flowed into the Heilon on the left: this is the torrent which flows from Valdula. Here a side road ran along the left bank of the Elaphus, for 20 stadia, to Peralees (Περάλες), where was a temple of Pan; it must have stood near Zekkanytus. But the direct road crossed the Elaphus, and entered the Maenalian plain, at the distance of 15 stadia from the Elaphus. This number, however, is much too small, as it is 5 geographical stades from the junction of the Elaphus with the Helion into the Maenalian plain. (Leake, Peloponnesiac, p. 242; Paus. viii. 36 § 5. seq.)

6. The road to Phigalia crossed the Alpheus at the distance of 20 stadia from Megalopolis. Two stadia from the Alpheus were the ruins of Macarea. 7 stadia further those of Dansae, and again 7 stadia the hill Acaceum, upon which stood the city Acacenum. At the distance of 4 stadia from Acaceum was the temple of Deoader, one of the most celebrated sanctuaries in the Peloponnesus, and of which Pausanias has given a particular description. Adjoining, was the temple of Pan, above which stood the ancient city of Lyco- sura. Between Lyco- sura and the river Phataniastion, which was 30 stadia from Phigalia, Pausanias mentions no object, though the direct distance between Lyco- sura and this river is 9 geographical stades. (Paus. viii. 36 §§ 39—39.)

7. The road to Pallantium and Tegesa, passed first through Labocia, a suburb of Megalopolis, next by the ruins of Haemoinae [see Vol. I. p. 192, b.]; beyond which, to the right of the road, were the ruins of Orestethion: while upon the direct road were the villages of Athribidos and Athineum; and 20 stadia beyond the latter the ruins of Asa, near which were the sources of the Alpheus and the Eurotas. From Asa there was a straight road to the mountain called Boreum, upon which was the Choma, marking the boundaries of Megalopolis, Pallantium, and Tegesa. (Paus. viii. 44.)

MEGARA.

8. The road to Heraea was the one by which Pausanias travelled to Megalopolis, and consequently is described by him in an inverse direction to that of the others. This was the great Roman road through the Peloponnesus, which occurs in the Peutinger Table. After leaving Heraea, the first place was Melaneae, which in the time of Pausanias was deserted and covered with water. Forty stadia above Melaneae was Buthagrum, at the sources of the river Buthus, near which were the boundaries of Heraea and Megalopolis. Next to Buthagrum came the village Makedon, and then Gortyn. Further on was the sepulchre of those slain in battle against Cleomenes, and called Pa- rakaisum (Παρακαίσου), because Cleomenes violated his covenant with them. On the right of the road were the ruins of Brentiae, and on the other side of the Alpheus the ruins of Trepiazi. Descending from thence towards the Alpheus was a place called Bathy. Ten stadia further was Bathy; beyond which, after crossing the Alpheus, the traveller came to Themis, a deserted city standing upon a height above the Aminis, a tributary of the Helisus. (Paus. viii. 26 § 8, viii. 2—8.)

(Coins of Megalopolis. MEGALOPOLIS. 1. In Curia. [Aphrodiasia.] 2. In Pontus. [Seleucia.] Megara, sometimes called, for distinction's sake, ME'GARA HVBIAEA (τὰ Μεγάρα Ἦβυλεα: Εθ. Μεγαρίσι or Μεγαρίσι Θέανοι, Μεγαρισάνι), a city of Sicily, situated on the E. coast of the island, between Syracuse and Catana, in the deep bay formed by the Xiphonian promontory. It was unque- donably a Greek colony, deriving its origin from the Merga in Euboea Proper; and the circumstances attending its foundation are related in detail by Timotheides. He tells us that a colony from Megara, under the command of a leader named Lamis, arrived in Sicily about the time that Leonitius was founded by the Chalcidian colonists, and settled themselves first near the mouth of the river Pantagis, at a place called Troitis. From thence they removed to Leonitius itself, where they dwelt for a time together with the Chalcidians; but were soon afterwards expelled by them, and next established themselves on the promontory or peninsula of Trapanis, near Syracuse. Hence they again removed after the death of Lamis, and, at the suggestion of Hyblon, a Sicilian chief of the surrounding country, finally settled at a place afterwards called the Hyblaean Megara. (Thuc. vi. 4.) Symm. Chins follows a different tradition, as he describes the estab- lishment of the Chalcidians at Naxos and that of the Megarians at Hybla as contemporary, and both preceding the foundation of Syracuse, n. c. 734. Strabo also adopts the same view of the subject, as he represents Megara as founded about the same
the plain loses itself in a gradual ascent. The city stood on a low hill with a double summit, on each of which there was an acropolis, one named CARIA (Karav), and the other ALCATHE (Akkath), the former probably being on the eastern, and the latter on the western height, now which the modern village is chiefly situated. Immediately below the city was a port-town named NISAE (Nisai and Neisa), the port being formed by an island called MINOS (Meos). The city was connected with its port-town by Long Walls.

II. HISTORY.

There were two traditions respecting the early history of Megara. According to the Megarians, the town owed its origin to Car, the son of Phereus, who built the citadel called Caria and the temples of Demeter called Megara, from which the place derived its name. (Paus. i. 39. § 5, i. 40. § 6.)

Twelve generations later Lelix came from Egypt and gave the inhabitants the name of Leleges, whence we read in Ovid (Met. vii. 443):—

"Tutus ad Alcaethon, Lelegenae moenia, limus Composito Sciron patre."

Lelix was succeeded by his son Cleson, the latter by his son Pylas, whose son Sciron married the daughter of Pandion, king of Athens. But Nisaus, the son of Pandion, disputing with Sciron the possession of Megara, Aeacus, who had been called in as arbiter, assigned the kingdom to Nisaus and his posterity, and to Sciron the command in war. Nisaus was succeeded by Megareus, the son of Poseidon, who had married Iphinoë, the daughter of Nisaus; and Megareus was followed by his son Alcauthus, who built the other citadel named after him. Such was the account of the Megarians, who purposely suppressed the story of the capture of their city by Minos during the reign of Nisaus. (Paus. i. 39. §§ 6, i. 41. § 5.)

The other tradition, however, was preserved by the Boeotians and adopted by the rest of Greece, differs widely from the preceding one. In the reign of Pylas, Pandion being expelled from Athens by the Metionidae, fled to Megara, married the daughter of Pylas, and succeeded his father-in-law in the kingdom. (Paus. i. 39. § 4; Apollod. iii. 15.)

The Metionidae were in their turn driven out of Athens; and when the dominions of Pandion were divided among his four sons, Nisaus, the youngest, obtained Megara. The city was called after him Nisa (Nisai), and the same name was given to the port-town which he built. When Minos attacked Nisaus, Megareus, son of Poseidon, came from Orchestrus in Boeotia to assist the latter, and was buried in the city, which was called after him Megara. The name of Nisa, subsequently Nisaen, was henceforth confined to the port-town. (Paus. i. 39. §§ 4, 6.)

The modern city, therefore, is named only from the thirteenth century, being founded in 1229 by the emperor Frederic II., from whom it derives its name.
MEGARA.

tical form of government was established. (Paus. i. 43. § 3.)

Into the value of those traditions it would be useless to inquire. It may, however, be regarded as certain, that Megara and its territory were in early times regarded as part of Attica; and hence Strabo assures us that the inscriptions of certain names in the Eba, because they were comprehended along with the Athenians under the general name of Ionians. (Strab. ix. p. 392.) The most certain event in the history of Megara is its conquest by the Dorians. This event is connected in tradition with the expulsion of the Peloponnesians against Athens. The Dorian invaders were defeated by the voluntary sacrifice of Codrus; but Megara was not withstanding permanently conquered, and a Corinthian and Megarian colony founded at Megara. The pillar at the isolaus of Corinth, which had hitherto marked the boundaries of Ionia and Peloponnesus, was now removed; and Megara was henceforth a Dorian state, and its territory included in Peloponnesus. (Strab. ix. p. 393; Seym. Ch. 502.) Megara, however, continued for some time to be subject to Corinth, and it was not without frequent struggles and wars that it at length established its independence. (For authorities, see Müller, Doriens, i. 5. § 10.) Megara appears not to have become the ruling city in Attic territory till it was independent of Corinth, since in earlier times it had been only one of the five handlets (oecus), into which the country was divided, namely, the Heraeans, Piraeans, Megarians, Cynosurians, and Triphiascians. (Plut. Quoest. Græc. c. 17, p. 387.)

After Megara had become an independent city, its prosperity rapidly increased, and in the seventh century before the Christian era it was one of the most flourishing commercial cities of Greece. For this it was chiefly indebted to its admirable situation, which gave its inhabitants great facilities for the prosecution of commerce both by land and sea. All the roads from Northern Greece to Peloponnesus passed through their country, while their shores being washed by the Corinthian and Saronic gulf, enabled them to trade both with the West and East. Megara founded some of the earlier Greek colonies, both in Sicily and Thrace. In b.c. 728 it established Megara Hyblaea in Sicily, in 712 Astaeus in Boeotia; in 673 Thasos, in the following year Caelanum at the mouth of the Bosphorus, and in 657 Byzantium opposite Caelanum. About this time, or rather later, Comedy is said to have been invented by the Megarians. According to the common account, Saisacia, a native of Tripæsucus in Megara, introduced comedy into Attica. (Dict. of Biogr. art. Susarion.) But, with the increase of wealth, the lower orders attempted to obtain a share in the government, which had hitherto been exclusively in the hands of the Dorian colonists, and Thyerages, the father-in-law of Cylon, became tyrant or despot of Megara, by attacking the rich landed proprietors and advocating the claims of the poor. (Aristot. Rhet, i. 2. Politi. v. 4.) He embellished the city by the construction of a beautiful aqueduct, which continued to exist down to the time of Pausanias (i. 40. § 1). Thyerages ruled about b.c. 630—600; but he was subsequently driven from power, and Megara was for some time torn asunder by struggles between the aristocracy and democracy. The elegiac poet Theognis, who belonged to the aristocracy, deprecates the sufferings of his party, and complains that the poor no longer paid the interest of their debts, and that they plundered the houses of the rich and even the temples.

About the same time the Megarians were engaged in frequent contests with their neighbours in Attica. The chief struggle between them was with the people of Salamis, which was at length gained by the Athenians in consequence of the well-known stratagem of Solon. (Paus. i. 40. § 2; Strab. ix. p. 394.) The Megarians took their share in the Persian wars. They fought with 20 ships at the battles of Artemision and Salamis. (Herod. viii. 1. 12.) They repulsed a body of Persians whom Mardonius sent to ravage their territory (Paus. i. 40. § 2), and finally 3000 of their troops fought at the battle of Plataea. (Herod. viii. 19.)

After the Persian War the Megarians were involved in hostilities with the Corinthians respecting the boundaries of their territories. This led the Megarians to desert the Peloponnesian alliance, and unite themselves with the Athenians, b.c. 455. In order to secure their communication with Megara, the Athenians built two Long Walls connecting the city with Nisaæa; and they garrisoned at the same time the town of Pegæ, on the Corinthian gulf. (Thuc. i. 106.) But ten years afterwards the Megarians joined the Spartans, with the assistance of some Peloponnesian troops, they slew the Athenian garrison, with the exception of those who escaped into Nisaæa. They continued to hold Nisaæa and Pegæ, but they also surrendered these towns in the thirty years' truce made in the same year (445) with Sparta and her allies. (Thuc. i. 114, 115.) The Athenians thus lost all authority over Megara; but they were so exasperated with the Megarians, that they passed a decree excluding them from all the Athenian ports. This decree pressed very hard upon the Megarians, whose unproductive soil was not sufficient to support the population, and who obtained most of their supplies from Attica: it was one of the reasons urged by the Peloponnesians for declaring war against Athens. (Thuc. i. 67, 139; Aristoph. Acharnæ. 533.)

In the Peloponnesian War the Megarians suffered greatly. In the first year of the war the Athenians invaded Megara with a very large force, and laid waste the whole territory up to the city walls. At the same time they first blockaded the harbour of Nisaæa, so that Megara was in the situation of a besieged city cut off from all its supplies. This invasion was repeated by the Athenians once in every year, and sometimes even twice; and the sufferings which the people then endured were remembered by them many centuries afterwards, and were assigned to Pausanias as the reason why one of their works of art had not been finished. (Thuc. ii. 31; Plut. Per. 30; Paus. i. 40. § 4.) In the fifth year of the Peloponnesian War (b.c. 427), the Athenians under Nicias took possession of the island of Minoa, which lay in front of Nisaæa, and left a garrison there, by which means the port of Nisaæa was still more effectually blockaded. (Thuc. iii. 51.) Of the position of this island, and of the causeway connecting it with the mainland, we shall speak presently. In the eighth year of the Peloponnesian War (b.c. 424), the democratic party in Megara fearing the return of the aristocratical exiles, who were at Pegæ, entered into negotiations with the Athenians, and had the city given back to the Megarians. The Athenians still held Minoa; and the Long Walls and Nisaæa were occupied by an Athenian garrison. The Athenians
MEGARA.

were admitted within the Long Walls by their friends in Megara, and after a siege of two days they took Nisaea.* Megara was saved by Brasidas, who advanced to the relief of the city with a large Peloponnesian force, and, after offering battle to the Athenians, which they declined, was admitted within the city. The aristocratical exiles were now recalled, and a strict and exclusive oligarchy established, which lasted for some time. (Thuc. iv. 66—74.) A few months afterwards the Megarians captured the Long Walls from the Athenians and burnt them to the ground; but the Athenians still continued to hold Nisaea and Minoa. (Thuc. iv. 169.) In the truce concluded between the Athenians and Peloponnesians in the following year, it was settled that the line of demarcation between the Athenians in Nisaea and Minoa, on one side, and the Megarians and their allies in Megara, on the other, should be the road leading from the gate of Nisaea near the monument of Xenis to the Poseidoum or temple of Poseidon, and from the latter in a straight line to the causeway leading to Minoa. (Thuc. iv. 117.)

From this time Megara is seldom mentioned in Grecian history. Its prosperous condition at a later period is cotted by Isocrates, who says that it possessed the largest houses of any city in Greece, and that it remained at peace, though placed between the Peloponnesians, Thebans, and Athenians. (Isocr. de Pace, p. 183, ed. Stephe.) Megara surrendered to Philip after the battle of Chaeronea. (Aelian, v. H. vii. 1.) After the death of Alexander it fell for some time in the power of Cassander; but his garrison was expelled by Demetrius Poliorcetes, who proclaimed the freedom of the city r. c. 307. (Diod. xx. 46; Plut. Demet. 9.) Subsequently it again passed into the hands of the Macedonian kings, but it was united by Aratus to the Achaean League. (Polyb. ii. 43.) In the war between the Achaean League and the Romans, Megara surrendered to Metellus without a contest. (Paus. vii. 15. § 11.) It is mentioned by Sulpicius, in his well-known letter to Cicero (ad Pans. iv. 5), as one of the ruined cities of Greece. It still existed in the time of Strabo (ix. p. 393), and it was subsequently made a Roman colony. (Plin. iv. 7. s. 11.) Pausanias relates that it was the only city of Greece which Hadrian refused to assist, on account of the murder by its inhabitants of Aemilius, the Athenian herald (Paus. i. 56. § 3); but we learn from inscriptions that a new tribe at Megara was called Adrianites, in honour of the emperor, and that Sabina, the emperor’s wife, was worshipped here under the title of via Aemilia (Brock, J Ast. vol. i. p. 565); and even Pausanias himself describes a temple of Apollo of white marble, built by Hadrian (i. 42. § 5). It continued to coin money under the Antonines and subsequent emperors; and it appears in the Tabula Peutinger, as a considerable place. In the fifth century its fortifications were repaired by Diogenes, an officer of the emperor Anastasius (Chandler, Jner. Ant. 130); but from this time it appears to have rapidly sunk, and was frequently plundered by the pirates of the Mediterranean.

Megara was celebrated on account of its philosophical school, which was founded there by Eu-

* On this occasion Thucydides (iv. 66) calls Megara ἢ ἄνω πόλις, in contradistinction to the port-town. This expression cannot refer to the acropolis of Megara, as some critics interpret it.

clides, a disciple of Socrates, and which distinguished itself chiefly by the cultivation of dialectics. The philosophers of this school were called the Megarici (οἱ Μεγαρικοί, Strab. ix. 393). It was also less creditably distinguished for its cortezans, who were called Megarican Sphinxes. (Μεγαρικαί Ψηφιστές, Suid. s. v.; comp. Plant. Pers. i. 3. 57.) The Megarics were addicted to the pleasures of the table. (Tertull. Apol. 39.) They had a bad character throughout Greece, and were regarded as fraudulently, pernicious, and ignorant; but they may have owed much of this bad character to the representations of their enemies, the Athenians. (Aelian, F. H. xii. 56; Schol. ad Aristoph. Foc. 248; Suid. s. v. Μεγαρικόν ᾨδίον μετήκος, i. e. contemplative people.) Of the Megarian games and festivals we have three kinds mentioned; the Dickean, celebrated in honour of the hero Boccles (Schol. ad Theocr. xii. 28; Schol. ad Pind. Ol. xiii. 153; Schol. ad Aristoph. Acharn. 774), the Alcathian, celebrated in honour of Alkath, and the Smaller Pythian, celebrated in honour of the Pythian Apollo, whose worship was very ancient in Megara. (Philostor. Vit. Soph. i. 3; Schol. ad Pind. Nem. v. 84, Ol. xiii. 155; Krause, Die Pythien, Nemeen und Ischmien, p. 66.)

Dion Chrysostom (Orat. vi.) says that Megara is one day’s journey from Athens, and Procopius (Bell. Vand. i. 1) makes it 210 stadia. According to modern travellers the journey takes 8 hours. (Dodwell, Classical Tour, vol. ii. p. 177.)

III. TOPOGRAPHY OF THE CITY AND ITS PORT-TOWN.

Pausanias has given a particular description of the public buildings of Megara (Paus. i. 40. seq.). He begins his account with the aqueduct of Theagenes, which was supplied with water from the fountain of the nymphs called Sthenides. The aqueduct was remarkable for its magnitude and numerous columns. Near it was an ancient temple, containing a statue of Artemis Soteira, statues of the twelve gods said to be by Praxiteles, and images of the Roman emperors. Beyond, in the Olympieum, or inclosure of Zeus Olympus, was a magnificent temple, containing a statue of the god, which was never finished, owing to the distress occasioned by the Athenians in the Peloponnesian War. From thence Pausanias ascended to the citadel, named Carin, passing by a temple of Dionysus Nysitas, a sanctuary of Aphrodite Apostrophos, an oracle of Night, and a roofless temple of Zeus Cronus. Here, also, was the Megaram, or temple of Demeter, said to have been founded by Car during his reign.

Below the northern side of the Acropolis Carin was the tomb of Alcmaeon near the Olympieum. Hence Pausanias was conducted by his Megarian guide to a place called Rhus (Pote; comp. Plat. Thea. 27), because the waters from the neighbouring mountains were collected here, until they were turned off by Theagenes, who erected on the spot an altar to Aicholus. It was probably this water which supplied the fountain of the Sthenides. Near this place was the monument of Hyllus; and not far from the latter were temples of Isis, Apollo Agmeus, and Artemis Agrotera, which was said to have been dedicated by Alcathus after he had slain the Cithæronian lion. Below these were the heroum of Pandrac, and the monuments of Hippolyte, queen of the Amazons, and Tereus, who married Procris.
MEGARA.

On the ascent to the citadel Alcatob, Pausanias saw, on the right hand, the sepulchre of Megara, and near it the heart of the gods called Pyronides, to whom Alcatobus sacrificed when he was going to build the walls. Here was the stone upon which Apollo laid his lyre, when he was assisting Alcatobus, and which, on being struck, returned a sound like that of a harp. (Comp. Theogon. 771 : Op. Met. viii. 14.) Beyond was the council-house (Bouleuterus) of the Megarians, formerly the sepulchre of Timaeus; and on the summit of the Acropolis was a temple of Athena, containing a statue of the goddess, entirely gilded, with the exception of the face, hands, and feet, which were of ivory. Here, also, were temples of Athena Nice, or Victory, and Arachus. The temple of Apollo was originally of brick, but had been rebuilt of white marble by Hadrian. Here, also, was a temple of Demeter Thesmophoros, in descending from which occurred the tomb of Callipolis, daughter of Alcatobus. On the road leading to the Pryntheium the traveller passed the heroon of Iota, the heroon of Iphigeneia, and a temple of Artemis said to have been erected by Agamenon. In the Pryntheium were tombs of Menippus, son of Megareus, and Echepolis, son of Alcatobus; near which was a stone called Anactetum, because here Demeter sat down and called her daughter. Pausanias next mentions the sepulchres of those Megarians who had fallen in battle against the Persians, and the AE-synunium, so named from its founder, which contained a monument of the heroes of Megara. There were several sepulchral monuments on the way from the AE-synunium to the heroon of Alcatobus, in which the public records were preserved in the time of Pausanias. Beyond was the Dionysium or temple of Dionysus; close to which was the temple of Aphrodite, containing several statues by Praxiteles. Near the latter was a temple of Fortune, with an image of the goddess by Praxiteles. A neighbouring temple contained statues of the Muses, and a Jupiter in bronze, by Lysiphus. It covered the tombs of Corebas and of the athlete Orissippus, the former of which was ornamented by some of the most ancient specimens of sculpture which Pausanias had seen in Greece. On descending from the Agera by the street called Straight, there stood, a little to the right, the temple of Apollo Prostaterus, with a statue of the god of great merit, as well as other statues by Praxiteles. In the ancient gymnasion, near the gates called Nymphades, was a pyramidal stone, called by the natives Apollo Carinus, and a temple of the Eileithyiares. On the road to the port of Nisaern was a temple of Demeter Melanephoros. The Acropolis of Nisaern still remained; on descending from the Acropolis there was the tomb of Lelex on the sea-side. Near Nisaern was a small island, called Minea, where the fleet of the Cretans was moored during the war against Nisaern.

Megara still retains its ancient name, but it is a miserable place. It occupies only the western of the two ancient citadels, and as this was probably Alcatobus, the town on the summit is on the site of the temple of Athena. There are hardly any remains of antiquity at Megara. On the eastern acropolis there are a few remains of the ancient walls. None of the numerous temples mentioned by Pausanias can be identified; and only one of them is marked by the fruits of some Ionic columns. The magnificent aqueduct of Theagenes has disappeared; and some imperfect foundations and a large fountain on the northern side of the town are the only remains of the celebrated fountain of the Stheneid nymphs.

Of the Long Walls, unifying Megara with Nisaern, we have already spoken. They are noticed by Aristophilus under the name of τὰ Μεγαραϊκα σκίτων (Legist. 1172). They were destroyed by the Megarians themselves, as we have already seen, in the eighth year of the Peloponnesian War, but they were subsequently restored by Phocion. Strabo speaks of them as if they still existed at his time (ix. p. 391), but they would seem to have fallen to ruin before that of Pausanias, as he makes no mention of them. According to Thucydides (v. 66) they were 8 stadia in length, but according to Strabo (i. c.) 18 stadia.

The position of Nisaern and Minea has given rise to much dispute, as the localities described by Thucydides do not agree with the present features of the coast. The subject has been briefly discussed by Colonel Leake (Northern Greece, vol. ii. p. 401), and more fully by Dr. Arnold (Thucyd. vol. ii. p. 293) and Lieut. Spratt. (London Geographical Journal, vol. viii. p. 205). Thucydides represents Minea as an island close to Nisaern, and united to the latter by a bridge over a morass. On Minea the Megarians had built a fortress (Thuc. iii. 51). Strabo (ix. p. 39) calls Minea a promontory (έσοπα). He says that, "after the Scironian rocks, we come to the promontory Minea, forming the harbour of Nisaern." Pausanias (i. 44. § 3), however, agrees with Thucydides in calling it an island; but it may be observed that the expression of Strabo (έσοπα) is not inconsistent with its being an island, as stated by Thucydides and Pausanias. The difficulty in determining the site of Minea and Nisaern arises from the fact, that there is at present no island off the coast which can be identified with Minea. At the distance of nearly a mile and a half from Megara there is a small rocky peninsula, and further off two islands, the inner one of which affords shelter to a few of the small class of coasters. Hence it has been supposed that the inner island was Minea, as it forms the port of the Megarians of the isthmus. But this island is distant from the promontory about 200 yards, with 7 fathoms of water between them; consequently they could never have been connected by a bridge. It might, indeed, be argued, that the peninsula was once an island; but this is disproved by the fact that its isthmus is of equal height with its extremity. Moreover, there are no ancient remains, either on this island or the peninsula.

Other writers, among whom are Colonel Leake and Dr. Arnold, suppose the promontory of Tikho (see map, No. 6) further to the east, at the entrance of the strait of Salamis, to have been Minea, since it may at one time have been an island. Accordingly, the statement of Strabo respecting the length of the Long Walls, is preferred to that of Thucydides. But this promontory is nearly 3 miles in length, which is larger than is implied in the description of Thucydides (iii. 51), who speaks of it as fortified only by a single fort. Moreover, Pausanias calls Minea a small island. Lieutenant Spratt has offered a more probable solution of the difficulty. He supposes Minea to be a rocky hill, surrounded by a ruined fortress, and standing on the margin of the sea south of Megara, at the distance of little more than a geographic mile, thus agreeing with the 8 stadia of Thucydides. "That this hill was once a peninsula, appears evident from the dry beds of two rivers, which pass close to its base; one on each side. The eastern
bed winds round the back of the hill, leaving only a narrow neck of elevated ground between it and that on the west side; and it is, therefore, clear, that when these two rivers had communication with the sea, the intermediate neck of land, with this hill, would have been a peninsula, or promontory. These two river beds were once the only outlets of the mountain streams which issue from the valleys on the north side of Mont Geraneia; for the ancient course of the eastern bed, although now ploughed over and cultivated, can be traced through the plain to the northward, as far as its junction with that river, whose torrent at present flows in an easterly direction towards the shallow bay of Tikho, crossing the site of the Long Walls which connected Megara with Nisaea and Minos, and losing themselves in the swamps bordering that bay. Although vestiges of the walls are not found in the bed of the river, yet, on examining the ground near it, the evidence is convincing that its present course does cross their site, as, at a short distance from it, on the Megarian side, their foundations may be traced in a direction transverse to the course of the river, and towards the castellated hill before mentioned. The dry watercourse on the western side of this isolated hill can be traced to within two or three hundred yards of the eastern one; and having no communication with any other mountain stream, it may not be unreasonable to suppose that formerly the river split there into two branches or mouths. This hill would then have been an island, as Thucydides calls Minos. The subsequent deposit of earth brought down by the above mentioned stream, would have joined the hill to the mainland.

The accompanying map and drawing are taken from Lieut. Spratt’s.

If this hill is the site of Minos, the town of Nisaea must have been near it; and Lieut. Spratt discovered many vestiges of an ancient site on the eastern side of the hill, between the sea and a low rock which stands in the plain a short distance to the northward. “Among these remains are four small heaps of ruins, with massive foundations, in one of which there are three broken shafts of small columns erect, and wanting apparently only the fourth to complete the original number. Probably they were monuments or temples; and two Greek churches, which are now in ruins, but standing on two ancient foundations, will not be unfavorable to the supposition. Another church, Agios Nikolaos, which is perfect, also occupies the site of an ancient building, but it stands nearer to the sea.” Lieut.
Spatz further supposes that he has discovered remains of the ancient causeway. "Between the base of the hill on its north side, and the opposite bank of the dry bed of a former river, there are three platforms of heavy buildings, one of which lies immediately at the foot of the hill, another on the edge of the opposite bank, and the third nearly central; and as the course of that former river-bed clearly and indubitably passes between them, it is more than probable that the bridge of communication may be recognised in these ruins." He also says, "the distinct remains of an ancient mole are to be seen extending from the south-eastern end of the hill, and curving to the eastward, so as to have formed a harbour between the hill and those ruins," which is in accordance with the statement of Strabo, that the port of Nisaea was formed by the promontory of Minos.

IV. Territory of Megara.

Megara occupied the greater part of the large Isthumus, which extends from the foot of Mt. Cithæron to the Acrocorinthus, and which connects Northern Greece with the Peloponnese. The southern part of this Isthumus, including the Isthumus properly so called, belonged to Corinth; but the boundaries of Megarics and Corinth differed at an earlier and a later period. Originally Megarics extended as far as Crommyon on the Saronic, and Thermæ on the Corinthian gulf, and a pillar was set up near the Isthumus proper, marking the boundaries between Peloponnese and Ionia; but subsequently this pillar was removed, and the territory of Corinth reached as far as the Scironian rocks and the other passes of the Geraneian mountains. (Strab. i. pp. 392, 393.) Towards the N., Megarics was separated from Boeotia by Mt. Cithæron, and towards the E. and N.E. from Attica by a high land, which terminates on the west side of the bay of Eleusis in two summits, formerly called Kerata or The Horns (7é Ké-
para), and now Kausiti. (Strab. i. p. 395; Diod. xiii. 65; Plut. Them. 13.) Here there is an immense deposit of conchiferous limestone, which Par- santius also noticed (i. 44 § 6). The river Lapis, which flowed into the sea a little to the W. of the Horns, was the boundary of Megarics and Attica.

[ATTICA, p. 323, a.] The extreme breadth of Megarics from Pague to Nisara is estimated by Strabo (viii. p. 334) at 120 stadia; and, according to the calculation of Clinton, the area of the country is 143 square miles.

Megarics is a rugged and mountainous country, and contains no plain, except the one in which its capital, Megara, was situated. This plain was called the "White Plain" (7é AeqoL o<i>li'vòv, Schol. ad Hom. Od. v. 333, ed. Mai; Eyrnal. M. s. v. AeqoL o<i>li'vòv), and is the same as Cimolia (Kimovia, Diod. xi. 79), which produced the Creta Cimolia or fuller's earth, and which Leuké erroneously regards as a place (Northern Greece, vol. ii. p. 419). The main range of Mt. Cithæron runs from W. to E., forming the boundary between Boeotia and Attica; but it is also prolonged southwards along the shores of the Corinthian gulf, and gradually rises into a new chain, which stretches across Megarics from W. to E., parallel to Mt. Cithæron. This chain is highest on the western side, where it attains the height of 4217 feet (Paris), and gradually sinks down on the eastern side towards the Saronic gulf. On its western side it runs out into the promontory AEOLPLANTUS (Ai'ip6v<i>plXov, Asch. Agr. 303, with Schel.), and also into those of OLMAYAE and HERAENIM in the Corinthian territory. [CORNITHUS, p. 685.] On its eastern side the island of Salamis and the surrounding rocks are only a continuation of this chain. The mountains were called GERANIA in antiquity (Γερανία, Thuc. i. 105; Paus. i. 40 § 7), and are said to have received this name because, in the deluge of Deucalion, Megarics, the son of Zeus and a Sibthorpe nymph, was led by the cries of cranes (γέρανα) to take refuge upon their summit (Paus. i. 40 § 7). Towards the south the Geraneian mountains sink down into the plain of the Isthumus, while to the south of the Isthumus there rises another chain of mountains called the Oneian. Strabo (viii. p. 380) confounds the Geraneia with the Oneia; and erroneously repre-
sents the latter extending as far as Boeotia and Cithæron. His error has misled many modern writers, who, in consequence, speak of the Geraneia as a portion of the Oneia. (Curtius, Peloponnesos, vol. i. p. 25.)

The Geraneian mountains are almost, if not entirely, calcareous. They form the true boundary of Northern Greece, and rise above the Isthumus of Corinth like a vast wall from sea to sea. Three roads lead across these mountains into Peloponnese. One runs from the western coast of Megarics, across the rocky peninsula of Perachóra, the ancient Pe-
raeum of Corinth, down to the Corinthian gulf. It was the road by which armies frequently marched from Peloponnese into Northern Greece, but in ordinary intercourse was not much used on account of its length. The second road passes through the centre of the Geraneia, and is called the road of the great Derenvia from the narrow pass (Turk. Der-
enia), which leads between two masses of rock, and where guards were stationed in Turkish times. According to Gell the top of this pass was anciently fortified with a wall. The same writer says that, from the top of this pass to Corinth the distance is 8 hours 37 minutes, and to Megara 2 hours 33 minutes. This road is now little used. The third road leads along the eastern coast of Megarics, is the shortest way between Megara and Corinth, and therefore has been the chief line of communi-
cation between Peloponnese and Northern Greece from the earliest times to the present day. This road, soon after leaving Megara, runs for several miles along a narrow ledge or terrace, cut in the rock half-way up the sides of the cliffs. On his right hand the traveller has the precipitous rock, while on his left it descends perpendicularly to the sea, which is 600 or 700 feet beneath him. The road, which is now narrow and impracticable for carriages, was made wide enough by the emperor Hadrian for two carriages to pass abreast. From the higher level the road descends to the brink of the water by a most rugged and precipitous path cut between walls of rock. This pass is the celebrated Scironian rocks of antiquity, now called Kocio-Ba<dia, or bad ladder (Ai'S lipovodov itopai, Strab. i. p. 391; Ai' lipovodov and Ai' lipovodov, Polyb. v. 16; 2epovos t<ai>, Eur. Hippol. 1206; the road itself 2 lipovodov 685; Hesiod. v. 71; Sciron saxa, Plin. iv. 7. s. 11). According to a Megarian tradition, these rocks derived their name from Scior-

Near the southern end of the pass, where the road
begins to descend, we must place the Melarian rock (ἡ Μελανία), from which Ino or Leuctheres threw herself with her son Melicerys (Παλαίστρον) into the sea; and close by were the executable rocks (σφένεια), from which Sciron used to throw strangers into the sea, and from which he was himself hurled by The- sers. (Paus. i. 44. § 7, seq.) The tortoise at the foot of the rock, which was said to devour the rob- bers, was probably a rock called by this name from its shape, and which gave rise to the tale (κατά τὴν καλυμμένην χελώνα, Dio. iv. 59). On the sum- mit of the mountain was a temple of Zeus Aphasis. On Apollon Lyciae, the temple of Apollo Laticius, near which were the boundaries of Megarion and the Corinthia. (Paus. i. 44. §§ 9, 10.)

MEGARIS. [Megara.]

MEGARIS, a small island on the coast of Cam- pania, mentioned by Pliny (iii. 6. 12), who places it between Pauly and Neapolis; it can therefore be no other than the islet or rock now occupied by the Castel dell'Ovo. [NEAPOLIS.] It is evidently the same which is called by Statius Megalai. (Stat. Silv. ii. 2. 80.)

MEGIDDÔ. [LEGIO; MAGIDOLUS.]

MEGIDDO VALLIS, the western part of the vast plain of Edrešenel, at the northern foot of Mount Carmel, watered by the Kishon. [ES- DREŠENEL VALLIS V. CAMPUS.] [G. W.]

MEGISTE (Μεγίστη), an island off the coast of Lycia, opposite to Antiphellus. It contained a town which, if the reading in Strabo (xiv. p. 666) be correct, was called Cisthenë (Κισθήνη), but had perished before the time of Pliny (v. 35). There was also an excellent harbour, which appears to have been capable of containing a whole fleet. (Liv. xxxvii. 22; comp. Steph. B. s. v., who calls the town Mesiste; Ptol. v. 3. § 9; Scylax, p. 39.) The island, which derived its name from the fact that it is the largest of a group, is now called Kasteloryzo, or Castel Rosso. The island seems to have been col-

MEGALENEAE. [Megalenae.]

MEGALENEAE, or MELANAEAE (Μελαναία Παυς.; Μελαναί, Rhian. ap. Steph. B. s. v. Ecthe, Μελαναίη), a town of Arcadia, in the territory of Heraea, and on the road from Heraea to Megalopolis. It was distant 40 stadia from Bupalagus. Pausanias says that it was founded by Melaneus, the son of Lycaon, but that it was deserted in his time and overflowed with water. The ruins of Melaeneae lie 4 or 5 miles eastward of Heraea, between the villages Kókore and Kákouria, where are the re-
mains of a Roman bath, which has also been a church, and is sometimes used as such, though it is said to be generally inundated, even in the dry season, which is in conformity with the account of Pausanias. The Pentinger Table specifies Maeanee as distant 12 miles from Olympia; but it does not mention Hecera, though a much more important place, and one which continued to exist long after Hecera: moreover, the distance of 12 miles applies to Hecera, and not to Maeanee. (Paus. viii. 26. § 8, comp. v. 7. § 1, viii. 3. § 3; Stephan. B. s. r.; Plin. iv. 6. s. t.; Leake,vol. iv. p. 231; Boblaye, Recherches, f. c. p. 159; Curtius, Ptolaeornaes, vol. i. p. 356.)

MELAIIUM (Μαλαίαιον), a place in Pelasgic to Thessaly, near Scutus, is mentioned in connection with the movements of the armies before the battle of Cynosephala. Leake places it near the sources of the Onchæstus, at a place called Dedericent. (Polv. viii. 3. 6; Liv. xxxiv. 6; Leake, Northern Greece, vol. iv. p. 473.)

MELANCLAIENI (Μελανκλαίηνη), a native tribe, of which none first appears in Herodotus (ap. Steph. B., Fr. 154. ed. Klauser). In the geography of Herodotus (iv. 20. 100—103. 107) they are found occupying the districts E. of the Androphagi, and N. of the Royal Scythians, 20 days' journey from the Palus Mæstis; over above them were lakes and lands unknown to man. It has been conjectured that Herodotus may refer, through some hearsay statement, to the lakes Leduca and Omege. The case has been considerable discussion among geographers, the name of which should be assigned to this tribe: it is of course impossible to fix this to any tribe; but there would seem to be reason to place them as far N. as the sources of the Volga, or even further (Sullarffik, Slow. Alt., vol. i. p. 295.) Herodotus expressly says that they did not belong to the Scythian-Scotic stock, although their customs were the same. The name, the "Black-clacks," like that of their cavalial neighbours, the Anthropophagi, was applied to them by the Greeks, and was no corrupted form of any indigenous appellation. A people bearing this name is mentioned by Scalix of Carystian (p. 32) as a tribe of Pontus. Pompous Mela (l. 19. § 4) and Pliny (vi. 5) coincide with Scalix, who speaks of two rivers flowing through their territory, the Melissa (Μελάσσα), probably the same as the Theasiris (Θεσσηρις, Pro. 9. § 10; Komitellar), and the Aegopus (Αἰγοπός, Κεκτῆτ), Donyan. Sius Perigezes (v. 309) places this people on the Bary-theines, and Pindley (v. 9. § 19) between the river Risa and the Hippoc Montes, in Asian Sarmatia; but it would be a great error to suppose any observation concerning these ancient northern tribes upon either the Roman writers or Pindley, or to confuse the picture set before us by these geographers, and the more correct delineations of Herodotus. For the Melanchaeni of Ammianus (xxxi. 8. § 31), see A. u. A. [E. B. J.]

MELANDIAE (Μαλανδιαί), a people of Thrace, mentioned only by Neophon (Apol. viii. 2. § 32).

MELANGES. [Mantinela, p. 264, b.]

MELANXIA (Μαλανξία), a place on the coast of Cisicia, a little to the west of Civitavecchia, perhaps on the site of the modern Kizilan (Strabo, xiv. p. 670.) From another passage of Strabo (xvi. p. 760), compared with Stephanus B. (s. r. Malaniean), it would seem that the place was also called Meanias. [L. S.]

MELANIPPE or MELANIPPIUM (Μαλανιππίου or Μαλανιππίων), a small town on the coast of Lucania, on the western slope of Mount Pheous, about 30 stadia from Cape Hieron, and 60 stadia south of Gagas, of which Leake (Asia Minor, p. 185) believes it to have been the port town. (Hecat. Fragm. 247; Stephan, B. s. r., who erroneously called it a river; Quint. Smyrn. iii. 232; Stadium. Mar. M. CXL. 211.) Fellow's (Discov. in Lygia, p. 212) found a few tombs cut out of the cliffs of the neighbourhood. [L. S.]

MELANOGAETULI (Γατεύλια), the Ubiuses colour of their vaccinated river on the north coast of Pontus, forming the boundary between Pontus Polemosianus and Cappadocius, and flowing into the Euxine a little to the east of Cytora. (Plin. II. X. vi. 4; Arrian, Peripl. p. 17; Anonym. Peripl. p. 12; Tab. Peut., where it is called Melians.) It is probably the same river as that now bearing the name of Melet Iraack. (Hamilton, Researches, i. p. 267.)

MELANIPS (Μαλανίπα), a village of Thrace, on the river Athrus, and on the road from Heraclea to Byzantium, the place where the city was situated, is mentioned as a place, in which Clymenus, not long after the period of the Persian Wars, had a 10,000—5,000,000,000,000 when in the year 100—5,000,000,000,000 (Curtius, Section, 11. p. 188.)

MELANITTA (Μαλανίττα), a people on the coast of Pontus, Bluetooth. ' [Discov. in Lygia, p. 212] found a few tombs cut out of the cliffs of the neighbourhood. [L. S.]

MELANTHIA (Μαλανθία), a village of Thrace, on the river Athrus, and on the road from Heraclea to Byzantium, the place where the city was situated, is mentioned as a place, in which Clymenus, not long after the period of the Persian Wars, had a

MELAS (Μέλας), the name of several rivers, so called, on the Ubiuses colour of their vaccinated river on the north coast of Pontus, forming the boundary between Pontus Polemosianus and Cappadocius, and flowing into the Euxine a little to the east of Cytora. (Plin. II. X. vi. 4; Arrian, Peripl. p. 17; Anonym. Peripl. p. 12; Tab. Peut., where it is called Melians.) It is probably the same river as that now bearing the name of Melet Iraack. (Hamilton, Researches, i. p. 267.)

MELATII SCOPULI (Μαλατίανοσκοποι), some rocks in the Aegan sea, where Apollo appeared to the Argonauts, probably lay between Icaria and Myconus. (Strab. xiv. p. 636; Apollo. Biblo. iv. 1707; Scyl. p. 55; Hesych. s. v.; Apoll. i. 9. § 26; Stadium. iii. 232, 270.)

MELAS (Μέλαια), the name of several rivers, so called, on the Ubiuses colour of their vaccinated river on the north coast of Pontus, forming the boundary between Pontus Polemosianus and Cappadocius, and flowing into the Euxine a little to the east of Cytora. (Plin. II. X. vi. 4; Arrian, Peripl. p. 17; Anonym. Peripl. p. 12; Tab. Peut., where it is called Melians.) It is probably the same river as that now bearing the name of Melet Iraack. (Hamilton, Researches, i. p. 267.)

2. A river of Boeotia. [Boeotia, p. 413, a.]

3. A river of Malis, which in the time of Herodotus flowed into the Malach gulf, at the distance of 5 stadia from Trachis. It is now called the Monera-Neria, and falls into the Malachus, also used to flow in ancient times into the Malachus gulf. (Herod. vii. 198; Strab. iv. p. 428; Liv. xxxiv. 26; Leake, Northern Greece, vol. ii. p. 26.)

5. A river of Thrace, now called Saddatt or Schacher-Sa, falling into a deep bay of the same name (Μάλας Σάου), which is bounded on the east by the shore of the Thracian Chersonesus. The modern name of the bay is the gulf of Saros. (Herod. vii. 58; Strab. iv. p. 331; Liv. xxxiii. 40; Polium. iii. ii. §§ 1, 2; Mela, ii. 2; Plin. iv. 11. s. 18.)

MELAS (Μέλαι), a small river of Cappadocia, which had its sources on Mount Argeus (Ito. v. 6. § 8), and flowed in a north-western direction past the town of Mazaca, frequently overflowing its banks and forming marées. (Strab. xii. p. 536, s. r.) It emptied itself into the river Italsi, opposite the town of Siva. (Strabo, l. c.) erroneously describes the Melas as a tributary of the Euphrates, as has been shown by Hamilton in the Journal of the Geog. Society, vol. viii. p. 149 (comp. his Researches, ii. p. 259, s. r.). The river still bears a
name answering to the ancient Melas, Kara-Su, that is, the Black River.

2. A navigable river in Pamphylia, flowing in a southern direction from Mount Taurus towards the sea, into which it emptied itself 50 stadia to the east of Side. (Plin. v. 22; Strab. xiv. p. 667; Pans. viii. 28, § 2; Mela, v. 14; Zosim. v. 16, vi. 5; Stob. ed. March. Mar. Mag. §§ 183, 194, 194.) Its modern name is Meaufrat-Su. (Loeke, Asia Minor, p. 196.)

3. A small river in Pontus Polemoniacus, in the country of the Maeanides. (Plin. vi. 4.)

MELAS SINEUS. [Melas, No. 5.]

MELDI (Μελδί, Pal. ii. 8, § 15), a people of Gallia Celtica or Lugdunensis in Pтолemy's time, whose chief place was Latiunum; but the position which Pтолemy assigns to the Melidae and to Latiunum is very incorrect, if the Meli are properly placed as neighbours of the Parisii and of the Matrons (Ματρών). Strabo is not clearer. He says (iv. p. 194:—

"On both sides of the Sequana there are the Parisii, who possess an island in the river and a city, Lutecia, and Melidae, and Lexovi, along the Ocean these;" by which he perhaps means only the Lexovi, but he might mean to say that the Melidae were on the Ocean. Pliny (v. 18) mentions in Lugdunensis Gallia "Maldi Liber, Parisii, Trecessi." From all this we may infer that the Meldi were near the Parisii but whether they obtained certain rights as to their name from that of Latiui (Latiunum) and other evidence. Gregory of Tours speaks of the "Comitatus Melcensis;" the "territorium Melciden" is mentioned in the Gesta of Dagobert I.; and in the Capitularies of Charlemagne the "Melcianius Pagus" is placed between the "Paisiocus" and "Mihidencus," or the Pagan of Melodunum (Melen), and as the Melcianus occupies the space between the two other Pagii, it must comprise the diocese of Meanz. Thus we obtain with certainty the position of the Melci (Meldi, and Meli, g.e.)

Caesar (B. G. v. 5) mentions the Meldi, and the passage has gained great difficulty. The name Meldi in Caesar's text is not certain. The MSS. have Meli, Melui, Medui, Meli, and Belgae. Caesar, intending to invade Britain a second time, ordered the legati who were set over his legions to get ships built in the winter of n. c. 55—54. All his legions were in the country of the Belgae during this winter (B. G. iv. 38); and it seems a proper inference that all these ships were built in the country of the Belgae. When Caesar in the spring of n. c. 54 came to the Portus Itius, he found all the ships there except sixty which were built "in Melcia." These ships being driven back by bad weather, had returned to the place from which they sailed. The wind which brought the other ships to the Portus Itius, which ships must have come from the south, would not suit ships that came from the north and east; and hence D'Anville justly concluded that these Meldi, whatever may be the true name, must have been north and east of Itius. A resemblance of words led him to find the name of the Melci in a place which he calls Medelfelt near Bruges. The true name of the place is Meldegheen. There is a place on the Scheldt about a league from Oudenarde, named Melden, which under the Empire was a Roman station (Recueil d'Antiquités, g.e. trouvées dans la Flandre, par M. J. de Bast). This is certainly not very convincing evidence for fixing the site of the Meldi; if that is the right name. "Belgica" cannot be the true reading, because all the ships were built in the territory of the Belgae; and Caesar's remark about the sixty would have no meaning, if he spoke of them as built "in Belgia."

If we cannot fix the site of these Meldi, we can see that they are not the people on the Marne. Caesar could have had no reason for building vessels so far up the river. If he did build any on the Seine, he built them lower down. But it is clear that Caesar does not mention any vessels built on the Seine, for he says that these sixty were driven back to the place from which they came; a remark which, if applied to ships built on the Seine, is without any meaning. Ubert (Gallien, p. 525) has made some objection to D'Anville's position of the Meldi, and his objections may have some weight; but his notion that Caesar's Meldi can be the Meldi on the Marne shows that he did not understand Caesar's text.

MELDIA (Μελδία), a town of Media superior, on the road from Naisus to Sarucia. (H. Ant. p. 135 ; I. Hieros, p. 566.)

MELES (Μελς), a small river of Ionia, flowing close by the walls of Smyrna, and discharging its waters into the Hermusian gulf. (Strab. xii. p. 554, xiv. p. 646.) The little stream derives its celebrity from its connection with the legends about Homer, and from a report about the healing power of its waters. There was a tradition that near the sources of the river Meles there was a cave in which Homer had composed his epic poems, or, sometimes called Μελεσσάρχα. (Pans. vii. 5, § 6; Vit. Hom. 2; Stat. Silv. iii. 3. 60, 7, 33; Tibull. iv. i. 200.) The belief in the healing power of its waters is attested by an inscription quoted by Arundell (Asia Minor, vol. ii. p. 406) and Hamilton (Researches, vol. ii. Appendix. No. 48). These circumstances are of some importance in identifying the river. It used to be supposed that a small, dirty, and muddy stream, flowing close by the modern town of Smyrna, was the same as the ancient Meles. But there is another stream, with bright and sparkling water, which rushes over its rocky bed near Bournaubat, and is still celebrated for its agreeable and wholesome qualities. Travellers are now justly inclined to identify this river with the ancient Meles. This supposition is confirmed by our more accurate knowledge of the site of ancient Smyrna, which was on the north of the bay, while new Smyrna was on the south of it, at a distance of 20 stadia from the former; the site of the ancient place is still marked by a few ruinous buildings close by them flows the clear stream which we must assume to be the ancient Meles. (Comp. Hom. Hymn. viii. 3: Ptol. v. 2, § 7; Steph. B. s. Acad. Μελέσσαρχα, according to whom the river was also called Meletus; Plin. v. 31; Hamilton, Researches, vol. i. p. 51, fol.)

MELESSES, a people in the S. of Spain, upon whose confines was situated the rich city of Origia, also called Auriwix. (Liv. xxxviii. 3.)

MELIBOCUS (Μελίβοκος ο Βραχς), a mountain in the interior of Germany, above the Sematina Silva. (Ptol. ii. 11, § 7.) There can be little doubt that Melibocus is the ancient name for the Harz mountain, or the Thuringer Wald, or for both. (L. S. 8.)

MELIBOEA, an island at the mouth of the Orontes in Syria, the sole authority for the existence of which appears to be a poetical myth of Opianus. (Cymogn. ii. 115, &c.)

MELIBOEA (Μελιβοε). 1. An ancient town of Messenia in Thessaly, mentioned by Homer as one of the places subject to Phibectes.
MELITATA.

(Deech, Corp. Inscri. Gr. 5752, &c.) In the First Punic War we find Melita still in the hands of the Carthaginians; and though it was ravaged in n. c. 257 by a Roman fleet under Atilius Regulus, it does not appear that it fell permanently into the hands of the Romans. At the outbreak of the Second Punic War it was held by a Carthaginian garrison under Hanlicar, the son of Gisco, who, however, surrendered the island to Tib. Sempronius, with a Roman fleet, n. c. 218 (Liv. xxi. 51); and from this time it continued without any subject to the Roman rule. It was annexed to the province of Sicily, and subject to the government of the praetor of that island. During the period that the Mediterraneum was so severely infested by the Cilician pirates, Melita was a favourite resort of those corsairs, who often made it their winter-quarters. (Cic. Terr. iv. 46, 47.) Notwithstanding this it appears to have been in the days of Cicero in a flourishing condition, and the great order more than a century since the two principal inscriptions enumerated the project of retiring thither into a kind of voluntary exile. (Cic. ad Att. iii. 4, x. 7, 8, 9, &c.)

The inhabitants of Melita were at this period famous for their skill in manufacturing a kind of fine linen, or rather cotton, stuffs, which appear to have been in great request at Rome, and were generally known under the name of "vestis Melitensis." (Cic. Terr. ii. 72, iv. 46; Diod. v. 12.) There is no doubt that these were manufactured from the cotton, which still forms the staple production of the island.

Melita is celebrated in sacred history as the scene of the shipwreck of St. Paul on his voyage to Rome, A. D. 60. (Act. Apost. xxvii.) The error of several earlier writers, who have transferred the to the Melita on the E. coast of the Adriatic (now Međedra), has evidently arisen from the vague use of the name of the Adriatic, which is employed in the Acts of the Apostles (xxvii. 27), in the manner that was customary under the Roman Empire, as corresponding to the Ionian and Sicilian seas of descriptions. (Admiralty Map.) The whole course and circumstances of the voyage leave no doubt that the Melita in question was no other than the modern Melita, where a bay called St. Paul's Bay is still pointed out by tradition as the landing-place of the Apostle. (The question is fully examined and discussed by Mr. J. Smith, in his Voyage and Shipwreck of St. Paul, Svo. Lond. 1848; also in Conybeare and Howson's Life of St. Paul, vol. ii. p. 353, &c.)

No other mention is found of Melita during the period of the Roman Empire, except in the geographers and the Maritime Itinerary, in which last the name already appears, corrupted into its modern form of Malta. (Strab. vi. p. 277; Plin. iii. 8. s. 13; Mel. ii. 7. § 18; Ptol. iv. 3. § 37; Itin. Marit. p. 518; Sil. Ital. xiv. 251.) After the fall of the Roman Empire it fell for a time into the hands of the Vandals; but was recovered from them by Belisarius in A. D. 533 (Procop. B. i. 17. i. 14), and appears to have continued from this time subject to the Byzantine empire, until it was conquered by the Arabs in A. D. 870.

The present population is principally derived from an African stock; but it is probable that the Arab conquerors here, as well as in Africa, have been to a great extent amalgamated with the previously existing Punic population. The inscriptions discovered at Malta sufficiently prove that the Greek language was at one time in

MELINOPHAGI.

(II. ii. 717). It was situated upon the sea-coast (II. vii. 188; Scylax, p. 25; Apoll. Rhod. i. 532), and described by Livy (xiii. 12) as situated at the roots of Mt. Ossa, and by Strabo (ix. p. 443) as lying in the gulf between Ossa and Pelion. Leake therefore places it near Aphid (Northern Greece, vol. iv. p. 414). Meliboea was taken and plundered by the Romans under Cn. Octavius, n. c. 158. (Liv. xiv. 46; Meliboea is also mentioned by Strab. ix. p. 496; Steph. B. s. c.; Mela, ii. 3; Philostr. v. 878.)

The Meliboean purple is said by Lucroitius (ii. 499; Virg. Aen. v. 251) to have derived its name from this town. Many modern writers, however, suppose the name to have come from the small island Meliboea at the mouth of the Orontes in Syria; but there is no reason for this supposition, as the shellfish from which the purple dye is obtained is found in the present day off the coast of Thessaly.

2. A town of Illyria in Thessaly, is conjectured to have been represented by the Leperida. (Livy xxvii. 13; Leake, Northern Greece, vol. iv. p. 536.)

MELINOPHAGI (Μελινόφαγοι), a people of Thrace upon the coast of the Euxine, near Sambodessus. (Xen. Anaub. v. 5. § 12; Theopomp. ap. Steph. B. s. v.) They are, perhaps, the same people as the Asti (Αστίοι) whom Strabo places in the same neighbourhood (vii. pp. 319, 320).

MELITA (Μελίττα; Fl. Μελίττας; Melitensis; Melito), an island in the Mediterranean sea, to the S. of Sicily, from the nearest point of which it is distant 47 geo- miles, but 53 from cape Pachymus. Strabo gives this last distance as 88 miles, which is greatly overstated; while Pliny calls it 84 miles distant from Camarina, which equally exceeds the truth. (Strab. vi. p. 277; Plin. iii. 8. s. 14.) The island is about 17 miles long, and between 9 and 10 in breadth, and is separated only by a narrow channel from the adjoining island of Gankos, now Gizo. Notwithstanding its small extent, the opportune situation of Melita in the channel between Sicily and Africa, and the excellence of its harbours, must have ever rendered it a place of importance as a commercial station, and it was occupied, probably at a very early period, by a Phoenician colony. (Diod. v. 12.) The date of this is wholly uncertain, and it is called by later writers for the most part a Carthaginian settlement (Svvl. p. 50. § 110; Steph. B. s. c.), which it certainly became in after times; but there can be no doubt that Diodorus is right in describing it as originally a Phoenician one, established by that people as an emporium and harbour of refuge during their long voyages towards the west. The same author tells us that in consequence of this commercial traffic, the colony rose rapidly to prosperity, which was increased by the industry of its inhabitants, who practised various kinds of manufactures with great success. (Diod. b. e.) But notwithstanding this account of its prosperity we have scarcely any knowledge of its history. The notice of it by Scylax as a Carthaginian colony, seems to prove that it had not in his day received a Greek settlement; and indeed there is no trace in history of its having ever fallen into the hands of the Greeks of Sicily, though its coins, as well as inscriptions, indicate that it received a strong influence of Greek civilization; and at a later period appears to have been in a great measure Hellenized. Some of these inscriptions point to a close connection with Syracuse in particular, but of the origin and nature of this we have no account.
MELITA.

The island is the home of the Maltese people, a community with a rich history.

COIN OF MELITA.

Ovid terms Melita a fertile isle (Fast. iii. 567), an expression which is certainly applied, for though it was, in ancient as well as modern times, populous and flourishing, and probably, therefore, always well cultivated, the soil is naturally stony and barren, and the great want of water precludes all natural fertility. Cotton, which at the present day is extensively cultivated there, was doubtless the material of the fine stuffs manufactured in the island; and the excellence of its soft stone as a building material accounts for the splendour of the houses, extolled by Diodorus (v. 12). Another peculiar production of the island was a breed of small dogs, noticed by Strabo and other authors, though some writers derived these from the Melita in the Adriatic. The breed still exists in Malta (Strab. vi. p. 277; Athen. xii. p. 518; Plin. iii. 26, s. 30). The freedom from venomous reptiles which Malta enjoys, in common with many other secluded islands, is ascribed by the inhabitants to the miraculous interposition of St. Paul. (Quint. l. c. p. 117.) [E. H. B.]

MELITA (Melita, Scyl. p. 8; Step. B. Agathem. i. 5; Plin. iii. 30; Itin. Anton. ; Fest. Tab.; Melita, Plut. vi. 16: 8 14; Melaita, Const. Porph. Adm. Inscri. 36; Melita, Geog. nos. 27; Melite, no. 28 of the Libranian group of islands. It was so called like its namesake Melita or Malta, from the excellence of its honey; and some erroneously have claimed for it the honour of being the island on which St. Paul was wrecked. (See preceding article.) It is the same as the long narrow and hilly island of Melide, lying about half-way between Corzola and Ragusa, remarkable in modern times for the singular phenomenon of subterranean fountains called Detonazioni di Melide, the cause of which has been ascribed to the region of volcanic activity which is supposed to underlie the whole of this coast. (Comp. Dauenh. On Volcanos, p. 333.) The site of a palace which was built by Agesilas of Cilicia, the father of Opiamnus, the author of the "Halicarnass," when banished to the island in the time of Septimius Severus, is still shown. (Wilkinson, Dalmatia and Monte-Negro, vol. i. p. 265.)

MELITAE, or MELITEIA (Melitaia, Strab. Plin. Step. B.; Melitaea, Polyb.; Melitaea, Thuc. Eth. Melitaeis, Melitaeus), an ancient town of Phthiotis in Thessaly, situated near the river Enipeus, at the distance of 10 stadia from the town Hellas. (Strab. iv. p. 432.) The inhabitants of Melitae confirmed that their town was anciently called Pyrrha, and they showed in the market-place the tomb of Helen, the son of Deucalion and Pyrrha, (Strab. l. c.) When Brasidas was marching through Thessaly to Macedonia, his Thessalian friends met him at Melitaea in order to escort him (Thuc. iv. 78:); and we learn from this narrative that the town was one day's march from Pharsalus, whether Brasidas proceeded on leaving the former place. In the Lamic war the allies left their baggage at Melitae, when they proceeded to attack Leonatus. (Diod. xviii. 15.) Subsequently Melitaea was in the hands of the Aetolians. Philip attempted to take it, but he did not succeed, in consequence of his scaling-ladders being too short. (Polyb. v. 97, ix. 18.) Melitaea is also mentioned by Sclav. p. 24; Euh. ap. Step. B. iv. 9; Dusarch. vol. ii.; Plin. iv. 9. s. 16; Plut. iii. 13. § 46, who erroneously calls it Melitraga. Leake identifies it with the ruins of an ancient fortress situated upon a lofty hill on the left bank of the Enipeus, at the foot of which stands the small village of Kandes. (Northern Greece, vol. iv. p. 469, seq.) MELITE (Melit.) 1. A lake of Acarnania. (Acharn., p. 9, b.) 2. A demus in the city of Athens. (Athenae, p. 301, b.)

MELITE'NE (Melit', Plut. vi. 3: § 3), the name given by Polydeny to that part of Russian which lay along the banks of the Tigris. 

MELITENE (Melit', Eth. Melit', a city in the easternmost part of Cappadocia, and the capital of the district called Melitene. It appears that in the time of Strabo (xii. p. 537) neither

HERACLES (Plin. l. c.), and also Byblis by STEPHANUS B. (4. v. Μησοος;) the latter name is said to have been derived from its receiving a colony from the town of Byblis in Phoenicia. Other writers mention this Phoenician colony, and Festus derives the name of Melos from the founder of the colony. (Fest. s. n. Melos.) Some connect the name with μησοος, an apple, on account of the round shape of the island. The Phoenician settlement is probable; but we know that it was colonised at an early period by the Lacedaemonians, and that it continued to be inhabited by Dorians down to the time of the Peloponnesian War. According to the Melians themselves, the Lacedaemonians settled the island 700 years before this war. (Herod. viii. 48; Thuc. v. 84, 112.) In the Peloponnesian War, the Melians remained faithful to their mother city. In B. C. 426, the Athenians made an unsuccessful attempt upon the island; but in 416 they captured the principal town, put all the adult males to death, sold the women and children into slavery, and colonised the island afresh by 500 Athenians. (Thuc. v. 84—116; Dod. xii. 80; Strab. l. c.)

Melos. It is mountainous and of volcanic origin. Its warm springs, which are now used for bathing, are mentioned in ancient times. (Plin. xxxi. 6. s. 23; Athen. ii. p. 43.) Pliny says that the best sulphur was found in Melos (xxxv. 15. s. 50); and among other products of the island he enumerates alum (xxxv. 15. s. 52), pumice-stone (xxxvi. 21. s. 42), and a bright colour, called Melanum pigmentum (xxxv. 6. s. 19; comp. Vitruv. vii. 7; Diosc. v. 180; Plaut. Moli. 1. 3. 107.) The mines of alum are on the eastern side of the island, and the alum is sent down to the town. There is a famous alum plant at Ploutarch near the town. Some very interesting Christian catacombs have also been discovered at Melos, of which Ross has given a description. (Tourn. Nichols, Voyage, vol. i. p. 114, Engl. tr.; Tavernier, Voyage, vol. i. p. 435; Olivier, Voyage, vol. ii. p. 217; Leake, Northern Greece, vol. iii. p. 77; Prokesch, Denkwürdigkeiten, vol. i. p. 531, vol. ii. p. 200; Fiedler, Reise, vol. ii p. 569; Ross, Reisen auf den Griechischen Inseln, vol. iii. pp. 3, 145.)

Eastward of the ancient city is a village named Τωρνίτη, from the tombs with which the hill is pierced in every part. Eastward of Τωρνίτη is a narrow valley sloping to the sea, which also contains several sepulchral excavations. Some of them consist of two chambers, and contain niches for several bodies. There are, also, tombs in other parts of the island. In these tombs many works of art and other objects have been discovered; painted vases, gold ornaments, arms, and utensils of various kinds. Some of these tombs have been opened, and some very interesting Christian catacombs have also been discovered at Melos, of which Ross has given a description. (Tourn. Nichols, Voyage, vol. i. p. 114, Engl. tr.; Tavernier, Voyage, vol. i. p. 435; Olivier, Voyage, vol. ii. p. 217; Leake, Northern Greece, vol. iii. p. 77; Prokesch, Denkwürdigkeiten, vol. i. p. 531, vol. ii. p. 200; Fiedler, Reise, vol. ii p. 569; Ross, Reisen auf den Griechischen Inseln, vol. iii. pp. 3, 145.)

COIN OF MELOS.

MELOS (Μησοος; Αθανασία), a village of Acrania, mentioned only by Steph. B. (s. e.)

MELOTIS, a district of Tripolyia in Epirus. (Liv. xxxii. 13.) The names of Tripolyia and Melotis, in connection with Epirus, occur only in Livy. Leake supposes that Melotis, which name indicates a sheep feeding district, was probably the pastoral highlands around Ostantula, on the borders of Molossia and Attanania. (Northern Greece, vol. iv. pp. 104, 118.)

MELP is a village in Arcadia, situated upon Mt. Nomia, which is a region of Mount Lycaeus, so called because Pan was said to have here discovered the melody (μηλοι) of the syrinx. (Paus. viii. 38. § 11.)

MELPES, a small river of Lucania, flowing into the Tyrrenian sea, near the promontory of Pa-
MELPIS, a small river of Latium, falling into the Liris (Garigliano), about 4 miles below its junction with the Teverus (Suco). It crossed the Via Latina about 4 miles from Aquinum, though Strabo erroneously speaks of it as flowing by that city. It is a still greater mistake that he calls it a great river (παραβοβις μεγας, Strab. v. p. 237), for it is in reality a very insconsiderable stream: but the text of Strabo is, in this passage, very corrupt, and perhaps the error is not that of the author. The name appears in the Tabula, under the corrupt form Medel, for which we should probably read Memelum. (Tab. Peut.)

MELPUM, a city of Cisalpine Gaul, of which the only record preserved to us is that of its capture and destruction by the combined forces of the Insulrians, Bians, and Senones, which took place according to Cornelius Nepos on the same day with the taking of Veii by Camillus, b.c. 396 (Corn. Nep. ap. Plin. ii. 17. s. 21). He calls it a very wealthy city ("opusirens opulentissimum"), and it therefore seems to have been one of the principal of the Etruscan settlements in this part of Italy. All trace of it has subsequently disappeared, and its site is a matter of mere conjecture. (E. H. B.)

MELPSAGUM, a lake or marsh in Germany (Mela, iii. 3. § 3), the site of which is unknown: it is perhaps one of the lakes of Mellemburg. [L. S.]

MELSI'S (Mælis), a small river of Hispania Tarraconensis, flowing into the sea through the territory of the Astures, not far from the city Xercuda (Noricia). Perhaps the modern Narcea. (Strab. iii. p. 167; Flor. Exp. Smyr. xx. p. 47.)

MEMBRIANA. [ANAPHE.]

MEMBRIASA (Membosora), a town of the province, the position of which is fixed by Troadus (B. I. ii. 15) at 330 stadia from Carthage. Membrisina (Membriasa. Pent. Tab.), as it is called in the Antonine Itinerary, was a station between Musti, and Siciliana, and a place of some importance in political history. (Moresell. African Christianit. vol. i. p. 223.)

MEMINI. [CARPETRONIACE.]

MEMNONIENES (Membonis), a tribe of Aschantians, who dwelt between the Nile and the Astapus, north of the peninsula of Memes. (Ptol. iv. 8. § 114.) The name was not an indigenous one, but given by the Greek geographers to one of the Nubian tribes, among whom they placed their legend of Memnon, son of Aurora. (W. B. D.)

MEMPHIS (Mæphos, Herod. ii. 99. 114, 136, 154; Ptol. v. 61; Diod. i. 50. sect. Steph. B. s. r. Eth. Memphiris), the North of the Old Testament (Lam. xix. 14; Jerem. vii. 16, xiv. 1), was the first capital of the entire kingdom of Egypt, after the Deltaic monarchy at Heliodorus was united to the Thebaid capital at This or Abydos. It stood on the western bank of the Nile, 15 miles S. of Cercusorus, in lat. 30° 6' N.

The foundation of Memphis belongs to the very earliest age of Egyptian history. It is ascribed (1) to Menes, the first mortal king; (2) to Uchoreus, a monarch of a later dynasty; and (3) toApis or Onephus. (Ogyin. Fabric. 149.) But the second latter may be dismissed as resting on very doubtful authority. (Diod. i. 51.) The only certainty is that Memphis was of remote antiquity, as indeed is implied in the ascription of its origin to Menes, and that it was the first capital of the united kingdom of Upper and Lower Egypt. The motives which induced its founder to select such a site for his capital are obvious. Not far removed from the bifaceation of the Nile at Cercusorus, it commanded the S. entrance to the Delta, while it was nearer to the Thebaid than any of the Deltaic provincial cities of importance, Heliodorus, Bubastis, and Sais. It is also clear why he placed it on the western bank of the Nile. His kingdom had little to apprehend from the tribes of the Libyan desert; whereas the eastern frontier of Egypt was always exposed to attack from Arabia, Assyria, and Persia, nor indeed was it beyond the reach of the Scythians. (Herod. i. 105.) It was important, therefore, to make the Nile a barrier of the city; and this was effected by placing Memphis W. of it. Before, however, Menes could lay the foundations of his capital, an artificial area was to be provided for them. The Nile, at that remote period, seems to have had a double bifurcation; one at the head of the Delta, the other above the site of Memphis, and parallel with the Arsinoite Nome. Of the branches of its southern fork, the western and the wider of the two ran at the foot of the Libyan hills; the eastern and lower was the present main stream. Between them the plain, though resting on a limestone basis, was covered with marshes, caused by their periods of overflow. This plain Menes chose for the area of Memphis. He began by constructing an embankment about 100 stadia S. of its site, that diverted the main body of the water into the eastern arm; and the marshes he drained off into two principal lakes, one to N., the other to W. of Memphis; and thus, on every side but S., was defended by water.

The area of Memphis, according to Diodorus (i. 50), occupied a circuit of 150 stadia, or at least 15 miles. This space, doubtless, included much open ground, laid out in gardens, as well as the courts required for the barracks of the garrison, in the quarter denominated "the White Castle," and which was successively occupied, under the Pharaohs, by the native militia; in the reign of Ptolemy (n. e. 658 to 614), by Ptolemy and Greek merchants; by the Persians, after the invasion of Cymenes (n. e. 524); and finally by the Macedonian and Roman troops. For although Memphis was not always a royal residence, it retained always two features of a metropolis: (1) it was the seat of the central garrison, at least until Alexander was founded; and (2) its necropolis—the pyramids—was the tomb of the kings of every native dynasty.

The mound which curved the inundations of the Nile was so essential to the very existence of Memphis, that even the Persians, who ravaged or neglected all other great works of the country, annually repaired it. (Herod. ii. 99.) The climate was of remarkable salubrity; the soil extremely productive; and the prospect from its walls attracted the notice of the Greeks and Romans, who seldom cared much for the picturesque. Diodorus (i. 96) mentions its bright green meadows, intersected by canals, pavd with the lotus-flower. Pliny (xii. 10, xvi. 21) speaks of trees of such girth that three men with extended arms could not span them. Martial (vi. 80) says that the "maria Memphis" brought roses in winter to Rome (comp. Lucan, Pharsal. iv. 135); and Athenaeus (i. 20, p. 11) celebrates its growing soil and its wine. (Comp. Joseph. Antiq. i. 14. § 4; Horace, Od. iii. 26. 10.) And these natural advantages were seconded by its
position in the "narrors" of Aegypt, at a point where the Arabian and Libyan hills converge for the last time as they approach the Delta, and whence Memphis commanded the whole inland trade, whether ascending or descending the Nile. On the coins of Hadrani, the wealth and fertility of Memphis are expressed by a figure of the Nile on their reverse, holding in his left hand a cornucopia. (Mionnet, Suppl. ix. No. 42.)

The position of Memphis, again, as regarded the civilization which Aegypt imparted or received, was most favourable. A capital in the Thebaid would have been too remote for communication with the East or Greece; a capital in the Delta would have been too remote from the Upper Kingdom, which would then have been isolated rather to Aethiopia than to Aegypt, while the Delta itself, unsupervised by the Thebaid, must in all probability have become an Assyrian province. But the intermediate situation of Memphis connected it both with the southern portions of the Nile valley, as far as its keys at Philae and Elephantine, and also through the isthmus of Suez and the coast, with the most civilized races of Asia and Europe. After the foundation of Alexander, indeed, Memphis sunk into a provincial city. But the Saracen invaders in the seventh century conquered the province, and Memphis are expressly stated to have built both Old and New Cairo in the neighbourhood of Memphis, only changing the site from the western to the eastern bank of the river, because their natural alliances, unlike those of the Pharaoths, were with the Arabian and the Syrian Khalifs.

The history of Memphis is in some measure that of Aegypt also. The great works of Memes were probably accomplished by successive monarchs, if not indeed by several dynasties. In the 1st period of the monarchy we find that the 3d, 4th, 6th, 7th, and 8th dynasties consisted of Memphite kings. Athosis, who is styled a son of Memes, is said to have built the palace, and thus stamped the new city as a royal residence. In the reign of Khakchos, in the 2nd dynasty, the worship of Apis was established at Memphis, which was equivalent to rendering it a cathedral city. In the 7th dynasty we have a record of seventy Memphite kings, each reigning for one day; this probably denotes an interregnum, and perhaps a forgone revolution; for, as Heraclotus remarks (147), the Aegyptians could not exist without a monarchy. After the 8th dynasty no series of Memphite kings occurs; and the royal families pass to Heracleopolis, in the first place; next, after the expansion of the Shepherds, to Thebes; afterwards to the Deltaic cities of Tanis, Bubastis, and Sais.

The shepherd kings, though they formed their great camp at Abaris, retained Memphis as the seat of civil government (Manetho, ap. Joseph. cont. Apion, l. 14); and although, after they withdrew into Syria, Thebes became the capital, yet we have a proof that the 18th dynasty—the house of Rameses—held their northern metropolis in high esteem. For Sesostris, or Rameses III. (Herod. ii. 108), on his return from his Asiatic wars, set up in front of the temple of Ptah at Memphis a colossal statue of himself 45 feet high; and this is probably the colossal figure still lying among the mounds of ruin at Mitraanih. Under the 25th dynasty, while the Aethiopians occupied Aegypt, Memphis was again the seat of a native government, apparently for the result of a revolution, which set Sethos, a priest, upon the throne. A victory obtained by this monarch over the Assyrians was commemorated by a statue in the temple of Ptah—Sethos holding in his hand a mouse, the symbol of destruction. (Horapoll. Hieroglyph. l. 56; comp. Aelian, H. Anim. vi. 41; Strab. xiii. p. 604; Herod. ii. 141.) Under Pharaoh-necho (viii. c. 670) the Phoenician soldiers, who had aided him in gaining the crown, were established by him in "the Tyrian camp;"—at least this seems to be the meaning of Heridotus (ii. 112),—but were removed by his successor Amasis into the capital itself, and into that quarter of it called the "White Castle."

Of all the Aegyptian cities, Memphis suffered the most severely from the cruelty and fanaticism of the Persians. Its populace, excited by the defeat of the Aegyptian army at Pelasgiu, put to death the Persian herald who summoned the Memphians to surrender. The vengeance of the conqueror is related by Heridotus. Memphis became the headquarters of a Persian garrison; and Cambyses, on his return from his unfortunate expedition against Aethiopia, was more than ever incensed against the vanquished. Pammenes, the last of the Pharaoths, was compelled to put himself to death (Herod. iii. 15); Cambyses slew the god Apis with his own hand, and massacred his priests; he profaned the Temple of Ptah and burned the images of the Cuberhi (v. ii. 32).

Under Darius Aegypt was mildly governed, and his moderation was shown by his acquiescence in the high-priest's refusal to permit the erection of a statue to him at Memphis. (Herod. ii. 110; Diidor. i. 58.) The next important notice of this city is in the reign of Artaxerxes I. Inara, son of Psammithichus, had revolted from Persia, and called in the aid of the Athenians. (Diod. xi. 71.) The Persians were defeated at Par-tmis in the Delta (ii. 74; comp. Mionnet, Geog. x. p. 51), and took Memphis, and were besieged in the "White Castle." (Thucyd. i. 108—109.) The siege lasted for more than a year (Diidor. i. 75), and was at length raised (Ctesias, c. 33), and the authority of the king of Persia restored. Under Nectanebus I., the first monarch of the Sebennytic dynasty, Memphis expelled its Persian garrison, nor did it return to its allegiance, until Nectanebus II., the last representative of thirty dynasties, was driven into Aethiopia. (Atheneus, iv. p. 150.) From this period Memphius loses its metropolitan importance, and sinks to the level of the chief provincial city of Aegypt.

If, as Diidorus remarks (i. 51), Thebes surpassed Memphis in the grandeur of its temples, the latter city was more remarkable for the number of its deities and sacred buildings, and for its recular and commercial edifices. It might, indeed, as regards its shrines, be not improperly termed the Pantheon of the land of Mismain. The following were its principal religious establishments:—The Memphites were required to include nearly all the capital objects of Aegyptian worship except the goat and the crocodile:—

1. The temple of Isis, was commenced at a very early period, but only completed by Amasis, c. 564. It is described as spacious and beautiful (Herod. ii. 176; Heliodor. Aethiop. vii. 2, 8, 11), but inferior to the Iseum at Bursiris (Herod. ii. 59, 61).

2. The temple of Proteus, founded probably by Phoenicians, who had a commercial establishment at Memphis. It was of so early date as to be ascribed to the era of the Trojan War. (Pintarch, de Gen. Socrat. c. 7.)

3. The temple of Apis, completed in the reign of...
MEMPHIS.

Ptolemaic (Herod. ii. 153; Aelian, Hist. Anim. xii. 10; Clunies, Carol. Paed. ii. 2; Strab., xvii. p. 807), stood opposite the southern portal of the great temple of Ptah or Hapshastos, and was celebrated for its colonnades, through which the processions of Apis were conducted. Here was also an oracle of Apis, in connection with one of Osiris and Isis (Plin. viii. 46; Pausan. vii. 22). This temple was the cathedral of Aegypt, and not only established there a numerous, opulent, and learned college of priests, but also attracted thither innumerable wanderers who combined commercial with religious purposes.

4. The temple of Serapis, in the western quarter of Memphis. This Serapis was of earlier date than the Alexandrian deity of similar name. To the Memphian Serapeum was attached a Nilometer, for gauging and recording the periodical overflows of the river. It was removed by Constantine as a relic of paganism, but replaced by his successor Julian. (Sueton. Hist. Eras. i. 18; Sozomen, v. 2; comp. Diodor. vii. 50, 57; Senee. Quest. Nat. iv. 2; Plin. viii. 46.)

5. A temple of Pute, or the Sun, mentioned only in the Rosetta inscription (Letonne, Recueil des Insocr. Grecques et Lat. de l'Egypte; Brugsch, Inscrip. Rosett.)

6. The temple of the Cabeiri (Herod. iii. 57), into none but the high-priest might lawfully enter. The statues of the pigmy gods were burned by Cambyses, and the temple mutilated.

7. The temple of Ptah or Hapshastos, the colossal statue of fire, worshipped under the form of a Pyramid. This was the most ancient shrine in Memphis, being coeval with its foundation. (Diodor. i. 45; Herod. ii. 99, iii. 37; Strab. xvii. 807; Ammian. xvi. 4.) It was enlarged and beautified by several successive monarchs, apparently through a spirit of rivalry with the great buildings at Thebes. (1.) Moeris erected the great northern court (Herod. ii. 101; Diod. i. 51). (2.) Rameses the Great raised in this court six colossal figures of stone,—portrait-statues of himself, his queen, and their four sons. (Herod. ii. 105—110; Strab. xvii. 807; Diodor. iv. 4.)(3.) Rhamphitius built the western court, and erected two colossal figures of summer and winter. (Herod. ii. 121; Diodor. i. 62; Wilkinson, M. and C. i. p. 121.) (4.) Ay-sheus built the eastern court. (Herod. ii. 136.) It was in the opinion of Herodotus, by far the noblest and most beautiful of the four quadrangles. (5.) Psammetichus, the Sate king, added the south court, in commemoration of his victory over the Dodecarchy (Polyaen. Stratag. viii. 5; Herod. ii. 153; Diodor. i. 67); and Amasis (Herod. iii. 176) restored or restored to its basis the colossal statue of Ptah, in front of the southern portal. From the priests of the Memphian temples, the Greeks derived their knowledge of Egyptian annals, and the rituals also of their philosophical systems. It was at Memphis that Herodotus made his longest sojourn, and gained most of his information respecting Lower Aegypt. Democritus also resided five years at Memphis, and won the favour of the priests by his addiction to astrophysical and mathematical studies. (Dio. Laert. D. e. r. i. 54.)

Memphis reckoned among its illustrious visitors, in early times, the legislator Solon, the historian Hectaierus, the philosophers Thales and Cleobulus of Lindus; and in a later age, Strabo the geographer, and Diodorus the Sicilian.

The village of Menai-nakh, half concealed in a grove of palm-trees, about 10 miles S. of Gizeh, marks the site of the ancient Memphis. The successive conquerors of the land, indeed, have used its ruins as a stone-quarry, so that its exact situation has been a subject of dispute. Major Renouw (Geography of Herodotus, vol. ii. p. 121, seq.), however, brings incontestable evidence of the correspondence of Menaenach with Memphis. Its remains extend over many hundred acres of ground, which are covered with blocks of granite, broken obelisks, columns and colossal statues. The principal were evidently erected probably with the area of the great temple of Ptah.

There are several accounts of the appearance of Menaeum at different eras. Strabo saw the Hapshastanum entire, although much of the city was then in ruins. In the twelfth century A. D. it was visited by the Arabian traveler Ab-dallatif, who was deeply impressed with the spectacle of grandeur and desolation. "Its ruins offer," he says, "to the spectator a union of things confounded, and which the most eloquent pen could not attempt to describe." He seems to have seen at least one of the colossal statues of the group of Rameses in the northern court of the Hapshastanum. Among innumerable "idols," as he terms them, he "measured one, which, without its pedestal, was more than 30 cubits long. This statue was formed of a single piece of red granite, and was covered with a red varnish." (Ab-dallatif, De Siclijs Translation, 4to. p. 184.) Sir William Hamilton (Aegyptiacen, 4to. p. 303) visited the spot, and says, that "high blocks of granite were heaped up to the height of 80 ft., and were used for the construction of the town." (that is W. and E.). He entered by the latter, and found immediately "thirty or forty large blocks of very fine red granite, lying on the ground, evidently forming parts of some colossal statues, the chief ornaments of the temple."

The district in which these remains are found is still termed Menafj by the Coptic population, and thus helps to confirm the identity of the village of Jumna with the ancient capital of Egypt. [W.B.D.]
COIN OF MENAENUM.

MENAPIA (MENAPIA, Pltol. vi. 11. § 8), a small place in Bactriana in the immediate neighbourhood of Eucratida. It is probably the same as that called MENAPPIA by Ammianus (xxiiii. 6).

MENAPII, a people of North Gallia. In Caesar's time (B. G. iv. 4) the Menapii were on both sides of the lower Rhine, where they had arable farms, buildings, and small towns. The Usipetes and Tenctheri, who were Germans, being hard pressed by the Sueri, came to the Rhine, surprised and massacred the Menapii on the east bank, and then crossing over spent the winter on the west side, and lived at free cost among the Menapii. The history of these marauders is told elsewhere. (USIPETES.) On the west side of the Rhine the Eburones were the immediate neighbours of the Menapii (B. G. vi. 5), and they were between the Menapii and the Treviri. The Menapii were protected by continuous swamps and forests. On the south and on the coast the Menapii bordered on the Morini. Caesar does not state this distinctly; but he mentions the Menapii (B. G. ii. 4) among the Belgian confederates next to the Morini; and the Menapii were said to be able to raise 7000 fighting men. As the Veneti sought the aid of the Morini and Menapii in their war with Caesar, we must conclude that they had ships, or their aid would have been useless (B. G. iii. 9). Caesar describes all Gallia as reduced to obedience at the close of the summer of B. C. 56, except the Morini and Menapii (B. G. iii. 28), who were protected against the Roman general for this season, by their forests and the bad weather. The next year (B. C. 55), immediately before sailing for Britannia, Caesar sent two of his legati to invade the country of the Menapii and those Patti of the Morini which had not made their submission (B. G. vi. 229). After his return from Britannia Caesar sent Luciilius against the Morini with the legions which had been brought back from Britannia. The summer had been dry, and as the marshes did not protect the Morini, as in the year before, most of them were compelled to yield. The troops which had been sent against the Menapii under the two legati ravaged the lands, destroyed the corn, and burnt the houses; but the people fled to the thickets of their forests, and saved themselves from their cruel enemy. (B. G. iv. 3.)

In n. c. 55 Caesar himself entered the country of the Menapii with five legions unnumbered with baggage. The Menapii were the only Galli who had never sent ambassadors to Caesar about peace, and they were allies of Ambiorix, king of the Eburones, Caesar's enemy. Trusting to the natural protection of their country, the Menapii did not combine their forces, but fled to the forests and marshes, carrying their property with them. Caesar entered their country with his army in three divisions; the inhabitants were sought by cavalry, and after having roused up the country made his bridges over the rivers, but he did not mention any names. The buildings and villages were burnt, and a great number of cattle and men were captured. The Menapii prayed for peace, gave hostages, and were told that their hostages would be put to death, if they allowed Ambiorix to come within their borders. With this threat Caesar quitted the country that he had ravaged, leaving Comm. the Atrebat, one of his shivish Gallic tools, with a body of cavalry to keep watch over the Menapii. (B. G. vi. 5, 6.) It appears from Caesar's narrative that this people had farms, arable land, and cattle; and probably ships. They were not savages, but a people with some civility. Caesar's narrative also leads us to infer that the Menapii on the coast bordered on the Morini, as Strabo (iv. pp. 194, 199) says. Pliny (v. 17) also makes the Menapii and Morini concentric on the coast, but he makes the Scalids (Schelde) the northern limit of the Menapii; and he places the Tomarini north of the Schelde. But the Scalids (the modern Aa) was the name of a river, which, according to the authority of the ancient writers, that the Nervii extended to the coast, and consequently were between the Morini and the Menapii. But it is here assumed as proved that the Morini on the coast bordered on the Menapii, who in Caesar's time at least extended along the coast from the northern boundary of the Morini to the territory of the Batauv. (BATAVORUM INSULA.) Walckenaer proves, as he supposes, that the river Aas, from its source to its outlet, was the boundary between the Morini and the Menapii. The Aas is the dull stream which flows by St. Omer, and is made navigable to Gravelines. Accordingly he makes the hill of Castel, which is east of the Aas, to be the Castellum Menapinorum of the Table. This question is examined under CASTELLUM MORINORUM. The boundary on the coast between the Morini and Menapii is unknown, but it may, perhaps, have been as far north as Dunkerque. As the Eburones about Tancreu and Spa were the neighbours of the Menapii of Caesar on the east, we obtain a limit of the Menapii in that direction. On the north their boundary was the Rhine; and on the south the Nervii. Under Augustus some German peoples, Ubii, Sycambri (SEGGEN), and others,
were removed to the west side of the Rhine. The
Tungundi, who were settled in North Brabant, occupied
the place of those Menapii who bordered on the
Iberones. But the Menapii still maintained them-
selves on the west. Tacitus (Hist. iv. 28, in his
description of the rebellion of Civis, still speaks of
the "Menapios et Marinos et extrema Galliarum."
Part of the former territory of the Menapii was
finally included in Germania Inferior, and the rest in
Belgium. The name Menapii subsisted for a long
time. Aurelius Victor (de Caesaribus, 39) calls
Carausius "Menapiæ civis;" and it appears in the
middle ages. D'Anville observes that though the
Nothicia of the Empire mentions a body of soldiers
named Menapii, we see no trace of this nation in
any city which represents it; but Walckenaer (Geogr.
in. vol. i. p. 460) contends that Tarrastan (Tarraeti
was their chief place, to which place probably belong the Belgo silver medals with the
legend DIVINÆCIS (Bast, Recueil, etc.) "In an act
of Charles the Bald, A.D. 847, in favour of the
abbey of St. Amand, which is south of Tournai, this
abbey is said to be 'in territorio Menapiorum quod
nunc Memesuman appellant.'" We thus obtain, as
it seems, a fixed point for part of the territory of
the Menapii, which under the later Empire may have
been limited to the counties west of the Schelde.
It is observed that "though it is very probable
that Caesar never advanced into the interior of
Flanders, it is, however, certain that the Romans
afterwards, if they did not absolutely make them-
selves masters of it, at least were there for some
time at different epochs. Their idols, their Déi Pe-
as, sepulchral urns, lamps, Roman utensils, and
especially the medals of almost all the emperors,
found in great numbers, are irrefragable evi-
dence of this." (Bast, Recueil d'Antiquités Romaines
euvi., traduction.)
"Ancient carthage vessels have been found in
great numbers all along the coast from Dunkerque
to Bruge, which shows that the sea has not gained
here, and refutes the notion that in the time of
Caesar and Pliny this coast was neither inhabited
nor habitable." (Walckenaer, Geogr. etc. vol. i. p. 469.)
An inscription found at Rimini, of the age of
Vespasian, mentions the "Salinatores Menapiorum," or
salt-makers of the Menapii.
If the position of the Médi of Caesar has been
rightly determined [Menapi], they were Menapian
people. There is nothing to show whether the
Menapii were Galli or Germani. [G. L.]

MENAPILA [Menapia.]

MENDE (Méden, Herod. vii. 123; Scyl. p. 26; Thuc.
iv. 123; Steph. B.), or MENDAE (Meoda, Paus.
v. 10. § 27; Plin. iv. 10; Méda, Polyain. ii. 1. § 21; Suid. s. v.; Mendis, Liv. xxi. 43: Eth. Meozaois), a town of Palkene, situated on the
SW. side of the cape. It was a colony of Eretria in
Euboea, which became subject to Athens with the
other cities of Phocis and Chalcis. On the
arrival of Brasidas, Mende revolted from the Athe-
nians (Thuc. l. c.), but was afterwards taken by
Nicias and Nicostratus (Thuc. iv. 130; Diss.
xi. 72). It appears, from the account which Livy
(l. c.) gives of the expedition of Attalus and the
Romans (iii. c. 290), to have been a small maritime
place under the dominion of Cassandria. Together
with Seleuc, Mende occupied the broadest part of
the peninsula. (Pomp. Mela, ii. 3. § 11) and is
probably represented by some Hellenic remains
which have been observed on the shore near Koru-

Posidiki, to the E., as well as on the heights above it. (Leake, North. Greece, vol. iii. p. 156.) The types
on its autonomous coins—Silenus riding upon an
ass and a "Delta"—in a square (Eckhel, vol. ii.
72)—refer to the famous Alexander vase of which
the ancients made honourable mention. (Athens, i.
Onomast. vi. segm. 15.)

[ E. B. J.]

COIN OF MENDE.

MENDES (Μηδες, Herod. ii. 42, 46, 166; Diad.
i. 84; Strab. xvii. p. 802; Mela, i. 9 § 9;}
Plin. v. 10. s. 12; Ptol. iv. 5. § 51; Steph. B.
v. r. : Ethis Mezesios), the capital of the Men-
desian nome in the Delta of Egypt. It was situ-
ated at the point where the Mendesian arm of the
Nile (Μηδεζιας εσμαθμ. in. 51; Ptol. iv.
5. § 10; Mendesian ostium, Pliny, Mela, ii. cc.)
flows into the lake of Tanis. Mende was, under
the Pharaonic kings, a considerable town: the
name was the chief seat of the worship of Mende
or Pan, the all-producing-principle of life, and
one of the eight greater deities of Egypt, and
represented under the form of a goat. It was
also one of the names assigned to that division
of the native army which was called the Calasirii,
and the city was celebrated for the manufacture of
a perfume designated as the Mendesium unguentum.
(Plin. xiii. 1. s. 2) Mende, however, declined
early, and disappears in the first century A. D.;
since both Pslemy (L. c.) and Aristides (iii. p. 160)
mention Tanins as the only town of note in the
Mendesian nome. From its position at the junction
of the river and the lake, it was probably encroach-
aed upon by their waters, after the canals fell into
neglect under the Macedonian kings, and when they
were repaired by Augustus (Sueton. Aug. 18. 63)
Thmuis had attracted its trade and population.
Ruin, however, supposed to be those of Mende,
have been found near the hamlet of Achmâni-Tanah
(Champollion, l'Egypte, vol. ii. p. 122.) [W. B. D.]

MENDICELIA. I. A town of the Ilergetes, probably Momson. [Vol. ii. p. 32, a.]

2 A town in the interior of Lusitania, on the
bank of the Tagus. (Ptol. ii. 5. § 8, where some
MSS. have Мηδεοκολούχα, others Мηδεοκολούδια.)

MENDEXIUM (Μηδεζιομ). a town in the
western part of Pisidia, two miles west of Pegla.
(Ptol. v. 5. § 6; Steph. s. v., who calls it a town
of Lyca.)

[ L. S.]

MENELAI PORTUS (Μηνελαόδις λιμ. Herod.
i. 169), a harbour of Marmarica, situated to the
W. of Paricnometon (Strab. i. 40. xviii. p. 838),

Here, according to legend, the hero Menelaus landed
(Herod. ii. 119); and it was the place where
Agiasius died in his march from the Nile to Cyrene,
r. c. 361. (Corn. Nep. Ages. 8.) Its position
must be sought on the coast of the Wady Daphnô,
near the Rjil-al-Mirb. (Pacho, Voyage dans la
Marmarique, p. 47.)

[ E. B. J.]

MENELAIUM. [Sparta.]

MENELAITIS (Μηνελαότα, Strab. xvii. p. 803;}
Steph. B. s. v.: Ethis Menelaites), was a town of the
The text in the image appears to be a mixture of sentences in various languages, including English, Latin, and others. It is difficult to interpret the content accurately due to the fragmented nature of the text. The text seems to discuss geographical and historical topics, possibly related to the study of ancient civilizations or regions.

Given the nature of the text, it is challenging to provide a coherent or meaningful translation without more context or clearer language. The fragmented nature of the text suggests that it may be a collection of excerpts from different sources or a text that has been poorly transcribed or digitized.

Without proper context or clearer text, it is not possible to provide a reliable representation of the document's content.
to signify the estimated width of the northern inlet separating the island from the main; and this estimate is probably much exaggerated. The mode of fishing with baskets is still practised in the Jubah islands, and along the coast. The formation of the coast of E. Africa in these latitudes—where the hills or downs upon the coast are all formed of a coral conglomerate, comprising fragments of madrepore, shell, and sand—renders it likely that the island which was close to the main sixteen or seventeen centuries ago, should now be united to it. Granting this theory of gradual transformation of the coast-line, the Menuthian of the "Periplus" may be supposed to have stood in what is now the rich garden-land of Shamba, where the rivers, carrying down mud to mingle with the marine deposit of coral drift, covered the choked-up estuary with a rich soil. (Cooley, "Ptolemy and the Nile," London, 1854, pp. 56—63.)

**MEREUH PROM.** "Egnaia "egaia, Prob. iv. 3. § 7; Pompon. Mela, l. 7. § 2; Plin. v. 3), the most northerly point of the coast of Africa to the E. of the gulf of Carthage, now Cape Bon, or the Ría Addir of the natives. [E. B. J.]

**MERABUM.** A town of Hispania Baetica, on the road from Gades to Malaesa, now Béger de la Miel. (Mém. de l'Acad. des Inscr. xxx. p. 111.)

**MERINUM.** [Garonum.]

**MERMESSUS (Μερμέσσος or Mermabos), a town in Tessalia, belonging to the territory of Lamprocus, was celebrated in antiquity as the native place of a sibyl (Steph. B. s. v.; Paus. x. 12. § 2; Lactant. i. 6. 12, where it is called Marimausa; Said. r. c.), but its exact site is unknown. [L. S.]

**MEREBICA.** [Mopereica.]

**MEROE (Μηρώη, Herod. ii. 29; Dind. i. 23, seq.; Strab. xviii. p. 821; Plin. ii. 73. s. 78, v. 9, s. 10; Steph. B. s. v.; Eth. Merousas, Moroosias). The kingdom of Meroe lay between the modern hamlet of Khartoum, where the Atapaus joins the true Nile and the influx of the Atashanae into their united streams, lat. 17° 40' N., long. 54° E. Although described as an island by the ancient geographers, it was properly an irregulous space, like Mesopotamia, included between two or more confluent rivers. According to Diodorus (i. 23) the region of Meroe was 375 miles in length, and 125 in breadth; but Strabo (xviii. p. 821) regards these numbers as referring to its circumference and diameter respectively. On its eastern side it was bounded by the Abyssinian highlands; on the western by the Libyan sands—the desert of Bahinda. Its extreme southern extremity was, according to a survey made in the reign of Nero, 873 miles distant from the last. (Herod. ii. 20; Strab. x. 180, s. 33) The temple of Artemis was, indeed, reduced this distance to 625 and 600 miles. (Manvett, "Geog. d. Altan, x. p. 183.) Within these limits Meroe was a region of singular opulence, both as respects its mineral wealth and its cereal and lecanimous productions. It possessed, on its eastern frontier, mines of gold, iron, copper, and salt; its woods of date-palm, almond-trees, and ilex yielded abundant supplies of both fruit and timber for export and home consumption; its meadows supported large herds of cattle, or produced double harvests of millet ("chowmari"); and its forests and swamps abounded with wild beasts and game, which the natives caught and salted for food. The banks of the Nile are so high in this region, that Meroe derives no benefit from the inundation, and as rain falls scantily in the north, even in the wet season (Strab. xv. p. 690), the lands remote from the rivers must always have been nearly desert. But the waste bore little proportion to the fertile lands in a tract so intersected with streams; the art of irrigation was extensively practised; and in the south, where the hills rise towards Abyssinia, the rains are sufficient to maintain a considerable degree of fertility. The valley of the Atashanae (Tacazze) is lower and warmer than the rest of Meroe. Partly from its natural richness, and partly from its situation between Abyssinia and the Red Sea, the regions which produced spice, and the rich yields of gold-dust, ivory, and precious stones,—Meroe was from very early times the seat of an active and diversified commerce. It was one of the capital centres of the caravan trade from Libya Interior, from the havens on the Red Sea, and from Aegypt and Aethiopia. It was, in fact, the receptacle and terminus of the Libyan traffic from Cartaghes, on the one side, and from Adulis and Berenice on the other. The ruins of its cities, so far as they have been explored, attest its former importance. It was a city of considerable size.

The site of the city of Meroe was placed by Eratosthenes (ap. Strab. xvii. p. 786) 700 stadia, or nearly 90 miles, south of the junction of the Nile with the Atashanae, lat. 16° 44'; and such a position agrees with Philo's statement (ii. p. 77) that the sun was vertical there 45 days before the summer solstice. (Comp. Plin. vi. 30.) The pyramids scattered over the plains of this mesopotamian region indicate the existence of numerous cities besides the capital. The ruins which have been discovered are, however, those of other temples or public monuments, for the cities themselves, being built of palm-branches and bricks dried in the sun, speedily crumbled away in a latitude in which the tropical rains partially extend. (Ritter, Africa, p. 542.) The remains of Meroe itself all lie between 16° and 17° lat. N., and are not far from the Nile. The most southerly of them are found at Naga-gerbel-araven. Here have been discovered the ruins of four temples, built in the Aegyptian style, but of late date. The largest of them was dedicated to the ram-headed deity Amun. The principal portico of this temple is detached from the main building,—an unusual practice in Aegyptian architecture,—and is approached through an avenue of sphinxes, 7 feet high, and also bearing the ram's head. The sculptures, like those of Aegypt, represent historical events. Amun receiving the homage of a queen, or a king holding his captives by the hair, and preparing to strike off their heads with an axe. At Wad Motor, a little from the Atapus, are the remains of a sandstone temple, 80 feet in length, with a large gateway, 76 feet wide, 12 feet in height, and 12 columns the figures and emblems of Phra, Athor, and Typhon. These ruins are amidst mounds of brick, which betoken the former presence of an extensive city. Again, 16 or 17 miles west of the Atapus, and among the hollows of the sandstone hills, surrounded by the desert, are the ruins of El-Mansourat. Eight temples, connected with one another by galleries or colonnades, and divided into courts and cloisters, are here found. The style of architecture is that of the era of the Ptolemies.

On the eastern bank, however, and about 2 miles from the river, are found groups of pyramids, which mark the site of a necropolis and the neighbourhood of a city; they are 80 in number, and of various dimensions; the base of the largest being 63 feet square, of the smallest less than 12 feet. The
leftist of these pyramids is about 160 feet in height. Some of these have evidently been royal tombs. None of the buildings of Mereoe, indeed, can claim a remote antiquity. The sculptures as well as the pyramids bear the impress of the decline of Egyptian art, and even traces of Greek architecture, and this circumstance is one of many indications that Mereoe derived its civilization from Aegypt, and did not, as has been supposed, transmit an earlier civilization to the Nile valley. And yet it is not probable that Mereoe received either its arts or its peculiar forms of civil polity from Aegypt, either entirely, or at any very remote epoch of time. Their points of resemblance, as well as of difference, forbid the supposition of direct transmission; for, on the one hand, the architecture and sculptures of Mereoe betray the inferiority of a later age, and its civil government is not modelled upon that of the Pharaohs. One remarkable feature in the latter is that the sceptre was so often held by female sovereigns; whereas in Aegypt we find a queen regnant only once mentioned—Nitocris, in the 3rd dynasty. Again, the polity of Mereoe appears to have been in great measure sacerdotal long after Aegypt had ceased to be governed by a pure theocracy. Yet, that the civilization of Mereoe was indigenous, is proved by the fact that in this portion of Libya in all ages render highly improbable. From whatever quarter the ruling caste of this ancient kingdom may have come, it bears all the tokens, both in what we know of its laws, and in what is visible of its arts, of the presence of a conquering race presiding over a subject people.
